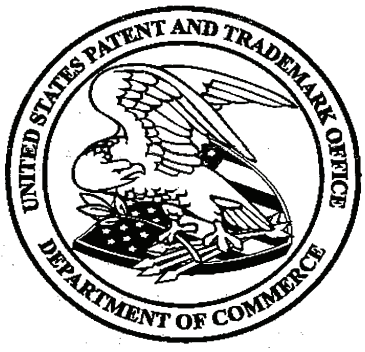
Manual of PATENT EXAMINING PROCEDURE

Original Eighth Edition, August 2001
Latest Revision July 2008



U.S. DEPARTMENT OF COMMERCE
United States Patent and Trademark Office

Rev. 7, July 2008

The U.S. Patent and Trademark Office does not handle the sale of the Manual, distribution of notices and revisions, or change of address of those on the subscription list. Correspondence relating to existing subscriptions should be sent to the Superintendent of Documents at the following address:

Superintendent of Documents
Mail List Section, Washington, DC 20402
Telephone: 202-512-2267

Inquiries relating to purchasing the Manual should be directed to:

Superintendent of Documents
United States Government Printing Office
Washington, DC 20402
Telephone: 202-512-1800

Orders for reproduced copies of individual replacement pages or of previous revisions of the Manual should be sent to the following address:

Mail Stop Document Services
Director of the U.S. Patent and Trademark Office
P.O. Box 1450
Alexandria, VA 22313-1450
Telephone: 1-800-972-6382 or 571-272-3150

Previous editions and revisions of the Manual are available on microfilm in the Patent Search Room.

The Manual is available on CD-ROM and on diskette from:

U.S. Patent and Trademark Office
Office of Electronic Information Products
MDW 4C18, P.O. Box 1450
Alexandria, VA 22313-1450
Telephone: 571-272-5600

Employees of the U.S. Patent and Trademark Office should direct their requests for the Manual, replacement pages, notices, and revisions to the Office of Patent Training. Telephone: 571-272-7222

Pursuant to the Patent and Trademark Office Efficiency Act (PTOEA) (Pub. L. 106-113, 113 Stat. 1501A-572), the head of the United States Patent and Trademark Office (USPTO) is the "Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office." The Director is assisted by the "Deputy Under Secretary of Commerce for Intellectual Property and Deputy Director of the United States Patent and Trademark Office." The patent operations of the USPTO are now headed by the "Commissioner for Patents." The trademark operations of the USPTO are now headed by the "Commissioner for Trademarks." Under section 4741(b) of the PTOEA, any reference to the Commissioner of Patents and Trademarks, the Assistant Commissioner for Patents, or the Assistant Commissioner for Trademarks is deemed to refer to the Director, the Commissioner for Patents, or the Commissioner for Trademarks, respectively. See "Reestablishment of the Patent and Trademark Office as the United States Patent and Trademark Office" published in the *Federal Register* at 65 FR 17858 (Apr. 5, 2000), and in the *Official Gazette of the United States Patent and Trademark Office* at 1234 O.G. 41 (May 9, 2000).

Additions to the text of the Manual are indicated by arrows (><) inserted in the text. Deletions are indicated by a single asterisk (*) where a single word was deleted and by two asterisks (**) where more than one word was deleted. The use of three or five asterisks in the body of the laws, rules, treaties, and administrative instructions indicates a portion of the law, rule, treaty, or administrative instruction which was not reproduced.

Revision 6, September 2007
Revision 7, July 2008

Foreword

This Manual is published to provide U.S. Patent and Trademark Office (USPTO) patent examiners, applicants, attorneys, agents, and representatives of applicants with a reference work on the practices and procedures relative to the prosecution of patent applications before the USPTO. It contains instructions to examiners, as well as other material in the nature of information and interpretation, and outlines the current procedures which the examiners are required or authorized to follow in appropriate cases in the normal examination of a patent application. The Manual does not have the force of law or the force of the rules in Title 37 of the Code of Federal Regulations.

A separate manual entitled "Trademark Manual of Examining Procedure" is published by the USPTO as a reference work for trademark cases.

Examiners will be governed by the applicable statutes, rules, decisions, and orders and instructions issued by the Director of the USPTO and other officials authorized by the Director of the USPTO. Orders and Notices still in force which relate to the subject matter included in this Manual are incorporated in the text. Orders and Notices, or portions thereof, relating to the examiners' duties and functions which have been omitted or not incorporated in the text may be considered obsolete. Interference procedure not directly involving the Primary Examiner are not included in this Manual and, therefore, Orders and Notices relating thereto remain in force.

Subsequent changes in practice and other revisions will be incorporated in the form of substitute or additional pages for the Manual.

Suggestions for improving the form and content of the Manual are always welcome. They should be addressed to:

Introduction

Constitutional Basis

The Constitution of the United States provides:

"Art. 1, Sec. 8. The Congress shall have power . . . To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries."

Statutes

Pursuant to the provision of the Constitution, Congress has over the years passed a number of statutes under which the U.S. Patent and Trademark Office (USPTO) is organized and our patent system is established. The provisions of the statutes can in no way be changed or waived by the USPTO.

Prior to January 1, 1953, the law relating to patents consisted of various sections of the Revised Statutes of 1874, derived from the Patent Act of 1870 and numerous amendatory and additional acts.

By an Act of Congress approved July 19, 1952, which came into effect on January 1, 1953, the patent laws were revised and codified into substantially its present form. The patent law is Title 35 of the United States Code which governs all cases in the USPTO. In referring to a particular section of the patent code the citation is given, for example, as, 35 U.S.C. 1. Title 35 of the United States Code is reproduced in Appendix L of the Manual of Patent Examining Procedure (MPEP). A copy of the consolidated laws is available on the USPTO web site at www.uspto.gov/web/offices/pac/mpep/consolidated_laws.pdf.

35 U.S.C. 1. Establishment.

(a) ESTABLISHMENT.— The United States Patent and Trademark Office is established as an agency of the United States, within the Department of Commerce. In carrying out its functions, the United States Patent and Trademark Office shall be subject to the policy direction of the Secretary of Commerce, but otherwise shall retain responsibility for decisions regarding the management and administration of its operations and shall exercise independent control of its budget allocations and expenditures, personnel decisions and processes, procurements, and other administrative and management functions in accordance with this title and applicable provisions of law. Those operations designed to grant and issue patents and those operations which are designed to facilitate the registration of trademarks shall be treated as separate operating units within the Office.

(b) OFFICES.— The United States Patent and Trademark Office shall maintain its principal office in the metropolitan Washington, D.C., area, for the service of process and papers and for the purpose of carrying out its functions. The United States Patent and Trademark Office shall be deemed, for purposes of venue in civil actions, to be a resident of the district in which its principal office is located, except where jurisdiction is otherwise provided by law. The United States Patent and Trademark Office may establish satellite offices in such other places in the United States as it considers necessary and appropriate in the conduct of its business.

(c) REFERENCE.— For purposes of this title, the United States Patent and Trademark Office shall also be referred to as the "Office" and the "Patent and Trademark Office".

Rules

One of the sections of the patent statute, namely, 35 U.S.C. 2, authorizes the USPTO, subject to the policy direction of the Secretary of Commerce, to establish regulations, not inconsistent with law, for the conduct of proceedings in the USPTO.

These regulations or rules and amendments thereto are published in the *Federal Register* and in the *Official Gazette*. In the *Federal Register* and in the Code of Federal Regulations the rules pertaining to patents are in Parts 1, 3, 4, 5, and 10 of Title 37, Patents, Trademarks, and Copyrights. In referring to a particular section of the rules the citation is given, for example, as 37 CFR 1.31. A booklet entitled "Code of Federal Regulations, Title 37, Patents, Trademarks, and Copyrights," published by the Office of the Federal Register, contains all of the patent rules as well as trademark rules and copyright rules. Persons desiring a copy of this booklet should order a copy from the Superintendent of Documents. A copy of the consolidated rules is available on the USPTO web site at www.uspto.gov/web/offices/pac/mpep/consolidated_rules.pdf.

The primary function of the rules is to advise the public of the rules which have been established in accordance with the statutes and which must be followed before the USPTO. The rules govern the examiners, as well as applicants and their attorneys and agents. The rules pertaining to patent practice appear in the MPEP as Appendix R.

Director's Orders and Notices

From time to time, the Director of the USPTO, formerly the Commissioner of Patents and Trademarks, has issued Orders and Notices relating to various specific situations that have arisen in operating the USPTO. Notices and circulars of information or instructions have also been issued by other USPTO officials under authority of the Director. Orders and Notices have served various purposes including giving examiners instruction, information, interpreta-

tions, and the like. Others have been for the information of the public, advising what the USPTO will do under specified circumstances.

Decisions

In addition to the statutes and rules, the actions taken by the examiner in the examination of applications for patents are to a great extent governed by decisions on prior cases. Applicants dissatisfied with an examiner's action may have it reviewed. In general, that portion of the examiner's action pertaining to objections on formal matters may be reviewed by petition to the Director of the USPTO (see MPEP § 1002), and that portion of the examiner's action pertaining to the rejection of claims on the merits may be reviewed by appeal to the Board of Patent Appeals and Interferences (see MPEP § 1201). The distinction is set forth in 37 CFR 1.181 and 1.191. In citing decisions as authority for his or her actions, the examiner should cite the decision in the manner set forth in MPEP § 707.06.

Publications Available from the U.S. Government Printing Office

For current price and availability information, visit the U.S. Government Printing Office (GPO) web site (http://bookstore.gpo.gov), call the GPO Order Desk (202-512-1800 or 1-866-512-1800), send a fax to 202-512-2104.

Products and Services Available From the U.S. Patent and Trademark Office

Patent and trademark related products and services available from the USPTO are described in the Products and Services Catalog, available on the USPTO's web site (www.uspto.gov/web/offices/ac/ido/oeip/catalog).

Call 800-786-9199 for information on Patent, Trademark, and General Products. Customer Service Representatives are available Monday through Friday (except Federal holidays) from 8:30 a.m. to 8:00 p.m.

MANUAL OF PATENT EXAMINING PROCEDURE
Eighth Edition

Instructions Regarding Revision No. 7

Appendix R has been updated to incorporate the following final rules:

- April 2007 Revision of Patent Cooperation Treaty Procedures, in particular, 37 CFR 1.17, 1.445 and 1.452, which became effective on November 9, 2007.

MPEP Chapters 2200 and 2600 have been revised to incorporate the changes necessitated by the final rules entitled "Revisions and Technical Corrections Affecting Requirements for *Ex Parte* and *Inter Partes* Reexamination," which became effective on May 16, 2007. MPEP Chapter 1800 has been updated to reflect changes to 37 CFR 1.17, 1.445 and 1.452, which became effective on November 9, 2007. In addition, the following MPEP Chapters have been revised: 600, 1400, and 2500.

This revision consists of replacement pages for the **Title Page** in the front of the Manual, **entire Chapters 600, 1400, 1800, 2200, 2500, 2600, Appendices II – List of Decisions Cited, R – Patent Rules, T – Patent Cooperation Treaty, and AI – Administrative Instructions Under the PCT, and entire Index**.

Pages which have been printed in this revision are labeled as "**Rev. 7**" on the bottom. Sections of the Manual that have been changed by this revision are indicated by "**[R-7]**" after the section title. Additions to the text of the Manual are indicated by arrows (><) inserted in the text. Deletions are indicated by a single asterisk (*) where a single word was deleted and by two asterisks (**) where more than one word was deleted. The use of three or five asterisks in the body of the laws and rules indicates a portion of the law or rule that was not reproduced.

Magdalen Y. C. Greenlief, Editor

AI-1 through AI-94	AI-1 through AI-94
I-1 through I-112	I-1 through I-112

Particular attention is called to the changes in the following sections:

CHAPTER 600:

601	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
601.01(c)	Revised to clarify that a provisional application filing fee is not required when filing a request to convert a nonprovisional application to a provisional application.
601.01(d)	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
601.01(f)-(h)	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
601.02	Form PTO/SB/81 has been updated.
601.03	37 CFR 1.33(a) has been updated.
602	The declaration forms have been updated.
602.03	Form paragraph has been revised.
602.04(a)	The list of member countries that are parties to the Hague Convention has been deleted since users can obtain an up-to-date list by accessing the Internet website provided in this section.
602.05(a)	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
603.01	The Office of Patent Publication has been changed to the Office of Data Management.
605.02	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
605.03	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
605.04(a)	Revised to clarify that where individual declarations are executed, they must be submitted as individual declarations rather than combined into one declaration by combining the signature pages. Revised to clarify that the Office will require a new oath or declaration if any alterations made in

	the application or the declaration are not initialed and dated. Reproduced form paragraph 6.05.02 has been replaced by form paragraph 6.02.01.
605.04(b)-(c)	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
605.04(f)-(g)	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
608.01	Revised to clarify that the written description portion of the specification must not contain drawings or flow diagrams and that a claim may incorporate by reference to a specific figure or table where there is no practical way to define the invention in words.
608.01(b)	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
608.01(f)	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP). Revised to clarify that if the drawings show Figures 1A, 1B, and 1C and the brief description of the drawings refers only to Figure 1, the examiner should object to the brief description and require applicant to provide a brief description of Figures 1A, 1B, and 1C.
608.01(g)	Revised to add reference to 37 CFR 1.84(p).
608.01(m)	The Office of Patent Publication has been changed to the Office of Data Management.
608.01(n)	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
608.01(v)	Form paragraph 6.20 has been revised.
608.02	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
608.02(b)	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).
608.02(z)	The Office of Patent Publication has been changed to the Office of Data Management.
608.05	The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).

608.05(a) The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).

608.05(b) The Office of Patent Publication has been changed to the Office of Data Management.

609 Revised to add an alternative electronic signature method that may be used by the examiners to indicate whether the information listed in an IDS has been considered.

609.01 Revised to add reference to the alternative electronic signature method.

609.04(a) Revised subsection II on legible copies to be consistent with 37 CFR 1.98(a)(2).

609.05(a) Form paragraph 6.49.10 has been revised.

609.05(b) Revised to add discussion on the alternative electronic signature method.

609.07 Revised to update e-IDS submitted by EFS-Web.

609.08 Revised to add discussion on the alternative electronic signature method.

CHAPTER 1400:

1402 Revised to indicate that a reissue application in which the only error specified to support reissue is the failure to include one or more claims that is/are narrower than at least one of the existing patent claim(s) without an allegation that one or more of the broader patent claim(s) is/are too broad together with an amendment to such claim(s) does not meet the requirements of 35 U.S.C. 251.

1404 Revised to delete reference to the IFW Manual.

1406 Revised text to be consistent with 37 CFR 1.98(a)(2).

1410 Revised to indicate that effective July 9, 2007, reissue applications and "follow-on" papers may be submitted by EFS-Web. Form PTO/SB/50 has been updated.

1410.01 The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).

1411 Revised to indicate that for reissue applications that are maintained in IFW, the "Final SPRE Review" form will be filled in at the appropriate

point to identify that a terminal disclaimer was filed in the application for the patent to be reissued and the form will be scanned into IFW.

1411.01 Revised to indicate that underlining and bracketing should not be used for changes made by a Certificate of Correction dated before the filing of the reissue application or dated during the pendency of the reissue application. If such changes are submitted improperly with underlining and brackets, the examiner will require correction by the applicant in the form of a replacement paragraph (or paragraphs) without such markings.

1412.02 Revised to add discussion of the Federal Circuit decision of *North American Container, Inc. v. Plastipak Packaging, Inc.* Discussion of the Board decision, *Ex Parte Eggert*, has been deleted. A new subsection V. directed to rebuttal by the reissue applicant to a recapture rejection has been added. The recapture-analysis flowchart has been revised.

1412.03 Revised to indicate that the filing of a reissue application to merely add combination claim(s) that require all the limitations of a subcombination claim, which subcombination claim was present in the original patent, would not provide an error that is correctable by reissue as defined by 35 U.S.C. 251. Revised to indicate that a statement that "the patent is wholly or partly inoperative by reason of claiming more or less than applicant had a right to claim" is not an unequivocal statement of an intent to broaden.

1412.04 Revised to clarify that a petition under 37 CFR 1.324 can be used to correct the inventorship of a patent, where appropriate.

1414 Revised to indicate that a statement of the error as "…the inclusion of claims 3-5 which were unduly broad…" and then canceling claims 3-5, would not be considered a sufficient error statement because applicant has not pointed out what the canceled claims lacked that the remaining claims contain. The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP). Forms PTO/SB/51 and PTO/SB/52 have been updated.

1414.01 Form PTO/SB/51S has been updated.

1415 Revised to indicate that the number of claims in the original patent is not relevant in determining the excess claims fee for a reissue application. Form PTO/SB/56 has been updated.

1415.01 Revised to indicate that only one maintenance fee is required for all the multiple reissue patents that replaced a single original patent. The maintenance fee must be directed to the latest reissue patent that has issued.

1430 Revised to indicate that where a reissue application seeks to change the inventorship of a patent, the names of the inventors of record of the patent file are set forth in the announcement, not the filing receipt. The filing receipt sets forth the names of the inventors that the reissue application is seeking to make of record upon reissue of the patent. Revised to indicate that where a notice to file missing parts - filing date granted has been mailed by the Office for a reissue application, the reissue application will not necessarily be announced in the *Official Gazette* until all elements of the notice have been complied with.

1449.01 Revised to add guidance to address the situation where a reexamination certificate is to be issued for a patent, while a reissue application for the patent is pending and will not be merged with the reexamination.

1449.02 Revised to indicate that where a reissue application with an appropriate error as required by 35 U.S.C. 251 is filed to provoke an interference, the reissue oath/declaration must include an identification of the claims added to provoke the interference.

1450 Revised to clarify that for reissue applications of patents issued from a national stage application submitted under 35 U.S.C. 371, the restriction requirement should not be made under the PCT unity of invention standard because a reissue application is filed under 35 U.S.C. 251 and not under 35 U.S.C. 371.

1451 Revised to clarify that the mere fact an application purports to be a continuation or divisional of a parent reissue application does not make it a reissue application itself, because it is possible to file a 35 U.S.C. 111(a) continuing application of a reissue application. There must be an identification, on filing, that the application is a continuation reissue application, as opposed to a continuation of a reissue application. The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).

1452 Revised to clarify that if a reissue application is merged with a reexamination proceeding, the filing of an RCE of the reissue application will normally not dissolve the merger, however, the Office may choose to dissolve the merger based on the individual facts and circumstances of the case, e.g., to promote the statutorily-mandated requirement for special dispatch in reexamination.

1455 Revised to delete references to reissue applications that are maintained in paper files.

1457 The Office of Initial Patent Examination (OIPE) has been changed to the Office of Patent Application Processing (OPAP).

1470 Information regarding accessing Public PAIR has been updated.

1485 The URL for accessing the image of a patent on the patent database has been updated. Form PTO/SB/44 has been updated.

1490 Revised to add discussion as to the interpretation of the phrase "earlier-filed" for purposes of making provisional ODP rejections in two or more pending applications. Revised to indicate that where the copending applications are filed on the same day, the provisional ODP rejection should be maintained in each of the applications until applicant overcomes the rejection by filing either a reply showing that the claims subject to the provisional ODP rejection are patentably distinct from each other or a terminal disclaimer in accordance with 37 CFR 1.321 in each of the pending applications. Forms PTO/SB/25 and PTO/SB/26 have been updated.

CHAPTER 1800:

1807 Revised to indicate the Customer Number practice set forth in MPEP § 403 may not be used in the international phase to appoint an agent or designate a correspondence address.

1808 Revised in view of 1329 OG 99 (April 8, 2008) to reflect revised procedures for handling requests to withdraw from representation. Also revised to indicate that in the international phase, an appointment of an agent may not be revoked by reference to a Customer Number.

1817 Revised to update the list of PCT Contracting States and the members of the European Patent Convention (EPC) regional patent system.

1817.02 Revised to reflect amendments to PCT Rule 4.11.

1819 Revised to reflect amendments to PCT Rule 4 and 37 CFR 1.445 and to add PCT Rule 12*bis*.

1845.01 Form paragraphs have been revised.

1850 Form paragraphs have been revised.

1852 Revised to reflect amendments to PCT Rules 4 and 41.

1878.01 Form paragraphs have been revised.

1879 Spelling of "further" was corrected in subsection VI and some text inadvertently omitted in Rev. 6 was re-inserted in subsection VII.

1893.03(d) Revised to indicate the sections of the MPEP relating to double patenting rejections (MPEP § 804), election and reply by applicant (MPEP § 818), and rejoinder of nonelected inventions (MPEP § 821.04) generally also apply to national stage applications submitted under 35 U.S.C. 371. Form paragraphs for restriction and election of species requirements have been revised.

CHAPTER 2200:

2203 Revised to clarify that "any person" as set forth in 35 U.S.C. 301 includes real parties in interest to the patent owner or requester.

2204 Revised to add reference to 37 CFR 1.501.

2205 Revised to clarify the explanation requirement of 35 U.S.C. 301.

2206 Revised to clarify when a citation qualifies for entry under 37 CFR 1.501.

2207 Revised to add discussion regarding litigation papers and decisions from litigations that may be entered in the patent file.

2209 Revised to indicate that "litigation tactics" are not tolerated in reexamination proceedings and that parties are expected to adhere to the provisions of 37 CFR 10.18(b) throughout the course of a reexamination proceeding.

2210 Revised to update 37 CFR 1.510(f).

2213 Revised to update 37 CFR 1.510(f). Revised to clarify that an attorney or agent representing a requester in a reexamination proceeding must be a registered patent practitioner.

2214 Revised to clarify that the request must identify each substantial new question of patentability raised and each proposed ground of rejection. Revised to indicate that an application data sheet cannot be submitted in a reexamination proceeding. Form PTO/SB/57 has been updated.

2216 Revised to add discussion of the Supreme Court decision in *KSR*.

2217 Revised to add a chart to illustrate rejections based on 35 U.S.C. 102(g)(2) in a reexamination proceeding.

2218 Revised to indicate that the requirement for copies of U.S. patents and U.S. patent application publications (37 CFR 1.510(b)(3)) relied upon or referred to in a reexamination request has been waived. Revised to

indicate that it is not required and parties are not permitted to submit copies of copending reexamination proceedings and applications in a reexamination request.

2220 Revised to indicate that where service was not possible after a reasonable effort to do so, requester must submit a duplicate copy of the request papers to the Office together with a cover letter including an explanation of what effort was made to effect service and why that effort was not successful. The cover letter should be clearly worded to avoid the possibility of the Office erroneously charging a duplicate filing fee.

2222 Revised to update 37 CFR 1.33(c). Form PTO/SB/82 has been deleted and replaced by form PTO/SB/81.

2223 Form PTO/SB/83 has been updated.

2224 Revised to indicate that effective July 9, 2007, the Office began accepting requests for reexamination and "follow on" papers submitted by EFS-Web. Revised to indicate that the certificate of mailing and transmission procedures set forth in 37 CFR 1.8 may be used to file any paper in an *ex parte* reexamination, except for a request for reexamination and a corrected/replacement request for reexamination.

2225 Revised to indicate that if untimely papers filed before an order for reexamination, are entered in the patent file prior to discovery of the impropriety, such papers will be expunged from the record.

2229 The Office of Publication has been changed to the Office of Data Management.

2232 Revised to indicate that non-patent literature in a reexamination file is not available for viewing by members of the public.

2232.01 The title of this section has been revised.

2234 Revised to update 37 CFR 1.530(k).

2235 The Office of Publication has been changed to the Office of Data Management.

2238 Revised to indicate that reexamination fees are based on full cost recovery and it is essential that all time expended on reexamination activities be reported accurately.

2240 Revised to indicate that in order for a second or subsequent request for reexamination to be granted, the second or subsequent requester must

	independently provide a substantial new question of patentability which is different from that raised in the pending reexamination for the claims in effect at the time of the determination (37 CFR 1.515(a)).
2242	Revised to add reference to the Supreme Court decision in *KSR*. Revised to indicate that in order for a second or subsequent request for reexamination to be granted, the second or subsequent requester must independently provide a substantial new question of patentability which is different from that raised in the pending reexamination for the claims in effect at the time of the determination (37 CFR 1.515(a)).
2249	Revised to update 37 CFR 1.530(a).
2250	Revised to update 37 CFR 1.530(k). Revised to indicate that in those rare instances where a concluded post-patent proceeding changes the patent while the reexamination proceeding is pending, amendments will be made relative to the patent, as revised by the concluded proceeding, and 37 CFR 1.530(i) is waived to that extent. The subsection on examples has been revised to add the re-presentation of original patent claims.
2250.02	Revised to update 37 CFR 1.530(l).
2250.03	Revised to update 37 CFR 1.20(c)(3).
2254	Revised to update 37 CFR 1.550(d).
2256	Revised to be consistent with 37 CFR 1.98(a)(2).
2257	Revised to indicate that the reexamination request must provide a listing of the patents and printed publications in accordance with 37 CFR 1.98.
2258	Revised to add a chart to illustrate rejections based on 35 U.S.C. 102(g)(2) in a reexamination proceeding. Form paragraph 22.03 has been revised.
2262	Revised to add discussion of current procedure which permits the examiner to indicate in the Office action that a discussion with the patent owner's representative may result in agreement whereby the reexamination proceeding may be placed in condition for issuing a NIRC and that the examiner will telephone the patent owner's representative in about 2 weeks.
2266	Revised to update 37 CFR 1.550(d). Revised to indicate that an application data sheet is an improper paper in a reexamination proceeding.
2266.01	Revised to add x-reference to MPEP § 2281.

2267 Revised to indicate that where an inappropriate paper has been scanned into IFW of the reexamination proceeding before discovery of the inappropriate nature of the paper, the paper will be marked as "non-public" and "closed" so that the paper does not appear in the active IFW record with the other active papers that comprise the public record of the reexamination proceeding.

2268 Revised to update 37 CFR 1.137.

2271 Revised to add x-reference to the final rejection practice set forth in MPEP § 706.07(a).

2272 Revised to add discussion of the filing of a petition under 37 CFR 1.181 where the patent owner is of the opinion that a final rejection is improper or premature, or that an amendment submitted after final rejection complies with 37 CFR 1.116 but the examiner improperly refused entry of such an amendment.

2280 Revised to add discussion of 37 CFR 1.98(a)(2).

2281 Revised to indicate that it is permitted for a paralegal or legal instruments examiner (or support staff) to telephone a requester to discuss a request that fails to comply with the filing date requirements for filing a reexamination request because there is no reexamination proceeding yet.

2282 Revised to add discussion regarding litigation papers and decisions from litigations that may be entered in the patent file.

2283 Revised to update 37 CFR 1.565(c) and the discussion regarding merger of multiple copending reexamination proceedings.

2285 Revised to update 37 CFR 1.565(d) and the discussion regarding conduct of merged reissue application and reexamination proceeding.

2286 Revised to add discussion of two Federal Circuit decisions involving reexamination proceedings where the court affirmed the Office's rejections even though parallel district court proceeding upheld the claims as valid and infringed.

2287 The Office of Publication has been changed to the Office of Data Management. Revised to indicate that if a patent expires during the pendency of a reexamination proceeding for that patent, all amendments to the patent claims and all claims added during the reexamination proceeding must be withdrawn.

2287.01 New section has been added directed to examiner consideration of submissions after a NIRC.

2288 Revised to update 37 CFR 1.570.

2294 Revised to add discussion regarding what to do with a reexamination file in which the reexamination proceeding has been terminated.

2295 The Office of Publication has been changed to the Office of Data Management.

CHAPTER 2500:

2501 Revised to indicate that 35 U.S.C. 41(b) as reproduced in this section has been extended through fiscal year 2008. The Office of Initial Patent Examination has been changed to the Office of Patent Application Processing.

2504 Revised to clarify that only one maintenance fee is required for all the multiple reissue patents that replaced the single original patent.

2510 Revised to indicate that maintenance fee payment cannot be submitted by using EFS-Web. The mailing address for submitting maintenance fee payments and correspondence related to maintenance fees has been updated.

2515 Revised to clarify that the maintenance fee transmittal form should be used when submitting maintenance fees by mail or by facsimile transmissions.

2542 The Office of Initial Patent Examination has been changed to the Office of Patent Application Processing.

2560 The Office of Initial Patent Examination has been changed to the Office of Patent Application Processing.

2570 Instructions regarding how to access maintenance fee status information over the Internet have been updated.

2590 Revised to add discussion regarding auto-processing of petitions to accept unintentionally delayed payment of a maintenance fee in an expired patent submitted by EFS-Web.

2595 Forms PTO/SB/45 and PTO/SB/47 have been updated.

CHAPTER 2600:

2602 Revised to update 37 CFR 1.902.

2609 Revised to indicate that "litigation tactics" are not tolerated in reexamination proceedings and that parties are expected to adhere to the provisions of 37 CFR 10.18(b) throughout the course of a reexamination proceeding.

2610 Revised to update 37 CFR 1.915.

2612 Revised to add discussion regarding challenging the accuracy of a certification submitted under 37 CFR 1.915(b)(7).

2613 Revised to update 37 CFR 1.915(c). Revised to clarify that an attorney or agent representing a requester in a reexamination proceeding must be a registered patent practitioner.

2614 Revised to update 37 CFR 1.915(c). Revised to clarify that the request must identify each substantial new question of patentability raised and each proposed ground of rejection. Revised to indicate that where service was not possible after a reasonable effort to do so, requester must submit a duplicate copy of the request papers to the Office together with a cover letter including an explanation of what effort was made to effect service and why that effort was not successful. The cover letter should be clearly worded to avoid the possibility of the Office erroneously charging a duplicate filing fee. Revised to indicate that an application data sheet cannot be submitted in a reexamination proceeding. Form PTO/SB/58 has been updated.

2616 Revised to add discussion of the Supreme Court decision in *KSR*.

2617 Revised to add a chart to illustrate rejections based on 35 U.S.C. 102(g)(2) in a reexamination proceeding. Revised to indicate that an admission made outside the record of the file or the court record may be admitted pursuant to MPEP § 2686.

2618 Revised to indicate that the requirement for copies of U.S. patents and U.S. patent application publications (37 CFR 1.915(b)(4)) relied upon or referred to in a reexamination request has been waived. Revised to indicate that it is not required and parties are not permitted to submit copies of copending reexamination proceedings and applications in a reexamination request.

2620 Revised to indicate that where service was not possible after a reasonable effort to do so, requester must submit a duplicate copy of the request

papers to the Office together with a cover letter including an explanation of what effort was made to effect service and why that effort was not successful. The cover letter should be clearly worded to avoid the possibility of the Office erroneously charging a duplicate filing fee.

2622 Revised to update 37 CFR 1.33(c). Revised to add x-reference to MPEP § 324 regarding establishing an assignee's right to take action when submitting a power of attorney. Form PTO/SB/82 has been deleted and replaced by form PTO/SB/81.

2623 Form PTO/SB/83 has been updated.

2624 Revised to indicate that effective July 9, 2007, the Office began accepting requests for reexamination and "follow on" papers submitted by EFS-Web. Revised to indicate that the certificate of mailing and transmission procedures set forth in 37 CFR 1.8 may be used to file any paper in an *inter partes* reexamination, except for a request for reexamination and a corrected/replacement request for reexamination.

2625 Revised to update 37 CFR 1.902.

2629 The Office of Publication has been changed to the Office of Data Management.

2632 Revised to indicate that non-patent literature in a reexamination file is not available for viewing by members of the public.

2632.01 The title of this section has been revised.

2635 The Office of Publication has been changed to the Office of Data Management.

2638 Revised to indicate that reexamination fees are based on full cost recovery and it is essential that all time expended on reexamination activities be reported accurately.

2640 Revised to update 37 CFR 1.923. Revised to indicate that in order for a second or subsequent request for reexamination to be granted, the second or subsequent requester must independently provide a substantial new question of patentability which is different from that raised in the pending reexamination for the claims in effect at the time of the determination (37 CFR 1.923. Revised to add x-references to MPEP § 2686.01 and MPEP § 2283.

2642 Revised to add reference to the Supreme Court decision in *KSR*. Revised to indicate that in order for a second or subsequent request for

reexamination to be granted, the second or subsequent requester must independently provide a substantial new question of patentability which is different from that raised in the pending reexamination for the claims in effect at the time of the determination (37 CFR 1.923).

2656 Revised to be consistent with 37 CFR 1.98(a)(2).

2657 Revised to indicate that the reexamination request must provide a listing of the patents and printed publications in accordance with 37 CFR 1.98.

2658 Form paragraph has been revised.

2666 Revised discussion regarding supplemental response to an Office action in an *inter partes* reexamination proceeding. Revised to indicate that an application data sheet is an improper paper in a reexamination proceeding.

2666.01 Revised to update 37 CFR 1.530(f) and (l).

2666.04 Revised to update 37 CFR 1.20(c).

2666.05 Revised to add discussion regarding circumstances where the patent owner files a response to an Office action and the page length of the response exceeds the page length set forth in 37 CFR 1.943(b). Revised discussion regarding when new prior art can be submitted with comments.

2666.07 Revised to indicate that if a patent owner's response to an Office action on the merits that is served on a third party requester is received by the third party requester more than 5 business days after the date of service set forth on the certificate of service, the third party requester may submit a verified statement, specifying the date of the actual receipt, as an attachment to the third party requester's comments and the Office will treat the date of actual receipt to be the date of service for purposes of 35 U.S.C. 314(b)(2).

2666.10 Revised to update 37 CFR 1.957(b).

2667 Revised to indicate that where an inappropriate paper has been scanned into IFW of the reexamination proceeding before discovery of the inappropriate nature of the paper, the paper will be marked as "non-public" and "closed" so that the paper does not appear in the active IFW record with the other active papers that comprise the public record of the reexamination proceeding. Revised to indicate that the provisions of 37 CFR 1.943(c) are waived to the extent that the table of contents pages, the table of case law pages, and the pages of the claims (but not claim charts applying the art to the claims) are excluded from the 30 page limit required by 37 CFR 1.943(c). Revised to indicate that after an opposition

to any patent owner petition is filed by a third party requester, any further paper in opposition/rebuttal/response to the third party opposition paper will not be considered and will be returned.

2668 Revised to update 37 CFR 1.137

2671.01 Form paragraph has been revised.

2671.02 Form paragraph has been revised.

2672 Revised to indicate that if the patent owner's submission of comments under 37 CFR 1.951(a) addresses issues not already raised in the action closing prosecution (ACP), the comments will be returned as improper. If the comments have been scanned into the IFW for the reexamination proceeding before the discovery of the impropriety, they should be expunged from the record, with notification being sent to the party that submitted the comments.

2673.02 Revised to update 37 CFR 1.953(b) and (c).

2685 Revised to indicate that the Office (paralegal or legal instruments examiner or support staff) may, in its sole discretion, telephone a party as to matter of completing or correcting the record of a file, where the subject matter discussed does not go to the merits of the reexamination proceeding (e.g., calls to obtain a certificate of service). Revised to indicate that it is permitted for a paralegal or legal instruments examiner (or support staff) to telephone a requester to discuss a request that fails to comply with the filing date requirements for filing a reexamination request because there is no reexamination proceeding yet.

2686 Revised to add discussion regarding court decision papers that may be entered in a reexamination file.

2686.01 Revised to update 37 CFR 1.989(a) and the discussion regarding merger of multiple copending reexamination proceedings.

2686.03 Revised to update 37 CFR 1.991 and 1.997 and the discussion regarding conduct of merged reissue application and reexamination proceeding.

2686.04 Revised to add discussion of two Federal Circuit decisions involving reexamination proceedings where the court affirmed the Office's rejections even though parallel district court proceeding upheld the claims as valid and infringed.

2687 The Office of Publication has been changed to the Office of Data Management. Revised to indicate that if a patent expires during the

	pendency of a reexamination proceeding for that patent, all amendments to the patent claims and all claims added during the reexamination proceeding must be withdrawn.
2687.01	Revised to add x-reference to MPEP § 2656.
2688	Revised to update 37 CFR 1.997.
2694	Revised to add discussion regarding what to do with a reexamination file in which the reexamination proceeding has been terminated.

Chapter 100 Secrecy, Access, National Security, and Foreign Filing

101 General [R-5]

35 U.S.C. 122. Confidential status of applications; publication of patent applications.

(a) CONFIDENTIALITY.— Except as provided in subsection (b), applications for patents shall be kept in confidence by the Patent and Trademark Office and no information concerning the same given without authority of the applicant or owner unless necessary to carry out the provisions of an Act of Congress or in such special circumstances as may be determined by the Director.

(b) PUBLICATION.—

(1) IN GENERAL.—

(A) Subject to paragraph (2), each application for a patent shall be published, in accordance with procedures determined by the Director, promptly after the expiration of a period of 18 months from the earliest filing date for which a benefit is sought under this title. At the request of the applicant, an application may be published earlier than the end of such 18-month period.

(B) No information concerning published patent applications shall be made available to the public except as the Director determines.

(C) Notwithstanding any other provision of law, a determination by the Director to release or not to release information concerning a published patent application shall be final and nonreviewable.

(2) EXCEPTIONS.—

(A) An application shall not be published if that application is—

(i) no longer pending;

(ii) subject to a secrecy order under section 181 of this title;

(iii) a provisional application filed under section 111(b) of this title; or

(iv) an application for a design patent filed under chapter 16 of this title.

(B)(i) If an applicant makes a request upon filing, certifying that the invention disclosed in the application has not and will not be the subject of an application filed in another country, or under a multilateral international agreement, that requires publication of applications 18 months after filing, the application shall not be published as provided in paragraph (1).

(ii) An applicant may rescind a request made under clause (i) at any time.

(iii) An applicant who has made a request under clause (i) but who subsequently files, in a foreign country or under a multilateral international agreement specified in clause (i), an application directed to the invention disclosed in the application filed in the Patent and Trademark Office, shall notify the Director of such filing not later than 45 days after the date of the filing of such foreign or international application. A failure of the applicant to provide such notice within the prescribed period shall result in the application being regarded as abandoned, unless it is shown to the satisfaction of the Director that the delay in submitting the notice was unintentional.

(iv) If an applicant rescinds a request made under clause (i) or notifies the Director that an application was filed in a foreign country or under a multilateral international agreement specified in clause (i), the application shall be published in accordance with the provisions of paragraph (1) on or as soon as is practical after the date that is specified in clause (i).

(v) If an applicant has filed applications in one or more foreign countries, directly or through a multilateral international agreement, and such foreign filed applications corresponding to an application filed in the Patent and Trademark Office or the description of the invention in such foreign filed applications is less extensive than the application or description of the invention in the application filed in the Patent and Trademark Office, the applicant may submit a redacted copy of the application filed in the Patent and Trademark Office eliminating any part or description of the invention in such application that is not also contained in any of the corresponding applications filed in a foreign country. The Director may only publish the redacted copy of the application unless the redacted copy of the application is not received within 16 months after the earliest effective filing date for which a benefit is sought under this title. The provisions of section 154(d) shall not apply to a claim if the description of the invention published in the redacted application filed under this clause with respect to the claim does not enable a person skilled in the art to make and use the subject matter of the claim.

(c) PROTEST AND PRE-ISSUANCE OPPOSITION.— The Director shall establish appropriate procedures to ensure that no protest or other form of pre-issuance opposition to the grant of a patent on an application may be initiated after publication of the application without the express written consent of the applicant.

(d) NATIONAL SECURITY.— No application for patent shall be published under subsection (b)(1) if the publication or disclosure of such invention would be detrimental to the national security. The Director shall establish appropriate procedures to

ensure that such applications are promptly identified and the secrecy of such inventions is maintained in accordance with chapter 17 of this title.

18 U.S.C. 2071. Concealment, removal, or mutilation generally.

(a) Whoever willfully and unlawfully conceals, removes, mutilates, obliterates, or destroys, or attempts to do so, or, with intent to do so takes and carries away any record, proceeding, map, book, paper, document, or other thing, filed or deposited with any clerk or officer of any court of the United States, or in any public office, or with any judicial or public officer of the United States, shall be fined under this title or imprisoned not more than three years, or both.

(b) Whoever, having the custody of any such record, proceeding, map, book, document, paper, or other thing, willfully and unlawfully conceals, removes, mutilates, obliterates, falsifies, or destroys the same, shall be fined under this title or imprisoned not more than three years, or both; and shall forfeit his office and be disqualified from holding any office under the United States. As used in this subsection, the term "office" does not include the office held by any person as a retired officer of the Armed Forces of the United States.

>

37 CFR 1.11. Files open to the public.

(a) The specification, drawings, and all papers relating to the file of: A published application; a patent; or a statutory invention registration are open to inspection by the public, and copies may be obtained upon the payment of the fee set forth in § 1.19(b)(2). If an application was published in redacted form pursuant to § 1.217, the complete file wrapper and contents of the patent application will not be available if: The requirements of paragraphs (d)(1), (d)(2), and (d)(3) of § 1.217 have been met in the application; and the application is still pending. See § 2.27 of this title for trademark files.

*****

<

37 CFR 1.14. Patent applications preserved in confidence.

(a) *Confidentiality of patent application information.* Patent applications that have not been published under 35 U.S.C. 122(b) are generally preserved in confidence pursuant to 35 U.S.C. 122(a). Information concerning the filing, pendency, or subject matter of an application for patent, including status information, and access to the application, will only be given to the public as set forth in § 1.11 or in this section.

(1) Records associated with patent applications (see paragraph (g) for international applications) may be available in the following situations:

(i) *Patented applications and statutory invention registrations.* The file of an application that has issued as a patent or published as a statutory invention registration is available to the public as set forth in §1.11(a). A copy of the patent application-as-filed, the file contents of the application, or a specific document in the file of such an application may be provided upon request and payment of the appropriate fee set forth in § 1.19(b).

(ii) *Published abandoned applications.* The file of an abandoned application that has been published as a patent application publication is available to the public as set forth in § 1.11(a). A copy of the application-as-filed, the file contents of the published application, or a specific document in the file of the published application may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b).

(iii) *Published pending applications.* A copy of the application-as-filed, the file contents of the application, or a specific document in the file of a pending application that has been published as a patent application publication may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b). If a redacted copy of the application was used for the patent application publication, the copy of the specification, drawings, and papers may be limited to a redacted copy. The Office will not provide access to the paper file of a pending application that has been published, except as provided in paragraph (c) or (h) of this section.

(iv) *Unpublished abandoned applications (including provisional applications) that are identified or relied upon.* The file contents of an unpublished, abandoned application may be made available to the public if the application is identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication of an international application that was published in accordance with PCT Article 21(2). An application is considered to have been identified in a document, such as a patent, when the application number or serial number and filing date, first named inventor, title and filing date or other application specific information are provided in the text of the patent, but not when the same identification is made in a paper in the file contents of the patent and is not included in the printed patent. Also, the file contents may be made available to the public, upon a written request, if benefit of the abandoned application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, or has published as a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, the file contents of the application, or a specific document in the file of the application may be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)).

(v) *Unpublished pending applications (including provisional applications) whose benefit is claimed.* A copy of the file contents of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the benefit of the application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, an application that has published as a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, or a specific document in the file of the pending application may also be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)). The

Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

(vi) *Unpublished pending applications (including provisional applications) that are incorporated by reference or otherwise identified.* A copy of the application as originally filed of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the application is incorporated by reference or otherwise identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2). The Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

(vii) *When a petition for access or a power to inspect is required.* Applications that were not published or patented, that are not the subject of a benefit claim under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, an application that has published as a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2), or are not identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2), are not available to the public. If an application is identified in the file contents of another application, but not the published patent application or patent itself, a granted petition for access (see paragraph (h)) or a power to inspect (see paragraph (c)) is necessary to obtain the application, or a copy of the application.

(2) Information concerning a patent application may be communicated to the public if the patent application is identified in paragraphs (a)(1)(i) through (a)(1)(vi) of this section. The information that may be communicated to the public (*i.e.*, status information) includes:

(i) Whether the application is pending, abandoned, or patented;

(ii) Whether the application has been published under 35 U.S.C. 122(b);

(iii) The application "numerical identifier" which may be:

(A) The eight-digit application number (the two-digit series code plus the six-digit serial number); or

(B) The six-digit serial number plus any one of the filing date of the national application, the international filing date, or date of entry into the national stage; and

(iv) Whether another application claims the benefit of the application (*i.e.*, whether there are any applications that claim the benefit of the filing date under 35 U.S.C. 119(e), 120, 121 or 365 of the application), and if there are any such applications, the numerical identifier of the application, the specified relationship between the applications (*e.g.*, continuation), whether the application is pending, abandoned or patented, and whether the application has been published under 35 U.S.C. 122(b).

*****

All U.S. Patent and Trademark Office employees are legally obligated to preserve pending applications for patents in confidence until they are published or patented. 35 U.S.C. 122 and 18 U.S.C. 2071 impose statutory requirements which cover the handling of patent applications and related documents. Suspension, removal, and even criminal penalties may be imposed for violations of these statutes.

In order to provide prompt and orderly service to the public, application files must be readily available to authorized U.S. Patent and Trademark Office employees at all times. Accordingly, in carrying or transporting applications and related papers, care must be exercised by U.S. Patent and Trademark Office employees, especially in corridors and elevators, to ensure that applications and related papers are always under employee surveillance and control. Application files must not be displayed or handled so as to permit perusal or inspection by any unauthorized member of the public.

Interoffice mail must be sent in appropriate envelopes.

No part of any application or paper related thereto should be reproduced or copied except for official purposes.

No patent application or related document may be removed from the premises occupied by the U.S. Patent and Trademark Office, except for handling as required by the issue process, unless specifically authorized by the Director. If such authorization is given, the employee having custody will be responsible for maintaining confidentiality and otherwise conforming with the requirements of law.

Applications must not be placed in desk drawers or other locations where they might be easily overlooked or are not visible to authorized personnel.

Whenever an application, or an artifact file in an Image File Wrapper (IFW) application, is removed from the operating area having custody of the file, a charge on the PALM system must be properly and promptly made.

Official papers are accepted only at a central delivery window, except for certain papers that have been specifically exempted from the central delivery policy. See MPEP § 502. Papers for non-Image File Wrapper (IFW) applications are forwarded to the Technology Center (TC) and must be properly and promptly placed within the appropriate files. If papers

are received with faulty identifications, this should be corrected at once. If papers are received at a destination for which they are not intended due to faulty identification or routing, appropriate corrective action should be taken at once to ensure the prompt receipt thereof at destination. See MPEP § 508.01 and § 508.03. Similarly, for IFW messages with faulty identifications or incorrect routing, appropriate corrective action should be taken at once to ensure the prompt receipt thereof at the appropriate destination. For IFW processing, see the IFW Manual.

All U.S. Patent and Trademark Office employees should bear in mind at all times the critical importance of ensuring the confidentiality and accessibility of patent application files and related documents, and in addition to the specific procedures referred to above, should take all appropriate action to that end.

Examiners, classifiers, and other U.S. Patent and Trademark Office employees who assist public searchers by outlining or indicating a field of search, should also bear in mind the critical importance of ensuring the confidentiality of information revealed by a searcher when requesting field of search assistance. See MPEP § 1701. Statutory requirements and curbs regarding the use of information obtained by an employee through government employment are imposed by 15 U.S.C. 15(b) and 18 U.S.C. 1905.

Examiners, while holding interviews with attorneys and applicants, should be careful to prevent exposures of files and drawings of other applicants.

Extreme care should be taken to prevent inadvertent and/or inappropriate disclosure of the filing date or application number of any application. This applies not only to Office actions but also to notes (usually in pencil) in the file wrapper or in the artifact folder of IFW applications.

TELEPHONE AND IN-PERSON REQUESTS FOR INFORMATION CONCERNING PENDING OR ABANDONED APPLICATIONS

37 CFR 1.14. Patent applications preserved in confidence.

>

(a) *Confidentiality of patent application information.* Patent applications that have not been published under 35 U.S.C. 122(b) are generally preserved in confidence pursuant to 35 U.S.C. 122(a). Information concerning the filing, pendency, or subject matter of an application for patent, including status information, and access to the application, will only be given to the public as set forth in § 1.11 or in this section.<

*****

(2) Information concerning a patent application may be communicated to the public if the patent application is identified in paragraphs (a)(1)(i) through (a)(1)(vi) of this section. The information that may be communicated to the public (i.e., status information) includes:

(i) Whether the application is pending, abandoned, or patented;

(ii) Whether the application has been published under 35 U.S.C. 122(b);

(iii) The application "numerical identifier" which may be:

(A) The eight-digit application number (the two-digit series code plus the six-digit serial number); or

(B) The six-digit serial number plus any one of the filing date of the national application, the international filing date, or date of entry into the national stage; and

(iv) Whether another application claims the benefit of the application (i.e., whether there are any applications that claim the benefit of the filing date under 35 U.S.C. 119(e), 120, 121 or 365 of the application), and if there are any such applications, the numerical identifier of the application, the specified relationship between the applications (e.g., continuation), whether the application is pending, abandoned or patented, and whether the application has been published under 35 U.S.C. 122(b).

*****

Normally no information concerning pending or abandoned patent applications (except applications which have been published, reissue applications and reexamination proceedings) may be given to the public without the authorization of the applicant, the assignee of record, or the attorney or agent of record. See 35 U.S.C. 122 and 37 CFR 1.14. Other exceptions are specified in 37 CFR 1.14.

When handling an incoming telephone call or an in-person request for information regarding an unpublished pending or abandoned patent application, no information should be disclosed until the identity of the requester can be adequately verified as set forth below. Particular care must be exercised when a request is made for the publication date or publication number, or issue date and patent number assigned to a *pending* patent application. If the publication or issue date is later than the current date (i.e., the date of the request), such information may be given *only* to the applicant, or the assignee of record, or the attorney or agent of record.

The following procedure should be followed before any information about an unpublished pending or abandoned patent application is given over the telephone:

(A) Obtain the caller's full name, the application number, and the caller's telephone number. Ask the caller if there is an attorney or agent of record.

(1) If there is an attorney or agent of record, ask for his or her registration number. If the registration number is not known, ask for the name of the attorney or agent of record. Inform caller that an attorney or agent of record will be called after verification of his/her identity and that information concerning the application will be released to that attorney or agent.

(2) If there is no attorney or agent of record, ask the caller why he or she is entitled to information concerning the application. If the caller identifies himself or herself as an applicant or an authorized representative of the assignee of record, ask for the correspondence address of record and inform caller that his or her association with the application must be verified before any information concerning the application can be released and that he or she will be called back. If the caller indicates that he or she is not an applicant or an authorized representative of the assignee of record then status information may only be given pursuant to MPEP § 102.

(B) Verify that information concerning the application can be released by checking PALM or the application file.

(1) If the caller stated there was an attorney or agent of record, PALM Intranet should be used to verify the registration number given or to obtain the registration number of an attorney or agent of record. Then PALM Intranet (using the registration number) should be used to obtain a telephone number for an attorney or agent of record.

(2) If the caller identified himself or herself as an applicant or an authorized representative of the assignee of record, PALM Intranet should be used to verify the correspondence address of record. PALM Intranet should be used to determine if there is an attorney or agent of record. If there is an attorney or agent of record, their telephone number can be obtained from PALM Intranet.

(C) Return the call using the telephone number as specified below.

(1) If an attorney or agent is of record in the application, information concerning the application should only be released by calling the attorney's or agent's telephone number obtained from PALM Intranet.

(2) If the applicant or an authorized representative of the assignee of record requests information, and there is no attorney or agent of record and the correspondence address of record has been verified, information concerning the application can be released to the caller using the telephone number given by the caller. If the caller's association with the application cannot be verified, no information concerning the application will be released. However, the caller should be informed that the caller's association with the application could not be verified.

In handling an in-person request, ask the requester to wait while verifying their identification as in (B) above.

102 Information as to Status of an Application [R-2]

37 CFR 1.14. Patent applications preserved in confidence.

**>

(a) *Confidentiality of patent application information.* Patent applications that have not been published under 35 U.S.C. 122(b) are generally preserved in confidence pursuant to 35 U.S.C. 122(a). Information concerning the filing, pendency, or subject matter of an application for patent, including status information, and access to the application, will only be given to the public as set forth in § 1.11 or in this section.

(1) Records associated with patent applications (see paragraph (g) for international applications) may be available in the following situations:

(i) *Patented applications and statutory invention registrations.* The file of an application that has issued as a patent or published as a statutory invention registration is available to the public as set forth in §1.11(a). A copy of the patent application-as-filed, the file contents of the application, or a specific document in the file of such an application may be provided upon request and payment of the appropriate fee set forth in § 1.19(b).

(ii) *Published abandoned applications.* The file of an abandoned application that has been published as a patent application publication is available to the public as set forth in § 1.11(a). A copy of the application-as-filed, the file contents of the published application, or a specific document in the file of the published application may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b).

(iii) *Published pending applications.* A copy of the application-as-filed, the file contents of the application, or a specific document in the file of a pending application that has been published as a patent application publication may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b). If a redacted copy of the application was used for the patent application publication, the copy of the specification, drawings, and papers may be limited to a redacted copy. The Office will not provide access to the paper file of a pending appli-

cation that has been published, except as provided in paragraph (c) or (h) of this section.

(iv) *Unpublished abandoned applications (including provisional applications) that are identified or relied upon.* The file contents of an unpublished, abandoned application may be made available to the public if the application is identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication of an international application that was published in accordance with PCT Article 21(2). An application is considered to have been identified in a document, such as a patent, when the application number or serial number and filing date, first named inventor, title and filing date or other application specific information are provided in the text of the patent, but not when the same identification is made in a paper in the file contents of the patent and is not included in the printed patent. Also, the file contents may be made available to the public, upon a written request, if benefit of the abandoned application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, or has published as a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, the file contents of the application, or a specific document in the file of the application may be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)).

(v) *Unpublished pending applications (including provisional applications) whose benefit is claimed.* A copy of the file contents of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the benefit of the application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, an application that has published as a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, or a specific document in the file of the pending application may also be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)). The Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

(vi) *Unpublished pending applications (including provisional applications) that are incorporated by reference or otherwise identified.* A copy of the application as originally filed of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the application is incorporated by reference or otherwise identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2). The Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

(vii) *When a petition for access or a power to inspect is required.* Applications that were not published or patented, that are not the subject of a benefit claim under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, an application that has published as a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2), or are not identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2), are not available to the public. If an application is identified in the file contents of another application, but not the published patent application or patent itself, a granted petition for access (see paragraph (h)) or a power to inspect (see paragraph (c)) is necessary to obtain the application, or a copy of the application.

(2) Information concerning a patent application may be communicated to the public if the patent application is identified in paragraphs (a)(1)(i) through (a)(1)(vi) of this section. The information that may be communicated to the public (*i.e.*, status information) includes:

(i) Whether the application is pending, abandoned, or patented;

(ii) Whether the application has been published under 35 U.S.C. 122(b);

(iii) The application "numerical identifier" which may be:

(A) The eight-digit application number (the two-digit series code plus the six-digit serial number); or

(B) The six-digit serial number plus any one of the filing date of the national application, the international filing date, or date of entry into the national stage; and

(iv) Whether another application claims the benefit of the application (*i.e.*, whether there are any applications that claim the benefit of the filing date under 35 U.S.C. 119(e), 120, 121 or 365 of the application), and if there are any such applications, the numerical identifier of the application, the specified relationship between the applications (*e.g.*, continuation), whether the application is pending, abandoned or patented, and whether the application has been published under 35 U.S.C. 122(b).<

*****

Status information of an application means only the following information:

(A) whether the application is pending, abandoned, or patented;

(B) whether the application has been published; *

(C) the application number or the serial number plus any one of the filing date of the national application, the international filing date or the date of entry into the national stage*>; and

(D) whether another application claims the benefit of the application (i.e., whether there are any applications that claim the benefit of the filing date under 35 U.S.C. 119(e), 120, 121 or 365 of the application), and if there are any such applications, status information therefor as set forth in 37 CFR 1.14(a)(2)(iv).<

A requester seeking status information regarding an application should check the Patent Application Information Retrieval (PAIR) system on the U.S. Patent and Trademark Office (USPTO) website at *>http://www.uspto.gov/ebc<. Alternatively, the requester may contact the File Information Unit (see MPEP § 1730). The File Information Unit (FIU) will check the relevant Office records and will inform the requester whether the application has been published or has issued as a patent. If the application has been published, the FIU will inform the requester of the publication number and publication date, and if the application has issued as a patent, the patent number, issue date and classification. If the application has not been published, but is pending or abandoned then the FIU should determine whether the requester is:

(A) an inventor;

(B) an attorney or agent of record in the application;

(C) an assignee of record in the application; or

(D) a person with written authority from (A), (B), or (C).

If the requester is (A), (B), (C), or (D), as set forth above, then the requester is entitled to status information. If the requester is inquiring about whether a reply was received or when an Office action can be expected, the requester should be directed to call the Technology Center (TC) to which the application is assigned. The assignment of an application to a TC can be determined from PALM Intranet **.

If the requester is not (A), (B), (C), or (D), as set forth above, and the application is (1) identified by application number (or serial number and filing date) in a published patent document, or (2) an application claiming the benefit of the filing date of an application identified by application number (or serial number and filing date) in a published patent document, then a written request including a copy of a published patent document (United States or foreign) which refers to the specific application must be provided when requesting status information for the application. If the published patent document is not in English, then a translation of the pertinent part thereof must also be included. The published patent document may be presented in person to the FIU or in written correspondence to the U.S. Patent and Trademark Office, for example, by facsimile transmission. Any written correspondence must include a return address or facsimile number. If the application is referred to by application number or serial number and filing date in a published patent document (e.g., a U.S. patent, >a statutory invention registration,< a U.S. patent application publication, or an international application publication), or in a U.S. application open to public inspection, pursuant to 37 CFR *>1.14(a)<, the requester is entitled to status information for the application. (The published patent document will at least identify the application from which the patent itself was issued.) PALM Intranet ** should be used to determine the status of the application. If the requester asks whether there are any applications on file which claim the benefit of the filing date of the identified application, pursuant to 37 CFR *>1.14(a)(2)(iv)<, status information (application number, filing date and whether the application is pending, abandoned or patented) for the applications claiming benefit of the identified application may be given to the requester as well. PALM Intranet ** should be used to determine the application number and filing date of any applications claiming the benefit of the filing date of the identified application. The requester should be informed of the national applications listed in the “child” section of the screen. If the child application is not shown to have been patented **>, PALM Intranet< should be used to determine whether the application is pending or abandoned. Alternatively, ** PALM *>Intranet< may be used with the patent number for continuity data for the patent. Other information contained on the screen, such as whether the application is a Continuation-in-Part (CIP), continuation or divisional application, the date of abandonment of the application, and the issue date, may be confidential information and should not be communicated. As to the extent of the chain of applications for which status information is available, the rule applies only to subsequent and not prior applications.

Furthermore, if the requester is not (A), (B), (C), or (D), as set forth above, but the application is a national stage application or any application claiming the benefit of the filing date of a published international application and the United States of America has been indicated as a Designated State in the international application, pursuant to 37 CFR *>1.14(a)(2)(iv)<, the requester is entitled to status

information for the national stage application as well as any application claiming the benefit of the filing date of the published international application. A copy of the first page of the published international application or of the corresponding page of the PCT Gazette must be supplied with the status request. ** The status request should be **>made in writing to the Office of PCT Legal Administration< (see MPEP § 1730). Alternatively, inquiries relating to applications claiming the benefit of the filing date of a published international application may be directed to the PCT Help desk. Only the serial number and filing date, or application number, as well as whether the application is pending, abandoned, or patented may be given for the national stage application and for any applications claiming the benefit of the filing date of the referenced published international application. Other information contained on the >continuity data< screen, such as whether the application is a CIP, continuation or divisional application, the date of abandonment of the application and issue date may be confidential information and should not be communicated.

STATUS LOCATION INFORMATION FOR OFFICE PERSONNEL

When it is desired to determine the current location or status of an application, Office personnel should use PALM. >If the application is an Image File Wrapper (IFW) application, no location is associated with the file. For the location of any artifact file(s) associated with an IFW application, see the IFW Manual.<

**Office personnel requesting status/location information on * applications ** >prior to 07 series applications that are not< in the PALM system **>should< contact the FIU (see MPEP § 1730) where the numerical index records of the above mentioned applications are maintained.

103 Right of Public To Inspect Patent Files and Some Application Files [R-5]

37 CFR 1.11. Files open to the public.

**>

(a) The specification, drawings, and all papers relating to the file of: A published application; a patent; or a statutory invention registration are open to inspection by the public, and copies may be obtained upon the payment of the fee set forth in § 1.19(b)(2). If an application was published in redacted form pursuant to § 1.217, the complete file wrapper and contents of the patent application will not be available if: The requirements of paragraphs (d)(1), (d)(2), and (d)(3) of § 1.217 have been met in the application; and the application is still pending. See § 2.27 of this title for trademark files.<

(b) All reissue applications, all applications in which the Office has accepted a request to open the complete application to inspection by the public, and related papers in the application file, are open to inspection by the public, and copies may be furnished upon paying the fee therefor. The filing of reissue applications, other than continued prosecution applications under § 1.53(d) of reissue applications, will be announced in the *Official Gazette*. The announcement shall include at least the filing date, reissue application and original patent numbers, title, class and subclass, name of the inventor, name of the owner of record, name of the attorney or agent of record, and examining group to which the reissue application is assigned.

**>

(c) All requests for reexamination for which all the requirements of § 1.510 or § 1.915 have been satisfied will be announced in the *Official Gazette.* Any reexaminations at the initiative of the Director pursuant to § 1.520 will also be announced in the *Official Gazette*. The announcement shall include at least the date of the request, if any, the reexamination request control number or the Director initiated order control number, patent number, title, class and subclass, name of the inventor, name of the patent owner of record, and the examining group to which the reexamination is assigned.<

(d) All papers or copies thereof relating to a reexamination proceeding which have been entered of record in the patent or reexamination file are open to inspection by the general public, and copies may be furnished upon paying the fee therefor.

**>

(e) Except as prohibited in § 41.6(b), the file of any interference is open to public inspection and copies of the file may be obtained upon payment of the fee therefor.<

37 CFR 1.14. Patent applications preserved in confidence.

(a) *Confidentiality of patent application information.* Patent applications that have not been published under 35 U.S.C. 122(b) are generally preserved in confidence pursuant to 35 U.S.C. 122(a). Information concerning the filing, pendency, or subject matter of an application for patent, including status information, and access to the application, will only be given to the public as set forth in § 1.11 or in this section.

(1) Records associated with patent applications (see paragraph (g) for international applications) may be available in the following situations:

(i) *Patented applications and statutory invention registrations.* The file of an application that has issued as a patent or published as a statutory invention registration is available to the public as set forth in §1.11(a). A copy of the patent application-as-filed, the file contents of the application, or a specific document in the file of such an application may be provided upon request and payment of the appropriate fee set forth in § 1.19(b).

(ii) *Published abandoned applications.* The file of an abandoned application that has been published as a patent applica-

tion publication is available to the public as set forth in § 1.11(a). A copy of the application-as-filed, the file contents of the published application, or a specific document in the file of the published application may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b).

(iii) *Published pending applications.* A copy of the application-as-filed, the file contents of the application, or a specific document in the file of a pending application that has been published as a patent application publication may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b). If a redacted copy of the application was used for the patent application publication, the copy of the specification, drawings, and papers may be limited to a redacted copy. The Office will not provide access to the paper file of a pending application that has been published, except as provided in paragraph (c) or (h) of this section.

(iv) *Unpublished abandoned applications (including provisional applications) that are identified or relied upon.* The file contents of an unpublished, abandoned application may be made available to the public if the application is identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication of an international application that was published in accordance with PCT Article 21(2). An application is considered to have been identified in a document, such as a patent, when the application number or serial number and filing date, first named inventor, title and filing date or other application specific information are provided in the text of the patent, but not when the same identification is made in a paper in the file contents of the patent and is not included in the printed patent. Also, the file contents may be made available to the public, upon a written request, if benefit of the abandoned application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, or has published as a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, the file contents of the application, or a specific document in the file of the application may be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)).

(v) *Unpublished pending applications (including provisional applications) whose benefit is claimed.* A copy of the file contents of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the benefit of the application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, an application that has published as a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, or a specific document in the file of the pending application may also be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)). The Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

(vi) *Unpublished pending applications (including provisional applications) that are incorporated by reference or otherwise identified.* A copy of the application as originally filed of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the application is incorporated by reference or otherwise identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2). The Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

(vii) *When a petition for access or a power to inspect is required*. Applications that were not published or patented, that are not the subject of a benefit claim under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, an application that has published as a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2), or are not identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2), are not available to the public. If an application is identified in the file contents of another application, but not the published patent application or patent itself, a granted petition for access (see paragraph (h)) or a power to inspect (see paragraph (c)) is necessary to obtain the application, or a copy of the application.

(2) Information concerning a patent application may be communicated to the public if the patent application is identified in paragraphs (a)(1)(i) through (a)(1)(vi) of this section. The information that may be communicated to the public (*i.e.*, status information) includes:

(i) Whether the application is pending, abandoned, or patented;

(ii) Whether the application has been published under 35 U.S.C. 122(b);

(iii) The application "numerical identifier" which may be:

(A) The eight-digit application number (the two-digit series code plus the six-digit serial number); or

(B) The six-digit serial number plus any one of the filing date of the national application, the international filing date, or date of entry into the national stage; and

(iv) Whether another application claims the benefit of the application (*i.e.*, whether there are any applications that claim the benefit of the filing date under 35 U.S.C. 119(e), 120, 121 or 365 of the application), and if there are any such applications, the numerical identifier of the application, the specified relationship between the applications (*e.g.*, continuation), whether the application is pending, abandoned or patented, and whether the application has been published under 35 U.S.C. 122(b).

*****

I. ACCESS TO IMAGE FILE WRAPPER (IFW) APPLICATIONS

The USPTO adopted an electronic data processing system for the storage and maintenance of all records

associated with patent applications. All new applications filed on or after June 30, 2003 are stored in this system as an Image File Wrapper (IFW), and the IFW is the official record of the application. Similarly, as earlier filed pending applications are loaded into the IFW system, the electronic record will be the official record of the application. There is no corresponding paper file wrapper for IFW applications. When access to IFW applications is available to the public in the File Information Unit (FIU) and/or over the Internet, the public will be able to access pending and abandoned published patent applications pursuant to 37 CFR 1.14(a)(1)(ii) and (iii). If an application is an IFW application and FIU/Internet access is not yet available for IFW applications, then the file itself will not be available to the public for inspection. However, copies of the application file may be obtained pursuant to 37 CFR 1.14(a)(1)(ii) and (iii).

II. PUBLISHED U.S. PATENT APPLICATIONS

37 CFR 1.14. Patent applications preserved in confidence.

(a) *Confidentiality of patent application information.* Patent applications that have not been published under 35 U.S.C. 122(b) are generally preserved in confidence pursuant to 35 U.S.C. 122(a). Information concerning the filing, pendency, or subject matter of an application for patent, including status information, and access to the application, will only be given to the public as set forth in § 1.11 or in this section.

(1) Records associated with patent applications (see paragraph (g) for international applications) may be available in the following situations:

*****

(ii) *Published abandoned applications.* The file of an abandoned application that has been published as a patent application publication is available to the public as set forth in § 1.11(a). A copy of the application-as-filed, the file contents of the published application, or a specific document in the file of the published application may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b).

(iii) *Published pending applications.* A copy of the application-as-filed, the file contents of the application, or a specific document in the file of a pending application that has been published as a patent application publication may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b). If a redacted copy of the application was used for the patent application publication, the copy of the specification, drawings, and papers may be limited to a redacted copy. The Office will not provide access to the paper file of a pending application that has been published, except as provided in paragraph (c) or (h) of this section.

*****

If a patent application has been published pursuant to 35 U.S.C. 122(b), then a copy of the specification, drawings, and all papers relating to the file of that published application (whether abandoned or pending) may be provided to any person upon written request and payment of the fee set forth in 37 CFR 1.19(b). See 37 CFR 1.14(a)(1)(ii) and (iii). If a redacted copy of the application was used for the patent application publication, the copy of the application will be limited to the redacted copy of the application and the redacted materials provided under 37 CFR 1.217(d).

See paragraph I., above, for information pertaining to access to Image File Wrapper (IFW) applications. >Published applications maintained in the IFW system are available on the USPTO's Internet website in the public Patent Application Information Retrieval (PAIR) system.< If the published patent application is pending >and it is not maintained in the IFW system<, the >paper< application file itself will not be available to the public for inspection. Only copies of the application file may be obtained pursuant to 37 CFR 1.14(a)(1)(iii). If the published patent application is abandoned, the entire application is available to the public for inspection and obtaining copies. See 37 CFR 1.11(a).

III. UNPUBLISHED ABANDONED AND PENDING APPLICATIONS (INCLUDING PROVISIONAL APPLICATIONS) THAT ARE IDENTIFIED

37 CFR 1.14. Patent applications preserved in confidence.

*****

(a) *Confidentiality of patent application information.* Patent applications that have not been published under 35 U.S.C. 122(b) are generally preserved in confidence pursuant to 35 U.S.C. 122(a). Information concerning the filing, pendency, or subject matter of an application for patent, including status information, and access to the application, will only be given to the public as set forth in § 1.11 or in this section.

(1) Records associated with patent applications (see paragraph (g) for international applications) may be available in the following situations:

*****

(iv) *Unpublished abandoned applications (including provisional applications) that are identified or relied upon.* The file contents of an unpublished, abandoned application may be made

available to the public if the application is identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication of an international application that was published in accordance with PCT Article 21(2). An application is considered to have been identified in a document, such as a patent, when the application number or serial number and filing date, first named inventor, title and filing date or other application specific information are provided in the text of the patent, but not when the same identification is made in a paper in the file contents of the patent and is not included in the printed patent. Also, the file contents may be made available to the public, upon a written request, if benefit of the abandoned application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, or has published as a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, the file contents of the application, or a specific document in the file of the application may be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)).

*****

(vi) *Unpublished pending applications (including provisional applications) that are incorporated by reference or otherwise identified*. A copy of the application as originally filed of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the application is incorporated by reference or otherwise identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2). The Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

*****

Abandoned applications meeting the requirements of 37 CFR 1.14(a)(1)(iv) and any application that is open to the public under 37 CFR 1.11 may be obtained by any person upon written request to the FIU without the specific written authority of the applicant, assignee, attorney or agent of record or Director. The following abandoned applications are available from the FIU: (A) An abandoned application referred to in a U.S. patent application publication or U.S. patent; and (B) a pending File Wrapper Continuation application (FWC) filed under former 37 CFR 1.62 of an abandoned application that meets the requirements of 37 CFR 1.14(a)(1)(iv). Under former 37 CFR 1.62(f), where access is permitted to an application within the file wrapper of a FWC application, the applicant has waived the right to keep all earlier filed applications in the same file wrapper in confidence.

37 CFR 1.14(a)(1)(i) relates only to United States applications that are open to public inspection. See 37 CFR 1.14(g)(3)-(5) for access to international applications where the U.S. is designated. See also MPEP § 110. If an abandoned application is referred to in an international application that is published in accordance with PCT Article 21(2), access to the abandoned application is available under 37 CFR 1.14(a)(1)(iv).

An abandoned non-IFW application identified in a U.S. patent application publication, U.S. patent or a U.S. application that is open to public inspection may be ordered for inspection by any member of the public through the FIU. An abandoned file received by a member of the public must be returned to the charge counter in the FIU before closing the same day it is received. If the abandoned application is contained within a pending FWC application, the requester will generally be directed to the appropriate Technology Center (TC) to inquire as to the availability of the pending FWC application. If the pending FWC application is available, it will be forwarded to the FIU for the requester to pick-up. See paragraph I., above, for information pertaining to access to IFW applications.

The incorporation by reference of a pending application in a U.S. patent application publication, a U.S. patent, a published international application published in accordance with PCT Article 21(2), or a statutory invention registration constitutes a special circumstance under 35 U.S.C. 122 warranting that a copy of the application-as-filed be provided upon written request as provided in 37 CFR 1.14(a)(1)(iv). In addition, if a U.S. patent application publication, a U.S. patent, or a published international application claims benefit under 35 U.S.C. 119(e), 120, 121, or 365 to a U.S. patent application, a copy of that application-as-filed may be provided upon written request, >or available through the public PAIR system if the application is maintained in the IFW system<. A benefit claim in an international application that does not designate the United States is not a claim under 35 U.S.C. 119(e), 120, 121 or 365. The written request, including a copy of the page of the patent application publication, U.S. patent, or published international application including the incorporation by reference or specific reference under 35 U.S.C. 119(e), 120,

121, or 365, and the requisite fee set forth in 37 CFR 1.19(b)(1), should be directed to the Certification Division. However, an incorporation by reference that is made as part of a transmittal letter for the application, or that is a part of the text of the application that has been canceled and which does not appear as part of the printed patent, may not be relied upon to obtain a copy of the application as originally filed. A petition for access with an explanation of special circumstances other than the not-printed incorporation by reference will be required. See 37 CFR 1.14(a)(1)(vii).

Copies of a patent application-as-filed and the contents of a patent application file wrapper may be ordered from the Certification Division with a facsimile request and payment of the appropriate fee under 37 CFR 1.19(b) by USPTO Deposit Account, American Express®, Discover®, MasterCard®, or Visa® by any person having a right to access to the originally filed application or patent. The Office does not provide for access to non-United States applications.

Form PTO/SB/68 may be used to request access.

Paper No._____

I hereby request access under 37 CFR 1.14(a)(1)(iv) to the application file record of the above-identified ABANDONED application, which is not within the file jacket of a pending Continued Prosecution Application (CPA) (37 CFR 1.53(d)) and which is identified in, or to which a benefit is claimed, in the following document (as shown in the attachment):

United States Patent Application Publication No. _____, page, _____ line _____,

United States Patent Number _____, column _____, line, _____ or

WIPO Pub. No._____, page _____, line _____.

Related Information About Access to Applications Maintained in the Image File Wrapper System (IFW) and Access to Pending Applications in General

A member of the public, acting without a power to inspect, cannot order applications maintained in the IFW system through the FIU. If the member of the public is entitled to a copy of the application file, then the file is made available through the Public Patent Application Information Retrieval system (Public PAIR) on the USPTO internet web site (www.uspto.gov). Terminals that allow access to Public PAIR are available in the Public Search Room. The member of the public may also be entitled to obtain a copy of all or part of the application file upon payment of the appropriate fee. Such copies must be purchased through the **Office of Public Records** upon payment of the appropriate fee (37 CFR 1.19(b)).

For **published** applications that are still pending, a member of the public may obtain **a copy** of: the file contents; the pending application as originally filed; or any document in the file of the pending application.

For **unpublished** applications that are still pending:

(1) If the benefit of the pending application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in another application that has: (a) issued as a U.S. patent, or (b) published as a statutory invention registration, a U.S. patent application publication, or an international patent application publication in accordance with PCT Article 21(2), a member of the public may obtain **a copy** of: the file contents; the pending application as originally filed; or any document in the file of the pending application.

(2) If the application is incorporated by reference or otherwise identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication in accordance with PCT Article 21(2), a member of the public may obtain **a copy** of the pending application as originally filed.

This collection of information is required by 37 CFR 1.11 and 1.14. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **BRING TO: File Information Unit, Room 2E04, 2900 Crystal Drive, Arlington, Virginia.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

<

IV. ACCESS WHERE PART OF AN APPLICATION IS INCORPORATED BY REFERENCE IN A U.S. PATENT APPLICATION PUBLICATION OR A U.S. PATENT

37 CFR 1.14(a)(1)(vi) permits a member of the public, without a petition for access, to obtain a copy of a pending application as originally filed, when the application is incorporated by reference in a U.S. patent application publication or a U.S. patent, upon the filing of an appropriate request and the payment of the required fee. However, if only part of the application is incorporated by reference, for example, where an application states, "the disclosure of a valve on page 5, lines 5-35, of application No. XX/YYY,YYY, is hereby incorporated by reference," then a petition for access is required to obtain access to or a copy of the incorporated material. Incorporation by reference of part of an application in a U.S. patent application publication or a U.S. patent constitutes a special circumstances under 35 U.S.C. 122(a) warranting that access to that part of the original disclosure of the application be granted on petition. The incorporation by reference will be interpreted as a waiver of confidentiality of only that part of the original disclosure as filed, and not the entire application file. *In re Gallo*, 231 USPQ 496 (Comm'r Pat. 1986). If applicant objects to access to the entire application file, applicant must file two copies of the information incorporated by reference along with the objection. In the example given, applicant would be required to provide two copies of page 5, lines 5-35 of the XX/YYY,YYY application. Failure to provide the material within the time period provided will result in the entire application content (including prosecution history) being made available to the petitioner. The Office will not attempt to separate the noted materials from the remainder of the application. Compare *In re Marsh Eng'g. Co.*, 1913 C.D. 183 (Comm'r Pat. 1913).

V. PETITION FOR ACCESS

37 CFR 1.14. Patent applications preserved in confidence.

>

(a) *Confidentiality of patent application information.* Patent applications that have not been published under 35 U.S.C. 122(b) are generally preserved in confidence pursuant to 35 U.S.C. 122(a). Information concerning the filing, pendency, or subject matter of an application for patent, including status information, and access to the application, will only be given to the public as set forth in § 1.11 or in this section.

(1) Records associated with patent applications (see paragraph (g) for international applications) may be available in the following situations:<

*****

(vii) *When a petition for access or a power to inspect is required.* Applications that were not published or patented, that are not the subject of a benefit claim under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, an application that has published as a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2), or are not identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2), are not available to the public. If an application is identified in the file contents of another application, but not the published patent application or patent itself, a granted petition for access (see paragraph (h)) or a power to inspect (see paragraph (c)) is necessary to obtain the application, or a copy of the application.

*****

(h) *Access or copies in other circumstances*. The Office, either *sua sponte* or on petition, may also provide access or copies of all or part of an application if necessary to carry out an Act of Congress or if warranted by other special circumstances. Any petition by a member of the public seeking access to, or copies of, all or part of any pending or abandoned application preserved in confidence pursuant to paragraph (a) of this section, or any related papers, must include:

(1) **>The fee set forth in § 1.17(g); and<

(2) A showing that access to the application is necessary to carry out an Act of Congress or that special circumstances exist which warrant petitioner being granted access to all or part of the application.

Any interested party may file a petition, accompanied by the petition fee, to the Director for access to an application. Inasmuch as the post office address is necessary for the complete identification of the petitioner, it should always be included complete with ZIP Code number. In addition, telephone and facsimile numbers should be provided to expedite handling of the petition. Petitions for access are handled in the Office of Patent Legal Administration, unless the application is involved in an interference. See MPEP § 1002.02(b).

The petition may be filed either with proof of service of copy upon the applicant, assignee of record, or attorney or agent of record in the application to which

access is sought, or the petition may be filed in duplicate, in which case the duplicate copy will be sent by the Office to the applicant, assignee of record, or attorney or agent of record in the application (hereinafter "applicant"). A separate petition, with fee, must be filed for each application file to which access is desired. Each petition should show not only why access is desired, but also why petitioner believes he or she is entitled to access. The applicant will normally be given a limited period such as 3 weeks within which to state any objection to the granting of the petition for access and reasons why it should by denied. If applicant states that he or she has no objection to the requested access, the petition will be granted. If objection is raised or applicant does not respond, the petition will be decided on the record. If access is granted to the application, any objections filed by the applicant will be available to the petitioner since these papers are in the application file. If access to the application is denied, petitioner will not receive copies of any objections filed by the applicant. A determination will be made whether "special circumstances" are present which warrant a grant of access under 35 U.S.C. 122. See below when the application is the basis of a claim for benefit of an earlier filing date under 35 U.S.C. 120 or part of the application is incorporated by reference in a United States patent. "Special circumstances" could be found where an applicant has relied upon his or her application as a means to interfere with a competitor's business or customers. See *In re Crossman*, 187 USPQ 367 (PTO Solicitor 1975); *In re Trimless Cabinets*, 128 USPQ 95 (Comm'r Pat. 1960); and *Ex parte Bonnie-B Co.*, 1923 C.D. 42, 313 O.G. 453 (Comm'r Pat. 1922). Furthermore, "special circumstances" could be found where an attorney or agent of record in an application in which a provisional double patenting rejection is made does not have power of attorney in the copending application having a common assignee or inventor. However, a more expeditious means of obtaining access would be to obtain power to inspect from an assignee or inventor. See MPEP § 104 and § 106.01.

VI. ACCESS WHERE PATENT CLAIMS 35 U.S.C. 119(e) 120, 121, or 365 BENEFIT

37 CFR 1.14. Patent applications preserved in confidence.

(a) *Confidentiality of patent application information.* Patent applications that have not been published under 35 U.S.C. 122(b) are generally preserved in confidence pursuant to 35 U.S.C. 122(a). Information concerning the filing, pendency, or subject matter of an application for patent, including status information, and access to the application, will only be given to the public as set forth in § 1.11 or in this section.

(1) Records associated with patent applications (see paragraph (g) for international applications) may be available in the following situations:

*****

(iv) *Unpublished abandoned applications (including provisional applications) that are identified or relied upon.* The file contents of an unpublished, abandoned application may be made available to the public if the application is identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication of an international application that was published in accordance with PCT Article 21(2). An application is considered to have been identified in a document, such as a patent, when the application number or serial number and filing date, first named inventor, title and filing date or other application specific information are provided in the text of the patent, but not when the same identification is made in a paper in the file contents of the patent and is not included in the printed patent. Also, the file contents may be made available to the public, upon a written request, if benefit of the abandoned application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, or has published as a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, the file contents of the application, or a specific document in the file of the application may be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)).

(v) *Unpublished pending applications (including provisional applications) whose benefit is claimed.* A copy of the file contents of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the benefit of the application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, an application that has published as a statutory invention registration, a U.S. patent application publication, or an international patent application publication that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, or a specific document in the file of the pending application may also be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)). The Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

(vi) *Unpublished pending applications (including provisional applications) that are incorporated by reference or otherwise identified.* A copy of the application as originally filed of an unpublished pending application may be provided to any person, upon written request and payment of the appropriate fee (§ 1.19(b)), if the application is incorporated by reference or otherwise identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent

application publication that was published in accordance with PCT Article 21(2). The Office will not provide access to the paper file of a pending application, except as provided in paragraph (c) or (h) of this section.

Whenever a patent relies on the filing date of an earlier but still pending application, the Office permits an applicant to obtain a copy of the prior application, either as originally filed or of the pending file history, upon written request (to the Office of Public Records) and payment of the appropriate fee. Furthermore, after publication of an international application that was published in accordance with PCT Article 21(2), a U.S. patent, a U.S. patent application publication, or a statutory invention registration, the file contents of any abandoned application identified or relied upon in such a publication are available pursuant to 37 CFR 1.14(a)(1)(iv). If the application is pending and benefit of the application is claimed pursuant to 35 U.S.C. 119(e), 120, 121 or 365 in such a patent document, then the file contents of the application are available pursuant to 37 CFR 1.14(a)(1)(v). >Such a patent application is available through the public PAIR system if the application is maintained in the IFW system.<

VII. ACCESS TO PROVISIONAL APPLICATIONS

In provisional applications, access or certified copies will only be given to parties with written authority from a named inventor, the assignee of record, or the attorney or agent of record. Since provisional applications do not require an oath or declaration, there may be no power of attorney in the application. If there is no power of attorney in the provisional application, a certified copy requested by the registered attorney or agent named in the papers accompanying the provisional application papers will be supplied to the correspondence address of the provisional application. Provisional applications are also available in the same manner as any other application. For example, an application that is relied upon for priority in a U.S. patent and is abandoned is available under 37 CFR 1.14(a)(1)(iv) >and, as a result may be available through public PAIR<.

VIII. APPLICATION AT BOARD OF PATENT APPEALS AND INTERFERENCES

The Board of Patent Appeals and Interferences handles all *>requests< for access to applications involved in an interference. See 37 CFR* >41.109<.

IX. DEFENSIVE PUBLICATIONS

If a defensive publication has been published, the entire application is available to the public for inspection and obtaining copies. See MPEP § 711.06.

X. REISSUE APPLICATIONS

37 CFR 1.11(b) opens all reissue applications filed after March 1, 1977 to inspection by the general public. 37 CFR 1.11(b) also provides for announcement of the filings of reissue applications in the *Official Gazette* (except for continued prosecution applications filed under 37 CFR 1.53(d)). This announcement will give interested members of the public an opportunity to submit to the examiner information pertinent to patentability of the reissue application.

37 CFR 1.11(b) is applicable only to those reissue applications filed on or after March 1, 1977. Those reissue applications previously on file will not be automatically open to inspection but a liberal policy will be followed by the Special Program Examiner in granting petitions for access to such applications. See Paragraph I. above for information pertaining to access to IFW applications.

For those reissue applications filed on or after March 1, 1977, the following procedure will be observed:

(A) The filing of reissue applications will be announced in the *Official Gazette* (except for continued prosecution applications filed under 37 CFR 1.53(d)) and will include certain identifying data as specified in 37 CFR 1.11(b). Any member of the general public may request access to a particular reissue application filed after March 1, 1977.

(B) Following the announcement in the *Official Gazette*, the pending reissue application files >(other than those that are maintained in the IFW system)< will be maintained in the TCs and inspection thereof will be supervised by TC personnel. Although no general limit is placed on the amount of time spent reviewing the files, the Office may impose limita-

tions, if necessary. No access will be permitted while the application is actively being processed.

(C) Where the reissue application >(other than those that are maintained in the IFW system)< has left the TC for administrative processing, requests for access should be directed to the appropriate supervisory personnel in the division or branch where the application is currently located.

(D) The reissue application file is not available to the public once the reissue application file has been released and forwarded by the TC for publication of the reissue patent>, except if the reissue application file is maintained in the IFW system then the reissue application file would be available through the public PAIR system<. This would include any reissue application files which have been selected for a post-allowance screening in the Office of Patent Legal Administration. Unless prosecution is reopened pursuant to the screening, the reissue application files are not available to the public until the reissue patent issues. This is because the reissue application file is put into a special format for printing purposes upon forwarding the application file for publication, and its release to the public would constitute a disruption of the publication process.

(E) Requests for copies of papers in the reissue application file must be in writing addressed to Mail Stop Document Services, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450 and may be either mailed or delivered to the Customer Service Window. The price for a copy of an application as filed is set forth in 37 CFR 1.19(b)(1). Since no useful purpose is seen for retaining such written request for copies of papers in reissue applications, they should be destroyed after the order has been completed.

XI. REQUEST FOR REEXAMINATION

An announcement of the filing of each request for reexamination in which the entire fee has been paid, and of each reexamination ordered at the initiative of the Director under 37 CFR 1.520, will be published in the *Official Gazette*. A reexamination file is normally NOT open to inspection by the general public until the file has been scanned into the reexamination database in the Central Reexamination Unit (CRU), at which point an electronic copy of the file is made available to the public. A Reexamination Processing System (REPS) terminal is available to the public in the Patent Search Room for accessing/copying reexamination files from the reexamination database. Access is free, and copies are 25 cents per page. All reexamination files are available to the public in electronic format only. See also MPEP § 2232.

XII. DECISIONS **>BY THE DIRECTOR<

37 CFR 1.14. Patent applications preserved in confidence.

*****

**>

(e) *Decisions by the Director*. Any decision by the Director that would not otherwise be open to public inspection may be published or made available for public inspection if:

(1) The Director believes the decision involves an interpretation of patent laws or regulations that would be of precedential value; and

(2) The applicant is given notice and an opportunity to object in writing within two months on the ground that the decision discloses a trade secret or other confidential information. Any objection must identify the deletions in the text of the decision considered necessary to protect the information, or explain why the entire decision must be withheld from the public to protect such information. An applicant or party will be given time, not less than twenty days, to request reconsideration and seek court review before any portions of a decision are made public under this paragraph over his or her objection<

*****

>

37 CFR 41.6. Public availability of Board records.

(a) *Publication*. (1) *Generally*. Any Board action is available for public inspection without a party's permission if rendered in a file open to the public pursuant to § 1.11 of this title or in an application that has been published in accordance with §§ 1.211 to 1.221 of this title. The Office may independently publish any Board action that is available for public inspection.

(2) *Determination of special circumstances*. Any Board action not publishable under paragraph (a)(1) of this section may be published or made available for public inspection if the Director believes that special circumstances warrant publication and a party does not, within two months after being notified of the intention to make the action public, object in writing on the ground that the action discloses the objecting party's trade secret or other confidential information and states with specificity that such information is not otherwise publicly available. If the action discloses such information, the party shall identify the deletions in the text of the action considered necessary to protect the information. If the affected party considers that the entire action must be withheld from the public to protect such information, the party must explain why. The party will be given time, not less than twenty days, to request reconsideration and seek court review

before any contested portion of the action is made public over its objection.

(b) *Record of proceeding*. (1) The record of a Board proceeding is available to the public unless a patent application not otherwise available to the public is involved.

(2) Notwithstanding paragraph (b)(1) of this section, after a final Board action in or judgment in a Board proceeding, the record of the Board proceeding will be made available to the public if any involved file is or becomes open to the public under § 1.11 of this title or an involved application is or becomes published under §§ 1.211 to 1.221 of this title.<

37 CFR 1.14(e) states the conditions under which significant decisions **>by the Director< that would not otherwise be open to public inspection will be made available to the public. 37 CFR **>41.6 describes the procedure for making a decision< of the Board of Patent Appeals and Interferences **>available to the public. These sections are< applicable to decisions deemed by the Director to involve an interpretation of patent laws or regulation that would be of significant precedent value, where such decisions are contained in either pending or abandoned applications or in interference files not otherwise open to the public. It is applicable whether or not the decision is a final decision of the U.S. Patent and Trademark Office.

37 CFR 1.14(e) *>and 37 CFR 41.6 are< considered to place a duty on the U.S. Patent and Trademark Office to identify significant decisions and to take the steps necessary to inform the public of such decisions, by publication of such decisions, in whole or in part. It is anticipated, however, that no more than a few dozen decisions per year will be deemed of sufficient importance to warrant publication under the authority of this section.

XIII. FOIA REQUESTS

37 CFR 102.4. Requirements for making requests.

(a) A request for USPTO records that are not customarily made available to the public as part of USPTO's regular informational services must be in writing, and shall be processed under FOIA, regardless of whether FOIA is mentioned in the request. Requests should be sent to the USPTO FOIA Officer, United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450 (records FOIA requires to be made regularly available for public inspection and copying are addressed in § 102.2(c)). For the quickest handling, the request letter and envelope should be marked "Freedom of Information Act Request." For requests for records about oneself, § 102.24 contains additional requirements. For requests for records about another individual, either a written authorization signed by that individual permitting disclosure of those records to the requester or proof that individual is deceased (for example, a copy of a death certificate or an obituary) facilitates processing the request.

(b) The records requested must be described in enough detail to enable USPTO personnel to locate them with a reasonable amount of effort. Whenever possible, a request should include specific information about each record sought, such as the date, title or name, author, recipient, and subject matter of the record, and the name and location of the office where the record is located. Also, if records about a court case are sought, the title of the case, the court in which the case was filed, and the nature of the case should be included. If known, any file designations or descriptions for the requested records should be included. In general, the more specifically the request describes the records sought, the greater the likelihood that USPTO will locate those records. If the FOIA Officer determines that a request does not reasonably describe records, the FOIA Officer will inform the requester what additional information is needed or why the request is otherwise insufficient. The FOIA Officer also may give the requester an opportunity to discuss the request so that it may be modified to meet the requirements of this section.

Many decisions of the Office are available on the FOIA section of the U.S. Patent and Trademark Office website at www.uspto.gov/web/offices/com/sol/foia/index.html. See 37 CFR Part 102, Subpart A, "Freedom of Information Act," for rules pertaining to FOIA requests.

104 Power to Inspect Application [R-5]

37 CFR 1.14. Patent applications preserved in confidence.

*****

(c) *Power to inspect a pending or abandoned application*. Access to an application may be provided to any person if the application file is available, and the application contains written authority (*e.g.*, a power to inspect) granting access to such person. The written authority must be signed by:

(1) An applicant;

(2) An attorney or agent of record;

(3) An authorized official of an assignee of record (made of record pursuant to § 3.71 of this chapter); or

(4) A registered attorney or agent named in the papers accompanying the application papers filed under § 1.53 or the national stage documents filed under § 1.495, if an executed oath or declaration pursuant to § 1.63 or § 1.497 has not been filed.

*****

If an executed oath or declaration pursuant to 37 CFR 1.63 or 1.497 has been filed, no person but the applicant (any one of joint applicants), an attorney or agent of record (if a power of attorney was filed), or an assignee whose assignment is of record, will be permitted to have access to the file of any pending application >kept in confidence under 35 U.S.C.

122(a)<, except as provided for under 37 CFR *>1.11 or 1.14<, former 37 CFR 1.62(f), or under the interference rules, unless written authority from one of the above indicated parties, identifying the application to be inspected and the name of the person authorized to have access, is made of record, or upon the written order of the Director, which will also become a part of the record of the application.

A person acting in a representative capacity under 37 CFR 1.34* may execute a power to inspect an application only if the attorney or agent was named in the application transmittal papers filed under 37 CFR 1.53 or the national stage documents filed under 37 CFR 1.495 and an executed oath or declaration has not been filed. Once an executed oath or declaration has been filed, any previously filed power to inspect signed by an registered attorney or agent who does not have a power of attorney will cease to have effect. For a discussion of power of attorney in an application, see MPEP § 402.

Approval by the primary examiner of a power to inspect is *not* required. The technical support staff of the Technology Center (TC) to which the application is assigned ascertains that the power is properly signed by one of the above indicated parties, and if acceptable, enters it into the file. If the power to inspect is unacceptable, notification of nonentry is written by the technical support staff to the person who signed the power.

When a power to inspect is received while a file is under the jurisdiction of a service branch, such as the Customer Services Division, the Service Branch of the Board of Patent Appeals and Interferences, and the Publishing Division of the Office of Patent Publication, the question of permission to inspect is decided by the head of the branch who, if he or she approves, indicates the approval directly on the power (in the "Office use only" section).

Powers to inspect are not accepted in Image File Wrapper (IFW) applications. IFW applications are available through the Private Patent Application Information Retrieval (PAIR) system, and *pro se* applicants and attorneys of record have direct access to the IFW through Private PAIR (when a Customer Number is associated with the correspondence address for the application, and the applicant or attorney has access to Private PAIR for the customer number). In **>addition<, IFW application files of published applications or patents **>are< available at least through Public PAIR. If for some reason an applicant, assignee, or attorney or agent of record cannot view an IFW application through PAIR, then a copy of the application must be purchased from the Office of Public Records.

A "power to inspect" is, in effect, the same as a "power to inspect and make copies."

Where an applicant relied on his or her application as a means to interfere with a competitor's business or customers, permission to inspect the application may be given the competitor by the Director. *Ex parte Bonnie-B Co.*, 1923 C.D. 42, 313 O.G. 453, (Comm'r Pat. 1922). Such permission is via petition for access under 37 CFR 1.14(h).

An unrestricted power to inspect given by an applicant is, under existing practice, recognized as in effect until and unless rescinded. The same is true in the case of one given by the attorney or agent of record, or assignee so long as such attorney or agent, or assignee retains his or her connection with the application.

Permission to inspect given by the Director, however, is not of a continuing nature, since the conditions that justified the permission to inspect when given may not apply at a later date.

ACCESS TO PATENT APPLICATIONS (PROVISIONAL AND NONPROVISIONAL) AND INTERFERENCE FILES

In order to ensure that access to patent applications, other than applications that are available pursuant to 37 CFR 1.11 or 1.14, and interference files is given only to persons who are entitled thereto or who are specially authorized to have access under 37 CFR >1.11,< 1.14 >and 41.6< and to ensure also that the file record identifies any such specially authorized person who has been given access to a file, the following practice will be observed by all personnel of the U.S. Patent and Trademark Office:

(A) Access, as provided for in the rules, will be given on *oral request* to any applicant, patentee, assignee, or attorney or agent of record in an application or patent only upon *proof of identity* or upon recognition based on personal acquaintance.

(B) Where a power of attorney or authorization of agent was given to a registered firm prior to July 2, 1971, access will be given upon oral request as in

paragraph (A) above to any registered member or employee of the firm who has signatory power for the firm.

(C) Unregistered employees of attorneys or agents, public stenographers, and all other persons not within the provisions of paragraphs (A) and (B) above will be given access only upon presentation of a *written authorization for access* (power to inspect) signed by a person specified in paragraph (A) above, which authorization will be entered as a part of the official file. The power to inspect must *specifically* name the person who is entitled to inspect and copy the application. An associate or representative of the named person is not entitled to access to the application on behalf of the authorized person. Further, the power to inspect must specifically identify the application by application number and be limited to a single application. Form PTO/SB/67 may be used for this purpose.

(D) In provisional applications, access or certified copies may only be requested by parties with written authority from a named inventor, the assignee of record, or the attorney or agent of record, unless the application is available pursuant to 37 CFR 1.14(a)(1)(iv)-(vi). Since provisional applications do not require an oath or declaration, there may be no power of attorney in the application. If the person requesting a certified copy is not a named inventor, assignee of record, or an attorney or agent of record, the requested certified copy will be supplied to the correspondence address of the provisional application.

105 Suspended or Excluded Practitioner Cannot Inspect [R-2]

U.S. Patent and Trademark Office (USPTO) employees are forbidden to hold either oral or written communication with an attorney or agent who has been suspended or excluded from practice by the USPTO regarding an application unless it *>is< one in which said attorney or agent is the applicant. Power to inspect given to such an attorney or agent will not be accepted.

106 Control of Inspection by Assignee [R-5]

The assignee of record of the entire interest in an application may intervene in the prosecution of the application, appointing an attorney or agent of his or her own choice. See 37 CFR 3.71. Such intervention, however, does not exclude the applicant from access to the application to see that it is being prosecuted properly, unless the assignee makes specific request to that effect. Any request to prevent the inventor from obtaining access to the file should be filed as a separate paper, 37 CFR 1.4(c), and should be directed to the Office of Petitions. If the request is granted, the inventor will be informed that he or she will only be permitted to inspect the application on sufficient showing why such inspection is necessary to conserve his or her rights, *In re The Kellogg Switchboard & Supply Company,* 1906 C.D. 274 (Comm'r Pat. 1906)**>. Of course, after the application has published pursuant to 35 U.S.C. 122(b), the application will be available to the public and any restriction on the inventor to access his or her application previously granted will no longer be in effect.<

106.01 Rights of Assignee of Part Interest

While it is only the assignee of record of the entire interest who can intervene in the prosecution of an application or interference to the exclusion of the applicant, an assignee of a part interest or a licensee of exclusive right is entitled to inspect the application. See also MPEP § 402.10 for applications accorded status under 37 CFR 1.47.

110 Confidential Nature of International Applications [R-2]

PCT Article 30.

Confidential Nature of the International Application.

(1)(a) Subject to the provisions of subparagraph (b), the International Bureau and the International Searching Authorities shall not allow access by any person or authority to the international application before the international publication of that application, unless requested or authorized by the applicant.

(b) The provisions of subparagraph (a) shall not apply to any transmittal to the competent International Searching Authority, to transmittals provided for under Article 13, and to communications provided for under Article 20.

(2)(a) No national Office shall allow access to the international application by third parties unless requested or authorized by the applicant, before the earliest of the following dates:

(i) date of the international publication of the international application,

(ii) date of receipt of the communication of the international application under Article 20,

(iii) date of receipt of a copy of the international application under Article 22.

(b) The provisions of subparagraph (a) shall not prevent any national Office from informing third parties that it has been designated, or from publishing that fact. Such information or publication may, however, contain only the following data: identification of the receiving Office, name of the applicant, international filing date, international application number, and title of the invention.

(c) The provisions of subparagraph (a) shall not prevent any designated Office from allowing access to the international application for the purposes of the judicial authorities.

(3) The provisions of paragraph (2)(a) shall apply to any receiving Office except as so far as transmittals provided for under Article 12(1) are concerned.

(4) For the purposes of this Article, the term "access" covers any means by which third parties may acquire cognizance, including individual communication and general publication, provided, however, that no national Office shall generally publish an international application or its translation before the international publication or, if international publication has not taken place by the expiration of 20 months from the priority date, before the expiration of 20 months from the said priority date.

PCT Article 38.
Confidential Nature of the International Preliminary Examination.

(1) Neither the International Bureau nor the International Preliminary Examining Authority shall, unless requested or authorized by the applicant, allow access within the meaning, and with the proviso, of Article 30(4) to the file of the international preliminary examination by any person or authority at any time, except by the elected Offices once the international preliminary examination report has been established.

(2) Subject to the provisions of paragraph (1) and Articles 36(1) and (3) and 37(3)(b), neither the International Bureau nor the International Preliminary Examining Authority shall, unless requested or authorized by the applicant, give information on the issuance or non-issuance of an international preliminary examination report and on the withdrawal or non-withdrawal of the demand or of any election.

35 U.S.C. 368. Secrecy of certain inventions; filing international applications in foreign countries.

(a) International applications filed in the Patent and Trademark Office shall be subject to the provisions of chapter 17 of this title.

(b) In accordance with article 27 (8) of the treaty, the filing of an international application in a country other than the United States on the invention made in this country shall be considered to constitute the filing of an application in a foreign country within the meaning of chapter 17 of this title, whether or not the United States is designated in that international application.

(c) If a license to file in a foreign country is refused or if an international application is ordered to be kept secret and a permit refused, the Patent and Trademark Office when acting as a Receiving Office, International Searching Authority, or International Preliminary Examining Authority, may not disclose the contents of such application to anyone not authorized to receive such disclosure.

Although most international applications are published soon after the expiration of 18 months from the priority date, PCT Article 21(2)(a), such publication does not open up the Home Copy or Search Copy to the public for inspection, except as provided in 37 CFR *>1.14(g)<.

37 CFR 1.14. Patent applications preserved in confidence.

*****

**>

(g) *International applications.*

(1) Copies of international application files for international applications which designate the U.S. and which have been published in accordance with PCT Article 21(2), or copies of a document in such application files, will be furnished in accordance with PCT Articles 30 and 38 and PCT Rules 94.2 and 94.3, upon written request including a showing that the publication of the application has occurred and that the U.S. was designated, and upon payment of the appropriate fee (see § 1.19(b)), if:

(i) With respect to the Home Copy (the copy of the international application kept by the Office in its capacity as the Receiving Office, see PCT Article 12(1)), the international application was filed with the U.S. Receiving Office;

(ii) With respect to the Search Copy (the copy of an international application kept by the Office in its capacity as the International Searching Authority, see PCT Article 12(1)), the U.S. acted as the International Searching Authority, except for the written opinion of the International Searching Authority which shall not be available until the expiration of thirty months from the priority date; or

(iii) With respect to the Examination Copy (the copy of an international application kept by the Office in its capacity as the International Preliminary Examining Authority), the United States acted as the International Preliminary Examining Authority, an International Preliminary Examination Report has issued, and the United States was elected.

(2) A copy of an English language translation of a publication of an international application which has been filed in the United States Patent and Trademark Office pursuant to 35 U.S.C. 154(d)(4) will be furnished upon written request including a showing that the publication of the application in accordance with PCT Article 21(2) has occurred and that the U.S. was designated, and upon payment of the appropriate fee (§ 1.19(b)(4)).

(3) Access to international application files for international applications which designate the U.S. and which have been published in accordance with PCT Article 21(2), or copies of a document in such application files, will be permitted in accordance with PCT Articles 30 and 38 and PCT Rules 44^{ter}.1, 94.2 and 94.3, upon written request including a showing that the publi-

cation of the application has occurred and that the U.S. was designated.

(4) In accordance with PCT Article 30, copies of an international application-as-filed under paragraph (a) of this section will not be provided prior to the international publication of the application pursuant to PCT Article 21(2).

(5) Access to international application files under paragraphs (a)(1)(i) through (a)(1)(vi) and (g)(3) of this section will not be permitted with respect to the Examination Copy in accordance with PCT Article 38.<

*****

Effective **>July 30, 2003<, 37 CFR *>1.14(g)< was amended to provide greater access to international application files kept by the U.S. Patent and Trademark Office (USPTO). 37 CFR *>1.14(g)< as amended applies to international applications having an international filing date on or after November 29, 2000. ** After publication of an application under 35 U.S.C. 122(b), the USPTO will make available copies of the application files and also allow for access to those files in accordance with 37 CFR **>1.14(a)<. Therefore, after publication of an international application designating the U.S. under PCT Article 21, the USPTO will make available copies of, and allow access to, those international application files which are kept in the USPTO (see 37 CFR *>1.14(g)<).

37 CFR *>1.14(g)(1)< sets forth those conditions upon which copies of international application files may be provided to the public. 37 CFR *>1.14(g)(1)(i) and (ii)< address the situation where the U.S. acted as the receiving Office and the International Searching Authority, respectively. Under these provisions, copies of the Home and Search Copies of the international file will be provided upon request. >However, the written opinion established by the International Searching Authority will not be available until the expiration of 30 months from the priority date.< 37 *>CFR 1.14(g)(1)(iii)< addresses the situation in which the U.S. acted as the International Preliminary Examining Authority (IPEA), the U.S. was elected, and the international preliminary examination report (IPER) has issued. PCT Rule 94.2 provides that after issuance of the IPER, the IPEA shall provide copies of any documents in the examination file to the elected Offices upon request. PCT Rule 94.3 permits the elected Offices to provide access to any documents in its files after international publication has occurred. Therefore, the USPTO acting in its capacity as an elected Office, will provide a copy of the examination file in an international application to a third party upon submission of a request complying with the requirements of 37 CFR *>1.14(g)(1)(iii)<. Requests for copies of an international application file under 37 CFR *>CFR 1.14(g)(1)< must be in the form of a written request >sent to the Office of PCT Legal Administration< and must include a showing that the international application has been published and that the U.S. was designated. Such a showing should preferably be in the form of the submission of a copy of the front page of the published international application. Additionally, requests for copies of international application files must also be accompanied by the appropriate fee (37 CFR 1.19(b)**).

37 CFR *>1.14(g)(2)< provides that copies of English language translations of international applications, which were published in a non-English language and which designated the U.S., and which have been submitted to the Office pursuant to 35 U.S.C. 154(d)(4), will also be available to the public. The USPTO will not provide general notification to the public of the filing of English language translations under 35 U.S.C. 154. Under 35 U.S.C. 154, it is the responsibility of the applicant to notify any possible infringers for the purposes of obtaining provisional rights.

37 CFR *>1.14(g)(3)< addresses access to the Home Copy and the Search Copy of the international application. Access to the Examination Copy of the international application is prohibited under 37 CFR *>1.14(g)(5)< as required by PCT Article 38.

115 Review of Applications for National Security and Property Rights Issues [R-5]

All provisional applications filed under 35 U.S.C. 111(b), nonprovisional applications filed under 35 U.S.C. 111(a), and international applications filed under the PCT, in the U.S. Patent and Trademark Office (USPTO) are reviewed for the purposes of issuance of a foreign filing license pursuant to 35 U.S.C. 184. See also 37 CFR 5.1(b). These applications are screened upon receipt in the USPTO for subject matter that, if disclosed, might impact the national security. Such applications are referred to the appropriate agencies for consideration of restrictions

on disclosure of the subject matter. Authority for this referral can be found in 35 U.S.C. 181 which provides, in part:

> Whenever the publication or disclosure of an invention by the publication of an application or by the granting of a patent, in which the Government does not have a property interest, might, in the opinion of the Commissioner of Patents, be detrimental to the national security, he shall make the application for patent in which such invention is disclosed available for inspection to the Atomic Energy Commission, the Secretary of Defense, and the chief officer of any other department or agency of the Government designated by the President as a defense agency of the United States.

If the agency concludes that disclosure of the invention would be detrimental to the national security, a secrecy order is recommended to the Commissioner for Patents. The Commissioner then issues a Secrecy Order and withholds the publication of the application or the grant of a patent for such period as the national interest requires.

**

For those applications in which the Government has a property interest (including applications indicating national security classified subject matter), responsibility for notifying the Commissioner for Patents of the need for a Secrecy Order resides with the agency having that interest. Applications that are national security classified (see 37 CFR 1.9(i)) may be so indicated by use of authorized national security markings (e.g., "Confidential," "Secret," or "Top Secret"). National security classified documents filed in the USPTO must be either hand-carried to Licensing and Review or mailed to the Office in compliance with 37 CFR 5.1(a) and Executive Order 12958 of April 17, 1995 and Executive Order 13292 of March 25, 2003. As set forth in 37 CFR 5.1(d), the applicant in a national security classified patent application must obtain a secrecy order >from the appropriate defense agency< or provide authority to cancel the markings. >A list of contacts at the appropriate defense agency can be obtained by contacting Licensing and Review.<

A second purpose for the screening of all applications is to identify inventions in which DOE or NASA might have property rights. See 42 U.S.C. 2182 and 42 U.S.C. 2457 and MPEP § 150.

A third function of the screening procedure is to process foreign filing license petitions under 37 CFR 5.12(a). See MPEP § 140.

**>Provisional applications filed in a foreign language are also screened under these provisions. The Office will make an attempt to determine the subject matter of the application, but the applicant may be required to provide at least an English language abstract of the information for screening purposes. It is strongly recommended that if the applicant is in possession of an English language description of the technology, it should be filed with the provisional application to prevent screening delays.<

All applications should be cleared from secrecy review before forwarding to issue. If the L&R code on the general information display does not equal 1, then an E-mail message should be sent to the supervisor of Licensing and Review, or in the case of an IFW application, a message should be sent to LREVINCOMINGDOCS.

Applications will be deleted from IFW upon the imposition of a secrecy order.

>Patent Application Locating and Monitoring's (PALM's) general information display discloses the current Licensing and Review status as well as the historical status. The indicator "L&R code" displays the current status of the application while the indicators "Third Level Review" and "Secrecy Order" display the historical status of the application. An L&R code of "3" or a "Third Level Review" of "Yes" indicates that application is/has been considered for security screening.

A L&R code of "4" indicates that application is currently under Secrecy Order. In this case, the application has been converted to a paper application file and there should be no images maintained in the Image File Wrapper system (IFW).<

While the initial screening is performed only by designated personnel, all examiners have a responsibility to be alert for obviously sensitive subject matter either in the original disclosure or subsequently introduced, for example, by amendment. **>If the examiner is aware of subject matter which should be subject to screening by appropriate office personnel, this should be brought to the attention of Licensing and Review, to any of the supervisory patent examiners (SPEs) of Technology Center Working Group 3640 or 3660.<

120 Secrecy Orders [R-5]

37 CFR 5.1. Correspondence.

**>

(a) All correspondence in connection with this part, including petitions, should be addressed to: Mail Stop L&R, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.<

(b) Application as used in this part includes provisional applications filed under 35 U.S.C. 111(b) (§ 1.9(a)(2) of this chapter), nonprovisional applications filed under 35 U.S.C. 111(a) or entering the national stage from an international application after compliance with 35 U.S.C. 371 (§ 1.9(a)(3)), or international applications filed under the Patent Cooperation Treaty prior to entering the national stage of processing (§ 1.9(b)).

(c) Patent applications and documents relating thereto that are national security classified (see § 1.9(i) of this chapter) and contain authorized national security markings (*e.g.*, "Confidential," "Secret" or "Top Secret") are accepted by the Office. National security classified documents filed in the Office must be either hand-carried to Licensing and Review or mailed to the Office in compliance with paragraph (a) of this section.

(d) The applicant in a national security classified patent application must obtain a secrecy order pursuant to § 5.2(a). If a national security classified patent application is filed without a notification pursuant to § 5.2(a), the Office will set a time period within which either the application must be declassified, or the application must be placed under a secrecy order pursuant to § 5.2(a), or the applicant must submit evidence of a good faith effort to obtain a secrecy order pursuant to § 5.2(a) from the relevant department or agency in order to prevent abandonment of the application. If evidence of a good faith effort to obtain a secrecy order pursuant to § 5.2(a) from the relevant department or agency is submitted by the applicant within the time period set by the Office, but the application has not been declassified or placed under a secrecy order pursuant to § 5.2(a), the Office will again set a time period within which either the application must be declassified, or the application must be placed under a secrecy order pursuant to § 5.2(a), or the applicant must submit evidence of a good faith effort to again obtain a secrecy order pursuant to § 5.2(a) from the relevant department or agency in order to prevent abandonment of the application.

(e) An application will not be published under § 1.211 of this chapter or allowed under § 1.311 of this chapter if publication or disclosure of the application would be detrimental to national security. An application under national security review will not be published at least until six months from its filing date or three months from the date the application was referred to a defense agency, whichever is later. A national security classified patent application will not be published under § 1.211 of this chapter or allowed under § 1.311 of this chapter until the application is declassified and any secrecy order under § 5.2(a) has been rescinded.

(f) Applications on inventions made outside the United States and on inventions in which a U.S. Government defense agency has a property interest will not be made available to defense agencies.

37 CFR 5.2. Secrecy order.

**>

(a) When notified by the chief officer of a defense agency that publication or disclosure of the invention by the granting of a patent would be detrimental to the national security, an order that the invention be kept secret will be issued by the Commissioner for Patents.

(b) Any request for compensation as provided in 35 U.S.C. 183 must not be made to the Patent and Trademark Office, but directly to the department or agency which caused the secrecy order to be issued.

(c) An application disclosing any significant part of the subject matter of an application under a secrecy order pursuant to paragraph (a) of this section also falls within the scope of such secrecy order. Any such application that is pending before the Office must be promptly brought to the attention of Licensing and Review, unless such application is itself under a secrecy order pursuant to paragraph (a) of this section. Any subsequently filed application containing any significant part of the subject matter of an application under a secrecy order pursuant to paragraph (a) of this section must either be hand-carried to Licensing and Review or mailed to the Office in compliance with § 5.1(a).<

37 CFR 5.3. Prosecution of application under secrecy orders; withholding patent.

**>Unless specifically ordered otherwise, action on the application by the Office and prosecution by the applicant will proceed during the time an application is under secrecy order to the point indicated in this section:

(a) National applications under secrecy order which come to a final rejection must be appealed or otherwise prosecuted to avoid abandonment. Appeals in such cases must be completed by the applicant but unless otherwise specifically ordered by the Commissioner for Patents will not be set for hearing until the secrecy order is removed.

(b) An interference will not be declared involving a national application under secrecy order. An applicant whose application is under secrecy order may suggest an interference (§ 41.202(a) of this title), but the Office will not act on the request while the application remains under a secrecy order.

(c) When the national application is found to be in condition for allowance except for the secrecy order the applicant and the agency which caused the secrecy order to be issued will be notified. This notice (which is not a notice of allowance under § 1.311 of this chapter) does not require reply by the applicant and places the national application in a condition of suspension until the secrecy order is removed. When the secrecy order is removed the Patent and Trademark Office will issue a notice of allowance under § 1.311 of this chapter, or take such other action as may then be warranted.

(d) International applications under secrecy order will not be mailed, delivered, or otherwise transmitted to the international authorities or the applicant. International applications under secrecy order will be processed up to the point where, if it were not for the secrecy order, record and search copies would be transmitted to the international authorities or the applicant.<

37 CFR 5.4. Petition for rescission of secrecy order.

**>

(a) A petition for rescission or removal of a secrecy order may be filed by, or on behalf of, any principal affected thereby. Such petition may be in letter form, and it must be in duplicate.

(b) The petition must recite any and all facts that purport to render the order ineffectual or futile if this is the basis of the petition. When prior publications or patents are alleged the petition must give complete data as to such publications or patents and should be accompanied by copies thereof.

(c) The petition must identify any contract between the Government and any of the principals under which the subject matter of the application or any significant part thereof was developed or to which the subject matter is otherwise related. If there is no such contract, the petition must so state.

(d) Appeal to the Secretary of Commerce, as provided by 35 U.S.C. 181, from a secrecy order cannot be taken until after a petition for rescission of the secrecy order has been made and denied. Appeal must be taken within sixty days from the date of the denial, and the party appealing, as well as the department or agency which caused the order to be issued, will be notified of the time and place of hearing.<

37 CFR 5.5. Permit to disclose or modification of secrecy order.

(a) Consent to disclosure, or to the filing of an application abroad, as provided in 35 U.S.C. 182, shall be made by a "permit" or "modification" of the secrecy order.

(b) Petitions for a permit or modification must fully recite the reason or purpose for the proposed disclosure. Where any proposed disclosee is known to be cleared by a defense agency to receive classified information, adequate explanation of such clearance should be made in the petition including the name of the agency or department granting the clearance and the date and degree thereof. The petition must be filed in duplicate.

(c) In a petition for modification of a secrecy order to permit filing abroad, all countries in which it is proposed to file must be made known, as well as all attorneys, agents and others to whom the material will be consigned prior to being lodged in the foreign patent office. The petition should include a statement vouching for the loyalty and integrity of the proposed disclosees and where their clearance status in this or the foreign country is known all details should be given.

(d) Consent to the disclosure of subject matter from one application under secrecy order may be deemed to be consent to the disclosure of common subject matter in other applications under secrecy order so long as not taken out of context in a manner disclosing material beyond the modification granted in the first application.

(e) Organizations requiring consent for disclosure of applications under secrecy order to persons or organizations in connection with repeated routine operation may petition for such consent in the form of a general permit. To be successful such petitions must ordinarily recite the security clearance status of the disclosees as sufficient for the highest classification of material that may be involved.

I. SECRECY ORDER TYPES

Three types of Secrecy Orders, each of a different scope, are issued as follows:

(A) Secrecy Order and Permit for Foreign Filing in Certain Countries — to be used for those patent applications that contain technical data whose export is controlled by the guidelines contained in DoD Directive 5230.25 dated November 6, 1984 which reviews export control under 10 U.S.C. 140(c) and the Militarily Critical Technology List (MCTL).

(B) Secrecy Order and Permit for Disclosing Classified Information — to be used for those patent applications which contain technical data that is properly classified or classifiable (no Government interest) under a security guideline where the patent application owner has a current DoD Security Agreement, DD Form 441. If the application is classifiable, this secrecy order allows disclosure of the technical information as if it were classified as prescribed in the Industrial Security Manual (ISM).

(C) Secrecy Order — to be used for those patent applications that contain technical data properly classifiable under a security guideline where the patent application owner does not have a DoD Security Agreement. The order prevents disclosure of the subject matter to anyone without an express written consent from the Commissioner for Patents. However, quite often this type of secrecy order includes a permit "Permit A" which relaxes the disclosure restrictions as set forth in the permit.

The first Secrecy Order is intended to permit the widest utilization of the technical data in the patent application while still controlling any publication or disclosure which would result in an unlawful exportation. This type of Secrecy Order is based on the applicable export controls in either the Commodity Control List (CCL) or the Munitions Lists of the International Traffic in Arms Regulation (ITAR), and identifies the countries where corresponding patent applications may be filed. Countries with which the United States has reciprocal security agreements are: Australia, Belgium, Canada, Denmark, France, Germany, Greece, Italy, Japan, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Turkey and the United Kingdom. Please note that applications subject to a secrecy order cannot be filed directly with the European Patent Office since no reciprocal security agreement

with this organization exists. Applications must be filed in the individual EPO member countries identified above. >Applicant must arrange filing of such subject matter through the agency sponsoring the secrecy order.<

The intent of the second Secrecy Order is to treat classified technical data presented as a patent application in the same manner as any other classified material. Accordingly, this Secrecy Order will include a notification of the classification level of the technical data in the application.

The third type of Secrecy Order is used where the other types of Orders do not apply, including Orders issued by direction of agencies other than the Department of Defense.

A Secrecy Order should not be construed in any way to mean that the Government has adopted or contemplates adoption of the alleged invention disclosed in an application; nor is it any indication of the value of such invention.

II. RELATED SUBJECT MATTER

The Secrecy Orders apply to the subject matter of the invention, not just to the patent application itself. Thus, the Secrecy Order restricts disclosure or publication of the invention in any form. Furthermore, other patent applications already filed or later filed which contain any significant part of the subject matter of the application also fall within the scope of the Order and must be brought to the attention of Licensing & Review if such applications are not already under Secrecy Order by the Commissioner.

The effects of a Secrecy Order are detailed in the notifying letter and include restrictions on disclosure of the invention and delay of any patent grant until the Order is rescinded.

III. CORRESPONDENCE

When the Secrecy Order issues, the law specifies that the subject matter or any material information relevant to the application, including unpublished details of the invention, shall not be published or disclosed to any person not aware of the invention prior to the date of the Order, including any employee of the principals except as permitted by the Secrecy Order. The law also requires that all information material to the subject matter of the application be kept in confidence, unless written permission to disclose is first obtained from the Commissioner for Patents except as provided by the Secrecy Order. Therefore, all correspondence to be filed in an application which is subject to a secrecy order and which is directly related to the subject matter covered by the Secrecy Order must be transmitted to the Office in a manner which would preclude disclosure to unauthorized individuals and addressed as set forth in 37 CFR 5.1(a). Use of facsimile transmission is not permitted. 37 CFR 1.6(d)(6).

Subject matter under Secrecy Order must be safeguarded under conditions that will provide adequate protection and prevent access by unauthorized persons.

When applicants desire to change the Power of Attorney in an application under Secrecy Order, **>applicant is required to provide a statement that the new attorney(s) has been apprised of the secrecy order.

In the case of applications bearing National Security Classification markings pursuant to an Executive Order, e.g., “Confidential” or “Secret,” applicants must provide a DoD cage code as evidence of the ability to accept and store classified information. Applicants no longer need to provide individual personal information to ensure a proper security clearance. Personnel controlling the cleared correspondence address bear the burden of ensuring that individuals obtaining classified information from the correspondence address follow the proper procedures for handling classified information.<

IV. PCT APPLICATIONS

If the Secrecy Order is applied to an international application, the application will not be forwarded to the International Bureau as long as the Secrecy Order remains in effect. If the Secrecy Order remains in effect at the end of the time limit under PCT Rule 22.3, the international application will be considered withdrawn (abandoned) because the Record Copy of the international application was not received in time by the International Bureau. 37 CFR 5.3(d), PCT Article 12(3), and PCT Rule 22.3. If the United States of America has been designated, however, it is possible to save the U.S. filing date, by fulfilling the requirements of 35 U.S.C. 371(c) prior to the withdrawal.

V. CHANGES IN SECRECY ORDERS

Applicants may petition for rescission or modification of the Secrecy Order. For example, if the applicant believes that certain existing facts or circumstances would render the Secrecy Order ineffectual, he or she may informally contact the sponsoring agency to discuss these facts or formally petition the Commissioner for Patents to rescind the Order. Rescission of a Secrecy Order may also be effected in some circumstances by expunging the sensitive subject matter from the disclosure, provided the sensitive subject matter is not necessary for an enabling disclosure under 35 U.S.C. 112, first paragraph. See MPEP § 724.05. The defense agency identified with the Secrecy Order as sponsoring the Order should be contacted directly for assistance in determining what subject matter in the application is sensitive, and whether the agency would agree to rescind the Order upon expunging this subject matter. The applicant may also petition the Commissioner for Patents for a permit to disclose the invention to another or to modify the Secrecy Order stating fully the reason or purpose for disclosure or modification. An example of such a situation would be a request to file the application in a foreign country. The requirements for petitions are described in 37 CFR 5.4 and 5.5. The law also provides that if an appeal is necessary, it may be taken to the Secretary of Commerce. Any petition or appeal should be addressed to the Mail Stop L&R, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia, 22313-1450.

VI. IMPROPER OR INADVERTENT DISCLOSURE

If, prior to or after the issuance of the Secrecy Order, any significant part of the subject matter or material information relevant to the application has been or is revealed to any U.S. citizen in the United States, the principals must promptly inform such person of the Secrecy Order and the penalties for improper disclosure. If such part of the subject matter was or is disclosed to any person in a foreign country or foreign national in the U.S., the principals must not inform such person of the Secrecy Order, but instead must promptly furnish to Mail Stop L&R, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia, 22313-1450 the following information to the extent not already furnished: date of disclosure; name and address of the disclosee; identification of such subject matter; and any authorization by a U.S. government agency to export such subject matter. If the subject matter is included in any foreign patent application or patent, this should be identified.

VII. EXPIRATION

Under the provision of 35 U.S.C. 181, a Secrecy Order remains in effect for a period of 1 year from its date of issuance. A Secrecy Order may be renewed for additional periods of not more than 1 year upon notice by a government agency that the national interest so requires. The applicant is notified of any such renewal.

The expiration of or failure to renew a Secrecy Order does not lessen in any way the responsibility of the principals for the security of the subject matter if it is subject to the provisions of Exec. Order No. 12958 or the Atomic Energy Act of 1954, as amended, 42 U.S.C. 141 *et. seq.* and 42 U.S.C. 2181 *et. seq.* or other applicable law unless the principals have been expressly notified that the subject patent application has been declassified by the proper authorities and the security markings have been authorized to be canceled or removed.

121 Handling of Applications and Other Papers Bearing Security Markings [R-2]

Under Executive Order for Classified National Security Information (Exec. Order No. 12958, 60 FR 19825 (April 20, 1995)) >and Executive Order 13292 of March 25, 2003< standards are prescribed for the marking, handling, and care of official information which requires safeguarding in the interest of security.

Papers marked as prescribed in the Executive *>Orders< and showing that such marking is applied by, or at the direction of, a government agency, are accepted in patent applications. All applications or papers in the U.S. Patent and Trademark Office bearing words such as “Secret” or “Confidential” must be promptly referred to Technology Center (TC) Working Group 3640 for clarification or security treatment. Under no circumstances can any such application, drawing, exhibit, or other paper be placed in public records, such as the patented files, until all security

markings have been considered and declassified or otherwise explained.

Authorized security markings may be placed on the patent application drawings when filed provided that such markings are outside the illustrations and that they are removed when the material is declassified. 37 CFR 1.84(v).

130 Examination of Secrecy Order Cases [R-5]

All applications in which a Secrecy Order has been imposed are examined in Technology Center (TC) Working *>Groups< 3640 and **>3660<. If the Order is imposed subsequent to the docketing of an application in another TC, the application will be transferred to TC Working Group 3640 >or 3660<.

Secrecy Order cases are examined for patentability as in other cases, but may not be passed to issue; nor will an interference be declared where one or more of the conflicting cases is classified or under Secrecy Order. See >37 CFR 5.3 and< MPEP § *>2306<. **

In case of a final rejection, while such action must be properly replied to, and an appeal, if filed, must be completed by the applicant to prevent abandonment, such appeal will not be set for hearing by the Board of Patent Appeals and Interferences until the Secrecy Order is removed, unless specifically ordered by the Commissioner for Patents.

When a Secrecy Order case is in condition for allowance, a notice of allowability (Form D-10) is issued, thus closing the prosecution. Any amendments received thereafter are not entered or responded to until such time as the Secrecy Order is rescinded. At such time, amendments which are free from objection will be entered; otherwise they are denied entry.

Due to the additional administrative burdens associated with handling papers in Secrecy Order cases, the full statutory period for reply will ordinarily be set for all Office actions issued on such cases.

Sometimes applications bearing national security markings but no Secrecy Order come up for examination. In this case, the examiner should require the applicant to seek imposition of a Secrecy Order or authority to cancel the markings. This should preferably be done with the first action and, in any event, prior to final disposition of the application. Pursuant to 37 CFR 5.1(d), if no Secrecy Order has issued in a national security classified patent application, the Office will set a time period within which the applicant must take one of the following three actions in order to prevent abandonment of the application:

(A) obtain a Secrecy Order;

(B) declassify the application; or

(C) submit evidence of a good faith effort to obtain a Secrecy Order pursuant to 37 CFR 5.2(a).

Pursuant to 37 CFR 5.1(e), a national security classified patent application will not be allowed until the application is declassified and any Secrecy Order pursuant to 37 CFR 5.2(a) has been rescinded.

140 Foreign Filing Licenses [R-5]

35 U.S.C. 184. Filing of application in foreign country.

Except when authorized by a license obtained from the Commissioner of Patents a person shall not file or cause or authorize to be filed in any foreign country prior to six months after filing in the United States an application for patent or for the registration of a utility model, industrial design, or model in respect of an invention made in this country. A license shall not be granted with respect to an invention subject to an order issued by the Commissioner of Patents pursuant to section 181 of this title without the concurrence of the head of the departments and the chief officers of the agencies who caused the order to be issued. The license may be granted retroactively where an application has been filed abroad through error and without deceptive intent and the application does not disclose an invention within the scope of section 181 of this title.

The term "application" when used in this chapter includes applications and any modifications, amendments, or supplements thereto, or divisions thereof.

The scope of a license shall permit subsequent modifications, amendments, and supplements containing additional subject matter if the application upon which the request for the license is based is not, or was not, required to be made available for inspection under section 181 of this title and if such modifications, amendments, and supplements do not change the general nature of the invention in a manner which would require such application to be made available for inspection under such section 181. In any case in which a license is not, or was not, required in order to file an application in any foreign country, such subsequent modifications, amendments, and supplements may be made, without a license, to the application filed in the foreign country if the United States application was not required to be made available for inspection under section 181 and if such modifications, amendments, and supplements do not, or did not, change the general nature of the invention in a manner which would require the United States application to have been made available for inspection under such section 181.

35 U.S.C. 185. Patent barred for filing without license.

Notwithstanding any other provisions of law any person, and his successors, assigns, or legal representatives, shall not receive a United States patent for an invention if that person, or his succes-

sors, assigns, or legal representatives shall, without procuring the license prescribed in section 184 of this title, have made, or consented to or assisted another's making, application in a foreign country for a patent or for the registration of a utility model, industrial design, or model in respect of the invention. A United States patent issued to such person, his successors, assigns, or legal representatives shall be invalid, unless the failure to procure such license was through error and without deceptive intent, and the patent does not disclose subject matter within the scope of section 181 of this title.

35 U.S.C. 186. Penalty.

Whoever, during the period or periods of time an invention has been ordered to be kept secret and the grant of a patent thereon withheld pursuant to section 181 of this title, shall, with knowledge of such order and without due authorization, willfully publish or disclose or authorize or cause to be published or disclosed the invention, or material information with respect thereto, or whoever willfully, in violation of the provisions of section 184 of this title, shall file or cause or authorize to be filed in any foreign country an application for patent or for the registration of a utility model, industrial design, or model in respect of any invention made in the United States, shall, upon conviction, be fined not more than $10,000 or imprisoned for not more than two years, or both.

The amendments made to 35 U.S.C. 184, 185, and 186 by Public Law 100-418 apply to all United States patents granted before, on, or after August 23, 1988, to all applications for United States patents pending on or filed after August 23, 1988, and to all licenses under 35 U.S.C. 184 granted before, on, or after August 23, 1988.

More specifically, paragraphs (c) and (d) of section 9101 of Public Law 100-418 read as follows:

> Sec. 9101. INCREASED EFFECTIVENESS OF PATENT LAW
>
> *****
>
> (c)REGULATIONS.-- The Commissioner of Patents and Trademarks shall prescribe such regulations as may be necessary to implement the amendments made by this section.
>
> (d)EFFECTIVE DATE.-- (1) Subject to paragraphs (2), (3), and (4) of this subsection, the amendments made by this section shall apply to all United States patents granted before, on, or after the date of enactment of this section, to all applications for United States patents pending on or filed after such date of enactment, and to all licenses under section 184 granted before, on, or after the date of enactment of this section.
>
> (2)The amendments made by this section shall not affect any final decision made by a court or the Patent and Trademark Office before the date of enactment of this section with respect to a patent or application for patent, if no appeal from such decision is pending and the time for filing an appeal has expired.
>
> (3)No United States patent granted before the date of enactment of this section shall abridge or affect the right of any person or his successors in business who made, purchased, or used, prior to such date of enactment, anything protected by the patent, to continue the use of, or sell to others to be used or sold, the specific thing so made, purchased, or used, if the patent claims were invalid or otherwise unenforceable on a ground obviated by this section and the person made, purchased, or used the specific thing in reasonable reliance on such invalidity or unenforceability. If a person reasonably relied on such invalidity or unenforceability, the court before which such matter is in question may provide for the continued manufacture, use, or sale of the thing made, purchased, or used as specified, or for the manufacture, use, or sale of which substantial preparation was made before the date of enactment of this section, and it may also provide for the continued practice of any process practiced, or for the practice of which substantial preparation was made, prior to the date of enactment of this section, to the extent and under such terms as the court deems equitable for the protection of investments made or business commenced before such date of enactment.
>
> (4)The amendments made by this section shall not affect the right of any party in any case pending in court on the date of enactment of this section to have its rights or liabilities --
>
> (A)under any patent before the court, or
>
> (B)under any patent granted after such date of enactment which is related to the patent before the court by deriving priority right under section 120 or 121 of title 35, United States Code, from a patent or an application for patent common to both patents, determined on the basis of the substantive law in effect before the date of enactment of this section.

35 U.S.C. 187. Nonapplicability to certain persons

The prohibitions and penalties of this chapter shall not apply to any officer or agent of the United States acting within the scope of his authority, nor to any person acting upon his written instructions or permission.

35 U.S.C. 188. Rules and regulations, delegation of power.

The Atomic Energy Commission, the Secretary of a defense department, the chief officer of any department or agency of the Government designated by the President as a defense agency of the United States, and the Secretary of Commerce, may separately issue rules and regulations to enable the respective department or

agency to carry out the provisions of this chapter, and may delegate any power conferred by this chapter.

37 CFR 5.11. License for filing in a foreign country an application on an invention made in the United States or for transmitting an international application.

(a) A license from the Commissioner for Patents under 35 U.S.C. 184 is required before filing any application for patent including any modifications, amendments, or supplements thereto or divisions thereof or for the registration of a utility model, industrial design, or model, in a foreign patent office or any foreign patent agency or any international agency other than the United States Receiving Office, if the invention was made in the United States and:

(1) An application on the invention has been filed in the United States less than six months prior to the date on which the application is to be filed, or

(2) No application on the invention has been filed in the United States.

**>

(b) The license from the Commissioner for Patents referred to in paragraph (a) would also authorize the export of technical data abroad for purposes relating to the preparation, filing or possible filing and prosecution of a foreign patent application without separately complying with the regulations contained in 22 CFR parts 121 through 130 (International Traffic in Arms Regulations of the Department of State), 15 CFR parts 730-774 (Regulations of the Bureau of Industry and Security, Department of Commerce) and 10 CFR part 810 (Foreign Atomic Energy Programs of the Department of Energy).

(c) Where technical data in the form of a patent application, or in any form, are being exported for purposes related to the preparation, filing or possible filing and prosecution of a foreign patent application, without the license from the Commissioner for Patents referred to in paragraphs (a) or (b) of this section, or on an invention not made in the United States, the export regulations contained in 22 CFR parts 120 through 130 (International Traffic in Arms Regulations of the Department of State), 15 CFR parts 730-774 (Bureau of Industry and Security Regulations, Department of Commerce) and 10 CFR part 810 (Assistance to Foreign Atomic Energy Activities Regulations of the Department of Energy) must be complied with unless a license is not required because a United States application was on file at the time of export for at least six months without a secrecy order under § 5.2 being placed thereon. The term "exported" means export as it is defined in 22 CFR part 120, 15 CFR part 734 and activities covered by 10 CFR part 810.<

(d) If a secrecy order has been issued under § 5.2, an application cannot be exported to, or filed in, a foreign country (including an international agency in a foreign country), except in accordance with § 5.5.

(e) No license pursuant to paragraph (a) of this section is required:

(1) If the invention was not made in the United States, or

(2) If the corresponding United States application is not subject to a secrecy order under § 5.2, and was filed at least six months prior to the date on which the application is filed in a foreign country, or

(3) For subsequent modifications, amendments and supplements containing additional subject matter to, or divisions of, a foreign patent application if:

(i) A license is not, or was not, required under paragraph (e)(2) of this section for the foreign patent application;

(ii) The corresponding United States application was not required to be made available for inspection under 35 U.S.C. 181; and

(iii) Such modifications, amendments, and supplements do not, or did not, change the general nature of the invention in a manner which would require any corresponding United States application to be or have been available for inspection under 35 U.S.C. 181.

(f) A license pursuant to paragraph (a) of this section can be revoked at any time upon written notification by the Patent and Trademark Office. An authorization to file a foreign patent application resulting from the passage of six months from the date of filing of a United States patent application may be revoked by the imposition of a secrecy order.

37 CFR 5.12. Petition for license.

(a) Filing of an application for patent for inventions made in the United States will be considered to include a petition for license under 35 U.S.C. 184 for the subject matter of the application. The filing receipt will indicate if a license is granted. If the initial automatic petition is not granted, a subsequent petition may be filed under paragraph (b) of this section.

**>

(b) A petition for license must include the fee set forth in § 1.17(g) of this chapter, the petitioner's address, and full instructions for delivery of the requested license when it is to be delivered to other than the petitioner. The petition should be presented in letter form.<

37 CFR 5.13. Petition for license; no corresponding application.

If no corresponding national or international application has been filed in the United States, the petition for license under § 5.12(b) must also be accompanied by a legible copy of the material upon which a license is desired. This copy will be retained as a measure of the license granted.

37 CFR 5.14. Petition for license; corresponding U.S. application.

(a) When there is a corresponding United States application on file, a petition for license under § 5.12(b) must also identify this application by application number, filing date, inventor, and title, but a copy of the material upon which the license is desired is not required. The subject matter licensed will be measured by the disclosure of the United States application.

(b) Two or more United States applications should not be referred to in the same petition for license unless they are to be combined in the foreign or international application, in which event the petition should so state and the identification of each United States application should be in separate paragraphs.

(c) Where the application to be filed or exported abroad contains matter not disclosed in the United States application or applications, including the case where the combining of two or more United States applications introduces subject matter not disclosed in any of them, a copy of the application as it is to be filed in the foreign country or international application which is to be transmitted to a foreign international or national agency for filing in the Receiving Office, must be furnished with the petition. If however, all new matter in the foreign or international application to be filed is readily identifiable, the new matter may be submitted in detail and the remainder by reference to the pertinent United States application or applications.

37 CFR 5.15. Scope of license.

(a) Applications or other materials reviewed pursuant to §§ 5.12 through 5.14, which were not required to be made available for inspection by defense agencies under 35 U.S.C. 181, will be eligible for a license of the scope provided in this paragraph. This license permits subsequent modifications, amendments, and supplements containing additional subject matter to, or divisions of, a foreign patent application, if such changes to the application do not alter the general nature of the invention in a manner which would require the United States application to have been made available for inspection under 35 U.S.C. 181. Grant of this license authorizing the export and filing of an application in a foreign country or the transmitting of an international application to any foreign patent agency or international patent agency when the subject matter of the foreign or international application corresponds to that of the domestic application. This license includes authority:

(1) To export and file all duplicate and formal application papers in foreign countries or with international agencies;

(2) To make amendments, modifications, and supplements, including divisions, changes or supporting matter consisting of the illustration, exemplification, comparison, or explanation of subject matter disclosed in the application; and

(3) To take any action in the prosecution of the foreign or international application provided that the adding of subject matter or taking of any action under paragraphs (a)(1) or (2) of this section does not change the general nature of the invention disclosed in the application in a manner which would require such application to have been made available for inspection under 35 U.S.C. 181 by including technical data pertaining to:

(i) Defense services or articles designated in the United States Munitions List applicable at the time of foreign filing, the unlicensed exportation of which is prohibited pursuant to the Arms Export Control Act, as amended, and 22 CFR parts 121 through 130; or

(ii) Restricted Data, sensitive nuclear technology or technology useful in the production or utilization of special nuclear material or atomic energy, dissemination of which is subject to restrictions of the Atomic Energy Act of 1954, as amended, and the Nuclear Non-Proliferation Act of 1978, as implemented by the regulations for Unclassified Activities in Foreign Atomic Energy Programs, 10 CFR part 810, in effect at the time of foreign filing.

(b) Applications or other materials which were required to be made available for inspection under 35 U.S.C. 181 will be eligible for a license of the scope provided in this paragraph. Grant of this license authorizes the export and filing of an application in a foreign country or the transmitting of an international application to any foreign patent agency or international patent agency. Further, this license includes authority to export and file all duplicate and formal papers in foreign countries or with foreign and international patent agencies and to make amendments, modifications, and supplements to, file divisions of, and take any action in the prosecution of the foreign or international application, provided subject matter additional to that covered by the license is not involved.

**>

(c) A license granted under § 5.12(b) pursuant to § 5.13 or § 5.14 shall have the scope indicated in paragraph (a) of this section, if it is so specified in the license. A petition, accompanied by the required fee (§ 1.17(g) of this chapter), may also be filed to change a license having the scope indicated in paragraph (b) of this section to a license having the scope indicated in paragraph (a) of this section. No such petition will be granted if the copy of the material filed pursuant to § 5.13 or any corresponding United States application was required to be made available for inspection under 35 U.S.C. 181. The change in the scope of a license will be effective as of the date of the grant of the petition.<

(d) In those cases in which no license is required to file the foreign application or transmit the international application, no license is required to file papers in connection with the prosecution of the foreign or international application not involving the disclosure of additional subject matter.

(e) Any paper filed abroad or transmitted to an international patent agency following the filing of a foreign or international application which changes the general nature of the subject matter disclosed at the time of filing in a manner which would require such application to have been made available for inspection under 35 U.S.C. 181 or which involves the disclosure of subject matter listed in paragraphs (a)(3)(i) or (ii) of this section must be separately licensed in the same manner as a foreign or international application. Further, if no license has been granted under § 5.12(a) on filing the corresponding United States application, any paper filed abroad or with an international patent agency which involves the disclosure of additional subject matter must be licensed in the same manner as a foreign or international application.

(f) Licenses separately granted in connection with two or more United States applications may be exercised by combining or dividing the disclosures, as desired, provided:

(1) Subject matter which changes the general nature of the subject matter disclosed at the time of filing or which involves subject matter listed in paragraphs (a)(3) (i) or (ii) of this section is not introduced and,

(2) In the case where at least one of the licenses was obtained under § 5.12(b), additional subject matter is not introduced.

(g) A license does not apply to acts done before the license was granted. See § 5.25 for petitions for retroactive licenses.

37 CFR 5.18. Arms, ammunition, and implements of war.

(a) The exportation of technical data relating to arms, ammunition, and implements of war generally is subject to the International Traffic in Arms Regulations of the Department of

State (22 CFR parts 120 through 130); the articles designated as arms, ammunitions, and implements of war are enumerated in the U.S. Munitions List (22 CFR part 121). However, if a patent applicant complies with regulations issued by the Commissioner for Patents under 35 U.S.C. 184, no separate approval from the Department of State is required unless the applicant seeks to export technical data exceeding that used to support a patent application in a foreign country. This exemption from Department of State regulations is applicable regardless of whether a license from the Commissioner for Patents is required by the provisions of §§ 5.11 and 5.12 (22 CFR part 125).

(b) When a patent application containing subject matter on the Munitions List (22 CFR part 121) is subject to a secrecy order under § 5.2 and a petition is made under § 5.5 for a modification of the secrecy order to permit filing abroad, a separate request to the Department of State for authority to export classified information is not required (22 CFR part 125).

37 CFR 5.19. Export of technical data.

**>

(a) Under regulations (15 CFR 734.3(b)(1)(v)) established by the Department of Commerce, a license is not required in any case to file a patent application or part thereof in a foreign country if the foreign filing is in accordance with the regulations (§§ 5.11 through 5.25) of the U.S. Patent and Trademark Office.

(b) An export license is not required for data contained in a patent application prepared wholly from foreign-origin technical data where such application is being sent to the foreign inventor to be executed and returned to the United States for subsequent filing in the U.S. Patent and Trademark Office (15 CFR 734.10(a)).<

37 CFR 5.20. Export of technical data relating to sensitive nuclear technology.

Under regulations (10 CFR 810.7) established by the United States Department of Energy, an application filed in accordance with the regulations (§§ 5.11 through 5.25) of the Patent and Trademark Office and eligible for foreign filing under 35 U.S.C. 184, is considered to be information available to the public in published form and a generally authorized activity for the purposes of the Department of Energy regulations.

37 CFR 5.25. Petition for retroactive license.

**>

(a) A petition for retroactive license under 35 U.S.C. 184 shall be presented in accordance with § 5.13 or § 5.14(a), and shall include:

(1) A listing of each of the foreign countries in which the unlicensed patent application material was filed,

(2) The dates on which the material was filed in each country,

(3) A verified statement (oath or declaration) containing:

(i) An averment that the subject matter in question was not under a secrecy order at the time it was filed abroad, and that it is not currently under a secrecy order,

(ii) A showing that the license has been diligently sought after discovery of the proscribed foreign filing, and

(iii) An explanation of why the material was filed abroad through error and without deceptive intent without the required license under § 5.11 first having been obtained, and

(4) The required fee (§ 1.17(g) of this chapter).<

In the interests of national security, the United States government imposes restrictions on the export of technical information. These restrictions are administered by the Departments of Commerce, State, and/or Energy depending on the subject matter involved. For the filing of patent applications in foreign countries, the authority for export control has been delegated to the Commissioner for Patents (note that the term "Commissioner of Patents" is used in Chapter 17 of title 35 of the U.S. Code, but "Commissioner for Patents" is used in the remainder of the statute and in title 37 of the Code of Federal Regulations; both titles are understood to represent the same individual). >Note that the export of subject matter abroad for purposes not related to foreign filing of a patent application, such as preparing an application in a foreign country for subsequent filing in the USPTO is not covered by any license from the USPTO. Applicants are directed to the Bureau of Industry of Security at the Department of Commerce for the appropriate clearances.<

There are two ways in which permission to file a patent application abroad may be obtained: either a petition for a foreign filing license may be granted (37 CFR 5.12) or an applicant may wait 6 months after filing a patent application in the USPTO (35 U.S.C. 184) at which time a license on that subject matter is no longer required as long as no Secrecy Order has been imposed. 37 CFR 5.11(e)(2).

There are several means by which a foreign filing license may be issued. First, every U.S. origin application filed in the USPTO is considered to include an implicit petition for a foreign filing license. The grant of a license is not immediate or even ensured. If the application is not marked by the security screeners, the petition is granted. This is indicated to the applicant by the presence on the filing receipt of the phrase "Foreign Filing License Granted" and a date. The license becomes effective on the date shown. Further, grant of this license is made of record in the application file**. The scope of this license is quite broad as set forth in 37 CFR 5.15(a).

>

I. EXPEDITED FOREIGN FILING LICENSE<

Explicit petitions for foreign filing licenses will also be accepted in accordance with 37 CFR 5.12(b), and may be faxed to Licensing and Review. See MPEP § 502.01. Applicants may be interested in such petitions in cases:

(A) in which the filing receipt license is not granted;

(B) in which the filing receipt has not yet been issued (37 CFR 5.14(a) or (b));

(C) in which there is no corresponding U.S. application (37 CFR 5.13);

(D) in which subject matter additional to that already licensed is sought to be licensed (37 CFR 5.14(c) and 5.15(e)); or

(E) in which expedited handling is requested.

The scope of any license granted on these petitions is indicated on the license.

Petitions under 37 CFR 5.14(a) or (b) as well as any license granted on the petition are **>made of record in the application file<. Petitions under 37 CFR 5.14(c) are not ordinarily made of record in the >application< file.

Applicants granted a license under 37 CFR 5.12(b) having the relatively narrow scope indicated in 37 CFR 5.15(b) may petition under 37 CFR 5.15(c) to convert the license to the broad scope of 37 CFR 5.15(a). A fee is charged for such a petition. See 37 CFR 1.17(*>g<). If the petition is granted, the change in the scope of the license is effective as of that day.

>Generally, a license will be granted, if there is no national security concern, within 3 business days from receipt of the expedited petition (filed under 37 CFR 5.12(b)) in Licensing and Review. Applicants are strongly encouraged to hand deliver or fax the license request directly to Licensing and Review at 571-273-0185. Applicants should also provide a contact number or fax number to which the license should be sent. Without this information, the license will be mailed to the requester, thereby delaying the receipt of the license.

II. RETROACTIVE LICENSES<

**>A< retroactive license may be sought if an unlicensed foreign filing has occurred through error and without deceptive intent. However, the requirements of 37 CFR 5.25 must be fulfilled in order for such a petition to be granted. Note that licenses under 37 CFR 5.25 are only made retroactive with respect to specific acts of foreign filing, and therefore the countries, the actual dates of filing and the establishing of the nature of the error must be provided for each act of proscribed foreign filing for which a retroactive license is sought. Also, the required verified statement must be in oath or declaration form.

Upon written notification from the **>USPTO<, any foreign filing license required by 37 CFR 5.11(a) may be revoked. Ordinarily, revocation indicates that additional review of the licensed subject matter revealed the need for referral of the application to the appropriate defense agencies. Revocation of a filing receipt license (37 CFR 5.12(a)) does not necessarily mean that a petition under 37 CFR 5.12(b) for a license of narrower scope will not be granted. The revocation becomes effective on the date on which the notice is mailed. Foreign filings>,< which occurred prior to revocation>,< need not be abandoned or otherwise specially treated; however, additional filings without a license are not permitted unless 6 months have elapsed from the filing of any corresponding U.S. application. Papers and other documents needed in support of prosecution of foreign applications may be sent abroad if they comply with any pertinent export regulations. Of course, if and once a Secrecy Order is issued, the restrictions thereof must immediately be observed.

Only the imposition of a Secrecy Order will cause revocation of the authority which arises from 35 U.S.C. 184 to file a foreign patent application 6 months or later after the date of filing of a corresponding U.S. patent application.

The penalties for failing to obtain any necessary license to file a patent application abroad are set forth in 35 U.S.C. 182, 35 U.S.C. 185, and 35 U.S.C. 186 and include loss of patenting rights in addition to possible fine or imprisonment.

150 Statements to DOE and NASA [R-2]

37 CFR 1.14. Patent applications preserved in confidence.

*****

**>

(d) *Applications reported to Department of Energy*. Applications for patents which appear to disclose, purport to disclose or do disclose inventions or discoveries relating to atomic energy are reported to the Department of Energy, which Department will be given access to the applications. Such reporting does not constitute a determination that the subject matter of each application so reported is in fact useful or is an invention or discovery, or that such application in fact discloses subject matter in categories specified by 42 U.S.C. 2181(c) and (d).<

*****

Title 42 United States Code, Section 2182 reads in part:

> No patent for any invention or discovery, useful in the production or utilization of special nuclear material or atomic energy, shall be issued unless the applicant files with the application, or within thirty days after request therefor by the Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office (unless the Commission advises the Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office that its rights have been determined and that accordingly no statement is necessary) a statement under oath setting forth the full facts surrounding the making or conception of the invention or discovery described in the application and whether the invention or discovery was made or conceived in the course of or under any contract, subcontract, or arrangement entered into with or for the benefit of the Commission, regardless of whether the contract, subcontract, or arrangement involved the expenditure of funds by the Commission. The Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office shall as soon as the application is otherwise in condition for allowance forward copies of the application and the statement to the Commission.

Similarly, 42 U.S.C. 2457 provides in part:

> (c) *Patent application.* No patent may be issued to any applicant other than the Administrator for any invention which appears to the Under Secretary of Commerce for Intellectual Property and Director of the United States Patent and Trademark Office (hereafter in this section referred to as the "Director") to have significant utility in the conduct of aeronautical and space activities unless the applicant files with the Director, with the application or within thirty days after request therefor by the Director, a written statement executed under oath setting forth the full facts concerning the circumstances under which such invention was made and stating the relationship (if any) of such invention to the performance of any work under any contract of the Administration. Copies of each statement and application to which it relates shall be transmitted forthwith by the *>Director< to the Administrator.

Property rights statements to DOE or NASA may be filed at any time but should be updated if necessary to accurately reflect property rights at the time the application is allowed.

Shortly after filing, an informal request for a property rights statement will be mailed to those applicants whose nonprovisional applications have been marked by the USPTO security screeners as being of interest to DOE or NASA. Provisional applications are not subject to DOE or NASA property rights review. While no formal time period is set, a response by applicants within 45 days will expedite processing. If the statement submitted during this period is defective, another letter is sent from Licensing and Review detailing the deficiencies and giving applicant another opportunity to respond during this period of informal correspondence.

If no response to the initial so called 45-Day Letter is received or if repeated efforts to correct a defective statement evidence an absence of cooperation on the part of the applicant, a formal request for a statement in accordance with the statutes will be made. A 30-day statutory period for response is then set. There is no provision for an extension of this time period. If no proper and timely statement is received, the application will be held abandoned and the applicant so notified. Such applications may be revived under the provisions of ** >37 CFR 1.137<. *In re Rutan*, 231 USPQ 864 (Comm'r Pat. 1986).

Any papers pertaining to property rights under section 152 of the Atomic Energy Act, 42 U.S.C. 2182, (DOE), or section 305(c) or the National Aeronautics and Space Act, 42 U.S.C. 2457, (NASA), that have not been associated with the application file, or have not been made of record in the file and processed by the Licensing and Review section, must be sent to the Licensing and Review section immediately.

151 Content of the Statements

The law requires the statement to set forth "the full facts" surrounding the conception and making of the invention. These facts should include those which are

unique to that invention. The use of form paragraphs or printed forms which set forth only broad generalized statements of fact is not ordinarily regarded as meeting the requirements of these statutes.

The word "applicant" in both of these statutes has been construed to mean the inventor or joint inventors in person. Accordingly, in the ordinary situation, the statements must be signed by the inventor or the joint inventors, if available. This construction is consistent with the fact that no other person could normally be more knowledgeable of the "full facts concerning the circumstances under which such invention was made," (42 U.S.C. 2457) or, "full facts surrounding the making or conception of the invention or discovery" (42 U.S.C. 2182). If a request under 37 CFR 1.48 for correction of inventorship is granted during pendency of an application in which a property rights statement has been filed, a supplemental statement executed by any added inventor(s) is required and should promptly be filed with the Licensing and Review section.

In instances where an applicant does not have firsthand knowledge whether the invention involved work under any contract, subcontract, or arrangement with or for the benefit of the Atomic Energy Commission, or had any relationship to any work under any contract of the National Aeronautics and Space Administration, and includes in his or her statement information of this nature derived from others, his or her statement should identify the source of his or her information. Alternatively, the statement by the applicant could be accompanied by a supplemental declaration or oath, as to the contractual matters, by the assignee or other person, e.g., an employee thereof, who has the requisite knowledge.

When an applicant is deceased or incompetent, or where it is shown to the satisfaction of this Office that he or she refuses to furnish a statement or cannot be reached after diligent efforts, declarations or statements under oath setting forth the information required by the statutes may be accepted from an officer or employee of the assignee who has sufficient knowledge of the facts. The offer of such substitute statements should be based on the actual unavailability of or refusal by the applicant, rather than mere inconvenience. Where it is shown that one of the joint inventors is deceased or unavailable, a statement by all of the other inventor(s) may be accepted.

The following is an acceptable format for statements to DOE or NASA assuming that no government funds or other considerations were involved in the making or conception of the invention. It is important that the information provided in the statement be an accurate reflection of the fact situation at the time the statement is made. While the sample below is in the form of a declaration, a sworn oath is equally acceptable.

Note that the statement must be in the form of an oath or declaration. Further note that the statement must be signed by all the inventors. See also the notice entitled "Statements Filed Under Atomic Energy Act and NASA Act" published in 914 O.G. 1 (Sept. 4, 1973) for further information.

I (We) _____ citizens of residing at declare: That I (we) made and conceived the invention described and claimed in patent application number filed in the United States of America on titled.

I (We) _____ citizens of _____ residing at _____ declare: That I (we) made and conceived the invention described and claimed in patent application number _____ filed in the United States of America on _____ titled _____.

(Include completed I. or II. below)

I. (for Inventors Employed by an Organization)

That I (we) made and conceived this invention while employed by _____.

That the invention is related to the work I am (we are) employed to perform and was made within the scope of my (our) employment duties;

That the invention was made during working hours and with the use of facilities, equipment, materials, funds, information and services of _____.

Other relevant facts are: _____.

That to the best of my (our) knowledge and belief based upon information provided by _____ of _____:

-OR-

II. (For Self-Employed Inventors)

That I (we) made and conceived this invention on my (our) own time using only my (our) own facilities, equipment, materials, funds, information and services.

Other relevant facts are _____

That to the best of my (our) knowledge and belief:

(Include III. and/or IV. below as appropriate)

III. The invention or discovery was not made or conceived in the course of, or in connection with, or under the terms of any contract, subcontract or arrangement entered into with or for the benefit of the United States Atomic Energy Commission or its successors Energy Research and Development Administration or the Department of Energy.

-AND/OR-

IV. The invention was not made under nor is there any relationship of the invention to the performance of any work under any contract of the National Aeronautics and Space Administration.

V. The undersigned inventor(s) declare(s) further that all statements made herein of his or her (their)own knowledge are true and that all statements made on information and belief are believed to be true and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issuing thereon.

Chapter 200 Types, Cross-Noting, and Status of Application

201 Types of Applications [R-3]

35 U.S.C. 111. Application.

(a) IN GENERAL.—

(1) WRITTEN APPLICATION.—An application for patent shall be made, or authorized to be made, by the inventor, except as otherwise provided in this title, in writing to the Director.

(2) CONTENTS.—Such application shall include—

(A) a specification as prescribed by section 112 of this title;

(B) a drawing as prescribed by section 113 of this title; and

(C) an oath by the applicant as prescribed by section 115 of this title.

(3) FEE AND OATH.—The application must be accompanied by the fee required by law. The fee and oath may be submitted after the specification and any required drawing are submitted, within such period and under such conditions, including the payment of a surcharge, as may be prescribed by the Director.

(4) FAILURE TO SUBMIT.—Upon failure to submit the fee and oath within such prescribed period, the application shall be regarded as abandoned, unless it is shown to the satisfaction of the Director that the delay in submitting the fee and oath was unavoidable or unintentional. The filing date of an application shall be the date on which the specification and any required drawing are received in the Patent and Trademark Office.

(b) PROVISIONAL APPLICATION.—

(1) AUTHORIZATION.—A provisional application for patent shall be made or authorized to be made by the inventor, except as otherwise provided in this title, in writing to the Director. Such application shall include—

(A) a specification as prescribed by the first paragraph of section 112 of this title; and

(B) a drawing as prescribed by section 113 of this title.

(2) CLAIM.—A claim, as required by the second through fifth paragraphs of section 112, shall not be required in a provisional application.

(3) FEE.—

(A) The application must be accompanied by the fee required by law.

(B) The fee may be submitted after the specification and any required drawing are submitted, within such period and

under such conditions, including the payment of a surcharge, as may be prescribed by the Director.

(C) Upon failure to submit the fee within such prescribed period, the application shall be regarded as abandoned, unless it is shown to the satisfaction of the Director that the delay in submitting the fee was unavoidable or unintentional.

(4) FILING DATE.—The filing date of a provisional application shall be the date on which the specification and any required drawing are received in the Patent and Trademark Office.

(5) ABANDONMENT.—Notwithstanding the absence of a claim, upon timely request and as prescribed by the Director, a provisional application may be treated as an application filed under subsection (a). Subject to section 119(e)(3) of this title, if no such request is made, the provisional application shall be regarded as abandoned 12 months after the filing date of such application and shall not be subject to revival after such 12-month period.

(6) OTHER BASIS FOR PROVISIONAL APPLICATION.—Subject to all the conditions in this subsection and section 119(e) of this title, and as prescribed by the Director, an application for patent filed under subsection (a) may be treated as a provisional application for patent.

(7) NO RIGHT OF PRIORITY OR BENEFIT OF EARLIEST FILING DATE.—A provisional application shall not be entitled to the right of priority of any other application under section 119 or 365(a) of this title or to the benefit of an earlier filing date in the United States under section 120, 121, or 365(c) of this title.

(8) APPLICABLE PROVISIONS.—The provisions of this title relating to applications for patent shall apply to provisional applications for patent, except as otherwise provided, and except that provisional applications for patent shall not be subject to sections 115, 131, 135, and 157 of this title.

(Amended Aug. 27, 1982, Public Law 97-247, sec. 5, 96 Stat. 319; Dec. 8, 1994, Public Law 103-465, sec. 532(b)(3), 108 Stat. 4986; Nov. 29, 1999, Public Law 106-113, sec. 1000(a)(9), 113 Stat. 1501A-582, 588 (S. 1948 secs. 4732(a)(10)(A), 4801(a)).)

37 CFR 1.9. Definitions.

(a)(1)A national application as used in this chapter means a U.S. application for patent which was either filed in the Office under 35 U.S.C. 111, or which entered the national stage from an international application after compliance with 35 U.S.C. 371.

(2) A provisional application as used in this chapter means a U.S. national application for patent filed in the Office under 35 U.S.C. 111(b).

(3) A nonprovisional application as used in this chapter means a U.S. national application for patent which was either filed in the Office under 35 U.S.C. 111(a), or which entered the national stage from an international application after compliance with 35 U.S.C. 371.

(b) An international application as used in this chapter means an international application for patent filed under the Patent Cooperation Treaty prior to entering national processing at the Designated Office stage.

*****

NATIONAL APPLICATIONS (35 U.S.C. 111) VS. NATIONAL STAGE APPLICATIONS (35 U.S.C. 371)

Nonprovisional and provisional applications are national applications. Treatment of a national application under 35 U.S.C. 111 and a national stage application (a national application which entered the national stage from an international application after compliance with 35 U.S.C. 371) are similar but not identical. Note the following examples:

(A) Restriction practice under MPEP § 806+ is applied to national applications under 35 U.S.C. 111(a) while unity of invention practice under MPEP Chapter 1800 is applied to national stage applications.

(B) National nonprovisional applications filed under 35 U.S.C. 111(a) without an executed oath or declaration *>, basic< filing fee>, search fee, or examination fee< are governed by the notification practice set forth in 37 CFR 1.53(f) while national stage applications filed without an oath or declaration or national stage fee are governed by the notification practice set forth in 37 CFR 1.495.

37 CFR 1.9(a)(1) defines a national application as a U.S. application which was either filed in the Office under 35 U.S.C. 111, or which entered the national stage from an international application after compliance with 35 U.S.C. 371. Domestic national patent applications fall under three broad types:

(A) applications for patent under 35 U.S.C. 101 relating to a “new and useful process, machine, manufacture, or composition of matter, etc.”;

(B) applications for plant patents under 35 U.S.C. 161; and

(C) applications for design patents under 35 U.S.C. 171.

The first type of patents are sometimes referred to as “utility” patents when being contrasted with plant or design patents. The specialized procedure which pertains to the examination of applications for design and plant patents are treated in detail in Chapters 1500 and 1600, respectively. Domestic national applications include original (nonprovisional), provisional, plant, design, reissue, divisional, and continuation applications (which may be filed under 37 CFR 1.53(b)), continued prosecution applications (CPA) (filed under 37 CFR 1.53(d), only applicable if the

application is for a design patent) and continuation-in-part applications (which may be filed under 37 CFR 1.53(b)).

201.01 Sole

An application wherein the invention is presented as that of a single person is termed a sole application.

201.02 Joint

A joint application is one in which the invention is presented as that of two or more persons. See MPEP § 605.07.

201.03 Correction of Inventorship in an Application [R-5]

Correction of inventorship in an application is permitted by amendment under 35 U.S.C. 116, which is implemented by 37 CFR 1.48. The utilization of a request under 37 CFR 1.48 will generally correct the inventorship in the application in which it is filed. 37 CFR 1.48(a) is directed at correcting the inventorship in an application where the inventorship was improperly set forth in the executed oath or declaration filed in the application. 37 CFR 1.48(b) is directed at correcting the inventorship where the executed oath or declaration had correctly set forth the inventorship but due to prosecution of the application, e.g., claim cancellation or amendment, fewer than all of the currently named inventors are the actual inventors of the remaining claims. 37 CFR 1.48(c) is directed at correcting the inventorship where the executed oath or declaration had correctly set forth the inventorship but due to amendment of the claims to include previously unclaimed but disclosed subject matter, one or more inventors of the amended subject matter must be added to the current inventorship. 37 CFR 1.48(d) is directed at provisional applications where an inventor is to be added. 37 CFR 1.48(e) is directed at provisional applications where an inventor is to be deleted. 37 CFR 1.48(f) operates to automatically correct the inventorship upon filing of a first executed oath or declaration under 37 CFR 1.63 by any of the inventors in a nonprovisional application or upon filing of a cover sheet in a provisional application.

Correction of inventorship may also be obtained by the filing of a continuing application under 37 CFR 1.53 without the need for filing a request under 37 CFR 1.48, either in the application containing the inventorship err(using a copy of the executed oath or declaration from the parent application)or (to be abandoned) or in the continuing application. The continuing application must be filed with the correct inventorship named therein. The filing of a continuing application to correct the inventorship is appropriate if at least one of the correct inventors has been named in the prior application (35 U.S.C. 120 and 37 CFR 1.78(a)(1)). That is, at least one of the correct inventors must be named in the executed oath or declaration filed in the prior application, or where no executed oath or declaration has been submitted in the prior application, the name of at least one correct inventor must be set forth in the application papers pursuant to 37 CFR 1.41(a)(1). Where the name of at least one inventor is to be added, correction of inventorship can be accomplished by filing a continuing application under 37 CFR 1.53(b) with a newly executed oath or declaration under 37 CFR 1.63(a). Where the name of an inventor(s) is to be deleted, applicant can file a *>continuation or divisional< application >(using a copy of the executed oath or declaration from the parent application)< with a request for deletion of the name of the inventor(s). >See 37 CFR 1.63(d)(2). If a continuing application is filed with a new executed oath or declaration properly naming the correct inventors, a request for deletion of the name(s) of the person(s) who are not inventors in the continuing application is not necessary.< The continuing application may be filed under 37 CFR 1.53(b) or, if the application is for a design patent, under 37 CFR 1.53(d). Note the requirements of 37 CFR 1.78 (a)(1)(ii).

In certain instances where the statement of the lack of deceptive intent of the inventor to be added or deleted cannot be obtained, a petition under 37 CFR 1.183 requesting waiver of that requirement may be possible.

For provisional applications, it may not be necessary to correct the inventorship under 37 CFR 1.48 (d) and (e) unless there would be no overlap of inventors upon the filing of the nonprovisional application with the correct inventorship. See subsections V. and VI. below.

The need to correct the inventorship in any U.S. nonprovisional or provisional application may in part

be dependent upon whether a foreign filing under the Paris Convention will occur subsequent to the U.S. filing. See MPEP § 201.13.

37 CFR 1.48 does not apply to reissue applications as is noted in its title, whether correcting an inventorship error in the patent to be reissued or in the reissue application itself. Where an error in inventorship in a patent is to be corrected via a reissue application, see MPEP § 1412.04. Where such an error is to be corrected via a certificate of correction under 37 CFR 1.324, see MPEP § 1481.

Where a request under 37 CFR 1.48 is denied in a final agency action, the examiner must determine whether a rejection under 35 U.S.C. 102(f) or (g) is appropriate. Where the request under 37 CFR 1.48 has been entered (for a decision thereon) and is dismissed (due to a defect that can be corrected) consideration under 35 U.S.C. 102(f) or (g) would be premature.

Although 37 CFR 1.48 does not contain a diligence requirement for filing the request, once an inventorship error is discovered, timeliness requirements under 37 CFR 1.116 and 37 CFR 1.312 apply. For allowed applications where the issue fee has been paid prior to the entry of a request under 37 CFR 1.48, if the request under 37 CFR 1.48 is dismissed or denied in an Office action, the application must be withdrawn from issue so that applicant would be given time to correct the defect(s). If the request under 37 CFR 1.48 is granted, then it would not be necessary to withdraw the application from issue.

Requests under 37 CFR 1.48 are generally decided by the primary examiner except:

(A) When the application is involved in an interference (decided by the Board of Patent Appeals and Interferences);

(B) When the application is a national stage application filed under 35 U.S.C. 371 which, as of the date of filing of the request, has not been accepted as satisfying the requirements for entry into the national stage (decided in the PCT Legal Office); and

(C) When accompanied by a petition under 37 CFR 1.183 requesting waiver of a requirement under 37 CFR 1.48(a) or (c), e.g., waiver of the statement of lack of deceptive intent by an inventor to be added or deleted, or waiver of the reexecution of the declaration by all of the inventors (decided in the Office of Petitions).

When any request for correction of inventorship under 37 CFR 1.48(a)-(c) is granted, the examiner will acknowledge any addition or deletion of the names of inventors by using either form paragraph 2.14 or form paragraph 2.14.01 in the next Office communication to applicant or his/her attorney. It will be necessary to revise the PALM records, issue a corrected filing receipt, and change the bib-data sheet. The correction should be noted on the original oath or declaration by writing in ink in the left column "See Paper No. __ for inventorship corrections." See MPEP § 605.04(g). For Image File Wrapper (IFW) processing, see the IFW Manual.

¶ *2.14 Correction of Inventorship Under 37 CFR 1.48(a) or (c), Sufficient*

In view of the papers filed **[1]**, it has been found that this nonprovisional application, as filed, through error and without deceptive intent, improperly set forth the inventorship, and accordingly, this application has been corrected in compliance with 37 CFR 1.48 (**[2]**). The inventorship of this application has been changed by **[3]**.

The application will be forwarded to the Office of Initial Patent Examination (OIPE) for issuance of a corrected filing receipt, and correction of Office records to reflect the inventorship as corrected.

Examiner Note:

1. In bracket 2, insert --a-- or --c--, as appropriate.
2. In bracket 3, insert explanation of correction made, including addition or deletion of appropriate names.

¶ *2.14.01 Correction of Inventorship Under 37 CFR 1.48(b), Sufficient*

In view of the papers filed **[1]**, the inventorship of this nonprovisional application has been changed by the deletion of **[2]**.

The application will be forwarded to the Office of Initial Patent Examination (OIPE) for issuance of a corrected filing receipt, and correction of Office records to reflect the inventorship as corrected.

Examiner Note:

1. This form paragraph is to be used only for 37 CFR 1.48(b) corrections.
2. In bracket 2, insert the names of the deleted inventor(s).

The grant or denial of a request under 37 CFR 1.48(a) may result in the lack of inventorship overlap between a parent application and a continuing application and the consequent inability to claim benefit in the continuing application of the parent application's filing date under 35 U.S.C. 120. Intervening references must then be considered.

For correction of inventorship in a patent, see 37 CFR 1.324 and MPEP § 1481.

A request under 37 CFR 1.48 will not be required:

(A) Where an application is to issue with the correct inventorship based on the allowed claims even though the application may have been filed with an incorrect inventorship based on the claims as originally submitted;

(B) Where a typographical or transliteration error in the spelling of an inventor's name is discovered, the Office should simply be notified of the error. A new oath or declaration is not required. See MPEP § 605.04(g). Reference to the notification will be made on the previously filed oath or declaration;

(C) Where an inventor's name has been changed after the application has been filed, see MPEP § 605.04(c);

(D) Where a court has issued an order under 35 U.S.C. 256 for correction of the inventorship of a patent, it should be submitted directly to the Certificate of Correction Division along with **> form PTO/SB/44 (see MPEP § 1485).< A new oath or declaration under 37 CFR 1.63 is not required;

(E) Where there is no change of individual but an incorrect name was given, a petition under 37 CFR 1.182 should be filed requesting correction of applicant's name;

(F) In a nonprovisional application filed under 35 U.S.C. 111(a), where the first-filed executed oath or declaration was filed on or after December 1, 1997 and names the correct inventors, but the inventive entity on the executed oath or declaration differs from that which was set forth on filing of the application, e.g., the application transmittal letter or an unexecuted oath or declaration. See 37 CFR 1.48(f)(1);

(G) In a provisional application filed under 35 U.S.C. 111(b), where the cover sheet was filed on or after December 1, 1997 which names the correct inventors, but the inventive entity on the cover sheet differs from that which was set forth on filing of the provisional application without a cover sheet. See 37 CFR 1.48(f)(2).

I. APPLICATIONS FILED UNDER 37 CFR 1.53(f) - NO OATH/DECLARATION

The Office will issue a filing receipt listing the inventors identified at the time of filing of the application even if the application was filed under 37 CFR 1.53(f) without an executed oath or declaration. Where the first-filed executed oath or declaration was filed on or after December 1, 1997 and sets forth an inventive entity which is different from the inventive entity initially set forth at the time of filing of the application, the actual inventorship of the application will be taken from the executed oath or declaration. See 37 CFR 1.41(a)(1). A request under 37 CFR 1.48(a), (b), or (c) will not be necessary. See 37 CFR 1.48(f).

Where the first-filed executed oath or declaration was submitted prior to December 1, 1997 in an application filed without an executed oath or declaration, if the inventive entity identified on the executed oath or declaration differs from the inventive entity identified at the time of filing of the application, a request under 37 CFR 1.48(a) or (c) must also be submitted.

The original named inventors should not execute or submit an oath or declaration under 37 CFR 1.63 merely to timely complete the filing requirements in reply to a "Notice to File Missing Parts of Application" where the possibility of an error in inventorship has been discovered, nor should the oath or declaration be signed by someone who cannot properly make the averments therein. Additional time to reply to the Notice is available under 37 CFR 1.136(a) and possibly under 37 CFR 1.136(b). See MPEP § 710.02(d).

Example

A nonprovisional application is filed (either prior to, on or after December 1, 1997) naming A as the sole inventor without an executed oath or declaration under 37 CFR 1.63. Only claim 1 is presented. A "Notice to File Missing Parts of Application" is mailed to the applicant requiring an oath or declaration under 37 CFR 1.63. In timely reply thereto after December 1, 1997, a preliminary amendment adding claim 2, and a declaration under 37 CFR 1.63 executed by inventors A and B are submitted with B being added in view of claim 2. A request under 37 CFR 1.48(c) is not required, in that 37 CFR 1.48(f)(1) will act to set forth an inventorship of A and B.

Similarly, where a preliminary amendment canceling or amending claims concomitantly requires the deletion of an inventor, such deletion may be accomplished by the submission of a first-filed executed oath or declaration on or after December 1, 1997 naming the actual inventive entity. A request under 37 CFR 1.48(b) would not be necessary.

II. 37 CFR 1.48(a)

37 CFR 1.48. Correction of inventorship in a patent application, other than a reissue application, pursuant to 35. U.S.C. 116.

(a) *Nonprovisional application after oath/declaration filed*. If the inventive entity is set forth in error in an executed § 1.63 oath or declaration in a nonprovisional application, and such error arose without any deceptive intention on the part of the person named as an inventor in error or on the part of the person who through error was not named as an inventor, the inventorship of the nonprovisional application may be amended to name only the actual inventor or inventors. Amendment of the inventorship requires:

(1) A request to correct the inventorship that sets forth the desired inventorship change;

(2) A statement from each person being added as an inventor and from each person being deleted as an inventor that the error in inventorship occurred without deceptive intention on his or her part;

(3) An oath or declaration by the actual inventor or inventors as required by § 1.63 or as permitted by §§ 1.42, 1.43 or § 1.47;

(4) The processing fee set forth in § 1.17(i); and

(5) If an assignment has been executed by any of the original named inventors, the written consent of the assignee (see § 3.73(b) of this chapter).

*****

Under 37 CFR 1.48(a), if the correct inventor or inventors are not named in an executed oath or declaration under 37 CFR 1.63 in a nonprovisional application for patent, the application can be amended to name only the actual inventor or inventors so long as the error in the naming of the inventor or inventors occurred without any deceptive intention on the part of the person named as an inventor in error or the person who through error was not named as an inventor.

37 CFR 1.48(a) requires that the amendment be accompanied by: (1) a request to correct the inventorship that sets forth the desired inventorship change; (2) a statement from each person being added and from each person being deleted as an inventor that the error occurred without deceptive intention on his or her part; (3) an oath or declaration by each actual inventor or inventors as required by 37 CFR 1.63 or as permitted by 37 CFR 1.42, 1.43 or 1.47; (4) the fee set forth in 37 CFR 1.17 (i); and (5) the written consent of any existing assignee, if any of the originally named inventors has executed an assignment.

Correction may be requested in cases where the person originally named as inventor was in fact not an inventor or the sole inventor of the subject matter being claimed. If such error occurred without any deceptive intention on the part of the inventor named and/or not named in error, the Office has the authority to substitute the true inventive entity for the erroneously named inventive entity. Instances where corrections can be made include changes from: a mistaken sole inventor to a different but actual sole inventor; a mistakenly identified sole inventor to different, but actual, joint inventors; a sole inventor to joint inventors to include the original sole inventor; erroneously identified joint inventors to different but actual joint inventors; erroneously identified joint inventors to a different, but actual, sole inventor. (Note that 35 U.S.C. 120 and 37 CFR 1.78 require an overlap of inventorship, hence, refiling, rather than requesting under 37 CFR 1.48, to change inventorship where the change would not result in an inventorship overlap may result in the loss of a benefit claim.)

A. Statement of Lack of Deceptive Intention

Where a similar inventorship error has occurred in more than one application for which correction is requested wherein petitioner seeks to rely on identical statements, only one original set need be supplied if copies are submitted in all other applications with a reference to the application containing the originals (original oaths or declarations under 37 CFR 1.63 and written consent of assignees along with separate processing fees must be filed in each application).

The statement required from each inventor being added or deleted may simply state that the inventorship error occurred without deceptive intention. The statement need not be a verified statement (see MPEP § 410).

On very infrequent occasions, the requirements of 37 CFR 1.48(a) have been waived upon the filing of a *>petition< and fee under 37 CFR 1.183 (along with the request and fee under 37 CFR 1.48(a)) to permit the filing of a statement by less than all the parties required to submit a statement. *In re Cooper*, 230 USPQ 638, 639 (Dep. Assist. Comm'r Pat. 1986). However, such a waiver will not be considered unless the facts of record unequivocally support the correction sought. *In re Hardee*, 223 USPQ 1122, 1123 (Comm'r Pat. 1984). As 37 CFR 1.48(a) is intended as a simple procedural remedy and does not represent a substantive determination as to inventorship, issues relating to the inventors' or alleged inventors' actual

contributions to conception and reduction to practice are not appropriate for consideration in determining whether the record unequivocally supports the correction sought.

In those situations where an inventor to be added refuses to submit a statement supporting the addition or such party cannot be reached, waiver under 37 CFR 1.183 of the requirement for a statement from that party would be appropriate upon a showing of such refusal or inability to reach the inventor. Every existing assignee of the original named inventors must give its consent to the requested correction. Where there is more than one assignee giving its consent, the extent of that interest (percentage) should be shown. Where no assignment has been executed by the inventors, or if deletion of a refusing inventor is requested, waiver will not be granted absent unequivocal support for the correction sought. Petitions under 37 CFR 1.47 are not applicable to the requirement for statements from each originally named inventor.

An available remedy to obtain correction of inventorship where waiver of a required statement is not available to correct the inventorship in a particular application is to refile the application naming the correct inventive entity. A request under 37 CFR 1.48(a) would not then be required in the newly filed application as no correction would be needed. Furthermore, a request under 37 CFR 1.48(a) would also not be required in the prior application that was refiled, since the prior application will be abandoned. Benefit of the parent application's filing date would be available under 35 U.S.C. 120 provided there is at least one inventor overlap between the two applications. (Note: a sole-to-sole correction would not obtain benefit under 35 U.S.C. 120).

B. Oath or Declaration

An oath or declaration under 37 CFR 1.63 by each actual inventor must be presented. While each inventor need not execute the same oath or declaration, each oath or declaration executed by an inventor must contain a complete listing of all inventors so as to clearly indicate what each inventor believes to be the appropriate inventive entity. Where individual declarations are executed, they must be submitted as individual declarations rather than combined into one declaration. For example, where the inventive entity is A and B, a declaration may not be executed only by A naming only A as the inventor and a different declaration may not be executed only by B naming only B as the inventor, which two declarations are then combined into one declaration with a first page of boiler plate, a second page with A's signature, and a second page with B's signature (so that it appears that the declaration was executed with the entire inventive entity appearing in the declaration when it did not).

Conflicting oaths or declarations filed: If the first executed oaths or declarations that are submitted name different inventive entities (e.g., one declaration names A, B, and C as inventors and a second declaration names D as the inventor) and are filed on the same day, the application will be considered to name the inventors named in both declarations (A, B, C, and D) and a new oath or declaration in compliance with 37 CFR 1.63 including the entire inventive entity will be required. Where an application is filed with an executed declaration under 37 CFR 1.63 naming an inventive entity that is in conflict with another paper filed in the application, such as the transmittal letter, the executed declaration will govern. However, where an executed declaration is never submitted and the application papers are in conflict as to the inventorship, each party identified as an inventor on filing will be considered to have been named as part of the inventive entity. See 37 CFR 1.41(a)(1).

37 CFR 1.47 is available to meet the requirement for an oath or declaration under 37 CFR 1.63 as for example where A, B, and C were originally named as inventors and D who refuses to cooperate is to be later added as an inventor. The oath or declaration under 37 CFR 1.63 of inventor D may be supplied pursuant to 37 CFR 1.47(a), but note that the required 37 CFR 1.48(a)(2) statement must still be supplied by inventor D (an unlikely event in view of the inability to obtain the executed oath or declaration under 37 CFR 1.63), or waiver thereof petitioned under 37 CFR 1.183. Alternatively, where D is to be added as an inventor (where inventors A, B, and C have previously executed the application under 37 CFR 1.63) and it is original inventor A who refuses to cooperate, the statement under 37 CFR 1.48(a)(2) is only required to be signed by inventor D. Originally named inventor A is merely required to reexecute an oath or declaration in compliance with 37 CFR 1.63. Petitions under 37 CFR 1.47 are only applicable to an original oath or

declaration and are not applicable to the reexecution of another oath or declaration by A. In such circumstances, a petition under 37 CFR 1.183 should be considered requesting waiver of the requirement of 37 CFR 1.64 that each of the actual inventors, i.e., inventor A, execute the oath or declaration, particularly where assignee consent is given to the requested correction. Absent assignee consent, the petition under 37 CFR 1.183 requesting waiver of the reexecution of the oath or declaration will be evaluated as to whether the nonsigning inventor was actually given the opportunity to reexecute the oath or declaration, or whether the nonsigning inventor could not be reached.

Applications filed with a petition under 37 CFR 1.47 and a request under 1.48(a) will be forwarded to the Office of Petitions, after mailing the filing receipt by the Office of Initial Patent Examination, for consideration of the petition and the request. In those instances wherein a request under 37 CFR 1.48(a) and a petition under 37 CFR 1.47 have both been filed in an application, the Office of Petitions may first issue a decision on the request under 37 CFR 1.48(a) so as to determine the appropriate oath or declaration under 37 CFR 1.63 required for the petition under 37 CFR 1.47.

The oath or declaration submitted subsequent to the filing date (37 CFR 1.53(f)) of an application filed under 37 CFR 1.53(b) must clearly identify the previously filed specification it is intended to execute. See MPEP § 601.01(a) and § 602.

C. Fee

Where waiver under 37 CFR 1.183 is requested in relation to a requirement under 37 CFR 1.48(a), a processing fee under 37 CFR 1.48(a) and a petition fee under 37 CFR 1.183 are required. Similarly, where in addition to a request under 37 CFR 1.48, two petitions under 37 CFR 1.183 are presented, e.g., one requesting waiver of a requirement under 37 CFR 1.48 and the other requesting waiver of the reexecution of an oath or declaration under 37 CFR 1.64, three fees are required (one for the request filed under 37 CFR 1.48 and two for the petitions filed under 37 CFR 1.183).

Where a similar error has occurred in more than one application a separate processing fee must be submitted in each application in which correction is requested.

If the processing fee has not been submitted or authorized the request will be dismissed.

D. Written Consent of Assignee

The written consent of every existing assignee of the original named inventors must be submitted. 37 CFR 1.48(a)(5). 37 CFR 1.48(a) does not limit assignees to those who are recorded in the U.S. Patent and Trademark Office records. The Office employee deciding the request should check the file record for any indication of the existence of an assignee (e.g., a small entity assertion from an assignee).

Where no assignee exists requester should affirmatively state that fact. If the file record including the request is silent as to the existence of an assignee it will be presumed that no assignee exists. Such presumption should be set forth in the decision to alert requesters to the requirement.

The individual signing on behalf of the assignee giving its consent to the requested inventorship correction, should specifically state that he or she has the authority to act on behalf of the assignee. In the absence of such a statement, the consent will be accepted if it is signed by an appropriate official of the assignee (e.g., president, vice president, secretary, treasurer, or derivative thereof) if the official's title has been made of record. A general statement of authority to act for the assignee, or on the specific matter of consent, or the appropriate title of the party signing on behalf of the assignee should be made of record in the consent. However, if it appears in another paper of record, e.g., small entity assertion, it is also acceptable. Further, the assignee must establish its ownership of the application in accordance with 37 CFR 3.73. MPEP § 324.

E. Continuing Applications

35 U.S.C. 120 permits a continuing application to claim the benefit of the filing date of a copending, previously filed, parent application provided there is inventorship overlap between the continuing application and the parent application. If the inventive entity of a continuing application includes an inventor named in the parent application, the inventorship overlap required by 35 U.S.C. 120 is met.

Example

The parent application names inventors A and B and claims inventions 1 and 2. Inventor A contributes only to invention 1 and inventor B contributes only to invention 2. A restriction requirement is made and invention 1 was elected. Upon allowance of claims directed to invention 1 and cancellation of claims directed to invention 2, a request under 37 CFR 1.48(b) was filed requesting deletion of inventor B. The request under 37 CFR 1.48(b) was granted by the primary examiner. Prior to the issuance of the parent application, a divisional application claiming benefit under 35 U.S.C. 120 to the parent application, is filed claiming only invention 2 and naming only inventor B. The inventorship overlap required by 35 U.S.C. 120 is met in this instance even though at the time of filing of the divisional application, the inventorship overlap was lost as a result of the deletion of an inventor in the parent application. The overlap of inventorship need not be present on the date the continuing application is filed nor present when the parent application issues or becomes abandoned.

On filing a continuing application under 37 CFR 1.53(b) it should not be assumed that an error in inventorship made in a parent application was in fact corrected therein in response to a request under 37 CFR 1.48(a) unless a decision from the U.S. Patent and Trademark Office to that effect was received by the requester. A continuing application naming the additional inventor can be filed under 35 U.S.C. 111(a) and 37 CFR 1.53(b) with a newly executed oath or declaration by the new inventive entity along with a request for benefit under 35 U.S.C. 120 without the need for a decision on the request under 37 CFR 1.48 filed in the parent application.

Should an error in inventorship in a parent application be discovered, whether it is the need to add and/or to delete inventors, when preparing to file a continuing application, the continuing application may be filed under 37 CFR 1.53(b) with the correct inventive entity without the need for a request under 37 CFR 1.48(a) in the parent or continuing application provided the parent application is to be abandoned on filing of the continuing application. In filing **>a continuation or divisional< application under 37 CFR 1.53(b), a copy of an oath or declaration from the prior application can only be used where inventors are to be deleted (37 CFR 1.53(b)(1) and 37 CFR 1.63(d)(1)(ii)), but not where inventors are to be added. Where inventors are to be added, a newly executed oath or declaration must be submitted. See 37 CFR 1.63(d)(5).

In a continued prosecution application (CPA) filed under 37 CFR 1.53(d), a request under 37 CFR 1.48(a) or (c) to add an inventor to a parent application that was not acted on (e.g., filed after final rejection) will be automatically considered in the CPA. Until the request is granted, the inventorship remains the same as the prior application. Note, however, that effective July 14, 2003, CPA practice has been eliminated as to utility and plant applications. If the application is a design application, after discovery of an inventorship error, the application can also be refiled under 37 CFR 1.53(d)(4) as a CPA where inventors are only to be deleted.

In filing a continuing application to correct the inventorship, it is important to recognize that 37 CFR 1.78 requires for purposes of claiming the benefit of the prior application that the prior application must either have had the filing fee, or the retention fee as set forth in 37 CFR 1.21(l), paid within the period set forth in 37 CFR 1.53(f) so as to establish copendency. See 37 CFR 1.78(a)(1). Effective July 1, 2005, the processing and retention fee (37 CFR 1.21(l)) practice has been eliminated. The basic filing fee (rather than just the processing and retention fee set forth in former 37 CFR 1.21(l)) must be paid within the pendency of a nonprovisional application in order to permit benefit of the application to be claimed under 35 U.S.C. 120, 121, or 365(c) in a subsequent nonprovisional or international application. See 37 CFR 1.78(a)(1)(ii).

Should a *>continuation or divisional< application be filed under 37 CFR 1.53(b)(1) where a copy of the oath or declaration from the prior application is utilized (or under 37 CFR 1.53(d) as a CPA if the prior application is a design application) purporting to add an inventor, the inventorship of the prior application will be retained in the continuing application as addition of an inventor is not permitted in these instances. The absence of a request to correct the inventorship submitted with the continuing application will not affect the filing date of the continuing application. However, the retained inventorship must

then be corrected by the filing of a request under 37 CFR 1.48(a) in the *>continuation or divisional< application stating that the error in failing to name the additional inventor in the prior application was without deceptive intention. Where an inventor is to be added, it is recommended that a *>continuation or divisional< application be filed under 37 CFR 1.53(b) with a newly executed oath or declaration and not be filed with a copy of the oath or declaration from the prior application. This procedure eliminates the need for a request under 37 CFR 1.48.

An inventorship error discovered while prosecuting a continuing application that occurred in both an abandoned parent application and the continuing application can be corrected in both applications by filing a single request in the continuing application (e.g., A + B named in parent, B + C named in continuing application, actual inventorship is C + D thereby eliminating inventorship overlap and resulting loss of benefit claim under 35 U.S.C. 120 if the error is not corrected in abandoned parent application as well as in continuation application). Absent such loss of inventorship overlap, correction need not be made in the abandoned application.

When entering the national stage under 35 U.S.C. 371, correction of inventorship is via the provisions of 37 CFR 1.497(d). See MPEP § 1893.01(e).

¶ *2.13 Correction of Inventorship Under 37 CFR 1.48(a), Insufficient*

The request to correct the inventorship of this nonprovisional application under 37 CFR 1.48(a) is deficient because:

Examiner Note:

1. This form paragraph should only be used in response to requests to correct an error in the naming of the prior inventors in nonprovisional applications. If the request is merely to delete an inventor because claims were canceled or amended such that the deleted inventor is no longer an actual inventor of any claim in the application, use form paragraph 2.13.01 instead of this form paragraph.

Potential rejections

A rejection under 35 U.S.C. 102(f) or (g) must be considered if the request is denied.

The grant or denial of the request may result in the loss of inventorship overlap between a parent application and a continuing application and an inability to claim benefit in the continuing application of the parent application's filing date under 35 U.S.C. 120. Intervening references must then be considered.

2. A primary examiner may not decide the request if the request is also accompanied by a petition under 37 CFR 1.183 requesting waiver of one of the requirements explicitly set forth in 37 CFR 1.48(a) (typically a refusal of one of the inventors to be added or deleted to execute the required statement of facts) – the request for correction of inventorship and request for waiver of the rules should be forwarded to the Office of Petitions.

3. One or more of form paragraphs 2.13a - 2.13e should follow this form paragraph, as applicable.

4. Where it appears that: 1) the inventor(s) to be added or deleted may be hostile and will not execute a required statement of facts; and 2) the actual inventorship would overlap the original inventorship (37 CFR 1.78), follow this form paragraph with form paragraph 2.13f.

5. Requests under 37 CFR 1.41 to change inventorship where an executed oath or declaration has not been filed are to be acted upon by OIPE.

6. Where there is a correction in a person's name, e.g., due to misspelling, or marriage, a request under 37 CFR 1.48 is inappropriate. See MPEP § 605.04(b) and (c) for name changes.

7. An initial executed oath or declaration under 37 CFR 1.63 may change the inventorship as originally set forth when the application is filed without an executed oath or declaration without request for correction of inventorship (37 CFR 1.48(f)).

¶ *2.13a Statement of Facts Problem (for Use Following FP 2.13, If Applicable)*

The statement of facts by an inventor or inventors to be added or deleted does not explicitly state that the inventorship error occurred without deceptive intent on his or her part or cannot be construed to so state.

¶ *2.13b No New Oath or Declaration (for Use Following FP 2.13 or 2.13.02, If Applicable)*

An oath or declaration by each actual inventor or inventors listing the entire inventive entity has not been submitted.

¶ *2.13c Required Fee Not Submitted (for Use Following FP 2.13, 2.13.01 or 2.13.02, If Applicable)*

It lacks the required fee under 37 CFR 1.17(i).

¶ *2.13d Written Consent Missing (for Use Following FP 2.13 or 2.13.02, If Applicable)*

It lacks the written consent of any assignee of one of the originally named inventors.

¶ *2.13e 37 CFR 3.73(b) Submission (for Use Following FP 2.13 or 2.13.02, If Applicable)*

A 37 CFR 3.73(b) submission has not been received to support action by the assignee.

¶ *2.13f Hostile Inventor(s)/Inventorship Overlap (for Use Following FP 2.13, If Applicable)*

As it appears that a party required by 37 CFR 1.48(a)(2) to submit a statement of facts may not be willing to submit such statement, applicant should consider either: a) submission of a petition under 37 CFR 1.183 to waive that requirement if the original named inventor(s) has assigned the entire right and interest to an

assignee who has given its consent to the requested inventorship correction, MPEP § 201.03, Statement of Lack of Deceptive Intention, or b) refiling the application (where addition is needed under 37 CFR 1.53(b) with a new oath or declaration and any necessary petition under 37 CFR 1.47, or where only deletion is needed, either under 37 CFR 1.53(b) utilizing a copy of a prior oath or declaration under 37 CFR 1.63(d)(1)(iv), or under 37 CFR 1.53(d)) (design applications only), thereby eliminating the need for a 37 CFR 1.48 request.

¶ *2.13.01 Correction of Inventorship Under 37 CFR 1.48(b), Insufficient*

The request for the deletion of an inventor in this nonprovisional application under 37 CFR 1.48(b) is deficient because:

Examiner Note:

1. This form paragraph should only be used when the inventorship was previously correct when originally executed but an inventor is being deleted because claims have been amended or canceled such that he or she is no longer an inventor of any remaining claim in the non-provisional application. If the inventorship is being corrected because of an error in naming the correct inventors, use form paragraph 2.13 instead of this form paragraph.
2. Follow this form paragraph with one or both of form paragraphs 2.13c and 2.13g.
3. See note 1 of form paragraph 2.13, Potential rejections.

¶ *2.13g Statement Under 37 CFR 1.48(b)(2) Problem (for Use Following FP 2.13.01, If Applicable)*

The request was not accompanied by the statement required under 37 CFR 1.48 (b)(2).

¶ *2.13.02 Correction of Inventorship Under 37 CFR 1.48(c), Insufficient*

The request to correct the inventorship in this nonprovisional application under 37 CFR 1.48(c) requesting addition of an inventor(s) is deficient because:

Examiner Note:

1. This form paragraph should only be used when the inventorship was previously correct when the application was originally executed, but the inventorship now needs to be changed due to subsequent addition of subject matter from the specification to the claims, which subject matter was contributed by a party not originally named as an inventor.
2. See note 2 of form paragraph 2.13.
3. Follow this form paragraph with any of form paragraphs 2.13b-2.13e or 2.13h.
4. See note 1 of form paragraph 2.13, Potential rejections.
5. See notes 4-7 of form paragraph 2.13.

¶ *2.13h Statement of Facts, Added Inventor (for Use Following FP 2.13.02, If Applicable)*

The statement of facts by the inventor(s) to be added does not explicitly state that the amendment of the inventorship is necessitated by amendment of the claims and that the inventorship error occurred without deceptive intent on the part of the inventor(s) to be added, or cannot be construed to so state.

¶ *2.14 Correction of Inventorship Under 37 CFR 1.48(a) or (c), Sufficient*

In view of the papers filed **[1]**, it has been found that this nonprovisional application, as filed, through error and without deceptive intent, improperly set forth the inventorship, and accordingly, this application has been corrected in compliance with 37 CFR 1.48 (**[2]**). The inventorship of this application has been changed by **[3]**.

The application will be forwarded to the Office of Initial Patent Examination (OIPE) for issuance of a corrected filing receipt, and correction of Office records to reflect the inventorship as corrected.

Examiner Note:

1. In bracket 2, insert --a-- or --c--, as appropriate.
2. In bracket 3, insert explanation of correction made, including addition or deletion of appropriate names.

¶ *2.14.01 Correction of Inventorship Under 37 CFR 1.48(b), Sufficient*

In view of the papers filed **[1]**, the inventorship of this nonprovisional application has been changed by the deletion of **[2]**.

The application will be forwarded to the Office of Initial Patent Examination (OIPE) for issuance of a corrected filing receipt, and correction of Office records to reflect the inventorship as corrected.

Examiner Note:

1. This form paragraph is to be used only for 37 CFR 1.48(b) corrections.
2. In bracket 2, insert the names of the deleted inventor(s).

III. 37 CFR 1.48(b)

37 CFR 1.48. Correction of inventorship in a patent application, other than a reissue application, pursuant to 35. U.S.C. 116.

*****

(b) *Nonprovisional application—fewer inventors due to amendment or cancellation of claims*. If the correct inventors are named in a nonprovisional application, and the prosecution of the nonprovisional application results in the amendment or cancellation of claims so that fewer than all of the currently named inventors are the actual inventors of the invention being claimed in the nonprovisional application, an amendment must be filed requesting deletion of the name or names of the person or persons who are not inventors of the invention being claimed. Amendment of the inventorship requires:

(1) A request, signed by a party set forth in § 1.33(b), to correct the inventorship that identifies the named inventor or inventors being deleted and acknowledges that the inventor's invention is no longer being claimed in the nonprovisional application; and

(2) The processing fee set forth in § 1.17(i).

*****

37 CFR 1.48(b) provides for deleting the names of persons originally properly included as inventors, but whose invention is no longer being claimed in a nonprovisional application. Such a situation would arise where claims have been amended or deleted during prosecution because they are unpatentable or as a result of a requirement for restriction of the application to one invention, or for other reasons. A request under 37 CFR 1.48(b) to delete an inventor would be appropriate prior to an action by the TC where it is decided not to pursue particular aspects of an invention attributable to some of the original named inventors.

37 CFR 1.48(b) requires that the amendment be accompanied by: (1) a request including a statement identifying each named inventor who is being deleted and acknowledging that the inventor's invention is no longer being claimed in the application; and (2) a fee under 37 CFR 1.17(i). The statement may be signed by applicant's registered attorney or agent who then takes full responsibility for ensuring that the inventor is not being improperly deleted from the application. Written consent of any assignee is not required for requests filed under 37 CFR 1.48(b).

IV. 37 CFR 1.48(c)

37 CFR 1.48. Correction of inventorship in a patent application, other than a reissue application, pursuant to 35. U.S.C. 116.

*****

(c) *Nonprovisional application—inventors added for claims to previously unclaimed subject matter*. If a nonprovisional application discloses unclaimed subject matter by an inventor or inventors not named in the application, the application may be amended to add claims to the subject matter and name the correct inventors for the application. Amendment of the inventorship requires:

(1) A request to correct the inventorship that sets forth the desired inventorship change;

(2) A statement from each person being added as an inventor that the addition is necessitated by amendment of the claims and that the inventorship error occurred without deceptive intention on his or her part;

(3) An oath or declaration by the actual inventors as required by § 1.63 or as permitted by §§ 1.42, 1.43, or § 1.47;

(4) The processing fee set forth in § 1.17(i); and

(5) If an assignment has been executed by any of the original named inventors, the written consent of the assignee (see § 3.73(b) of this chapter).

*****

37 CFR 1.48(c) provides for the situation where a nonprovisional application discloses unclaimed subject matter by an inventor or inventors not named in the application when an executed declaration under 37 CFR 1.63 was first filed. In such a situation, the nonprovisional application may be amended pursuant to 37 CFR 1.48(c) to add claims directed to the originally unclaimed but disclosed subject matter and also to name the correct inventors for the application based on the newly added claims. Any claims added to the application must be supported by the disclosure as filed and cannot add new matter.

37 CFR 1.48(c) requires that the amendment must be accompanied by: (1) a request to correct the inventorship that sets forth the desired inventorship change; (2) a statement from each person being added as an inventor that the amendment is necessitated by an amendment to the claims and that the inventorship error occurred without deceptive intention on his or her part; (3) an oath or declaration by each actual inventor; (4) the fee under 37 CFR 1.17(i); and (5) the written consent of any assignee of the original named inventors.

V. 37 CFR 1.48(d)

37 CFR 1.48. Correction of inventorship in a patent application, other than a reissue application, pursuant to 35. U.S.C. 116.

*****

(d) *Provisional application—adding omitted inventors*. If the name or names of an inventor or inventors were omitted in a provisional application through error without any deceptive intention on the part of the omitted inventor or inventors, the provisional application may be amended to add the name or names of the omitted inventor or inventors. Amendment of the inventorship requires:

(1) A request, signed by a party set forth in § 1.33(b), to correct the inventorship that identifies the inventor or inventors being added and states that the inventorship error occurred without deceptive intention on the part of the omitted inventor or inventors; and

(2) The processing fee set forth in § 1.17(q).

*****

37 CFR 1.48(d) provides a procedure for adding the name of an inventor in a provisional application,

where the name was originally omitted without deceptive intent.

37 CFR 1.48(d) requires that the amendment be accompanied by: (1) a request to correct the inventorship that sets forth the desired inventorship change; (2) a statement that the inventorship error occurred without deceptive intention on the part of the omitted inventor or inventors; and (3) the fee set forth in 37 CFR 1.17(q). The statement of lack of deceptive intent may be included in the request and may be signed by a registered attorney or agent. A statement of lack of deceptive intent is not required from any of the original or to be added inventors.

See also discussion below regarding requests filed under 37 CFR 1.48(e).

VI. 37 CFR 1.48(e)

37 CFR 1.48. Correction of inventorship in a patent application, other than a reissue application, pursuant to 35. U.S.C. 116.

*****

(e) *Provisional application—deleting the name or names of the inventor or inventors.* If a person or persons were named as an inventor or inventors in a provisional application through error without any deceptive intention on the part of such person or persons, an amendment may be filed in the provisional application deleting the name or names of the person or persons who were erroneously named. Amendment of the inventorship requires:

(1) A request to correct the inventorship that sets forth the desired inventorship change;

(2) A statement by the person or persons whose name or names are being deleted that the inventorship error occurred without deceptive intention on the part of such person or persons;

(3) The processing fee set forth in § 1.17(q); and

(4) If an assignment has been executed by any of the original named inventors, the written consent of the assignee (see § 3.73(b) of this chapter).

*****

37 CFR 1.48(e) provides a procedure for deleting the name of a person who was erroneously named as an inventor in a provisional application.

37 CFR 1.48(e) requires that the amendment be accompanied by: (1) a request to correct the inventorship that sets forth the desired inventorship change; (2) a statement of lack of deceptive intent by the person whose name is being deleted establishing that the error occurred without deceptive intention on his or her part; (3) the fee set forth in 37 CFR 1.17(q); and (4) the written consent of any assignee.

Under 35 U.S.C. 119(e), as contained in Public Law 103-465, a later filed nonprovisional application under 35 U.S.C. 111(a) that is filed within twelve months of an earlier provisional application may claim benefits based on the earlier filed provisional application so long as both applications have at least one inventor in common. An error in not naming or in naming a person as an inventor in a provisional application would not require correction under either 37 CFR 1.48(d) (to add an inventor) or 37 CFR 1.48(e) (to delete an inventor) in the provisional application so long as the nonprovisional application naming the correct inventorship would contain an overlap of at least one inventor with the provisional application. The existence of inventorship overlap would prevent the original inventorship error from having any effect upon the ability of the provisional application to serve as a basis for a benefit claim under 35 U.S.C. 119(e) with the U.S. Patent and Trademark Office.

If, however, applicant chooses to correct the inventive entity of a provisional application, for example, to permit the provisional application to serve as the basis of a priority claim in a foreign country, 37 CFR 1.48(d) and (e) set forth the procedures for adding one or more actual inventors and for deleting one or more erroneously named inventors respectively.

In the situation where an inventor was not named in a provisional application and an inventor was also erroneously named in the same provisional application and correction is desired, a request under 37 CFR 1.48(d) and a request under 37 CFR 1.48(e) would be required.

Where an inventorship error in a provisional application is desired to be corrected after expiration of twelve months from the filing date of the provisional application, a request under 37 CFR 1.48(d) and/or 37 CFR 1.48(e) may still be filed with OIPE, which handles requests under 37 CFR 1.48(d) and (e), to correct the inventorship in provisional applications.

VII. 37 CFR 1.48(f)

37 CFR 1.48. Correction of inventorship in a patent application, other than a reissue application, pursuant to 35. U.S.C. 116.

*****

(f)(1) *Nonprovisional application—filing executed oath/declaration corrects inventorship.* If the correct inventor or inventors are not named on filing a nonprovisional application under

§ 1.53(b) without an executed oath or declaration under § 1.63 by any of the inventors, the first submission of an executed oath or declaration under § 1.63 by any of the inventors during the pendency of the application will act to correct the earlier identification of inventorship. See §§ 1.41(a)(4) and 1.497(d) and (f) for submission of an executed oath or declaration to enter the national stage under 35 U.S.C. 371 naming an inventive entity different from the inventive entity set forth in the international stage.

(2) *Provisional application filing cover sheet corrects inventorship.* If the correct inventor or inventors are not named on filing a provisional application without a cover sheet under § 1.51(c)(1), the later submission of a cover sheet under § 1.51(c)(1) during the pendency of the application will act to correct the earlier identification of inventorship.

*****

37 CFR 1.48(f)(1) and (f)(2) will act to automatically correct an earlier identification of inventorship in a nonprovisional application by the filing of an initial executed oath or declaration and in a provisional application by the filing of an initial cover sheet. A request and fee is not required for the inventorship correction to occur.

The provision in 37 CFR 1.48(f)(1) for changing the inventorship only applies if an executed oath or declaration under 37 CFR 1.63 has not been submitted by any of the inventors. In this situation, the submission of an executed oath or declaration under 37 CFR 1.63 by any of the inventors is sufficient to correct an earlier identification of inventorship. A first-filed oath or declaration under 37 CFR 1.63 executed by less than all of the inventors initially identified will, under 37 CFR 1.48(f)(1), determine the inventorship in the application. Any subsequent oath or declaration filed by a different inventive entity will not be effective under 37 CFR 1.48(f)(1) to correct the inventorship that was specified in the first-filed oath or declaration.

37 CFR 1.48(f)(1) is not applicable for national stage applications filed under 35 U.S.C. 371 where the inventorship has been erroneously named in the international application. Accordingly, if the inventorship set forth in the oath or declaration filed in the national stage application differs from the inventorship specified in the international application, the requirements of 37 CFR 1.497(d) must be satisfied. See MPEP § 1893.01(e).

VIII. 37 CFR 1.48(g)

37 CFR 1.48. Correction of inventorship in a patent application, other than a reissue application, pursuant to 35. U.S.C. 116.

*****

(g) *Additional information may be required.* The Office may require such other information as may be deemed appropriate under the particular circumstances surrounding the correction of inventorship.

201.04 Parent Application

The term "parent" is applied to an earlier application of an inventor disclosing a given invention. Such invention may or may not be claimed in the first application. Benefit of the filing date of copending parent application may be claimed under 35 U.S.C. 120. The term parent will not be used to describe a provisional application.

201.04(a) Original Application

"Original" is used in the patent statute and rules to refer to an application which is not a reissue application. An original application may be a first filing or a continuing application.

201.04(b) Provisional Application [R-5]

35 U.S.C. 111. Application.

*****

(b) PROVISIONAL APPLICATION.—

(1) AUTHORIZATION.—A provisional application for patent shall be made or authorized to be made by the inventor, except as otherwise provided in this title, in writing to the Director. Such application shall include—

(A) a specification as prescribed by the first paragraph of section 112 of this title; and

(B) a drawing as prescribed by section 113 of this title.

(2) CLAIM.—A claim, as required by the second through fifth paragraphs of section 112, shall not be required in a provisional application.

(3) FEE.—

(A) The application must be accompanied by the fee required by law.

(B) The fee may be submitted after the specification and any required drawing are submitted, within such period and under such conditions, including the payment of a surcharge, as may be prescribed by the Director.

(C) Upon failure to submit the fee within such prescribed period, the application shall be regarded as abandoned, unless it is shown to the satisfaction of the Director that the delay in submitting the fee was unavoidable or unintentional.

(4) FILING DATE.—The filing date of a provisional application shall be the date on which the specification and any required drawing are received in the Patent and Trademark Office.

(5) ABANDONMENT.—Notwithstanding the absence of a claim, upon timely request and as prescribed by the Director, a provisional application may be treated as an application filed under subsection (a). Subject to section 119(e)(3) of this title, if no such request is made, the provisional application shall be regarded as abandoned 12 months after the filing date of such application and shall not be subject to revival after such 12-month period.

(6) OTHER BASIS FOR PROVISIONAL APPLICATION.—Subject to all the conditions in this subsection and section 119(e) of this title, and as prescribed by the Director, an application for patent filed under subsection (a) may be treated as a provisional application for patent.

(7) NO RIGHT OF PRIORITY OR BENEFIT OF EARLIEST FILING DATE.—A provisional application shall not be entitled to the right of priority of any other application under section 119 or 365(a) of this title or to the benefit of an earlier filing date in the United States under section 120, 121, or 365(c) of this title.

(8) APPLICABLE PROVISIONS.—The provisions of this title relating to applications for patent shall apply to provisional applications for patent, except as otherwise provided, and except that provisional applications for patent shall not be subject to sections 115, 131, 135, and 157 of this title.

37 CFR 1.9. Definitions.

(a)(1)A national application as used in this chapter means a U.S. application for patent which was either filed in the Office under 35 U.S.C. 111, or which entered the national stage from an international application after compliance with 35 U.S.C. 371.

(2) A provisional application as used in this chapter means a U.S. national application for patent filed in the Office under 35 U.S.C. 111(b).

(3) A nonprovisional application as used in this chapter means a U.S. national application for patent which was either filed in the Office under 35 U.S.C. 111(a), or which entered the national stage from an international application after compliance with 35 U.S.C. 371.

*****

37 CFR 1.53. Application number, filing date, and completion of application.

*****

(c) *Application filing requirements - Provisional application.* The filing date of a provisional application is the date on which a specification as prescribed by the first paragraph of 35 U.S.C. 112, and any drawing required by § 1.81(a) are filed in the Patent and Trademark Office. No amendment, other than to make the provisional application comply with the patent statute and all applicable regulations, may be made to the provisional application after the filing date of the provisional application.

(1) A provisional application must also include the cover sheet required by § 1.51(c)(1), which may be an application data sheet (§ 1.76), or a cover letter identifying the application as a provisional application. Otherwise, the application will be treated as an application filed under paragraph (b) of this section.

(2) An application for patent filed under paragraph (b) of this section may be converted to a provisional application and be accorded the original filing date of the application filed under paragraph (b) of this section. The grant of such a request for conversion will not entitle applicant to a refund of the fees that were properly paid in the application filed under paragraph (b) of this section. Such a request for conversion must be accompanied by the processing fee set forth in § 1.17(q) and be filed prior to the earliest of:

(i) Abandonment of the application filed under paragraph (b) of this section;

(ii) Payment of the issue fee on the application filed under paragraph (b) of this section;

(iii) Expiration of twelve months after the filing date of the application filed under paragraph (b) of this section; or

(iv) The filing of a request for a statutory invention registration under § 1.293 in the application filed under paragraph (b) of this section.

(3) A provisional application filed under paragraph (c) of this section may be converted to a nonprovisional application filed under paragraph (b) of this section and accorded the original filing date of the provisional application. The conversion of a provisional application to a nonprovisional application will not result in either the refund of any fee properly paid in the provisional application or the application of any such fee to the filing fee, or any other fee, for the nonprovisional application. Conversion of a provisional application to a nonprovisional application under this paragraph will result in the term of any patent to issue from the application being measured from at least the filing date of the provisional application for which conversion is requested. Thus, applicants should consider avoiding this adverse patent term impact by filing a nonprovisional application claiming the benefit of the provisional application under 35 U.S.C. 119(e) (rather than converting the provisional application into a nonprovisional application pursuant to this paragraph). A request to convert a provisional application to a nonprovisional application must be accompanied by the fee set forth in § 1.17(i) and an amendment including at least one claim as prescribed by the second paragraph of 35 U.S.C. 112, unless the provisional application under paragraph (c) of this section otherwise contains at least one claim as prescribed by the second paragraph of 35 U.S.C.112. The nonprovisional application resulting from conversion of a provisional application must also include the filing fee, search fee, and examination fee for a nonprovisional application, an oath or declaration by the applicant pursuant to §§ 1.63, 1.162, or 1.175, and the surcharge required by § 1.16(f) if either the basic filing fee for a nonprovisional application or the oath or declaration was not present on the filing date accorded the resulting nonprovisional application (*i.e.*, the filing date of the original provisional application). A request to convert a provisional application to a nonprovisional application must also be filed prior to the earliest of:

(i) Abandonment of the provisional application filed under paragraph (c) of this section; or

(ii) Expiration of twelve months after the filing date of the provisional application filed under paragraph (c) of this section.

(4) A provisional application is not entitled to the right of priority under 35 U.S.C. 119 or 365(a) or § 1.55, or to the benefit of an earlier filing date under 35 U.S.C. 120, 121 or 365(c) or § 1.78 of any other application. No claim for priority under 35 U.S.C. 119(e) or § 1.78(a)(4) may be made in a design application based on a provisional application. No request under § 1.293 for a statutory invention registration may be filed in a provisional application. The requirements of §§ 1.821 through 1.825 regarding application disclosures containing nucleotide and/or amino acid sequences are not mandatory for provisional applications.

*****

One of the provisions of the Uruguay Round Agreements Act (effective as of June 8, 1995), is the establishment of a domestic priority system. The Act provides a mechanism to enable domestic applicants to quickly and inexpensively file provisional applications. Under the provisions of 35 U.S.C. 119(e), applicants are entitled to claim the benefit of priority in a given application in the United States. The domestic priority period will not count in the measurement of the 20-year patent term. See 35 U.S.C. 154(a)(3). Thus, domestic applicants are placed on equal footing with foreign applicants with respect to the patent term.

>A provisional application is a regular national filing that starts the Paris Convention priority year. Foreign filings must be made within 12 months of the filing date of the provisional application if applicant wishes to rely on the filing date of the provisional application in the foreign filed application.<

The parts of a provisional application that are required are set forth in 37 CFR 1.51(c) and MPEP § 601.01(b). The filing date of a provisional application is the date on which (1) a specification which complies with 35 U.S.C. 112, first paragraph, and (2) any drawing required by 37 CFR 1.81(a) are filed. A provisional application must also include a cover sheet or cover letter identifying the application as a provisional application. Otherwise, the application will be treated as an application filed under 37 CFR 1.53(b). The filing fee is set forth in 37 CFR 1.16(d).

NOTE:

(A) No claim is required in a provisional application.

(B) No oath or declaration is required in a provisional application.

(C) Provisional applications will not be examined for patentability, placed in an interference, or made the subject of a statutory invention registration.

A provisional application will automatically be abandoned 12 months after its filing date and will not be subject to revival to restore it to pending status thereafter. See 35 U.S.C. 111(b)(5). Public Law 106-113 amended 35 U.S.C. 119(e)(3) to extend the period of pendency of a provisional application to the next succeeding business day if the day that is 12 months after the filing date of a provisional application falls on a Saturday, Sunday, or Federal holiday within the District of Columbia. See also 37 CFR 1.7(b). 35 U.S.C. 119(e)(3) as amended by Public Law 106-113 is effective as of November 29, 1999 and applies to any provisional applications filed on or after June 8, 1995 but has no effect on any patent which is the subject of litigation in an action commenced before November 29, 1999.

For example, if a provisional application was filed on January 15, 1999, the last day of pendency of the provisional application under 35 U.S.C. 111(b)(5) and 35 U.S.C. 119(e)(3) is extended to January 18, 2000 (January 15, 2000 is a Saturday and Monday, January 17, 2000 is a Federal holiday and therefore, the next succeeding business day is Tuesday, January 18, 2000). A nonprovisional application claiming the benefit of the provisional application must be filed no later than January 18, 2000.

A provisional application is not entitled to claim priority benefits based on any other application under 35 U.S.C. 119, 120, 121, or 365. If applicant attempts to claim the benefit of an earlier U.S. or foreign application in a provisional application, the filing receipt will not reflect the improper benefit or priority claim. Moreover, if a nonprovisional application claims the benefit of the filing date of a provisional application, and states that the provisional application relies upon the filing date of an earlier application, the claim for benefit or priority earlier than the filing date of the provisional application will be disregarded.

An application filed under 37 CFR 1.53(b) may be converted to a provisional application provided a request for conversion is submitted along with the fee as set forth in 37 CFR 1.17(q). The request and fee must be submitted prior to the earlier of the abandonment of the nonprovisional application, the payment of the issue fee, the expiration of 12 months after the

filing date of the nonprovisional application, or the filing of a request for statutory invention registration. The grant of any such request will not entitle applicant to a refund of the fees which were properly paid in the application filed under 37 CFR 1.53(b). See MPEP § 601.01(c)

Public Law 106-113 amended 35 U.S.C. 111(b)(5) to permit a provisional application filed under 37 CFR 1.53(c) be converted to a nonprovisional application filed under 37 CFR 1.53(b). 35 U.S.C. 111(b)(5) as amended by Public Law 106-113 is effective as of November 29, 1999 and applies to any provisional applications filed on or after June 8, 1995. A request to convert a provisional application to a nonprovisional application must be accompanied by the fee set forth in 37 CFR 1.17(i) and an amendment including at least one claim as prescribed by 35 U.S.C. 112, unless the provisional application otherwise contains at least one such claim. The request must be filed prior to the earliest of the abandonment of the provisional application or the expiration of twelve months after the filing date of the provisional application. The filing fee for a nonprovisional application, an executed oath or declaration under 37 CFR 1.63, and the surcharge under 37 CFR 1.16(f), if appropriate, are also required. The grant of any such request will not entitle applicant to a refund of the fees which were properly paid in the application filed under 37 CFR 1.53(c). Conversion of a provisional application to a nonprovisional application will result in the term of any patent issuing from the application being measured from at least the filing date of the provisional application. This adverse patent term impact can be avoided by filing a nonprovisional application claiming the benefit of the provisional application under 35 U.S.C. 119(e), rather than requesting conversion of the provisional application to a nonprovisional application. See 37 CFR 1.53(c)(3).

Design applications may not make a claim for priority of a provisional application under 35 U.S.C. 119(e). See 35 U.S.C. 172 and 37 CFR 1.78(a)(4).

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

PROVISIONAL APPLICATION FOR PATENT COVER SHEET – Page 1 of 2

This is a request for filing a PROVISIONAL APPLICATION FOR PATENT under 37 CFR 1.53(c).

Express Mail Label No. _____

INVENTOR(S)		
Given Name (first and middle [if any])	Family Name or Surname	Residence (City and either State or Foreign Country)

Additional inventors are being named on the _____ *separately numbered sheets attached hereto*

TITLE OF THE INVENTION (500 characters max):

Direct all correspondence to: **CORRESPONDENCE ADDRESS**

☐ The address corresponding to Customer Number:

OR

☐ Firm or Individual Name

Address

City	State	Zip
Country	Telephone	Email

ENCLOSED APPLICATION PARTS *(check all that apply)*

☐ Application Data Sheet. See 37 CFR 1.76

☐ CD(s), Number of CDs _____

☐ Drawing(s) *Number of Sheets* _____

☐ Other (specify) _____

☐ Specification (e.g. description of the invention) *Number of Pages* _____

Fees Due: Filing Fee of $200 ($100 for small entity). If the specification and drawings exceed 100 sheets of paper, an application size fee is also due, which is $250 ($125 for small entity) for each additional 50 sheets or fraction thereof. See 35 U.S.C. 41(a)(1)(G) and 37 CFR 1.16(s).

METHOD OF PAYMENT OF THE FILING FEE AND APPLICATION SIZE FEE FOR THIS PROVISIONAL APPLICATION FOR PATENT

☐ Applicant claims small entity status. See 37 CFR 1.27.

☐ A check or money order is enclosed to cover the filing fee and application size fee (if applicable).

☐ Payment by credit card. Form PTO-2038 is attached

TOTAL FEE AMOUNT ($)

☐ The Director is hereby authorized to charge the filing fee and application size fee (if applicable) or credit any overpayment to Deposit Account Number: _____. A duplicative copy of this form is enclosed for fee processing.

USE ONLY FOR FILING A PROVISIONAL APPLICATION FOR PATENT

This collection of information is required by 37 CFR 1.51. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 8 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

201.05 Reissue Application [R-3]

A reissue application is an application for a patent to take the place of an unexpired patent that is defective **>as a result of an error in the patent which was made without deceptive intention.< A detailed treatment of **>reissue applications can< be found in Chapter 1400.

201.06 Divisional Application [R-2]

A later application for an independent or distinct invention, carved out of a pending application and disclosing and claiming only subject matter disclosed in the earlier or parent application, is known as a divisional application or "division." >A divisional application is often filed as a result of a restriction requirement made by the examiner.< The divisional application must claim the benefit of the prior nonprovisional application under 35 U.S.C. 121 or 365(c). *>See MPEP § 201.11 for the conditions for receiving the benefit of the filing date of the prior application. The divisional application should set forth at least the portion of the earlier disclosure that is germane to the invention as claimed in the divisional application.

Divisional applications of utility or plant applications must be filed under 37 CFR 1.53(b). Divisional applications of design applications< may be filed pursuant to 37 CFR 1.53(b) or 1.53(d). 37 CFR 1.60 and 1.62 have been deleted as of December 1, 1997.

**>Effective July 14, 2003, continued prosecution application (CPA) practice set forth in 37 CFR 1.53(d) has been eliminated as to utility and plant applications.< An application claiming the benefits of a provisional application under 35 U.S.C. 119(e) should not be called a "division" of the provisional application since the application will have its patent term calculated from its filing date, whereas an application filed under 35 U.S.C. 120, 121, or 365(c) will have its patent term calculated from the date on which the earliest application was filed, provided a specific reference is made to the earlier filed application(s). 35 U.S.C. 154(a)(2) and (a)(3).

In the interest of expediting the processing of newly filed divisional applications filed as a result of a restriction requirement, applicants are requested to include the appropriate U.S. Patent and Trademark Office classification of the divisional application and the status and *>assigned art unit< of the parent application on the papers submitted. The appropriate classification for the divisional application may be found in the Office communication of the parent application wherein the >restriction< requirement was made. It is suggested that this classification designation be placed in the upper right hand corner of the letter of transmittal accompanying these divisional applications or in an application data sheet as set forth in 37 CFR 1.76(b)(3).

Use form paragraph 2.01 to remind applicant of possible divisional status.
**>

¶ *2.01 Definition of Division*

This application appears to be a division of Application No. **[1],** filed **[2]**. A later application for a distinct or independent invention, carved out of a pending application and disclosing and claiming only subject matter disclosed in the earlier or parent application, is known as a divisional application or "division." The divisional application should set forth the portion of the earlier disclosure that is germane to the invention as claimed in the divisional application.

Examiner Note:

1. In bracket 1, insert the Application No.(series code and serial no.) of the parent application.
2. In bracket 2, insert the filing date of the parent application.
3. An application claiming the benefits of a provisional application under 35 U.S.C. 119(e) should not be called a "division" of the provisional application since the application will have its patent term calculated from its filing date, whereas an application filed under 35 U.S.C. 120, 121, or 365(c) will have its term calculated from the date on which the earliest application was filed, provided a specific reference is made to the earlier filed application(s), 35 U.S.C. 154(a)(2) and (a)(3).

<

A design application may be considered to be a division of a utility application (but not of a provisional application), and is entitled to the filing date thereof if the drawings of the earlier filed utility application show the same article as that in the design application sufficiently to comply with 35 U.S.C. 112, first paragraph. However, such a divisional design application may only be filed under the procedure set forth in 37 CFR 1.53(b) not under 37 CFR 1.53(d). ** See MPEP § 1504.20.

While a divisional application may depart from the phraseology used in the parent application there may be no departure therefrom in substance or variation in the disclosure that would amount to "new matter" if introduced by amendment into the parent application. Compare MPEP § 201.08 and § 201.11.

For notation to be put *>in< the file *>history< by the examiner in the case of a divisional application, see MPEP § 202.02.

201.06(a) Former 37 CFR 1.60 Divisional-Continuation Procedure [R-2]

*** 37 CFR 1.60 was deleted effective December 1, 1997. See 1203 O.G. 63, October 21, 1997. A continuation or divisional application filed under 37 CFR 1.60 on or after December 1, 1997, will automatically be treated as an application filed under 37 CFR 1.53(b). All continuation and divisional applications filed under 37 CFR 1.60 prior to December 1, 1997 will continue to be processed and examined under the procedures set forth in former 37 CFR 1.60. **>For more information pertaining to practice and procedure under former 37 CFR 1.60, see MPEP § 201.06(a) in the MPEP 8th Edition, Rev. 1 (February 2003)(available on the USPTO web site at www.uspto.gov/web/offices/pac/mpep/mpep.htm).<**

201.06(b) Former 37 CFR 1.62 File Wrapper Continuing Procedure [R-2]

***37 CFR 1.62 was deleted effective December 1, 1997. See 1203 O.G. 63, October 21, 1997. A >request for a< continuation or divisional application filed under former 37 CFR 1.62 on or after December 1, 1997, >, in an application that was filed on or after June 8, 1995,< will be treated as ** a request for continued examination (RCE) under 37 CFR *>1.114<, see MPEP 706.07(h), paragraph IV. **>A request< filed on or after December 1, 1997, under former 37 CFR 1.62 *>for< a continuation-in-part (CIP) application, **>, or for a continuation or divisional of an application having a filing date before June 8, 1995,< will be treated as an improper application.**

**

All continuation, divisional and CIP applications filed under former 37 CFR 1.62 prior to December 1, 1997, will continue to be processed and examined under the procedures set forth in former 37 CFR 1.62. **>For more information pertaining to practice and procedure under former 37 CFR 1.62, see MPEP § 201.06(b) in the MPEP 8th Edition, Rev. 1 (February 2003)(available on the USPTO web site at www.uspto.gov/web/offices/pac/mpep/mpep.htm).<

201.06(c) 37 CFR 1.53(b) and 37 CFR 1.63(d) Divisional-Continuation Procedure [R-5]

37 CFR 1.53. Application number, filing date, and completion of application.

*****

(b) *Application filing requirements - Nonprovisional application*. The filing date of an application for patent filed under this section, except for a provisional application under paragraph (c) of this section or a continued prosecution application under paragraph (d) of this section, is the date on which a specification as prescribed by 35 U.S.C. 112 containing a description pursuant to § 1.71 and at least one claim pursuant to § 1.75, and any drawing required by § 1.81(a) are filed in the Patent and Trademark Office. No new matter may be introduced into an application after its filing date. A continuing application, which may be a continuation, divisional, or continuation-in-part application, may be filed under the conditions specified in 35 U.S.C. 120, 121 or 365(c) and § 1.78(a).

(1) A continuation or divisional application that names as inventors the same or fewer than all of the inventors named in the prior application may be filed under this paragraph or paragraph (d) of this section.

(2) A continuation-in-part application (which may disclose and claim subject matter not disclosed in the prior application) or a continuation or divisional application naming an inventor not named in the prior application must be filed under this paragraph.

*****

37 CFR 1.63. Oath or Declaration.

*****

(d)(1)A newly executed oath or declaration is not required under § 1.51(b)(2) and § 1.53(f) in a continuation or divisional application, provided that:

(i) The prior nonprovisional application contained an oath or declaration as prescribed by paragraphs (a) through (c) of this section;

(ii) The continuation or divisional application was filed by all or by fewer than all of the inventors named in the prior application;

(iii) The specification and drawings filed in the continuation or divisional application contain no matter that would have been new matter in the prior application; and

(iv) A copy of the executed oath or declaration filed in the prior application, showing the signature or an indication thereon

that it was signed, is submitted for the continuation or divisional application.

(2) The copy of the executed oath or declaration submitted under this paragraph for a continuation or divisional application must be accompanied by a statement requesting the deletion of the name or names of the person or persons who are not inventors in the continuation or divisional application.

(3) Where the executed oath or declaration of which a copy is submitted for a continuation or divisional application was originally filed in a prior application accorded status under § 1.47, the copy of the executed oath or declaration for such prior application must be accompanied by:

(i) A copy of the decision granting a petition to accord § 1.47 status to the prior application, unless all inventors or legal representatives have filed an oath or declaration to join in an application accorded status under § 1.47 of which the continuation or divisional application claims a benefit under 35 U.S.C. 120, 121, or 365(c); and

(ii) If one or more inventor(s) or legal representative(s) who refused to join in the prior application or could not be found or reached has subsequently joined in the prior application or another application of which the continuation or divisional application claims a benefit under 35 U.S.C. 120, 121, or 365(c), a copy of the subsequently executed oath(s) or declaration(s) filed by the inventor or legal representative to join in the application.

(4) Where the power of attorney or correspondence address was changed during the prosecution of the prior application, the change in power of attorney or correspondence address must be identified in the continuation or divisional application. Otherwise, the Office may not recognize in the continuation or divisional application the change of power of attorney or correspondence address during the prosecution of the prior application.

(5) A newly executed oath or declaration must be filed in a continuation or divisional application naming an inventor not named in the prior application.

*****

I. IN GENERAL

37 CFR 1.53(b) is the section under which all applications are filed EXCEPT: (A) an application resulting from entry of an international application into the national stage under 35 U.S.C. 371 and 37 CFR 1.495; (B) a provisional application under 35 U.S.C. 111(b) and 37 CFR 1.53(c); or (C) a continued prosecution application (CPA) of a design application under 37 CFR 1.53(d). Applications submitted under 37 CFR 1.53(b), as well as CPAs submitted under 37 CFR 1.53(d), are applications filed under 35 U.S.C. 111(a). An application filed under 37 CFR 1.53(b) may be an original, a continuation, a divisional, a continuation-in-part, or a substitute. (See MPEP § 201.09 for substitute application.) The application may be for a "utility" patent under 35 U.S.C. 101, a design patent under 35 U.S.C. 171, a plant patent under 35 U.S.C. 161, or a reissue under 35 U.S.C. 251.

37 CFR 1.53(b) is the "default" application. An application that is not (A) the result of the entry of an international application into the national stage after compliance with 35 U.S.C. 371 and 37 CFR 1.495, (B) a provisional application under 37 CFR 1.53(c), or (C) a CPA of a design application filed under 37 CFR 1.53(d), is an application filed under 37 CFR 1.53(b). An application will be treated as one filed under 37 CFR 1.53(b) unless otherwise designated.

In order to be complete for filing date purposes, all applications filed under 37 CFR 1.53(b) must include a specification as prescribed by 35 U.S.C. 112 containing a description pursuant to 37 CFR 1.71 and at least one claim pursuant to 37 CFR 1.75, and any drawing required by 37 CFR 1.81(a). The statutory filing fee and an oath or declaration in compliance with 37 CFR 1.63 (and 37 CFR 1.175 (if a reissue) or 37 CFR 1.162 (if for a plant patent)) are also required by 37 CFR 1.51(b) for a complete application, but the filing fee and oath or declaration may be filed after the application filing date upon payment of the surcharge set forth in 37 CFR 1.16(f). See 37 CFR 1.53(f) and MPEP § 607.

Any application filed on or after December 1, 1997, which is identified by the applicant as an application filed under 37 CFR 1.60 will be processed as an application under 37 CFR 1.53(b) (using the copy of the specification, drawings and signed oath/declaration filed in the prior application supplied by the applicant). Any submission of an application including or relying on a copy of an oath or declaration that would have been proper under 37 CFR 1.60 will be a proper filing under 37 CFR 1.53(b).

A new application containing a copy of an oath or declaration under 37 CFR 1.63 referring to an attached specification is indistinguishable from a continuation or divisional application containing a copy of an oath or declaration from a prior application submitted pursuant to 37 CFR 1.63(d). Unless an application is submitted with a statement that the application is a continuation or divisional application, see 37 CFR 1.78(a)(2), the Office will process the application as a new non-continuing application. Applicants are advised to clearly designate any continuation, divi-

sional, or continuation-in-part application as such by submitting a reference to the prior-filed application with the appropriate relationship (i.e., continuation, divisional, or continuation-in-part) in compliance with 37 CFR 1.78(a) in the first sentence(s) of the specification or in an application data sheet to avoid the need for a petition to accept an unintentionally delayed claim under 37 CFR 1.78(a) and the surcharge set forth in 37 CFR 1.17(t), and the issuance of a filing receipt that does not indicate that the application is a continuation, divisional, or continuation-in-part. See MPEP § 201.11.

II. OATH/DECLARATION

37 CFR 1.63(d) provides that a newly executed oath or declaration is not required in a continuation or divisional application filed by all or by fewer than all of the inventors named in a prior nonprovisional application containing a signed oath or declaration as required by 37 CFR 1.63, provided that a copy of the signed oath or declaration filed in the prior application is submitted for the continuation or divisional application and the specification and drawings filed in the continuation or divisional application do not contain any subject matter that would have been new matter in the prior application. The copy of the oath or declaration must show the signature of the inventor(s) or contain an indication thereon that the oath or declaration was signed (e.g., the notation "/s/" on the line provided for the signature). >If the copy of the signed oath or declaration from the prior application included a power of attorney, the power of attorney in the copy of the signed oath or declaration from the prior application would carry over to the continuation or divisional application. If the power of attorney was changed during the prosecution of the prior application, see subsection VII below.<

It is not necessary to have the inventor sign a new oath or declaration merely to include a reference to the duty of disclosure if the parent application was filed prior to January 1, 1978, to indicate that the inventor has reviewed and understands the contents of the application if the parent application was filed prior to October 1, 1983, or to indicate the inventor's post office address if the parent application was filed prior to December 1, 1997, and the inventor's mailing or post office address is identified elsewhere in the application.

When a copy of an oath or declaration from a prior application is filed in a continuation or divisional application under 37 CFR 1.53(b), special care should be taken by the applicant to ensure that the copy is matched with the correct application file. Applicant should file the copy of the oath or declaration with a cover letter explaining that the copy of the oath or declaration is for the attached application or for a previously-filed 37 CFR 1.53(b) application (identified by application number which consists of a two-digit series code, e.g., 08/, and a six-digit serial number, e.g., 123,456). An adhesive label may be attached to the front of the copy of the oath or declaration. The label should clearly state that the copy of the oath or declaration is intended for the attached application submitted therewith or for Application No. XX/YYY,YYY. During initial processing, attachments (e.g., a cover letter) to application papers may be separated. Therefore, applicant should not rely solely upon a cover letter. Note: 37 CFR 1.5(a) states that no correspondence relating to an application should be filed prior to receipt of the application number information from the Patent and Trademark Office.

37 CFR 1.63(d) requires a copy of the signed oath or declaration from the prior application. In instances in which the oath or declaration filed in the prior application is itself a copy of an oath or declaration from a prior application, either a copy of the copy of the oath or declaration in the prior application or a direct copy of the original oath or declaration is acceptable, as both are a copy of the oath or declaration in the prior application, see 37 CFR 1.4(d)(1)(ii).

The patent statute and rules of practice do not require that an oath or declaration include a date of execution, and no objection should be made to an oath or declaration because it lacks either a recent date of execution or any date of execution. The applicant's duty of candor and good faith including compliance with the duty of disclosure requirements of 37 CFR 1.56 is continuous and applies to the continuing application.

A newly executed oath or declaration is required in a continuation or divisional application filed under 37 CFR 1.53(b) naming an inventor not named in the prior application, and in a continuation-in-part application.

III. SPECIFICATION AND DRAWINGS

A continuation or divisional application may be filed under 35 U.S.C. 111(a) using the procedures set forth in 37 CFR 1.53(b), by providing: (A) a new specification and drawings and a copy of the signed oath or declaration as filed in the prior application provided the new specification and drawings do not contain any subject matter that would have been new matter in the prior application; or (B) a new specification and drawings and a newly executed oath or declaration provided the new specification and drawings do not contain any subject matter that would have been new matter in the prior application. To claim the benefit of a prior application under 35 U.S.C. 120, 121, or 365(c), applicant must include a reference to the prior application in compliance with 37 CFR 1.78(a) in the first sentence(s) of the specification or in an application data sheet. See MPEP § 201.11. The new specification and drawings of a continuation or divisional application filed under 37 CFR 1.53(b) may include changes to the specification and drawings originally filed in the prior application in the manner that an applicant may file a substitute specification, see 37 CFR 1.125, or amend the drawings of an application so long as it does not result in the introduction of new matter. Applicant should file a new set of claims as the original claims of the continuing application instead of filing a copy of the claims from the prior application and a preliminary amendment to those claims. It is the applicant's responsibility to review any new specification or drawings submitted for a continuation or divisional application under 37 CFR 1.53(b) and 37 CFR 1.63(d) to determine that it contains no new matter. An applicant is advised to simply file a continuing application with a newly executed oath or declaration when it is questionable as to whether the continuing application adds material that would have been new matter if presented in the prior application. If one or more claims are allowed in the continuation or divisional application which are directed to matter shown and described in the prior nonprovisional application but not claimed in the prior application, the applicant should be required to file a supplemental oath or declaration under 37 CFR 1.67(b).

If a continuation or divisional application filed with a newly executed oath or declaration contains subject matter that would have been new matter in the prior application, the application will have to be amended to indicate that it is a continuation-in-part application rather than a continuation or a divisional application. Form paragraph 2.10.01 may be used to require the applicant to correct the relationship of the applications. See MPEP § 201.11.

Where a copy of the oath or declaration from a prior application was filed in a continuation or divisional application, if the examiner determines that new matter is present relative to the prior application, the examiner should so notify the applicant in the next Office action (preferably the first Office action). The examiner should require: (A) a new oath or declaration along with the surcharge set forth in 37 CFR 1.16(f); and (B) that the application be redesignated as a continuation-in-part.

Any utility or plant patent application, including any continuing application, that will be published pursuant to 35 U.S.C. 122(b) should be filed under 37 CFR 1.53(b) with a specification (including the claims), and drawings, that the applicant would like to have published. This is important because the Office will generally publish the specification (including the claims) and drawings as filed and, under 35 U.S.C. 154(d), a patentee may obtain provisional rights if the invention claimed in a patent is substantially identical to the invention claimed in the application publication. Filing a continuing application under 37 CFR 1.53(b) with a preliminary amendment (which makes all the desired changes to the specification, including adding, deleting or amending claims) is NOT recommended because the changes made by the preliminary amendment will generally not be reflected in the patent application publication even if the preliminary amendment is referred to in an oath or declaration. As noted above, a continuation or divisional application filed under 37 CFR 1.53(b) may be filed with a new specification and corrected drawings, along with a copy of an oath or declaration from a prior (parent) application, provided the new specification and drawings do not contain any subject matter that would have been new matter in the prior application. Thus, the new specification and corrected drawings may include some or all of the amendments entered during the prosecution of the prior application(s), as well as additional amendments submitted for clarity or contextual purposes, and a new set of claims. In order to have a patent application publication of a continuation

or divisional application contain only a desired set of claims, rather than the set of claims in the prior application, it is strongly recommended that the continuation or divisional application be filed under 37 CFR 1.53(b) with a new specification containing only the desired set of claims. If the continuation or divisional application is filed with a copy of the specification from the prior application along with a preliminary amendment which cancels, amends and/or adds new claims, publication of the application may exclude the preliminary amendment unless a copy of the specification (with the amended set of claims) was also submitted through the Office's Electronic Filing System (EFS).

IV. INCORPORATION BY REFERENCE

An applicant may incorporate by reference the prior application by including, in the continuation or divisional application-as-filed, an explicit statement that such specifically enumerated prior application or applications are "hereby incorporated by reference." The statement must appear in the specification. See 37 CFR 1.57(b) and MPEP § 608.01(p). The inclusion of this incorporation by reference statement will permit an applicant to amend the continuation or divisional application to include subject matter from the prior application(s), without the need for a petition provided the continuation or divisional application is entitled to a filing date notwithstanding the incorporation by reference. For applications filed prior to September 21, 2004, the incorporation by reference statement may appear in the transmittal letter or in the specification. Note that for applications filed prior to September 21, 2004, if applicants used a former version of the transmittal letter form provided by the USPTO, the incorporation by reference statement could only be relied upon to add inadvertently omitted material to the continuation or divisional application.

For applications filed on or after September 21, 2004, a claim under 35 U.S.C. 120 and 37 CFR 1.78 for benefit of a prior-filed nonprovisional application or international application designating the U.S. that was present on the filing date of the continuation or divisional application is considered an incorporation by reference of the prior-filed application as to inadvertently omitted material, subject to the conditions and requirements of 37 CFR 1.57(a). The purpose of 37 CFR 1.57(a) is to provide a safeguard for applicants when all or a portion of the specification and/or drawing(s) is (are) inadvertently omitted from an application. For applications filed on or after September 21, 2004, applicants are encouraged to provide an explicit incorporation by reference statement to the prior-filed application(s) for which benefit is claimed under 35 U.S.C. 120 if applicants do not wish the incorporation by reference to be limited to inadvertently omitted material pursuant to 37 CFR 1.57(a). See 37 CFR 1.57(b) and MPEP § 608.01(p) for discussion regarding explicit incorporation by reference.

An incorporation by reference statement added after an application's filing date is not effective because no new matter can be added to an application after its filing date (see 35 U.S.C. 132(a)). If an incorporation by reference statement is included in an amendment to the specification to add a benefit claim under 35 U.S.C. 120 after the filing date of the application, the amendment would not be proper. When a benefit claim under 35 U.S.C. 120 is submitted after the filing of an application, the reference to the prior application cannot include an incorporation by reference statement of the prior application. See *Dart Indus. v. Banner*, 636 F.2d 684, 207 USPQ 273 (C.A.D.C. 1980).

Mere reference to another application, patent, or publication is not an incorporation of anything therein into the application containing such reference for the purpose of the disclosure required by 35 U.S.C. 112, first paragraph. *In re de Seversky*, 474 F.2d 671, 177 USPQ 144 (CCPA 1973). See MPEP § 608.01(p). As noted above, however, for applications filed on or after September 21, 2004, 37 CFR 1.57(a) provides that a claim for the benefit of a prior-filed application under 37 CFR 1.78 is considered an incorporation by reference as to inadvertently omitted material. See MPEP § 201.17.

A. Application NOT Entitled to a Filing Date

Material needed to accord an application a filing date may not be incorporated by reference unless an appropriate petition under 37 CFR 1.57(a)(3) or under 37 CFR 1.182 is granted. Until such a petition has been granted, the application will **not** be entitled to a filing date.

For an application filed on or after September 21, 2004, if the material needed for a filing date is completely contained within a prior-filed application to

which benefit is claimed, applicant may file a petition under 37 CFR 1.57(a)(3) along with the fee set forth in 37 CFR 1.17(f) and an amendment with the inadvertently omitted material requesting that the amendment be entered and the application be accorded a filing date as of the original date of deposit of the application papers. See 37 CFR 1.57(a)(3) and MPEP § 201.17.

In an application containing an explicit incorporation by reference statement in the specification or in a transmittal letter (if the transmittal letter was filed prior to September 21, 2004), a petition for the granting of a filing date may be made under 37 CFR 1.182. A petition under 37 CFR 1.182 and the required petition fee, including an amendment submitting the necessary omitted material, requesting that the necessary omitted material contained in the prior application and submitted in the amendment, be included in the continuation or divisional application based upon the incorporation by reference statement, is required in order to accord the application a filing date as of the date of deposit of the continuation or divisional application. An amendment submitting the omitted material and relying upon the incorporation by reference will not be entered in the continuation or divisional application unless a decision granting the petition states that the application is accorded a filing date and that the amendment will be entered.

B. Application Entitled to a Filing Date

If a continuation or divisional application as originally filed on or after September 21, 2004 does not include an explicit incorporation by reference statement and is entitled to a filing date despite the inadvertent omission of a portion of the prior application(s), applicant may be permitted to add the omitted material by way of an amendment under 37 CFR 1.57(a). Such an amendment must be made within any time period set by the Office. See 37 CFR 1.57(a)(1).

If an application as originally filed included a proper explicit incorporation by reference statement (or an explicit incorporation by reference statement that has been made effective under 37 CFR 1.57(g)), the omitted specification page(s) and/or drawing figure(s) may be added by amendment provided the omitted item(s) contains only subject matter in common with a document that has been properly incorporated by reference. If the Office identified the omitted item(s) in a "Notice of Omitted Item(s)," applicant need **not** respond to the "Notice of Omitted Item(s)." Applicant should, however, submit the amendment adding the omitted material prior to the first Office action to avoid delays in the prosecution of the application. See MPEP § 601.01(d) and § 601.01(g).

V. INVENTORSHIP

The filing of a continuation or divisional application by all or by fewer than all of the inventors named in a prior application without a newly executed oath or declaration is permitted. Applicant has the option of filing: (A) a newly executed oath or declaration signed by the inventors for the continuation or divisional application; or (B) a copy of the oath or declaration filed in the prior application accompanied by a statement from applicant, applicant's representative or other authorized party requesting the deletion of the names of the person or persons who are not inventors in the continuation or divisional application. See 37 CFR 1.63(d). Where the continuation or divisional application and a copy of the oath or declaration from the prior application are filed without a statement from an authorized party requesting deletion of the names of any person or persons named in the prior application, the continuation or divisional application will be treated as naming as inventors the person or persons named in the copy of the executed oath or declaration from the prior application. Accordingly, if a petition or request under 37 CFR 1.48(a) or (c) was granted in the prior application, the oath or declaration filed in a continuation or divisional application pursuant to 37 CFR 1.53(b) and 37 CFR 1.63(d) should be a copy of the oath or declaration executed by the added inventor(s) filed in the prior application. The statement requesting the deletion of the names of the person or persons who are not inventors in the continuation or divisional application must be signed by person(s) authorized pursuant to 37 CFR 1.33(b) to sign an amendment in the continuation or divisional application.

A newly signed oath or declaration in compliance with 37 CFR 1.63 is required where an inventor who was not named as an inventor in the signed oath or declaration filed in the prior application is to be named in a continuation or divisional application filed

under 37 CFR 1.53(b). The newly signed oath or declaration must be signed by all the inventors.

VI. RULE 47 ISSUES

37 CFR 1.63(d)(3) provides for the situation in which the executed oath or declaration, of which a copy is submitted for a continuation or divisional application, was originally filed in a prior application accorded status under 37 CFR 1.47. 37 CFR 1.63(d)(3)(i) requires a copy of any decision granting a petition to accord 37 CFR 1.47 status to such application, unless all nonsigning inventor(s) or legal representative (pursuant to 37 CFR 1.42 or 1.43) have filed an oath or declaration to join in an application of which the continuation or divisional application claims a benefit under 35 U.S.C. 120, 121 or 365(c). Where one or more, but not all, nonsigning inventor(s) or legal representative (pursuant to 37 CFR 1.42 or 1.43) subsequently joins in any application of which the continuation or divisional application claims a benefit under 35 U.S.C. 120, 121 or 365(c), 37 CFR 1.63(d)(3)(ii) also requires a copy of any oath or declaration filed by the inventor or legal representative who subsequently joined in such application.

New continuation or divisional applications filed under 37 CFR 1.53(b) which contain a copy of an oath or declaration that is not signed by one of the inventors and a copy of the decision according 37 CFR 1.47 status in the prior application, should be forwarded by the Office of Initial Patent Examination (OIPE) to the Office of Petitions before being forwarded to the Technology Center (TC). The Office of Petitions will mail applicant a letter stating that "Rule 47" status has been accorded to the continuation or divisional application, but will not repeat the notice to the nonsigning inventor nor the announcement in the *Official Gazette*. See 37 CFR 1.47(c).

VII. CHANGE OF ATTORNEY/CORRESPONDENCE ADDRESS

37 CFR 1.63(d)(4) provides that where the power of attorney or correspondence address was changed during the prosecution of the prior application, the change in power of attorney or correspondence address must be identified in the continuation or divisional application. Otherwise, the Office may not recognize in the continuation or divisional application the change of power of attorney or correspondence address which occurred during the prosecution of the prior application.

VIII. SMALL ENTITY STATUS

If small entity status has been established in a parent application and is still proper and desired in a continuation or divisional application filed under 37 CFR 1.53(b), a new assertion as to the continued entitlement to small entity status under 37 CFR 1.27 is required. See MPEP § 509.03.

IX. COPIES OF AFFIDAVITS

Affidavits or declarations, such as those submitted under 37 CFR 1.130, 1.131 and 1.132 filed during the prosecution of the prior nonprovisional application do not automatically become a part of a continuation or divisional application filed under 37 CFR 1.53(b). Where it is desired to rely on an earlier filed affidavit or declaration, the applicant should make such remarks of record in the 37 CFR 1.53(b) application and include a copy of the original affidavit or declaration filed in the prior nonprovisional application.

Use form paragraph 2.03 for instructions to applicant concerning affidavits or declarations filed in the prior application.

¶ *2.03 Affidavits or Declarations in Prior Application*

Applicant refers to an affidavit or declaration filed in the prior application. Affidavits or declarations, such as those submitted under 37 CFR 1.130, 1.131 and 1.132, filed during the prosecution of the prior application do not automatically become a part of this application. Where it is desired to rely on an earlier filed affidavit or declaration, the applicant should make the remarks of record in this application and include a copy of the original affidavit or declaration filed in the prior application.

Examiner Note:

This form paragraph is to be used in applications filed under 37 CFR 1.53(b). Do not use this form paragraph in applications filed under 37 CFR 1.53(d) since affidavits and/or declarations, such as those submitted under 37 CFR 1.130, 1.131 and 1.132 filed during the prosecution of the parent nonprovisional application automatically become a part of the 37 CFR 1.53(d) application.

X. EXTENSIONS OF TIME

If an extension of time is necessary to establish continuity between the prior application and the continuing application filed under 37 CFR 1.53(b), the petition for an extension of time must be filed as a

separate paper directed to the prior nonprovisional application. Under 37 CFR 1.136(a)(3), an authorization to charge all required fees, fees under 37 CFR 1.17, or all required extension of time fees will be treated as a constructive petition for an extension of time in any concurrent or future reply requiring a petition for an extension of time for its timely submission. A continuing application filed under 37 CFR 1.53(b) is a new application which is assigned a new application number and filing date and is maintained separately from the file of the prior application. The filing of a continuing application is not a paper directed or placed in the file of the prior application and is not a "reply" to the last Office action in the prior application. Thus, a petition for an extension of time and the fee set forth in 37 CFR 1.17 are required to be filed as a separate paper in the prior application. Any petition for an extension of time directed to the prior application must be accompanied by its own certificate of mailing under 37 CFR 1.8 (if mailed by first class mail) or under 37 CFR 1.10 (if mailed by Express Mail), if the benefits of those rules are desired.

XI. ABANDONMENT OF THE PRIOR NONPROVISIONAL APPLICATION

Under 37 CFR 1.53(b) and 37 CFR 1.63(d) practice, the prior nonprovisional application is not automatically abandoned upon filing of the continuing application. If the prior nonprovisional application is to be expressly abandoned, such a paper must be signed in accordance with 37 CFR 1.138. A registered **>patent practitioner< not of record acting in a representative capacity under 37 CFR 1.34 may also expressly abandon a prior nonprovisional application as of the filing date granted to a continuing application when filing such a continuing application.

If the prior nonprovisional application which is to be expressly abandoned has a notice of allowance issued therein, the prior nonprovisional application can become abandoned by the nonpayment of the issue fee. However, once an issue fee has been paid in the prior application, even if the payment occurs following the filing of a continuing application under 37 CFR 1.53(b), a petition to withdraw the prior nonprovisional application from issue must be filed before the prior nonprovisional application can be abandoned (37 CFR 1.313). See MPEP § 711.01.

If the prior nonprovisional application which is to be expressly abandoned is before the Board of Patent Appeals and Interferences >(Board)<, a separate notice should be forwarded by the appellant to the Board, giving them notice thereof.

After a decision by the Court of Appeals for the Federal Circuit (CAFC) in which the rejection of all claims is affirmed, the proceeding is terminated when the mandate is issued by the Court.

XII. EXAMINATION

The practice relating to making first action rejections final also applies to continuation and divisional applications filed under 37 CFR 1.53(b). See MPEP § 706.07(b).

Any preliminary amendment that is present on the filing date of an application filed under 37 CFR 1.53(b) is part of the original disclosure. Amendments must be filed in compliance with the requirements of 37 CFR 1.121 (e.g., the amendment must include a complete claim listing whenever a claim is added, canceled, or amended). See MPEP § 714. Applications should be classified and assigned to the proper Technology Center (TC) by taking into consideration the claims that will be before the examiner upon entry of such a preliminary amendment.

Where a copy of the oath or declaration from a prior application was filed in a continuation or divisional application, if the examiner determines that new matter is present relative to the prior application, the examiner should so notify the applicant in the next Office action (preferably the first Office action). The examiner should require: (A) a new oath or declaration along with the surcharge set forth in 37 CFR 1.16(f); and (B) that the application be redesignated as a continuation-in-part. See MPEP § 608.04(b) when new matter is contained in a preliminary amendment.

If the examiner finds that pages of the specification or drawings figures described in the specification are missing and the application is a continuation or divisional application filed prior to September 21, 2004 under 37 CFR 1.53(b) using a copy of the oath or declaration filed in the prior application under 37 CFR 1.63(d), the examiner must check to determine whether the continuation or divisional application, as originally filed, includes a statement incorporating by reference the prior application(s). For applications filed prior to September 21, 2004, the statement could

appear in the application transmittal letter (or the specification, rather than only in the specification). The inclusion of this incorporation by reference of the prior application(s) was necessary in these applications to permit applicant to amend the continuation or divisional application to include subject matter in the prior application(s) without the need for a petition. See also the subsection above regarding "Incorporation by Reference." If the continuation or divisional application filed prior to September 21, 2004 under 37 CFR 1.53(b) does not include the incorporation by reference statement in the application papers (in the specification or in the transmittal letter) as originally filed and applicant has not been informed of the omitted items, the application should be returned to OIPE for mailing of a "Notice of Omitted Item(s)." For applications filed on or after September 21, 2004, see 37 CFR 1.57(a) and MPEP § 201.17.

201.06(d) 37 CFR 1.53(d) Continued Prosecution Application (CPA) Practice [R-5]

37 CFR 1.53. Application number, filing date, and completion of application.

*****

(d) *Application filing requirements - Continued prosecution (nonprovisional) application*.

(1) A continuation or divisional application (but not a continuation-in-part) of a prior nonprovisional application may be filed as a continued prosecution application under this paragraph, provided that:

(i) The application is for a design patent:

(ii) The prior nonprovisional application is a design application that is complete as defined by § 1.51(b); and

(ii) The application under this paragraph is filed before the earliest of:

(A) Payment of the issue fee on the prior application, unless a petition under § 1.313(c) is granted in the prior application;

(B) Abandonment of the prior application; or

(C) Termination of proceedings on the prior application.

(2) The filing date of a continued prosecution application is the date on which a request on a separate paper for an application under this paragraph is filed. An application filed under this paragraph:

(i) Must identify the prior application;

(ii) Discloses and claims only subject matter disclosed in the prior application;

(iii) Names as inventors the same inventors named in the prior application on the date the application under this paragraph was filed, except as provided in paragraph (d)(4) of this section;

(iv) Includes the request for an application under this paragraph, will utilize the file jacket and contents of the prior application, including the specification, drawings and oath or declaration from the prior application, to constitute the new application, and will be assigned the application number of the prior application for identification purposes; and

(v) Is a request to expressly abandon the prior application as of the filing date of the request for an application under this paragraph.

(3) The filing fee, search fee, and examination fee for a continued prosecution application filed under this paragraph are the basic filing fee as set forth in § 1.16(b), the search fee as set forth in § 1.16 (l), and the examination fee as set forth in § 1.16(p).

(4) An application filed under this paragraph may be filed by fewer than all the inventors named in the prior application, provided that the request for an application under this paragraph when filed is accompanied by a statement requesting deletion of the name or names of the person or persons who are not inventors of the invention being claimed in the new application. No person may be named as an inventor in an application filed under this paragraph who was not named as an inventor in the prior application on the date the application under this paragraph was filed, except by way of correction of inventorship under § 1.48.

(5) Any new change must be made in the form of an amendment to the prior application as it existed prior to the filing of an application under this paragraph. No amendment in an application under this paragraph (a continued prosecution application) may introduce new matter or matter that would have been new matter in the prior application. Any new specification filed with the request for an application under this paragraph will not be considered part of the original application papers, but will be treated as a substitute specification in accordance with § 1.125.

(6) The filing of a continued prosecution application under this paragraph will be construed to include a waiver of confidentiality by the applicant under 35 U.S.C. 122 to the extent that any member of the public, who is entitled under the provisions of § 1.14 to access to, copies of, or information concerning either the prior application or any continuing application filed under the provisions of this paragraph, may be given similar access to, copies of, or similar information concerning the other application or applications in the file jacket.

(7) A request for an application under this paragraph is the specific reference required by 35 U.S.C. 120 to every application assigned the application number identified in such request. No amendment in an application under this paragraph may delete this specific reference to any prior application.

(8) In addition to identifying the application number of the prior application, applicant should furnish in the request for an application under this paragraph the following information relating to the prior application to the best of his or her ability:

(i) Title of invention;

(ii) Name of applicant(s); and

(iii) Correspondence address.

(9) **See § 1.103(b) for requesting a limited suspension of action in an application filed under this paragraph.

*****

I. CPA PRACTICE HAS BEEN ELIMINATED AS TO UTILITY AND PLANT APPLICATIONS

Effective July 14, 2003, continued prosecution application (CPA) practice has been eliminated as to utility and plant applications. Applicants who wish to continue examination of the same claimed invention after the prosecution of a utility or plant application is closed should consider filing a request for continued examination (RCE) under 37 CFR 1.114. For more information on RCE practice, see MPEP § 706.07(h). Applicants who wish to file a continuation, divisional, or continuation-in-part application should file an application under 37 CFR 1.53(b). See MPEP § 201.06(c). CPAs filed prior to July 14, 2003 will continue to be processed and examined under the procedures set forth in prior 37 CFR 1.53(d). Any request for a CPA filed on or after July 14, 2003 in a utility or plant application is improper, regardless of the filing date of the utility or plant application in which the CPA is filed.

The Office will not convert an improper CPA into an application under 37 CFR 1.53(b) unless the applicant shows that there are extenuating circumstances that warrant the burdensome process of such conversion.

If an examiner discovers that an improper or incomplete CPA has been processed as a proper CPA in error, the examiner should immediately notify a supervisory applications examiner (SAE) or other technical support staff within the Technology Center (TC) who will reprocess the CPA and correct the application records as appropriate.

A. Applications Filed on or After June 8, 1995

If a utility or plant application has a filing date on or after June 8, 1995, an improper CPA filed on or after July 14, 2003 will be treated as a request for continued examination (RCE) under 37 CFR 1.114. See MPEP § 706.07(h) and form paragraph 7.42.15. If the improper CPA does not satisfy the requirements of 37 CFR 1.114 (e.g., the request lacks a submission or the fee under 37 CFR 1.17(e), or the prosecution of the application is not closed), the Office will treat the improper CPA as an improper RCE, and the time period set in the last Office action (or notice) will continue to run. The Office will send the applicant a Notice of Improper Request for Continued Examination (RCE), PTO-2051. If the time period for reply to the last Office action (or notice) has expired, the application is abandoned and the applicant must file a petition under 37 CFR 1.137 and the required petition fee to revive the abandoned application. Unless prosecution in the application was not closed, the petition must be accompanied by a submission as defined by 37 CFR 1.114(c) and the fee set forth in 37 CFR 1.17(e), unless previously filed. If the last Office action is a notice of allowance, the issue fee must also be paid at the time of filing the petition to revive. If prosecution in the application was not closed, the petition must be accompanied by a reply to the non-final Office action.

Applicants cannot, as a matter of right, obtain continued examination on claims that are independent and distinct from the invention previously claimed (i.e., applicants cannot switch inventions when filing an RCE). See 37 CFR 1.145. Therefore, if applicants file a request for a divisional CPA on or after July 14, 2003 and the request satisfies all the requirements in 37 CFR 1.114 (e.g., the request is accompanied by the fee as set forth in 37 CFR 1.17(e) and a submission), the Office will treat the improper divisional CPA as a proper RCE. However, any amendment canceling all claims drawn to the elected invention and presenting only claims drawn to the nonelected invention will be treated as nonresponsive. See MPEP § 821.03. Any newly submitted claims that are directed to an invention distinct from and independent of the invention previously claimed will be withdrawn from consideration. Applicants should be notified by using form paragraph 8.26 or 8.27.

B. Applications Filed Before June 8, 1995

If a utility or plant application has a filing date before June 8, 1995, the Office cannot treat an improper CPA filed on or after July 14, 2003 as an RCE because RCE practice does not apply to applications filed before June 8, 1995. The Office will notify the applicant of the improper CPA by mailing a

Notice of Improper CPA (or FWC) Filing For Utility or Plant Applications Filed Before June 8, 1995, PTO-2011 (Rev. 7/03 or later). The time period for reply set in the last Office action (or notice) will continue to run. Applicant may file a continuing application under 37 CFR 1.53(b). If the time period for reply has expired, the application is abandoned. If the application in which the improper CPA is filed is abandoned when a continuing application is filed, applicant would need to file a petition under 37 CFR 37 CFR 1.137 to revive the prior application to establish copendency with the continuing application under 37 CFR 1.53(b).

II. FILING AND INITIAL PROCESSING OF CPAs FOR DESIGN APPLICATIONS

A. In General

In addition to the provisions of 37 CFR 1.53(b), a continuation or divisional (but not a continuation-in-part) application may be filed under 37 CFR 1.53(d) if the prior application is a design application that is complete as defined by 37 CFR 1.51(b). A continuation or divisional application filed under 37 CFR 1.53(d) is called a "Continued Prosecution Application" or "CPA." A CPA has a number of advantages compared to a continuation or divisional application filed under 37 CFR 1.53(b). For example, the papers required to be filed in the U.S. Patent and Trademark Office in order to secure a filing date under 37 CFR 1.53(d) are minimal compared to 37 CFR 1.53(b). In addition, the Office will not normally issue a new filing receipt for a CPA. See 37 CFR 1.54(b). The time delay between the filing date and the first Office action should be less for a CPA than for an application filed under 37 CFR 1.53(b). For examination priority purposes only, the USPTO will treat continuation CPAs as if they were "amended" applications (as of the CPA filing date) and not as "new" applications. This treatment is limited to CPAs in which the prior application has an Office action issued by the examiner. If no Office action has been issued in the prior application, the CPA will be treated, for examination purposes, like a "new" application unless a petition to make special under 37 CFR 1.102 or a request for expedited examination under 37 CFR 1.155 is filed in the CPA. As "amended" applications generally have a shorter time frame for being acted on by examiners than "new" applications, the treatment of a CPA as an "amended" application will result in a first Office action being mailed in the CPA much sooner than if it had been filed as a continuation application under 37 CFR 1.53(b) (or under former 37 CFR 1.60 or 1.62). Therefore, applicants are strongly encouraged to file any preliminary amendment in a CPA at the time the CPA is filed. See 37 CFR 1.115 and MPEP § 714.03(a).

A request for a CPA expressly abandons the prior application as of the filing date of the request for the CPA. See 37 CFR 1.53(d)(2)(v). Therefore, where the prior application is not to be abandoned, any continuation or divisional application must be filed under 37 CFR 1.53(b). If applicant wants the USPTO to disregard a previously filed request for a CPA filed in a design application (and not recognize its inherent request to expressly abandon the prior application) and to treat the paper as the filing of an application under 37 CFR 1.53(b), the applicant must file a petition under 37 CFR 1.182. A request to expressly abandon an application is not effective until the abandonment is acknowledged, including the express abandonment of the prior application of a CPA that occurs by operation of 37 CFR 1.53(d)(2)(v). The express abandonment of the prior application is acknowledged and becomes effective upon processing and entry of the CPA into the file of the prior application. Thus, such a petition under 37 CFR 1.182 should be filed expeditiously since the petition will not be granted once the request for a CPA has been entered into the prior application (and the inherent request to expressly abandon the prior application has been acknowledged). If the request for a CPA has been entered into the prior application by the time the petition under 37 CFR 1.182 and the application file are before the deciding official for a decision on the petition, the petition will be denied. It is noted, however, that if the applicant intended to file a second application (either a continuation or a divisional) without abandoning the prior application, applicant can still achieve that result without loss of the benefit of the original filing date by: (A) continuing the prosecution of the original application via the CPA; and (B) filing a new continuation/divisional under 37 CFR 1.53(b) claiming benefit of the CPA and its parent applications under 35 U.S.C. 120 during the pendency of the CPA.

Since no new matter may be introduced in a CPA, the procedure set forth in 37 CFR 1.53(d) is not available for filing a continuation-in-part application. All continuation-in-part applications must be filed under 37 CFR 1.53(b) and a newly executed oath or declaration is required.

Under the CPA procedure, the continuation or divisional application will utilize the file wrapper and contents of the prior nonprovisional application, including the specification, drawings and oath or declaration from the prior nonprovisional application, and will be assigned the same application number as the prior nonprovisional application. Any changes to the continuation or divisional application desired when filing the CPA must be made in the form of an amendment to the prior application as it existed prior to filing the CPA, see 37 CFR 1.53(d)(5). Any new specification filed with the CPA request will not be considered part of the original application papers, but will be treated as a substitute specification in accordance with 37 CFR 1.125. However, the applicant must comply with the requirements of 37 CFR 1.125(b) before the substitute specification will be entered into the CPA. Since 37 CFR 1.125(b) requires that a substitute specification be accompanied by, *inter alia*, a statement that the substitute specification includes no new matter, any substitute specification containing new matter will be denied entry by the examiner. Any preliminary amendment to the written description and claims, other than a substitute specification, filed with a CPA request will ordinarily be entered. Any new matter which is entered, however, will be required to be canceled pursuant to 35 U.S.C. 132 from the descriptive portion of the specification. Further, any claim(s) which relies upon such new matter for support will be rejected under 35 U.S.C. 112, first paragraph. See MPEP § 2163.06. In the event that a substitute specification or preliminary amendment containing new matter was filed with a request for a CPA, applicant may file a petition under 37 CFR 1.182 requesting that the substitute specification or preliminary amendment be removed from the CPA application file, and be accorded the status as a separate application by being placed in a new file wrapper and assigned a new application number, with the new application being accorded a filing date as of the date the request for a CPA and substitute specification/preliminary amendment were filed. Of course, a request for a CPA is not improper simply because the request is accompanied by a substitute specification or preliminary amendment containing new matter. Thus, an applicant will not be entitled to a refund of the filing fee paid in a proper CPA as a result of the granting of a petition under 37 CFR 1.182 requesting that the substitute specification or preliminary amendment be removed from the CPA application file.

A CPA may be based on a prior CPA so long as the prior CPA is complete under 37 CFR 1.51(b) and is a design application. There is no other limit to the number of CPAs that may be filed in a chain of continuing applications. However, only one CPA may be pending at one time based on the same prior nonprovisional application.

Under 37 CFR 1.53(d), the specification, claims, and drawings, and any amendments entered in the prior nonprovisional application are used in the CPA. A new basic filing fee, search fee, and examination fee are required in accordance with 35 U.S.C. 41 and 37 CFR 1.16. No search and examination fees are required for a CPA filed before December 8, 2004. The only other statutory requirement under 35 U.S.C. 111(a) is a signed oath or declaration. Since a CPA cannot contain new matter, the oath or declaration filed in the prior nonprovisional application would supply all the information required under the statute and rules to have a complete application and to obtain a filing date. Accordingly, the previously filed oath or declaration will be considered to be the oath or declaration of the CPA.

The original disclosure of a CPA is the same as the original disclosure of the parent non-continued prosecution application and amendments entered in the parent application(s). However, any subject matter added by amendment in the parent application which is deemed to be new matter in the parent application will also be considered new matter in the CPA. No amendment filed in a CPA, even if filed on the filing date of the CPA, may include new matter.

If application papers for a design application are in any way designated as a CPA filing under 37 CFR 1.53(d) (e.g., contain a reference to 37 CFR 1.53(d), CPA, or continued prosecution application), the application papers will be treated by the Office as a CPA filed under 37 CFR 1.53(d), even if the application papers also contain other inconsistent designations (e.g., if the papers are also designated as an applica-

tion filed under 37 CFR 1.53(b) or include a reference to a "continuation-in-part CPA"). If application papers for a utility or plant application are in any way designated as a CPA filing under 37 CFR 1.53(d), the application papers will be treated as a request for continued examination (RCE) under 37 CFR 1.114. See I. CPA PRACTICE HAS BEEN ELIMINATED AS TO UTILITY AND PLANT APPLICATIONS, above.

B. Conditions for Filing a CPA

A continuation or divisional application may be filed under 37 CFR 1.53(d), if the prior nonprovisional application is a design application that is complete as defined by 37 CFR 1.51(b). The term "prior nonprovisional application" in 37 CFR 1.53(d)(1) means the nonprovisional application immediately prior to the CPA. A complete application as defined by 37 CFR 1.51(b) must contain, *inter alia*, the appropriate filing fee (including the basic filing fee, search fee, and examination fee) and a signed oath or declaration under 37 CFR 1.63.

In addition, a continuation or divisional application filed under 37 CFR 1.53(d) must be filed before the earliest of: (A) payment of the issue fee on the prior application, unless a petition under 37 CFR 1.313(c) is granted in the prior application; (B) abandonment of the prior application; or (C) termination of proceedings on the prior application.

Note that request for continued examination (RCE) practice under 37 CFR 1.114 is not available in design applications. Any improper RCE filed in a design application will not be treated as a CPA. An improper RCE filed in a design application will not toll the running of any time period for reply.

C. Initial Processing

A CPA request will be initially processed by the TC assigned the prior application. The TC will verify that (A) the prior application is a design application, (B) the correct application number of the prior nonprovisional application is identified in the request, (C) the request is properly signed, (D) the prior nonprovisional application was pending on, and that the issue fee has not been paid in the prior nonprovisional application on or prior to, the filing date of the CPA request, (E) the prior nonprovisional application was complete under 37 CFR 1.51(b) (e.g., the filing fee has been paid and a signed oath or declaration under 37 CFR 1.63 has been filed in the prior application), and (F) the proper filing fee has been paid in the CPA. If one or more other conditions for filing a CPA have not been satisfied or the proper basic filing fee, search fee, and examination fee have not been paid, the applicant will be so notified and no examination will be made in the CPA until the filing error has been corrected or the proper fees have been submitted. See 37 CFR 1.53(h). If an examiner discovers that an improper or incomplete CPA has been processed as a proper CPA in error, the examiner should immediately notify a supervisory applications examiner (SAE) or other technical support staff within the TC who will reprocess the CPA and correct the application records.

D. Incorrect Patent Application Number Identified

A request for a CPA must identify the prior nonprovisional application (37 CFR 1.53(d)(2)(i)) by application number (series code and serial number) or by serial number and filing date. Where a paper requesting a CPA is filed which does not properly identify the prior nonprovisional application number, the TC should attempt to identify the proper application number by reference to other identifying information provided in the CPA papers, e.g., name of the inventor, filing date, title of the invention, and attorney's docket number of the prior application. If the TC is able to identify the correct application number of the prior application, the correct application number should be entered in red ink on the paper requesting the CPA and the entry should be dated and initialed. For Image File Wrapper (IFW) processing, see IFW Manual. If the TC is unable to identify the application number of the prior application and the party submitting the CPA papers is a registered practitioner, the practitioner may be requested by telephone to supply a letter signed by the practitioner providing the correct application number. If all attempts to obtain the correct application number are unsuccessful, the paper requesting the CPA should be returned by the TC to the sender where a return address is available. The returned CPA request must be accompanied by a cover letter which will indicate to the sender that if the returned CPA request is resubmitted to the U.S. Patent and Trademark Office with the correct application number within two weeks of the mail date on the cover letter, the original date of receipt of the CPA request will be

considered by the U.S. Patent and Trademark Office as the date of receipt of the CPA request. See 37 CFR 1.5(a). A copy of the returned CPA request and a copy of the date-stamped cover letter should be retained by the TC. Applicants may use either the Certificate of Mailing or Transmission procedure under 37 CFR 1.8 or the "Express Mail" procedure under 37 CFR 1.10 for resubmissions of returned CPA requests if they desire to have the benefit of the date of deposit in the United States Postal Service. If the returned CPA request is not resubmitted within the two-week period with the correct application number, the TC should cancel the original "Office Date" stamp on the CPA request and re-stamp the returned CPA request with the date of receipt of the resubmission or with the date of deposit as "Express Mail" with the United States Postal Service, if the CPA request is resubmitted under 37 CFR 1.10. Where the CPA request is resubmitted later than two weeks after the return mailing by the U.S. Patent and Trademark Office, the later date of receipt or date of deposit as "Express Mail" of the resubmission will be considered to be the filing date of the CPA request. The two-week period to resubmit the returned CPA request is not extendible. See 37 CFR 1.5(a).

In addition to identifying the application number of the prior application, applicant is urged to furnish in the request for a CPA the following information relating to the prior application to the best of his or her ability: (A) title of invention; (B) name of applicant(s); and (C) correspondence address. See 37 CFR 1.53(d)(8).

E. Signature Requirement

A CPA is a request to expressly abandon the prior application (37 CFR 1.53(d)(2)(v)) and, therefore, must be properly signed. For a listing of the individuals who may properly sign a CPA request, see 37 CFR 1.33(b). In a joint application with no attorney or agent, all applicants must sign the CPA request in order for the CPA request to be considered properly signed. An unsigned or improperly signed CPA request will be placed in the file of the prior application, and is entitled to an application filing date, but is ineffective to abandon the prior application. A CPA will NOT be examined until the CPA request is properly signed.

A request for a CPA may be signed by a registered practitioner acting in a representative capacity under 37 CFR 1.34. However, correspondence concerning the CPA will be sent by the Office to the correspondence address as it appears in the prior nonprovisional application until a new power of attorney, or change of correspondence address signed by an attorney or agent of record in the prior application, is filed in the CPA.

A request for a CPA may also be signed by the assignee or assignees of the entire interest. However, the request must be accompanied by papers establishing the assignee's ownership under 37 CFR 3.73(b), unless such papers were filed in the prior application and ownership has not changed.

F. Filing Date

The filing date of a CPA is the date on which a request on a separate paper for a CPA is filed. A request for a CPA cannot be submitted as a part of papers filed for another purpose, see 37 CFR 1.53(d)(2), (e.g., the filing of a request for a CPA within an amendment after final for the prior application is an improper request for a CPA).

A paper requesting a CPA may be sent to the U.S. Patent and Trademark Office by mail (see MPEP § 501), by facsimile transmission (see MPEP § 502.01) or it may be filed directly at the Customer Service Window located in the Randolph Building, 401 Dulany Street, Alexandria, VA 22314.

The date of receipt accorded to a CPA request sent by facsimile transmission is the date the complete transmission is received by an Office facsimile unit, unless the transmission is completed on a Saturday, Sunday, or Federal holiday within the District of Columbia. Correspondence for which transmission was completed on a Saturday, Sunday, or Federal holiday within the District of Columbia, will be accorded a receipt date of the next succeeding day which is not a Saturday, Sunday, or Federal holiday within the District of Columbia.

Applicants filing a CPA by facsimile transmission may include a "Receipt for Facsimile Transmitted CPA" (PTO/SB/29A) containing a mailing address and identifying information (e.g., the prior application number, filing date, title, first named inventor) with the request for a CPA. The USPTO will: (A) separate the "Receipt for Facsimile Transmitted CPA" from the

CPA request papers; (B) date-stamp the "Receipt for Facsimile Transmitted CPA"; (C) verify that the identifying information provided by the applicant on the "Receipt for Facsimile Transmitted CPA" is the same information provided on the accompanying request for a CPA; and (D) mail the "Receipt for Facsimile Transmitted CPA" to the mailing address provided on the "Receipt for Facsimile Transmitted CPA." The "Receipt for Facsimile Transmitted CPA" cannot be used to acknowledge receipt of any paper(s) other than the request for a CPA. A returned "Receipt for Facsimile Transmitted CPA" may be used as *prima facie* evidence that a request for a CPA containing the identifying information provided on the "Receipt for Facsimile Transmitted CPA" was filed by facsimile transmission on the date stamped thereon by the USPTO. As the USPTO will verify only the identifying information contained on the request for a CPA, and will not verify whether the CPA was accompanied by other papers (e.g., a preliminary amendment), the "Receipt for Facsimile Transmitted CPA" cannot be used as evidence that papers other than a CPA were filed by facsimile transmission in the USPTO. Likewise, applicant-created "receipts" for acknowledgment of facsimile transmitted papers (whether created for the acknowledgment of a CPA or other papers) cannot be used as evidence that papers were filed by facsimile in the USPTO. Applicants are cautioned not to include information on a "Receipt for Facsimile Transmitted CPA" that is intended for retention in the application file, as the USPTO does not plan on retaining a copy of such receipts in the file of the application.

If an applicant filing a CPA by facsimile does not include an authorization to charge the basic filing fee, search fee, and examination fee to a deposit account or to a credit card using PTO-2038 (See MPEP § 509), the application will be treated under 37 CFR 1.53(f) as having been filed without the appropriate fees (as fees cannot otherwise be transmitted by facsimile).

37 CFR 1.6(f) provides for the situation in which the Office has no evidence of receipt of a CPA transmitted to the Office by facsimile transmission. 37 CFR 1.6(f) requires that a showing thereunder include, *inter alia*, a copy of the sending unit's report confirming transmission of the application or evidence that came into being after the complete transmission of the application and within one business day of the complete transmission of the application.

The Certificate of Mailing Procedure under 37 CFR 1.8 does not apply to filing a request for a CPA, since the filing of such a request is considered to be a filing of national application papers for the purpose of obtaining an application filing date (37 CFR 1.8(a)(2)(i)(A)). Thus, if (A) the Patent and Trademark Office mails a final Office action on July 2, 1997 (Wednesday), with a shortened statutory period of 3 months to reply and (B) a petition for a three-month extension of time (and the fee) and a CPA are received in the U.S. Patent and Trademark Office on January 5, 1998 (Monday), accompanied by a certificate of mailing under 37 CFR 1.8 dated January 2, 1998 (Friday), then the prior application was abandoned on January 3, 1998, and the CPA is improper because the CPA was not filed before the abandonment of the prior application. As a further example, if (A) the U.S. Patent and Trademark Office mails a final Office action on July 2, 1997 (Wednesday), with a shortened statutory period of 3 months to reply and (B) applicant submits a petition for a three-month extension of time (and the fee) and a CPA request via facsimile transmission accompanied by a certificate of transmission under 37 CFR 1.8 at 9:00 PM (PST) on January 2, 1998 (Friday), but the U.S. Patent and Trademark Office does not receive the complete transmission until 12:01 AM (EST) on January 3, 1998 (Saturday), then the CPA is improper because the CPA request was not filed until January 5, 1998, see 37 CFR 1.6(a)(3), which is after the abandonment (midnight on Friday, January 2, 1998) of the prior application.

G. Filing Fee

The filing fees for a CPA are the basic filing fee as set forth in 37 CFR 1.16(b)(1), the search fee as set forth in 37 CFR 1.16(l), and the examination fee as set forth in 37 CFR 1.16(p). See 37 CFR 1.53(d)(3).

A general authorization to charge fees to a deposit account which was filed in the prior application carries over from the prior nonprovisional application to a CPA. Thus, where a general authorization to charge fees to a deposit account was filed in the prior application the TC should charge the necessary filing fee of the CPA to the deposit account.

Where a general authorization to charge fees to a deposit account was filed in the prior application and applicant desires to file a CPA without paying the filing fee on the filing date of the application, applicant may file the CPA with specific instructions revoking the general authorization filed in the prior application.

Where a filing date has been assigned to a CPA, but the basic filing fee, search fee, and examination fee are insufficient or have been omitted, applicant will be so notified by the TC and given a period of time in which to file the missing fee(s) and to pay the surcharge set forth in 37 CFR 1.16(f) in order to prevent abandonment of the application. For CPAs filed on or after December 8, 2004 but prior to July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(d), if the search and/or examination fees are paid on a date later than the filing date of the application, the surcharge under 37 CFR 1.16(f) is not required. For CPAs filed on or after July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(d), if any of the basic filing fee, search fee, or examination fee are paid on a date later than the filing date of the CPA, the surcharge under 37 CFR 1.16(f) is required. The time period usually set is 2 months from the date of notification. This time period is subject to the provisions of 37 CFR 1.136(a). A CPA will not be placed upon the files for examination until all of its required parts, including the basic filing fee, search fee, examination fee, and any necessary surcharge, are received. See 37 CFR 1.53(h). Thus, it would be inappropriate to conduct an interview or to issue an action on the merits in the CPA until the basic filing fee, search fee, examination fee, and any necessary surcharge, are received.

Small Entity Status

Small entity status established in the parent application does not automatically carry over to a CPA. Status as a small entity must be specifically established in every application in which the status is available and desired. 37 CFR 1.27(c)(4) provides that the refiling of an application as a continued prosecution application under 37 CFR 1.53(d) requires a new assertion of continued entitlement to small entity status.

Because small entity status does not automatically carry over from the prior application to the CPA, unless the request for a CPA specifically indicates that the filing fee is to be charged in the small entity amount or otherwise includes an assertion of entitlement to small entity status, the large entity filing fee should be charged.

H. Extensions of Time

If an extension of time is necessary to establish continuity between the prior application and the CPA, the petition for extension of time should be filed as a separate paper directed to the prior nonprovisional application. However, a CPA is not improper simply because the request for a CPA is combined in a single paper with a petition for extension of time. The "separate paper" requirement of 37 CFR 1.53(d)(2) is intended to preclude an applicant from burying a request for a CPA in a paper submitted primarily for another purpose, e.g., within an amendment after final for the prior application.

While the filing of a CPA is not strictly a reply to an Office action mailed in a prior application, a request for a CPA is a paper directed to and placed in the file of the prior application, and seeks to take action in (i.e., expressly abandon) the prior application. Thus, it will be considered a "reply" for purposes of 37 CFR 1.136(a)(3). As a result, an authorization in the prior application to charge all required fees, fees under 37 CFR 1.17, or all required extension of time fees to a deposit account or to a credit card (See MPEP § 509) will be treated as a constructive petition for an extension of time in the prior application for the purpose of establishing continuity with the CPA. The correct extension fee to be charged in the prior application would be the extension fee necessary to establish continuity between the prior application and the CPA on the filing date of the CPA.

If an extension of time directed to the prior application is filed as a separate paper, it must be accompanied by its own certificate of mailing under 37 CFR 1.8 (if mailed by first class mail) or under 37 CFR 1.10 (if mailed by Express Mail), if the benefits of those rules are desired.

I. Notice of CPA Filing

Since a "Notice of Abandonment" is not mailed in the prior application as a result of the filing of a CPA

nor is a filing receipt normally mailed for a CPA, the examiner should advise the applicant that a request for a CPA has been granted by including form paragraph 2.30 in the first Office action of the CPA.

¶ *2.30 CPA Status Acceptable (for Design Applications)*

The request filed on **[1]** for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. **[2]** is acceptable and a CPA has been established. An action on the CPA follows.

Examiner Note:

1. Use this form paragraph in the first Office action of a CPA to advise the applicant that a request for a CPA is acceptable and that a CPA has been established. This notice should be given, since applicant is not notified of the abandonment of the parent nor is a filing receipt normally sent for a CPA. If the request for a CPA in a utility or plant application is improper and the CPA has been treated as an RCE, do not use this form paragraph (use form paragraph 7.42.15 instead). See MPEP § 706.07(h).
2. In bracket 1 insert the filing date of the request for a CPA.
3. In bracket 2 insert the Application Number of the parent application.

A "conditional" request for a CPA will not be permitted. Any "conditional" request for a CPA submitted as a separate paper with an amendment after final in an application will be treated as an unconditional request for a CPA of the application. This will result (by operation of 37 CFR 1.53(d)(2)(v)) in the abandonment of the prior application, and (if so instructed in the request for a CPA) the amendment after final in the prior application will be treated as a preliminary amendment in the CPA. The examiner should advise the applicant that a "conditional" request for a CPA has been treated as an unconditional request for a CPA and has been accepted by including form paragraph 2.35 in the first Office action of the CPA.

¶ *2.35 CPA Status Acceptable - Conditional Request (for Design Applications)*

Receipt is acknowledged of the "conditional" request for a Continued Prosecution Application (CPA) filed on **[1]** under 37 CFR 1.53(d) based on prior Application No. **[2]**. Any "conditional" request for a CPA submitted as a separate paper is treated as an unconditional request for a CPA. Accordingly, the request for a CPA application is acceptable and a CPA has been established. An action on the CPA follows.

Examiner Note:

1. Use this form paragraph in the first Office action of a CPA to advise the applicant that a "conditional" request for a CPA is treated as an unconditional request and the CPA is acceptable and that a CPA has been established. This notice should be given, since applicant is not notified of the abandonment of the parent nor is a filing receipt normally sent for a CPA. If the request for a CPA in a utility or plant application is improper and the CPA has been treated as an RCE, do not use this form paragraph (use form paragraph 7.42.15 instead). See MPEP § 706.07(h).
2. In bracket 1 insert the filing date of the request for a CPA.
3. In bracket 2 insert the Application Number identified in the CPA request.

Where the examiner recognizes that a paper filed in the prior application contains a request for a CPA, but the request is not in a separate paper, the examiner should, if possible, contact applicant by telephone to notify applicant that the request for a CPA is ineffective or notify the applicant in the next Office action that the CPA request is ineffective by using form paragraph 2.31.

¶ *2.31 CPA Status Not Acceptable - Request Not on Separate Paper*

Receipt is acknowledged of the request for a Continued Prosecution Application (CPA) filed on **[1]** under 37 CFR 1.53(d) based on Application No. **[2]**. However, because the request was not submitted on a separate paper as required by 37 CFR 1.53(d)(2), the request is not acceptable and no CPA has been established.

Examiner Note:

1. Use this form paragraph to inform applicant that a request for a CPA in a design application is not in compliance with 37 CFR 1.53(d)(2) and, therefore, no CPA has been established.
2. In bracket 1 insert the filing date of the paper containing the request for a CPA.
3. In bracket 2 insert the Application Number identified in the CPA request.

J. Inventorship

The inventive entity set forth in the prior nonprovisional application automatically carries over into the CPA UNLESS the request for a CPA is accompanied by or includes on filing a statement requesting the deletion of the name or names of the person or persons who are not inventors of the invention being claimed in the CPA. 37 CFR 1.53(d)(4). The statement requesting the deletion of the names of the person or persons who are not inventors in the continuation or divisional application must be signed by person(s) authorized pursuant to 37 CFR 1.33(b) to sign an amendment in the continuation or divisional application. The examiner should acknowledge receipt of a statement filed with a CPA requesting the deletion of the name or names of the person or persons who are not inventors of the invention being

claimed in the CPA in the first Office action in the CPA by using form paragraph 2.32.

¶ *2.32 Request To Delete a Named Inventor*

Receipt is acknowledged of the statement requesting that **[1]** be deleted as a named inventor which was filed with the Continued Prosecution Application (CPA) on **[2]**. The inventorship has been corrected as requested.

Examiner Note:

1. Use this form paragraph where a Continued Prosecution Application (CPA) is filed accompanied by a statement requesting deletion of the name or names of the person or persons who are not inventors of the invention being claimed in the new application. Any request to delete a named inventor in a CPA filed after the CPA is filed must be accompanied by a request under 37 CFR 1.48.
2. In bracket 1 insert the name or names of the inventor(s) requested to be deleted.
3. In bracket 2 insert the filing date of the CPA.

After the first Office action is mailed, the application file should be sent to OIPE for revision of its records to reflect the change of inventorship. For paper application files, the examiner should note the change of inventorship on the original oath or declaration by writing in red ink in the left column "See Paper No. __ for inventorship changes." See MPEP § 201.03 and § 605.04(g). For Image File Wrapper (IFW) processing, see the IFW Manual. Any request by applicant for a corrected filing receipt to show the change in inventorship should not be submitted until after the examiner has acknowledged the change in inventorship in an Office action. Otherwise, the "corrected" filing receipt may not show the change in inventorship.

The inventive entity of the CPA will be the same as the inventive entity of the prior application even if the CPA papers include a transmittal letter or a new oath or declaration naming an inventor not named in the prior application. However, the new oath or declaration will be placed in the application file. Upon review of the application, the examiner will notify the applicant in the first Office action using form paragraph 2.33 that the inventive entity of the prior application has been carried over into the CPA. If the inventive entity set forth in the transmittal letter of the new oath or declaration is desired, then a request under 37 CFR 1.48 along with the required fee set forth in 37 CFR 1.17(i) must be filed. No new oath or declaration need be filed with the later-filed request under 37 CFR 1.48 if such was submitted on filing of the CPA. If a request under 37 CFR 1.48 is not filed, it should be noted that the filing in a CPA of a transmittal letter or a new oath or declaration containing an inventor not named in the prior nonprovisional application may result in the claims in the CPA being rejected under 35 U.S.C. 102(f).

¶ *2.33 New Inventor Identified*

It is noted that **[1]** identified as a named inventor in the Continued Prosecution Application (CPA) filed under 37 CFR 1.53(d) on **[2]**, but no request under 37 CFR 1.48, as is required, was filed to correct the inventorship. Any request to add an inventor must be in the form of a request under 37 CFR 1.48. Otherwise, the inventorship in the CPA shall be the same as in the prior application.

Examiner Note:

1. Use this form paragraph where a request for a Continued Prosecution Application (CPA) identifies one or more inventors who were not named as inventors in the prior application on the filing date of the CPA.
2. In bracket 1 insert the name or names of the inventor(s) requested to be added followed by either --was-- or --were--, as appropriate.
3. In bracket 2 insert the filing date of the CPA.

III. EXAMINATION OF CPAs

A. Benefit of Earlier Filing Date

A request for a CPA is a specific reference under 35 U.S.C. 120 to every application assigned the application number identified in the request, and 37 CFR 1.78(a)(2) provides that a request for a CPA is the specific reference under 35 U.S.C. 120 to the prior application. That is, the CPA includes the request for an application under 37 CFR 1.53(d) and the recitation of the application number of the prior application in such request is the "specific reference to the earlier filed application" required by 35 U.S.C. 120. No further amendment to the specification of the CPA nor a reference in the CPA's application data sheet is required by 35 U.S.C. 120 or 37 CFR 1.78(a) to identify or reference the prior application, as well as any other application assigned the application number of the prior application (e.g., in instances in which a CPA is the last in a chain of CPAs).

Where an application claims a benefit under 35 U.S.C. 120 of a chain of applications, the application must make a reference to the first (earliest) application and every intermediate application. See *Sampson v. Ampex Corp.*, 463 F.2d 1042, 1044-45, 174 USPQ 417, 418-19 (2d Cir. 1972); *Sticker Indus.*

Supply Corp. v. Blaw-Knox Co., 405 F.2d 90, 93, 160 USPQ 177, 179 (7th Cir. 1968); *Hovlid v. Asari*, 305 F.2d 747, 751, 134 USPQ 162, 165 (9th Cir. 1962). See also MPEP § 201.11. In addition, every intermediate application must also make a reference to the first (earliest) application and every application after the first application and before such intermediate application.

In the situation in which there is a chain of CPAs, each CPA in the chain will, by operation of 37 CFR 1.53(d)(7), contain the required specific reference to its immediate prior application, as well as every other application assigned the application number identified in such request. Put simply, a specific reference to a CPA by application number and filing date will constitute a specific reference to: (A) the non-continued prosecution application originally assigned such application number (the prior application as to the first CPA in the chain); and (B) every CPA assigned the application number of such non-continued prosecution application.

Where the non-continued prosecution application originally assigned such application number itself claims the benefit of a prior application or applications under 35 U.S.C. 119(e), 120, 121, or 365(c), 37 CFR 1.78(a)(2) and (a)(5) continue to require that such application contain a reference to any such prior application(s). The reference(s) can be in an application data sheet (37 CFR 1.76) or in the first sentence(s) of the specification. See 37 CFR 1.78(a)(2) and (a)(5). As a CPA uses the application file of the prior application, a specific reference in the prior application (as to the CPA) will constitute a specific reference in the CPA, as well as every CPA in the event that there is a chain of CPAs.

Where an applicant in an application filed under 37 CFR 1.53(b) seeks to claim the benefit of a CPA under 35 U.S.C. 120 or 121 (as a continuation, divisional, or continuation-in-part), 37 CFR 1.78(a)(2) requires a reference to the CPA by application number in the first sentence(s) of such application unless such reference is made in an application data sheet. 37 CFR 1.78(a)(2) provides that "[t]he identification of an application by application number under this section is the specific reference required by 35 U.S.C. 120 to every application assigned that application number." Thus, where a referenced CPA is in a chain of CPAs, this reference will constitute a reference under 35 U.S.C. 120 and 37 CFR 1.78(a)(2) to every CPA in the chain as well as the non-continued prosecution application originally assigned such application number.

Therefore, regardless of whether an application is filed under 37 CFR 1.53(b) or (d), a claim under 35 U.S.C. 120 to the benefit of a CPA is, by operation of 37 CFR 1.53(d)(7) and 37 CFR 1.78(a)(2), a claim to every application assigned the application number of such CPA. In addition, applicants will not be permitted to choose to delete such a claim as to certain applications assigned that application number (e.g., for patent term purposes). See 37 CFR 1.53(d)(7).

Further, an applicant in a CPA is not permitted to amend the first sentence(s) of the specification to provide the specific reference to the prior application, or to provide such a reference in an application data sheet. Any such amendment will not be entered. The applicant should be advised in the next Office action that any such amendment to the specification or reference in the application data sheet has not been entered by using form paragraph 2.34. See 37 CFR 1.78(a)(2).

¶ *2.34 Reference in CPA to Prior Application (by Amendment to the Specification)*

The amendment filed **[1]** requesting that the specification be amended to refer to the present Continued Prosecution Application (CPA) as a **[2]** application of Application No. **[3]** has not been entered. As set forth in 37 CFR 1.53(d)(7), a request for a CPA is the specific reference required by 35 U.S.C. 120 to every application assigned the application number identified in such request. Thus, there is no need to amend the first sentence(s) of the specification to refer back to the prior application and any such amendment shall be denied entry.

Examiner Note:

1. Use this form paragraph to inform the applicant that an amendment to the first sentence(s) of the specification referring to the CPA as a continuing application of the prior application has not been entered and will not be entered if submitted again.
2. In bracket 1, insert the filing date of the amendment.
3. In bracket 2, insert either --continuation-- or --divisional--.
4. In bracket 3, insert the Application Number of the prior nonprovisional application.

Claims under 35 U.S.C. 119(a)-(d) and (e) for the benefit of the filing dates of earlier applications in a parent application will automatically carry over to a CPA.

B. Terminal Disclaimer

A terminal disclaimer filed in the parent application carries over to a CPA. The terminal disclaimer filed in the parent application carries over because the CPA retains the same application number as the parent application, i.e., the application number to which the previously filed terminal disclaimer is directed. If applicant does not want the terminal disclaimer to carry over to the CPA, applicant must file a petition under 37 CFR 1.182 along with the required petition fee, requesting the terminal disclaimer filed in the parent application not be carried over to the CPA. See MPEP § 1490, "Withdrawing a Terminal Disclaimer," subheading entitled "A. Before Issuance of Patent."

C. Prior Election

An election made in the prior application carries over to the CPA only if all of the following conditions are met: (A) the CPA is designated as a continuation or is not designated at all (i.e., the CPA is **NOT** designated as a divisional); (B) there was an express election by the applicant in reply to a restriction requirement in the prior application; (C) the CPA presents claim(s) drawn only to invention(s) claimed in the prior application; and (D) the CPA does not contain an indication that a shift in election is desired.

Where all of the conditions are met, the examiner's first action should repeat the restriction requirement made in the prior application to the extent it is still applicable in the CPA and include a statement that prosecution is being continued on the invention elected and prosecuted by applicant in the prior application.

D. Information Disclosure Statements and Preliminary Amendments

All information disclosure statements filed in the prior application that comply with the content requirements of 37 CFR 1.98 will be considered in a CPA by the examiner. No specific request that the previously submitted information be considered in a CPA is required.

In addition, all information disclosure statements that comply with the content requirements of 37 CFR 1.98 and are filed before the mailing of a first Office action on the merits will be considered by the examiner, regardless of whatever else has occurred in the examination process up to that point in time. The submission of an information disclosure statement after the first Office action is mailed could delay prosecution. Therefore, applicants are encouraged to file any information disclosure statement in a CPA as early as possible, preferably at the time of filing the CPA. For further discussion of information disclosure statements, see MPEP § 609.

Applicants are also encouraged to file all preliminary amendments at the time of filing a CPA because the entry of any preliminary amendment filed after the filing date of the CPA could be denied under 37 CFR 1.115 if the preliminary amendment unduly interferes with the preparation of a first Office action. See MPEP § 714.03(a). In a situation where the applicant needs more time to prepare a preliminary amendment or to file an information disclosure statement, applicant can request a three-month suspension of action under 37 CFR 1.103(b). The three-month suspension of action under 37 CFR 1.103(b) must be filed at the time of filing a CPA. See MPEP § 709.

E. Copies of Affidavits

Affidavits and declarations, such as those under 37 CFR 1.130, 1.131 and 1.132 filed during the prosecution of the parent nonprovisional application, automatically become a part of the CPA. Therefore, no copy of the original affidavit or declaration filed in the parent nonprovisional application need be filed in the CPA.

IV. PUBLIC ACCESS TO CPAs

A. Waiver of Confidentiality

A CPA is construed to include a waiver of confidentiality by the applicant under 35 U.S.C. 122 to the extent that any member of the public who is entitled under the provisions of 37 CFR 1.14 to obtain access to, copies of, or information concerning either the prior application or any continuing application filed under the provisions of 37 CFR 1.53(d) may be given similar access to, copies of, or similar information concerning, the other application(s) in the application file. 37 CFR 1.53(d)(6). However, all applications in the file jacket of a pending CPA are treated as pending, rather than abandoned, in determining whether copies of, and access to, such applications will be granted. For Image File Wrapper (IFW) processing,

see IFW Manual. See MPEP § 103 for further discussion of access to an abandoned application contained in the file of a pending CPA.

B. Certified Copy

A certified copy of a CPA will be prepared by the Certification Branch upon request. The certified copy will consist of a copy of the most recent non-continued prosecution application in the chain of CPAs. The filing date of the CPA will be shown in the certified copy as the filing date of the most recent non-continued prosecution application in the chain of CPAs.

V. FORMS

Form PTO/SB/29, "For Design Applications Only: Continued Prosecution Application (CPA) Request Transmittal" and Form PTO/SB/29A, "For Design Applications Only: Receipt For Facsimile Transmitted CPA" may be used by applicant for filing a CPA under 37 CFR 1.53(d). The forms used by the TCs to notify applicants of defects regarding applications filed under 37 CFR 1.53(d) are shown below. "Notice of Improper CPA (or FWC) Filing For Utility or Plant Applications Filed Before June 8, 1995" Form PTO-2011; "Notice of Improper CPA For Design Applications" Form PTO-2012; "Notice To File Missing Parts Of Application (CPA), For Design Applications" Form PTO-2021; "Notice Of Incomplete Reply (CPA) For Design Applications" Form PTO-2018; and "Notice Of Abandonment Under 37 CFR 1.53(f) (CPA) For Design Applications" Form PTO-2019.

PTO/SB/29 (07-06)
Approved for use through 01/31/2007. OMB 0651-0032
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

FOR DESIGN APPLICATIONS ONLY:
CONTINUED PROSECUTION APPLICATION (CPA) REQUEST TRANSMITTAL

(Only for Continuation or Divisional applications under 37 CFR 1.53(d))

CHECK BOX, if applicable: ☐ DUPLICATE

Address to: **Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450**	*Attorney Docket No. of Prior Application*	
	First Named Inventor	
	Examiner Name	
	Art Unit	
	Express Mail Label No.	

This is a request for a ☐ continuation or ☐ Divisional application under 37 CFR 1.53(d), (continued prosecution application (CPA)) of prior application number _____,

filed on _____, entitled _____.

NOTES

*A CPA may **only** be filed in a **design** application. A CPA **cannot** be filed in a utility or plant application. See "Elimination of Continued Prosecution Application Practice as to Utility and Plant Applications; Final Rule," 68 FR 32376 (May 30, 2003). Applicant may consider filing a Request for Continued Examination (RCE) under 37 CFR 1.114 in utility or plant applications. See MPEP 706.07(h) and form PTO/SB/30.*

***Filing Qualifications:** The prior application identified above must be a design application that is complete as defined by 37 CFR 1.51(b).*

***C-I-P NOT PERMITTED:** A continuation-in-part application cannot be filed as a CPA under 37 CFR 1.53(d), but must be filed under 37 CFR 1.53(b).*

***EXPRESS ABANDONMENT OF PRIOR APPLICATION:** The filing of this CPA is a request to expressly abandon the prior application as of the filing date of the request for a CPA. 37 CFR 1.53(b) must be used to file a continuation, divisional, or continuation-in-part of an application that is not to be abandoned.*

***ACCESS TO PRIOR APPLICATION:** The filing of this CPA will be construed to include a waiver of confidentiality by the applicant under 35 U.S.C. 122 to the extent that any member of the public who is entitled under the provisions of 37 CFR 1.14 to access to, copies of, or information concerning, the prior application may be given similar access to, copies of, or similar information concerning, the other application or applications in the file.*

***35 U.S.C. 120 STATEMENT:** In a CPA, no reference to the prior application is needed in the first sentence of the specification and none should be submitted. If a sentence referencing the prior application is submitted, it will not be entered. A request for a CPA is the specific reference required by 35 U.S.C. 120 and to every application assigned the application number identified in such request, 37 CFR 1.78(a).*

WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.

1. ☐ Enter the unentered amendment previously filed on _____ under 37 CFR 1.116 in the prior design application.
2. ☐ A preliminary amendment is enclosed.
3. This application is filed by fewer than all the inventor(s) named in the prior application, 37 CFR 1.53(d)(4).
   a. ☐ ***DELETE*** the following inventor(s) named in the prior design application:
      _____
      _____
   b. ☐ The inventor(s) to be deleted are set forth on a separate sheet attached hereto.
4. ☐ A new power of attorney (PTO/SB/81) is enclosed.
5. Information Disclosure Statement (IDS) is enclosed;
   a. ☐ PTO/SB/08, PTO-1449 or equivalent
   b. ☐ Copies of IDS Citations

PTO/SB/29 (07-06)
Approved for use through 01/31/2007. OMB 0651-0032
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

6. Small entity status: Applicant claims small entity status. See 37 CFR 1.27.

7. The Director is hereby authorized to credit overpayments or change the following fees to Deposit Account No._____: (A duplicative copy of this form is enclosed)

   a. ☐ Fees required under 37 CFR 1.16.

   b. ☐ Fees required under 37 CFR 1.17.

   c. ☐ Fees required under 37 CFR 1.18.

8. ☐ A check in the amount of $ _____is enclosed.

9. ☐ Payment by credit card. Form PTO-2038 is attached.

10. ☐ Applicant requests suspension of action under 37 CFR 1.103(b) for a period of _____months (not to exceed 3 months) and the fee under 37 CFR 1.17(i) is enclosed.

11. ☐ New Attorney Docket Number, if desired _____
[Prior application Attorney Docket Number will carry over to this CPA unless a new Attorney Docket Number has been provided herein.]

12. a. ☐ Receipt For Facsimile Transmitted CPA (PTO/SB/29A)

    b. ☐ Return Receipt Postcard (Should be specifically itemized. See MPEP 503)

13. ☐ Other:

NOTE: ***The prior application's correspondence address will carry over to this CPA UNLESS a new correspondence address is provided below.***

14. NEW CORRESPONDENCE ADDRESS

☐ The address associated with Customer Number: | ***OR*** ☐ New correspondence address below

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

PTO/SB/29A (07-06)
Approved for use through 01/31/2007. OMB 0651-0032
Patent and Trademark Office: U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

If this RECEIPT is included with a request for a CPA filed by facsimile transmission, it will be date stamped and mailed to the ADDRESS in item 1.

1. ADDRESS | *Applicant's Mailing Address for this receipt must be CLEARLY PRINTED or TYPED in the box below.*

FOR DESIGN APPLICATIONS ONLY

RECEIPT

FOR

FACSIMILE TRANSMITTED

CPA

(To accompany a request for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) filed by facsimile transmission)

NOTE: ***By this receipt, the USPTO (a) acknowledges that a request for a CPA in a design application was filed by facsimile the date stamped below by the USPTO and (b) verifies only that the application number provided by the applicant on this receipt is the same as the application number provided on the accompanying request for a CPA. This receipt CANNOT be used to acknowledge receipt of any paper(s) other than the request for a CPA.***

2. APPLICATION IDENTIFICATION:

(Provide at least enough information to identify the application)

a. For prior application

Application No: ……

Filing Date: ……

Title: ……

Attorney Docket No: ……

First Named Inventor: ……

b. For instant CPA application

New Attorney Docket No: ……

(if applicable)

The USPTO date stamp, which appears in the box to the right, is an acknowledgement by the USPTO of receipt of a request for a CPA filed by facsimile transmission on the date indicated below.

(THIS AREA FOR PTO DATE STAMP USE)

USPTO HANDLING INSTRUCTIONS:

Please stamp area to the right with the date the complete transmission of the request for a CPA was received in the USPTO and also include the USPTO organization name that provided the date stamp (stamp may include both items). Verify that the application number provided by applicant on this receipt is the same as the application number provided by applicant on the request for a CPA accompanying this receipt. If there is an inconsistency between the application number provided on this receipt and the request for a CPA, strike through the inconsistent application number provided on this receipt and insert the correct application number, if possible. Then place in a window envelope and mail.

This collection of information is required by 37 CFR 1.8. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 24 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 (1-800-786-9199) and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

UNITED STATES PATENT AND TRADEMARK OFFICE
P.O. BOX 1450
ALEXANDRIA, VA 22313-1450
www.uspto.gov

DATE MAILED:

Notice of Improper CPA (or FWC) Filing
For Utility or Plant Applications Filed Before June 8, 1995
No Filing Date Granted

Applicant filed a request for a continued prosecution application (CPA) under 37 CFR 1.53(d) (or a file wrapper continuing (FWC) application under 37 CFR 1.62) on _____in the above-identified application which is a utility or plant application filed before June 8, 1995. Effective July 14, 2003, CPA Practice under 37 CFR 1.53(d) is no longer available for utility and plant applications. *See Elimination of Continued Prosecution Application Practice as to Utility and Plant Patent Applications*, Final Rule, 68 *Feg. Reg.* 32376 (May 30, 2003). FWC practice also has been eliminated as of December 1, 1997. *See* 1203 *O.G.* 63 (October 21, 1997).

The time period for reply set in the last Office action (or notice) of the application in which the improper CPA (or FWC) is filed (hereafter "prior application") continues to run from the mailing date of the Office action or notice. Applicant may wish to file a continuing application under 37 CFR 1.53(b). If, however, the prior application is abandoned (*e.g.*, the time period for reply has expired), applicant would need to file a petition to revive the prior application to establish copendency with the continuing application under 37 CFR 1.53(b).

Any petition to revive under 37 CFR 1.137 should be directed to the attention of the Office of Petitions and may be addressed to: Mail Stop Petition
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Alternatively, if no application is desired, applicant may file a request for refund of any CPA (or FWC) filing fee paid (less the handling fee set forth in 37 CFR 1.21(n)).

A copy of this notice MUST be returned with the reply.

Direct the reply and any questions concerning this notice to

DATE MAILED:

NOTICE OF IMPROPER CPA FOR DESIGN APPLICATIONS
No Filing Date Granted

The Continued Prosecution Application (CPA) request deposited on _____ is improper under 37 CFR 1.53(d) and has **not** been granted a filing date for reason(s) indicated below.

☐ 1. The prior application is not a complete (37 CFR 1.51(b)) application.

☐ 2. The request for a CPA was not filed before the payment of issue fee on the prior application. The issue fee was paid on _____.

☐ 3. The request for a CPA was not filed before the abandonment of, or termination of proceedings on, the prior application. The prior application was abandoned, or proceedings terminated, on _____.

☐ 4. A petition under 37 CFR 1.136(a) and appropriate fee are necessary to establish copendency between this CPA and the prior application.

☐ 5. Other: _____.

Any assertions that the above-identified CPA request is proper under 37 CFR 1.53(d) must be by way of petition directed to the attention of the Office of Petitions, and may be addressed to:

Mail Stop Petition
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Any such petition must be accompanied by the $400.00 petition fee (37 CFR 1.17(f)). If the petition alleges that no defect exists, a request for refund of the petition fee may be included in the petition.

Any petition **must be** submitted within **TWO MONTHS** of the mailing date of this notice (37 CFR 1.181(f)) or the application may be returned or otherwise disposed of and the filing fee, if submitted, will be refunded less the $130.00 handling fee (37 CFR 1.21(n)). THIS TIME LIMIT MAY NOT BE EXTENDED PURSUANT TO 37 CFR 1.136.

A copy of this Notice MUST be returned with the reply.

Direct any questions concerning this notice to

_____, Technology Center 2900

DATE MAILED:

NOTICE TO FILE MISSING PARTS OF APPLICATION (CPA) FOR DESIGN APPLICATIONS
Filing Date Granted

The Continued Prosecution Application (CPA) request filed on _____ is entitled to a filing date under 37 CFR 1.53(d)(1). The CPA request, however, lacks the filing fee(s) and/or items indicated below.

Applicant is given **TWO MONTHS FROM THE DATE OF THIS NOTICE** within which to file the fee(s), and any surcharge required below to avoid abandonment of this CPA. Extensions of time may be obtained by filing a petition accompanied by the extension fee under the provisions of 37 CFR 1.136(a).

The total amount owed by applicant is the sum of items 1(a) or 1(b), and 2 (if checked) below.

☐ 1. The basic filing fee (37 CFR 1.16(b)(1)), search fee (37 CFR 1.16(l)), and/or examination fee (37 CFR 1.16(p)) is missing or insufficient.

Applicant must submit:

a. **Non-small entity**: $ _____ to complete the basic filing fee, search fee, examination fee, and the $130.00 surcharge set forth in 37 CFR 1.16(f); **or**

b. **Small entity**: $ _____ to complete the basic filing fee, search fee, and examination fee and the $65.00 surcharge set forth in 37 CFR 1.16(f) if the applicant is entitled to the small entity status and a written assertion of small entity status under 37 CFR 1.27 is filed in the CPA.

☐ 2. A $50.00 processing fee is required since your check was returned without payment (37 CFR 1.21(m)).

☐ 3. The CPA request is unsigned. Applicant must file a signed duplicate or ratification of the CPA request.

☐ 4. Other: _____.

A copy of this notice MUST be returned with the reply.

Any reply may be addressed to: Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

DATE MAILED:

NOTICE OF INCOMPLETE REPLY (CPA)
FOR DESIGN APPLICATIONS
Filing Date Granted

The reply filed on _____ to the Notice to File Missing Parts of Application (CPA) (Notice) mailed on _____ has been entered into the application. The reply, however, is incomplete for the following reason(s):

☐ 1. The basic filing fee (37 CFR 1.16(b)(1)), search fee (37 CFR 1.16(l)), and/or examination fee (37 CFR 1.16(p)) required by the Notice has not been received. The amount of $_____ is due.

☐ 2. The surcharge set forth in 37 CFR 1.16(f) of $_____ has not been received.

☐ 3. The reply does not include _____ as required by the Notice.

A complete reply must be timely filed to prevent **ABANDONMENT** of the above-identified application and may be addressed to:

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

The period for reply set forth in the Notice continues to run from the mailing date of the Notice. Applicant may obtain an EXTENSION OF TIME under the provisions of 37 CFR 1.136(a) by filing a petition accompanied by the appropriate fee (37 CFR 1.17(a)).

A copy of this notice MUST be returned with the reply.

DATE MAILED:

NOTICE OF ABANDONMENT UNDER 37 CFR 1.53(f) (CPA)
For Design Applications

The above-identified Continued Prosecution Application (CPA) is abandoned for failure to timely or completely reply to the Notice to File Missing Parts of Application (CPA) (Notice) mailed on _____.

☐ No reply was received.

☐ The reply received on _____ was untimely.

☐ The reply received on _____ was incomplete. The reply did not include:

☐ 1. The surcharge required for filing the basic filing fee on a date later than the filing date of a nonprovisional application (37 CFR 1.16(f)).

☐ 2. The basic filing fee (37 CFR 1.16(b)(1)), search fee (37 CFR 1.16(l)), and/or examination fee (37 CFR 1.16(p)) required by the Notice.
(Note: A nonprovisional application may not be relied on for benefits under 35 U.S.C. 120 and 37 CFR 1.78 unless the processing and retention fee set forth in 37 CFR 1.21(l) is paid within the period set forth in 37 CFR 1.53(f)).

☐ The letter of Express Abandonment filed on _____ is acknowledged; however, the application is abandoned for failure to timely or completely reply to the Notice as indicated above.

A petition to the Director under 37 CFR 1.137 may be filed requesting that the application be revived.

Under 37 CFR 1.137(a), a petition requesting the application be revived on the grounds of **UNAVOIDABLE DELAY** must be filed promptly after the applicant becomes aware of the abandonment and such petition must be accompanied by: (1) an adequate showing of the cause of unavoidable delay; (2) the required reply to the above-identified Notice; (3) the petition fee set forth in 37 CFR 1.17(l), and (4) a terminal disclaimer if required by 37 CFR 1.137(d).

Under 37 CFR 1.137(b), a petition requesting the application be revived on the grounds of **UNINTENTIONAL DELAY** must be filed promptly after applicant becomes aware of the abandonment and such petition must be accompanied by: (1) a statement that the entire delay was unintentional; (2) the required reply to the above-identified Notice; (3) the petition fee set forth in 37 CFR 1.17(m); and (4) a terminal disclaimer if required by 37 CFR 1.137(d).

Any questions concerning petitions to revive should be directed to Office of Petitions at (571) 272-3282.
Any petitions to revive may be addressed to: Mail Stop Petition

Form **PTO-2019** (Rev. 4/05)

201.07 Continuation Application [R-3]

A continuation is a second application for the same invention claimed in a prior nonprovisional application and filed before the original prior application becomes abandoned or patented. The continuation application may be filed under 37 CFR 1.53(b) (or 1.53(d) if the application is a design application). The applicant in the continuation application must include at least one inventor named in the prior nonprovisional application. The disclosure presented in the continuation must be the same as that of the original application; i.e., the continuation should not include anything which would constitute new matter if inserted in the original application. The continuation application must claim the benefit of the prior nonprovisional application under 35 U.S.C. 120 or 365(c). >For more information on claiming the benefit of a prior nonprovisional application, see MPEP § 201.11.<

An application claiming the benefits of a provisional application under 35 U.S.C. 119(e) should not be called a "continuation" of the provisional application since an application that claims benefit of a provisional application is a nonprovisional application of a provisional application, not a continuation, division, or continuation-in-part of the provisional application.

At any time before the patenting or abandonment of or termination of proceedings on his or her earlier nonprovisional application, an applicant may have recourse to filing a continuation in order to introduce into the application a new set of claims and to establish a right to further examination by the primary examiner. *>A continued prosecution< application >(CPA)< under 37 CFR 1.53(d) >(available only for design applications)<, however, must be filed prior to payment of the issue fee unless a petition under 37 CFR 1.313(c) is granted in the prior application. In addition, a continuation or divisional application may only be filed under 37 CFR 1.53(d) if the prior nonprovisional application is a design application that is complete as defined by 37 CFR 1.51(b).

For notation to be put in the file history by the examiner in the case of a continuation application, see MPEP § 202.02.

Use form paragraph 2.05 to remind applicant of possible continuation status.

¶ *2.05 Possible Status as Continuation*

This application discloses and claims only subject matter disclosed in prior application no **[1]**, filed **[2]**, and names an inventor or inventors named in the prior application. Accordingly, this application may constitute a continuation or division. Should applicant desire to obtain the benefit of the filing date of the prior application, attention is directed to 35 U.S.C. 120 and 37 CFR 1.78.

Examiner Note:

1. This form paragraph should only be used if it appears that the application may be a continuation, but priority has not been properly established.

2. An application claiming the benefits of a provisional application under 35 U.S.C. 119(e) should not be called a "continuation" of the provisional application since an application that claims benefit of a provisional application is a nonprovisional application of a provisional application, not a continuation, division, or continuation-in-part of the provisional application.

201.08 Continuation-in-Part Application [R-3]

A continuation-in-part is an application filed during the lifetime of an earlier nonprovisional application, repeating some substantial portion or all of the earlier nonprovisional application and *adding matter not disclosed* in the said earlier nonprovisional application. (*In re Klein*, 1930 C.D. 2, 393 O.G. 519 (Comm'r Pat. 1930)). The continuation-in-part application may only be filed under 37 CFR 1.53(b). The continuation-in-part application must claim the benefit of the prior nonprovisional application under 35 U.S.C. 120 or 365(c). >For more information on claiming the benefit of a prior nonprovisional application, see MPEP § 201.11.<

A continuation-in-part application CANNOT be filed as a continued prosecution application (CPA) under 37 CFR 1.53(d).

An application claiming the benefit of a provisional application under 35 U.S.C. 119(e) should not be called a "continuation-in-part" of the provisional application since an application that claims benefit of a provisional application is a nonprovisional application of a provisional application, not a continuation, division, or continuation-in-part of the provisional application.

The mere filing of a continuation-in-part does not itself create a presumption that the applicant acquiesces in any rejections which may be outstanding in the copending national nonprovisional application or

applications upon which the continuation-in-part application relies for benefit.

A continuation-in-part filed by a sole applicant may also derive from an earlier joint application showing a portion only of the subject matter of the later application, subject to the conditions set forth in 35 U.S.C. 120 and 37 CFR 1.78. Subject to the same conditions, a joint continuation-in-part application may derive from an earlier sole application.

Unless the filing date of the earlier nonprovisional application is actually needed, for example, in the case of an interference or to overcome a reference, there is no need for the Office to make a determination as to whether the requirement of 35 U.S.C. 120, that the earlier nonprovisional application discloses the invention of the second application in the manner provided by the first paragraph of 35 U.S.C. 112, is met and whether a substantial portion of all of the earlier nonprovisional application is repeated in the second application in a continuation-in-part situation. Accordingly, an alleged continuation-in-part application should be permitted to claim the benefit of the filing date of an earlier nonprovisional application if the alleged continuation-in-part application complies with the **>other< requirements of 35 U.S.C. 120 >and 37 CFR 1.78, such as<:

(A) The first application and the alleged continuation-in-part application were filed with at least one common inventor;

(B) The alleged continuation-in-part application was "filed before the patenting or abandonment of or termination of proceedings on the first application or an application similarly entitled to the benefit of the filing date of the first application"; and

(C) The alleged continuation-in-part application "contains or is amended to contain a specific reference to the earlier filed application." (The specific reference **>must be submitted either in the first sentence(s) of the specification or in an application data sheet (see 37 CFR 1.76(b)(5)).)

See MPEP § 201.11 for more information on claiming the benefit of a prior nonprovisional application.<

For notation to be put in the file history by the examiner in the case of a continuation-in-part application see MPEP § 202.02. See MPEP § 708 for order of examination.

Use form paragraph 2.06 to remind applicant of possible continuation-in-part status.

¶ *2.06 Possible Status as Continuation-in-Part*

This application repeats a substantial portion of prior Application No. **[1]**, filed **[2]**, and adds and claims additional disclosure not presented in the prior application. Since this application names an inventor or inventors named in the prior application, it may constitute a continuation-in-part of the prior application. Should applicant desire to obtain the benefit of the filing date of the prior application, attention is directed to 35 U.S.C. 120 and 37 CFR 1.78.

Examiner Note:

1. This form paragraph should only be used when it appears that the application may qualify as a continuation-in-part, but no priority claim has been perfected.
2. An application claiming the benefits of a provisional application under 35 U.S.C. 119(e) should not be called a "continuation-in-part" of the provisional application since an application that claims benefit of a provisional application is a nonprovisional application of a provisional application, not a continuation, division, or continuation-in-part of the provisional application.

201.09 Substitute Application [R-5]

The use of the term "Substitute" to designate any application which is in essence the duplicate of an application by the same applicant abandoned before the filing of the later application, finds official recognition in the decision *Ex parte Komenak*, 45 USPQ 186, 1940 C.D. 1, 512 O.G. 739 (Comm'r Pat. 1940). Current practice does not require applicant to insert in the specification reference to the earlier application; however, attention should be called to the earlier application. The notation in the file history (see MPEP § 202.02) that one application is a "Substitute" for another is printed in the heading of the patent copies. See MPEP § 202.02.

As is explained in MPEP § 201.11, a "Substitute" does not obtain the benefit of the filing date of the prior application.

Use form paragraph 2.07 to remind applicant of possible substitute status.
**>

¶ *2.07 Definition of a Substitute*

Applicant refers to this application as a "substitute" of Application No. **[1]**, filed **[2]**. The use of the term "substitute" to designate an application which is in essence the duplicate of an application by the same applicant abandoned before the filing of the later case finds official recognition in the decision, *Ex parte Komenak*, 45 USPQ 186, 1940 C.D. 1, 512 O.G. 739 (Comm'r Pat. 1940). The notation on the file wrapper (See MPEP § 202.02) that one case is a "substitute" for another is printed in the

heading of the patent copies. A "substitute" does not obtain the benefit of the filing date of the prior application.

<

201.10 Refile [R-2]

No official definition has been given the term "Refile," though it is sometimes used as an alternative for the term "Substitute."

If the applicant designates his or her application as "Refile" and the examiner finds that the application is in fact a duplicate of a former application by the same party which was abandoned prior to the filing of the second application, the examiner should require the substitution of the word "substitute" for "refile", since the former term has official recognition.

Use form paragraph 2.08 to remind applicant of possible refile status.
**>

¶ *2.08 Definition of a Refile*

It is noted that applicant refers to this application as a "refile." No official definition has been given the term "refile," though it is sometimes used as an alternative for the term "substitute." Since this application appears to be in fact a duplicate of a former application which was abandoned prior to the filing of the second case, the substitution of the word "substitute" for "refile" is required since the term "substitute" has official recognition. Applicant is required to make appropriate corrections.

<

201.11 Claiming the Benefit of an Earlier Filing Date Under 35 U.S.C. 120 and 119(e) [R-5]

Under certain circumstances a later-filed application for patent is entitled to the benefit of the filing date of a prior-filed nonprovisional application or provisional application which has at least one common inventor. The conditions are specified in 35 U.S.C. 120 and 37 CFR 1.78(a)(1) – (a)(3) for the benefit claim of a prior nonprovisional application and 35 U.S.C. 119(e) and 37 CFR 1.78(a)(4) – (a)(6) for the benefit claim of a prior provisional application.

35 U.S.C. 120. Benefit of earlier filing date in the United States.

An application for patent for an invention disclosed in the manner provided by the first paragraph of section 112 of this title in an application previously filed in the United States, or as provided by section 363 of this title, which is filed by an inventor or inventors named in the previously filed application shall have the same effect, as to such invention, as though filed on the date of the prior application, if filed before the patenting or abandonment of or termination of proceedings on the first application or on an application similarly entitled to the benefit of the filing date of the first application and if it contains or is amended to contain a specific reference to the earlier filed application. No application shall be entitled to the benefit of an earlier filed application under this section unless an amendment containing the specific reference to the earlier filed application is submitted at such time during the pendency of the application as required by the Director. The Director may consider the failure to submit such an amendment within that time period as a waiver of any benefit under this section. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed submission of an amendment under this section.

35 U.S.C. 119. Benefit of earlier filing date; right of priority.

*****

(e)(1) An application for patent filed under section 111(a) or section 363 of this title for an invention disclosed in the manner provided by the first paragraph of section 112 of this title in a provisional application filed under section 111(b) of this title, by an inventor or inventors named in the provisional application, shall have the same effect, as to such invention, as though filed on the date of the provisional application filed under section 111(b) of this title, if the application for patent filed under section 111(a) or section 363 of this title is filed not later than 12 months after the date on which the provisional application was filed and if it contains or is amended to contain a specific reference to the provisional application. No application shall be entitled to the benefit of an earlier filed provisional application under this subsection unless an amendment containing the specific reference to the earlier filed provisional application is submitted at such time during the pendency of the application as required by the Director. The Director may consider the failure to submit such an amendment within that time period as a waiver of any benefit under this subsection. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed submission of an amendment under this subsection during the pendency of the application

(2) A provisional application filed under section 111(b) of this title may not be relied upon in any proceeding in the Patent and Trademark Office unless the fee set forth in subparagraph (A) or (C) of section 41(a)(1) of this title has been paid.

(3) If the day that is 12 months after the filing date of a provisional application falls on a Saturday, Sunday, or Federal holiday within the District of Columbia, the period of pendency of the provisional application shall be extended to the next succeeding secular or business day.

37 CFR 1.78. Claiming benefit of earlier filing date and cross-references to other applications.

(a)(1) A nonprovisional application or international application designating the United States of America may claim an invention disclosed in one or more prior-filed copending nonpro-

visional applications or international applications designating the United States of America. In order for an application to claim the benefit of a prior-filed copending nonprovisional application or international application designating the United States of America, each prior-filed application must name as an inventor at least one inventor named in the later-filed application and disclose the named inventor's invention claimed in at least one claim of the later-filed application in the manner provided by the first paragraph of 35 U.S.C. 112. In addition, each prior-filed application must be:

(i) An international application entitled to a filing date in accordance with PCT Article 11 and designating the United States of America; or

(ii) Entitled to a filing date as set forth in § 1.53(b) or § 1.53(d) and have paid therein the basic filing fee set forth in § 1.16 within the pendency of the application.

(2)(i) Except for a continued prosecution application filed under § 1.53(d), any nonprovisional application or international application designating the United States of America claiming the benefit of one or more prior-filed copending nonprovisional applications or international applications designating the United States of America must contain or be amended to contain a reference to each such prior-filed application, identifying it by application number (consisting of the series code and serial number) or international application number and international filing date and indicating the relationship of the applications. Cross references to other related applications may be made when appropriate (see § 1.14).

(ii) This reference must be submitted during the pendency of the later-filed application. If the later-filed application is an application filed under 35 U.S.C. 111(a), this reference must also be submitted within the later of four months from the actual filing date of the later-filed application or sixteen months from the filing date of the prior-filed application. If the later-filed application is a nonprovisional application which entered the national stage from an international application after compliance with 35 U.S.C. 371, this reference must also be submitted within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371 (b) or (f) in the later-filed international application or sixteen months from the filing date of the prior-filed application. These time periods are not extendable. Except as provided in paragraph (a)(3) of this section, the failure to timely submit the reference required by 35 U.S.C. 120 and paragraph (a)(2)(i) of this section is considered a waiver of any benefit under 35 U.S.C. 120, 121, or 365(c) to such prior-filed application. The time periods in this paragraph do not apply if the later-filed application is:

(A) An application for a design patent;

(B) An application filed under 35 U.S.C. 111 (a) before November 29, 2000; or

(C) A nonprovisional application which entered the national stage after compliance with 35 U.S.C. 371 from an international application filed under 35 U.S.C. 363 before November 29, 2000.

(iii) If the later-filed application is a nonprovisional application, the reference required by this paragraph must be included in an application data sheet (§ 1.76), or the specification must contain or be amended to contain such reference in the first sentence(s) following the title.

(iv) The request for a continued prosecution application under § 1.53(d) is the specific reference required by 35 U.S.C. 120 to the prior-filed application. The identification of an application by application number under this section is the identification of every application assigned that application number necessary for a specific reference required by 35 U.S.C. 120 to every such application assigned that application number.

(3) If the reference required by 35 U.S.C. 120 and paragraph (a)(2) of this section is presented after the time period provided by paragraph (a)(2)(ii) of this section, the claim under 35 U.S.C. 120, 121, or 365(c) for the benefit of a prior-filed copending nonprovisional application or international application designating the United States of America may be accepted if the reference identifying the prior-filed application by application number or international application number and international filing date was unintentionally delayed. A petition to accept an unintentionally delayed claim under 35 U.S.C. 120, 121, or 365(c) for the benefit of a prior-filed application must be accompanied by:

(i) The reference required by 35 U.S.C. 120 and paragraph (a)(2) of this section to the prior-filed application, unless previously submitted;

(ii) The surcharge set forth in § 1.17(t); and

(iii) A statement that the entire delay between the date the claim was due under paragraph (a)(2)(ii) of this section and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional.

(4) A nonprovisional application, other than for a design patent, or an international application designating the United States of America may claim an invention disclosed in one or more prior-filed provisional applications. In order for an application to claim the benefit of one or more prior-filed provisional applications, each prior-filed provisional application must name as an inventor at least one inventor named in the later-filed application and disclose the named inventor's invention claimed in at least one claim of the later-filed application in the manner provided by the first paragraph of 35 U.S.C. 112. In addition, each prior-filed provisional application must be entitled to a filing date as set forth in § 1.53(c), and the basic filing fee set forth in § 1.16(d) must be paid within the time period set forth in § 1.53(g).

(5)(i) Any nonprovisional application or international application designating the United States of America claiming the benefit of one or more prior-filed provisional applications must contain or be amended to contain a reference to each such prior-filed provisional application, identifying it by the provisional application number (consisting of series code and serial number).

(ii) This reference must be submitted during the pendency of the later-filed application. If the later-filed application is an application filed under 35 U.S.C. 111(a), this reference must also be submitted within the later of four months from the actual filing date of the later-filed application or sixteen months from the filing date of the prior-filed provisional application. If the later-filed application is a nonprovisional application which entered the national stage from an international application after compliance

with 35 U.S.C. 371, this reference must also be submitted within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371(b) or (f) in the later-filed international application or sixteen months from the filing date of the prior-filed provisional application. These time periods are not extendable. Except as provided in paragraph(a)(6) of this section, the failure to timely submit the reference is considered a waiver of any benefit under 35 U.S.C. 119(e) to such prior-filed provisional application. The time periods in this paragraph do not apply if the later-filed application is:

(A) An application filed under 35 U.S.C. 111(a) before November 29, 2000; or

(B) A nonprovisional application which entered the national stage after compliance with 35 U.S.C. 371 from an international application filed under 35 U.S.C. 363 before November 29, 2000.

(iii) If the later-filed application is a nonprovisional application, the reference required by this paragraph must be included in an application data sheet (§ 1.76), or the specification must contain or be amended to contain such reference in the first sentence(s) following the title.

**>

(iv) If the prior-filed provisional application was filed in a language other than English and both an English-language translation of the prior-filed provisional application and a statement that the translation is accurate were not previously filed in the prior-filed provisional application, applicant will be notified and given a period of time within which to file, in the prior-filed provisional application, the translation and the statement. If the notice is mailed in a pending nonprovisional application, a timely reply to such a notice must include the filing in the nonprovisional application of either a confirmation that the translation and statement were filed in the provisional application, or an amendment or Supplemental Application Data Sheet withdrawing the benefit claim, or the nonprovisional application will be abandoned. The translation and statement may be filed in the provisional application, even if the provisional application has become abandoned.<

(6) If the reference required by 35 U.S.C. 119(e) and paragraph (a)(5) of this section is presented in a nonprovisional application after the time period provided by paragraph (a)(5)(ii) of this section, the claim under 35 U.S.C. 119(e) for the benefit of a prior filed provisional application may be accepted during the pendency of the later-filed application if the reference identifying the prior-filed application by provisional application number was unintentionally delayed. A petition to accept an unintentionally delayed claim under 35 U.S.C. 119(e) for the benefit of a prior-filed provisional application must be accompanied by:

(i) The reference required by 35 U.S.C. 119(e) and paragraph (a)(5) of this section to the prior-filed provisional application, unless previously submitted;

(ii) The surcharge set forth in § 1.17(t); and

(iii) A statement that the entire delay between the date the claim was due under paragraph (a)(5)(ii) of this section and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional.

*****

There are several conditions for a later-filed application to receive the benefit of the filing date of a prior-filed application under 35 U.S.C. 120, 121, or 365(c), or, provided the later-filed application is not a design application (see 35 U.S.C. 172), under 35 U.S.C. 119(e). The conditions are briefly summarized as follows:

(A) The prior-filed application must disclose the claimed invention of the later-filed application in the manner provided by the first paragraph of 35 U.S.C. 112 for a benefit claim under 35 U.S.C. 120, 121, or 365(c), and also for a benefit claim under 35 U.S.C. 119(e).

(B) The later-filed application must be copending with the prior-filed nonprovisional application for a benefit claim under 35 U.S.C. 120, 121, or 365(c). For a benefit claim under 35 U.S.C. 119(e), the later-filed application must be filed not later than 12 months after the filing date of the prior provisional application.

(C) The later-filed application must contain a reference to the prior-filed application in the first sentence(s) of the specification or in an application data sheet, for a benefit claim under 35 U.S.C. 120, 121, or 365(c), and also for a benefit claim under 35 U.S.C. 119(e).

(D) The later-filed application must be filed by an inventor or inventors named in the prior-filed application for a benefit claim under 35 U.S.C. 120, 121, or 365(c), and also for a benefit claim under 35 U.S.C. 119(e).

(E) If the later-filed application is a utility or plant application filed on or after November 29, 2000, the reference to the prior-filed application must be submitted within the time period set forth in 37 CFR 1.78(a) (e.g., during the pendency of the later-filed application and within the later of 4 months from the actual filing date of the later-filed application or 16 months from the filing date of the prior-filed application) for a benefit claim under 35 U.S.C. 120, 121, or 365(c), and also for benefit claim under 35 U.S.C. 119(e).

(F) If the prior-filed application is a provisional application filed in a language other than English, a benefit claim under 35 U.S.C. 119(e) *>requires the following to be filed in the provisional application<: (1) an English language translation of the provisional

application; and (2) a statement that the translation is accurate. See 37 CFR 1.78(a)(5)(iv).

(G) If the prior-filed application was an international application designating the United States of America, it must be entitled to a filing date in accordance with PCT Article 11. See 37 CFR 1.78(a)(1)(i).

(H) If the prior-filed application was filed under 35 U.S.C. 111, the prior-filed application must be entitled to a filing date and the basic filing fee of the prior-filed application must have been paid. See 37 CFR 1.78(a)(1)(ii) regarding a benefit claim under 35 U.S.C. 120, 121, or 365(c), and see 37 CFR 1.78(a)(4) regarding a benefit claim under 35 U.S.C. 119(e).

More information for each condition is provided in the subsections below.

If the claims in the later-filed application are not entitled to the benefit of an earlier filing date, the examiner should:

(A) Notify applicant that the claims in the later-filed application are not entitled to the benefit of an earlier filing date because one or more conditions for receiving the benefit of an earlier filing date have not been satisfied (the examiner may use form paragraph 2.09 and other appropriate form paragraphs provided in the following subsections); and

(B) Conduct a prior art search based on the actual filing date of the application instead of the earlier filing date. The examiner may use an intervening reference in a rejection until applicant corrects the benefit claim or shows that the conditions for claiming the benefit of the prior application have been met. The effective filing date of the later-filed application is the actual filing date of the later-filed application, not the filing date of the prior-filed application. See MPEP § 706.02.

I. DISCLOSURE REQUIREMENT

The later-filed application must be an application for a patent for an invention which is also disclosed in the prior application (the parent or original nonprovisional application or provisional application); the disclosure of the invention in the prior application and in the later-filed application must be sufficient to comply with the requirements of the first paragraph of 35 U.S.C. 112. See *Transco Prods., Inc. v. Performance Contracting, Inc.*, 38 F.3d 551, 32 USPQ2d 1077 (Fed. Cir. 1994). The prior-filed application must disclose the common named inventor's invention claimed in the later-filed application in the manner provided by the first paragraph of 35 U.S.C. 112. See 37 CFR 1.78(a)(1). Accordingly, the disclosure of the prior-filed application must provide adequate support and enablement for the claimed subject matter of the later-filed application in compliance with the requirements of 35 U.S.C. 112, first paragraph.

A. Claiming the Benefit of Provisional Applications

Under 35 U.S.C. 119(e), the written description and drawing(s) (if any) of the provisional application must adequately support and enable the subject matter claimed in the nonprovisional application that claims the benefit of the provisional application. In *New Railhead Mfg., L.L.C. v. Vermeer Mfg. Co.*, 298 F.3d 1290, 1294, 63 USPQ2d 1843, 1846 (Fed. Cir. 2002), the court held that for a nonprovisonal application to be afforded the priority date of the provisional application, "the specification of the provisional must 'contain a written description of the invention and the manner and process of making and using it, in such full, clear, concise, and exact terms,' 35 U.S.C. § 112 ¶1, to enable an ordinarily skilled artisan to practice the invention claimed in the nonprovisional application."

In *New Railhead*, the patented drill bit was the subject of a commercial offer for sale. A provisional application was filed after the sale offer, but well within the one year grace period of 35 U.S.C. 102(b). A nonprovisional application, which issued as Patent No. 5,899,283, was filed within one year of the filing of the provisional application but more than one year after the sale offer. If the '283 patent was not afforded the priority date of the provisional application, the patent would be invalid under 35 U.S.C. 102(b) since it was filed more than one year after the commercial offer for sale. The court looked at claim 1 of the '283 patent which recites a bit body being angled with respect to the sonde housing. The court then reviewed the provisional application and concluded that nowhere in the provisional application is the bit body expressly described as "being angled with respect to the sonde housing" as recited in claim 1 of the '283 patent. The court held that the disclosure of the provisional application does not adequately support the

invention claimed in the '283 patent as to the angle limitation and therefore, the '283 patent is not entitled to the filing date of the provisional application under 35 U.S.C. 119(e)(1) and the '283 patent is invalid under 35 U.S.C. 102(b).

A claim is not required in a provisional application. However, for a claim in a later filed nonprovisional application to be entitled to the benefit of the filing date of the provisional application, the written description and drawing(s) (if any) of the provisional application must adequately support and enable the subject matter of the claim in the later filed nonprovisional application. If a claim in the nonprovisional application is not adequately supported by the written description and drawing(s) (if any) of the provisional application (as in *New Railhead*), that claim in the nonprovisional application is not entitled to the benefit of the filing date of the provisional application. If the filing date of the earlier provisional application is necessary, for example, in the case of an interference or to overcome a reference, care must be taken to ensure that the disclosure filed as the provisional application adequately provides (1) a written description of the subject matter of the claim(s) at issue in the later filed nonprovisional application, and (2) an enabling disclosure to permit one of ordinary skill in the art to make and use the claimed invention in the later filed nonprovisional application without undue experimentation.

B. Claiming the Benefit of Nonprovisional Applications

The disclosure of a continuation application must be the same as the disclosure of the prior-filed application. See MPEP § 201.07. The disclosure of a divisional application must be the same as the disclosure of the prior-filed application, or include at least that portion of the disclosure of the prior-filed application that is germane to the invention claimed in the divisional application. See MPEP § 201.06. The disclosure of a continuation or divisional application cannot include anything which would constitute new matter if inserted in the prior-filed application. A continuation-in-part application may include matter not disclosed in the prior-filed application. See MPEP § 201.08. Only the claims of the continuation-in-part application that are disclosed in the manner provided by the first paragraph of 35 U.S.C. 112 in the prior-filed application are entitled to the benefit of the filing date of the prior-filed application. If there is a continuous chain of copending nonprovisional applications, each copending application must disclose the claimed invention of the later-filed application in the manner provided by the first paragraph of 35 U.S.C. 112, in order for the later-filed application to be entitled to the benefit of the earliest filing date.

Under 35 U.S.C. 120, a claim in a U.S. application is entitled to the benefit of the filing date of an earlier filed U.S. application if the subject matter of the claim is disclosed in the manner provided by 35 U.S.C. 112, first paragraph, in the earlier filed application. See, e.g., *Tronzo v. Biomet, Inc.*, 156 F.3d 1154, 47 USPQ2d 1829 (Fed. Cir. 1998); *In re Scheiber*, 587 F.2d 59, 199 USPQ 782 (CCPA 1978). A claim in a subsequently filed application that relies on a combination of prior applications may not be entitled to the benefit of an earlier filing date under 35 U.S.C. 120 since 35 U.S.C. 120 requires that the earlier filed application contain a disclosure which complies with 35 U.S.C. 112, first paragraph for each claim in the subsequently filed application. *Studiengesellschaft Kohle m.b.H. v. Shell Oil Co.*, 112 F.3d 1561, 1564, 42 USPQ2d 1674, 1677 (Fed. Cir. 1997).

A claim in the later-filed application is not entitled to the benefit of the filing date of the prior-filed application if the disclosure of the prior-filed application does not enable one skilled in the art to "use" the claimed invention. See *In re Hafner*, 410 F.2d 1403, 1406, 161 USPQ 783, 786 (CCPA 1969) ("[T]o be entitled to the benefits provided by [35 U.S.C. 120], the invention disclosed in the "previously filed" application must be described therein in such a manner as to satisfy *all* the requirements of the first paragraph of [35 U.S.C.] 112, including that which requires the description to be sufficient to enable one skilled in the art to *use* the [invention].").

Where the prior application (a nonprovisional application) is found to be fatally defective because of insufficient disclosure to support allowable claims, a later-filed application filed as a "continuation-in-part" of the first application to supply the deficiency is not entitled to the benefit of the filing date of the first application. *Hunt Co. v. Mallinckrodt Chemical Works*, 177 F.2d 583, 587, 83 USPQ 277, 281 (2d Cir. 1949) and cases cited therein.

Any claim in a continuation-in-part application which is directed *solely* to subject matter adequately disclosed under 35 U.S.C. 112 in the parent nonprovisional application is entitled to the benefit of the filing date of the parent nonprovisional application. However, if a claim in a continuation-in-part application recites a feature which was not disclosed or adequately supported by a proper disclosure under 35 U.S.C. 112 in the parent nonprovisional application, but which was first introduced or adequately supported in the continuation-in-part application, such a claim is entitled only to the filing date of the continuation-in-part application; *In re Chu*, 66 F.3d 292, 36 USPQ2d 1089 (Fed. Cir. 1995); *Transco Products, Inc. v. Performance Contracting Inc.*, 38 F.3d 551, 32 USPQ2d 1077 (Fed. Cir. 1994); *In re Van Lagenhoven*, 458 F.2d 132, 136, 173 USPQ 426, 429 (CCPA 1972); and *Chromalloy American Corp. v. Alloy Surfaces Co., Inc.*, 339 F. Supp. 859, 874, 173 USPQ 295, 306 (D. Del. 1972).

By way of further illustration, if the claims of a continuation-in-part application which are only entitled to the continuation-in-part filing date "read on" published, publicly used or sold, or patented subject matter (e.g., as in a genus-species relationship) a rejection under 35 U.S.C. 102 would be proper. Cases of interest in this regard are as follows: *Mendenhall v. Cedarapids Inc.*, 5 F.3d 1557, 28 USPQ2d 1081 (Fed. Cir. 1993); *In re Lukach*, 442 F.2d 967, 169 USPQ 795 (CCPA 1971); *In re Hafner*, 410 F.2d 1403, 161 USPQ 783 (CCPA 1969); *In re Ruscetta*, 255 F.2d 687, 118 USPQ 101 (CCPA 1958); *In re Steenbock*, 83 F.2d 912, 30 USPQ 45 (CCPA 1936); and *Ex parte Hageman*, 179 USPQ 747 (Bd. App. 1971).

C. Form Paragraphs

Form paragraphs 2.09 and 2.10 should be used where the claims of the later-filed application are not adequately disclosed or enabled by the disclosure of the prior application.

**>

¶ *2.09 Heading for Conditions for Benefit Claims Under 35 U.S.C. 119(e), 120, 121, or 365(c)*

Applicant's claim for the benefit of a prior-filed application under 35 U.S.C. 119(e) or under 35 U.S.C. 120, 121, or 365(c) is acknowledged. Applicant has not complied with one or more conditions for receiving the benefit of an earlier filing date under 35 U.S.C. **[1]** as follows:

Examiner Note:

1. In bracket 1, insert either or both --119(e)-- or --120--.
2. One or more of form paragraphs 2.10 to 2.11.01 or 2.38 to 2.40 must follow depending upon the circumstances.

<

¶ *2.10 Disclosure of Prior-Filed Application Does Not Provide Support for Claimed Subject Matter*

The later-filed application must be an application for a patent for an invention which is also disclosed in the prior application (the parent or original nonprovisional application or provisional application). The disclosure of the invention in the parent application and in the later-filed application must be sufficient to comply with the requirements of the first paragraph of 35 U.S.C. 112. See *Transco Products, Inc. v. Performance Contracting, Inc.*, 38 F.3d 551, 32 USPQ2d 1077 (Fed. Cir. 1994).

The disclosure of the prior-filed application, Application No. **[1]**, fails to provide adequate support or enablement in the manner provided by the first paragraph of 35 U.S.C. 112 for one or more claims of this application. **[2]**

Examiner Note:

1. This form paragraph must be preceded by heading form paragraph 2.09.
2. This form paragraph may be used when there is lack of support or enablement in the prior-filed application for the claims in the application that is claiming the benefit of the prior-filed application under 35 U.S.C. 120, 121, or 365(c) or under 35 U.S.C. 119(e). The prior-filed application can be a provisional application or a nonprovisional application.
3. In bracket 1, insert the application number of the prior-filed application.
4. In bracket 2, provide an explanation of lack of support or enablement. If only some of the claims are not entitled to the benefit of the filing date of the prior application, the examiner should include a list those claims after the explanation (e.g., "Accordingly, claims 1-10 are not entitled to the benefit of the prior application.").

Form paragraph 2.10.01 should be used where applicant is claiming the benefit of a prior nonprovisional application under 35 U.S.C. 120, 121, or 365(c) and the relationship (continuation or divisional) of the applications should be changed to continuation-in-part because the disclosure of the later-filed application contains matter not disclosed in the prior-filed nonprovisional application.

¶ *2.10.01 Continuation or Divisional Application Contains New Matter Relative to the Prior-Filed Application*

Applicant states that this application is a continuation or divisional application of the prior-filed application. A continuation or divisional application cannot include new matter. Applicant is required to change the relationship (continuation or divisional

application) to continuation-in-part because this application contains the following matter not disclosed in the prior-filed application: **[1]**.

Examiner Note:

1. This form paragraph should be used when an application claims the benefit of a prior-filed application under 35 U.S.C. 120, 121, or 365(c), contains new matter, and purports to be a "continuation," "division," or "divisional application" of the prior-filed application. Do not use this form paragraph if the applicant is claiming the benefit of a provisional application under 35 U.S.C. 119(e).
2. In bracket 1, provide an example of the matter not disclosed in the prior-filed application.

II. TIME FOR FILING LATER-FILED APPLICATIONS

A. Claiming the Benefit of Provisional Applications

When a later-filed application is claiming the benefit of a prior-filed provisional application under 35 U.S.C. 119(e), the nonprovisional application must be filed not later than 12 months after the date on which the provisional application was filed. If the day that is 12 months after the filing date of a provisional application falls on a Saturday, Sunday, or Federal holiday within the District of Columbia, the nonprovisional application may be filed on the next succeeding business day. See 35 U.S.C. 21(b), 37 CFR 1.7(b), and MPEP § 201.04(b) and § 505.

Public Law 106-113 amended 35 U.S.C. 119(e)(2) to eliminate the copendency requirement for a nonprovisional application claiming benefit of a provisional application. 35 U.S.C. 119(e)(2) as amended by Public Law 106-113 is effective as of November 29, 1999 and applies to any provisional applications filed on or after June 8, 1995 but has no effect on any patent which is the subject of litigation in an action commenced before November 29, 1999. Although a nonprovisional application claiming the benefit of a provisional application is not required to be copending with the provisional application, abandonment of a provisional application for failure to pay the basic filing fee would indicate that the nonprovisional application could not claim the benefit of the provisional application because the basic filing fee was not paid within the time period set forth in 37 CFR 1.53(g) as required by 37 CFR 1.78(a)(4).

Applicant may claim the benefit of a provisional application by claiming the benefit of an intermediate copending nonprovisional application. The later-filed application must claim the benefit of the intermediate nonprovisional application under 35 U.S.C. 120, 121, or 365(c); the intermediate application must be filed not later than 12 months after the filing date of the provisional application; and both the later-filed application and the intermediate application must claim the benefit of the provisional application under 35 U.S.C. 119(e).

B. Claiming the Benefit of Nonprovisional Applications — Copendency

When a later-filed application is claiming the benefit of a prior-filed nonprovisional application under 35 U.S.C. 120, 121, or 365(c), the later-filed application must be copending with the prior application or with an intermediate nonprovisional application similarly entitled to the benefit of the filing date of the prior application. Copendency is defined in the clause which requires that the later-filed application must be filed before: (A) the patenting of the prior application; (B) the abandonment of the prior application; or (C) the termination of proceedings in the prior application.

If the prior application issues as a patent, it is sufficient for the later-filed application to be copending with it if the later-filed application is filed on the same date, or before the date that the patent issues on the prior application. Thus, the later-filed application may be filed under 37 CFR 1.53(b) while the prior application is still pending before the examiner, or is in issue, or even between the time the issue fee is paid and the patent issues. Patents usually will be published within four weeks of payment of the issue fee. Applicants are encouraged to file any continuing applications no later than the date the issue fee is paid, to avoid issuance of the prior application before the continuing application is filed.

If the prior application is abandoned, the later-filed application must be filed before the abandonment in order for it to be copending with the prior application. The term "abandoned," refers to abandonment for failure to prosecute (MPEP § 711.02), express abandonment (MPEP § 711.01), abandonment for failure to pay the issue fee (37 CFR 1.316), and abandonment for failure to notify the Office of a foreign filing after filing a nonpublication request under 35 U.S.C. 122(b)(2)(B)(iii) (MPEP § 1124).

The expression "termination of proceedings" includes the situations when an application is abandoned or when a patent has been issued, and hence this expression is the broadest of the three.

After a decision by the Court of Appeals for the Federal Circuit in which the rejection of all claims is affirmed, the proceeding is terminated when the mandate is issued by the Court. There are several other situations in which proceedings are terminated as is explained in MPEP § 711.02(c).

When proceedings in an application are terminated, the application is treated in the same manner as an abandoned application, and the term "abandoned application" may be used broadly to include such applications.

The term "continuity" is used to express the relationship of copendency of the same subject matter in two different applications of the same inventor. The later-filed application may be referred to as a continuing application when the prior application is not a provisional application. Continuing applications include those applications which are called divisions, continuations, and continuations-in-part. The statute is so worded that the prior application may contain more than the later-filed application, or the later-filed application may contain more than the prior application, and in either case the later-filed application is entitled to the benefit of the filing date of the prior application as to the common subject matter disclosed in compliance with 35 U.S.C. 112, first paragraph.

A later-filed application which is <u>not</u> copending with the prior application (which includes those called "substitute" applications as set forth in MPEP § 201.09) is not entitled to the benefit of the filing date of the prior application. Therefore, prior art against the claims of the later-filed application is determined based on the filing date of the later-filed application. An applicant is not required to refer to such prior application(s) in an application data sheet or in the specification of the later-filed application, but is required to otherwise call the examiner's attention to the prior application if it or its contents or prosecution is material to patentability of the later-filed application as defined in 37 CFR 1.56(b).

C. Form Paragraphs

Use form paragraphs 2.09 and 2.11 to indicate the benefit claim under 35 U.S.C. 120, 121, or 365(c) is improper because there is no copendency between the applications.

¶ *2.11 Application Must Be Copending With Parent*

This application is claiming the benefit of prior-filed nonprovisional application No. **[1]** under 35 U.S.C. 120, 121, or 365(c). Copendency between the current application and the prior application is required. Since the applications are not copending, the benefit claim to the prior-filed nonprovisional application is improper. Applicant is required to delete the reference to the prior-filed application from the first sentence(s) of the specification, or the application data sheet, depending on where the reference was originally submitted, unless applicant can establish copendency between the applications.

Examiner Note:

1. This form paragraph must be preceded by heading form paragraph 2.09.
2. Do not use this form paragraph for benefit claims under 35 U.S.C. 119(e) to provisional applications.
3. In bracket 1, insert the application number of the prior-filed nonprovisional application.

Use form paragraphs 2.09 and 2.11.01 and to indicate that the later-filed application must be filed not later than 12 months after the filing date of the provisional application for which a benefit is sought.

¶ *2.11.01 Application Must Be Filed Within 12 Months From the Provisional Application*

This application is claiming the benefit of provisional application No. **[1]** under 35 U.S.C. 119(e). However, this application was not filed within twelve months from the filing date of the provisional application, and there is no indication of an intermediate nonprovisional application that is directly claiming the benefit of the provisional application and filed within 12 months of the filing date of the provisional application.

Note: If the day that is 12 months after the filing date of the provisional application falls on a Saturday, Sunday, or Federal holiday within the District of Columbia, the nonprovisional application claiming the benefit of the provisional application may be filed on the next succeeding business day.

Applicant is required to delete the reference to the prior-filed provisional application from the first sentence(s) of the specification or the application data sheet, depending on where the reference was originally submitted, unless applicant can establish that this application, or an intermediate nonprovisional application, was filed within 12 months of the filing date of the provisional application.

Examiner Note:

1. This form paragraph must be preceded by heading form paragraph 2.09.

2. In bracket 1, insert the application number of the prior-filed provisional application.

III. REFERENCE TO PRIOR APPLICATION(S)

The third requirement of the statute is that the later-filed application must contain a specific reference to the prior application. This should appear as the first sentence(s) of the specification following the title preferably as a separate paragraph (37 CFR 1.78(a)) and/or in an application data sheet (37 CFR 1.76). If the specific reference is only contained in the application data sheet, then the benefit claim information will be included on the front page of any patent or patent application publication, but will not be included in the first sentence(s) of the specification. When a benefit claim is submitted after the filing of an application, the reference to the prior application cannot include an incorporation by reference statement of the prior application, unless an incorporation by reference statement of the prior application was presented upon filing of the application. See *Dart Indus. v. Banner*, 636 F.2d 684, 207 USPQ 273 (C.A.D.C. 1980).

A. Reference to Prior Nonprovisional Applications

Except for benefit claims to the prior application in a continued prosecution application (CPA), benefit claims under 35 U.S.C. 120, 121, and 365(c) must identify the prior application by application number, or by international application number and international filing date, and indicate the relationship between the applications. See 37 CFR 1.78(a)(2)(i). The relationship between the applications is whether the instant application is a continuation, divisional, or continuation-in-part of the prior nonprovisional application. An example of a proper benefit claim is "this application is a continuation of prior Application No. ---, filed ---." A benefit claim that merely states that "this application claims the benefit of Application No. ---, filed ---" does not comply with 35 U.S.C. 120 and 37 CFR 1.78(a)(2)(i), since the relationship between the applications is not stated. In addition, a benefit claim that merely states that "this application is a continuing application of Application No. ---, filed ---" does not comply with 35 U.S.C. 120 and 37 CFR 1.78(a)(2)(i) since the proper relationship, which includes the type of continuing (i.e., continuation, divisional, or continuation-in-part) application, is not stated.

A request for a CPA filed under 37 CFR 1.53(d) is itself the specific reference required by 35 U.S.C. 120 and 37 CFR 1.78(a)(2) to every application assigned the same application number identified in the request. (Note: The CPA is assigned the same application number as the prior application.) In a CPA, a specific reference in the first sentence(s) of the specification following the title, or in an application data sheet, to a prior application assigned the same application number is not required and may not be made. Any such reference should be deleted. No amendment in a CPA may delete the specific reference to the prior application assigned the same application number. A specific reference to an application not assigned the same application number, but relied on for benefit under 35 U.S.C. 120 and 37 CFR 1.78(a)(2) is required. Cross references to other related applications not assigned the same application as the CPA may be made when appropriate.

When a nonprovisional application (other than a CPA) is entitled under 35 U.S.C. 120 to an earlier U.S. effective filing date, a statement such as "This is a divisional (or continuation, or continuation-in-part, as appropriate) application of Application No. ---, filed ---" should appear as the first sentence(s) of the specification or in an application data sheet, except in the case of design applications where it should appear as set forth in MPEP § 1504.20. In the case of an application filed under 37 CFR 1.53(b) as a divisional, continuation or continuation-in-part of a CPA, there should be only one reference to the series of applications assigned the same application number, with the filing date cited being that of the original noncontinued application. Where a nonprovisional application is claiming the benefit under 35 U.S.C. 120 of a prior national stage application under 35 U.S.C. 371, a suitable reference would read "This application is a continuation of U.S. Application No. 08/---, which was the National Stage of International Application No. PCT/DE95/---, filed ---."

Any benefit claim that does not <u>both</u> identify a prior application by its application number <u>and</u> specify a relationship between the applications will not be considered to contain a specific reference to a prior application as required by 35 U.S.C. 120. Such benefit

claim may not be recognized by the Office and may not be included on the filing receipt even if the claim appears in the first sentence(s) of the specification or an application data sheet. As a result, publication of the application may not be scheduled as a function of the prior application's filing date. If the Office does not recognize a benefit claim under 35 U.S.C. 120 because it does not contain the required reference and the time period set forth in 37 CFR 1.78(a)(2)(ii) for submitting the required reference has expired, applicant must submit a petition under 37 CFR 1.78(a)(3) and the surcharge set forth in 37 CFR 1.17(t) in order for the Office to accept the unintentionally delayed claim under 35 U.S.C. 120 since the application will not have been scheduled for publication on the basis of the prior application's filing date.

To specify the relationship between the applications, applicant must specify whether the application is a continuation, divisional, or continuation-in-part of the prior application. Note that the terms are exclusive. An application cannot be, for example, both a continuation and a divisional or a continuation and a continuation-in-part of the same application. Moreover, if the benefit of more than one nonprovisional application is claimed, then the relationship between each application (i.e., continuation, divisional, or continuation-in-part) must be specified in order to establish copendency throughout the entire chain of prior-filed applications. For example, a statement that "this application claims the benefit of Application Nos. C, B, and A" or "this application is a continuing application of Application Nos. C, B, and A" is improper. Applicant instead must state, for example, that "this application is a continuation of Application No. C, filed ---, which is a continuation of Application No. B, filed ---, which is a continuation of Application No. A, filed ---.

B. Reference to Prior Provisional Applications

When the nonprovisional application is entitled to an earlier U.S. effective filing date of one or more provisional applications under 35 U.S.C. 119(e), a statement such as "This application claims the benefit of U.S. Provisional Application No. 60/---, filed ---, and U.S. Provisional Application No. 60/ ---, filed ---." should appear as the first sentence(s) of the description or in an application data sheet. In addition, for an application which is claiming the benefit under 35 U.S.C. 120 of a prior application, which in turn claims the benefit of a provisional application under 35 U.S.C. 119(e), a suitable reference would read, "This application is a continuation of U.S. Application No. 10/---, filed ---, which claims the benefit of U.S. Provisional Application No. 60/---, filed ---.". In the case of design applications, it should appear as set forth in MPEP § 1504.20.

The relationship (i.e., continuation, divisional, or continuation-in-part) is not required and should not be specified when a prior provisional application is being claimed under 35 U.S.C. 119(e). No relationship should be specified because whenever a priority claim to a provisional application under 35 U.S.C. 119(e) is made, it is implicit that the relationship is "nonprovisional application of a provisional application." If a relationship between a prior provisional application and the nonprovisional application is submitted, it may be unclear whether the applicant wishes to claim the benefit of the filing date of the provisional application under 35 U.S.C. 119(e) or 120. Thus, applicants seeking to claim the priority to a provisional application under 35 U.S.C. 119(e) should <u>not</u> state that the application is a "continuation" of a provisional application or that the application claims 35 U.S.C. 120 benefit to a provisional application. Although 35 U.S.C. 120 does not preclude a benefit claim to a provisional application, it is not recommended that applicants claim the benefit to a provisional application under 35 U.S.C. 120 since such a claim could have the effect of reducing the patent term, as the term of a patent issuing from such an application may be measured from the filing date of the provisional application pursuant to 35 U.S.C. 154(a)(2).

C. Benefit Claims to Multiple Prior Applications

Sometimes a pending application is one of a series of applications wherein the pending application is not copending with the first filed application but is copending with an intermediate application entitled to the benefit of the filing date of the first application. If applicant wishes that the pending application have the benefit of the filing date of the first filed application, applicant must, besides making reference to the intermediate application, also make reference to the first application. See *Sticker Indus. Supply Corp. v. Blaw-*

Knox Co., 405 F.2d 90, 160 USPQ 177 (7th Cir. 1968) and *Hovlid v. Asari*, 305 F. 2d 747, 134 USPQ 162 (9th Cir. 1962). The reference to the prior applications must identify all of the prior applications and indicate the relationship (i.e., continuation, divisional, or continuation-in-part) between each nonprovisional application in order to establish copendency throughout the entire chain of prior applications. Appropriate references must be made in each intermediate application in the chain of prior applications. If an applicant desires, for example, the following benefit claim: "this application is a continuation of Application No. C, filed ---, which is a continuation of Application No. B, filed ---, which claims the benefit of provisional Application No. A, filed ---," then Application No. C must have a reference to Application No. B and provisional Application No. A, and Application No. B must have a reference to provisional Application No. A.

There is no limit to the number of prior applications through which a chain of copendency may be traced to obtain the benefit of the filing date of the earliest of a chain of prior copending applications. See *In re Henriksen*, 399 F2.d 253, 158 USPQ 224 (CCPA 1968).

A nonprovisional application that directly claims the benefit of a provisional application under 35 U.S.C. 119(e) must be filed within 12 months from the filing date of the provisional application. Although an application that itself directly claims the benefit of a provisional application is not required to specify the relationship to the provisional application, if the instant nonprovisional application is not filed within the 12 month period, but claims the benefit of an intermediate nonprovisional application under 35 U.S.C. 120 that was filed within 12 months from the filing date of the provisional application and claimed the benefit of the provisional application, the intermediate application must be clearly identified as claiming the benefit of the provisional application so that the Office can determine whether the intermediate nonprovisional application was filed within 12 months of the provisional application and thus, whether the claim is proper. Applicant must state, for example, "this application is a continuation of Application No. C, filed ---, which is a continuation of Application No. B, filed ---, which claims the benefit of provisional Application No. A, filed ---." A benefit claim that merely states "this application claims the benefit of nonprovisional Application Nos. C and B, and provisional Application No. A" would be improper. Where the benefit of more than one provisional application is being claimed, the intermediate nonprovisional application(s) claiming the benefit of each provisional application must be indicated. Applicant must state, for example, "this application is continuation of Application No. D, filed ---, which is a continuation-in-part of Application No. C, filed ---, Application No. D claims the benefit of provisional Application No. B, filed ---, and Application No. C claims the benefit of provisional Application No. A, filed ---." If a benefit claim to a provisional application is submitted without an indication that an intermediate application directly claims the benefit of the provisional application and the instant nonprovisional application is not filed within the 12 month period or the relationship between each nonprovisional application is not indicated, the Office will not recognize such benefit claim and will not include the benefit claim on the filing receipt. Therefore, a petition under 37 CFR 1.78(a) and the surcharge set forth in 37 CFR 1.17(t) will be required if the intermediate application and the relationship of each nonprovisional application are not indicated within the period set forth in 37 CFR 1.78(a).

D. Reference Must Be Included in the Specification or an Application Data Sheet (ADS)

The reference required by 37 CFR 1.78(a)(2) or (a)(5) must be included in an ADS or the specification must contain or be amended to contain such reference in the first sentence(s) following the title. If applicant is claiming the benefit of multiple prior applications, the reference to the prior applications may be in a continuous string of multiple sentences at the beginning of the specification. The multiple sentences must begin as the first sentence after the title, and any additional sentence(s) including a benefit claim must follow the first sentence and not be separated from the first sentence by any other sentence not making a benefit claim. If an applicant includes a benefit claim in the application but not in the manner specified by 37 CFR 1.78(a) (e.g., if the claim is included in an oath or declaration or the application transmittal letter) within the time period set forth in 37 CFR 1.78(a), the Office will not require a petition under 37 CFR 1.78(a) and the surcharge under 37 CFR 1.17(t) to

correct the claim if the information concerning the claim was recognized by the Office as shown by its inclusion on the filing receipt. If, however, a claim is not included in the first sentence(s) of the specification or in an ADS and is not recognized by the Office as shown by its absence on the filing receipt, the Office will require a petition under 37 CFR 1.78(a) and the surcharge to correct the claim. The Office may not recognize any benefit claim where there is no indication of the relationship between the nonprovisional applications or no indication of the intermediate nonprovisional application that is directly claiming the benefit of the provisional application. Even if the Office has recognized a benefit claim by entering it into the Office's database and including it on applicant's filing receipt, the benefit claim is not a proper benefit claim under 35 U.S.C. 119(e) or 35 U.S.C. 120 and 37 CFR 1.78 unless the reference is included in an ADS or in the first sentence>(s)< of the specification and all other requirements are met.

E. Examiners Should Require the Reference if Missing

In view of this requirement, the right to rely on a prior application may be waived by an applicant if a reference to the prior application is not included in the later-filed application. If the examiner is aware of the fact that an application is a continuing application of a prior application or the applicant fails to submit the reference to the prior application in compliance with 37 CFR 1.78(a) (e.g., the reference was submitted in the transmittal letter but not in the first sentence(s) of the specification or in an application data sheet), he or she should merely call attention to this in an Office action by using the wording of form paragraphs 2.15 or 2.16.

¶ *2.15 Reference to Prior Application, 35 U.S.C. 119(e) or 120 Benefit*

If applicant desires to claim the benefit of a prior-filed application under 35 U.S.C. **[1]**, a specific reference to the prior-filed application in compliance with 37 CFR 1.78(a) must be included in the first sentence(s) of the specification following the title or in an application data sheet. For benefit claims under 35 U.S.C. 120, 121 or 365(c), the reference must include the relationship (i.e., continuation, divisional, or continuation-in-part) of the applications.

If the instant application is a utility or plant application filed under 35 U.S.C. 111(a) on or after November 29, 2000, the specific reference must be submitted during the pendency of the application and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior application. If the application is a utility or plant application which entered the national stage from an international application filed on or after November 29, 2000, after compliance with 35 U.S.C. 371, the specific reference must be submitted during the pendency of the application and within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371(b) or (f) or sixteen months from the filing date of the prior application. See 37 CFR 1.78(a)(2)(ii) and (a)(5)(ii). This time period is not extendable and a failure to submit the reference required by 35 U.S.C. 119(e) and/or 120, where applicable, within this time period is considered a waiver of any benefit of such prior application(s) under 35 U.S.C. 119(e), 120, 121 and 365(c). A benefit claim filed after the required time period may be accepted if it is accompanied by a grantable petition to accept an unintentionally delayed benefit claim under 35 U.S.C. 119(e), 120, 121 and 365(c). The petition must be accompanied by (1) the reference required by 35 U.S.C. 120 or 119(e) and 37 CFR 1.78(a)(2) or (a)(5) to the prior application (unless previously submitted), (2) a surcharge under 37 CFR 1.17(t), and (3) a statement that the entire delay between the date the claim was due under 37 CFR 1.78(a)(2) or (a)(5) and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional. The petition should be addressed to: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

If the reference to the prior application was previously submitted within the time period set forth in 37 CFR 1.78(a), but not in the first sentence(s) of the specification or an application data sheet (ADS) as required by 37 CFR 1.78(a) (e.g., if the reference was submitted in an oath or declaration or the application transmittal letter), and the information concerning the benefit claim was recognized by the Office as shown by its inclusion on the first filing receipt, the petition under 37 CFR 1.78(a) and the surcharge under 37 CFR 1.17(t) are not required. Applicant is still required to submit the reference in compliance with 37 CFR 1.78(a) by filling an amendment to the first sentence(s) of the specification or an ADS. See MPEP § 201.11.

Examiner Note:

1. In bracket 1, insert --119(e)-- or --120--.

2. In a continued prosecution application (CPA) filed under 37 CFR 1.53(d), a specific reference in the first sentence(s) of the specification, or in an application data sheet, to the prior application is not required and may not be made. The specific reference requirement of 35 U.S.C. 120 is met by the transmittal request for the CPA which is considered to be part of the CPA. 37 CFR 1.53(d)(2)(iv) and (d)(7).

¶ *2.16 Reference to a Prior Application*

It is noted that this application appears to claim subject matter disclosed in prior Application No. **[1]**, filed **[2]**. A reference to the prior application must be inserted as the first sentence(s) of the specification of this application or in an application data sheet (37 CFR 1.76), if applicant intends to rely on the filing date of the prior application under 35 U.S.C. 119(e), 120, 121, or 365(c). See 37 CFR 1.78(a). For benefit claims under 35 U.S.C. 120, 121, or

365(c), the reference must include the relationship (i.e., continuation, divisional, or continuation-in-part) of all nonprovisional applications.

If the application is a utility or plant application filed under 35 U.S.C. 111(a) on or after November 29, 2000, the specific reference to the prior application must be submitted during the pendency of the application and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior application. If the application is a utility or plant application which entered the national stage from an international application filed on or after November 29, 2000, after compliance with 35 U.S.C. 371, the specific reference must be submitted during the pendency of the application and within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371(b) or (f) or sixteen months from the filing date of the prior application. See 37 CFR 1.78(a)(2)(ii) and (a)(5)(ii). This time period is not extendable and a failure to submit the reference required by 35 U.S.C. 119(e) and/or 120, where applicable, within this time period is considered a waiver of any benefit of such prior application(s) under 35 U.S.C. 119(e), 120, 121 and 365(c). A benefit claim filed after the required time period may be accepted if it is accompanied by a grantable petition to accept an unintentionally delayed benefit claim under 35 U.S.C. 119(e), 120, 121 and 365(c). The petition must be accompanied by (1) the reference required by 35 U.S.C. 120 or 119(e) and 37 CFR 1.78(a)(2) or (a)(5) to the prior application (unless previously submitted), (2) a surcharge under 37 CFR 1.17(t), and (3) a statement that the entire delay between the date the claim was due under 37 CFR 1.78(a)(2) or (a)(5) and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional. The petition should be addressed to: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

If the reference to the prior application was previously submitted within the time period set forth in 37 CFR 1.78(a), but not in the first sentence(s) of the specification or an application data sheet (ADS) as required by 37 CFR 1.78(a) (e.g., if the reference was submitted in an oath or declaration or the application transmitted letter), and the information concerning the benefit claim was recognized by the Office as shown by its inclusion on the first filing receipt, the petition under 37 CFR 1.78(a) and the surcharge under 37 CFR 1.17(t) are not required. Applicant is still required to submit the reference in compliance with 37 CFR 1.78(a) by filing an amendment to the first sentence(s) of the specification or an ADS. See MPEP § 201.11

Examiner Note:

In a continued prosecution application (CPA) filed under 37 CFR 1.53(d), a specific reference in the first sentence(s) of the specification, or in an application data sheet, to the prior application is <u>not</u> required and may <u>not</u> be made. The specific reference requirement of 35 U.S.C. 120 is met by the transmittal request for the CPA which is considered to be part of the CPA. 37 CFR 1.53(d)(2)(iv) and (d)(7).

If the examiner is aware of a prior application he or she should note it in an Office action, as indicated above, but should not require the applicant to call attention to the prior application.

For notations to be placed in the file history in the case of continuing applications, see MPEP § 202.02 and § 1302.09.

F. Correcting or Adding a Benefit Claim After Filing

The Office will not grant a request for a corrected filing receipt to include a benefit claim unless the proper reference to the prior application is included in the first sentence(s) of the specification or an ADS within the time period required by 37 CFR 1.78(a) with a few exceptions. See subsection V., "TIME PERIOD FOR MAKING A CLAIM FOR BENEFIT UNDER 37 CFR 1.78(a)(2) AND (a)(5)". If the proper reference was previously submitted, a copy of the amendment, the first page of the specification, or the ADS containing the benefit claim should be included with the request for a corrected filing receipt. The Office plans to notify applicants on or with the filing receipt that a benefit claim may not have been recognized because the benefit claim was improper but applicants are advised that only the benefit claims that are listed on the filing receipt have been recognized by the Office. Therefore, applicants should carefully and promptly review their filing receipts in order to avoid the need for a petition (37 CFR 1.78(a)(3) or (a)((6)) and the surcharge.

If a benefit claim is added after the time period required by 37 CFR 1.78(a), a petition and the surcharge are required. See subsection V. "TIME PERIOD FOR MAKING A CLAIM FOR BENEFIT 37 CFR 1.78(a)(2) AND (a)(5)." Any petition under 37 CFR 1.78(a)(3) or (a)(6) must be accompanied by an amendment to the specification or an ADS unless the proper reference was previously submitted. In addition to the petition under 37 CFR 1.78 and the amendment or ADS, to add a benefit claim it may be necessary for applicant to file one of the following, depending on the status of the application:

(A) a request for continued examination (RCE) under 37 CFR 1.114, if the application is under a final rejection or has been allowed (see MPEP §706.07(h)). An amendment or ADS filed after final rejection or allowance is not entered as a matter of right and must be filed in compliance with 37 CFR 1.116 or 1.312, respectively; or

(B) a reissue application or a request for a certificate of correction under 37 CFR 1.323, if appropriate (see MPEP §§ 1402 and 1481), if the application has issued as a patent.

An incorporation by reference statement added after an application's filing date is not effective because no new matter can be added to an application after its filing date (see 35 U.S.C. 132(a)). If an incorporation by reference statement is included in an amendment to the specification to add a benefit claim after the filing date of the application, the amendment would not be proper. When a benefit claim is submitted after the filing of an application, the reference to the prior application cannot include an incorporation by reference statement of the prior application unless an incorporation by reference statement of the prior application was presented upon filing of the application. See *Dart Indus. v. Banner*, 636 F.2d 684, 207 USPQ 273 (C.A.D.C. 1980).

G. Deleting Benefit Claims

Effective June 8, 1995, Public Law 103-465 amended 35 U.S.C. 154 to change the term of a patent to 20 years measured from the filing date of the earliest U.S. application for which benefit under 35 U.S.C. 120, 121, or 365(c) is claimed. The 20-year patent term applies to all utility and plant patents issued on applications filed on or after June 8, 1995. As a result of the 20-year patent term, it is expected, in certain circumstances, that applicants may cancel their claim to priority by amending the specification or submitting a new application data sheet (no supplemental declaration is necessary) to delete any references to prior applications.

The examiner should consider whether any new prior art may now be available if a benefit claim is deleted. If an applicant is submitting an amendment to the specification or an ADS to delete a benefit claim after final rejection or action, the amendment or ADS will be treated under 37 CFR 1.116 (see MPEP § 714.12 and § 714.13). If the amendment or ADS to delete a benefit claim is submitted after the application has been allowed, the amendment or ADS will be treated under 37 CFR 1.312 (see MPEP § 714.16). A deletion of a benefit claim will not delay the publication of the application unless the amendment or ADS is recognized by the Office within nine weeks prior to the projected publication date that was originally calculated based on the benefit claim.

A cancellation of a benefit claim to a prior application may be considered as a showing that the applicant is intentionally waiving the benefit claim to the prior application in the instant application. If the applicant later files a petition to accept an unintentionally delayed claim to add the benefit claim to the prior application in the same application from which the benefit claim was canceled, the Office may refuse to accept such benefit claim because the delay was not unintentional.

In a continued prosecution application (CPA) filed under 37 CFR 1.53(d), no amendment may delete the specific reference to a prior application assigned the same application number. (Note: In the CPA, the request is the specific reference required by 35 U.S.C. 120 and 37 CFR 1.78(a)(2) to every application assigned the same application number identified in the request. Further, in a CPA, a specific reference in the first sentence(s) of the specification following the title, or in an application data sheet, to a prior application assigned the same application number is not required and should not be made.) The correction or entry of the data in the PALM data base can be made by technical support staff of the TC. Upon entry of the data, a new PALM bib-data sheet should be printed and placed in the file. See also MPEP § 707.05 and § 1302.09.

IV. SAME INVENTOR OR INVENTORS

The statute also requires that the applications claiming benefit of the earlier filing date under 35 U.S.C. 119(e) or 120 be filed by an inventor or inventors named in the previously filed application or provisional application. 37 CFR 1.78(a)(1) and (a)(4) require that each prior-filed application must name as an inventor at least one inventor named in the later-filed application and disclose the named inventor's invention claimed in at least one claim of the later-filed application in the manner provided by the first paragraph of 35 U.S.C. 112.

V. TIME PERIOD FOR MAKING A CLAIM FOR BENEFIT UNDER 37 CFR 1.78(a)(2) AND (a)(5)

The time period requirement under 37 CFR 1.78(a)(2) and (a)(5) is only applicable to utility or plant applications filed on or after November 29, 2000.

The American Inventors Protection Act of 1999 (AIPA), Public Law 106-113, amended 35 U.S.C. 119 and 120 to provide that the Office may set a time period for the filing of benefit claims and establish procedures to accept an unintentionally delayed benefit claim. The Office has implemented these statutory changes, in part, by amending 37 CFR 1.78 to include: (A) a time period within which a benefit claim to a prior nonprovisional or provisional application must be stated or it is considered waived; and (B) provisions for the acceptance of the unintentionally delayed submission of a claim to the benefit of a prior nonprovisional or provisional application.

If the application is a utility or plant application filed under 35 U.S.C. 111(a) on or after November 29, 2000, the benefit claim of the prior application under 35 U.S.C. 119(e), 120, 121, or 365(c) must be made during the pendency of the application and within the later of four months from the actual filing date of the later-filed application or sixteen months from the filing date of the prior-filed application. If the application is a nonprovisional application which entered the national stage from an international application after compliance with 35 U.S.C. 371, the benefit claim must be made within the later of: (1) four months from the date on which the national stage commenced under 37 U.S.C. 371(b) or (f); or (2) sixteen months from the filing date of the prior application. See 37 CFR 1.78(a)(2)(ii) and (a)(5)(ii). This time period is not extendable and a failure to submit the reference required by 35 U.S.C. 119(e) and/or 120, where applicable, within this time period is considered a waiver of any benefit of such prior application(s) under 35 U.S.C. 119(e), 120, 121 and 365(c).

If the reference required by 35 U.S.C. 120 and 37 CFR 1.78(a)(2) is not submitted within the required time period, a petition for an unintentionally delayed claim may be filed. The petition must be accompanied by: (A) the reference required by 35 U.S.C. 120 and 37 CFR 1.78(a)(2) to the prior application (unless previously submitted); (B) a surcharge under 37 CFR 1.17(t); and (C) a statement that the entire delay between the date the claim was due under 37 CFR 1.78(a)(2) and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional. See 37 CFR 1.78(a)(3).

Likewise, if the reference required by 35 U.S.C. 119(e) and 37 CFR 1.78(a)(5) is not submitted within the required time period, a petition for an unintentionally delayed claim may be filed. The petition for an unintentionally delayed benefit claim must be submitted during the pendency of the nonprovisional application. The petition must be accompanied by: (A) the reference required by 35 U.S.C. 119(e) and 37 CFR 1.78(a)(5) to the prior provisional application (unless previously submitted); (B) a surcharge under 37 CFR 1.17(t); and (C) a statement that the entire delay between the date the claim was due under 37 CFR 1.78(a)(5) and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional. See 37 CFR 1.78(a)(6).

Petitions for an unintentionally delayed benefit claim should be forwarded to the Office of Petitions. See MPEP § 1002.02(b).

If an applicant includes a claim to the benefit of a prior application elsewhere in the application but not in the manner specified in 37 CFR 1.78(a)(2)(i) and (a)(2)(iii) or 37 CFR 1.78(a)(5)(i) and (a)(5)(iii) (e.g., if the benefit claim is included in an unexecuted oath or declaration or the application transmittal letter) within the time period set forth in 37 CFR 1.78(a)(2)(ii) or (a)(5)(ii), the Office will not require a petition and the surcharge under 37 CFR 1.17(t) to correct the benefit claim if the information concerning the benefit claim contained elsewhere in the application was recognized by the Office as shown by its inclusion on a filing receipt. This is because the application will have been scheduled for publication on the basis of such information concerning the benefit claim. Applicant must still submit the benefit claim in the manner specified in 37 CFR 1.78(a)(2)(i) and (a)(2)(iii) or 37 CFR 1.78(a)(5)(i) and (a)(5)(iii) (i.e., by an amendment in the first sentence(s) of the specification or in an ADS) to have a proper claim under 35 U.S.C. 120 or 119(e) and 37 CFR 1.78 to the benefit of a prior application. If, however, an applicant

includes a benefit claim elsewhere in the application and not in the manner specified in 37 CFR 1.78(a), and the claim is not recognized by the Office as shown by its absence on a filing receipt (e.g., if the benefit claim is in a part of the application where benefit claims are not conventionally located, such as the body of the specification), the Office will require a petition and the surcharge under 37 CFR 1.17(t) to correct the benefit claim. This is because the application will not have been scheduled for publication on the basis of the information concerning the benefit claim contained elsewhere in the application.

A petition under 37 CFR 1.78(a)(3) and the surcharge would not be required for correcting a timely submitted benefit claim for the following situations:

(A) Changing the relationship of the applications (e.g., changing from "continuation" or "divisional" to "continuation-in-part" or from "continuation-in-part" to "continuation" or "divisional");

(B) Changing the filing date of a prior-filed nonprovisional or provisional application; and

(C) Changing a benefit claim of a prior-filed provisional application under 35 U.S.C. 120 (e.g., "This application is a continuation of prior-filed provisional application No. ---") to a benefit claim of the same provisional application under 35 U.S.C. 119(e) (e.g., "This application claims the benefit of prior-filed provisional application No. ---") during the pendency of the later-filed application. Note, however: If the later-filed application has issued as a patent, the correction cannot be made by a certificate of correction and would not be effective in a reissue application because the term of a patent is measured from the prior application's filing date and removing the benefit claim under 35 U.S.C. 120, 121, or 365(c) would have the effect of lengthening the term of the patent.

If a benefit claim is filed after the required time period and without a petition as required by 37 CFR 1.78(a)(3) or (a)(6), the applicant should be informed that the benefit claim was not entered and that a petition needs to be filed using form paragraph 2.39.

¶ *2.39 35 U.S.C. 119(e), 120, 121 or 365(c) Benefit Claim is Untimely*

The benefit claim filed on **[1]** was not entered because the required reference was not timely filed within the time period set forth in 37 CFR 1.78(a)(2) or (a)(5). If the application is an application filed under 35 U.S.C. 111(a) on or after November 29, 2000, the reference to the prior application must be submitted during the pendency of the application and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior application. If the application is a nonprovisional application which entered the national stage from an international application filed on or after November 29, 2000, after compliance with 35 U.S.C. 371, the reference to the prior application must be made during the pendency of the application and within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371(b) or (f) or sixteen months from the filing date of the prior application. See 37 CFR 1.78(a)(2)(ii) and (a)(5)(ii). If applicant desires the benefit under 35 U.S.C. **[2]** based upon a previously filed application, applicant must file a petition for an unintentionally delayed benefit claim under 37 CFR 1.78(a)(3) or (a)(6). The petition must be accompanied by: (1) the reference required by 35 U.S.C. 120 or 119(e) and 37 CFR 1.78(a)(2) or (a)(5) to the prior application (unless previously submitted); (2) a surcharge under 37 CFR 1.17(t); and (3) a statement that the entire delay between the date the claim was due under 37 CFR 1.78(a)(2) or (a)(5) and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional. The petition should be addressed to: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Examiner Note:

1. Use this form paragraph only for utility or plant applications filed on or after November 29, 2000.
2. In bracket 1, insert the filing date of the amendment or paper containing the benefit claim.
3. In bracket 2, insert --119(e)--, --120--, --121--, or --365(c)--.
4. Do not use this form paragraph if the reference to the prior application was previously submitted within the time period set forth in 37 CFR 1.78(a), but not in the first sentence(s) of the specification or in an application data sheet (ADS) as required by 37 CFR 1.78(a) (e.g., if the reference was submitted in an oath or declaration or the application transmittal letter), and the information concerning the benefit claim was recognized by the Office as shown by its inclusion on the first filing receipt. In this situation, the petition under 37 CFR 1.78(a) and the surcharge under 37 CFR 1.17(t) are not required. Applicant is still required to submit the reference in compliance with 37 CFR 1.78(a) by filling an amendment to the first sentence(s) of the specification or an ADS, if the reference has not been previously submitted. See MPEP § 201.11.

VI. ENGLISH TRANSLATION

If benefit is being claimed to a provisional application which was filed in a language other than English, (A) an English language translation of the provisional application, and (B) a statement that the translation is accurate, are required to be filed * in the provisional application **. >If a nonprovisional application claims the benefit of the filing date of a non-English language provisional application, a translation of the

provisional application and a statement that the translation was accurate required by 37 CFR 1.78(a)(5)(iv) will not be required to be filed in the provisional application, if the translation and statement were filed in the nonprovisional application before November 25, 2005.< If the translation and statement were not * filed in the provisional application or >in< the nonprovisional application >before November 25, 2005,< the applicant will be notified in the nonprovisional application and given a period of time within which to file the translation and statement >in the provisional application, and a reply in the nonprovisional application confirming that the translation and statement were filed in the provisional application. In the alternative, applicant may reply to the notice by filing an amendment or a supplemental application data sheet (37 CFR 1.76(c)) withdrawing the benefit claim<. In a pending nonprovisional application, failure to timely reply to such notice will result in the abandonment of the nonprovisional application.

Form paragraph 2.38 may be used to notify applicant that an English translation of the non-English language provisional application is required.

**>

¶ *2.38 Claiming Benefit to a Non-English Language Provisional Application*

This application claims benefit to provisional application No. **[1]**, filed on **[2]**, in a language other than English. An English translation of the non-English language provisional application and a statement that the translation is accurate must be filed in provisional application No. **[3]**. See 37 CFR 1.78(a)(5). The **[4]** required by 37 CFR 1.78(a)(5) is missing. Accordingly, applicant must supply 1) the missing **[5]** in provisional application No. **[6]** and 2) in the present application, a confirmation that the translation and statement were filed in the provisional application. If 1) and 2) are not filed (or the benefit claim withdrawn by the filing of an amendment or Supplemental Application Data Sheet) prior to the expiration of the time period set in this Office action, the present application will be abandoned. See 37 CFR 1.78(a)(5)(iv).

Examiner Note:

1. Use this form paragraph to notify applicant that an English translation of the non-English language provisional application and/or a statement that the translation is accurate is required. Do not use this form paragraph if a translation of the provisional application and a statement that the translation was accurate were filed in the nonprovisional application (the present application) before November 25, 2005.

2. In brackets 1 and 3, insert the application number of the non-English language provisional application.

3. In bracket 2, insert the filing date of the prior provisional application.

4. In brackets 4 and 5, insert --English translation and a statement that the translation is accurate-- or --statement that the translation is accurate--, where appropriate.

<

VII. THE PRIOR-FILED APPLICATION MUST BE ENTITLED TO A FILING DATE

If the prior-filed application is a nonprovisional application filed under 35 U.S.C. 111(a), the application must be entitled to a filing date as set forth in 35 CFR 1.53(b) or (d), and the basic filing fee as set forth in 37 CFR 1.16 must have been paid within the pendency of the application. See 37 CFR 1.78(a)(1). If the prior-filed application is an international application designating the United States of America, the prior-filed application must be entitled to a filing date in accordance with PCT Article 11. If the prior-filed application is a provisional application, the provisional application must be entitled to a filing date as set forth in 37 CFR 1.53(c) and the basic filing fee of the provisional application must have been paid within the time period set in 37 CFR 1.53(g) (the filing fee is paid within the time period set in 37 CFR 1.53(g) if an extension of time was filed to make a response to a notice to file missing parts requiring the filing fee timely).

Form paragraph 2.40 may be used to notify applicant that the application is not entitled to the benefit of the prior-filed application because the prior-filed application was not entitled to a filing date and/or did not include the basic filing fee.

¶ *2.40 Prior-Filed Application Not Entitled to a Filing Date or Basic Filing Fee Was Not Paid*

This application claims the benefit of prior-filed application No. **[1]** under 35 U.S.C. 120, 121, or 365(c) or under 35 U.S.C. 119(e). If the prior-filed application is an international application designating the United States of America, it must be entitled to a filing date in accordance with PCT Article 11. See 37 CFR 1.78(a)(1)(i). If the prior-filed application is a nonprovisional application, the prior-filed application must been entitled to a filing date as set forth in 37 CFR 1.53(b) or 1.53(d) and include the basic filing fee set forth in 37 CFR 1.16. See 37 CFR 1.78(a)(1)(ii). If the prior-filed application is a provisional application, the prior-filed application must be entitled to a filing date as set forth in 37 CFR 1.53(c) and the basic filing fee must be paid within the time period set forth in 37 CFR 1.53(g). See 37 CFR 1.78(a)(4).

This application is not entitled to the benefit of the prior-filed application because the prior-filed application **[2]**. Applicant is required to delete the reference to the prior-filed application.

Examiner Note:

1. Use this form paragraph to notify applicant that the application is not entitled to the benefit of the prior-filed application because the prior-filed application was not entitled to a filing date and/or did not include the basic filing fee.

2. In bracket 1, insert the application number of the prior-filed application.

3. In bracket 2, insert "was not entitled to a filing date"; "did not include the basic filing fee"; or "was not entitled to a filing date and did not include the basic filing fee".

201.11(a) Filing of Continuation or Continuation-in-Part Application During Pendency of International Application Designating the United States [R-3]

It is possible to file a U.S. national application under 35 U.S.C. 111(a) and 37 CFR 1.53(b) during the pendency (prior to the abandonment) of an international application which designates the United States without completing the requirements for entering the national stage under 35 U.S.C. 371(c). See MPEP §1895. The ability to take such action is based on provisions of the United States patent law. 35 U.S.C. 363 provides that "An international application designating the United States shall have the effect from its international filing date under article 11 of the treaty, of a national application for patent regularly filed in the Patent and Trademark Office...". 35 U.S.C. 371(d) indicates that failure to timely comply with the requirements of 35 U.S.C. 371(c) "shall be regarded as abandonment by the parties thereof...". It is therefore clear that an international application which designates the United States has the effect of a pending U.S. application from the international application filing date until its abandonment as to the United States. The first sentence of 35 U.S.C. 365(c) specifically provides that "In accordance with the conditions and requirements of section 120 of this title,... a national application shall be entitled to the benefit of the filing date of a prior international application designating the United States." The condition of 35 U.S.C. 120 relating to the time of filing requires the later application to be "filed before the patenting or abandonment of or termination of proceedings on the first application...".

DELAYED SUBMISSION OF BENEFIT CLAIM IN INTERNATIONAL APPLICATION

A petition under 37 CFR 1.78(a)(3) for accepting an unintentionally delayed benefit claim and the surcharge under 37 CFR 1.17(t) are required to add a benefit claim under 35 U.S.C. 120 >and 365(c)< in an abandoned international application >designating the United States< filed on or after November 29, 2000, even when the international application did not enter the national stage under 35 U.S.C. 371. For example, when filing a "bypass" continuation application under 35 U.S.C. 111(a) that claims the benefit of an international application >designating the United States< with a filing date on or after November 29, 2000 that could have but did not claim the benefit of an earlier U.S. application, and the benefit claim is to be added to the international application, a petition under 37 CFR 1.78(a)(3) must be filed in the international application.

201.12 **Title >to an Application Claiming Benefit of an Earlier Application< [R-3]

**>The assignment records of the USPTO will only reflect an assignment of a divisional application or continuation application (or any other application) if a request for recordation in compliance with 37 CFR 3.28, accompanied by the required fee (37 CFR 3.41), is filed.< See MPEP § 306. When the assignment is in a provisional application, see MPEP § 306.01.

201.13 Right of Priority of Foreign Application [R-3]

Under certain conditions and on fulfilling certain requirements, an application for patent filed in the United States may be entitled to the benefit of the filing date of a prior application filed in a foreign country, to overcome an intervening reference or for similar purposes. The conditions are specified in 35 U.S.C. 119(a)-(d) and (f)>, and 37 CFR 1.55<.

35 U.S.C. 119. Benefit of earlier filing date; right of priority.

(a) An application for patent for an invention filed in this country by any person who has, or whose legal representatives or

assigns have, previously regularly filed an application for a patent for the same invention in a foreign country which affords similar privileges in the case of applications filed in the United States or to citizens of the United States, or in a WTO member country, shall have the same effect as the same application would have if filed in this country on the date on which the application for patent for the same invention was first filed in such foreign country, if the application in this country is filed within twelve months from the earliest date on which such foreign application was filed; but no patent shall be granted on any application for patent for an invention which had been patented or described in a printed publication in any country more than one year before the date of the actual filing of the application in this country, or which had been in public use or on sale in this country more than one year prior to such filing.

(b)(1) No application for patent shall be entitled to this right of priority unless a claim is filed in the Patent and Trademark Office, identifying the foreign application by specifying the application number on that foreign application, the intellectual property authority or country in or for which the application was filed, and the date of filing the application, at such time during the pendency of the application as required by the Director.

(2) The Director may consider the failure of the applicant to file a timely claim for priority as a waiver of any such claim. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed claim under this section.

(3) The Director may require a certified copy of the original foreign application, specification, and drawings upon which it is based, a translation if not in the English language, and such other information as the Director considers necessary. Any such certification shall be made by the foreign intellectual property authority in which the foreign application was filed and show the date of the application and of the filing of the specification and other papers.

(c) In like manner and subject to the same conditions and requirements, the right provided in this section may be based upon a subsequent regularly filed application in the same foreign country instead of the first filed foreign application, provided that any foreign application filed prior to such subsequent application has been withdrawn, abandoned, or otherwise disposed of, without having been laid open to public inspection and without leaving any rights outstanding, and has not served, nor thereafter shall serve, as a basis for claiming a right of priority.

(d) Applications for inventors' certificates filed in a foreign country in which applicants have a right to apply, at their discretion, either for a patent or for an inventor's certificate shall be treated in this country in the same manner and have the same effect for purpose of the right of priority under this section as applications for patents, subject to the same conditions and requirements of this section as apply to applications for patents, provided such applicants are entitled to the benefits of the Stockholm Revision of the Paris Convention at the time of such filing.

*****

(f) Applications for plant breeder's rights filed in a WTO member country (or in a foreign UPOV Contracting Party) shall have the same effect for the purpose of the right of priority under subsections (a) through (c) of this section as applications for patents, subject to the same conditions and requirements of this section as apply to applications for patents.

*****

37 CFR 1.55. Claim for foreign priority.

(a) An applicant in a nonprovisional application may claim the benefit of the filing date of one or more prior foreign applications under the conditions specified in 35 U.S.C. 119(a) through (d) and (f), 172, and 365(a) and (b).

(1)(i) In an original application filed under 35 U.S.C. 111(a), the claim for priority must be presented during the pendency of the application, and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior foreign application. This time period is not extendable. The claim must identify the foreign application for which priority is claimed, as well as any foreign application for the same subject matter and having a filing date before that of the application for which priority is claimed, by specifying the application number, country (or intellectual property authority), day, month, and year of its filing. The time periods in this paragraph do not apply in an application under 35 U.S.C. 111(a) if the application is:

(A) A design application; or

(B) An application filed before November 29, 2000.

(ii) In an application that entered the national stage from an international application after compliance with 35 U.S.C. 371, the claim for priority must be made during the pendency of the application and within the time limit set forth in the PCT and the Regulations under the PCT.

(2) The claim for priority and the certified copy of the foreign application specified in 35 U.S.C. 119(b) or PCT Rule 17 must, in any event, be filed before the patent is granted. If the claim for priority or the certified copy of the foreign application is filed after the date the issue fee is paid, it must be accompanied by the processing fee set forth in § 1.17(i), but the patent will not include the priority claim unless corrected by a certificate of correction under 35 U.S.C. 255 and § 1.323

**>

(3) The Office may require that the claim for priority and the certified copy of the foreign application be filed earlier than provided in paragraphs (a)(1) or (a)(2) of this section:

(i) When the application becomes involved in an interference (see § 41.202 of this title),

(ii) When necessary to overcome the date of a reference relied upon by the examiner, or

(iii) When deemed necessary by the examiner.

(4)(i)An English language translation of a non-English language foreign application is not required except:

(A) When the application is involved in an interference (see § 41.202 of this title),

(B) When necessary to overcome the date of a reference relied upon by the examiner, or

(C) When specifically required by the examiner.

(ii) If an English language translation is required, it must be filed together with a statement that the translation of the certified copy is accurate.<

*****

The period of 12 months specified in this section is 6 months in the case of designs, 35 U.S.C. 172. See MPEP § 1504.10.

The conditions, for benefit of the filing date of a prior application filed in a foreign country, may be listed as follows:

(A) The foreign application must be one filed in "a foreign country which affords similar privileges in the case of applications filed in the United States or to citizens of the United States or in a WTO member country."

(B) The foreign application must have been filed by the same applicant (inventor) as the applicant in the United States, or by his or her legal representatives or assigns.

(C) The application, or its earliest parent United States application under 35 U.S.C. 120, must have been filed within 12 months from the date of the earliest foreign filing in a "recognized" country as explained below.

(D) The foreign application must be for the same invention as the application in the United States.

(E) For an original application filed under 35 U.S.C. 111(a) (other than a design application) on or after November 29, 2000, the claim for priority must be presented during the pendency of the application, and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior foreign application. This time period is not extendable.

(F) For applications that entered the national stage from an international application filed on or after November 29, 2000, after compliance with 35 U.S.C. 371, the claim for priority must be made during the pendency of the application and within the time limit set forth in the PCT Article and Regulations.

(G) In the case where the basis of the claim is an application for an inventor's certificate, the requirements of 37 CFR 1.55(b) must also be met.

Applicant may be informed of possible priority rights under 35 U.S.C. 119(a)-(d) >and (f)< by using the wording of form paragraph 2.18.

¶ *2.18 Right of Priority Under 35 U.S.C. 119(a)-(d) and (f)*

Applicant is advised of possible benefits under 35 U.S.C. 119(a)-(d) and (f), wherein an application for patent filed in the United States may be entitled to the benefit of the filing date of a prior application filed in a foreign country.

I. RECOGNIZED COUNTRIES OF FOREIGN FILING

The right to rely on a foreign application is known as the right of priority in international patent law and this phrase has been adopted in the U.S. statute. The right of priority originated in a multilateral treaty of 1883, to which the United States adhered in 1887, known as the Paris Convention for the Protection of Industrial Property (Paris Convention). The treaty is administered by the World Intellectual Property Organization (WIPO) at Geneva, Switzerland. This treaty has been revised several times, the latest revision in effect being written in Stockholm in July 1967 (copy at Appendix P of this Manual). Articles 13-30 of the Stockholm Revision became effective on September 5, 1970. Articles 1-12 of the Stockholm Revision became effective on August 25, 1973. One of the many provisions of the treaty requires each of the adhering countries to accord the right of priority to the nationals of the other countries and the first United States statute relating to this subject was enacted to carry out this obligation. There is another treaty between the United States and some Latin American countries which also provides for the right of priority. A foreign country may also provide for this right by reciprocal legislation.

The United States and Taiwan signed an agreement on priority for patent and trademark applications on April 10, 1996, and Taiwan is now a country for which the right of priority is recognized in the United States. Applicants seeking patent protection in the United States may avail themselves of the right of priority based on patent applications filed in Taiwan, on or after April 10, 1996.

An application for patent filed in the United States on or after January 1, 1996, by any person who has, or whose legal representatives or assigns have, previously filed an application for patent in Thailand shall have the benefit of the filing date in Thailand in accordance with 35 U.S.C. 119 and 172.

NOTE: Following is a list of countries with respect to which the right of priority referred to in 35 U.S.C. 119(a)-(d) has been recognized. The letter "I" follow-

ing the name of the country indicates that the basis for priority in the case of these countries is the Paris Convention for the Protection of Industrial Property (613 O.G. 23, 53 Stat. 1748). The letter "P" after the name of the country indicates the basis for priority of these countries is the Inter-American Convention relating to Inventions, Patents, Designs, and Industrial Models, signed at Buenos Aires, August 20, 1910 (207 O.G. 935, 38 Stat. 1811). The letter "L" following the name of the country indicates the basis for priority is reciprocal legislation in the particular country. The letter "W" following the name of the country indicates the basis for priority is membership in the World Trade Organization (WTO). See 35 U.S.C. 119(a). The letter "W°" indicates that the country became a WTO member after January 1, 1996. See http://www.wto.org/english/thewto_e/whatis_e/tif_e/org6_e.htm for a current list of WTO member countries along with their dates of membership. Applications for plant breeder's rights filed in WTO member countries and foreign UPOV contracting parties may be relied upon for priority pursuant to 35 U.S.C. 119(f) and MPEP Chapter 1600.

Sixteen African Countries have joined together to create a common patent office and to promulgate a common law for the protection of inventions, trademarks, and designs. The common patent office is called “Organisation Africain de la Propriete Intellectuelle” (OAPI) and is located in Yaounde, Cameroon. The English title is “African Intellectual Property Organization.” The member countries using the OAPI Patent Office are Benin, Cameroon, Central African Republic, Chad, Congo, Gabon, Cote d’Ivoire, Mauritania, Niger, Senegal, Republic of Togo, Burkina Faso>,< Guinea, Guinea-Bissau, Mali and Equatorial

Guinea. Since all these countries adhere to the Paris Convention for the Protection of Industrial Property, priority under 35 U.S.C. 119(a)-(d) may be claimed of an application filed in the OAPI Patent Office.

If any applicant asserts the benefit of the filing date of an application filed in a country not on this list, the examiner should contact the Office of International Relations to determine if there has been any change in the status of that country. It should be noted that the right is based on the *country* of the foreign filing and not upon the citizenship of the applicant.

II. RIGHT OF PRIORITY (35 U.S.C. 119(a)-(d) AND 365) BASED ON A FOREIGN APPLICATION FILED UNDER A BILATERAL OR MULTILATERAL TREATY

Under Article 4A of the Paris Convention for the Protection of Industrial Property a right of priority may be based either on an application filed under the national law of a foreign country adhering to the Convention or on a foreign application filed under a bilateral or multilateral treaty concluded between two or more such countries. Examples of such treaties are The Hague Agreement Concerning the International Deposit of Industrial Designs, the Benelux Designs Convention, and the Libreville Agreement of September 13, 1962, relating to the creation of an African Intellectual Property Office. The Convention on the Grant of European Patents, the Patent Cooperation Treaty (MPEP § 201.13(b)), the Office for Harmonization in the Internal Market (OHIM), and the Community Plant Variety Office (CPVO) are further examples of such treaties.

A. The Priority Claim

A priority claim need not be in any special form and may be a statement signed by a registered attorney or agent. A priority claim can be made on filing: (A) by including a copy of an unexecuted or executed oath or declaration specifying a foreign priority claim (see 37 CFR 1.63(c)(2)); or (B) by submitting an application data sheet specifying a foreign priority claim (see 37 CFR 1.76).

In claiming priority of a foreign application previously filed under such a treaty, certain information must be supplied to the U.S. Patent and Trademark Office. In addition to the application number and the date of the filing of the application, the following information is required: (A) the name of the treaty under which the application was filed; and (B) the name and location of the national or intergovernmental authority which received such application.

B. Certification of the Priority Papers

35 U.S.C. 119(b)(3) authorizes the Office to require the applicant to furnish a certified copy of priority papers. Applicants are required to submit the certified copy of the foreign application specified in 35 U.S.C. 119(b) or PCT Rule 17 before the patent is granted. If the claim for priority or the certified copy of the foreign application is filed after the date the issue fee is paid, it must be accompanied by the processing fee set forth in 37 CFR 1.17(i), but the patent will not include the priority claim unless corrected by a certificate of correction under 35 U.S.C. 255 and 37 CFR 1.323. See 37 CFR 1.55(a)(2). Certification by the authority empowered under a bilateral or multilateral treaty to receive applications which give rise to a right of priority under Article 4A(2) of the Paris Convention will be deemed to satisfy the certification requirement.

C. Identity of Inventors

The inventors of the U.S. nonprovisional application and of the foreign application must be the same, for a right of priority does not exist in the case of an application of inventor A in the foreign country and inventor B in the United States, even though the two applications may be owned by the same party. However, the application in the foreign country may have been filed by the assignee, or by the legal representative or agent of the inventor which is permitted in some foreign countries, rather than by the inventor himself, but in such cases the name of the inventor is usually given in the foreign application on a paper filed therein. An indication of the identity of inventors made in the oath or declaration accompanying the U.S. nonprovisional application by identifying the foreign application and stating that the foreign application had been filed by the assignee, or the legal representative, or agent, of the inventor, or on behalf of the inventor, as the case may be, is acceptable. Joint inventors A and B in a nonprovisional application filed in the United States Patent and Trademark Office may properly claim the benefit of an application filed in a foreign country by A and another application filed in a foreign country by B, i.e., A and B may each

claim the benefit of their foreign filed applications. See MPEP § 605.07.

D. Time for Filing U.S. Nonprovisional Application

The United States nonprovisional application, or its earliest parent nonprovisional application under 35 U.S.C. 120, must have been filed within 12 months of the earliest foreign filing. In computing this 12 months, the first day is not counted; thus, if an application was filed in Canada on January 3, 1983, the U.S. nonprovisional application may be filed on January 3, 1984. The Convention specifies in Article 4C(2) that "the day of filing is not counted in this period." (This is the usual method of computing periods, for example a 6-month period for reply to an Office action dated January 2 does not expire on July 1, but the reply may be made on July 2.) If the last day of the 12 months is a Saturday, Sunday, or Federal holiday within the District of Columbia, the U.S. nonprovisional application is in time if filed on the next succeeding business day; thus, if the foreign application was filed on September 4, 1981, the U.S. nonprovisional application is in time if filed on September 7, 1982, since September 4, 1982, was a Saturday and September 5, 1982 was a Sunday and September 6, 1982 was a Federal holiday. Since January 1, 1953, the Office has not received applications on Saturdays and, in view of 35 U.S.C. 21, and the Convention which provides "if the last day of the period is an official holiday, or a day on which the Office is not open for the filing of applications in the country where protection is claimed, the period shall be extended until the first following working day" (Article 4C(3)), if the 12 months expires on Saturday, the U.S. application may be filed on the following Monday. Note *Ex parte Olah*, 131 USPQ 41 (Bd. App. 1960). See, e.g., *Dubost v. U.S. Patent and Trademark Office,* 777 F.2d 1561, 1562, 227 USPQ 977, 977 (Fed. Cir. 1985).

E. Filing of Papers During Unscheduled Closings of the U.S. Patent and Trademark Office

37 CFR 1.9(h) provides that the definition of "Federal holiday within the District of Columbia" includes an official closing of the Office. When the entire U.S. Patent and Trademark Office is officially closed for business for an entire day, for reasons due to adverse weather or other causes, the Office will consider each such day a "Federal holiday within the District of Columbia" under 35 U.S.C. 21. Any action or fee due on such a day may be taken, or fee paid, on the next succeeding business day the Office is open. In addition, 37 CFR 1.6(a)(1) provides "[t]he U.S. Patent and Trademark Office is not open for the filing of correspondence on any day that is a Saturday, Sunday or Federal holiday within the District of Columbia" to clarify that any day that is a Saturday, Sunday or Federal holiday within the District of Columbia is a day that the U.S. Patent and Trademark Office is not open for the filing of applications within the meaning of Article 4C(3) of the Paris Convention. Note further that in accordance with 37 CFR 1.6(a)(2), even when the Office is not open for the filing of correspondence on any day that is a Saturday, Sunday or Federal holiday within the District of Columbia, correspondence deposited as Express Mail with the USPS in accordance with 37 CFR 1.10 will be considered filed on the date of its deposit, regardless of whether that date is a Saturday, Sunday or Federal holiday within the District of Columbia (under 35 U.S.C. 21(b) or 37 CFR 1.7).

When the U.S. Patent and Trademark Office is open for business during any part of a business day between 8:30 a.m. and 5:00 p.m., papers are due on that day even though the Office may be officially closed for some period of time during the business day because of an unscheduled event. The procedures of 37 CFR 1.10 may be used for filing applications.

Information regarding whether or not the Office is officially closed on any particular day may be obtained by calling **>1-800-PTO-9199 or (571) 272-1000<.

F. First Foreign Application

The 12 months is from earliest foreign filing except as provided in 35 U.S.C 119(c). If an inventor has filed an application in France on January 4, 1982, and an identical application in the United Kingdom on March 3, 1982, and then files in the United States on February 2, 1983, the inventor is not entitled to the right of priority at all; the inventor would not be entitled to the benefit of the date of the French application since this application was filed more than twelve months before the U.S. application, and the inventor would not be entitled to the benefit of the date of the

United Kingdom application since this application is not the first one filed. *Ahrens v. Gray*, 1931 C.D. 9, 402 O.G. 261 (Bd. App. 1929). If the first foreign application was filed in a country which is not recognized with respect to the right of priority, it is disregarded for this purpose.

Public Law 87-333 modified 35 U.S.C. 119(c) to extend the right of priority to "subsequent" foreign applications if one earlier filed had been withdrawn, abandoned, or otherwise disposed of, under certain conditions.

The United Kingdom and a few other countries have a system of "post-dating" whereby the filing date of an application is changed to a later date. This "post-dating" of the filing date of the application does not affect the status of the application with respect to the right of priority; if the original filing date is more than one year prior to the U.S. filing no right of priority can be based upon the application. See *In re Clamp*, 151 USPQ 423 (Comm'r Pat. 1966).

If an applicant has filed two foreign applications in recognized countries, one outside the year and one within the year, and the later application discloses additional subject matter, a claim in the U.S. application specifically limited to the additional disclosure would be entitled to the date of the second foreign application since this would be the first foreign application for that subject matter.

G. Incorporation by Reference

**>An applicant may incorporate by reference the foreign priority application by including, in the U.S. application-as-filed, an explicit statement that such specifically enumerated foreign priority application or applications are "hereby incorporated by reference." The statement must appear in the specification. See 37 CFR 1.57(b) and MPEP § 608.01(p). For U.S. applications filed prior to September 21, 2004, the incorporation by reference statement may appear in the transmittal letter or in the specification. The inclusion of this statement of incorporation by reference of the foreign priority application will permit an applicant to amend the U.S. application to include subject matter from the foreign priority application(s), without raising the issue of new matter. Thus, the incorporation by reference statement can be relied upon to permit the entering of a portion of the foreign priority application into the U.S. application when a portion of the foreign priority application has been inadvertently omitted from the U.S. application, or to permit the correction of translation error in the U.S. application where the foreign priority application is in a non-English language.

For U.S. applications filed on or after September 21, 2004, a claim under 37 CFR 1.55 for priority of a prior-filed foreign application that was present on the filing date of the U.S. application is considered an incorporation by reference of the prior-filed foreign priority application as to inadvertently omitted material, subject to the conditions and requirements of 37 CFR 1.57(a). The purpose of 37 CFR 1.57(a) is to provide a safeguard for applicants when all or a portion of the specification and/or drawing(s) is (are) inadvertently omitted from an application. For U.S. applications filed on or after September 21, 2004, applicants are encouraged to provide an explicit incorporation by reference statement to the prior-filed foreign priority application(s) for which priority is claimed under 37 CFR 1.55 if applicants do not wish the incorporation by reference to be limited to inadvertently omitted material pursuant to 37 CFR 1.57(a). See 37 CFR 1.57(b) and MPEP § 608.01(p) for discussion regarding explicit incorporation by reference.<

III. EFFECT OF RIGHT OF PRIORITY

The right to rely on the foreign filing extends to overcoming the effects of intervening references or uses, but there are certain restrictions. For example, the 1 year bar of 35 U.S.C. 102(b) dates from the U.S. filing date and not from the foreign filing date; thus if an invention was described in a printed publication, or was in public use in this country, in November 1981, a foreign application filed in January 1982, and a U.S. application filed in December 1982, granting a patent on the U.S. application is barred by the printed publication or public use occurring more than one year prior to its actual filing in the United States.

The right of priority can be based upon an application in a foreign country for a so-called "utility model," called Gebrauchsmuster in Germany.

201.13(a) Right of Priority Based Upon an Application for an Inventor's Certificate

37 CFR 1.55. Claim for foreign priority.

*****

(b) An applicant in a nonprovisional application may under certain circumstances claim priority on the basis of one or more applications for an inventor's certificate in a country granting both inventor's certificates and patents. To claim the right of priority on the basis of an application for an inventor's certificate in such a country under 35 U.S.C. 119(d), the applicant when submitting a claim for such right as specified in paragraph (a) of this section, shall include an affidavit or declaration. The affidavit or declaration must include a specific statement that, upon an investigation, he or she is satisfied that to the best of his or her knowledge, the applicant, when filing the application for the inventor's certificate, had the option to file an application for either a patent or an inventor's certificate as to the subject matter of the identified claim or claims forming the basis for the claim of priority.

*****

An inventor's certificate may form the basis for rights of priority under 35 U.S.C. 119(d) only when the country in which they are filed gives to applicants, at their discretion, the right to apply, on the same invention, either for a patent or for an inventor's certificate. The affidavit or declaration specified under 37 CFR 1.55(b) is only required for the purpose of ascertaining whether, in the country where the application for an inventor's certificate originated, this option generally existed for applicants with respect to the particular subject matter of the invention involved. The requirements of 35 U.S.C. 119(d) and 37 CFR 1.55(b) are not intended, however, to probe into the eligibility of the particular applicant to exercise the option in the particular priority application involved.

It is recognized that certain countries that grant inventors' certificates also provide by law that their own nationals who are employed in state enterprises may only receive inventors' certificates and not patents on inventions made in connection with their employment. This will not impair their right to be granted priority in the United States based on the filing of the inventor's certificate.

Accordingly, affidavits or declarations filed pursuant to 37 CFR 1.55(b) need only show that in the country in which the original inventor's certificate was filed, applicants generally have the right to apply at their own option either for a patent or an inventor's certificate as to the particular subject matter of the invention.

Priority rights on the basis of an inventor's certificate application will be honored only if the applicant had the option or discretion to file for either an inventor's certificate or a patent on his or her invention in his or her home country. Certain countries which grant both patents and inventor's certificates issue only inventor's certificates on certain subject matter, generally pharmaceuticals, foodstuffs, and cosmetics.

To ensure compliance with the treaty and statute, 37 CFR 1.55(b) provides that at the time of claiming the benefit of priority for an inventor's certificate, the applicant or his or her attorney must submit an affidavit or declaration stating that the applicant when filing his or her application for the inventor's certificate had the option either to file for a patent or an inventor's certificate as to the subject matter forming the basis for the claim of priority.

Effective Date

37 CFR 1.55(b) originally went into effect on August 25, 1973, which is the date on which the international treaty entered into force with respect to the United States. The rights of priority based on an earlier filed inventor's certificate shall be granted only with respect to U.S. patent applications where *both* the earlier application and the U.S. patent application were filed in their respective countries following this effective date.

201.13(b) Right of Priority Based Upon an International Application Filed Under the Patent Cooperation Treaty [R-2]

35 U.S.C. 365. Right of priority; benefit of the filing date of a prior application.

(a) In accordance with the conditions and requirements of subsections (a) through (d) of section 119 of this title, a national application shall be entitled to the right of priority based on a prior filed international application which designated at least one country other than the United States.

(b) In accordance with the conditions and requirements of section 119(a) of this title and the treaty and the Regulations, an international application designating the United States shall be entitled to the right of priority based on a prior foreign application, or a prior international application designating at least one country other than the United States.

(c) In accordance with the conditions and requirements of section 120 of this title, an international application designating the United States shall be entitled to the benefit of the filing date of a prior national application or a prior international application designating the United States, and a national application shall be entitled to the benefit of the filing date of a prior international application designating the United States. If any claim for the benefit of an earlier filing date is based on a prior international application which designated but did not originate in the United States, the Director may require the filing in the Patent and Trademark Office of a certified copy of such application together with a translation thereof into the English language, if it was filed in another language.

35 U.S.C. 365(a) provides that a national application shall be entitled to the right of priority based on a prior international application of whatever origin, which designated any country other than, or in addition to, the United States. Of course, the conditions prescribed by section 119(a)-(d) of title 35 U.S.C., which deals with the right of priority based on earlier filed foreign applications, must be complied with.

35 U.S.C. 365(b) provides that an international application designating the United States shall be entitled to the right of priority of a prior foreign application which may either be another international application or a regularly filed foreign application. The international application upon which the claim of priority is based can either have been filed in the United States or a foreign country; however, it must contain the designation of at least one country other than, or in addition to, the United States.

As far as the actual place of filing is concerned, for the purpose of 35 U.S.C. 365(a) and (b) and 35 U.S.C. 119(a)-(d) and (f), an international application designating a country is considered to be a national application regularly filed in that country on the international filing date irrespective of whether it was physically filed in that country, in another country, or in an intergovernmental organization acting as Receiving Office for a country.

An international application which seeks to establish the right of priority will have to comply with the conditions and requirements as prescribed by the Treaty and the PCT Regulations, in order to avoid rejection of the claim to the right of priority. Reference is especially made to the requirement of making a declaration of the claim of priority at the time of filing of the international application (Article 8(1) of the Treaty and Rule 4.10 of the PCT Regulations) and the requirement of either filing a certified copy of the priority document with the international application, or submitting a certified copy of the priority document to the International Bureau at a certain time (Rule 17 of the PCT Regulations). The submission of the priority document to the International Bureau is only required in those instances where priority is based on an earlier filed foreign *national* application.

Thus, if the priority document is an earlier national application and did not accompany the international application when filed with the Receiving Office, an applicant must submit such document to the International Bureau not later than 16 months after the priority date. However, should an applicant request early processing of his or her international application in accordance with Article 23(2) of the Treaty, the priority document would have to be submitted to the International Bureau at that time (Rule 17.1(a) of the PCT Regulations). If priority is based on an earlier international application, a copy does not have to be filed, either with the Receiving Office or the International Bureau, since the latter is already in possession of such international application.

The formal requirements for obtaining the right of priority under 35 U.S.C. 365 differ somewhat from those imposed by 35 U.S.C. 119(a)-(d) and (f), although the 1-year bar of 35 U.S.C. 102(b), as required by the last clause of section 119(a) is the same. However, the substantive right of priority is the same, in that it is derived from Article 4 of the Paris Convention for the Protection of Industrial Property (Article 8(2) of the Treaty).

35 U.S.C. 365(c) recognizes the benefit of the filing date of an earlier application under 35 U.S.C. 120. Any international application designating the United States, whether filed with a Receiving Office in this country or abroad, and even though other countries may have also been designated, has the effect of a regular national application in the United States, as of the international filing date. As such, any later filed national application, or international application designating the United States, may claim the benefit of the filing date of an earlier international application designating the United States, if the requirements and conditions of section 120 of title 35 U.S.C. are fulfilled. Under the same circumstances, the benefit of the earlier filing date of a national application may be obtained in a later filed international application designating the United States. In those instances, where

the applicant relies on an international application designating, but not originating in, the United States the *>Director< may require submission of a copy of such application together with an English translation, since in some instances, and for various reasons, a copy of that international application or its translation may not otherwise be filed in the U.S. Patent and Trademark Office.

PCT Rule 17.
The Priority Document

17.1. Obligation to Submit Copy of Earlier National or International Application

**>

(a) Where the priority of an earlier national or international application is claimed under Article 8, a copy of that earlier application, certified by the authority with which it was filed ("the priority document"), shall, unless that priority document has already been filed with the receiving Office together with the international application in which the priority claim is made, and subject to paragraphs (b) and (b^{bis}), be submitted by the applicant to the International Bureau or to the receiving Office not later than 16 months after the priority date, provided that any copy of the said earlier application which is received by the International Bureau after the expiration of that time limit shall be considered to have been received by that Bureau on the last day of that time limit if it reaches it before the date of international publication of the international application.

(b) Where the priority document is issued by the receiving Office, the applicant may, instead of submitting the priority document, request the receiving Office to prepare and transmit the priority document to the International Bureau. Such request shall be made not later than 16 months after the priority date and may be subjected by the receiving Office to the payment of a fee.

(b^{bis})Where the priority document is, in accordance with the Administrative Instructions, available to the receiving Office or to the International Bureau from a digital library, the applicant may, as the case may be, instead of submitting the priority document:

(i) request the receiving Office to obtain the priority document from such digital library and transmit it to the International Bureau; or

(ii) request the International Bureau to obtain the priority document from such digital library.

Such request shall be made not later than 16 months after the priority date and may be subjected by the receiving Office or the International Bureau to the payment of a fee.

(c) If the requirements of none of the three preceding paragraphs are complied with, any designated Office may, subject to paragraph (d), disregard the priority claim, provided that no designated Office shall disregard the priority claim before giving the applicant an opportunity to furnish the priority document within a time limit which shall be reasonable under the circumstances.

(d) No designated Office shall disregard the priority claim under paragraph (c) if the earlier application referred to in paragraph (a) was filed with it in its capacity as national Office or if the priority document is, in accordance with the Administrative Instructions, available to it from a digital library.<

17.2. Availability of Copies

**>

(a) Where the applicant has complied with Rule 17.1(a), (b) or (b^{bis}), the International Bureau shall, at the specific request of the designated Office, promptly but not prior to the international publication of the international application, furnish a copy of the priority document to that Office. No such Office shall ask the applicant himself to furnish it with a copy. The applicant shall not be required to furnish a translation to the designated Office before the expiration of the applicable time limit under Article 22. Where the applicant makes an express request to the designated Office under Article 23(2) prior to the international publication of the international application, the International Bureau shall, at the specific request of the designated Office, furnish a copy of the priority document to that Office promptly after receiving it.<

(b) The International Bureau shall not make copies of the priority document available to the public prior to the international publication of the international application.

(c) Where the international application has been published under Article 21, the International Bureau shall furnish a copy of the priority document to any person upon request and subject to reimbursement of the cost unless, prior to that publication:

(i) the international application was withdrawn,

(ii) the relevant priority claim was withdrawn or considered, under Rule 26^{bis}.2(b), not to have been made.

(iii) *[Deleted]*

(d) *[Deleted]*

37 CFR 1.451. The priority claim and priority document in an international application.

(a) The claim for priority must, subject to paragraph (d) of this section, be made on the Request (PCT Rule 4.10) in a manner complying with sections 110 and 115 of the Administrative Instructions.

(b) Whenever the priority of an earlier United States national application or international application filed with the United States Receiving Office is claimed in an international application, the applicant may request in a letter of transmittal accompanying the international application upon filing with the United States Receiving Office or in a separate letter filed in the United States Receiving Office not later than 16 months after the priority date, that the United States Patent and Trademark Office prepare a certified copy of the prior application for transmittal to the International Bureau (PCT Article 8 and PCT Rule 17). The fee for preparing a certified copy is set forth in § 1.19(b)(1).

(c) If a certified copy of the priority document is not submitted together with the international application on filing, or, if the priority application was filed in the United States and a request and appropriate payment for preparation of such a certified copy do not accompany the international application on filing or are not filed within 16 months of the priority date, the certified copy of the priority document must be furnished by the applicant to the

International Bureau or to the United States Receiving Office within the time limit specified in PCT Rule 17.1(a).

(d) The applicant may correct or add a priority claim in accordance with PCT Rule 26*bis*.1.

201.14 Right of Priority, Formal Requirements [R-5]

Under the statute (35 U.S.C. 119(b)), an applicant who wishes to secure the right of priority must comply with certain formal requirements within a time specified. If these requirements are not complied with the right of priority is lost and cannot thereafter be asserted.

For nonprovisional applications filed prior to November 29, 2000, the requirements of the statute are (a) that the applicant must file a claim for the right and (b) he or she must also file a certified copy of the original foreign application; these papers must be filed within a certain time limit. The maximum time limit specified in the statute is that the claim for priority and the priority papers must be filed before the patent is granted, but the statute gives the Director authority to set this time limit at an earlier time during the pendency of the application.

Where a claim for priority under 35 U.S.C. 119(b) has not been made in the parent application, the claim for priority may be made in a **>continuing application< provided the parent application has been filed within 12 months from the date of the earliest foreign filing. **>See *In re Tangsrud*, 184 USPQ 746 (Comm'r Pat. 1973). If the claim for priority and the certified copy of the priority document are not filed in the continuing application within the time period set in 37 CFR 1.55,< the right of priority is lost. A reissue was granted in *Brenner v. State of Israel*, 400 F.2d 789, 158 USPQ 584 (D.C. Cir. 1968), where the only ground urged was failure to file a certified copy of the original foreign application to obtain the right of foreign priority under 35 U.S.C. 119 before the patent was granted.

It should be particularly noted that these papers must be filed in all cases even though they may not be necessary during the pendency of the application to overcome the date of any reference. The statute also gives the Director authority to require a translation of the foreign documents if not in the English language and such other information as the Director may deem necessary.

For original applications filed under 35 U.S.C.111(a) (other than a design application) on or after November 29, 2000, the requirements of the statute are that the applicant must (a) file a claim for the right of priority and (b) identify the original foreign application by specifying the application number of the foreign application, the intellectual property authority or country in which the application was filed and the date of filing of the application. These papers must be filed within a certain time limit. The time limit specified in 35 U.S.C.119(b)(1) is that the claim for priority and the required identification information must be filed at such time during the pendency of the application as set by the Director. The Director has by rule set this time limit as the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior foreign application. See 37 CFR 1.55(a)(1)(i). This time period is not extendable. In an application that entered the national stage from an international application after compliance with 35 U.S.C. 371, the claim for priority must be made during the pendency of the application and within the time limit set forth in the PCT and the Regulations under the PCT. See 37 CFR 1.55(a)(1)(ii). Claims for foreign priority not presented within the time period specified in 37 CFR 1.55(a)(1)(i) are considered to have been waived. If a claim for priority under 35 U.S.C.119(a) - (d) or (f), or 365(a) is presented after the time period set in 37 CFR 1.55(a)(1)(i), the claim may be accepted if it includes the required identification information and is accompanied by a grantable petition to accept the unintentionally delayed claim for priority. See 37 CFR 1.55(c). In addition, 35 U.S.C. 119(b)(3) gives the Director authority to require a certified copy of the foreign application and an English translation if the foreign application is not in the English language and such other information as the Director may deem necessary. The Director has by rule, 37 CFR 1.55(a)(2), required a certified copy of the foreign application to be submitted before the patent is granted. If the certified copy of the foreign application is submitted after the payment of the issue fee, it must be accompanied by the processing fee set forth in 37 CFR 1.17(i). See MPEP § 201.14(a).

Unless provided in an application data sheet, 37 CFR 1.63 requires that the oath or declaration must identify the foreign application for patent or inven-

tor's certificate for which priority is claimed under 37 CFR 1.55, and any foreign applications having a filing date before that of the application on which priority is claimed, by specifying the application number, country, day, month, and year of its filing.

201.14(a) Right of Priority, Time for Filing Papers [R-3]

The time for filing the priority papers required by the statute is specified in 37 CFR 1.55(a).

37 CFR 1.55. Claim for foreign priority.

(a) An applicant in a nonprovisional application may claim the benefit of the filing date of one or more prior foreign applications under the conditions specified in 35 U.S.C. 119(a) through (d) and (f), 172, and 365(a) and (b).

(1)(i) In an original application filed under 35 U.S.C. 111(a), the claim for priority must be presented during the pendency of the application, and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior foreign application. This time period is not extendable. The claim must identify the foreign application for which priority is claimed, as well as any foreign application for the same subject matter and having a filing date before that of the application for which priority is claimed, by specifying the application number, country (or intellectual property authority), day, month, and year of its filing. The time periods in this paragraph do not apply in an application under 35 U.S.C. 111(a) if the application is:

(A)A design application; or

(B)An application filed before November 29, 2000.

(ii) In an application that entered the national stage from an international application after compliance with 35 U.S.C. 371, the claim for priority must be made during the pendency of the application and within the time limit set forth in the PCT and the Regulations under the PCT.

(2) The claim for priority and the certified copy of the foreign application specified in 35 U.S.C. 119(b) or PCT Rule 17 must, in any event, be filed before the patent is granted. If the claim for priority or the certified copy of the foreign application is filed after the date the issue fee is paid, it must be accompanied by the processing fee set forth in § 1.17(i), but the patent will not include the priority claim unless corrected by a certificate of correction under 35 U.S.C. 255 and § 1.323

**>

(3) The Office may require that the claim for priority and the certified copy of the foreign application be filed earlier than provided in paragraphs (a)(1) or (a)(2) of this section:

(i) When the application becomes involved in an interference (see § 41.202 of this title),

(ii) When necessary to overcome the date of a reference relied upon by the examiner, or

(iii) When deemed necessary by the examiner.

(4)(i)An English language translation of a non-English language foreign application is not required except:

(A)When the application is involved in an interference (see § 41.202 of this title),

(B)When necessary to overcome the date of a reference relied upon by the examiner, or

(C)When specifically required by the examiner.

(ii) If an English language translation is required, it must be filed together with a statement that the translation of the certified copy is accurate.<

*****

(c) Unless such claim is accepted in accordance with the provisions of this paragraph, any claim for priority under 35 U.S.C. 119(a)-(d) or 365(a) not presented within the time period provided by paragraph (a) of this section is considered to have been waived. If a claim for priority under 35 U.S.C. 119(a)-(d) or 365(a) is presented after the time period provided by paragraph (a) of this section, the claim may be accepted if the claim identifying the prior foreign application by specifying its application number, country (or intellectual property authority), and the day, month, and year of its filing was unintentionally delayed. A petition to accept a delayed claim for priority under 35 U.S.C. 119(a)-(d) or 365(a) must be accompanied by:

(1) The claim under 35 U.S.C. 119(a)-(d) or 365(a) and this section to the prior foreign application, unless previously submitted;

(2) The surcharge set forth in § 1.17(t); and

(3) A statement that the entire delay between the date the claim was due under paragraph (a)(1) of this section and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional.

It should first be noted that the Director has by rule specified an earlier ultimate date than the date the patent is granted for filing a claim and a certified copy. For original applications filed under 35 U.S.C. 111(a) (other than a design application) on or after November 29, 2000, a claim for foreign priority must be presented during the pendency of the application, and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior foreign application. See 37 CFR 1.55(a)(1)(i). This time period is not extendable. For applications that entered the national stage from an international application filed on or after November 29, 2000, after compliance with 35 U.S.C. 371, the claim for priority must be made during the pendency of the application and within the time limit set forth in the PCT and the Regulations under the PCT. Any foreign priority claim not presented within the time period set in 37 CFR 1.55(a)(1)(i) is considered to have been waived. If a claim for foreign priority is presented after the time period set in 37 CFR 1.55(a)(1)(i), the claim may be accepted if the claim

properly identifies the prior foreign application and is accompanied by a grantable petition to accept an unintentionally delayed claim for priority. A grantable petition to accept an unintentionally delayed claim for priority must include: (1) the claim (i.e., the claim required by 35 U.S.C. 119(a)-(d) and (f) and 37 CFR 1.55) for priority to the prior foreign application, unless previously submitted; (2) the surcharge set forth in 37 CFR 1.17(t); and (3) a statement that the entire delay between the date the claim was due under 37 CFR 1.55(a)(1) and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional. See 37 CFR1.55(c).

For nonprovisional applications filed prior to November 29, 2000 and for design applications, a claim for foreign priority may be made up until the time when the patent is granted. Priority claims and certified copies of foreign applications filed after payment of the issue fee will be placed in the application file but will not be reviewed, as explained in further detail below.

For all applications, assuming the claim for foreign priority has been made, the latest time at which the papers may be filed without a processing fee (37 CFR 1.17(i)) is the date of the payment of the issue fee, except that, under certain circumstances, they are required at an earlier date. These circumstances are specified in the rule as:

(A) in the case of interferences in which event the papers must be filed within the time specified in the interference rules;

(B) when necessary to overcome the date of a reference relied on by the examiner; and

(C) when specifically required by the examiner.

The claim for foreign priority and the certified copy of the foreign application specified in 35 U.S.C. 119(b) or PCT Rule 17 must, in any event, be filed before the patent is granted. If the claim for foreign priority or the certified copy of the foreign application is filed after the date of payment of the issue fee but prior to the date of grant of the patent, the priority claim or certified copy must be accompanied by a processing fee set forth in 37 CFR 1.17(i). The priority claim or certified copy will be placed in the file record but there will be no review of the papers and the patent when published will not include the priority claim. A certificate of correction under 35 U.S.C. 255 and 37 CFR 1.323 can be filed to have the priority claim or certified copy considered after publication of the patent. In addition, for original applications filed under 35 U.S.C. 111(a) (other than a design application) on or after November 29, 2000, a grantable petition to accept an unintentionally delayed claim for priority under 37 CFR 1.55(c) must also be filed with the certificate of correction.

In view of the shortened periods for prosecution leading to allowances, it is recommended that priority papers be filed as early as possible. Although 37 CFR 1.55(a)(2) permits the filing of priority papers up to and including the date for payment of the issue fee, it is advisable that such papers be filed promptly after filing the application. Frequently, priority papers are found to be deficient in material respects, such as for example, the failure to include the correct certified copy, and there is not sufficient time to remedy the defect. Occasionally, a new oath or declaration may be necessary where the original oath or declaration omits the reference to the foreign filing date for which the benefit is claimed. The early filing of priority papers would thus be advantageous to applicants in that it would afford time to explain any inconsistencies that exist or to supply any additional documents that may be necessary.

It is also suggested that a pencil notation of the application number of the corresponding U.S. application be placed on the priority papers. Such notation should be placed directly on the priority papers themselves even where a cover letter is attached bearing the U.S. application data. Experience indicates that cover letters and priority papers occasionally become separated, and without the suggested pencil notations on the priority papers, correlating them with the corresponding U.S. application becomes exceedingly difficult, frequently resulting in severe problems for both the Office and applicant. Adherence to the foregoing suggestion for making a pencil notation on the priority document of the U.S. application data will result in a substantial lessening of the problem.

If the priority claim in an original application filed under 35 U.S.C. 111(a) (other than a design application) on or after November 29, 2000 is submitted after the time period set forth in 37 CFR 1.55(a)(1) and without the required petition (37 CFR 1.55(c)), the examiner may use the following form paragraph to

inform applicant that the foreign priority claim will not be entered.

¶ *2.21.01 35 U.S.C. 119(a)-(d) or (f) or 365(a) Foreign Priority Claim is Untimely*

The foreign priority claim filed on **[1]** was not entered because the foreign priority claim was not filed during the time period set forth in 37 CFR 1.55(a)(1). For original applications filed under 35 U.S.C. 111(a) (other than a design application) on or after November 29, 2000, the time period is during the pendency of the application and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior foreign application. For applications that have entered national stage from an international application filed on or after November 29, 2000, after compliance with 35 U.S.C. 371, the claim for priority must be made during the pendency of the application and within the time limit set forth in the PCT and the Regulations under the PCT. See 37 CFR 1.55(a)(1)(ii). If applicant desires priority under 35 U.S.C. 119(a)-(d), (f) or 365(a) based upon a prior foreign application, applicant must file a petition for an unintentionally delayed priority claim (37 CFR 1.55(c)). The petition must be accompanied by (1) the claim (i.e., the claim required by 35 U.S.C. 119(a)-(d) and (f) and 37 CFR 1.55) for priority to the prior foreign application, unless previously submitted; (2) a surcharge under 37 CFR 1.17(t); and (3) a statement that the entire delay between the date the claim was due under 37 CFR 1.55(a)(1) and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional. The petition should be addressed to: Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Examiner Note:

1. Use this form paragraph only for original applications filed under 35 U.S.C. 111(a) on or after November 29, 2000. DO NOT use for design applications.

2. In bracket 1, insert the date the amendment or paper containing the foreign priority claim was filed.

201.14(b) Right of Priority, Papers Required [R-2]

The filing of the priority papers under 35 U.S.C. 119(a)-(d) makes the record of the file of the United States patent complete. The U.S. Patent and Trademark Office does not normally examine the papers to determine whether the applicant is in fact entitled to the right of priority and does not grant or refuse the right of priority, except as described in MPEP § 201.15 and in cases of interferences.

The papers required are the claim for priority and the certified copy of the foreign application. For original applications filed under 35 U.S.C. 111(a) (other than design applications) on or after November 29, 2000, the claim for foreign priority must identify the foreign application for which priority is claimed by specifying the application number, country (or intellectual property authority), day, month, and year of its filing. In addition, the claim for priority must also identify any foreign application for the same subject matter having a filing date before that of the foreign application for which priority is claimed.

For all applications, the claim to priority need be in no special form, and may be made by a person authorized to sign correspondence under 37 CFR1.33(b). No special language is required in making the claim for priority, and any expression which can be reasonably interpreted as claiming the benefit of the foreign application is accepted as the claim for priority. The claim for priority may appear in the oath or declaration, an application data sheet (37 CFR1.76), or the application transmittal letter with the recitation of the foreign application. See MPEP § 201.13, paragraph A.

The certified copy which must be filed is a copy of the original foreign application with a certification by the patent office of the foreign country in which it was filed. Certified copies ordinarily consist of a copy of the specification and drawings of the applications as filed with a certificate of the foreign patent office giving certain information. “Application” in this connection is not considered to include formal papers such as a petition. A copy of the foreign patent as issued does not comply since the application as filed is required; however, a copy of the printed specification and drawing of the foreign patent is sufficient if the certification indicates that it corresponds to the application as filed. A French patent stamped “Service De La Propriete Industrielle - Conforme Aux Pieces Deposees A L’ Appui de La Demande” and additionally bearing a signed seal is also acceptable in lieu of a certified copy of the French application.

When the claim to priority and the certified copy of the foreign application are received while the application is pending before the examiner, the examiner should make no examination of the papers except to see that they correspond in number, date and country to the application identified in the oath or declaration and contain no obvious formal defects. The subject matter of the application is not examined to determine whether the applicant is actually entitled to the benefit

of the foreign filing date on the basis of the disclosure thereof. In addition, for original applications filed under 35 U.S.C. 111(a) (other than design applications) on or after November 29, 2000, the examiner should make sure that the claim for foreign priority is timely. Examiners may use form paragraph 2.21.01 to notify applicant that the foreign priority claim is untimely.

>

I. < DURING INTERFERENCE

If priority papers are filed in an interference, it is not necessary to file an additional certified copy in the application file. The administrative patent judge will *>associate< them *>with< the application *.

>

II. < LATER FILED APPLICATIONS, REISSUES

Where the benefit of a foreign filing date based on a foreign application is claimed in a later filed application (i.e., continuation, continuation-in-part, division) or in a reissue application and a certified copy of the foreign application as filed, has been filed in a parent or related application, it is not necessary to file an additional certified copy in the later application. A reminder of this provision is found in form paragraph 2.20. The applicant when making such claim for priority may simply identify the application containing the certified copy. In such cases, the examiner should acknowledge the claim on form PTOL-326. Note copy in MPEP § 707.

If the applicant fails to call attention to the fact that the certified copy is in the parent or related application and the examiner is aware of the fact that a claim for priority under 35 U.S.C. 119(a)-(d) or (f) was made in the parent application, the examiner should call applicant's attention to these facts in an Office action, so that if a patent issues on the later or reissue application, the priority data will appear in the patent. In such cases, the language of form paragraph 2.20 should be used.

**>

¶ *2.20 Priority Papers in Parent or Related (Reissue Situation) - Application*

Applicant is reminded that in order for a patent issuing on the instant application to obtain the benefit of priority based on priority papers filed in parent or related Application No. **[1]** under 35 U.S.C. 119(a)-(d) or (f), a claim for such foreign priority must be timely made in this application. To satisfy the requirement of 37 CFR 1.55(a)(2) for a certified copy of the foreign application, applicant may simply identify the application containing the certified copy.

<

Where the benefit of a foreign filing date, based on a foreign application, is claimed in a later filed application or in a reissue application and a certified copy of the foreign application, as filed, has not been filed in a parent or related application, a claim for priority may be made in the later application. *In re Tangsrud*, 184 USPQ 746 (Comm'r Pat. 1973). When such a claim is made in the later application and a certified copy of the foreign application is placed therein, the examiner should acknowledge the claim on form PTOL-326. Note copy in MPEP § 707.

>

III. < WHERE AN ACTUAL MODEL WAS ORIGINALLY FILED IN GERMANY

The German design statute does not permit an applicant having an establishment or domicile in the Federal Republic of Germany to file design patent applications with the German Patent Office. These German applicants can only obtain design protection by filing papers or an actual deposit of a model with the judicial authority ("Amtsgericht") of their principal establishment or domicile. Filing with the German Patent Office is exclusively reserved for applicants who have neither an establishment or domicile in the Federal Republic of Germany. The deposit in an "Amtsgericht" has the same effect as if deposited at the German Patent Office and results in a "Geschmacksmuster" which is effective throughout Germany.

In implementing the Paris Convention, 35 U.S.C. 119(a)-(d) and (f) requires that a copy of the original foreign application, specification, and drawings certified by the patent office of the foreign country in which filed, shall be submitted to the U.S. Patent and Trademark Office, in order for an applicant to be entitled to the right of priority in the United States.

Article 4, section A(2) of the Paris Convention however states that "(a)ny filing that is equivalent to a regular national filing under the domestic legislation of any country of the Union . . . shall be recognized as giving rise to the right of priority." Article 4D(3) of

the Convention further provides that countries of the Union may require any person making a declaration of priority to produce a copy of the previously filed application (description, drawings, etc.) certified as correct by the authority which received this application.

As far as the physical production of a copy of the earlier filed paper application is concerned, an applicant should have no difficulty in providing a copy, certified by the authority which received it, if the earlier filed application contained drawings illustrating the design. A problem, however, arises when the only prior "regular national filing" consisted of the deposit of an actual model of the design. 35 U.S.C. 119 is silent on this subject.

Therefore, the U.S. Patent and Trademark Office will receive as evidence of an earlier filed German design application under 35 U.S.C. 119(a)-(d), drawings or acceptable clear photographs of the deposited model faithfully reproducing the design embodied therein together with other required information, certified as being a true copy by an official of the court with which the model was originally deposited.

35 U.S.C. 119(a)-(d), prior to amendment by the American Inventors Protection Act of 1999 (AIPA), Public Law 106-113, provides for the certification of the earlier filed application by the patent office of the foreign country in which it was filed. Because Article 4D(3) of the Paris Convention which 35 U.S.C. 119(a)-(d) implements refers to certification ". . . by the authority which received such application . . .", the reference to "patent office" in the statute is construed to extend also to the authority which is in charge of the design register, i.e., the applicable German court. As a consequence, an additional certification by the German Patent Office will not be necessary especially since Article 4D(3) of the Paris Convention provides that authentication shall not be required. Effective November 29, 2000, the AIPA amended 35 U.S.C. 119(b)(3) to state that certification "…shall be made by the foreign intellectual property authority in which the foreign application was filed." 35 U.S.C. 119(b)(3) as amended by the AIPA applies to applications filed under 35 U.S.C 111(a) and international applications complying with 35 U.S.C. 371, with filing dates on or after November 29, 2000.

Although, as stated above, a "regular national filing" gives rise to the right of priority, the mere submission of a certified copy of the earlier filed foreign application, however, may not be sufficient to perfect that right in this country. For example, among other things, an application filed in a foreign country must contain a disclosure of the invention adequate to satisfy the requirements of 35 U.S.C. 112, in order to form the basis for the right of priority in a later filed United States application.

201.14(c) Right of Priority, Practice [R-3]

Before going into the practice with respect to those instances in which the priority papers are used to overcome a reference, there will first be described the practice when there is no occasion to use the papers, which will be in the majority of cases. In what follows in this section it is assumed that no reference has been cited which requires the priority date to be overcome.

I. UNTIMELY CLAIM FOR PRIORITY

If the foreign priority claim in an original application filed under 35 U.S.C.111(a) (other than a design application) on or after November 29, 2000 is submitted after the time period set in 37 CFR 1.55(a)(1)(i) and without a petition under 37 CFR 1.55(c), the examiner may use form paragraph 2.21.01 to notify applicant that the foreign priority claim will not be entered.

II. NO IRREGULARITIES AND PRIORITY CLAIM TIMELY

When the papers under 35 U.S.C. 119(a)-(d) are received within the time period set forth in 37 CFR 1.55(a)(1), if applicable, they are **>entered into the application file history.< Assuming that the papers are timely and regular in form and that there are no irregularities in dates, the examiner in the next Office action will advise the applicant that the papers have been received on form PTOL-326 or by use of form paragraph 2.26. For Image File Wrapper (IFW) processing, see the IFW Manual.

¶ *2.26 Claimed Foreign Priority - Papers Filed*

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Where the priority papers have been filed in another application, use form paragraph 2.27.

¶ *2.27 Acknowledge Foreign Priority Paper in Parent*

Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119 (a)-(d). The certified copy has been filed in parent Application No. **[1]**, filed on **[2]**.

Examiner Note:

1. For problems with foreign priority, see form paragraphs 2.18 to 2.24.
2. In bracket 1, insert series code and serial no. of parent.

The examiner will enter the information specified in MPEP § 202.03 on the face of the file wrapper or on the PALM bib-data sheet*>,< as appropriate.

III. PAPERS INCONSISTENT WITH A TIMELY PRIORITY CLAIM

If the certified copy filed does not correspond to the foreign application identified in the application oath or declaration or an application data sheet, or if the application oath or declaration or an application data sheet does not refer to the particular foreign application, the applicant has not complied with the requirements of the rule relating to the oath or declaration. In such instances, the Office action, after acknowledging receipt of the papers, should require the applicant to explain the inconsistency and to file a new oath or declaration or an application data sheet stating correctly the facts concerning foreign applications required by 37 CFR 1.63 by using form paragraph 2.21.

¶ *2.21 Oath, Declaration, or Application Data Sheet Does Not Contain Reference to Foreign Filing*

Receipt is acknowledged of papers filed under 35 U.S.C. 119(a)-(d) based on an application filed in **[1]** on **[2]**. Applicant has not complied with the requirements of 37 CFR 1.63(c), since the oath, declaration, or application data sheet does not acknowledge the filing of any foreign application. A new oath, declaration, or application data sheet is required in the body of which the present application should be identified by application number and filing date.

Other situations requiring some action by the examiner are exemplified by other form paragraphs.

IV. NO CLAIM FOR PRIORITY

Where applicant has filed a certified copy but has not made a claim for priority, use form paragraph 2.22.

¶ *2.22 Certified Copy Filed, But No Claim Made*

Receipt is acknowledged of a certified copy of the **[1]** application referred to in the oath or declaration or in an application data sheet. If this copy is being filed to obtain the benefits of the foreign filing date under 35 U.S.C. 119(a)-(d), applicant should also file a claim for such priority as required by 35 U.S.C. 119(b). If the application being examined is an original application filed under 35 U.S.C. 111(a) (other than a design application) on or after November 29, 2000, the claim for priority must be presented during the pendency of the application, and within the later of four months from the actual filing date of the application or sixteen months from the filing date of the prior foreign application. See 37 CFR 1.55(a)(1)(i). If the application being examined has entered the national stage from an international application filed on or after November 29, 2000, after compliance with 35 U.S.C. 371, the claim for priority must be made during the pendency of the application and within the time limit set forth in the PCT and Regulations of the PCT. See 37 CFR 1.55(a)(1)(ii). Any claim for priority under 35 U.S.C. 119(a)-(d) or (f) or 365(a) or (b) not presented within the time period set forth in 37 CFR 1.55(a)(1) is considered to have been waived. If a claim for foreign priority is presented after the time period set forth in 37 CFR 1.55(a)(1), the claim may be accepted if the claim properly identifies the prior foreign application and is accompanied by a grantable petition to accept an unintentionally delayed claim for priority. See 37 CFR 1.55(c).

Examiner Note:

In bracket 1, insert the application number of the foreign application.

NOTE: Where the applicant's accompanying letter states that the certified copy is filed for priority purposes or for the convention date, it is accepted as a claim for priority.

V. FOREIGN APPLICATIONS ALL FILED MORE THAN A YEAR BEFORE EARLIEST EFFECTIVE U.S. FILING

Where the earlier foreign application was filed more than 12 months prior to the U.S. application, use form paragraph 2.23.

¶ *2.23 Foreign Filing More Than 12 Months Earlier*

Acknowledgment is made of applicant's claim for priority under 35 U.S.C. 119(a)-(d) based upon an application filed in **[1]** on **[2]**. A claim for priority under 35 U.S.C. 119(a)-(d) cannot be based on said application, since the United States application was filed more than twelve months thereafter.

Examiner Note:

1. In bracket 1, insert the country name.
2. In bracket 2, insert the filing date of the foreign application.

VI. SOME FOREIGN APPLICATIONS FILED MORE THAN A YEAR BEFORE U.S. FILING

For example, where a British provisional specification was filed more than a year before a U.S. application, but the British complete application was filed within the year, and certified copies of both were submitted, language similar to the following should be used: "Receipt is acknowledged of papers filed on September 18, 1979, purporting to comply with the requirements of 35 U.S.C. 119(a)-(d). It is not seen how the claim for priority can be based on the British specification filed January 23, 1978, because the instant application was filed more than one year thereafter. However, the printed heading of the patent will note the claimed priority date based on the complete specification; i.e., November 1, 1978, for such subject matter as was not disclosed in the provisional specification."

VII. CERTIFIED COPY NOT THE FIRST FOREIGN APPLICATION

Form paragraph 2.24 may be used to notify applicant that the date for which foreign priority is claimed is not the date of the first filed foreign application acknowledged in the oath or declaration.

¶ *2.24 Claimed Foreign Priority Date Not the Earliest Date*

Receipt is acknowledged of papers filed on **[1]** purporting to comply with the requirements of 35 U.S.C. 119(a)-(d) and they have been placed of record in the file. Attention is directed to the fact that the date for which foreign priority is claimed is not the date of the first filed foreign application acknowledged in the oath or declaration.

VIII. NO CERTIFIED COPY

Where priority is claimed but no certified copy of the foreign application has been filed, use form paragraph 2.25.

¶ *2.25 Claimed Foreign Priority, No Papers Filed*

Acknowledgment is made of applicant's claim for foreign priority based on an application filed in **[1]** on **[2]**. It is noted, however, that applicant has not filed a certified copy of the **[3]** application as required by 35 U.S.C. 119(b).

Examiner Note:

1. In bracket 1, insert the country name.
2. In bracket 2, insert the filing date of the foreign application.
3. In bracket 3, insert the application number of the foreign application.

Any unusual situation may be referred to the Technology Center (TC) Director.

IX. APPLICATION IN ISSUE

When priority papers for applications which have been sent to the Publishing Division are received, the priority papers should be sent to the Publishing Division. For Image File Wrapper (IFW) processing, see the IFW Manual.

When the claim for foreign priority or the certified copy of the foreign application is filed after the date of payment of the issue fee but prior to the date of grant of the patent, the priority claim or certified copy must be accompanied by a processing fee set forth in 37 CFR 1.17(i). The priority claim or certified copy will be placed in the file record but there will be no review of the papers and the patent when published will not include the priority claim. A certificate of correction under 35 U.S.C. 255 and 37 CFR 1.323 can be filed to have the priority claim or certified copy considered after publication of the patent. In addition, for original applications filed under 35 U.S.C.111(a) (other than design applications) on or after November 29, 2000, a grantable petition to accept an unintentionally delayed claim for priority under 37 CFR 1.55(c) must be filed with the certificate of correction.

X. RETURN OF PAPERS

For Image File Wrapper (IFW) processing, see the IFW Manual. It is sometimes necessary for the examiner to return papers filed under 35 U.S.C. 119(a)-(d) either upon request of the applicant, for example, to obtain a translation of the certified copy of the foreign application, or because they fail to meet a basic requirement of the statute, such as where all foreign applications were filed more than a year prior to the U.S. filing date.

When the papers have not been **>entered into the application file history<, it is not necessary to secure approval of the Director of the United States Patent and Trademark Office for their return but they should be sent to the TC Director for cancellation of the Office stamps. Where the papers have been **>entered into the application file history,< a request for permission to return the papers should be addressed to the Director of the United States Patent

and Trademark Office and forwarded to the TC Director for approval. Where the return is approved, the written approval should be **>entered into the application file history.< Any questions relating to the return of papers filed under 35 U.S.C. 119(a)-(d) should be directed to the Office of the Commissioner for Patents.

XI. **>NOTATION IN FILE HISTORY REGARDING FOREIGN PRIORITY APPLICATION<

For Image File Wrapper (IFW) processing, see the IFW Manual. Where foreign applications are listed on the 37 CFR 1.63 oath or declaration or application data sheet, the examiner should check that such foreign applications are properly listed on the **>PALM bib-data sheet<, correcting errors of typography or format as necessary, and initialing the "verified" line when the information on the **>PALM bib-data sheet< matches the oath or declaration or application data sheet. See MPEP § 202.03. Should there be an error on the oath or declaration, or application data sheet itself, the examiner should require a new oath or declaration, or application data sheet, where appropriate. If a foreign application listed on the oath or declaration, or application data sheet is not listed on the **>PALM bib-data sheet, the examiner should provide the information regarding the foreign application number, the country, and the filing date on the PALM bib-data sheet and forward the marked-up PALM bib-data sheet to the Legal Instrument Examiner for correction in the Office computer systems.< Applications listed on the **>PALM bib-data sheet< but filed in countries not qualifying for benefits under 35 U.S.C. 119(a)-(d) should be lined through in * ink. A listing of countries qualifying for benefits under 35 U.S.C. 119(a)-(d) appears at MPEP § 201.13.

**

201.14(d) Proper Identification of Priority Application

In order to help overcome problems in determining the proper identification of priority applications for patent documentation and printing purposes, the following tables have been prepared which set out for various countries the forms of acceptable presentation of application numbers.

The tables should enable applicants, examiners and others to extract from the various formats the minimum required data which comprises a proper citation.

Proper identification of priority applications is essential to establishing accurate and complete relationships among various patent documents which reflect the same invention. Knowledge of these relationships is essential to search file management, technology documentation and various other purposes.

The tables show the forms of presentation of application numbers as used in the records of the source or originating patent office. They also show, under the heading "Minimum Significant Part of the Number," the simplified form of presentation which should be used in United States Patent and Trademark Office records.

Note particularly that in the simplified format that:

(A) Alpha symbols preceding numerals are eliminated in all cases except Hungary.

(B) A decimal character and numerical subset as part of a number is eliminated in all cases except France.

(C) Use of the dash (—) is reduced, but is still an essential element of application numbers, in the case of Czechoslovakia and Japan.

MINIMUM SIGNIFICANT PART OF AN APPLICATION NUMBER PROVIDING UNIQUE IDENTIFICATION OF AN APPLICATION

Table I—Countries Using Annual Application Number Series

Country #	Example of application number at source	Minimum significant part of the number	Remarks
Austria [AT]	A 12116/69	12116/69	The letter A is common to all patent applications.
Czechoslovakia [CS]	PV3628-72	3628-72	PV is an abbreviation meaning "application of invention."
Denmark [DK]	68/2986	68/2986	
Egypt [EG]	487-1968	487-1968	
Country #	Example of application number at source	Minimum - significant part of the number	Remarks
Finland [FI]	3032/69 (old numbering system) 752032 (new numbering system)	3032/69 752032	New numbering system introduced on January 1, 1975. First two digits indicate year of application.
France [FR]	69.38066 7319346	68.38066 7319346	Deletion of the intermediary full stop from this number onwards.
Note: All French applications are numbered in a single annual series, e.g., demande de brevet, demande de certificate d'addition (first addition, second addition, etc.)			Annual series of numbers is used for all applications of patent documents. The number allotted to an application at its filing (national registration number) is also the number of the granted patent.

Country #	Example of application number at source	Minimum significant part of the number	Remarks
Germany, Fed. Rep. of [DE]	P 1940738// 6-24 G6947580.5	1940738 D6947580	P=Patent. The first two digits of the number represent the last two digits of the year of application less 50 (e.g., 1969 less 50=19; 1973 less 50=23). The first digit after the slash is an error control digit. The two digits following the dash indicate the examining division. G= Gebrauschsmuster. The first two digits of the number represent the last two digits of the year of application. The difference in numbering scheme of the first two digits affords unique identification of this type of application. However, see note below (D). The digit after the period is for error control.
Ireland	1152/69	1152/69	
Italy [IT]	28039-A/70	28039/70	Application numbers are not presented on published patent documents or given in an official gazette. An exclusive block of application numbers is given annually to each of 93 provincial bureaus where patent applications may be filed. In 1973, 90,000 numbers were allotted, wherein an estimated total of 30,000 applications were expected to be filed. While, as a consequence, gaps will exist in the ultimately used numbers, each application has a unique number. For this purpose, neither the dash nor the letter identifying the receiving bureau, which follows the application number, is needed.
Japan [JP]	46-69807 46-81861	46-69807 D46-81861	The two digits before the dash indicate the year (1925 or 1988) of the Emperor's reign in which the application was filed (46=1971). Patent and utility model applications are numbered in separate series.
Netherlands [NL]	7015038	7015038	First two digits indicate year of application.
Norway [NO]	1748/70 (old numbering system) 74001 (new numbering system)	1748/70 74001	New numbering system introduced on January 1, 1974. First two digits indicate year of application.
South Africa [ZA]	70/4865	70/4865	

Country #	Example of application number at source	Minimum significant part of the number	Remarks
Sweden [SE]	16414/70 7300001-0 (new system)	16414/70 7300001	The new numbering system was introduced January 1, 1973. First two digits indicate year of application. The digit after the dash is used for computer control.
Switzerland [CH]	15978/70	15978/70	
United Kingdom [GB]	41352/70	41352/70	
Yugoslavia [YU]	P1135/66	1135/66	
Zambia [ZM]	142/70	142/70	
Argentina [AR]	231790	231790	
Australia [AU]	59195/69	59195/69	Long series spread over several years. New series started in 1970.
Belgium [BE]	96469	96469	Application numbers are not presented on published patent documents or given in an official gazette. A series of parallel numbers is provided to each of 10 offices which, respectively, may receive applications (control office + 9 provincial bureaus) and assign application numbers. Series was started in 1958. Since an application number does not uniquely identify a BE document, the patent number is often cited as the "priority application number."
Brazil [BR]	222986	222986	
Bulgaria [BG]	11572	11572	
Canada [CA]	103828	103828	
Colombia [CO]	126050	126050	

Table II—Countries Using Other Than Application Number Series

Country #	Example of application number at source	Minimum significant part of the number	Remarks
Brazil [BR]	222986	222986	
Bulgaria [BG]	11572	11572	
Canada [CA]	103828	103828	
Colombia [CO]	126050	126050	
Cuba [CU]	33384	33384	
German (Dem. Rep.) [DD]	AP84c/ 137355 WP135b/ 147203	137355 147203	AP=Ausschliessungspatent; WP=Wirtschaftspatent. The other symbols before the slash are classification symbols. A single numbering series covers both AP and WP applications.
Greece [GR]	44114	44114	
Hungary [HU]	OE 107	OE 107	The letters preceding the number are essential for identifying the application. They are the first letter and the first following vowel of the applicant's name. There is a separate numbering sequence for each pair of letters.
Israel [IL]	35691	35691	
Luxembourg [LU]	60093	60093	
Mexico [MX]	123723	123723	
Monaco [MC]	908	908	
New Zealand [NZ]	161732	161732	
OAPI [OA]	52118	52118	
Philippines [PH]	11929	11929	
Poland [PO]	P144826 44987	144826 D44987	

Country #	Example of application number at source	Minimum significant part of the number	Remarks
Portugal [PT]	P52-555-5607	52555 D5607	
Romania [RO]	65211	65211	
Soviet Union	1397205-15	1397205	The numbers following the slash denote the examination division and a processing division.
United States [US]	889877	889877	The highest number assigned in the series of numbers started in January 1960. New series started in January 1970, January 1979, D January 1987, January 1993, and January 1998.

ICIREPAT Country Code is indicated in brackets, e.g., [AR].

D In order to distinguish utility model applications from patent applications, it is necessary to identify them as to type of application in citations or references. This may be done by using the name of the application type in conjunction with the number or by using the symbol “U” in brackets or other enclosure following the number.

201.15 Right of Priority, Overcoming a Reference

The only times during *ex parte* prosecution that the examiner considers the merits of an applicant's claim of priority is when a reference is found with an effective date between the date of the foreign filing and the date of filing in the United States and when an interference situation is under consideration. If at the time of making an action the examiner has found such an intervening reference, he or she simply rejects whatever claims may be considered unpatentable thereover, without paying any attention to the priority date (assuming the papers have not yet been filed). The applicant in his or her reply may argue the rejection if it is of such a nature that it can be argued, or present the foreign papers for the purpose of overcoming the date of the reference. If the applicant argues the reference, the examiner, in the next action in the application, may specifically require the foreign papers to be filed in addition to repeating the rejection if it is still considered applicable, or he or she may merely continue the rejection.

Form paragraph 2.19 may be used in this instance.

¶ *2.19 Overcome Rejection by Translation*

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Examiner Note:

This paragraph should follow a rejection based on an intervening reference.

In those cases where the applicant files the foreign papers for the purpose of overcoming the effective date of a reference, a translation is required if the foreign papers are not in the English language. When the examiner requires the filing of the papers, the translation should also be required at the same time. This translation must be filed together with a statement that the translation of the certified copy is accurate. When the necessary papers are filed to overcome the date of the reference, the examiner's action, if he or she determines that the applicant is not entitled to the priority date, is to repeat the rejection on the reference, stating the reasons why the applicant is not considered entitled to the date. If it is determined that the applicant is entitled to the date, the rejection is withdrawn in view of the priority date.

If the priority papers are already in the file when the examiner finds a reference with the intervening effective date, the examiner will study the papers, if they are in the English language, to determine if the applicant is entitled to their date. If the applicant is found to be entitled to the date, the reference is simply not used but may be cited to applicant on form PTO-892. If the applicant is found not entitled to the date, the unpatentable claims are rejected on the reference with an explanation. If the papers are not in the English language and there is no translation, the examiner may reject the unpatentable claims and at the same time require an English translation for the purpose of determining the applicant's right to rely on the foreign filing date.

The foreign application may have been filed by and in the name of the assignee or legal representative or agent of the inventor, as applicant. In such cases, if the certified copy of the foreign application corresponds with the one identified in the oath or declaration as required by 37 CFR 1.63 and no discrepancies appear, it may be assumed that the inventors are entitled to the claim for priority. If there is disagreement as to inventors on the certified copy, the priority date should be refused until the inconsistency or disagreement is resolved.

The most important aspect of the examiner's action pertaining to a right of priority is the determination of the identity of invention between the U.S. and the foreign applications. The foreign application may be considered in the same manner as if it had been filed in this country on the same date that it was filed in the foreign country, and the applicant is ordinarily entitled to any claims based on such foreign application that he or she would be entitled to under our laws and practice. The foreign application must be examined for the question of sufficiency of the disclosure under 35 U.S.C. 112, as well as to determine if there is a basis for the claims sought.

In applications filed from the United Kingdom there may be submitted a certified copy of the "provisional specification," which may also in some cases be accompanied by a copy of the "complete specification." The nature and function of the United Kingdom provisional specification is described in an article in the Journal of the Patent Office Society of November 1936, pages 770-774. According to United Kingdom law the provisional specification need not contain a

complete disclosure of the invention in the sense of 35 U.S.C. 112, but need only describe the general nature of the invention, and neither claims nor drawings are required. Consequently, in considering such provisional specifications, the question of completeness of disclosure is important. If it is found that the United Kingdom provisional specification is insufficient for lack of disclosure, reliance may then be had on the complete specification and its date, if one has been presented, the complete specification then being treated as a different application and disregarded as to the requirement to file within 1 year.

In some instances, the specification and drawing of the foreign application may have been filed at a date subsequent to the filing of the petition in the foreign country. Even though the petition is called the application and the filing date of this petition is the filing date of the application in a particular country, the date accorded here is the date on which the specification and drawing were filed.

It may occasionally happen that the U.S. application will be found entitled to the filing date of the foreign application with respect to some claims and not with respect to others. Occasionally a sole or joint applicant may rely on two or more different foreign applications and may be entitled to the filing date of one of them with respect to certain claims and to another with respect to other claims.

201.16 Using Certificate of Correction to Perfect Claim for Priority Under 35 U.S.C. 119(a)-(d) or (f) [R-1]

35 U.S.C. 119. Benefit of Earlier Filing Date; Right of Priority.

*****

(b)(1)No application for patent shall be entitled to this right of priority unless a claim is filed in the Patent and Trademark Office, identifying the foreign application by specifying the application number on that foreign application, the intellectual property authority or country in or for which the application was filed, and the date of filing the application, at such time during the pendency of the application as required by the Director.

(2) The Director may consider the failure of the applicant to file a timely claim for priority as a waiver of any such claim. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed claim under this section.

(3) The Director may require a certified copy of the original foreign application, specification, and drawings upon which it is based, a translation if not in the English language, and such other information as the Director considers necessary. Any such certification shall be made by the foreign intellectual property authority in which the foreign application was filed and show the date of the application and of the filing of the specification and other papers.

*****

The failure to perfect a claim to foreign priority benefit prior to issuance of the patent may be cured by filing a reissue application. *Brenner v. State of Israel,* 400 F.2d 789, 158 USPQ 584 (D.C. Cir. 1968).

However, under certain conditions, this failure may also be cured by filing a certificate of correction request under 35 U.S.C. 255 and 37 CFR 1.323. For example, in the case of *In re Van Esdonk*, 187 USPQ 671 (Comm'r Pat. 1975), the Commissioner granted a request to issue a certificate of correction in order to perfect a claim to foreign priority benefits. In that case, a claim to foreign priority benefits had not been filed in the application prior to issuance of the patent. However, the application was a continuation of an earlier application in which the requirements of 35 U.S.C. 119(a)-(d) or (f) had been satisfied. Accordingly, the Commissioner held that the "applicants' perfection of a priority claim under 35 U.S.C. 119 in the parent application will satisfy the statute with respect to their continuation application."

Although *In re Van Esdonk* involved the patent of a continuation application filed under former 37 CFR 1.60, it is proper to apply the holding of that case in similar factual circumstances to any patented application having benefits under 35 U.S.C. 120. This is primarily because a claim to foreign priority benefits in a continuing application, where the claim has been perfected in the parent application, constitutes in essence a mere affirmation of the applicant's previously expressed desire to receive benefits under 35 U.S.C. 119(a)-(d) or (f) for subject matter common to the foreign, parent, and continuing applications.

In summary, a certificate of correction under 35 U.S.C. 255 and 37 CFR 1.323 may be requested and issued in order to perfect a claim for foreign priority benefit in a patented continuing application if the requirements of 35 U.S.C. 119(a)-(d) or (f) had been satisfied in the parent application prior to issuance of the patent and the requirements of 37 CFR

1.55(a) are met. Furthermore, if the continuing application (other than a design application), which issued as a patent, was filed on or after November 29, 2000 **, in addition to the filing of a certificate of correction request, patentee must also file a petition for an unintentionally delayed foreign priority claim under 37 CFR 1.55(c).

However, a claim to foreign priority benefits cannot be perfected via a certificate of correction if the requirements of 35 U.S.C. 119(a)-(d) or (f) had not been satisfied in the patented application, or its parent, prior to issuance and the requirements of 37 CFR 1.55(a) are not met. In this latter circumstance, the claim to foreign priority benefits can be perfected only by way of a reissue application in accordance with the rationale set forth in *Brenner v. State of Israel*, 158 USPQ 584.

*>If the original application, which issued as the patent, was filed under 35 U.S.C. 111(a) (other than a design application) on or after November 29, 2000, a< claim for priority under 35 U.S.C. 119(a)-(d) or (f) for the benefit of a prior foreign application may be added (or corrected) in *>the< issued patent by reissue or certificate of correction (assuming the conditions for reissue or certificate of correction are otherwise met)**. In addition to the filing of a reissue application or a request for a certificate of correction, a petition to accept a delayed claim for priority under 35 U.S.C. 119(a)-(d) or (f) along with the surcharge as set forth in 37 CFR 1.17(t) and a statement that the entire delay between the date the claim was due under 37 CFR1.55(a)(1) and the date the claim was filed was unintentional must be submitted. See 37 CFR1.55(c).

>

201.17 Incorporation by Reference Under 37 CFR 1.57(a) [R-3]

37 CFR 1.57. Incorporation by reference.

(a) Subject to the conditions and requirements of this paragraph, if all or a portion of the specification or drawing(s) is inadvertently omitted from an application, but the application contains a claim under § 1.55 for priority of a prior-filed foreign application, or a claim under § 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application, that was present on the filing date of the application, and the inadvertently omitted portion of the specification or drawing(s) is completely contained in the prior-filed application, the claim under § 1.55 or § 1.78 shall also be considered an incorporation by reference of the prior-filed application as to the inadvertently omitted portion of the specification or drawing(s).

(1) The application must be amended to include the inadvertently omitted portion of the specification or drawing(s) within any time period set by the Office, but in no case later than the close of prosecution as defined by § 1.114(b), or abandonment of the application, whichever occurs earlier. The applicant is also required to:

(i) Supply a copy of the prior-filed application, except where the prior-filed application is an application filed under 35 U.S.C. 111;

(ii) Supply an English language translation of any prior-filed application that is in a language other than English; and

(iii) Identify where the inadvertently omitted portion of the specification or drawings can be found in the prior-filed application.

(2) Any amendment to an international application pursuant to this paragraph shall be effective only as to the United States, and shall have no effect on the international filing date of the application. In addition, no request to add the inadvertently omitted portion of the specification or drawings in an international application designating the United States will be acted upon by the Office prior to the entry and commencement of the national stage (§ 1.491) or the filing of an application under 35 U.S.C. 111 (a) which claims benefit of the international application.

(3) If an application is not otherwise entitled to a filing date under § 1.53(b), the amendment must be by way of a petition pursuant to this paragraph accompanied by the fee set forth in § 1.17(f).

*****

I. IN GENERAL

37 CFR 1.57(a) provides that, if all or a portion of the specification or drawing(s) is inadvertently omitted from an application, but the application contains a claim under 37 CFR 1.55 for priority of a prior-filed foreign application, or a claim under 37 CFR 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application, that was present on the filing date of the application, and the inadvertently omitted portion of the specification or drawing(s) is completely contained in the prior-filed application, the claim for priority or benefit shall be considered an incorporation by reference of the prior-filed application as to the inadvertently omitted portion of the specification or drawings.

The purpose of 37 CFR 1.57(a) is to provide a safeguard for applicants when a page(s) of the specification, or a portion thereof, or a sheet(s) of the drawing(s), or a portion thereof, is (are) inadvertently omitted from an application, such as through a clerical error. It allows inadvertently omitted material to be

added to the application by way of a later-filed amendment if the inadvertently omitted portion of the specification or drawing(s) is completely contained in the prior-filed application even though there is no explicit incorporation by reference of the prior-filed application.

For a discussion of explicit incorporation by reference statements, see MPEP § 608.01(p).

II. CONDITIONS AND REQUIREMENTS OF 37 CFR 1.57(a)

The following conditions and requirements need to be met for an applicant to add omitted material to an application pursuant to 37 CFR 1.57(a):

(A) the application must have been filed on or after September 21, 2004;

(B) all or a portion of the specification or drawing(s) must have been inadvertently omitted from the application;

(C) a claim under 37 CFR 1.55 for priority of a prior-filed foreign application, or a claim under 37 CFR 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application, must have been present on the filing date of the application;

(D) the inadvertently omitted portion of the specification or drawing(s) must be completely contained in the prior-filed application;

(E) applicant must file an amendment to include the inadvertently omitted portion of the specification or drawing(s) within any time period set by the Office, but in no case later than the close of prosecution as defined by 37 CFR 1.114(b), or abandonment of the application, whichever occurs earlier;

(F) if the application is not otherwise entitled to a filing date, applicant must also file a petition under 37 CFR 1.57(a) accompanied by the petition fee set forth in 37 CFR 1.17(f);

(G) applicant must supply a copy of the prior-filed application, except where the prior-filed application is an application filed under 35 U.S.C. 111;

(H) applicant must supply an English language translation of any prior-filed application that is in a language other than English; and

(I) applicant must identify where the inadvertently omitted portion of the specification or drawing(s) can be found in the prior-filed application.

A. Application Filed On or After September 21, 2004

37 CFR 1.57(a) became effective on September 21, 2004 and applies to applications filed on or after that date. Thus, an application that inadvertently omits material must have been filed on or after September 21, 2004 in order for 37 CFR 1.57(a) to apply. Applicants may, however, rely on prior-filed applications filed before September 21, 2004 to supply inadvertently omitted material to applications filed on or after September 21, 2004.

B. Material Must Be Inadvertently Omitted

There is no requirement for applicant to submit a declaration stating that the omission was inadvertent or to submit proof that a particular omission was inadvertent at the time of filing of the application. If applicant submits an amendment to add the omitted material pursuant to 37 CFR 1.57(a), it would constitute a certification under 37 CFR 10.18(b) that the omission was inadvertent. The Office, however, may inquire as to inadvertence where the record raises such issue.

C. Claim Under 37 CFR 1.55 or 1.78 Present on Filing Date

The priority claim under 37 CFR 1.55 or the benefit claim under 37 CFR 1.78 of the prior-filed application must be present on the filing date of the later-filed application in order for it to be considered an incorporation by reference of the prior-filed application under 37 CFR 1.57(a). The later-filed application claiming benefit of the prior-filed application can be a continuation, divisional, or continuation-in-part application of the prior-filed application.

D. Omitted Material Completely Contained in Prior-filed Application

The phrase "completely contained" in 37 CFR 1.57(a) requires that the material to be added to the later-filed application under 37 CFR 1.57(a) must be expressly, as opposed to implicitly, disclosed in the prior-filed application. Furthermore, the material to be added must be completely contained in the prior-filed application **as filed** since it is the prior application as filed which is being incorporated under 37 CFR 1.57(a).

E. Amendment to Add Inadvertently Omitted Material

The application must be amended to include the inadvertently omitted portion of the specification or drawing(s) within any time period set by the Office, but in no case later than the close of prosecution as defined in 37 CFR 1.114(b), or the abandonment of the application, whichever occurs earlier. If the Office of Initial Patent Examination (OIPE) mails a "Notice of Omitted Item(s)" indicating that a portion of the specification or drawings have been omitted, any amendment pursuant to 37 CFR 1.57(a) should be submitted within the two month time period set in the notice and should be identified as an amendment under 37 CFR 1.57(a). The amendment must be in compliance with 37 CFR 1.57(a) and 1.121. See MPEP § 601.01(d) and § 601.01(g). While an amendment to include inadvertently omitted material may be submitted in reply to a final Office action which first raises the issue of the omitted material, such an amendment does not have a right of entry as it would be considered as an amendment under 37 CFR 1.116. If the application is abandoned or the prosecution is closed, applicant may file a petition to revive an application under 37 CFR 1.137 and/or a request for continued examination under 37 CFR 1.114, as appropriate, in order to restore the application to pending status and/or reopen prosecution in the application. If, however, an application has been patented, a certificate of correction or a reissue application could not be used to add inadvertently omitted material to that patent via 37 CFR 1.57(a).

In order for the omitted material to be included in the application, and hence considered to be part of the disclosure, the application must be amended to include the omitted portion. Therefore, applicants can still intentionally omit material contained in the prior-filed application from the application containing the priority or benefit claim without the material coming back in by virtue of the incorporation by reference of 37 CFR 1.57(a). Applicants can maintain their intent by simply not amending the application to include the intentionally omitted material.

In addition to filing the amendment to add the inadvertently omitted material, applicant is also required to: (A) supply a copy of the prior-filed application, except where the prior-filed application is an application filed under 35 U.S.C. 111; (B) supply an English-language translation of any prior-filed application that is in a language other than English; and (C) identify where the inadvertently omitted portion of the specification or drawings can be found in the prior-filed application.

F. Petition Requirement

If an application is not otherwise entitled to a filing date under 37 CFR 1.53(b), the amendment must be by way of petition under 37 CFR 1.57(a)(3) accompanied by the fee set forth in 37 CFR 1.17(f). If OIPE mails a "Notice of Incomplete Application" indicating that the application lacks a specification or drawings, applicant should file a petition under 37 CFR 1.57(a) in response to the notice if applicant wants to rely on 37 CFR 1.57(a). See MPEP § 601.01(d) and § 601.01(f).

G. International Applications

Any amendment to an international application pursuant to 37 CFR 1.57(a) will be effective only as to the United States and shall have no effect on the international filing date of the application. The incorporation by reference relief provided in 37 CFR 1.57(a) cannot be relied upon to accord an international filing date to an international application that is not otherwise entitled to a filing date under PCT Article 11, and it cannot be relied upon to alter the international filing date accorded under PCT Article 11. In addition, no request to add the inadvertently omitted portion of the specification or drawings in an international application designating the United States will be acted upon by the Office prior to the entry and commencement of the national stage (37 CFR 1.491) or the filing of an application under 35 U.S.C. 111(a) which claims benefit of the international application.

III. EXAMPLES

Example 1:

The Office of Initial Patent Examination (OIPE) noticed that Figure 3 was omitted from the application during the initial review of the application although the specification included a description of Figure 3. The application as originally filed contained a claim under 37 CFR 1.78 for the benefit of a prior-filed application that included the appropriate Figure 3. OIPE mailed a Notice of Omitted Item(s) notifying the applicant of the

omission of Figure 3 and providing a two-month period for reply.

Applicant may rely on the incorporation by reference provided by 37 CFR 1.57(a) to amend the application to add Figure 3. Applicant, however, must file the amendment to add the inadvertently omitted drawing figure in compliance with 37 CFR 1.57(a) within the time period set forth in the Notice of Omitted Item(s).

Example 2:

Applicant discovered that the last page of the specification is inadvertently omitted after the prosecution of the application has been closed (e.g., a final Office action, an *Ex Parte* Quayle action, or a notice of allowance has been mailed to the applicant). The application, as originally filed, contained a claim under 37 CFR 1.78 for the benefit of a prior-filed application that included the last page of the specification.

If applicant wishes to amend the specification to include the inadvertently omitted material, applicant must reopen the prosecution by filing a Request for Continued Examination (RCE) under 37 CFR 1.114 accompanied by the appropriate fee and an amendment in compliance with 37 CFR 1.57(a) within the time period for reply set forth in the last Office action (e.g., prior to payment of the issue fee, unless applicant also files a petition to withdraw the application from issue).

Example 3:

Applicant filed a (third) application that includes a claim under 37 CFR 1.78 for the benefit of a (second) prior-filed application and a (first) prior-filed application. The second application was a continuation application of the first application and the second application was abandoned after the filing of the third application. Subsequently, the applicant discovered the last page of the specification was inadvertently omitted from the third application and the second application.

If the benefit of the filing date of first application for the omitted subject matter is required (for example, the omitted material is required to provide support for the claimed subject matter of the third application and there is an intervening reference that has a prior art date prior to the filing date of the third application, but after the filing date of the first application), applicant must amend the specification of the second application and the specification of the third application to include the inadvertently omitted material in compliance with 37 CFR 1.57(a) (note: the second and third applications must be filed on or after the effective date of 37 CFR 1.57(a)). Since the second application is abandoned, applicant must file a petition to revive under 37 CFR 1.137 in the second application only for the purpose of correcting the specification under 37 CFR 1.57(a) along with the amendment in compliance with 37 CFR 1.57(a).

IV. FORM PARAGRAPHS

Examiners may use form paragraph 6.19.02 set forth below to notify applicant that an amendment to add inadvertently omitted material pursuant to 37 CFR 1.57(a) is not in compliance with 37 CFR 1.57(a). If the amendment is made to the specification and/or drawings and introduces new matter into the disclosure, form paragraph 7.28 must also be used to object to the new matter added to the disclosure, and if the amendment adds new matter to the claims or affects the claims, form paragraph 7.31.01 must also be used to reject the claims under 35 U.S.C. 112, first paragraph.

¶ *6.19.02 Amendment Not in Compliance with 37 CFR 1.57(a)*

The amendment to add inadvertently omitted material pursuant to 37 CFR 1.57(a) filed **[1]** is not in compliance with 37 CFR 1.57(a) because **[2]**.

Examiner Note:

1. In bracket 1, insert the date the amendment was filed.

2. In bracket 2, insert the reason why the amendment has not been entered. For example: (1) the present application was filed before September 21, 2004, the effective date of 37 CFR 1.57(a); (2) the claim for priority/benefit of the prior-filed application was not present on the filing date of the present application; (3) the inadvertently omitted portion is not completely contained in the prior-filed application; (4) a copy of the prior-filed application (except where the prior-filed application is an application filed under 35 U.S.C. 111) was not submitted; (5) an English language translation of the prior-filed non-English language application was not submitted; or (6) applicant did not identify where the inadvertently omitted portion of the specification or drawings can be found in the prior-filed application.

3. This form paragraph must be followed by form paragraph 7.28, where the amendment is made to the specification and/or drawings and introduces new matter into the disclosure, and/or form paragraph 7.31.01, where the amendment adds new matter to the claims or affects the claims.

4. If the amendment is an after-final amendment, an advisory action should be issued indicating that the amendment raises new issues because it is not in compliance with 37 CFR 1.57(a).

5. This form paragraph should not be used if there is an express incorporation by reference since applicant would not need to comply with the requirements of 37 CFR 1.57(a).

<

202 Cross-Noting

**

202.02 Notation in File History Regarding Prior U.S. Applications, Including Provisional Applications [R-3]

For Image File Wrapper (IFW) processing, see the IFW Manual.**>The front page of a printed patent identifies all prior applications for which benefits are claimed under 35 U.S.C. 119(e), 120, 121, or 365(c) in continuation-in-part, continuation, divisional, substitute, and reissue applications. Therefore, the identifying data of all prior applications for which benefits are claimed should be reviewed by the examiner to ensure that the data is accurate and provided in either the first sentence(s) of the specification or in an application data sheet. See 37 CFR 1.78(a) and MPEP § 201.11. For example, the reference to a prior nonprovisional application must include the appropriate relationship (e.g., continuation, divisional, or continuation-in-part) between the nonprovisional applications.<

The *>front page< of a printed patent issuing on a continued prosecution application (CPA) filed under 37 CFR 1.53(d) will identify the application number and filing date of the most recent noncontinued prosecution application (but not the filing date of the CPA) as well as all **>prior applications< from which *>benefit< was claimed in the most recent noncontinued prosecution application.

Where ** prior application data, including provisional application data, is preprinted ** on the PALM bib-data sheet **, the examiner should check that data for accuracy, including whether the application is, in fact, copending with the *>prior< nonprovisional application or applications *>for< which *>benefit< is claimed. >Similarly, the application number of any provisional application for which benefit is claimed should be printed on the PALM bib-data sheet.< If applicant claims benefit under 35 U.S.C. 119(e) to a prior provisional application, and states that the provisional application claims priority to earlier domestic or foreign application(s), the earlier application(s) should not be reflected on the ** PALM bib-data sheet because a provisional application is not entitled to the right of priority of any other application. See 35 U.S.C. 111(b)(7).

Where the data is correct, the examiner should initial ** the PALM bib-data sheet ** in the provided space. Should there be error in the preprinted *>prior< application data, the ** correction or entry of the data in the PALM data base can be made by technical support staff of the Technology Center. Upon entry of the data, a new PALM bib-data sheet should be printed and **>scanned into< the file.

**

The inclusion of ** prior application information in the *>patent< does not necessarily indicate that the claims are entitled to the benefit of the earlier filing date.

See MPEP § 306 for work done by the Assignment Division pertaining to these particular types of applications.

In the situation in which there has been no reference to a *>prior< application because the benefit of its filing date is not desired, no notation as to the *>prior< application is made on the ** PALM bib-data sheet **.

202.03 Notation on File Wrapper When Priority Is Claimed for Foreign Application [R-3]

For Image File Wrapper (IFW) processing, see the IFW Manual. A ** PALM bib-data sheet should include the application number, country (or intellectual property authority), day, month, and year of each foreign application that the U.S. application is claiming the *>priority< of. The examiner should check this information for accuracy. Should there be error, the examiner should make the appropriate corrections directly ** on the PALM bib-data sheet, and have the information corrected in the Office computer systems by forwarding the information ** to the examiner's

Legal Instrument Examiner, with an explanation of the correction to be made. The examiner should initial ** the PALM bib-data sheet in the "VERIFIED" space provided when the information is correct or has been amended to be correct. However, the examiner must still indicate on the Office action and ** on the PALM bib-data sheet whether the conditions of 35 U.S.C. 119(a)-(d) or (f) have been met.

If the filing dates of several foreign applications are claimed (see MPEP § 201.15, last paragraph) and **>the certified copy of each foreign application has< been received **, information respecting each of the foreign applications is to be entered ** on the PALM bib-data sheet.

The front page of the patent when it is issued, and the listing in the *Official Gazette*, will refer to the claim of priority, giving the country, the filing date, and the number of the foreign application in those applications in which ** the PALM bib-data sheet has been endorsed.

202.04 In Oath or Declaration [R-2]

As will be noted by reference to MPEP § 201.14, 37 CFR 1.63 requires that the oath or declaration **>must identify any foreign application for patent (or inventor's certificate) for which a claim for priority is made pursuant to 37 CFR 1.55, and any foreign application having a filing date before that of the application on which priority is claimed, by specifying the application number, country, day, month, and year of its filing, unless such information is supplied on an application data sheet in accordance with 37 CFR 1.76.<
**

203 Status of Applications

203.01 New [R-2]

A "new" application is a nonprovisional *>application< that has not yet received an action by the examiner. An amendment filed prior to the first Office Action does not alter the status of a "new" application.

203.02 Rejected

A nonprovisional application which, during its prosecution in the examining group and before allowance, contains an unanswered examiner's action is designated as a "rejected" application. Its status as a "rejected" application continues as such until acted upon by the applicant in reply to the examiner's action (within the allotted reply period), or until it becomes abandoned.

203.03 Amended [R-2]

An "amended" ** nonprovisional application is one that having been acted on by the examiner, has in turn been acted on by the applicant in reply to the examiner's action. The applicant's reply may be confined to an election, a traverse of the action taken by the examiner or may include an amendment of the application.

203.04 Allowed or in Issue [R-2]

An "allowed" nonprovisional application or an application "in issue" is one which, having been examined, is passed to issue as a patent, subject to payment of the issue fee. Its status as an "allowed" application continues from the date of the notice of allowance until it is withdrawn from issue or until it issues as a patent or becomes abandoned, as provided in 37 CFR 1.316.

The files of allowed applications are kept in the **>Office of Patent Publication. For Image File Wrapper (IFW) processing, see the IFW Manual<.

203.05 Abandoned [R-3]

An abandoned application is, *inter alia*, one which is removed from the Office docket of pending applications:

(A) through formal abandonment by the applicant (acquiesced in by the assignee if there is one) or by the attorney or agent of record;

(B) through failure of applicant to take appropriate action at some stage in the prosecution of a nonprovisional application;

(C) for failure to pay the issue fee (MPEP * § 711 to § 711.05); or

(D) in the case of a provisional application, no later than 12 months after the filing date of the provisional application (see MPEP § 711.03(c) and 35 U.S.C. 111 (b) (5)).

203.06 Incomplete [R-3]

An application **>that is not entitled to a filing date (e.g., for lacking some of the essential parts)< is termed an incomplete application. (MPEP § 506 * and § 601.01(d)-(g)).

**

203.08 Status Inquiries [R-2]

>

I. < NEW APPLICATION

Current examining procedures now provide for the routine mailing from the Technology Centers (TCs) of Form PTOL-37 in *every* case of allowance of an application. Thus, the mailing of a form PTOL-37 in addition to a formal Notice of Allowance (PTOL-85) in all allowed applications would seem to obviate the need for status inquiries even as a precautionary measure where the applicant may believe his or her new application may have been passed to issue on the first examination. However, as an exception, a status inquiry would be appropriate where a Notice of Allowance is not received within three months from receipt of form PTOL-37.

Current examining procedures also aim to minimize the spread in dates among the various examiner dockets of each art unit and TC with respect to actions on new applications. Accordingly, the dates of the "oldest new applications" appearing in the *Official Gazette* are fairly reliable guides as to the expected time frames of when the examiners reach the applications or action.

Therefore, it should be rarely necessary to query the status of a new application.

>

II. < AMENDED APPLICATIONS

Amended applications are expected to be taken up by the examiner and an action completed within two months of the date the examiner receives the application. Accordingly, a status inquiry is not in order after reply by the attorney until 5 or 6 months have elapsed with no response from the Office.> However, in the event that a six month period has elapsed, and no response from the Office is received, applicant should inquire as to the status of the application to avoid potential abandonment. Applicants are encouraged to use PAIR to make status inquiries. See subsection III below.< A >stamped< postcard receipt for replies to Office actions, adequately and specifically identifying the papers filed, will be considered *prima facie* proof of receipt of such papers. >See MPEP § 503.< Where such proof indicates the timely filing of a reply, the submission of a copy of the postcard with a copy of the reply will ordinarily obviate the need for a petition to revive. Proof of receipt of a timely reply to a final action will obviate the need for a petition to revive only if the reply was in compliance with 37 CFR 1.113.

>

III. < IN GENERAL

>Applicants are encouraged, where appropriate, to check Patent Application Information Retrieval (PAIR) (http://pair.uspto.gov) which provides applicants direct secure access to their own patent application status information, as well as to general patent information publicly available. See MPEP § 1730.< Inquiries as to the status of applications, by persons entitled to the information, should be answered promptly. Simple letters of inquiry regarding the status of applications will be transmitted from the Office of Initial Patent Examination* to the TCs for direct action. Such letters will be stamped "Status Letters."

If the correspondent is not entitled to the information, in view of 37 CFR 1.14, he or she should be so informed. For Congressional and other official inquiries, see MPEP § 203.08(a).

Telephone inquiries regarding the status of applications, by persons entitled to the information, should be directed to the TC technical support personnel and not to the examiners **>, since< the technical support personnel can readily provide status information without contacting the examiners.

See also MPEP § 102 regarding status information.

Processing Status Letters by the TCs

(A) All status letters sent to a TC will be delivered to a designated location (e.g., Customer Service Office) within the TC for action. Status requests with respect to PCT applications are to be processed by the PCT Legal Division and should be forwarded to that office for reply. Status information regarding an application identified in a published patent document

should be forwarded to the File Information Unit for reply. See MPEP § 102.

(B) A designated representative of the TC will review the status letter to determine the nature of the request and whether the requester is entitled to receive the requested information. PALM Intranet should be used to determine whether the requester is entitled to the information. If after reviewing the information in PALM it is not clear whether the requester is entitled to receive the information requested, the TC representative should review the application file to resolve the issue.

(C) The TC representative will determine the appropriate reply to the status letter by

(1) using PALM Intranet to determine the status of the application,

(2) reviewing the new application dates within the TC,

(3) reviewing any tracking system for the particular item or action at issue,

(4) discussing the matter with the supervisory patent examiner or the examiner in charge of the application, or

(5) when necessary, reviewing the application file.

The TC representative should discuss the matter with an appropriate resource person in the TC if it is not clear what the reply should be.

(D) The TC representative may reply to a status letter, other than an inquiry directed to an abandoned application, by placing a telephone call to the attorney or agent of record. If the status letter requests a date of expected action, the reply should make clear that the date provided is only an "expected" date of when the examiner will take action on the application. If the requester requests that the Office provide a written reply to the status letter, the reply may be faxed (preferable) or mailed (only if requested) to the correspondence address.

(E) The TC representative will note the reply to the status inquiry on the status letter with the initials of the TC representative and the date that the reply was completed.

(F) All TCs will employ the Status Letter Database to track the progress of the status letters. The TC will retain a record of the reply to the status letter. The record includes the entry of the information concerning the status letter and the reply into the Status Letter Database.

(G) After the information has been entered into the Status Letter Database, the status letter along with the reply must be *>associated< with the application file (including abandoned applications)**.

203.08(a) Congressional and Other Official Inquiries [R-3]

Correspondence and inquiries from the White House, Members of Congress, embassies, and heads of Executive departments and agencies normally are cleared through the Office of International Relations and/or the Office of Congressional Relations.

When persons from the designated official sources request services from the Office, or information regarding the business of the Office, they should, under long-standing instructions, be referred, at least initially, to a staff member in the appropriate office.

This procedure is used so that there will be uniformity in the handling of contacts from the indicated sources, and also so that compliance with directives of the Department of Commerce is attained.

Inquiries referred to in this section such as correspondence from embassies, the Office of the U.S. Trade Representative, and the Department of State should immediately be transmitted to the Director of the Office of International Relations by messenger, and a staff member of that office should be notified by phone that such correspondence has been received. Inquiries referred to in this section, such as correspondence from Congress or the White House, should immediately be transmitted to the Director of the Office of Congressional Relations by messenger, and * a staff member of that office should be notified by phone that such correspondence has been received.

●●●●●●●●●●●●●●●●●●●●●●●●●●●

Chapter 300 Ownership and Assignment

301 Ownership/Assignability of Patents and Applications [R-3]

35 U.S.C. 261. Ownership; assignment.

Subject to the provisions of this title, patents shall have the attributes of personal property.

Applications for patent, patents, or any interest therein, shall be assignable in law by an instrument in writing. The applicant, patentee, or his assigns or legal representatives may in like manner grant and convey an exclusive right under his application for patent, or patents, to the whole or any specified part of the United States.

A certificate of acknowledgment under the hand and official seal of a person authorized to administer oaths within the United States, or, in a foreign country, of a diplomatic or consular officer of the United States or an officer authorized to administer oaths whose authority is proved by a certificate of a diplomatic or consular officer of the United States, or apostille of an official designated by a foreign country which, by treaty or convention, accords like effect to apostilles of designated officials in the United States, shall be prima facie evidence of the execution of an assignment, grant, or conveyance of a patent or application for patent.

An assignment, grant, or conveyance shall be void as against any subsequent purchaser or mortgagee for valuable consideration, without notice, unless it is recorded in the Patent and Trademark Office within three months from its date or prior to the date of such subsequent purchase or mortgage.

35 U.S.C. 262. Joint owners.

In the absence of any agreement to the contrary, each of the joint owners of a patent may make, use, offer to sell, or sell the patented invention within the United States, or import the patented invention into the United States, without the consent of and without accounting to the other owners.

37 CFR 3.1. Definitions.

**>For purposes of this part, the following definitions shall apply:

Application means a national application for patent, an international patent application that designates the United States of America, or an application to register a trademark under section 1 or 44 of the Trademark Act, 15 U.S.C. 1051 or 15 U.S.C. 1126, unless otherwise indicated.

Assignment means a transfer by a party of all or part of its right, title and interest in a patent, patent application, registered mark or a mark for which an application to register has been filed.

Document means a document which a party requests to be recorded in the Office pursuant to § 3.11 and which affects some interest in an application, patent, or registration.

Office means the United States Patent and Trademark Office.

Recorded document means a document which has been recorded in the Office pursuant to § 3.11.

Registration means a trademark registration issued by the Office.<

>

I. < OWNERSHIP

Ownership of a patent gives the patent owner the right to exclude others from making, using, offering for sale, selling, or importing into the United States the invention claimed in the patent. 35 U.S.C. 154(a)(1). Ownership of the patent does not furnish the owner with the **right** to make, use, offer for sale, sell, or import the claimed invention because there may be other legal considerations precluding same (e.g., existence of another patent owner with a dominant patent, failure to obtain FDA approval of the patented invention, an injunction by a court against making the product of the invention, or a national security related issue).

The ownership of the patent (or the application for the patent) initially vests in the named inventors of the invention of the patent. See *Beech Aircraft Corp. v. EDO Corp.*, 990 F.2d 1237, 1248, 26 USPQ2d 1572, 1582 (Fed. Cir. 1993). The patent (or patent application) is then assignable by an instrument in writing, and the assignment of the patent, or patent application, transfers to the assignee(s) an alienable (transferable) ownership interest in the patent or application. 35 U.S.C. 261.

>

II. < ASSIGNMENT

"Assignment," in general, is the act of transferring to another the ownership of one's property, i.e., the interest and rights to the property. In 37 CFR 3.1, assignment of patent rights is defined as "a transfer by a party of all or part of its right, title and interest in a patent or patent application...." An assignment of a patent, or patent application, is the transfer to another of a party's **entire** ownership interest or a percentage of that party's ownership interest in the patent or application. In order for an assignment to take place, the transfer to another must include the entirety of the bundle of rights that is associated with the ownership interest, i.e., all of the bundle of rights that are inherent in the right, title and interest in the patent or patent application.

>

III. < LICENSING

As compared to assignment of patent rights, the licensing of a patent transfers a bundle of rights which is less than the entire ownership interest, e.g., rights that may be limited as to time, geographical area, or field of use. A patent license is, in effect, a contractual agreement that the patent owner will not sue the licensee for patent infringement if the licensee makes, uses, offers for sale, sells, or imports the claimed invention, as long as the licensee fulfills its obligations and operates within the bounds delineated by the license agreement.

An exclusive license may be granted by the patent owner to a licensee. The exclusive license prevents the patent owner (or any other party to whom the patent owner might wish to sell a license) from competing with the exclusive licensee, as to the geographic region, the length of time, and/or the field of use, set forth in the license agreement.

A license is not an assignment of the patent. Even if the license is an exclusive license, it is **not** an assignment of patent rights in the patent or application.

>

IV. < INDIVIDUAL AND JOINT OWNERSHIP

Individual ownership - An individual entity may own the entire right, title and interest of the patent property. This occurs where there is only one inventor, and the inventor has not assigned the patent property. Alternatively, it occurs where all parties having ownership interest (all inventors and assignees) assign the patent property to one party.

Joint ownership - Multiple parties may **together** own the entire right, title and interest of the patent property. This occurs when any of the following cases exist:

(A) Multiple partial assignees of the patent property;

(B) Multiple inventors who have not assigned their right, title and interest; or

(C) A combination of partial assignee(s), and inventor(s) who have not assigned their right, title and interest.

Each individual inventor may only assign the interest he or she holds; thus, assignment by one joint inventor renders the assignee a partial assignee. A partial assignee likewise may only assign the interest it holds; thus, assignment by a partial assignee renders a subsequent assignee a partial assignee. All parties having any portion of the ownership in the patent property must act **together** as a composite entity in patent matters before the Office.

>

V. < MAKING THE ASSIGNMENT OF RECORD

An assignment can be made of record in the United States Patent and Trademark Office (Office) in two different ways, for two different purposes. The differences are important to note:

(A) An assignment can be made of record in the assignment records of the Office. Recordation of the assignment provides legal notice to the public of the assignment. It should be noted that recording of the assignment is merely a ministerial act; it is not an Office determination of the validity of the assignment document nor the effect of the assignment document on the ownership of the patent property. See 37 CFR 3.54 and MPEP § 317.03; and

(B) An assignment can be made of record in the file of a patent application, patent, or other patent proceeding (e.g., reexamination proceeding). This step is necessary to permit the assignee to "take action" in the application, patent, or other patent proceeding under the conditions set forth in 37 CFR 3.73 and MPEP § 324. Recordation of an assignment in the assignment records of the Office does **not**, by itself, permit the assignee to take action in the application, patent, or other patent proceeding. >For a patent to issue to an assignee, the assignment must have been recorded or filed for recordation in accordance with 37 CFR 3.11. See 37 CFR 3.81(a).<

301.01 Accessibility of Assignment Records [R-3]

37 CFR 1.12. Assignment records open to public inspection.

**>

(a)(1) Separate assignment records are maintained in the United States Patent and Trademark Office for patents and trademarks. The assignment records, relating to original or reissue patents, including digests and indexes (for assignments recorded on or after May 1, 1957), and published patent applications are open to public inspection at the United States Patent and Trademark Office, and copies of patent assignment records may be obtained upon request and payment of the fee set forth in § 1.19 of this chapter. See § 2.200 of this chapter regarding trademark assignment records.

(2) All records of assignments of patents recorded before May 1, 1957, are maintained by the National Archives and Records Administration (NARA). The records are open to public inspection. Certified and uncertified copies of those assignment records are provided by NARA upon request and payment of the fees required by NARA.<

**>

(b) Assignment records, digests, and indexes relating to any pending or abandoned patent application, which is open to the public pursuant to § 1.11 or for which copies or access may be supplied pursuant to § 1.14, are available to the public. Copies of any assignment records, digests, and indexes that are not available to the public shall be obtainable only upon written authority of the applicant or applicant's assignee or patent attorney or patent agent or upon a showing that the person seeking such information is a bona fide prospective or actual purchaser, mortgagee, or licensee of such application, unless it shall be necessary to the proper conduct of business before the Office or as provided in this part.<

(c) Any request by a member of the public seeking copies of any assignment records of any pending or abandoned patent application preserved in confidence under § 1.14, or any information with respect thereto, must:**>

(1) Be in the form of a petition including the fee set forth in § 1.17(g); or<

(2) Include written authority granting access to the member of the public to the particular assignment records from the applicant or applicant's assignee or attorney or agent of record.

(d) An order for a copy of an assignment or other document should identify the reel and frame number where the assignment or document is recorded. If a document is identified without specifying its correct reel and frame, an extra charge as set forth in § 1.21(j) will be made for the time consumed in making a search for such assignment.

Assignment documents relating to patents, published patent applications, registrations of trademarks, and applications for registration of trademarks are open to public inspection. >Records related to assignments of patents, and patent applications that have

been published as patent application publications are available on the USPTO Internet web site. To view the recorded assignment document itself, members of the public must place an order pursuant to 37 CFR 1.12(d).<

The Office will not open only certain parts of an assignment document to public inspection. If such a document contains two or more items, any one of which, if alone, would be open to such inspection, then the entire document will be open. Thus, if a document covers either a trademark or a patent in addition to one or more patent applications, it will be available to the public *ab initio*; and if it covers a number of patent applications, it will be so available as soon as any one of them is published or patented. Documents relating only to one or more pending applications for patent which have not been published under 35 U.S.C. 122(b) will not be open to public inspection.

Copies of assignment records relating to pending or abandoned patent applications **>which are open to the public pursuant to 37 CFR 1.11 or for which copies or access may be supplied pursuant to 37 CFR 1.14 are available to the public. For pending or abandoned applications which are not open to the public pursuant to 37 CFR 1.11 or for which copies or access may not be supplied pursuant to 37 CFR 1.14,< information related thereto *>is only< obtainable upon a showing of written authority from the applicant or applicant's assignee or from the attorney or agent of either, or upon a showing that the person seeking such information is a *bona fide* prospective or actual purchaser, mortgagee, or licensee of such application.

If the application on which a patent was granted is a division *>,< continuation>, or continuation-in-part< of an earlier application, the assignment records of that earlier application will be open to public inspection **>because copies or access may be supplied to the earlier application pursuant to 37 CFR 1.14<.

Assignment records relating to reissue applications are open to public inspection >since reissue applications are open to public inspection pursuant to 37 CFR 1.11(b).<

Requests for abstracts of title for assignments of patents recorded after May 1, 1957, are provided by the Certification Division upon request and payment of fee required in 37 CFR 1.19. Requests for copies of pre-1957 records for patents should be directed to the National Archives and Records Administration (NARA). Since these records are maintained by NARA, it is more expeditious to request copies directly from NARA, rather than from the Office, which would then have to route the requests to NARA. Payment of the fees required by NARA should accompany all requests for copies.

All assignment records from 1837 to April 30, 1957 for patents are now maintained and are open for public inspection in the National Archives Research Room located at the Washington National Records Center Building, 4205 Suitland Road, Suitland, Maryland 20746. Assignment documents recorded before 1837 are maintained at the >Civilian Records Division of the< National Archives **>at College Park, 8601 Adelphi Road, College Park, MD 20740-6001<.

302 Recording of Assignment Documents [R-5]

37 CFR 3.11. Documents which will be recorded.

(a) Assignments of applications, patents, and registrations, accompanied by completed cover sheets as specified in §§ 3.28 and 3.31, will be recorded in the Office. Other documents, accompanied by completed cover sheets as specified in §§ 3.28 and 3.31, affecting title to applications, patents, or registrations, will be recorded as provided in this part or at the discretion of the Director.

(b) Executive Order 9424 of February 18, 1944 (9 FR 1959, 3 CFR 1943-1948 Comp., p. 303) requires the several departments and other executive agencies of the Government, including Government-owned or Government-controlled corporations, to forward promptly to the Director for recording all licenses, assignments, or other interests of the Government in or under patents or patent applications. Assignments and other documents affecting title to patents or patent applications and documents not affecting title to patents or patent applications required by Executive Order 9424 to be filed will be recorded as provided in this part.

**>

(c) A joint research agreement or an excerpt of a joint research agreement will also be recorded as provided in this part.<

37 CFR 3.58. Governmental registers.

(a) The Office will maintain a Departmental Register to record governmental interests required to be recorded by Executive Order 9424. This Departmental Register will not be open to public inspection but will be available for examination and inspection by duly authorized representatives of the Government. Governmental interests recorded on the Departmental Register will be available for public inspection as provided in § 1.12.

(b) The Office will maintain a Secret Register to record governmental interests required to be recorded by Executive Order 9424. Any instrument to be recorded will be placed on this Secret Register at the request of the department or agency submitting the

same. No information will be given concerning any instrument in such record or register, and no examination or inspection thereof or of the index thereto will be permitted, except on the written authority of the head of the department or agency which submitted the instrument and requested secrecy, and the approval of such authority by the Director. No instrument or record other than the one specified may be examined, and the examination must take place in the presence of a designated official of the Patent and Trademark Office. When the department or agency which submitted an instrument no longer requires secrecy with respect to that instrument, it must be recorded anew in the Departmental Register.

Effective September 4, 1992, Part 3 has been added to 37 CFR to set forth Office rules on recording assignments and other documents and the rights of an assignee.

Effective December 10, 2004, as a result of the Cooperative Research and Technology Enhancement Act of 2004 (CREATE Act), 37 CFR 3.11(c) has been added to provide that the Office will record a joint research agreement or an excerpt of a joint research agreement. **

302.01 Assignment Document Must Be ** Copy for Recording [R-3]

**>

37 CFR 3.24. Requirements for documents and cover sheets relating to patents and patent applications.

(a) *For electronic submissions:* Either a copy of the original document or an extract of the original document may be submitted for recording. All documents must be submitted as digitized images in Tagged Image File Format (TIFF) or another form as prescribed by the Director. When printed to a paper size of either 21.6 by 27.9 cm (8 1/2 inches by 11 inches) or 21.0 by 29.7 cm (DIN size A4), the document must be legible and a 2.5 cm (one-inch) margin must be present on all sides.

(b) *For paper or facsimile submissions*: Either a copy of the original document or an extract of the original document must be submitted for recording. Only one side of each page may be used. The paper size must be either 21.6 by 27.9 cm (8 1/2 inches by 11 inches) or 21.0 by 29.7 cm (DIN size A4), and in either case, a 2.5 cm (one-inch) margin must be present on all sides. For paper submissions, the paper used should be flexible, strong white, non-shiny, and durable. The Office will not return recorded documents, so original documents must not be submitted for recording.<

The United States Patent and Trademark Office will accept and record only **>a< copy of an original assignment or other document. See MPEP § 317. >The document submitted for recordation will not be returned to the submitter. If the copy submitted for recordation is illegible, the recorded document will be illegible. Accordingly, applicants and patent owners should ensure that only a legible copy is submitted for recordation.<

**

302.02 Translation of Assignment Document

37 CFR 3.26. English language requirement.

The Office will accept and record non-English language documents only if accompanied by an English translation signed by the individual making the translation.

The assignment document, if not in the English language, will not be recorded unless accompanied by an English translation signed by the translator.

302.03 Identifying Patent or Application [R-3]

**>

37 CFR 3.21. Identification of patents and patent applications.

An assignment relating to a patent must identify the patent by the patent number. An assignment relating to a national patent application must identify the national patent application by the application number (consisting of the series code and the serial number, *e.g.*, 07/123,456). An assignment relating to an international patent application which designates the United States of America must identify the international application by the international application number (*e.g.*, PCT/US90/01234). If an assignment of a patent application filed under § 1.53(b) is executed concurrently with, or subsequent to, the execution of the patent application, but before the patent application is filed, it must identify the patent application by the name of each inventor and the title of the invention so that there can be no mistake as to the patent application intended. If an assignment of a provisional application under § 1.53(c) is executed before the provisional application is filed, it must identify the provisional application by the name of each inventor and the title of the invention so that there can be no mistake as to the provisional application intended.<

The patent or patent application to which an assignment relates must be identified by patent number or application number unless the assignment is executed concurrently with or subsequent to the execution of the application but before the application is filed. Then, the application must be identified by ** the name(s) of the inventors, and the title of the invention. If an assignment of a provisional application is executed before the provisional application is filed, it

must identify the provisional application by name(s) of the inventors and the title of the invention.

The Office makes every effort to provide applicants with the application numbers for newly filed patent applications as soon as possible. It is suggested, however, that an assignment be written to allow entry of the identifying number after the execution of the assignment. An example of acceptable wording is:

"I hereby authorize and request my attorney, (Insert name), of (Insert address), to insert here in parentheses (Application number , filed) the filing date and application number of said application when known."

302.04 Foreign Assignee May Designate Domestic Representative [R-3]

35 U.S.C. 293. Nonresident patentee; service and notice.

Every patentee not residing in the United States may file in the Patent and Trademark Office a written designation stating the name and address of a person residing within the United States on whom may be served process or notice of proceedings affecting the patent or rights thereunder. If the person designated cannot be found at the address given in the last designation, or if no person has been designated, the United States District Court for the District of Columbia shall have jurisdiction and summons shall be served by publication or otherwise as the court directs. The court shall have the same jurisdiction to take any action respecting the patent or rights thereunder that it would have if the patentee were personally within the jurisdiction of the court.

**>

37 CFR 3.61. Domestic representative.

If the assignee of a patent, patent application, trademark application or trademark registration is not domiciled in the United States, the assignee may designate a domestic representative in a document filed in the United States Patent and Trademark Office. The designation should state the name and address of a person residing within the United States on whom may be served process or notice of proceedings affecting the application, patent or registration or rights thereunder.<

An assignee >of a patent or patent application who is< not domiciled in the United States may, by written document signed by such assignee, designate a domestic representative. The designation of domestic representative should always be a paper separate from any assignment document, in order that the paper of designation can be retained in the appropriate application or patent file. Also, there should be a separate paper of designation of representative for each patent or application, so that a designation paper can be placed in each file. The designation of a domestic representative should be directed to the Office of Public Records for processing.

302.05 Address of Assignee

The address of the assignee may be recited in the assignment document and must be given in the required cover sheet. See MPEP § 302.07.

302.06 Fee for Recording [R-3]

37 CFR 3.41. Recording fees.

(a) All requests to record documents must be accompanied by the appropriate fee. Except as provided in paragraph (b) of this section, a fee is required for each application, patent and registration against which the document is recorded as identified in the cover sheet. The recording fee is set in § 1.21(h) of this chapter for patents and in § 2.6(b)(6) of this chapter for trademarks.

(b) No fee is required for each patent application and patent against which a document required by Executive Order 9424 is to be filed if:

(1) The document does not affect title and is so identified in the cover sheet (see § 3.31(c)(2)); and

**>

(2) The document and cover sheet are either: Faxed or electronically submitted as prescribed by the Director, or mailed to the Office in compliance with § 3.27.<

The recording fee set forth in 37 CFR 1.21(h) is charged for each patent application and patent identified in the required cover sheet except as provided in 37 CFR 3.41(b).

302.07 Assignment Document Must Be Accompanied by a Cover Sheet [R-5]

37 CFR 3.28. Requests for recording.

**>Each document submitted to the Office for recording must include a single cover sheet (as specified in § 3.31) referring either to those patent applications and patents, or to those trademark applications and registrations, against which the document is to be recorded. If a document to be recorded includes interests in, or transactions involving, both patents and trademarks, then separate patent and trademark cover sheets, each accompanied by a copy of the document to be recorded, must be submitted. If a document to be recorded is not accompanied by a completed cover sheet, the document and the incomplete cover sheet will be returned pursuant to § 3.51 for proper completion, in which case the document and a completed cover sheet should be resubmitted.<

37 CFR 3.31. Cover sheet content.

(a) Each patent or trademark cover sheet required by § 3.28 must contain:

(1) The name of the party conveying the interest;

(2) The name and address of the party receiving the interest;

(3) A description of the interest conveyed or transaction to be recorded;

(4) Identification of the interests involved:

(i) For trademark assignments and trademark name changes: Each trademark registration number and each trademark application number, if known, against which the Office is to record the document. If the trademark application number is not known, a copy of the application or a reproduction of the trademark must be submitted, along with an estimate of the date that the Office received the application; or

(ii) For any other document affecting title to a trademark or patent application, registration or patent: Each trademark or patent application number or each trademark registration number or patent against which the document is to be recorded, or an indication that the document is filed together with a patent application;

(5) The name and address of the party to whom correspondence concerning the request to record the document should be mailed;

(6) The date the document was executed;

(7) The signature of the party submitting the document. For an assignment document or name change filed electronically, the person who signs the cover sheet must either:

**>

(i) Place a symbol comprised of letters, numbers, and/or punctuation marks between forward slash marks (*e.g.* /Thomas O' Malley III/) in the signature block on the electronic submission; or<

(ii) Sign the cover sheet using some other form of electronic signature specified by the Director.

(b) A cover sheet should not refer to both patents and trademarks, since any information, including information about pending patent applications, submitted with a request for recordation of a document against a trademark application or trademark registration will become public record upon recordation.

(c) Each patent cover sheet required by § 3.28 seeking to record a governmental interest as provided by § 3.11(b) must:

(1) Indicate that the document relates to a Government interest; and

(2) Indicate, if applicable, that the document to be recorded is not a document affecting title (see § 3.41(b)).

(d) Each trademark cover sheet required by § 3.28 seeking to record a document against a trademark application or registration should include, in addition to the serial number or registration number of the trademark, identification of the trademark or a description of the trademark, against which the Office is to record the document.

(e) Each patent or trademark cover sheet required by § 3.28 should contain the number of applications, patents or registrations identified in the cover sheet and the total fee.

(f) Each trademark cover sheet should include the citizenship of the party conveying the interest and the citizenship of the party receiving the interest. In addition, if the party receiving the interest is a partnership or joint venture, the cover sheet should set forth the names, legal entities, and national citizenship (or the state or country of organization) of all general partners or active members that compose the partnership or joint venture.

(g) The cover sheet required by § 3.28 seeking to record a joint research agreement or an excerpt of a joint research agreement as provided by § 3.11(c) must:

(1) Identify the document as a "joint research agreement" (in the space provided for the description of the interest conveyed or transaction to be recorded if using an Office-provided form);

(2) Indicate the name of the owner of the application or patent (in the space provided for the name and address of the party receiving the interest if using an Office-provided form);

(3) Indicate the name of each other party to the joint research agreement party (in the space provided for the name of the party conveying the interest if using an Office-provided form); and

(4) Indicate the date the joint research agreement was executed.

Each assignment document submitted to the Office for recording must be accompanied by a cover sheet as required by 37 CFR 3.28. The cover sheet for patents or patent applications must contain:

(A) The name of the party conveying the interest;

(B) The name and address of the party receiving the interest;

(C) A description of the interest conveyed or transaction to be recorded;

(D) Each patent application number or patent number against which the document is to be recorded, or an indication that the document is filed together with a patent application;

(E) The name and address of the party to whom correspondence concerning the request to record the document should be mailed;

(F) The date the document was executed; and

(G) The signature of the party submitting the document.

If the document submitted for recordation is a joint research agreement or an excerpt of a joint research agreement, the cover sheet must clearly identify the document as a "joint research agreement" (in the space provided for the description of the interest conveyed if using Form PTO-1595). The date the joint research agreement was executed must also be identified. The cover sheet must also identify the name(s) of the owner(s) of the application or patent (in the space provided for the name and address of the party receiving the interest if using Form PTO-1595). The name(s) of every other party(ies) to the joint research

agreement must also be identified (in the space provided for the name of the party conveying the interest if using Form PTO-1595).

Each patent cover sheet should contain the number of patent applications or patents identified in the cover sheet and the total fee.

Examples of the type of descriptions of the interest conveyed or transaction to be recorded that can be identified are:

(A) assignment;
(B) security agreement;
(C) merger;
(D) change of name;
(E) license;
(F) foreclosure;
(G) lien;
(H) contract; and
(I) joint research agreement.

Cover sheets required by 37 CFR 3.28 seeking to record a governmental interest must also (1) indicate that the document relates to a governmental interest and (2) indicate, if applicable, that the document to be recorded is not a document affecting title.

A patent cover sheet may not refer to trademark applications or registrations.

Form PTO-1595, Recordation Form Cover Sheet, may be used as the cover sheet for recording documents relating to patent(s) and/or patent application(s) in the Office.

Form **PTO-1595** (Rev. 07/05)
OMB No. 0651-0027 (exp. 6/30/2008)

U.S. DEPARTMENT OF COMMERCE
United States Patent and Trademark Office

RECORDATION FORM COVER SHEET
PATENTS ONLY

To the Director of the U.S. Patent and Trademark Office: Please record the attached documents or the new address(es) below.

1. Name of conveying party(ies)

Additional name(s) of conveying party(ies) attached? ☐ Yes ☐ No

2. Name and address of receiving party(ies)

Name: _____

Internal Address: _____

_____

Street Address: _____

_____

City: _____

State: _____

Country: _____ Zip: _____

Additional name(s) & address(es) attached? ☐ Yes ☐ No

3. Nature of conveyance/Execution Date(s):

Execution Date(s) _____

☐ Assignment ☐ Merger
☐ Security Agreement ☐ Change of Name
☐ Joint Research Agreement
☐ Government Interest Assignment
☐ Executive Order 9424, Confirmatory License
☐ Other _____

4. Application or patent number(s): ☐ This document is being filed together with a new application.

A. Patent Application No.(s)

B. Patent No.(s)

Additional numbers attached? ☐ Yes ☐ No

5. Name and address to whom correspondence concerning document should be mailed:

Name: _____

Internal Address: _____

_____

Street Address: _____

_____

City: _____

State: _____ Zip: _____

Phone Number: _____

Fax Number: _____

Email Address: _____

6. Total number of applications and patents involved: _____

7. Total fee (37 CFR 1.21(h) & 3.41) $ _____

☐ Authorized to be charged by credit card
☐ Authorized to be charged to deposit account
☐ Enclosed
☐ None required (government interest not affecting title)

8. Payment Information

a. Credit Card Last 4 Numbers _____
Expiration Date _____

b. Deposit Account Number _____

Authorized User Name _____

9. Signature:

_____ _____
Signature Date

_____
Name of Person Signing

Total number of pages including cover sheet, attachments, and documents: ☐

Documents to be recorded (including cover sheet) should be faxed to (571) 273-0140, or mailed to:
Mail Stop Assignment Recordation Services, Director of the USPTO, P.O.Box 1450, Alexandria, V.A. 22313-1450

Guidelines for Completing Patents Cover Sheets (PTO-1595)

Cover Sheet information must be submitted with each document to be recorded. If the document to be recorded concerns both patents and trademarks separate patent and trademark cover sheets, including any attached pages for continuing information, must accompany the document. All pages of the cover sheet should be numbered consecutively, for example, if both a patent and trademark cover sheet is used, and information is continued on one additional page for both patents and trademarks, the pages of the cover sheet would be numbered from 1 to 4.

Item 1. Name of Conveying Party(ies).

Enter the full name of the party(ies) conveying the interest. If there is insufficient space, enter a check mark in the "Yes" box to indicate that additional information is attached. The name of the additional conveying party(ies) should be placed on an attached page clearly identified as a continuation of the information Item 1. Enter a check mark in the "No" box, if no information is contained on an attached page. If the document to be recorded is a joint research agreement, enter the name(s) of the party(ies) other than the owner of the patent or patent application as the conveying party(ies).

Item 2. Name and Address of Receiving Party(ies).

Enter the name and full address of the first party receiving the interest. If there is more than one party receiving the interest, enter a check mark in the "Yes" box to indicate that additional information is attached. Enter a check mark in the "No" box, if no information is contained on an attached page. If the document to be recorded is a joint research agreement, enter the name(s) of the patent or patent application owner(s) as the receiving party.

Item 3. Nature of Conveyance/Execution Date(s).

Enter the execution date(s) of the document. It is preferable to use the name of the month, or an abbreviation of that name, in order that confusion over dates is minimized. Place a check mark in the appropriate box describing the nature of the conveying document. If the "Other" box is checked, specify the nature of the conveyance.

Item 4. Application Number(s) or Patent Number(s).

Indicate the application number(s), and/or patent number(s) against which the document is to be recorded. National application numbers must include both the series code and a six-digit number (e.g., 07/123,456), and international application numbers must be complete (e.g., PCT/US91/12345).

Enter a check mark in the appropriate box: "Yes" or "No " if additional numbers appear on attached pages. Be sure to identify numbers included on attached pages as the continuation of Item 4. Also enter a check mark if this Assignment is being filed with a new application.

Item 5. Name and Address of Party to whom correspondence concerning the document should be mailed.

Enter the name and full address of the party to whom correspondence is to be mailed.

Item 6. Total Applications and Patents involved.

Enter the total number of applications and patents identified for recordation. Be sure to include all applications and patents identified on the cover sheet and on additional pages.

Block 7. Total Fee Enclosed.

Enter the total fee enclosed or authorized to be charged. A fee is required for each application and patent against which the document is recorded.

Item 8. Payment Information.

Enter either the last four digits of your credit card and expiration date or the deposit account number and authorized user name to authorize charges.

Item 9. Signature.

Enter the name of the person submitting the document. The submitter must sign and date the cover sheet. Enter the total number of pages including the cover sheet, attachments, and document.

This collection of information is required by 35 USC 261 and 262 and 15 USC 1057 and 1060. The information is used by the public to submit (and by the USPTO to process) patent and trademark assignment requests. After the USPTO records the information, the records for patent and trademarks, assignments, and other associated documents can be inspected by the public. To view documents recorded under secrecy orders or documents recorded due to the interest of the federal government, a written authorization must be submitted. This collection is estimated to take 30 minutes to complete, including gathering, preparing, and submitting the form to the USPTO. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Manager of the Assignment Division, USPTO, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop Assignment Recordation Services, Director of the USPTO, P.O. Box 1450, Alexandria, VA 22313-1450.

Privacy Act Statement for Patent Assignment Recordation Form Cover Sheet

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with the above request for information. This collection of information is authorized by 35 U.S.C. 1, 2, 261 and E.O. 9424. This information will primarily be used by the USPTO for the recordation of assignments related to patents and patent applications. Submission of this information is voluntary but is required in order for the USPTO to record the requested assignment. If you do not provide the information required on the cover sheet, the assignment will not be recorded, and all documents will be returned to you.

After the information is recorded, the records and associated documents can be inspected by the public and are not confidential, except for documents that are sealed under secrecy orders or related to unpublished patent applications. Assignment records relating to unpublished patent applications are maintained in confidence in accordance with 35 U.S.C. 122. Records open to the public are searched by users for the purpose of determining ownership for other property rights with respect to patents and trademarks.

Routine uses of the information you provide may also include disclosure to appropriate Federal, state, local, or foreign agencies in support of their enforcement duties and statutory or regulatory missions, including investigating potential violations of law or contract and awarding contracts or other benefits; to a court, magistrate, or administrative tribunal in the course of presenting evidence; to members of Congress responding to requests for assistance from their constituents; to the Office of Management and Budget in connection with the review of private relief legislation; to the Department of Justice in connection with a Freedom of Information Act request; to a contractor in the performance of their duties; to the Office of Personnel Management for personnel studies; and to the General Services Administration (GSA) as part of their records management responsibilities under the authority of 44 U.S.C. 2904 and 2906. Such disclosure to GSA shall not be used to make determinations about individuals.

<

302.08 Mailing Address for Submitting Assignment Documents [R-3]

**>

37 CFR 3.27. Mailing address for submitting documents to be recorded.

Documents and cover sheets submitted by mail for recordation should be addressed to Mail Stop Assignment Recordation Services, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450, unless they are filed together with new applications.<

37 CFR 3.27 sets out how documents submitted for recording should be addressed to the Office. In order to ensure prompt and proper processing, documents and their cover sheets should be addressed to the ** >Mail Stop Assignment Recordation Services, Director of the U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450<, unless they are filed together with new applications**. Requests for recording documents which accompany new applications should be addressed to the ** >Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.<

302.09 Facsimile Submission of Assignment Documents [R-5]

Assignments and other documents affecting title may be submitted to the Office via facsimile (fax). See the USPTO Internet web site or MPEP § 1730 for the facsimile number. This process allows customers to submit their documents directly into the automated Patent and Trademark Assignment System and receive the resulting recordation notice at their fax machine. The customer's fax machine must be connected to a dedicated line because recordation notices will be returned automatically to the sending fax number through the Patent and Trademark Assignment System. If the Office system is unable to complete transmission of the recordation notice, the notice will be printed and mailed to the sender by U.S. Postal Service first class mail. Recorded documents will not be returned with the "Notice of Recordation."

Any assignment-related document for patent matters submitted by facsimile must include:

(A) an identified application or patent number;

(B) one cover sheet to record a single transaction; and

(C) payment of the recordation fee by a credit card >(use of the Credit Card form, PTO-2038 (see MPEP § 509), is required for the credit card information to be kept separate from the assignment records)< or a USPTO Deposit Account.

The following documents **cannot** be submitted via facsimile:

(A) Assignments submitted concurrently with newly filed patent applications;

(B) Documents with two or more cover sheets (e.g., a single document with one cover sheet to record an assignment, and a separate cover sheet to record separately a license relating to the same property);

(C) Requests for corrections to documents recorded previously;

(D) Requests for "at cost" recordation services; and

(E) Resubmission of a non-recorded assignment.

The date of receipt accorded to an assignment document sent to the Office by facsimile transmission is the date the complete transmission is received in the Office. See MPEP § 502.01. The benefits of a certificate of transmission under 37 CFR 1.8 are available.

If a document submitted by fax is determined not to be recordable, the entire document, with its associated cover sheet, and the Office "Notice of Non-Recordation" will be transmitted via fax back to the sender. Once corrections are made, the initial submission, amended, may then be resubmitted by mailing the corrected submission to the address set forth in 37 CFR 3.27. Timely resubmission will provide the sender with the benefit of the initial receipt date as the recordation date in accordance with 37 CFR 3.51.

The Patent and Trademark Assignment System assigns reel and frame numbers and superimposes recordation stampings on the processed and stored electronic images. Accordingly, copies of all recorded documents will have the reel and frame numbers and recordation stampings.

302.10 Electronic Submission of Assignment Documents [R-5]

37 CFR 3.31. Cover sheet content.

*****

(a)(7) The signature of the party submitting the document. For an assignment document or name change filed electronically, the person who signs the cover sheet must either:

**>

(i) Place a symbol comprised of letters, numbers, and/or punctuation marks between forward slash marks (*e.g.* /Thomas O' Malley III/) in the signature block on the electronic submission; or<

(ii) Sign the cover sheet using some other form of electronic signature specified by the Director.

*****

37 CFR 1.4. Nature of correspondence and signature requirements.

*****

(d)(2) **>S-signature. An S-signature is a signature inserted between forward slash marks, but not a handwritten signature as defined by § 1.4(d)(1). An S-signature includes any signature made by electronic or mechanical means, and any other mode of making or applying a signature not covered by either a handwritten signature of § 1.4(d)(1) or an Office Electronic Filing System (EFS) character coded signature of § 1.4(d)(3). Correspondence being filed in the Office in paper, by facsimile transmission as provided in § 1.6(d), or via the Office Electronic Filing System as an EFS Tag(ged) Image File Format (TIFF) attachment, for a patent application, patent, or a reexamination proceeding may be S-signature signed instead of being personally signed (i.e., with a handwritten signature) as provided for in paragraph (d)(1) of this section. The requirements for an S-signature under this paragraph (d)(2) are as follows.<

(i) The S-signature must consist only of letters, or Arabic numerals, or both, with appropriate spaces and commas, periods, apostrophes, or hyphens for punctuation, and the person signing the correspondence must insert his or her own S-signature with a first single forward slash mark before, and a second single forward slash mark after, the S-signature (e.g., /Dr. James T. Jones, Jr./); and

(ii) **>A patent practitioner (§ 1.32(a)(1)), signing pursuant to §§ 1.33(b)(1) or 1.33(b)(2), must supply his/her registration number either as part of the S-signature, or immediately below or adjacent to the S-signature. The number (#) character may be used only as part of the S-signature when appearing before a practitioner's registration number; otherwise the number character may not be used in an S-signature.<

(iii) The signer's name must be:

(A) Presented in printed or typed form preferably immediately below or adjacent the S-signature, and

(B) Reasonably specific enough so that the identity of the signer can be readily recognized.

(3) *EFS character coded signature*. Correspondence in character coded form being filed via the Office Electronic Filing System for a patent application or patent may be signed electronically. The electronic signature must consist only of letters of the English alphabet, or Arabic numerals, or both, with appropriate spaces and commas, periods, apostrophes, or hyphens for punctuation. The person signing the correspondence must personally insert the electronic signature with a first single forward slash mark before, and a second single forward slash mark after, the electronic signature (*e.g.*, /Dr. James T. Jones, Jr./).

(4) *Certifications*. (i) *Section 10.18 certifications*: The presentation to the Office (whether by signing, filing, submitting, or later advocating) of any paper by a party, whether a practitioner or non-practitioner, constitutes a certification under § 10.18 (b) of this chapter. Violations of § 10.18 (b)(2) of this chapter by a party, whether a practitioner or non-practitioner, may result in the imposition of sanctions under § 10.18(c) of this chapter. Any practitioner violating § 10.18(b) of this chapter may also be subject to disciplinary action. See §§ 10.18 (d) and 10.23 (c)(15) of this chapter.

(ii) *Certifications as to the signature*: (A) *Of another*: A person submitting a document signed by another under paragraphs (d)(2) or (d)(3) of this section is obligated to have a reasonable basis to believe that the person whose signature is present on the document was actually inserted by that person, and should retain evidence of authenticity of the signature.

(B) *Self certification*: The person inserting a signature under paragraphs (d)(2) or (d)(3) of this section in a document submitted to the Office certifies that the inserted signature appearing in the document is his or her own signature.

(C) *Sanctions*: Violations of the certifications as to the signature of another or a person's own signature, set forth in paragraphs (d)(4)(ii)(A) and (B) of this section, may result in the imposition of sanctions under § 10.18 (c) and (d) of this chapter.

*****

Assignments and other documents affecting title may be submitted to the Office via the Office's Electronic Filing System (EFS) or the Electronic Patent Assignment System (EPAS). See the USPTO Internet web site for additional information regarding EFS and EPAS. These systems allow customers to submit their documents directly into the automated Patent and Trademark Assignment System and receive the resulting recordation notice at their fax machine. The customer's fax machine must be connected to a dedicated line because recordation notices will be returned automatically to the sending fax number through the Patent and Trademark Assignment System. If the Office system is unable to complete transmission of the recordation notice, the notice will be printed and mailed to the sender by U.S. Postal Service first class mail. Recorded documents will not be returned with the "Notice of Recordation."

Any assignment related document submitted by EFS or EPAS must include:

(A) an identified application or patent number;

(B) one cover sheet to record a single transaction; and

(C) payment of the recordation fee by a credit card >(use of the Credit Card form , PTO-2038 (see MPEP § 509), is required for the credit card information to be kept separate from the assignment records)< or a USPTO Deposit Account.

For an assignment document filed electronically, the person who signs the cover sheet can sign with a symbol comprised of letters, numbers, and/or punctuation marks between forward slash marks (e.g., /Thomas O' Malley III/) in the signature block on the electronic submission. If EFS or EPAS is used, then the letters must be letters of the English alphabet, the numbers must be Arabic numerals, and the punctuation marks must be commas, periods, apostrophes, or hyphens, in the signature of the cover sheet.

The following documents cannot be submitted via EPAS:

(A) Assignments submitted concurrently with newly filed patent applications;

(B) Documents with two or more cover sheets (e.g., a single document with one cover sheet to record an assignment, and a separate cover sheet to record separately a license relating to the same property);

(C) Requests for corrections to documents recorded previously; and

(D) Resubmission of a non-recorded assignment.

The date of receipt accorded to an assignment document sent to the Office by EFS or EPAS is the date the complete transmission is received in the Office.

If a document submitted by EFS or EPAS is determined not to be recordable, the entire document, with its associated cover sheet, and the Office "Notice of Non-Recordation" will be transmitted via fax back to the sender. Once corrections are made, the initial submission, as amended, may then be resubmitted by mailing the corrected submission to the address set forth in 37 CFR 3.27. Timely submission will provide the sender with the benefit of the initial receipt date as the recordation date in accordance with 37 CFR 3.51.

The Patent and Trademark Assignment System assigns reel and frame numbers and superimposes recordation stampings on the processed and stored electronic images. Accordingly, copies of all recorded documents will have the reel and frame numbers and recordation stampings.

303 Assignment Documents Not Endorsed on Pending Applications

Certified copies of patent applications as filed do not include an indication of assignment documents. Applicants desiring an indication of assignment documents of record should request separately certified copies of assignment documents and submit the fees required by 37 CFR 1.19.

When the assignment condition of an application is significant, such as when applications of different inventors contain conflicting claims or there is a question as to who should direct prosecution, it is necessary for the examiner to obtain assignment information from PALM. See MPEP § 320.

306 Assignment of Division, Continuation, Substitute, and Continuation-in-Part in Relation to Parent Application [R-3]

In the case of a division or continuation application, a prior assignment recorded against the original application is applied >(effective)< to the division or continuation application because the assignment recorded against the original application gives the assignee rights to the subject matter common to both applications. >Although the assignment recorded against an original application is applied to the division or continuation application, the Office's assignment records will only reflect an assignment of a division or continuation application (or any other application) if a request for recordation in compliance with 37 CFR 3.28, accompanied by the required fee (37 CFR 3.41), is filed.<

In the case of a substitute or continuation-in-part application, a prior assignment of the original application is not applied >(effective)< to the substitute or continuation-in-part application because the assignment recorded against the original application gives the assignee rights to only the subject matter common to both applications. Substitute or continuation-in-part

applications require >the recordation of< a new assignment if they are to be issued to an assignee. >See 37 CFR 3.81.<

**

306.01 Assignment of an Application - Claiming the Benefits of a Provisional Application [R-3]

If an application which claims the earlier filing date of a provisional application under 35 U.S.C. 119(e) includes only subject matter which formed a part of the provisional application, an assignment recorded against the provisional application will be effective in the later application, similar to the practice with respect to continuations and divisions filed under 35 U.S.C. 120. See MPEP § 306. If an application claiming the earlier filing date of a provisional application includes subject matter that is not common with subject matter of the provisional application, new assignment papers must be **>recorded for< the * application >claiming the benefit of the provisional application<, similar to the practice with respect to continuations-in-part filed under 35 U.S.C. 120. See MPEP § 306.

307 Issue to Assignee [R-3]

35 U.S.C. 152. Issue of patent to assignee.

Patents may be granted to the assignee of the inventor of record in the Patent and Trademark Office, upon the application made and the specification sworn to by the inventor, except as otherwise provided in this title.

**>

37 CFR 3.81. Issue of patent to assignee.

(a) *With payment of the issue fee*: An application may issue in the name of the assignee consistent with the application's assignment where a request for such issuance is submitted with payment of the issue fee, provided the assignment has been previously recorded in the Office. If the assignment has not been previously recorded, the request must state that the document has been filed for recordation as set forth in § 3.11.

(b) *After payment of the issue fee*: Any request for issuance of an application in the name of the assignee submitted after the date of payment of the issue fee, and any request for a patent to be corrected to state the name of the assignee, must state that the assignment was submitted for recordation as set forth in § 3.11 before issuance of the patent, and must include a request for a certificate of correction under § 1.323 of this chapter (accompanied by the fee set forth in § 1.20(a)) and the processing fee set forth in § 1.17 (i) of this chapter.

(c) *Partial assignees*. (1) If one or more assignee, together with one or more inventor, holds the entire right, title, and interest in the application, the patent may issue in the names of the assignee and the inventor.

(2) If multiple assignees hold the entire right, title, and interest to the exclusion of all the inventors, the patent may issue in the names of the multiple assignees.<

Normally, for a patent to issue to an assignee, a request for issuance of the application in the name* of the assignee* must be filed in the United States Patent and Trademark Office (Office) at a date not later than the day on which the issue fee is paid. **>Such a request must indicate that the assignment has been previously recorded in the Office. If the assignment has not been previously recorded in the Office, the request must state that the document has been filed for recordation as set forth in 37 CFR 3.11. See 37 CFR 3.81(a).

If a request for issuance to an assignee pursuant to 37 CFR 3.81(b) is submitted after the day on which the issue fee is paid, the request under 37 CFR 3.81(b) must include a request for a certificate of correction under 37 CFR 1.323 (accompanied by the fee set forth in 37 CFR 1.20(a)) and the processing fee set forth in 37 CFR 1.17(i). The request under 37 CFR 3.81(b) must state that the assignment was submitted for recordation as set forth in 37 CFR 3.11 before issuance of the patent. The Office will issue a certificate of correction to reflect that the patent issued to the assignee provided the requirements of 37 CFR 3.81(b) and 37 CFR 1.323 are complied with.<

Only the first appearing name of an assignee will be printed on the patent where multiple names for the same party are identified on the **>Fee(s)< Transmittal form, PTOL-85B. Such multiple names may occur when both a legal name and an "also known as" or "doing business as" name is also included. This printing practice will not, however, affect the existing practice of recording assignments with the Office in the Assignment Division. The assignee entry on form PTOL-85B should still be completed to indicate the assignment data as recorded in the Office. For example, the assignment filed in the Office and, therefore, the PTOL-85B assignee entry might read "Smith Company doing business as (d.b.a.) Jones Company." The assignee entry on the printed patent will read "Smith Company."

Irrespective of whether the assignee participates in the prosecution of the application, the patent issues to the assignee if so indicated on the **>Fee(s)< Transmittal form PTOL-85B. Unless an assignee's name

and address are identified in item 3 of the **>Fee(s)< Transmittal form PTOL-85B, the patent will issue to the applicant. Assignment data printed on the patent will be based solely on the information so supplied. >Assignment information printed on a patent is not updated after a patent is issued, and may not be reflective of the assignment recorded in the Office subsequent to the issuance of the patent. Detailed assignment information can be found by performing an assignment search on the USPTO Internet website, and by inspecting the recorded assignment documents.<

A request for a certificate of correction under 37 CFR 1.323 (see MPEP § 1481 and § 1485) arising from incomplete or erroneous assignee's name furnished >, or a missing assignee's name,< in item 3 of PTOL-85B will not be granted unless a **>request under 37 CFR 3.81(b) has been granted and the assignment was submitted for recordation as set forth in 37 CFR 3.11 before the patent issued. Any such request under 37 CFR 3.81(b)< should be directed to the Office of Petitions and should include:

(A) the *>processing< fee required by 37 CFR 1.17(*>i<);

(B) a request **>for issuance of the application in the name of the assignee, or a request that a patent be corrected to state the name of the assignee;<

(C) a statement that the **>assignment was submitted for recordation as set forth in 37 CFR 3.11 before the issuance of the patent;< and

(D) a **>request for a certificate of correction under 37 CFR 1.323 accompanied by the fee set forth in 37 CFR 1.20(a).<

309 Restrictions Upon Employees of >U.S.< Patent and Trademark Office [R-3]

35 U.S.C. 4. Restrictions on officers and employees as to interests in patents.

Officers and employees of the Patent and Trademark Office shall be incapable, during the period of their appointments and for one year thereafter, of applying for a patent and of acquiring, directly or indirectly, except by inheritance or bequest, any patent or any right or interest in any patent, issued or to be issued by the Office. In patents applied for thereafter they shall not be entitled to any priority date earlier than one year after the termination of their appointment.

310 Government License Rights to Contractor-Owned Inventions Made Under Federally Sponsored Research and Development [R-3]

Where a Government contractor retains U.S. domestic patent rights, the contractor is under an obligation by virtue of 35 U.S.C. 202(c)(6) to include the following statement at the beginning of the application and any patents issued thereon:

"The U.S. Government has a paid-up license in this invention and the right in limited circumstances to require the patent owner to license others on reasonable terms as provided for by the terms of (contract No. or Grant No.) awarded by (Agency)."

If reference is made in the first sentence>(s)< of the *>specification following the title< to prior copending applications of the applicant ** (37 CFR 1.78(a) and MPEP § 201.11), ** the above "Government License Rights" statement should follow immediately as the second paragraph of the specification.

If there is no reference to an earlier application, the "Government License Rights" statement should appear as the first paragraph of the specification. See 37 CFR 1.77.

311 Filing of Notice of Arbitration Awards [R-3]

35 U.S.C. 294. Voluntary arbitration.

(a) A contract involving a patent or any right under a patent may contain a provision requiring arbitration of any dispute relating to patent validity or infringement arising under the contract. In the absence of such a provision, the parties to an existing patent validity or infringement dispute may agree in writing to settle such dispute by arbitration. Any such provision or agreement shall be valid, irrevocable, and enforceable, except for any grounds that exist at law or in equity for revocation of a contract.

**>

(b) Arbitration of such disputes, awards by arbitrators, and confirmation of awards shall be governed by title 9, to the extent such title is not inconsistent with this section. In any such arbitration proceeding, the defenses provided for under section 282 of this title shall be considered by the arbitrator if raised by any party to the proceeding.

(c) An award by an arbitrator shall be final and binding between the parties to the arbitration but shall have no force or effect on any other person. The parties to an arbitration may agree that in the event a patent which is the subject matter of an award is subsequently determined to be invalid or unenforceable in a judgment rendered by a court of competent jurisdiction from which no appeal can or has been taken, such award may be modified by any

court of competent jurisdiction upon application by any party to the arbitration. Any such modification shall govern the rights and obligations between such parties from the date of such modification.<

(d) When an award is made by an arbitrator, the patentee, his assignee or licensee shall give notice thereof in writing to the Director. There shall be a separate notice prepared for each patent involved in such proceeding. Such notice shall set forth the names and addresses of the parties, the name of the inventor, and the name of the patent owner, shall designate the number of the patent, and shall contain a copy of the award. If an award is modified by a court, the party requesting such modification shall give notice of such modification to the Director. The Director shall, upon receipt of either notice, enter the same in the record of the prosecution of such patent. If the required notice is not filed with the Director, any party to the proceeding may provide such notice to the Director.

(e) The award shall be unenforceable until the notice required by subsection (d) is received by the Director.

37 CFR 1.335. Filing of notice of arbitration awards.

(a) Written notice of any award by an arbitrator pursuant to 35 U.S.C. 294 must be filed in the Patent and Trademark Office by the patentee, or the patentee's assignee or licensee. If the award involves more than one patent a separate notice must be filed for placement in the file of each patent. The notice must set forth the patent number, the names of the inventor and patent owner, and the names and addresses of the parties to the arbitration. The notice must also include a copy of the award.

(b) If an award by an arbitrator pursuant to 35 U.S.C. 294 is modified by a court, the party requesting the modification must file in the Patent and Trademark Office, a notice of the modification for placement in the file of each patent to which the modification applies. The notice must set forth the patent number, the names of the inventor and patent owner, and the names and addresses of the parties to the arbitration. The notice must also include a copy of the court's order modifying the award.

(c) Any award by an arbitrator pursuant to 35 U.S.C. 294 shall be unenforceable until any notices required by paragraph (a) or (b) of this section are filed in the Patent and Trademark Office. If any required notice is not filed by the party designated in paragraph (a) or (b) of this section, any party to the arbitration proceeding may file such a notice.

The written notices required by this section should be directed to the attention of the Office of the Solicitor. The Office of the Solicitor will be responsible for processing such notices.

313 Recording of Licenses, Security Interests, and Other Documents Other Than Assignments [R-3]

In addition to assignments and documents required to be recorded by Executive Order 9424, documents affecting title to a patent or application will be recorded in the Assignment Division of the United States Patent and Trademark Office (Office). Other documents not affecting title may be recorded at the discretion of the *>Director<. 37 CFR 3.11(a).

Thus, some documents which relate to patents or applications will be recorded, although they do not constitute a transfer or change of title. Typical of these documents which are accepted for recording are license agreements and agreements which convey a security interest. Such documents are recorded in the public interest in order to give third parties notification of equitable interests or other matters relevant to the ownership of a patent or application.

Any document returned unrecorded, which the sender nevertheless believes represents an unusual case which justifies recordation, may be submitted to the Office of Petitions with a petition under 37 CFR 1.181 requesting recordation of the document.

The recordation of a document is not a determination of the effect of the document on the chain of title. The determination of what, if any, effect a document has on title will be made by the Office at such times as ownership must be established to permit action to be taken by the Office in connection with a patent or an application. See MPEP § 324.

314 Certificates of Change of Name or of Merger

Certificates issued by appropriate authorities showing a change of name of a business or a merger of businesses are recordable. Although a mere change of name does not constitute a change in legal entity, it is properly a link in the chain of title. Documents of merger are also proper links in the chain of title. They may represent a change of entity as well as a change of name.

315 Indexing Against a Recorded Certificate [R-3]

Prior to amendment of the Rules of Practice to add Part 3 to 37 CFR, it had been the practice of the United States Patent and Trademark Office (Office) to process requests for "indexing" or "cross-referencing" additional patent numbers or application numbers against a document, other than an assignment, previously recorded in the Assignment Division, upon submission of a transmittal letter and recording fee. The

Office no longer processes such indexing requests. Such requests do not comply with 37 CFR 3.11, 3.28, and 3.31, which require that each request for recordation include the document to be recorded and a cover sheet.

Therefore, even where a document has already been recorded in the Assignment Division in connection with a patent or patent application, a party that wishes recordation of that document with respect to additional patents and/or patent applications must submit the following to the Assignment Division:

(A) ** a * copy of the original document (which may consist of the previously recorded papers on which the Assignment Division has stamped the reel and frame numbers at which they are recorded, or a copy of such papers);

(B) a completed cover sheet (see 37 CFR 3.31 and MPEP § 302.07); and

(C) the appropriate recording fee (see 37 CFR 1.21(h) and 3.41).

The Office will assign a new recording date to that submission, update the assignment database, and microfilm the cover sheet and document, which shall become part of the official record.

317 Handling of Documents in the Assignment Division [R-3]

All documents and cover sheets submitted for recording are examined for formal requirements in the Assignment Division in order to separate documents which are recordable from those which are not recordable.

Documents and cover sheets that are considered not to be recordable are returned to the sender by the Assignment Division with an explanation. If the sender disagrees or believes that the document represents an unusual case which justifies recordation, the sender may present the question to the *>Director< by way of petition under 37 CFR 1.181, filed with the Office of Petitions.

After an assignment and cover sheet have been recorded, they will be returned to the name and address indicated on the cover sheet to receive correspondence, showing the reel and frame number.

317.01 Recording Date

37 CFR 3.51. Recording date.

The date of recording of a document is the date the document meeting the requirements for recording set forth in this part is filed in the Office. A document which does not comply with the identification requirements of § 3.21 will not be recorded. Documents not meeting the other requirements for recording, for example, a document submitted without a completed cover sheet or without the required fee, will be returned for correction to the sender where a correspondence address is available. The returned papers, stamped with the original date of receipt by the Office, will be accompanied by a letter which will indicate that if the returned papers are corrected and resubmitted to the Office within the time specified in the letter, the Office will consider the original date of filing of the papers as the date of recording of the document. The procedure set forth in § 1.8 or § 1.10 of this chapter may be used for resubmissions of returned papers to have the benefit of the date of deposit in the United States Postal Service. If the returned papers are not corrected and resubmitted within the specified period, the date of filing of the corrected papers will be considered to be the date of recording of the document. The specified period to resubmit the returned papers will not be extended.

The date of recording of a document is the date the document meeting the requirements for recording set forth in the regulations is filed in the Office. A document which does not comply with the identification requirements of 37 CFR 3.21 will not be recorded. Documents not meeting the other requirements for recording, for example, a document submitted without a completed cover sheet or without the required fee, will be returned for correction to the sender when a correspondence address is available.

317.02 Correction of >Unrecorded< Returned Documents and Cover Sheets [R-3]

Assignment documents and cover sheets>, or copies of the same,< which are returned by Assignment Division will be stamped with the original date of receipt by the Office and will be accompanied by a letter which will indicate that if the returned papers are corrected and resubmitted to the Office within the time specified in the letter, the Office will consider the original date of receipt of the papers as the date of recording of the document. See 37 CFR 3.51. The certification procedure under 37 CFR 1.8 or the "Express Mail" procedure under 37 CFR 1.10 may be used for resubmissions of returned papers to obtain the benefit of the date of deposit in the United States

Postal Service >to establish that the papers were returned within the time period specified. Instead of mailing or faxing the returned documents and cover sheets, the returned documents may be resubmitted using the Electronic Patent Assignment System<. If the returned papers are not corrected and resubmitted within the specified period, the date of receipt of the corrected papers will be considered to be the date of recording of the document. The specified period to resubmit the returned papers will not be extended.

317.03 Effect of Recording

37 CFR 3.54. Effect of recording.

The recording of a document pursuant to § 3.11 is not a determination by the Office of the validity of the document or the effect that document has on the title to an application, a patent, or a registration. When necessary, the Office will determine what effect a document has, including whether a party has the authority to take an action in a matter pending before the Office.

37 CFR 3.56. Conditional assignments.

Assignments which are made conditional on the performance of certain acts or events, such as the payment of money or other condition subsequent, if recorded in the Office, are regarded as absolute assignments for Office purposes until canceled with the written consent of all parties or by the decree of a court of competent jurisdiction. The Office does not determine whether such conditions have been fulfilled.

The recording of a document is not a determination by the Office of the validity of the document or the effect that document has on the title to an application or patent. When necessary, the Office will determine what effect a document has, including whether a party has the authority to take an action in a matter pending before the Office. See MPEP § 324.

37 CFR 3.56 provides that an assignment, which at the time of its execution is conditional on a given act or event, will be treated by the Office as an absolute assignment. This rule serves as notification as to how a conditional assignment will be treated by the Office in any proceeding requiring a determination of the owner of an application, patent, or registration. Since the Office will not determine whether a condition has been fulfilled, the Office will treat the submission of such an assignment for recordation as signifying that the act or event has occurred. A security agreement that does not convey the right, title, and interest of a patent property is not a conditional assignment.

318 Documents Not to be Placed in Files

Assignment documents submitted for recording should not be placed directly in application or patent files, but should be forwarded to Assignment Division for recording.

320 Title Reports [R-5]

The "title report" is a form which can be used under certain circumstances by the Assignment Division to report to someone within the Office the name of the owner of an application or patent as shown by the Assignment Division records on the date the title report is made. For example, a title report is requested by the Reexamination Preprocessing Staff when a request for reexamination is filed. Title reports may not be ordered by applicants or attorneys.

Information as to the title is not normally required by the examiner to examine an application. It is only in limited circumstances when the ownership becomes an issue and an examiner needs a title report. See MPEP § 303. Examiners may obtain a title report using the PALM Intranet >(select "General Information," insert the appropriate application number, select "Search," select "Assignments")<. The screen resulting from the search may be printed to yield the copy of the title report.

NOTE: The public can request a certified abstract of title. The fee for this service is set forth at 37 CFR 1.19(b)(4). See MPEP § 301.01 for a discussion of which assignment records are publicly available.

323 Procedures for Correcting Errors in Recorded Assignment Document [R-3]

An error in a recorded assignment document will be corrected by Assignment Division provided a "corrective document" is submitted. The "corrective document" must include the following:

(A) *>A copy of the< original assignment document with the corrections made therein. The corrections must be initialed and dated by the party conveying the interest; and

(B) A new Recordation Form Cover Sheet (form PTO-*>1595<) (See MPEP § 302.07).

The new recordation form cover sheet must identify the submission as a "corrective document" submission and indicate the reel and frame number where the incorrectly recorded assignment document appears. The person signing the new recordation form cover sheet must state that the information provided on the new cover sheet is true and correct and that any copy submitted is a true copy of the original document. The original cover sheet should be submitted with the corrective document. The corrective document will be recorded and given a new reel and frame number and recording date. The recording fee set forth in 37 CFR 1.21(h) is required for each patent application and patent against which the corrective document is being recorded. See MPEP § 302.06.

Corrections may be made on the original assignment document, for example, by lining out an incorrect patent or application number in a merger or change of name (see MPEP § 314).

Office policy regarding recordation of assignment documents is directed toward maintaining a complete history of claimed interests in property and, therefore, recorded assignment documents will not be expunged even if subsequently found to be invalid. See *In re Ratny*, 24 USPQ2d 1713 (Comm'r Pat. 1992). >Once a document is recorded with the Assignment Services Division, the Assignment Services Division will not remove the papers from the record relating to that application or patent. See MPEP § 323.01(d).<

323.01 Correction of Error in Recorded Cover Sheet [R-3]

**>

37 CFR 3.34. Correction of cover sheet errors.

(a) An error in a cover sheet recorded pursuant to § 3.11 will be corrected only if:

(1) The error is apparent when the cover sheet is compared with the recorded document to which it pertains and

(2) A corrected cover sheet is filed for recordation.

(b) The corrected cover sheet must be accompanied by a copy of the document originally submitted for recording and by the recording fee as set forth in § 3.41.<

Any alleged error in a recorded cover sheet will only be corrected if the error is apparent from a comparison with the recorded assignment document. The corrected cover sheet should be directed to Assignment Division.

>During the recording process, the Assignment Services Division will check to see that a cover sheet is complete and record the data exactly as it appears on the cover sheet. The Assignment Services Division does not compare the cover sheet with the assignment document (or other document affecting title). Once the document is recorded, the Office will issue a notice of recordation.

The party recording the document should carefully review the notice of recordation.

Typographical errors made by the Office will be corrected promptly and without charge upon written request directed to the Assignment Services Division. For any other error, the party recording the document is responsible for filing the papers and paying the recordation fees necessary to correct the error, using the procedures set forth in MPEP § 323.01(a) through § 323.01(c).<

>

323.01(a) Typographical Errors in Cover Sheet [R-3]

A party who wishes to correct a typographical error on a recorded cover sheet must submit the following to the Assignment Services Division:

(A) a copy of the originally recorded assignment document (or other document affecting title);

(B) a corrected cover sheet; and

(C) the required fee for each application or patent to be corrected (37 CFR 3.41).

See 37 CFR 3.34. The party requesting correction should also submit a copy of the original cover sheet, to facilitate comparison of the corrected cover sheet with the originally recorded document.

The party filing the corrected cover sheet should check the box titled "Other" in the area of the sheet requesting "Nature of Conveyance," and indicate that the submission is to correct an error in a cover sheet previously recorded. The party should also identify the reel and frame numbers (if known), and the nature of the correction (e.g., "correction to the spelling of assignor's name" or "correction of application number or patent number"). The Office will then compare the corrected cover sheet with the original cover sheet and the originally recorded assignment document (or other document affecting title) to determine whether the correction is typographical in nature. If the error is

typographical in nature, the Assignment Services Division will record the corrected cover sheet and correct the Assignment Historical Database.

I. TYPOGRAPHICAL ERRORS IN COVER SHEET THAT DO NOT AFFECT TITLE TO APPLICATION OR PATENT

If the original cover sheet contains a typographical error that does not affect title to the application or patent against which the original assignment or name change is recorded, the Assignment Services Division will correct the Assignment Historical Database and permit the recording party to keep the original date of recordation.

II. TYPOGRAPHICAL ERRORS IN COVER SHEET THAT DO AFFECT TITLE TO APPLICATION OR PATENT

If the original cover sheet contains a typographical error that affects title to the application or patent against which the assignment or name change is recorded, the recording party will not be entitled to keep the original date of recordation. Rather, the Assignment Services Division will correct its automated records and change the date of recordation to the date the corrected cover sheet was received in the Office.

323.01(b) Typographical Errors in Recorded Assignment Document [R-3]

If there is an error in the recorded assignment document (or other document affecting title) rather than in the cover sheet, the party responsible for an erroneous document (e.g., the assignor) must either create and record a new document or make corrections to the original document and re-record it. If an assignor is not available to correct an original document or execute a new one, the assignee may submit an affidavit or declaration in which the assignee identifies the error and requests correction. The affidavit or declaration must be accompanied by a copy of the originally recorded papers, a cover sheet, and the required fee for each application or patent to be corrected (37 CFR 3.41). See *In re Abacab International Computers Ltd.*, 21 USPQ2d 1078 (Comm'r Pat. 1987).

323.01(c) Assignment or Change of Name Improperly Filed and Recorded by Another Person Against Owner's Application or Patent [R-3]

When the owner of an application or registration discovers that due to a typographical error, another party has improperly recorded an assignment or name change against the owner' s application or patent, the owner must correct the error by having a corrected cover sheet filed with the Assignment Services Division.

The owner should contact the party who recorded the papers with the erroneous information and request that such party record corrective papers. However, if the party cannot be located or is unwilling to file corrective papers, then the true owner must record the necessary papers with the Assignment Services Division to correct the error.

Specifically, the owner should submit the following to the Assignment Services Division:

(A) a completed cover sheet identifying the application or patent against which the assignment was improperly recorded;

(B) an affidavit or declaration (1) identifying itself as the correct owner, (2) stating that the previously recorded document was submitted with erroneous information, and (3) providing the reel and frame number of the previously recorded document; and

(C) the required fee (37 CFR 3.41) for each application or patent to be corrected.

The affidavit or declaration should include a summary of the true chain of title to make it clear that the chain of title for the application or patent identified should not be considered altered by the incorrect assignment or name change, and a statement that the original applicant or patentee or last correct assignee has been, and continues to be, the owner of the application, or patent at issue.

On the corrected cover sheet, the owner should check the box titled "Other" in the area of the cover sheet requesting the "Nature of Conveyance," and indicate that the submission is to correct an error made in a previously recorded document that erroneously affects the identified application(s), or patent(s). The party should also write the name of the correct

owner in both the box requesting the name of the conveying party and the box requesting the name and address of the receiving party; this is to make it clear that ownership never changed and that any assignment or name change recorded against the application(s) or patent(s) was erroneous.

323.01(d) Expungement of Assignment Records [R-3]

Petitions to correct, modify or "expunge" assignment records are rarely granted. Such petitions are granted only if the petitioner can prove that:

(A) the normal corrective procedures outlined in MPEP § 323.01(a) through § 323.01(c) will not provide the petitioner with adequate relief; and

(B) the integrity of the assignment records will not be affected by granting the petition.

Even if a petition to "expunge" a document is granted with respect to a particular application or patent, the image of the recorded document will remain in the records of the Assignment Services Division at the same reel and frame number, and the image will appear when someone views that reel and frame number. The Office will, however, delete the links to the application or patent that was the subject of the petition, so that no information about the recorded document will appear when someone searches for that application or patent number in the Assignment Historical Database.<

324 Establishing Right of Assignee To Take Action [R-5]

37 CFR 3.71. Prosecution by assignee.

(a) *Patents — conducting of prosecution.* One or more assignees as defined in paragraph (b) of this section may, after becoming of record pursuant to paragraph (c) of this section, conduct prosecution of a national patent application or a reexamination proceeding to the exclusion of either the inventive entity, or the assignee(s) previously entitled to conduct prosecution.

(b) *Patents* — assignee(s) who can prosecute. The assignee(s) who may conduct either the prosecution of a national application for patent or a reexamination proceeding are:

(1) *A single assignee*. An assignee of the entire right, title and interest in the application or patent being reexamined who is of record, or

(2) *Partial assignee(s) together or with inventor(s).* All partial assignees, or all partial assignees and inventors who have not assigned their right, title and interest in the application or patent being reexamined, who together own the entire right, title and interest in the application or patent being reexamined. A partial assignee is any assignee of record having less than the entire right, title and interest in the application or patent being reexamined.

(c) *Patents — Becoming of record.* An assignee becomes of record either in a national patent application or a reexamination proceeding by filing a statement in compliance with § 3.73(b) that is signed by a party who is authorized to act on behalf of the assignee.

(d) *Trademarks*. The assignee of a trademark application or registration may prosecute a trademark application, submit documents to maintain a trademark registration, or file papers against a third party in reliance on the assignee's trademark application or registration, to the exclusion of the original applicant or previous assignee. The assignee must establish ownership in compliance with § 3.73(b).

37 CFR 3.73. Establishing right of assignee to take action.

(a) The inventor is presumed to be the owner of a patent application, and any patent that may issue therefrom, unless there is an assignment. The original applicant is presumed to be the owner of a trademark application or registration, unless there is an assignment.

(b)(1) In order to request or take action in a patent or trademark matter, the assignee must establish its ownership of the patent or trademark property of paragraph (a) of this section to the satisfaction of the Director. The establishment of ownership by the assignee may be combined with the paper that requests or takes the action. Ownership is established by submitting to the Office a signed statement identifying the assignee, accompanied by either:

**>

(i) Documentary evidence of a chain of title from the original owner to the assignee (e.g., copy of an executed assignment). For trademark matters only, the documents submitted to establish ownership may be required to be recorded pursuant to § 3.11 in the assignment records of the Office as a condition to permitting the assignee to take action in a matter pending before the Office. For patent matters only, the submission of the documentary evidence must be accompanied by a statement affirming that the documentary evidence of the chain of title from the original owner to the assignee was or concurrently is being submitted for recordation pursuant to § 3.11; or<

(ii) A statement specifying where documentary evidence of a chain of title from the original owner to the assignee is recorded in the assignment records of the Office (*e.g.*, reel and frame number).

(2) The submission establishing ownership must show that the person signing the submission is a person authorized to act on behalf of the assignee by:

(i) Including a statement that the person signing the submission is authorized to act on behalf of the assignee; or

(ii) Being signed by a person having apparent authority to sign on behalf of the assignee, e.g., an officer of the assignee.

(c) For patent matters only:

(1) Establishment of ownership by the assignee must be submitted prior to, or at the same time as, the paper requesting or taking action is submitted.

(2) If the submission under this section is by an assignee of less than the entire right, title and interest, such assignee must indicate the extent (by percentage) of its ownership interest, or the Office may refuse to accept the submission as an establishment of ownership.

The owner or assignee of a patent property can take action in a patent application or patent proceeding in numerous instances. The owner or assignee can sign a reply to an Office action (37 CFR 1.33(b)(3) and (4)), a request for a continued prosecution application under 37 CFR 1.53(d) (MPEP § 201.06(d)), a terminal disclaimer (MPEP § 1490), Fee(s) Transmittal (PTOL-85B) (MPEP § 1306), or a request for status of an application (MPEP § 102). The owner or assignee can file an application under 37 CFR 1.47(b) (MPEP § 409.03(b)), appoint its own registered patent **>practitioner< to prosecute an application (37 CFR 1.32 and MPEP § 402.07), grant a power to inspect an application (MPEP § 104), and acquiesce to express abandonment of an application (MPEP § 711.01). The owner or assignee consents to the filing of a reissue application (MPEP § 1410.01), and to the correction of inventorship (MPEP § 201.03 or § 1481).

I. THE ASSIGNEE/OWNER THAT CAN TAKE ACTION IN PATENT MATTERS

The provisions of 37 CFR 3.71(b)(1) and (2) identify the owner or assignee that can take action in patent matters, e.g., the assignee which may conduct the prosecution of a U.S. national application for a patent (35 U.S.C. 111(a)), or any other patent proceeding (e.g., a reexamination proceeding, an interference proceeding). A national patent application is owned by one of the following individual or composite entities:

(A) the inventor(s);

(B) an assignee or multiple assignees of the inventor(s); or

(C) some combination of the assignee(s), and inventor(s) who have not assigned away their right, title and interest in the application.

Pursuant to 37 CFR 3.73(b), a party must be established as the assignee by satisfying the requirements of that subsection, in order to be recognized as an owner or part owner, for purposes of taking action in patent matters before the Office.

As discussed in subsection II below, all parties having any portion of the ownership must join in "taking action" (i.e., act together as a composite entity) in order to be entitled to conduct the prosecution in patent matters.

A. Individual and Partial Assignees

If there is a single assignee of the **entire** right, title and interest in the patent application, 37 CFR 3.71(b)(1) provides that the single assignee (i.e., individual assignee) may act alone to conduct the prosecution of an application or other patent proceeding (upon complying with 37 CFR 3.73(b)).

If there is no assignee of the **entire** right, title and interest of the patent application, then two possibilities exist:

(A) The application has not been assigned, and ownership resides solely in the inventor(s) (i.e., the applicant(s)). In this situation, 37 CFR 3.71 does not apply, since there is no assignee, and the combination of all inventors is needed to conduct the prosecution of an application.

(B) The application has been assigned by at least one of the inventors, and there is thus at least one "partial assignee." As defined in 37 CFR 3.71(b)(2), a partial assignee is any assignee of record who has less than the entire right, title and interest in the application. The application is owned by the combination of all partial assignees and all inventors who have not assigned away their right, title and interest in the application.

Where at least one inventor retains an ownership interest together with the partial assignee(s), the combination of all partial assignees and inventors retaining ownership interest is needed to conduct the prosecution of an application, unless one or more inventors have refused to join in the filing of the application and a petition under 37 CFR 1.47 has been granted. If a petition under 37 CFR 1.47 has been granted, then the assignee need only be the assignee of the entire interest of the 37 CFR 1.47 applicant to sign a power of attorney. See 37 CFR 1.32(b)(4). Where an applicant retains an ownership interest, the combination of all partial assignees and the applicant

with the ownership interest is needed to conduct the prosecution of an application.

Where a reissue application is filed to correct inventorship in the patent by the deletion of the name of inventor X and inventor X has not assigned his/her rights to the patent, inventor X has an ownership interest in the patent. Inventor X must consent to the filing of the reissue application, even though inventor X is being deleted and need not sign the reissue oath or declaration. If inventor X has assigned his/her rights to the patent, then inventor X's assignee must consent to the filing of the reissue application.

B. Example

Inventors A and B invent a process and file their application, signing the declaration for the patent application. Inventors A and B together may conduct prosecution. Inventor A then assigns all his/her rights in the application to Corporation X. As soon as Corporation X (now a partial assignee) is made of record in the application as a partial assignee (by filing a statement pursuant to 37 CFR 3.73(b) stating fifty percent ownership), Corporation X and Inventor B together may conduct prosecution. Corporation X and Inventor B then both assign their rights in the application to Corporation Y. As soon as Corporation Y (now an assignee of the entire right, title and interest) is made of record in the application as the assignee (by filing a statement pursuant to 37 CFR 3.73(b) stating one-hundred percent ownership), Corporation Y may, by itself, conduct prosecution.

II. ESTABLISHING OWNERSHIP

When an assignee first seeks to take action in a matter before the Office with respect to a patent application, patent, or reexamination proceeding, the assignee must establish its ownership of the property to the satisfaction of the Director. 37 CFR 3.73(b). The assignee's ownership may be established under 37 CFR 3.73(b) by submitting to the Office, in the Office file related to the matter in which action is sought to be taken:

(A) documentary evidence of a chain of title from the original owner to the assignee (e.g., copy of an executed assignment submitted for recording) >and a statement affirming that the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is, submitted for recordation pursuant to 37 CFR 3.11<; or

(B) a statement specifying, by reel and frame number, where such evidence is recorded in the Office.

Documents submitted to establish ownership **>are< required to be recorded>, or submitted for recordation pursuant to 37 CFR 3.11,< as a condition to permitting the assignee to take action in a matter pending before the Office.

The action taken by the assignee, and the 37 CFR 3.73(b) submission establishing that the assignee is the appropriate assignee to take such action, can be combined in one paper.

The establishment of ownership by the assignee must be submitted prior to, or at the same time as, the paper requesting or taking action is submitted. 37 CFR 3.73(c). If the submission establishing ownership is not present, the action sought to be taken will not be given effect. If the submission establishing ownership is submitted at a later date, that date will be the date of the request for action or the date of the assignee's action taken.

The submission establishing ownership by the assignee must be signed by a party who is authorized to act on behalf of the assignee. See discussion below. Once 37 CFR 3.73(b) is complied with by an assignee, that assignee may continue to take action in that application, patent, or reexamination proceeding without filing a 37 CFR 3.73(b) submission each time, provided that ownership has not changed.

The submission establishing ownership by the assignee pursuant to 37 CFR 3.73(b) is generally referred to as the "statement under 37 CFR 3.73(b)" or the "37 CFR 3.73(b) statement." A duplicate copy of the 37 CFR 3.73(b) statement is not required and should not be submitted. See 37 CFR 1.4(b) and MPEP § 502.04.

III. CONTINUING APPLICATIONS

When an assignee files a continuation or divisional application under 37 CFR 1.53, other than a continued prosecution application (CPA) under 37 CFR 1.53(d), the application papers must:

(A) refer to a statement filed under 37 CFR 3.73(b) in the parent application;

(B) contain a copy of a statement filed under 37 CFR 3.73(b) in the parent application; or

(C) contain a newly executed statement under 37 CFR 3.73(b).

When a continuation-in-part application is filed by an assignee, a newly executed statement under 37 CFR 3.73(b) must be filed. When a CPA under 37 CFR 1.53(d) is filed, the statement filed under 37 CFR 3.73(b) in the parent application will serve as the statement for the CPA.

IV. REQUESTS FOR CONTINUED EXAMINATION

Where a Request for Continued Examination of an application is filed under 37 CFR 1.114 (which can be filed on or after May 29, 2000 for an application filed on or after June 8, 1995), the application is not considered to be abandoned; rather the finality of the Office action is withdrawn and the prosecution continues. Thus, the statement under 37 CFR 3.73(b) in the application will continue to serve as the statement establishing ownership.

V. PARTY WHO MUST SIGN

The submission establishing ownership must be signed by a party authorized to act on behalf of the assignee. The submission under 37 CFR 3.73(b) may be signed on behalf of the assignee in the following manner if the assignee is an organization (e.g., corporation, partnership, university, government agency, etc.):

(A) The submission may be signed by a person in the organization having apparent authority to sign on behalf of the organization. 37 CFR 3.73(b)(2)(ii). An officer (chief executive officer, president, vice-president, secretary, or treasurer) is presumed to have authority to sign on behalf of the organization. The signature of the chairman of the board of directors is acceptable, but not the signature of an individual director. Modifications of these basic titles are acceptable, such as vice-president for sales, executive vice-president, assistant treasurer, vice-chairman of the board of directors. In foreign countries, a person who holds the title "Manager" or "Director" is normally an officer and is presumed to have the authority to sign on behalf of the organization. A person having a title (administrator, general counsel) that does not clearly set forth that person as an officer of the assignee is not presumed to have authority to sign the submission on behalf of the assignee. A power of attorney (37 CFR 1.32(b)(4)) to a patent practitioner to prosecute a patent application executed by the applicant or the assignee of the entire interest does not make that practitioner an official of an assignee or empower the practitioner to sign the submission on behalf of the assignee.

(B) The submission may be signed by any person, if the submission sets forth that the person signing is authorized (or empowered) to act on behalf of the assignee, i.e., to sign the submission on behalf of the assignee. 37 CFR 3.73(b)(2)(i).

(C) The submission may be signed by a person empowered by an organizational resolution (e.g., corporate resolution, partnership resolution) to sign the submission on behalf of the assignee, if a copy of the resolution is, or was previously, submitted in the record.

Where a submission does not comply with (A), (B), or (C) above, evidence of the person's authority to sign will be required.

VI. WHEN OWNERSHIP MUST BE ESTABLISHED

Examples of situations where ownership must be established under 37 CFR 3.73(b) are when the assignee: signs a request for a continued prosecution application under 37 CFR 1.53(d), unless papers establishing ownership under 37 CFR 3.73(b) were filed in the prior application and ownership has not changed (MPEP § 201.06(d)); signs a request for status of an application or gives a power to inspect an application (MPEP § 102 and § 104); acquiesces to express abandonment of an application (MPEP § 711.01); appoints its own registered attorney or agent to prosecute an application (37 CFR 3.71 and MPEP § 402.07); signs a terminal disclaimer (MPEP § 1490); consents to the filing of a reissue application (MPEP § 1410.01); consents to the correction of inventorship (MPEP § 201.03 or § 1481); files an application under 37 CFR 1.47(b) (MPEP § 409.03(b)) or 37 CFR 1.425; signs a Fee(s) Transmittal (PTOL-85B) (MPEP § 1306); or signs a reply to an Office action.

VII. WHEN OWNERSHIP NEED NOT BE ESTABLISHED

Examples of situations where ownership need not be established under 37 CFR 3.73(b) are when the assignee: signs a request for a continued prosecution application under 37 CFR 1.53(d), where papers establishing ownership under 37 CFR 3.73(b) were filed in the prior application and ownership has not changed (MPEP § 201.06(d)); signs a small entity statement (MPEP § 509.03); signs a statement of common ownership of two inventions (MPEP § 706.02(l)(2)); signs a NASA or DOE property rights statement (MPEP § 151); signs an affidavit under 37 CFR 1.131 where the inventor is unavailable (MPEP § 715.04); signs a certificate under 37 CFR 1.8 (MPEP § 512); or files a request for reexamination of a patent under 37 CFR 1.510 (MPEP § 2210).

VIII. MULTIPLE ASSIGNEES

When an assignee seeks to take action in a matter before the Office with respect to a patent application, patent, or reexamination proceeding and the right, title, and interest therein is held by more than one assignee, each partial assignee must provide a submission under 37 CFR 3.73(b). In each submission, the extent of each assignee's interest must be set forth so that the Office can determine whether it has obtained action by the entirety of the right, title and interest holders (owners). 37 CFR 3.73(c)(2). If the extent of the partial assignee's ownership interest is not set forth in the submission under 37 CFR 3.73(b), the Office may refuse to accept the submission as an establishment of ownership interest.

IX. CONFLICTING 37 CFR 3.73(b) STATEMENTS

Where there are two or more conflicting 37 CFR 3.73(b) statements in an application or other Office proceeding, the statement with the latest date of submission to the Office will normally control as to establishment of the assignee. If, however, the ownership established as controlling is contested on the record by another party who has submitted a conflicting 37 CFR 3.73(b) statement, then the application or other proceeding shall be forwarded by the Office official in charge of the application or other proceeding to the Office of Patent Legal Administration for resolution of the ownership question. Generally, where there are two or more conflicting 37 CFR 3.73(b) statements in an application, the ownership entity that filed that application will be permitted to conduct the prosecution, and the other party that submitted a 37 CFR 3.73(b) statement to establish its ownership may wish to consider filing an application under 37 CFR 1.47.

X. FORMS

Form PTO/SB/96 may be used to establish ownership under 37 CFR 3.73(b).

**>

PTO/SB/96 (12-05)
Approved for use through 07/31/2006. OMB 0651-0031
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

STATEMENT UNDER 37 CFR 3.73(b)

Applicant/Patent Owner: _____

Application No./Patent No./Control No.: _____ Filed/Issue Date: _____

Entitled:

_____, a _____
(Name of Assignee) (Type of Assignee: corporation, partnership, university, government agency, etc.)

states that it is:

1. ☐ the assignee of the entire right, title, and interest; or

2. ☐ an assignee of less than the entire right, title and interest
(The extent (by percentage) of its ownership interest is _____%)

in the patent application/patent identified above by virtue of either:

A. ☐ An assignment from the inventor(s) of the patent application/patent identified above. The assignment was recorded in the United States Patent and Trademark Office at Reel _____, Frame _____, or a true copy of the original assignment is attached.

OR

B. ☐ A chain of title from the inventor(s), of the patent application/patent identified above, to the current assignee as follows:

1. From: _____ To: _____
The document was recorded in the United States Patent and Trademark Office at
Reel _____, Frame _____, or for which a copy thereof is attached.

2. From: _____ To: _____
The document was recorded in the United States Patent and Trademark Office at
Reel _____, Frame _____, or for which a copy thereof is attached.

3. From: _____ To: _____
The document was recorded in the United States Patent and Trademark Office at
Reel _____, Frame _____, or for which a copy thereof is attached.

☐ Additional documents in the chain of title are listed on a supplemental sheet.

As required by 37 CFR 3.73(b)(1)(i), the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11.

[NOTE: A separate copy (*i.e.*, a true copy of the original assignment document(s)) must be submitted to Assignment Division in accordance with 37 CFR Part 3, to record the assignment in the records of the USPTO. See MPEP 302.08]

The undersigned (whose title is supplied below) is authorized to act on behalf of the assignee.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

Chapter 400 Representative of Inventor or Owner

401 U.S. Patent and Trademark Office Cannot Aid in Selection of Attorney [R-5]

**>

37 CFR 1.31. Applicant may be represented by one or more patent practitioners or joint inventors.

An applicant for patent may file and prosecute his or her own case, or he or she may give a power of attorney so as to be represented by one or more patent practitioners or joint inventors. The United States Patent and Trademark Office cannot aid in the selection of a patent practitioner.<

An applicant for patent may file and prosecute his or her own application, and thus act as his or her own representative (*pro se*) before the Office. See 37 CFR 1.31. In presenting (whether by signing, filing, submitting, or later advocating) papers to the Office, a *pro se* applicant is making the certifications under 37 CFR 10.18(b), and may be subject to sanctions under 37 CFR 10.18(c) for violations of 37 CFR 10.18(b)(2). See 37 CFR 1.4(d)(4). See also MPEP § 410.

If patentable subject matter appears to be disclosed in a *pro se* application and it is apparent that the applicant is unfamiliar with the proper preparation and prosecution of patent applications, the examiner may suggest to the applicant that it may be desirable to employ a registered patent attorney or agent. It is suggested that form paragraph 4.10 be incorporated in an Office action if the use of an attorney or agent is considered desirable and if patentable subject matter exists in the application.

¶ *4.10 Employ Services of Attorney or Agent*

An examination of this application reveals that applicant is unfamiliar with patent prosecution procedure. While an inventor may prosecute the application, lack of skill in this field usually acts as a liability in affording the maximum protection for the invention disclosed. Applicant is advised to secure the services of a registered patent attorney or agent to prosecute the application, since the value of a patent is largely dependent upon skilled preparation and prosecution. The Office cannot aid in selecting an attorney or agent.

A listing of registered patent attorneys and agents is available on the USPTO Internet web site http://www.uspto.gov in the Site

Index under "Attorney and Agent Roster". Applicants may also obtain a list of registered patent attorneys and agents located in their area by writing to the Mail Stop OED, Director of the U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450.

Examiner Note:

The examiner should not suggest that applicant employ an attorney or agent if the application appears to contain no patentable subject matter.

402 Power of Attorney; Acting in a Representative Capacity [R-5]

37 CFR 1.32. Power of attorney.

**>

(a) Definitions.

(1) Patent practitioner means a registered patent attorney or registered patent agent under § 11.6.

(2) Power of attorney means a written document by which a principal authorizes one or more patent practitioners or joint inventors to act on his or her behalf.

(3) Principal means either an applicant for patent (§ 1.41(b)) or an assignee of entire interest of the applicant for patent or in a reexamination proceeding, the assignee of the entirety of ownership of a patent. The principal executes a power of attorney designating one or more patent practitioners or joint inventors to act on his or her behalf.

(4) Revocation means the cancellation by the principal of the authority previously given to a patent practitioner or joint inventor to act on his or her behalf.

(5) Customer Number means a number that may be used to:

(i) Designate the correspondence address of a patent application or patent such that the correspondence address for the patent application, patent or other patent proceeding would be the address associated with the Customer Number;

(ii) Designate the fee address (§ 1.363) of a patent such that the fee address for the patent would be the address associated with the Customer Number; and

(iii) Submit a list of patent practitioners such that those patent practitioners associated with the Customer Number would have power of attorney.<

(b) A power of attorney must:

(1) Be in writing;

(2) Name one or more representatives in compliance with (c) of this section;

(3) Give the representative power to act on behalf of the principal; and

(4) Be signed by the applicant for patent (§ 1.41(b)) or the assignee of the entire interest of the applicant.

(c) A power of attorney may only name as representative:

(1) One or more joint inventors (§ 1.45);

(2) Those registered patent practitioners associated with a Customer Number;

**>

(3) Ten or fewer patent practitioners, stating the name and registration number of each patent practitioner. Except as provided in paragraph (c)(1) or (c)(2) of this section, the Office will not recognize more than ten patent practitioners as being of record in an application or patent. If a power of attorney names more than ten patent practitioners, such power of attorney must be accompanied by a separate paper indicating which ten patent practitioners named in the power of attorney are to be recognized by the Office as being of record in the application or patent to which the power of attorney is directed.<

>An applicant may give a power of attorney to one or more patent practitioners or joint inventors (37 CFR 1.31).< Powers of attorney naming firms of attorneys or agents filed in patent applications will not be recognized. Furthermore, a power of attorney that names more than ten patent practitioners will only be entered if Customer Number practice is used or if such power of attorney is accompanied by a separate paper indicating which ten patent practitioners named in the power of attorney are to be recognized by the Office as being of record in the application or patent to which the power of attorney is directed. If a power of attorney is not entered because more than ten patent practitioners were named, a copy of the power of attorney should be refiled with the separate paper as set forth in 37 CFR 1.32(c)(3).

Powers of attorney under 37 CFR 1.32(b) naming >joint inventors,< one or more registered individuals, or all registered practitioners associated with a Customer Number, may be made. See MPEP § 403 for Customer Number practice. >Where a power of attorney is given to ten or fewer patent practitioners, 37 CFR 1.32(c)(3) requires the name and registration number of each patent practitioner to be stated in the power of attorney. If the name submitted on the power of attorney does not match the name associated with the registration number provided in the Office of Enrollment and Discipline records for patent practitioners, the person that the Office will recognize as being of record will be the person associated with the registration number provided, because the Office enters the registration number, not the name, when making the practitioner of record. Accordingly, if the wrong registration number is provided, a new power of attorney will be required to correct the error.<

For a power of attorney to be valid, the attorney or agent appointed must be registered to practice before the U.S. Patent and Trademark Office in accordance with 37 CFR 11.6. >Any power of attorney given to a

practitioner who has been suspended or disbarred by the Office is ineffective, and does not authorize the person to practice before the Office or to represent applicants or patentees in patent matters.< Form PTO/SB/81 may be used to appoint a registered >patent< practitioner.

**>

PTO/SB/81 (01-06)
Approved for use through 12/31/2008. OMB 0651-0035
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

POWER OF ATTORNEY and CORRESPONDENCE ADDRESS INDICATION FORM

Application Number	
Filing Date	
First Named Inventor	
Title	
Art Unit	
Examiner Name	
Attorney Docket Number	

I hereby revoke all previous powers of attorney given in the above-identified application.

I hereby appoint:

☐ Practitioners associated with the Customer Number:

OR

☐ Practitioner(s) named below:

Name	Registration Number

as my/our attorney(s) or agent(s) to prosecute the application identified above, and to transact all business in the United States Patent and Trademark Office connected therewith.

Please recognize or change the correspondence address for the above-identified application to:

☐ The address associated with the above-mentioned Customer Number:

OR

☐ The address associated with Customer Number:

OR

☐ Firm or Individual Name					
Address					
City		State		Zip	
Country					
Telephone		Email			

I am the:

☐ Applicant/Inventor.

☐ Assignee of record of the entire interest. See 37 CFR 3.71.
Statement under 37 CFR 3.73(b) is enclosed. (Form PTO/SB/96)

SIGNATURE of Applicant or Assignee of Record

Signature		Date	
Name		Telephone	
Title and Company			

NOTE: Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required. Submit multiple forms if more than one signature is required, see below*.

☐ *Total of _____ forms are submitted.

This collection of information is required by 37 CFR 1.31, 1.32 and 1.33. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

37 CFR 1.34. Acting in a representative capacity.

**>When a patent practitioner acting in a representative capacity appears in person or signs a paper in practice before the United States Patent and Trademark Office in a patent case, his or her personal appearance or signature shall constitute a representation to the United States Patent and Trademark Office that under the provisions of this subchapter and the law, he or she is authorized to represent the particular party on whose behalf he or she acts. In filing such a paper, the patent practitioner must set forth his or her registration number, his or her name and signature. Further proof of authority to act in a representative capacity may be required.<

In accordance with 37 CFR 1.34, a paper filed by a registered patent attorney or agent in an application in which he or she is not of record must include his or her name and registration number with his or her signature. Acceptance of papers filed in patent applications and reexamination proceedings by registered attorneys and agents upon a representation that the attorney or agent is authorized to act in a representative capacity is for the purpose of facilitating replies on behalf of applicants in patent applications and, further, to obviate the need for filing powers of attorney in individual applications or patents when there has been a change in composition of law firms or corporate patent staffs. Interviews with a registered attorney or agent not of record will, in view of 35 U.S.C. 122, be conducted only on the basis of information and files supplied by the attorney or agent. A person acting in a representative capacity may not sign (A) a power of attorney (37 CFR 1.32(b)(4)), (B) a document granting access to an application (except where an executed oath or declaration has not been filed, and the patent practitioner was named in the papers accompanying the application papers - 37 CFR 1.14(c)), (C) a change of correspondence address (except where an executed oath or declaration has not been filed, and the patent practitioner filed the application - 37 CFR 1.33(a)), (D) a terminal disclaimer (37 CFR 1.321(b)(1)(iv)), or (E) a request for an express abandonment without filing a continuing application (37 CFR 1.138(b)).

A power of attorney or authorization given to a registered Canadian patent agent, to be valid, must be given by the applicants, all of whom are located in Canada. See 37 CFR 11.6(c).

When an application for patent is filed accompanied by a power of attorney to a person *>who is neither< registered to practice before the United States Patent and Trademark Office >nor named as an inventor in the application<, the Office of Initial Patent Examination will send the official filing receipt directly to the *>first named inventor<, together with an explanatory letter. A copy of the letter will be sent to the person named in the power and a copy placed in the file without being given a paper number. The name of the unregistered person will not be added to the list of patent practitioners of record for the application in the Office's electronic records and the examiner will communicate only with the applicant directly ** unless and until the applicant appoints a recognized practitioner.

Form paragraph 4.09 may be used to notify applicant that the attorney or agent is not registered.
**>

¶ *4.09 Unregistered Attorney or Agent*

An examination of this application reveals that applicant has attempted to appoint an attorney or agent who is neither registered to practice before the U.S. Patent and Trademark Office in patent matters nor one of the named inventors in the application, contrary to the Code of Federal Regulations, 37 CFR 1.31 and 1.32. Therefore, the appointment is void, *ab initio*. We will not recognize the appointment and all correspondence concerning this application must be signed by: 1) all named applicants (inventors), 2) all the owners of the rights to the invention, or 3) a registered attorney or agent duly appointed by the inventor(s) or the owner(s). Furthermore, all communications from the Office will be addressed to the first named inventor, unless specific instructions to the contrary are supplied by the applicant(s) for patent or owner(s).

While an applicant may prosecute the application, lack of skill in this field usually acts as a liability in affording the maximum protection for the invention disclosed. Applicant is, therefore, encouraged to secure the services of a registered patent attorney or agent (i.e., registered to practice before the U.S. Patent and Trademark Office) to prosecute the application, since the value of a patent is largely dependent upon skillful preparation and prosecution.

The Office cannot aid you in selecting a registered attorney or agent, however, a list of attorneys and agents registered to practice before the U.S. Patent and Trademark Office is available from the USPTO web site, http://www.uspto.gov. For assistance locating this information, contact the Office of Enrollment and Discipline at (571) 272-4097 or call the Inventors Assistance Center toll-free number, 1(800)786-9199.

Examiner Note:

This form paragraph is to be used ONLY after ensuring that the named representative is not registered with the Office. A PALM inquiry should be first made and if no listing is given, the Office of Enrollment and Discipline should be contacted to determine the current "recognition" status of the individual named by the applicant in a "power of attorney." If the named individual is NOT

registered or otherwise recognized by the Office, the correspondence address on the face of the file should be promptly changed to that of the first named inventor unless applicant specifically provides a different "correspondence address." A copy of the Office communication incorporating this form paragraph should also be mailed to the unregistered individual named by the applicant in the "power of attorney." If desired, you may include with your communication, a list of the registered practitioners from applicant's Zip Code copied from the Registered Attorney/Agent Roster posted on the USPTO Internet web site http://www.uspto.gov.

<

See MPEP § 601.03 for change of correspondence address. See MPEP § 201.06(c) for change in the power of attorney in continuation or divisional applications filed under 37 CFR 1.53(b). See MPEP § 403 for the addition and/or deletion of a practitioner from the list of practitioners associated with a Customer Number. For a representative of a requester of reexamination, see MPEP § 2213.

37 CFR 10.18. Signature and certificate for correspondence filed in the Patent and Trademark Office.

(a) For all documents filed in the Office in patent, trademark, and other non-patent matters, except for correspondence that is required to be signed by the applicant or party, each piece of correspondence filed by a practitioner in the Patent and Trademark Office must bear a signature by such practitioner complying with the provisions of § 1.4(d), § 1.4(e), or § 2.193(c)(1) of this chapter.

(b) By presenting to the Office (whether by signing, filing, submitting, or later advocating) any paper, the party presenting such paper, whether a practitioner or non-practitioner, is certifying that—

(1) All statements made therein of the party's own knowledge are true, all statements made therein on information and belief are believed to be true, and all statements made therein are made with the knowledge that whoever, in any matter within the jurisdiction of the Patent and Trademark Office, knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or device a material fact, or makes any false, fictitious or fraudulent statements or representations, or makes or uses any false writing or document knowing the same to contain any false, fictitious or fraudulent statement or entry, shall be subject to the penalties set forth under 18 U.S.C. 1001, and that violations of this paragraph may jeopardize the validity of the application or document, or the validity or enforceability of any patent, trademark registration, or certificate resulting therefrom; and

(2) To the best of the party's knowledge, information and belief, formed after an inquiry reasonable under the circumstances, that —

(i) The paper is not being presented for any improper purpose, such as to harass someone or to cause unnecessary delay or needless increase in the cost of prosecution before the Office;

(ii) The claims and other legal contentions therein are warranted by existing law or by a nonfrivolous argument for the extension, modification, or reversal of existing law or the establishment of new law;

(iii) The allegations and other factual contentions have evidentiary support or, if specifically so identified, are likely to have evidentiary support after a reasonable opportunity for further investigation or discovery; and

(iv) The denials of factual contentions are warranted on the evidence, or if specifically so identified, are reasonably based on a lack of information or belief.

(c) Violations of paragraph (b)(1) of this section by a practitioner or non-practitioner may jeopardize the validity of the application or document, or the validity or enforceability of any patent, trademark registration, or certificate resulting therefrom. Violations of any of paragraphs (b)(2)(i) through (iv) of this section are, after notice and reasonable opportunity to respond, subject to such sanctions as deemed appropriate by the Commissioner, or the Commissioner's designee, which may include, but are not limited to, any combination of —

(1) Holding certain facts to have been established;

(2) Returning papers;

(3) Precluding a party from filing a paper, or presenting or contesting an issue;

(4) Imposing a monetary sanction;

(5) Requiring a terminal disclaimer for the period of the delay; or

(6) Terminating the proceedings in the Patent and Trademark Office.

(d) Any practitioner violating the provisions of this section may also be subject to disciplinary action. See § 10.23(c)(15).

37 CFR 10.18(a) emphasizes that every paper filed by a practitioner must be personally signed by the practitioner, except those required to be signed by the applicant or party. 37 CFR 10.18(b) provides that, by presenting any paper to the Office, the party presenting such paper (whether a practitioner or nonpractitioner) is: (1) certifying that the statements made therein are subject to the declaration clause of 37 CFR 1.68; and (2) making the certifications required for papers filed in a federal court under Rule 11(b) of the Federal Rules of Civil Procedure. See MPEP § 410. 37 CFR 10.18(d) provides that any practitioner violating the provisions of 37 CFR 10.18 may also be subject to disciplinary action (see 37 CFR 10.23(c)(15)), thus clarifying that a practitioner may be subject to disciplinary action in lieu of, or in addition to, the sanctions set forth in 37 CFR 10.18(c) for violations of 37 CFR 10.18. See also 37 CFR 1.4(d)(4).

The certifications in 37 CFR 10.18(b) apply to all papers filed in the Office, including allegations of improper conduct made by a registered practitioner in any Office proceeding.

37 CFR 10.11. Removing names from the register.

A letter may be addressed to any individual on the register, at the address of which separate notice was last received by the Director, for the purpose of ascertaining whether such individual desires to remain on the register. The name of any individual failing to reply and give any information requested by the Director within a time limit specified will be removed from the register and the names of individuals so removed will be published in the Official Gazette. The name of any individual so removed may be reinstated on the register as may be appropriate and upon payment of the fee set forth in § 1.21(a)(3) of this subchapter.

See also MPEP § 1702.

402.01 Exceptions as to Registration [R-5]

37 CFR 11.9. Limited recognition in patent matters.

(a) Any individual not registered under § 11.6 may, upon a showing of circumstances which render it necessary or justifiable, and that the individual is of good moral character and reputation, be given limited recognition by the OED Director to prosecute as attorney or agent a specified patent application or specified patent applications. Limited recognition under this paragraph shall not extend further than the application or applications specified. Limited recognition shall not be granted while individuals who have passed the examination or for whom the examination has been waived are awaiting registration to practice before the Office in patent matters.

(b) A nonimmigrant alien residing in the United States and fulfilling the provisions of § 11.7(a) and (b) may be granted limited recognition if the nonimmigrant alien is authorized by the Bureau of Citizenship and Immigration Services to be employed or trained in the United States in the capacity of representing a patent applicant by presenting or prosecuting a patent application. Limited recognition shall be granted for a period consistent with the terms of authorized employment or training. Limited recognition shall not be granted or extended to a non-United States citizen residing abroad. If granted, limited recognition shall automatically expire upon the nonimmigrant alien's departure from the United States.

(c) An individual not registered under § 11.6 may, if appointed by an applicant, prosecute an international patent application only before the United States International Searching Authority and the United States International Preliminary Examining Authority, provided that the individual has the right to practice before the national office with which the international application is filed as provided in PCT Art. 49, Rule 90 and § 1.455 of this subchapter, or before the International Bureau when the USPTO is acting as Receiving Office pursuant to PCT Rules 83.1*bis* and 90.1.

Sometimes in **>an< application >naming joint inventors,< one >or more< of the *>joint inventors< gives to the other >joint inventor(s)< the power of attorney in the application. Such power will be recognized even though the one to whom it is given is not registered. See 37 CFR >1.31 and< 1.32(c)(1).

If a request for special recognition accompanies the application, the Office of Initial Patent Examination will forward the file to the Director of the Office of Enrollment and Discipline.

402.02 Appointment of Associate Attorney or Agent [R-3]

**>Effective June 25, 2004, the associate power of attorney practice has been eliminated. The Office no longer accepts a power of attorney signed by a principal to name an associate power of attorney. An appointment of an associate power of attorney filed on or after June 25, 2004 will not be accepted.< See also MPEP § 406.

402.05 Revocation [R-5]

37 CFR 1.36. Revocation of power of attorney; withdrawal of patent attorney or agent.

(a) **>A power of attorney, pursuant to § 1.32(b), may be revoked at any stage in the proceedings of a case by an applicant for patent (§ 1.41(b)) or an assignee of the entire interest of the applicant, or the owner of the entire interest of a patent. A power of attorney to the patent practitioners associated with a Customer Number will be treated as a request to revoke any powers of attorney previously given. Fewer than all of the applicants (or fewer than all of the assignees of the entire interest of the applicant or, in a reexamination proceeding, fewer than all the owners of the entire interest of a patent) may revoke the power of attorney only upon a showing of sufficient cause, and payment of the petition fee set forth in § 1.17(f). A patent practitioner will be notified of the revocation of the power of attorney. Where power of attorney is given to the patent practitioners associated with a Customer Number (§ 1.32(c)(2)), the practitioners so appointed will also be notified of the revocation of the power of attorney when the power of attorney to all of the practitioners associated with the Customer Number is revoked. The notice of revocation will be mailed to the correspondence address for the application (§ 1.33) in effect before the revocation. An assignment will not of itself operate as a revocation of a power previously given, but the assignee of the entire interest of the applicant may revoke previous powers of attorney and give another power of attorney of the assignee's own selection as provided in § 1.32(b).<

(b) A registered patent attorney or patent agent who has been given a power of attorney pursuant to § 1.32(b) may withdraw as attorney or agent of record upon application to and approval by the Director. The applicant or patent owner will be notified of the withdrawal of the registered patent attorney or patent agent. Where power of attorney is given to the patent practitioners associated with a Customer Number, a request to delete all of the patent practitioners associated with the Customer Number may not be granted if an applicant has given power of attorney to the

patent practitioners associated with the Customer Number in an application that has an Office action to which a reply is due, but insufficient time remains for the applicant to file a reply. See § 41.5 of this title for withdrawal during proceedings before the Board of Patent Appeals and Interferences.

Upon revocation of the power of attorney, appropriate notification is sent by the technical support staff of the Technology Center.

Revocation of the power of the principal attorney revokes any associate powers granted by him or her to other attorneys.

Revocation of the power of attorney becomes effective on the date that the revocation is RECEIVED in the Office (not on the date of ACCEPTANCE).

Form PTO/SB/82 may be used to revoke a power of attorney.

REVOCATION OF POWER OF ATTORNEY WITH NEW POWER OF ATTORNEY AND CHANGE OF CORRESPONDENCE ADDRESS		
	Application Number	
	Filing Date	
	First Named Inventor	
	Art Unit	
	Examiner Name	
	Attorney Docket Number	

I hereby revoke all previous powers of attorney given in the above-identified application.

☐ A Power of Attorney is submitted herewith.

OR

☐ I hereby appoint the practitioners associated with the Customer Number: ☐

☐ Please change the correspondence address for the above-identified application to:

☐ The address associated with Customer Number: ☐

OR

☐ Firm *or* Individual Name					
Address					
City		State		Zip	
Country					
Telephone		Email			

I am the:

☐ Applicant/Inventor.

☐ Assignee of record of the entire interest. See 37 CFR 3.71.
Statement under 37 CFR 3.73(b) is enclosed. (Form PTO/SB/96)

SIGNATURE of Applicant or Assignee of Record

Signature			
Name			
Date		Telephone	

NOTE: Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required. Submit multiple forms if more than one signature is required, see below*.

☐ *Total of _____forms are submitted.

This collection of information is required by 37 CFR 1.36. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

402.06 Attorney or Agent Withdraws [R-5]

37 CFR 1.36. Revocation of power of attorney; withdrawal of patent attorney or agent.

*****

(b) A registered patent attorney or patent agent who has been given a power of attorney pursuant to § 1.32(b) may withdraw as attorney or agent of record upon application to and approval by the Director. The applicant or patent owner will be notified of the withdrawal of the registered patent attorney or patent agent. Where power of attorney is given to the patent practitioners associated with a Customer Number, a request to delete all of the patent practitioners associated with the Customer Number may not be granted if an applicant has given power of attorney to the patent practitioners associated with the Customer Number in an application that has an Office action to which a reply is due, but insufficient time remains for the applicant to file a reply. See § 41.5 of this title for withdrawal during proceedings before the Board of Patent Appeals and Interferences.

See 37 CFR 1.36(a) in MPEP § 402.05 for revocation. See 37 CFR 10.40 for information regarding permissive and mandatory withdrawal. When filing a request to withdraw as attorney or agent of record, the patent attorney or agent should briefly state the reason(s) for which he or she is withdrawing so that the Office can determine whether to grant the request. >Note that disciplinary rule, 37 CFR 10.40(a) provides that a "practitioner shall not withdraw from employment until the practitioner has taken reasonable steps to avoid foreseeable prejudice to the rights of the client." Among several scenarios addressed in 37 CFR 10.40(c), subsections (iv) and (vi) permit withdrawal when the client fails to compensate the practitioner, or when "other conduct on the part of the client has rendered the representation unreasonably difficult." When preparing a request for withdrawal for such reasons, the practitioner should also be mindful of 37 CFR 10.57(b)(2), which prohibits the use of a confidence or secret of a client to the disadvantage of a client. Where withdrawal is predicated upon such reasons, the practitioner, rather than divulging confidential or secret information about the client, should identify the reason(s) for requesting to withdraw as being based on "irreconcilable differences." An explanation of and the evidence supporting "irreconcilable differences" should be submitted as proprietary material in accordance with MPEP § 724.02 to ensure that the client's confidences are maintained.<

In the event that a notice of withdrawal is filed by the attorney or agent of record, the file will be forwarded to the **>appropriate official for decision on the request<. The **withdrawal is effective when approved** rather than when received.

To expedite the handling of requests for permission to withdraw as attorney or agent, under 37 CFR 1.36(b), Form PTO/SB/83 may be used. Because the Office does not recognize law firms, each attorney of record must sign the notice of withdrawal, or the notice of withdrawal must contain a clear indication of one attorney signing on behalf of himself or herself and another. A withdrawal of another attorney or agent of record, without also withdrawing the attorney or agent signing the request is a revocation, not a withdrawal.

The Director of the United States Patent and Trademark Office usually requires that there be at least 30 days between *approval* of withdrawal and the later of the expiration date of a time period for reply or the expiration date of the period which can be obtained by a petition and fee for extension of time under 37 CFR 1.136(a). This is so that the applicant will have sufficient time to obtain other representation or take other action. If a period has been set for reply and the period may be extended without a showing of cause pursuant to 37 CFR 1.136(a) by filing a petition for extension of time and fee, the practitioner will not be required to seek such extension of time for withdrawal to be approved. In such a situation, however, withdrawal will not be approved unless at least 30 days would remain between the date of approval and the last date on which such a petition for extension of time and fee could properly be filed.

For withdrawal during reexamination proceedings, see MPEP § 2223.

Form PTO/SB/83 may be used to request withdrawal of attorney or agent of record.

REQUEST FOR WITHDRAWAL AS ATTORNEY OR AGENT AND CHANGE OF CORRESPONDENCE ADDRESS

Application Number	
Filing Date	
First Named Inventor	
Art Unit	
Examiner Name	
Attorney Docket Number	

To: Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Please withdraw me as attorney or agent for the above identified patent application, and

☐ all the attorneys/agents of record.

☐ the attorneys/agents (with registration numbers) listed on the attached paper(s), or

☐ the attorneys/agents associated with Customer Number ☐

NOTE: This box can only be checked when the power of attorney of record in the application is to all the practitioners associated with a customer number.

The reasons for this request are:

CORRESPONDENCE ADDRESS

1. ☐ The correspondence address is NOT affected by this withdrawal.
2. ☐ Change the correspondence address and direct all future correspondence to:

☐ The address associated with Customer Number: ☐

OR

☐ Firm *or* Individual Name					
Address					
City		State		Zip	
Country					
Telephone		Email			

Signature			
Name		Registration No.	
Date		Telephone No.	

NOTE: Withdrawal is effective when approved rather than when received. Unless there are at least 30 days between approval of withdrawal and the expiration date of a time period for response or possible extension period, the request to withdraw is normally disapproved.

This collection of information is required by 37 CFR 1.36. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

402.07 Assignee Can Revoke Power of Attorney of Applicant and Appoint New Power of Attorney [R-5]

The assignee of record of the entire interest can revoke the power of attorney of the applicant unless an "irrevocable" right to prosecute the application had been given as in some government owned applications.

37 CFR 3.71. Prosecution by assignee.

(a) *Patents — conducting of prosecution.* One or more assignees as defined in paragraph (b) of this section may, after becoming of record pursuant to paragraph (c) of this section, conduct prosecution of a national patent application or a reexamination proceeding to the exclusion of either the inventive entity, or the assignee(s) previously entitled to conduct prosecution.

(b) *Patents* — assignee(s) who can prosecute. The assignee(s) who may conduct either the prosecution of a national application for patent or a reexamination proceeding are:

(1) *A single assignee*. An assignee of the entire right, title and interest in the application or patent being reexamined who is of record, or

(2) *Partial assignee(s) together or with inventor(s)*. All partial assignees, or all partial assignees and inventors who have not assigned their right, title and interest in the application or patent being reexamined, who together own the entire right, title and interest in the application or patent being reexamined. A partial assignee is any assignee of record having less than the entire right, title and interest in the application or patent being reexamined.

(c) *Patents — Becoming of record.* An assignee becomes of record either in a national patent application or a reexamination proceeding by filing a statement in compliance with § 3.73(b) that is signed by a party who is authorized to act on behalf of the assignee.

(d) *Trademarks*. The assignee of a trademark application or registration may prosecute a trademark application, submit documents to maintain a trademark registration, or file papers against a third party in reliance on the assignee's trademark application or registration, to the exclusion of the original applicant or previous assignee. The assignee must establish ownership in compliance with § 3.73(b).

See 37 CFR 1.36 in MPEP § 402.05.

A power of attorney by the assignee of the entire interest revokes all powers given by the applicant and prior assignees if the assignee establishes their right to take action as provided in 37 CFR 3.73(b). See MPEP § 324. Ordinarily, the applicant will still have access to the application (MPEP § 106).

In an application that has been accorded status under 37 CFR 1.47(a), or for which status under 37 CFR 1.47(a) has been requested, a power of attorney given by the inventors who have signed the declaration (available inventors) may be revoked by an assignee of the entire interest of the available inventors (i.e., the applicant). See 37 CFR 1.32(b)(4). Rights of the assignee to take action may be established as provided in 37 CFR 3.73(b) and MPEP § 324.

Form PTO/SB/80 may be used by an assignee of the entire interest of the applicant to revoke a power of attorney and appoint a new power of attorney. The assignee would sign the power of attorney, and a newly appointed practitioner, having authority to take action on behalf of the assignee would sign a statement under 37 CFR 3.73(b) for the application in which the general power of attorney is to be used.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

402.08 Application in Interference

While an application is involved in an interference, no power of attorney of any kind should be entered in such application by the technical support staff of the Technology Center.

If a power of attorney or revocation is received for an application which is in interference, it should be forwarded to the Service Branch of the Board of Patent Appeals and Interferences because all parties to the interference must be notified.

402.09 International Application [R-3]

>

37 CFR 11.9. Limited recognition in patent matters

(a) Any individual not registered under § 11.6 may, upon a showing of circumstances which render it necessary or justifiable, and that the individual is of good moral character and reputation, be given limited recognition by the OED Director to prosecute as attorney or agent a specified patent application or specified patent applications. Limited recognition under this paragraph shall not extend further than the application or applications specified. Limited recognition shall not be granted while individuals who have passed the examination or for whom the examination has been waived are awaiting registration to practice before the Office in patent matters.

(b) A nonimmigrant alien residing in the United States and fulfilling the provisions of § 11.7(a) and (b) may be granted limited recognition if the nonimmigrant alien is authorized by the Bureau of Citizenship and Immigration Services to be employed or trained in the United States in the capacity of representing a patent applicant by presenting or prosecuting a patent application. Limited recognition shall be granted for a period consistent with the terms of authorized employment or training. Limited recognition shall not be granted or extended to a non-United States citizen residing abroad. If granted, limited recognition shall automatically expire upon the nonimmigrant alien's departure from the United States.

(c) An individual not registered under § 11.6 may, if appointed by an applicant, prosecute an international patent application only before the United States International Searching Authority and the United States International Preliminary Examining Authority, provided that the individual has the right to practice before the national office with which the international application is filed as provided in PCT Art. 49, Rule 90 and § 1.455 of this subchapter, or before the International Bureau when the USPTO is acting as Receiving Office pursuant to PCT Rules 83.1^{bis} and 90.1.<

37 CFR 1.455. Representation in international applications.

(a) **>Applicants of international applications may be represented by attorneys or agents registered to practice before the United States Patent and Trademark Office or by an applicant appointed as a common representative (PCT Art. 49, Rules 4.8 and 90 and § 11.9). If applicants have not appointed an attorney or agent or one of the applicants to represent them, and there is more than one applicant, the applicant first named in the request and who is entitled to file in the U.S. Receiving Office shall be considered to be the common representative of all the applicants. An attorney or agent having the right to practice before a national office with which an international application is filed and for which the United States is an International Searching Authority or International Preliminary Examining Authority may be appointed to represent the applicants in the international application before that authority. An attorney or agent may appoint an associate attorney or agent who shall also then be of record (PCT Rule 90.1(d)). The appointment of an attorney or agent, or of a common representative, revokes any earlier appointment unless otherwise indicated (PCT Rule 90.6(b) and (c)).<

(b) **>Appointment of an agent, attorney or common representative (PCT Rule 4.8) must be effected either in the Request form, signed by applicant, in the Demand form, signed by applicant, or in a separate power of attorney submitted either to the United States Receiving Office or to the International Bureau.<

(c) Powers of attorney and revocations thereof should be submitted to the United States Receiving Office until the issuance of the international search report.

(d) The addressee for correspondence will be as indicated in section 108 of the Administrative Instructions.

For representation in international applications, see MPEP § 1807.

402.10 Appointment/Revocation by Less Than All Applicants or Owners [R-5]

Papers giving or revoking a power of attorney in an application generally require signature by all the applicants or owners of the application. Papers revoking a power of attorney in an application (or giving a power of attorney) will not be accepted by the Office when signed by less than all of the applicants or owners of the application unless they are accompanied by a petition under 37 CFR 1.36(a) and fee under 37 CFR 1.17(*>f<) with a showing of sufficient cause (if revocation), or a petition under 37 CFR 1.183 and fee under 37 CFR 1.17(f) (if appointment) demonstrating the extraordinary situation where justice requires waiver of the requirement of 37 CFR 1.32(b)(4) that the applicant, or the assignee of the entire interest of the applicant sign the power of attorney. The petition should be directed to the Office of Petitions. The acceptance of such papers by petition under 37 CFR 1.36(a) or 1.183 will result in more than one attorney, agent, applicant, or owner prosecuting the application at the same time. Therefore, each of these parties must

sign all subsequent replies submitted to the Office. See *In re Goldstein*, 16 USPQ2d 1963 (Dep. Assist. Comm'r Pat. 1988). In an application filed under 37 CFR 1.47(a), an assignee of the entire interest of the available inventors (i.e., the applicant) who have signed the declaration may appoint or revoke a power of attorney without a petition under 37 CFR 1.36(a) or 1.183. See MPEP § 402.07. However, in applications accepted under 37 CFR 1.47, such a petition under 37 CFR 1.36(a) or 1.183 submitted by a previously nonsigning inventor who has now joined in the application will not be granted. See MPEP § 409.03(i). Upon accepting papers appointing and/or revoking a power of attorney that are signed by less than all of the applicants or owners, the Office will indicate to applicants who must sign subsequent replies. Dual correspondence will still not be permitted. Accordingly, when the acceptance of such papers results in an attorney or agent and at least one applicant or owner prosecuting the application, correspondence will be mailed to the attorney or agent. When the acceptance of such papers results in more than one attorney or agent prosecuting the application, the correspondence address will continue to be that of the attorney or agent first named in the application, unless all parties agree >to a different correspondence address<. Each attorney or agent signing subsequent papers must indicate whom he or she represents.

The following are examples of who must sign replies when there is more than one person responsible for prosecuting the application:

(A) If coinventor A has given a power of attorney >to a patent practitioner< and coinventor B has not, replies must be signed by the *>patent practitioner< of A and by coinventor B.

(B) If coinventors A and B have each appointed their own *>patent practitioner<, replies must be signed by both *>patent practitioners<.

403 Correspondence — With Whom Held [R-5]

37 CFR 1.33. Correspondence respecting patent applications, reexamination proceedings, and other proceedings.

(a) **>*Correspondence address and daytime telephone number*. When filing an application, a correspondence address must be set forth in either an application data sheet (§ 1.76), or elsewhere, in a clearly identifiable manner, in any paper submitted with an application filing. If no correspondence address is specified, the Office may treat the mailing address of the first named inventor (if provided, see §§ 1.76(b)(1) and 1.63(c)(2)) as the correspondence address. The Office will direct all notices, official letters, and other communications relating to the application to the correspondence address. The Office will not engage in double correspondence with an applicant and a patent practitioner, or with more than one patent practitioner except as deemed necessary by the Director. If more than one correspondence address is specified in a single document, the Office will select one of the specified addresses for use as the correspondence address and, if given, will select the address associated with a Customer Number over a typed correspondence address. For the party to whom correspondence is to be addressed, a daytime telephone number should be supplied in a clearly identifiable manner and may be changed by any party who may change the correspondence address. The correspondence address may be changed as follows:

(1) *Prior to filing of § 1.63 oath or declaration by any of the inventors*. If a § 1.63 oath or declaration has not been filed by any of the inventors, the correspondence address may be changed by the party who filed the application. If the application was filed by a patent practitioner, any other patent practitioner named in the transmittal papers may also change the correspondence address. Thus, the inventor(s), any patent practitioner named in the transmittal papers accompanying the original application, or a party that will be the assignee who filed the application, may change the correspondence address in that application under this paragraph.<

(2) *Where a § 1.63 oath or declaration has been filed by any of the inventors.* If a § 1.63 oath or declaration has been filed, or is filed concurrent with the filing of an application, by any of the inventors, the correspondence address may be changed by the parties set forth in paragraph (b) of this section, except for paragraph (b)(2).

(b) *Amendments and other papers*. Amendments and other papers, except for written assertions pursuant to § 1.27(c)(2)(ii) of this part, filed in the application must be signed by:

(1) **>A patent practitioner of record appointed in compliance with § 1.32(b);<

(2) **>A patent practitioner not of record who acts in a representative capacity under the provisions of § 1.34;<

(3) An assignee as provided for under § 3.71(b) of this chapter; or

(4) All of the applicants (§ 1.41(b)) for patent, unless there is an assignee of the entire interest and such assignee has taken action in the application in accordance with § 3.71 of this chapter.

(c) All notices, official letters, and other communications for the patent owner or owners in a reexamination proceeding will be directed to the attorney or agent of record (*see* § 1.32(b)) in the patent file at the address listed on the register of patent attorneys and agents maintained pursuant to §§ 11.5 and 11.11 of this subchapter, or if no attorney or agent is of record, to the patent owner or owners at the address or addresses of record. Amendments and other papers filed in a reexamination proceeding on behalf of the patent owner must be signed by the patent owner, or if there is more than one owner by all the owners, or by an attorney or agent of record in the patent file, or by a registered attorney or agent not

of record who acts in a representative capacity under the provisions of § 1.34. Double correspondence with the patent owner or owners and the patent owner's attorney or agent, or with more than one attorney or agent, will not be undertaken. If more than one attorney or agent is of record and a correspondence address has not been specified, correspondence will be held with the last attorney or agent made of record.

(d) A "correspondence address" or change thereto may be filed with the Patent and Trademark Office during the enforceable life of the patent. The "correspondence address" will be used in any correspondence relating to maintenance fees unless a separate "fee address" has been specified. See § 1.363 for "fee address" used solely for maintenance fee purposes.

>

(e) A change of address filed in a patent application or patent does not change the address for a patent practitioner in the roster of patent attorneys and agents. See § 11.11 of this title.<

37 CFR 1.33(a) provides for an applicant to supply an address to receive correspondence from the U.S. Patent and Trademark Office so that the Office may direct mail to any address of applicant's selection, such as a corporate patent department, a firm of attorneys or agents, or an individual attorney, agent, or other person.

37 CFR 1.33(a) provides that in a patent application the applicant must specify a correspondence address to which the Office will send notices, letters and other communications relating to the application. The correspondence address must appear either in an application data sheet (37 CFR 1.76) or in a clearly identifiable manner elsewhere in any papers submitted with an application filing. Where more than one correspondence address is specified, the Office will **>select one of the correspondence addresses for use< as the correspondence address. This is intended to cover, for example, the situation where an application is submitted with multiple addresses, such as one correspondence address being given in the application transmittal letter, and a different one in an accompanying 37 CFR 1.63 oath or declaration, or other similar situations. The **>Office will select which of the multiple correspondence addresses to use according to the following order: (A) application data sheet (ADS); (B) application transmittal; (C) oath or declaration (unless power of attorney is more current); and (D) power of attorney.< If more than one correspondence address is specified in a single document, the Office will *>select< the address associated with a Customer Number over a typed correspondence address.

37 CFR 1.33(a) requests the submission of a daytime telephone number of the party to whom correspondence is to be addressed. While business is to be conducted on the written record (37 CFR 1.2), a daytime telephone number would be useful in initiating contact that could later be reduced to writing. The telephone number would be changeable by any party who could change the correspondence address.

37 CFR 1.33(a)(1) provides that any party filing the application and setting forth a correspondence address could later change the correspondence address provided that a 37 CFR 1.63 oath/declaration by any of the inventors has not been submitted. If one joint inventor filed an application, the person who may change the correspondence address would include only the one inventor who filed the application, even if another inventor was identified on the application transmittal letter. If two of three inventors filed the application, the two inventors filing the application would be needed to change the correspondence address. Additionally, any registered practitioner named in the application transmittal letter, or a person who has the authority to act on behalf of the party that will be the assignee (if the application was filed by the party that will be the assignee), could change the correspondence address. A registered practitioner named in a letterhead would not be sufficient, but rather a clear identification of the individual as being a representative would be required. A company (to whom the invention has been assigned, or to whom there is an obligation to assign the invention) who files an application, is permitted to designate the correspondence address, and to change the correspondence address, until such time as a (first) 37 CFR 1.63 oath/declaration is filed. The mere filing of a 37 CFR 1.63 oath/declaration that does not include a correspondence address does not affect any correspondence address previously established on the filing of the application, or changed per 37 CFR 1.63(a)(1), even if the application was filed by a company that is only a partial assignee. The expression "party that will be the assignee," rather than assignee, is used in that until a declaration is submitted, inventors have only been identified, and any attempted assignment, or partial assignment, cannot operate for Office purposes until the declaration is supplied. Hence, if the application transmittal letter indicates that the application is being filed on behalf of XYZ company, with an assignment

to be filed later, XYZ company would be allowed to change the correspondence address without resort to 37 CFR 3.73(b) until an executed oath or declaration is filed, and with resort to 37 CFR 3.73(b) after the oath or declaration is filed.

Where a correspondence address was set forth or changed pursuant to 37 CFR 1.33(a)(1) (prior to the filing of a 37 CFR 1.63 oath or declaration), that correspondence address remains in effect upon filing of a 37 CFR 1.63 declaration and can then only be changed pursuant to 37 CFR 1.33(a)(2).

37 CFR 1.33 states that when an attorney or agent has been duly appointed to prosecute an application, correspondence will be held with the attorney or agent unless some other correspondence address has been given. If an attorney or agent of record assigns a correspondence address which is different than an address where the attorney or agent normally receives mail, the attorney or agent is reminded that 37 CFR 10.57 requires the attorney or agent to keep information obtained by attorney/agent – client relationship in confidence. Double correspondence with an applicant and his or her attorney, or with two representatives, will not be undertaken. See MPEP § 403.01, § 403.02, and § 714.01(d).

If double correspondence is attempted, form paragraph 4.01 should be included in the next Office action.

¶ *4.01 Dual Correspondence*

Applicant has appointed an attorney or agent to conduct all business before the Patent and Trademark Office. Double correspondence with an applicant and applicant's attorney or agent will not be undertaken. Accordingly, applicant is required to conduct all future correspondence with this Office through the attorney or agent of record. See 37 CFR 1.33.

Examiner Note:

1. The first time a reply is received directly from applicant, include this paragraph in the Office action and send a copy of the action to the applicant. See MPEP §§ 403 and 714.01.
2. Should applicant file additional replies, do not send copies of subsequent Office actions to the applicant.
3. Status letters from the applicant may be acknowledged in isolated instances.

In a joint application with no attorney or agent, the applicant whose name first appears in the papers receives the correspondence, unless other instructions are given. All applicants must sign the replies. See MPEP § 714.01(a). If the assignee of the entire interest of the applicant is prosecuting the application (MPEP § 402.07), the assignee may specify a correspondence address.

37 CFR 1.33(c) relates to which address communications for the patent owner will be sent in reexamination proceedings. See also MPEP § 2224.

Powers of attorney to firms are not recognized by the U.S. Patent and Trademark Office. See MPEP § 402. However, the firm's address may be used for the correspondence address. The address should appear as follows:

John Doe (inventor)
In care of Able, Baker, and Charlie (firm)
1234 Jefferson Davis Highway
Arlington, Virginia 22202

>Patent practitioners are reminded that the attorney and agent roster must be updated separately from and in addition to any change of address filed in individual patent applications.<

See MPEP § 601.03 for change of correspondence address.

See MPEP § 201.06(c) regarding change of correspondence address in continuation or divisional applications filed under 37 CFR 1.53(b).

I. CUSTOMER NUMBER PRACTICE

A Customer Number (previously a "Payor Number") may be used to:

(A) designate the correspondence address of a patent application or patent such that the correspondence address for the patent application or patent would be the address associated with the Customer Number (37 CFR 1.32(a)(*>5<)(i));

(B) designate the fee address (37 CFR 1.363) of a patent such that the fee address for the patent would be the address associated with the Customer Number (37 CFR 1.32(a)(*>5<)(ii)); and

(C) submit a list of practitioners such that those practitioners associated with the Customer Number would have power of attorney (37 CFR 1.32(a)(*>5<)(iii)).

Thus, a Customer Number may be used to designate the address associated with the Customer Number as the correspondence address of an application (or patent) or the fee address of a patent, and may also be used to submit a power of attorney in the applica-

tion (or patent) to the registered practitioners associated with the Customer Number.

Applicant may use either the same or different customer number(s) for the correspondence address, the fee address and/or a list of practitioners. The customer number associated with the correspondence address is the Customer Number used to obtain access to the Patent Application Information Retrieval (PAIR) system at http://pair.uspto.gov. See MPEP § 1730 for additional information regarding PAIR.

The following forms are suggested for use with the Customer Number practice:

(A) the "Request for Customer Number" (PTO/SB/125) to request a Customer Number;

(B) the "Request for Customer Number Data Change" (PTO/SB/124) to request a change in the data (address or list of practitioners) associated with an existing Customer Number;

(C) the "Change of Correspondence Address, Application" (PTO/SB/122) to change the correspondence address of an individual application to the address associated with a Customer Number; and

(D) the "Change of Correspondence Address, Patent" (PTO/SB/123) to change the correspondence address of an individual patent to the address associated with a Customer Number.

The Office will also accept requests submitted electronically *via* a computer-readable diskette to change the correspondence address of a list of applications or patents or the fee address for a list of patents to the address associated with a Customer Number.

Such electronic requests must be submitted in the manner set forth in the Notice entitled "Extension of the Payor Number Practice (through "Customer Numbers") to Matters Involving Pending Patent Applications," published in the *Federal Register* at 61 FR 54622, 54623-24 (October 21, 1996), and in the *Official Gazette* at 1191 O. G. 187, 188-89 (October 29, 1996). Note that such electronic requests are no longer accepted to change the power of attorney in a patent application or patent. See the notice entitled "Notice of Elimination of Batch Update Practice to Change Power of Attorney," published in the *Official Gazette* at 1272 O.G. 24 (July 1, 2003).

With Customer Number practice, a patentee is also able to designate a "fee address" for the receipt of maintenance fee correspondence, and a different address for the receipt of all other correspondence. The designation of a "fee address" by reference to a Customer Number will not affect or be affected by the designation of a correspondence address by reference to another Customer Number, in that the Office will send maintenance fee correspondence to the address associated with the Customer Number designated as the "fee address" and will send all other correspondence to the address associated with the Customer Number designated as the correspondence address.

The association of a list of practitioners with a Customer Number will permit an applicant to appoint all of the practitioners associated with the Customer Number merely by reference to the Customer Number in the Power of Attorney (i.e., without individually listing the practitioners in the Power of Attorney). The addition and/or deletion of a practitioner from the list of practitioners associated with a Customer Number by submitting a corresponding "Request for Customer Number Data Change" (PTO/SB/124) will result in the addition or deletion of such practitioner from the list of persons authorized to represent any applicant or assignee of the entire interest of the applicant who appointed all of the practitioners associated with such Customer Number. This will avoid the necessity for the filing of additional papers in each patent application affected by a change in the practitioners of the law firm prosecuting the application. The appointment of practitioners associated with a Customer Number is optional, in that any applicant may continue to individually name those practitioners to represent the applicant in a patent application, so long as fewer than ten patent practitioners are named. See 37 CFR 1.32(c)(3).

The Customer Number practice does not affect the prohibition against, and does not amount to, an appointment of a law firm (rather than specified practitioners). The Office prohibits an appointment of a specified law firm because the Office cannot ascertain from its records whether a particular practitioner submitting a paper to the Office is associated with the law firm specified in an appointment. The Office will permit an appointment of all of the practitioners associated with a specified Customer Number because the Office can ascertain from its records for the specified Customer Number whether a particular practitioner is associated with that Customer Number.

As the Office will not recognize more than one correspondence address (37 CFR 1.33(a)), any inconsistencies between the correspondence address resulting from a Customer Number being provided in an application for the correspondence address and any other correspondence address provided in that application *>will generally< be resolved in favor of the address of the Customer Number. Due to the prohibition against dual correspondence in an application (37 CFR 1.33(a)), an applicant will be permitted to provide only a single number at a time as the Customer Number for the correspondence address.

Where an applicant appoints all of the practitioners associated with a Customer Number as well as a list of individually named practitioners, such action would be treated as only an appointment of all of the practitioners associated with a Customer Number due to the potential for confusion and data entry errors in entering registration numbers from plural sources. Furthermore, Office computer systems do not allow for entry of both a power of attorney to a list of practitioners associated with a Customer Number and a list of practitioners.

Although Customer Numbers are designed to designate both a correspondence address and to associate one or more patent **>practitioners< with an application, one Customer Number may be used for the correspondence address, and another Customer Number may be used for the power of attorney.

Applicants are strongly cautioned not to attempt to appoint more than one Customer Number for a particular purpose (e.g., correspondence address) in a single communication, as such action will **not** have a cumulative effect.

The Office has created a Mail Stop designation for correspondence related to a Customer Number ("Mail Stop EBC"), and all correspondence related to a Customer Number (e.g., requests for a Customer Number) should be addressed to this mail stop designation.

The following persons are authorized to change the information associated with an established Customer Number: (1) a registered practitioner associated with the Customer Number; and (2) the person who requested the Customer Number (signed the Request for Customer Number, Form PTO/SB/125).

NOTE: Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required. Submit multiple forms if more than one signature is required, see below*.

☐ *Total of _____forms are submitted.

This collection of information is required by 37 CFR 1.33. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

II. PATENT APPLICATION FILED WITHOUT CORRESPONDENCE ADDRESS

In accordance with the provisions of 35 U.S.C. 111(a) and 37 CFR 1.53, a filing date is granted to a nonprovisional application for patent filed in the U.S. Patent and Trademark Office, if it includes at least a specification containing a description pursuant to 37 CFR 1.71 and at least one claim pursuant to 37 CFR 1.75, and any drawing referred to in the specification or required by 37 CFR 1.81(a). If a nonprovisional application which has been accorded a filing date does not include the appropriate basic filing fee, search fee, examination fee, or oath or declaration, the applicant will be so notified and given a period of time within which to file the missing parts to complete the application and to pay the surcharge as set forth in 37 CFR 1.16(f) in order to prevent abandonment of the application. If a provisional application which has been accorded a filing date does not include the appropriate filing fee, or the cover sheet, the applicant will be so notified and given a period of time within which to file the missing parts to complete the application and to pay the surcharge as set forth in 37 CFR 1.16(g) in order to prevent abandonment of the application.

In order for the Office to so notify the applicant, a correspondence address must also be provided by the applicant. The address may be different from the post office address of the applicant. For example, the address of the applicant's registered attorney or agent may be used as the correspondence address. If the applicant fails to provide the Office with a correspondence address, the Office will be unable to provide the applicant with notification to complete the application and to pay the surcharge as set forth in 37 CFR 1.16(f) for nonprovisional applications and 37 CFR 1.16(g) for provisional applications. In such a case, the applicant will be considered to have constructive notice as of the filing date that the application must be completed and the applicant will have 2 months from the filing date in which to do so before abandonment occurs.

The periods of time within which the applicant must complete the application may be extended under the provisions of 37 CFR 1.136. Applications which are not completed in a timely manner will be abandoned.

403.01 Correspondence Held With Associate Attorney [R-3]

Where the attorneys bear relation of principal attorney and associate attorney, the correspondence will be had with the associate attorney unless the principal attorney directs otherwise. *Ex parte Eggan*, 1911 C.D. 213, 172 O.G. 1091 (Comm'r Pat. 1911). The associate attorney may specify or change the correspondence address to which communications about the application are to be directed. >Associate powers of attorney are not accepted after June 25, 2004, but any associate power of attorney filed before June 25, 2004 will continue to have effect.<

403.02 Two *>Patent Practitioners< for Same Application [R-5]

If the applicant simultaneously appoints two principal *>patent practitioners<, he or she should indicate with whom correspondence is to be conducted. If one is a local Washington metropolitan area *>patent practitioner< and the applicant fails to indicate either *>patent practitioner<, correspondence will be conducted with the local *>patent practitioner<.

If, after one *>patent practitioner< is appointed, a second *>patent practitioner< is later appointed without revocation of the power of the first *>patent practitioner<, the correspondence address of the second *>patent practitioner< is entered into the application file record (*Ex parte Eggan*, 1911 C.D. 213, 172 O.G. 1091 (Comm'r Pat. 1911)), so that the Office letters are to be sent to him or her.

404 Conflicting Parties Having Same *>Patent Practitioner< [R-5]

See 37 CFR 10.66.

405 *>Patent Practitioner< Not of Record [R-5]

Papers may be filed in patent applications and reexamination proceedings by registered attorneys or agents not of record under 37 CFR 1.34. Filing of such papers is considered to be a representation that the attorney or agent is authorized to act in a representative capacity on behalf of applicant. However, interviews with a registered attorney or agent not of record will ordinarily be conducted based only on the infor-

mation and files supplied by the attorney or agent in view of 35 U.S.C. 122. Interviews may be conducted with a registered practitioner who does not have a copy of the application file, but has proper authority from the applicant or attorney or agent of record in the form of a paper on file in the application. See also MPEP § 713.05. Such a paper may be an "Authorization to Act in a Representative Capacity." **>Form/PTO/SB/84,< "Authorization to Act in a Representative Capacity" is available from the USPTO Internet web site at http://www.uspto.gov/web/forms/sb0084.pdf.

**>

PTO/SB/84 (01-06)
Approved for use through 12/31/2008. OMB 0651-0035
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

AUTHORIZATION TO ACT IN A REPRESENTATIVE CAPACITY

In re Application of:	
Application No.	
Filed:	
Title:	
Attorney Docket No.	Art Unit:

The practitioner named below is authorized to conduct interviews and has the authority to bind the principal concerned. Furthermore, the practitioner is authorized to file correspondence in the above-identified application pursuant to 37 CFR 1.34:

Name	Registration Number

This is not a Power of Attorney to the above-named practitioner. Accordingly, the practitioner named above does **not** have authority to sign a request to change the correspondence address, a request for an express abandonment, a disclaimer, a power of attorney, or other document requiring the signature of the applicant, assignee of the entire interest or an attorney of record. If appropriate, a separate Power of Attorney to the above-named practitioner should be executed and filed in the United States Patent and Trademark Office.

SIGNATURE of Practitioner of Record

Signature		Date
Name		Registration No., if applicable
Telephone		

This collection of information is required by 1.31, 1.32 and 1.34. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

A change of correspondence address or a document granting access (i.e., a power to inspect) may only be signed by an attorney or agent who is not of record if an executed oath or declaration has not been filed in the application. See 37 CFR 1.33(a) (correspondence address) and 1.14(c)(4).

406 Death of *>Patent Practitioner< [R-5]

The power of a principal *>patent practitioner< will be revoked or terminated by his or her death. Such a revocation or termination of the power of the principal *>patent practitioner< will also terminate the power of those appointed by him or her. Thus, a principal *>patent practitioner< may appoint an associate *>patent practitioner (effective June 25, 2004, the associate power of * patent practitioner practice has been eliminated)< but such a power terminates with that of the principal. The principal *>patent practitioner< may not appoint a "substitute" and any attempt by the principal to appoint a "substitute" *>patent practitioner< whose power is intended to survive his or her own will not be recognized by the Office.

If notification is received from the applicant or assignee of the death of the sole principal *>patent practitioner< and the application is up for action by the examiner, correspondence is held with the applicant or assignee who originally appointed the deceased *>patent practitioner<.

If notification is received from the office of the deceased attorney and the application is up for action, the examiner when preparing the Office action should add form paragraph 4.02.
**>

¶ *4.02 Death of Patent Practitioner, Notice Received from Patent Practitioner's Office*

In view of the notification of the death of the attorney or agent of record, the power of attorney is terminated. A new registered attorney or agent may be appointed.

Examiner Note:

As the power of attorney has been terminated, Office correspondence is sent to the applicant or the assignee who originally appointed the deceased attorney or agent.

<

If notification of the death of the sole principal attorney is received from the Office of Enrollment and Discipline or some other source, there will be no paper of record in the file wrapper to indicate that the attorney is deceased. Correspondence therefore continues to be held with the office of the deceased attorney but a copy of the Office action is also mailed to the person who originally appointed the attorney. In such an Office action where the application is not ready for allowance, the examiner should add form paragraph 4.03.
**>

¶ *4.03 Death of Patent Practitioner, Notice from Other Source*

Notice of the death of the attorney or agent of record has come to the attention of this Office. Since the power of attorney is therefore terminated, a copy of this action is being mailed to the **[1]**.

Examiner Note:

In bracket 1, insert --applicant-- or --assignee-- if the assignee originally appointed the deceased attorney or agent.

<

If notification of the death of the sole principal *>patent practitioner< is received from the Office of Enrollment and Discipline or some other source and the application is ready for allowance, the examiner prepares the application for allowance and writes a letter to the office of the deceased *>patent practitioner< with a copy to the person who originally appointed the deceased *>patent practitioner< including the wording of form paragraph 4.04.
**>

¶ *4.04 Death of Patent Practitioner, Application Is Ready for Allowance*

Notice of the death of the attorney or agent of record has come to the attention of this Office. Since the power of attorney is thus terminated, and this application is now ready for allowance, the Notice of Allowance will be mailed to the office of the deceased attorney or agent in the absence of a new power of attorney.

Examiner Note:

A copy should also be mailed to the applicant or the assignee who originally appointed the attorney or agent.

<

Note MPEP § 405.

407 Suspended or Excluded >Patent< Practitioner [R-5]

>Any power of attorney given to a practitioner who has been suspended or disbarred by the Office is inef-

fective, and does not authorize the person to practice before the Office or to represent applicants or patentees in patent matters.<

See MPEP § 105.

Form paragraphs 4.06, 4.07, and 4.08 should be used where power of attorney is given to an attorney or agent who has been suspended from practice before the Office.

¶ *4.06 Attorney/Agent Suspended (Sole Practitioner, Sole Inventor)*

The instant application contains a power of attorney to **[1]** who has been **[2]** from practice before the Patent and Trademark Office (Office). The Office does not communicate with attorneys or agents who have been suspended or excluded from practice. Accordingly, the Office action is being mailed to you as the inventor.

Applicant may, of course, file a new power of attorney in the application to have a registered attorney or agent represent you before the Office. In the absence of an attorney or agent of record, all amendments and other papers filed in the application must be signed: (1) by you; or (2) if there is an assignee of record of an undivided part interest, by you and such assignee; or (3) if there is an assignee of the entire interest, by such assignee; or (4) by a registered patent attorney or agent, not of record, who acts in a representative capacity under the provisions of 37 CFR 1.34.

Applicant may obtain a list of registered patent attorneys and agents located in your area by consulting the USPTO web site, http://www.uspto.gov, or by calling the Office of Enrollment and Discipline at (571) 272-4097.

Examiner Note:

1. In bracket 1, insert name of suspended or excluded practitioner.
2. In bracket 2, insert either --suspended-- or --excluded--.
3. This form paragraph should be used when a suspended or excluded practitioner is the only practitioner of record and there is only a single inventor. Use form paragraph 4.07 if there are joint inventors.
4. The Office action is to be mailed only to the inventor at his/her current address of record.

¶ *4.07 Attorney/Agent Suspended (Sole Practitioner, Joint Inventors)*

The instant application contains a power of attorney to [1] who has been [2] from practice before the Patent and Trademark Office (Office). The Office does not communicate with attorneys or agents who have been suspended or excluded from practice. Accordingly, the Office action is being mailed to the address of the inventor first named in the application.

Applicants may, of course, file a new power of attorney in the application to have a registered attorney or agent represent them before the Office. In the absence of an attorney or agent of record, all amendments and other papers filed in the application must be signed: (1) by all named applicants unless one named applicant has been given a power of attorney to sign on behalf of the remaining applicants, and the power of attorney is of record in the application; or (2) if there is an assignee of record of an undivided part interest, by all named applicants retaining an interest and such assignee; or (3) if there is an assignee of the entire interest, by such assignee; or (4) by a registered patent attorney or agent not of record who acts in a representative capacity under the provisions of 37 CFR 1.34.

Applicants may obtain a list of registered patent attorneys and agents located in their area by consulting the USPTO web site, http://www.uspto.gov, or by calling the Office of Enrollment and Discipline at (571) 272-4097.

Examiner Note:

1. In bracket 1, insert the name of the suspended or excluded practitioner.
2. In bracket 2, insert either --suspended-- or --excluded--.
3. This form paragraph should be used when the suspended or excluded practitioner is the only practitioner of record and there are joint inventors. Use form paragraph 4.06 if there is a single inventor.
4. The Office action is to be mailed only to the inventor first named in the declaration at his or her current address of record.

¶ *4.08 Attorney/Agent Suspended (Plural Practitioners)*

The present application was filed containing a power of attorney to **[1]** and **[2]**. A correspondence address was supplied for **[3]**. No address was supplied for **[4]**.

[5] was **[6]** from practice before the Patent and Trademark Office (Office). The Office does not communicate with attorneys or agents who have been suspended or excluded from practice.

As a correspondence address, other than to **[7]**, is not of record, this Office action is being mailed to **[8]** at his/her last known address as listed on the register of patent attorneys and agents. To ensure that a copy of this Office action is received in a timely manner to allow for a timely reply, a copy of the Office action is being mailed directly to the address of the inventor first named in the declaration or oath. Any reply by applicant(s) should be by way of the remaining practitioner(s) of record and should include a new correspondence address.

Examiner Note:

1. In brackets 1, 3, 5 and 7 insert the name of the suspended or excluded practitioner.
2. In brackets 2, 4 and 8, insert the name of the first named unsuspended (unexcluded) registered practitioner of record.
3. In bracket 6, insert either --suspended-- or --excluded--.
4. This form paragraph should be used when there is at least one registered practitioner still of record who has not been suspended or excluded from practice. Use one of form paragraphs 4.06 or 4.07 if there are no remaining registered attorneys or agents of record.
5. The Office action is to be mailed both to the first named registered attorney or agent of record (who is not suspended or excluded) at the address currently listed in the Attorney's Roster, and to the inventor first named in the declaration at his or her current address of record.

408 Telephoning *>Patent Practitioner< [R-5]

Present Office policy places great emphasis on telephone interviews initiated by the examiner. For this reason, it is not necessary for **>a patent practitioner< to request a telephone interview. Examiners are not required to note or acknowledge requests for telephone calls or state reasons why such proposed telephone interviews would not be considered effective to advance prosecution. However, it is desirable for **>a patent practitioner< to call the examiner if the *>patent practitioner< feels the call will be beneficial to advance prosecution of the application. See MPEP § 713.01 and § 713.05.

Many *>patent practitioners< have offices or representatives in the Washington area and it sometimes expedites business to interview them concerning an application. When the examiner believes the progress of the application would be advanced by an interview, he or she may call the *>patent practitioner< in the application by telephone and ask the *>patent practitioner< to come to the Office.

Registered attorneys or agents not of record in a patent application and acting in a representative capacity under 37 CFR 1.34 should not be telephoned for restriction requirements, approval of examiner's amendments, or given any information relative to such patent application by telephone. In addition, non-registered representatives of the practitioner of record should not be telephoned for such actions, even if authorized by the attorney or agent of record.

Examiners should place all long distance telephone calls through the FTS (Federal Telecommunications System), even though collect calls may have been authorized by the *>patent practitioner<.

To facilitate any telephone calls that may become necessary, it is strongly recommended that amendments, letters of transmittal, and powers of attorney include the complete telephone number, with area code and extension, of the person with whom the interview should be held, preferably near the signature.

In new applications, the telephone number may appear on the letter of transmittal or in the power of attorney, oath, or declaration, next to the *>patent practitioner's< name and address.

SPECIFIC TELEPHONE INTERVIEW SITUATIONS

For restriction of invention, see MPEP § 812.01.

For multiplicity, see MPEP § 2173.05(n).

409 Death, Legal Incapacity, or Unavailability of Inventor [R-5]

If the inventor is dead, insane, or otherwise legally incapacitated, refuses to execute an application, or cannot be found, an application may be made by someone other than the inventor, as specified in 37 CFR **>1.42, 1.43 and 1.47<, and 37 CFR 1.423, MPEP § 409.01 - § 409.03(j).

A minor (under age 18) inventor may execute an oath or declaration under 37 CFR 1.63 as long as the *>minor< is competent to sign (i.e., understands the document that he or she is signing); a legal representative is not required to execute an oath or declaration on the minor's behalf. See 37 CFR 1.63(a)(1).

Employees of the United States Patent and Trademark Office (Office) who were inventors are not permitted to sign an oath or declaration for patent application (37 CFR 1.63) during the period of their employment with the Office and one year thereafter. 35 U.S.C. 4. These employees (inventors) will be treated as being unavailable to sign the oath or declaration pursuant to 37 CFR 1.47.

409.01 Death of Inventor [R-5]

Unless a power of attorney is coupled with an interest (i.e., **>a patent practitioner< is assignee or part-assignee), the death of the inventor (or one of the joint inventors) terminates the power of attorney given by the deceased inventor. A new power from the heirs, administrators, executors, or assignees is necessary if the deceased inventor is the sole inventor or all powers of attorney in the application have been terminated (but see MPEP § 409.01(f)). See also 37 CFR 1.422.

409.01(a) Prosecution by Administrator or Executor

35 U.S.C. 117. Death or incapacity of inventor

Legal representatives of deceased inventors and of those under legal incapacity may make application for patent upon compliance with the requirements and on the same terms and conditions applicable to the inventor.

37 CFR 1.42. When the inventor is dead.

In case of the death of the inventor, the legal representative (executor, administrator, etc.) of the deceased inventor may make the necessary oath or declaration, and apply for and obtain the patent. Where the inventor dies during the time intervening between the filing of the application and the granting of a patent thereon, the letters patent may be issued to the legal representative upon proper intervention.

One who has reason to believe that he or she will be appointed legal representative of a deceased inventor may apply for a patent as legal representative in accordance with 37 CFR 1.42.

Application may be made by the heirs of the inventor, as such, if there is no will or the will did not appoint an executor and the estate was under the sum required by state law for the appointment of an administrator. The heirs should identify themselves as the legal representative of the deceased inventor in the oath or declaration submitted pursuant to 37 CFR 1.63 and 1.64.

409.01(b) Proof of Authority of Administrator or Executor

The Office no longer requires proof of authority of the legal representative of a deceased or incapacitated inventor. Although the Office does not require proof of authority to be filed, any person acting as a legal representative of a deceased or incapacitated inventor should ensure that he or she is properly acting in such a capacity.

409.01(c) After Administrator or Executor Has Been Discharged

When an administrator or executor has performed his or her functions and has been discharged and it is desired to make an application for an invention of the deceased, it is necessary for the administrator or executor to take out new letters of administration in order that he or she may file a new application for an invention of the deceased inventor.

409.01(d) Exception in Some Foreign Countries

The terms "Executor" and "Administrator" do not have exact counterparts in all foreign countries, and therefore, those terms must be construed to fit the circumstances of the case. Hence, the person or persons having authority corresponding to that of executor or administrator are permitted to make application as, for example, the heirs in the Federal Republic of Germany where no existing executor or administrator has been or will be appointed.

409.01(e) If Applicant of Assigned Application Dies

When an applicant who has prosecuted an application after assignment, dies, the administrator of the deceased applicant's estate may carry on the prosecution upon filing letters of administration unless and until the assignee intervenes (MPEP § 402.07).

409.01(f) Intervention of Executor Not Compulsory

When an inventor dies after filing an application and executing the oath or declaration required by 37 CFR 1.63, the executor or administrator should intervene, but the allowance of the application will not be withheld nor the application withdrawn from issue if the executor or administrator does not intervene.

This practice is applicable to an application which has been placed in condition for allowance or passed to issue prior to notification of the death of the inventor. See MPEP § 409.01.

When a joint inventor of a *pro se* application dies after filing the application, the living joint inventor(s) must submit proof that the other joint inventor is dead. Upon submission of such proof, only the signatures of the living joint inventors are required on the papers filed with the USPTO if the legal representative of the deceased inventor does not intervene. If the legal representative of the deceased inventor wishes to intervene, the legal representative must submit an oath or declaration in compliance with 37 CFR 1.63 and 1.64 (e.g., stating that he or she is the legal representative of the deceased inventor and his or her residence, citizenship and post office address). Once the legal representative of the deceased inventor intervenes in the *pro se* application, the signatures of the living joint inventors and the legal representative are required on the papers filed with the USPTO.

409.02 Insanity or Other Legal Incapacity [R-3]

37 CFR 1.43. When the inventor is insane or legally incapacitated.

In case an inventor is insane or otherwise legally incapacitated, the legal representative (guardian, conservator, etc.) of such inventor may make the necessary oath or declaration, and apply for and obtain the patent.

When an inventor *>becomes legally incapacitated< prior to the filing of an application and prior to *>executing< the oath or declaration required by 37 CFR 1.63 and no legal representative has been appointed, one must be appointed by a court of competent jurisdiction for the purpose of execution of the oath or declaration of the application.

409.03 Unavailability of Inventor [R-3]

35 U.S.C. 116. Inventors

When an invention is made by two or more persons jointly, they shall apply for patent jointly and each make the required oath, except as otherwise provided in this title. Inventors may apply for a patent jointly even though (1) they did not physically work together or at the same time, (2) each did not make the same type or amount of contribution, or (3) each did not make a contribution to the subject matter of every claim of the patent.

If a joint inventor refuses to join in an application for patent or cannot be found or reached after diligent effort, the application may be made by the other inventor on behalf of himself and the omitted inventor. The Director, on proof of the pertinent facts and after such notice to the omitted inventor as he prescribes, may grant a patent to the inventor making the application, subject to the same rights which the omitted inventor would have had if he had been joined. The omitted inventor may subsequently join in the application.

Whenever through error a person is named in an application for patent as the inventor, or through an error an inventor is not named in an application, and such error arose without any deceptive intention on his part, the Director may permit the application to be amended accordingly, under such terms as he prescribes.

35 U.S.C. 118. Filing by other than inventor

Whenever an inventor refuses to execute an application for patent, or cannot be found or reached after diligent effort, a person to whom the inventor has assigned or agreed in writing to assign the invention or who otherwise shows sufficient proprietary interest in the matter justifying such action, may make application for patent on behalf of and as agent for the inventor on proof of the pertinent facts and a showing that such action is necessary to preserve the rights of the parties or to prevent irreparable damage; and the Director may grant a patent to such inventor upon such notice to him as the Director deems sufficient, and on compliance with such regulations as he prescribes.

37 CFR 1.47. Filing when an inventor refuses to sign or cannot be reached.

(a) **>If a joint inventor refuses to join in an application for patent or cannot be found or reached after diligent effort, the application may be made by the other inventor on behalf of himself or herself and the nonsigning inventor. The oath or declaration in such an application must be accompanied by a petition including proof of the pertinent facts, the fee set forth in § 1.17(g), and the last known address of the nonsigning inventor. The nonsigning inventor may subsequently join in the application by filing an oath or declaration complying with § 1.63<.

(b) **>Whenever all of the inventors refuse to execute an application for patent, or cannot be found or reached after diligent effort, a person to whom an inventor has assigned or agreed in writing to assign the invention, or who otherwise shows sufficient proprietary interest in the matter justifying such action, may make application for patent on behalf of and as agent for all the inventors. The oath or declaration in such an application must be accompanied by a petition including proof of the pertinent facts, a showing that such action is necessary to preserve the rights of the parties or to prevent irreparable damage, the fee set forth in § 1.17(g), and the last known address of all of the inventors. An inventor may subsequently join in the application by filing an oath or declaration complying with § 1.63<.

(c) The Office will send notice of the filing of the application to all inventors who have not joined in the application at the address(es) provided in the petition under this section, and publish notice of the filing of the application in the *Official Gazette*. The Office may dispense with this notice provision in a continuation or divisional application, if notice regarding the filing of the prior application was given to the nonsigning inventor(s).

Application papers submitted pursuant to 37 CFR 1.47 are forwarded by the Office of Initial Patent Examination (OIPE) to the Office of Petitions for a determination of whether the papers are proper, complete, and acceptable under 37 CFR 1.47 and for a decision on the petition under 37 CFR 1.47 before the application is sent to the Technology Center. Since an application without an oath or declaration executed by all of the inventors may be an incomplete application, an examiner should not mail an Office action in an application without a fully executed oath or declaration under 37 CFR 1.63 unless the application has been accorded status under 37 CFR 1.47 in a written decision on the petition.

A *bona fide* attempt must be made to comply with the provisions of 37 CFR 1.47 at the time the oath or declaration is first submitted. If the oath or declaration, and evidence submitted with the oath or declaration, are not acceptable, the 37 CFR 1.47 applicant will be notified of the reasons why the papers are not acceptable. The 37 CFR 1.47 applicant may request

reconsideration and file supplemental evidence in a case where a *bona fide* attempt was made to comply with 37 CFR 1.47 from the outset.

A decision granting a petition under 37 CFR 1.47 does not alter the ownership interest or title of the application. If the nonsigning inventor has not signed an assignment document which has been recorded in the USPTO, then the 37 CFR 1.47 applicant (the company that files the petition under 37 CFR 1.47(b) and establishes proprietary interest in the application) is NOT the assignee of the entire interest of the application.

409.03(a) At Least One Joint Inventor Available

37 CFR 1.47(a) and 35 U.S.C. 116, second paragraph, requires all available joint inventors to file an application "on behalf of" themselves and on behalf of a joint inventor who "cannot be found or reached after diligent effort" or who refuses to "join in an application."

In addition to other requirements of law (35 U.S.C. 111(a) and 115), an application deposited in the U.S. Patent and Trademark Office pursuant to 37 CFR 1.47(a) must meet the following requirements:

(A) All the available joint inventors must (1) make oath or declaration on their own behalf as required by 37 CFR 1.63 or 1.175 (see MPEP § 602, § 605.01, and § 1414) and (2) make oath or declaration on behalf of the nonsigning joint inventor as required by 37 CFR 1.64. An oath or declaration signed by all the available joint inventors with the signature block of the nonsigning inventor(s) left blank may be treated as having been signed by all the available joint inventors on behalf of the nonsigning inventor(s), unless otherwise indicated.

(B) The application must be accompanied by proof that the nonsigning inventor (1) cannot be found or reached after diligent effort or (2) refuses to execute the application papers. See MPEP § 409.03(d).

(C) The last known address of the nonsigning joint inventor must be stated. See MPEP § 409.03(e).

409.03(b) No Inventor Available

Filing under 37 CFR 1.47(b) and 35 U.S.C. 118 is permitted only when no inventor is available to make application. These provisions allow a "person" with a demonstrated proprietary interest to make application "on behalf of and as agent for" an inventor who "cannot be found or reached after diligent effort" or who refuses to sign the application oath or declaration. The word "person" has been construed by the U.S. Patent and Trademark Office to include juristic entities, such as a corporation. Where 37 CFR 1.47(a) is available, application cannot be made under 37 CFR 1.47(b).

In addition to other requirements of law (35 U.S.C. 111(a) and 115), an application deposited pursuant to 37 CFR 1.47(b) must meet the following requirements:

(A) The 37 CFR 1.47(b) applicant must make the oath required by 37 CFR 1.63 and 1.64 or 1.175. Where a corporation is the 37 CFR 1.47(b) applicant, an officer (President, Vice-President, Secretary, Treasurer, or Chief Executive Officer) thereof should normally sign the necessary oath or declaration. A corporation may authorize any person, including an attorney or agent registered to practice before the U.S. Patent and Trademark Office, to sign the application oath or declaration on its behalf. Where an oath or declaration is signed by a registered attorney or agent on behalf of a corporation, either proof of the attorney's or agent's authority in the form of a statement signed by an appropriate corporate officer must be submitted, or the attorney or agent may simply state that he or she is authorized to sign on behalf of the corporation. Where the oath or declaration is being signed on behalf of an assignee, see MPEP § 324. An inventor may not authorize another individual to act as his or her agent to sign the application oath or declaration on his or her behalf. *Staeger v. Commissioner*, 189 USPQ 272 (D.D.C. 1976), *In re Striker*, 182 USPQ 507 (Comm'r Pat. 1973). Where an application is executed by one other than the inventor, the declaration required by 37 CFR 1.63 must state the full name, residence, post office address, and citizenship of the nonsigning inventor. Also, the title or position of the person signing must be stated if signing on behalf of a corporation under 37 CFR 1.47(b).

(B) The 37 CFR 1.47(b) applicant must state his or her relationship to the inventor as required by 37 CFR 1.64.

(C) The application must be accompanied by proof that the inventor (1) cannot be found or reached after a diligent effort or (2) refuses to execute the application papers. See MPEP § 409.03(d).

(D) The last known address of the inventor must be stated. See MPEP § 409.03(e).

(E) The 37 CFR 1.47(b) applicant must make out a *prima facie* case (1) that the invention has been assigned to him or her or (2) that the inventor has agreed in writing to assign the invention to him or her or (3) otherwise demonstrate a proprietary interest in the subject matter of the application. See MPEP § 409.03(f).

(F) The 37 CFR 1.47(b) applicant must prove that the filing of the application is necessary (1) to preserve the rights of the parties or (2) to prevent irreparable damage. See MPEP § 409.03(g).

409.03(c) Legal Representatives of Deceased Inventor Not Available

37 CFR 1.47 should not be considered an alternative to 37 CFR 1.42 or 35 U.S.C. 117 since the language "cannot be found or reached after diligent effort" has no reasonable application to a deceased inventor. *In re Application Papers Filed September 10, 1954*, 108 USPQ 340 (Comm'r Pat. 1955). See 37 CFR 1.42 and MPEP § 409.01. However, 37 CFR 1.47 does apply where a known legal representative of a deceased inventor cannot be found or reached after diligent effort, or refuses to make application. In such cases, the last known address of the legal representative must be given (see MPEP § 409.03(e)).

409.03(d) Proof of Unavailability or Refusal [R-3]

>

I. < INVENTOR CANNOT BE REACHED

Where inability to find or reach a nonsigning inventor "after diligent effort" is the reason for filing under 37 CFR 1.47, a statement of facts should be submitted that fully describes the exact facts which are relied on to establish that a diligent effort was made.

The fact that a nonsigning inventor is on vacation or out of town and is therefore temporarily unavailable to sign the declaration is not an acceptable reason for filing under 37 CFR 1.47.

Furthermore, the fact that an inventor is hospitalized and/or is not conscious is not an acceptable reason for filing under 37 CFR 1.47. 37 CFR 1.43 may be available under these circumstances. See MPEP § 409.02. Such a petition under 37 CFR 1.47 will be dismissed as inappropriate.

The statement of facts must be signed, where at all possible, by a person having firsthand knowledge of the facts recited therein. Statements based on hearsay will not normally be accepted. Copies of documentary evidence such as internet searches, certified mail return receipts, cover letters of instructions, telegrams, that support a finding that the nonsigning inventor could not be found or reached should be made part of the statement. The steps taken to locate the whereabouts of the nonsigning inventor should be included >in the< statement of facts. It is important that the statement contain facts as opposed to conclusions.

>

II. < REFUSAL TO JOIN

A refusal by an inventor to sign an oath or declaration when the inventor has not been presented with the application papers does not itself suggest that the inventor is refusing to join the application unless it is clear that the inventor understands exactly what he or she is being asked to sign and refuses to accept the application papers. A copy of the application papers should be sent to the last known address of the nonsigning inventor, or, if the nonsigning inventor is represented by counsel, to the address of the nonsigning inventor's attorney. The fact that an application may contain proprietary information does not relieve the 37 CFR 1.47 applicant of the responsibility to present the application papers to the inventor if the inventor is willing to receive the papers in order to sign the oath or declaration. It is noted that the inventor may obtain a complete copy of the application, unless the inventor has assigned his or her interest in the application, and the assignee has requested that the inventor not be permitted access. See MPEP § 106. It is reasonable to require that the inventor be presented with the application papers before a petition under 37 CFR 1.47 is granted since such a procedure ensures that the inventor is apprised of the application to which the oath or declaration is directed. *In re Gray*, 115 USPQ 80 (Comm'r Pat. 1956).

Where a refusal of the inventor to sign the application papers is alleged, the circumstances of the presentation of the application papers and of the refusal must be specified in a statement of facts by the person

who presented the inventor with the application papers and/or to whom the refusal was made. Statements by a party not present when an oral refusal is made will not be accepted.

Proof that a *bona fide* attempt was made to present a copy of the application papers (specification, including claims, drawings, and oath or declaration) to the nonsigning inventor for signature, but the inventor refused to accept delivery of the papers or expressly stated that the application papers should not be sent, may be sufficient. When there is an express oral refusal, that fact along with the time and place of the refusal must be stated in the statement of facts. When there is an express written refusal, a copy of the document evidencing that refusal must be made part of the statement of facts. The document may be redacted to remove material not related to the inventor's reasons for refusal.

When it is concluded by the 37 CFR 1.47 applicant that a nonsigning inventor's conduct constitutes a refusal, all facts upon which that conclusion is based should be stated in the statement of facts in support of the petition or directly in the petition. If there is documentary evidence to support facts alleged in the petition or in any statement of facts, such evidence should be submitted. Whenever a nonsigning inventor gives a reason for refusing to sign the application oath or declaration, that reason should be stated in the petition.

409.03(e) Statement of Last Known Address

An application filed pursuant to 37 CFR 1.47 must state the last known address of the nonsigning inventor.

That address should be the last known address at which the inventor customarily receives mail. See MPEP § 605.03. Ordinarily, the last known address will be the last known residence of the nonsigning inventor.

Inasmuch as a nonsigning inventor is notified that an application pursuant to 37 CFR 1.47 has been filed on his or her behalf, other addresses at which the nonsigning inventor may be reached should also be given.

409.03(f) Proof of Proprietary Interest

When an application is deposited pursuant to 37 CFR 1.47(b), the 37 CFR 1.47(b) applicant must prove that

(A) the invention has been assigned to the applicant, or

(B) the inventor has agreed in writing to assign the invention to the applicant, or

(C) the applicant otherwise has sufficient proprietary interest in the subject matter to justify the filing of the application.

If the application has been assigned, a copy of the assignment (in the English language) must be submitted. The assignment must clearly indicate that the invention described in the 37 CFR 1.47(b) application was assigned to the 37 CFR 1.47(b) applicant. A statement under 37 CFR 3.73(b) by the assignee must also be submitted (see MPEP § 324). An assignment of an application and any "reissue, division, or continuation of said application" does not itself establish an assignment of a continuation-in-part application. *In re Gray*, 115 USPQ 80 (Comm'r Pat. 1956). An assignment to a 37 CFR 1.47(b) applicant for the sole purpose of obtaining a filing date for a 37 CFR 1.47(b) application is not considered an assignment within the meaning of 35 U.S.C. 118 and 37 CFR 1.47(b).

When an inventor has agreed in writing to assign an invention described in an application deposited pursuant to 37 CFR 1.47(b), a copy of that agreement should be submitted. If an agreement to assign is dependent on certain specified conditions being met, it must be established by a statement of facts by someone with first hand knowledge of the circumstances in which those conditions have been met. A typical agreement to assign is an employment agreement where an employee (nonsigning inventor) agrees to assign to his or her employer (37 CFR 1.47(b) applicant) all inventions made during employment. When such an agreement is relied on, it must be established by a statement of a person having firsthand knowledge of the facts that the invention was made by the employee while employed by the 37 CFR 1.47(b) applicant.

If the invention has not been assigned, or if there is no written agreement to assign, the 37 CFR 1.47(b) applicant must demonstrate that he or she otherwise has a sufficient proprietary interest in the matter.

A proprietary interest obtained other than by assignment or agreement to assign may be demonstrated by an appropriate legal memorandum to the effect that a court of competent jurisdiction (federal, state, or foreign) would by the weight of authority in

that jurisdiction award title of the invention to the 37 CFR 1.47(b) applicant. The facts in support of any conclusion that a court would award title to the 37 CFR 1.47(b) applicant should be made of record by way of an affidavit or declaration of the person having firsthand knowledge of same. The legal memorandum should be prepared and signed by an attorney at law familiar with the law of the jurisdiction involved. A copy (in the English language) of a statute (if other than the United States statute) or a court decision (if other than a reported decision of a federal court or a decision reported in the United States Patents Quarterly) relied on to demonstrate a proprietary interest should be made of record.

409.03(g) Proof of Irreparable Damage

Irreparable damage may be established by a showing (a statement) that a filing date is necessary to preserve the rights of the party or to prevent irreparable damage.

409.03(h) Processing and Acceptance of a 37 CFR 1.47 Application [R-3]

A filing date is assigned to an application deposited pursuant to 37 CFR 1.47 provided the requirements of 37 CFR 1.53(b) are met. A filing receipt will be sent to the applicant and the application >, or an electronic message concerning the petition under 37 CFR 1.47,< will be forwarded to the Office of Petitions, for consideration of the petition filed under 37 CFR 1.47.

When papers deposited pursuant to 37 CFR 1.47 are found acceptable, the Office of Petitions enters a decision to that effect in the file. A notice will be published in the *Official Gazette* identifying the application number, filing date, the title of the invention and the name(s) of the nonsigning inventor(s). The U.S. Patent and Trademark Office will notify the nonsigning inventor(s) or, if the inventor is deceased, the legal representative(s), of the filing of an application under 37 CFR 1.47 by sending a letter to the last known address of the nonsigning inventor(s) or legal representative(s). In a continuation or divisional application filed under 37 CFR 1.53(b) of an application accorded status under 37 CFR 1.47, if a copy of a declaration from a prior application and a copy of a decision according status under 37 CFR 1.47 are filed as permitted by 37 CFR 1.63(d)(3)(i), the notice will not be repeated. See 37 CFR 1.47(c). In addition, the notice is not repeated in continued prosecution applications filed under 37 CFR 1.53(d).

409.03(i) Rights of the Nonsigning Inventor [R-3]

The nonsigning inventor (also referred to as an "inventor designee") may protest his or her designation as an inventor. The nonsigning inventor is entitled to inspect any paper in the application, order copies thereof at the price set forth in 37 CFR 1.19, and make his or her position of record in the file wrapper of the application. Alternatively, the nonsigning inventor may arrange to do any of the preceding through a registered patent attorney or agent.

While the U.S. Patent and Trademark Office will grant the nonsigning inventor access to the application, *inter partes* proceedings will not be instituted in 37 CFR 1.47 case. *In re Hough*, 108 USPQ 89 (Comm'r Pat. 1955). A nonsigning inventor is not entitled to a hearing *(Cogar v. Schuyler,* 464 F.2d 747, 173 USPQ 389 (D.C. Cir. 1972)), and is not entitled to prosecute the application if status under 37 CFR 1.47 has been accorded, or if proprietary interest of the 37 CFR 1.47(b) applicant has been shown to the satisfaction of the U.S. Patent and Trademark Office.

A nonsigning inventor may join in a 37 CFR 1.47 application. To join in the application, the nonsigning inventor must file an appropriate 37 CFR 1.63 oath or declaration. Even if the nonsigning inventor joins in the application, he or she cannot revoke or give a power of attorney without agreement of the 37 CFR 1.47 applicant. >See MPEP § 402.10.<

The rights of a nonsigning inventor are protected by the fact that the patent resulting from an application filed under 37 CFR 1.47(b) and 35 U.S.C. 118 must issue to the inventor, and in an application filed under 37 CFR 1.47(a) and 35 U.S.C. 116, the inventor has the same rights that he or she would have if he or she had joined in the application. *In re Hough*, 108 USPQ 89 (Comm'r Pat. 1955).

If a nonsigning inventor feels that he or she is the sole inventor of an invention claimed in a 37 CFR 1.47 application naming him or her as a joint inventor, the nonsigning inventor may file his or her own application and request that his or her application be placed in interference with the 37 CFR 1.47 application. If the claims in both the nonsigning inventor's applica-

tion and the 37 CFR 1.47 application are otherwise found allowable, an interference may be declared.

409.03(j) Action Following Acceptance of a 37 CFR 1.47 Application [R-3]

After an application deposited pursuant to 37 CFR 1.47 is found acceptable by the Office, the examiner will act on the application in the usual manner. Papers filed by an inventor who did not originally join in the application, and papers relating to its 37 CFR 1.47 status, will be placed in the file wrapper.

In the event the previously nonsigning inventor decides to join in the application by filing an executed oath or declaration complying with 37 CFR 1.63, the oath or declaration will be placed in the application file.

**>When an examiner receives an application in which a petition under 37 CFR 1.47 has been filed, he or she must check the file to determine that the petition has been decided by the Office of Petitions. If the petition has not been decided by the Office of Petitions, the application, or an electronic message concerning the petition, must be forwarded to the Office of Petitions for appropriate action.<

An application filed under 37 CFR 1.47 can be published as a Statutory Invention Registration.

410 Representations to the U.S. Patent and Trademark Office [R-5]

37 CFR 1.4. Nature of correspondence and signature requirements.

*****

(d)(4) *Certifications*. (i) *Section 10.18 certifications*: The presentation to the Office (whether by signing, filing, submitting, or later advocating) of any paper by a party, whether a practitioner or non-practitioner, constitutes a certification under § 10.18(b) of this chapter. Violations of § 10.18(b)(2) of this chapter by a party, whether a practitioner or non-practitioner, may result in the imposition of sanctions under § 10.18(c) of this chapter. Any practitioner violating § 10.18(b) of this chapter may also be subject to disciplinary action. See §§ 10.18(d) and 10.23(c)(15) of this chapter.

(ii) *Certifications as to the signature*: (A) *Of another*: A person submitting a document signed by another under paragraphs (d)(2) or (d)(3) of this section is obligated to have a reasonable basis to believe that the person whose signature is present on the document was actually inserted by that person, and should retain evidence of authenticity of the signature.

(B) *Self certification*: The person inserting a signature under paragraphs (d)(2) or (d)(3) of this section in a document submitted to the Office certifies that the inserted signature appearing in the document is his or her own signature.

(C) *Sanctions*: Violations of the certifications as to the signature of another or a person's own signature, set forth in paragraphs (d)(4)(ii)(A) and (B) of this section, may result in the imposition of sanctions under § 10.18(c) and (d) of this chapter.

(e) Correspondence requiring a person's signature and relating to registration practice before the Patent and Trademark Office in patent cases, enrollment and disciplinary investigations, or disciplinary proceedings must be submitted with an original hand written signature personally signed in permanent dark ink or its equivalent by that person.

*****

37 CFR 10.18. Signature and certificate for correspondence filed in the Patent and Trademark Office.

(a) For all documents filed in the Office in patent, trademark, and other non-patent matters, except for correspondence that is required to be signed by the applicant or party, each piece of correspondence filed by a practitioner in the Patent and Trademark Office must bear a signature by such practitioner complying with the provisions of § 1.4(d), § 1.4(e), or § 2.193(c)(1) of this chapter.

(b) By presenting to the Office (whether by signing, filing, submitting, or later advocating) any paper, the party presenting such paper, whether a practitioner or non-practitioner, is certifying that—

(1) All statements made therein of the party's own knowledge are true, all statements made therein on information and belief are believed to be true, and all statements made therein are made with the knowledge that whoever, in any matter within the jurisdiction of the Patent and Trademark Office, knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or device a material fact, or makes any false, fictitious or fraudulent statements or representations, or makes or uses any false writing or document knowing the same to contain any false, fictitious or fraudulent statement or entry, shall be subject to the penalties set forth under 18 U.S.C. 1001, and that violations of this paragraph may jeopardize the validity of the application or document, or the validity or enforceability of any patent, trademark registration, or certificate resulting therefrom; and

(2) To the best of the party's knowledge, information and belief, formed after an inquiry reasonable under the circumstances, that —

(i) The paper is not being presented for any improper purpose, such as to harass someone or to cause unnecessary delay or needless increase in the cost of prosecution before the Office;

(ii) The claims and other legal contentions therein are warranted by existing law or by a nonfrivolous argument for the extension, modification, or reversal of existing law or the establishment of new law;

(iii) The allegations and other factual contentions have evidentiary support or, if specifically so identified, are likely to have evidentiary support after a reasonable opportunity for further investigation or discovery; and

(iv) The denials of factual contentions are warranted on the evidence, or if specifically so identified, are reasonably based on a lack of information or belief.

(c) Violations of paragraph (b)(1) of this section by a practitioner or non-practitioner may jeopardize the validity of the application or document, or the validity or enforceability of any patent, trademark registration, or certificate resulting therefrom. Violations of any of paragraphs (b)(2)(i) through (iv) of this section are, after notice and reasonable opportunity to respond, subject to such sanctions as deemed appropriate by the Commissioner, or the Commissioner's designee, which may include, but are not limited to, any combination of —

(1) Holding certain facts to have been established;

(2) Returning papers;

(3) Precluding a party from filing a paper, or presenting or contesting an issue;

(4) Imposing a monetary sanction;

(5) Requiring a terminal disclaimer for the period of the delay; or

(6) Terminating the proceedings in the Patent and Trademark Office.

(d) Any practitioner violating the provisions of this section may also be subject to disciplinary action. See § 10.23(c)(15).

37 CFR 1.4(d)(4) provides that the presentation to the Office (whether by signing, filing, submitting, or later advocating) of any paper by a party, whether a practitioner or nonpractitioner, constitutes a certification under 37 CFR 10.18(b), and that violations of 37 CFR 10.18(b)(2) may subject the party to sanctions under 37 CFR 10.18(c). Thus, by presenting a paper to the Office, the party is making the certifications set forth in 37 CFR 10.18(b), and is subject to sanctions under 37 CFR 10.18(c) for violations of 37 CFR 10.18(b)(2), regardless of whether the party is a practitioner or nonpractitioner. A practitioner violating 37 CFR 10.18(b) may also be subject to disciplinary action in lieu of or in addition to sanctions under 37 CFR 10.18(c) for violations of 37 CFR 10.18(b).

Additional certifications provided in 37 CFR 1.4(d)(4) include that a person inserting a signature into a document under 37 CFR 1.4(d)(2) or 1.4(d)(3) certifies that the inserted signature appearing in the document is his or her own signature. Also, a person filing a document signed by another under 37 CFR 1.4(d)(2) or 1.4(d)(3) is obligated to have a reasonable belief that the signature present on the document was actually inserted by that person. The person filing the document should retain evidence of the authenticity of the signature. See 37 CFR 1.4(h).

37 CFR 10.18(b) provides that, by presenting any paper to the USPTO, the party presenting such paper is making two certifications: (1) the first certification is that the statements made therein are subject to the declaration clause of 37 CFR 1.68; (2) the second certification is the certification required for papers filed in a federal court under Rule 11(b) of the Federal Rules of Civil Procedure.

The first certification has permitted the USPTO to eliminate the separate verification requirement previously contained in 37 CFR 1.6, 1.8, 1.10, 1.27, 1.28, 1.47, 1.48, 1.52, 1.55, 1.69, 1.102, 1.125, 1.137, 1.377, 1.378, 1.740, 1.804, 1.805, 3.26, and 5.4 for statements of facts by persons who are not registered to practice before the USPTO. As statements submitted to the USPTO by any person are now, by operation of 37 CFR 10.18(b)(1), verified statements, a separate verification requirement is no longer necessary. The USPTO, however, has retained the verification requirement for a statement to be submitted under oath or declaration (37 CFR 1.68) in a number of sections (e.g., 37 CFR 1.63, 1.130, 1.131, 1.132, 1.495(f), and 5.25).

The second certification is based upon Rule 11(b) of the Federal Rules of Civil Procedure (1993). This provision is promulgated pursuant to the Director’s authority under 35 U.S.C. *>2(b)(2)< to establish regulations for the conduct of proceedings in the USPTO, and is intended to discourage the filing of frivolous papers by practitioners or non-practitioners in the USPTO. Rule 11(b) of the Federal Rules of Civil Procedure provides:

> **Representations to Court.** By presenting to the court (whether by signing, filing, submitting, or later advocating) a pleading, written motion, or other paper, an attorney or unrepresented party is certifying that to the best of the person's knowledge, information and belief, formed after an inquiry reasonable under the circumstances, --
>
> (1) it is not being presented for any improper purpose, such as to harass or to cause unnecessary delay or needless increase in the cost of litigation;
>
> (2) the claims, defenses, and other legal contentions therein are warranted by existing law or by a nonfrivolous argument for the extension, modification, or reversal of existing law or the establishment of new law;
>
> (3) the allegations and other factual contentions have evidentiary support or, if specifically so identified, are likely to have evidentiary support after a reasonable opportunity for further investigation or discovery; and

> (4) the denials of factual contentions are warranted on the evidence or, if specifically so identified, are reasonably based on a lack of information or belief.

Fed. R. Civ. P. 11(b)(1993).

37 CFR 10.18(b)(2) tracks the language of Fed. R. Civ. P. 11(b). The advisory committee notes to Fed. R. Civ. P. 11(b) provide, in part, that:

> [Fed. R. Civ. P. 11(b) and (c)] restate the provisions requiring attorneys and *pro se* litigants to conduct a reasonable inquiry into the law and facts before signing pleadings, written motions, and other documents, and prescribing sanctions for violations of these obligations. The [1993] revision in part expands the responsibilities of litigants to the court, while providing greater constraints and flexibility in dealing with infractions of the rule. The rule continues to require litigants to "stop-and-think" before initially making legal or factual contentions. It also, however, emphasizes the duty of candor by subjecting litigants to potential sanctions for insisting upon a position after it is no longer tenable and by generally providing protection against sanctions if they withdraw or correct contentions after a potential violation is called to their attention.
>
> The rule applies only to assertions contained in papers filed with or submitted to the court. It does not cover matters arising for the first time during oral presentations to the court, when counsel may make statements that would not have been made if there had been more time for study and reflection. However, a litigant's obligations with respect to the contents of these papers are not measured solely as of the time they are filed with or submitted to the court, but include reaffirming to the court and advocating positions contained in those pleadings and motions after learning that they cease to have any merit. For example, an attorney who during a pretrial conference insists on a claim or defense should be viewed as "presenting to the court" that contention and would be subject to the obligations of [Rule 11(b)] measured at that time. Similarly, if after a notice of removal is filed, a party urges in federal court the allegations of a pleading filed in state court (whether as claims, defenses, or in disputes regarding removal or remand), it would be viewed as "presenting"--and hence certifying to the district court under Rule 11--those allegations.
>
> The certification with respect to allegations and other factual contentions is revised in recognition that sometimes a litigant may have good reason to believe that a fact is true or false but may need discovery, formal or informal, from opposing parties or third persons to gather and confirm the evidentiary basis for the allegation. Tolerance of factual contentions in initial pleadings by plaintiffs or defendants when specifically identified as made on information and belief does not relieve litigants from the obligation to conduct an appropriate investigation into the facts that is reasonable under the circumstances; it is not a license to join parties, make claims, or present defenses without any factual basis or justification. Moreover, if evidentiary support is not obtained after a reasonable opportunity for further investigation or discovery, the party has a duty under the rule not to persist with that contention. [Rule 11(b)] does not require a formal amendment to pleadings for which evidentiary support is not obtained, but rather calls upon a litigant not thereafter to advocate such claims or defenses.
>
> The certification is that there is (or likely will be) "evidentiary support" for the allegation, not that the party will prevail with respect to its contention regarding the fact. That summary judgment is rendered against a party does not necessarily mean, for purposes of this certification, that it had no evidentiary support for its position. On the other hand, if a party has evidence with respect to a contention that would be sufficient to defeat a motion for summary judgment based thereon, it would have sufficient "evidentiary support" for purposes of Rule 11.
>
> Denials of factual contentions involve somewhat different considerations. Often, of course, a denial is premised upon the existence of evidence contradicting the alleged fact. At other times a denial is permissible because, after an appropriate investigation, a party has no information concerning the matter or, indeed, has a reasonable basis for doubting the credibility of the only evidence relevant to the matter. A party should not deny an allegation it knows to be true; but it is not required, simply because it lacks contradictory evidence, to admit an allegation that it believes is not true.
>
> The changes in [Rule 11(b)(3) and (4)] will serve to equalize the burden of the rule upon plaintiffs and defendants, who under Rule 8(b) are in effect allowed to deny allegations by stating that from their initial investigation they lack sufficient information to form a belief as to the truth of the allegation. If, after further investigation or discovery, a denial is no longer warranted, the defendant should not continue to insist on that denial. While sometimes helpful, formal amendment of the pleadings to withdraw an allegation or denial is not required by [Rule 11(b)].
>
> Arguments for extensions, modifications, or reversals of existing law or for creation of new law do not violate [Rule 11(b)(2)] provided they are "nonfrivolous." This establishes an objective standard, intended to eliminate any "empty-head pure-heart" justification for patently frivolous arguments. However, to the extent to which a litigant has researched the issues and found some support for its theories even in minority opinions, in law review articles, or through consultation with other attorneys should certainly be taken into account in determining whether [Rule 11(b)(2)] has been violated. Although

> arguments for a change in law are not required to be specifically so identified, a contention that is so identified should be viewed with greater tolerance under [Rule 11].

Amendments to the Federal Rules of Civil Procedure at 50-53 (1993), *reprinted in* 146 F.R.D. 401, 584-87. An "inquiry reasonable under the circumstances" requirement of 37 CFR 10.18(b)(2) is identical to that in Fed. R. Civ. P. 11(b). The Federal courts have stated in regard to the "reasonable inquiry" requirement of Fed. R. Civ. P. 11:

> In requiring reasonable inquiry before the filing of any pleading in a civil case in federal district court, Rule 11 demands "an objective determination of whether a sanctioned party's conduct was reasonable under the circumstances." In effect it imposes a negligence standard, for negligence is a failure to use reasonable care. The equation between negligence and failure to conduct a reasonable precomplaint inquiry is . . . that "the amount of investigation required by Rule 11 depends on both the time available to investigate and on the probability that more investigation will turn up important evidence; the Rule does not require steps that are not cost-justified."

Hays v. Sony Corp. of Am., 847 F.2d 412, 418, 7 USPQ2d 1043, 1048 (7th. Cir. 1988) (citations omitted) (decided prior to the 1993 amendment to Fed. R. Civ. P. 11, but discussing a "reasonable under the circumstances" standard).

37 CFR 1.4(d)(4) and 10.18 do not require a practitioner to advise the client (or third party) providing information of this certification effect (or the sanctions applicable to noncompliance), or question the client (or third party) when such information or instructions are provided. When a practitioner is submitting information (e.g., a statement of fact) from the applicant or a third party, or relying upon information from the applicant or a third party in his/her arguments, the Office will consider a practitioner's "inquiry reasonable under the circumstances" duty under 37 CFR 10.18 met so long as the practitioner has no knowledge of information that is contrary to the information provided by the applicant or third party or would otherwise indicate that the information provided by the applicant or third party was so provided for the purpose of a violation of 37 CFR 10.18 (e.g., was submitted to cause unnecessary delay).

Nevertheless, it is highly advisable for a practitioner to advise a client or third party that any information so provided must be reliable and not misleading. The submission by an applicant of misleading or inaccurate statements of facts during the prosecution of applications for patent has resulted in the patents issuing on such applications being held unenforceable. See, e.g. , *Refac Int'l Ltd. v. Lotus Development Corp.*, 81 F.3d 1576, 38 USPQ2d 1665 (Fed. Cir. 1996); *Paragon Podiatry Laboratory, Inc. v. KLM Laboratories, Inc.*, 984 F.2d 1182, 25 USPQ2d 1561 (Fed. Cir 1993); *Rohm & Haas Co. v. Crystal Chem. Co.*, 722 F.2d 1556, 200 USPQ 289 (Fed. Cir. 1983), *cert. denied*, 469 U.S. 851 (1984); *Ott v. Goodpasture*, 40 USPQ2d 1831 (D.N. Tex. 1996); *Herman v. William Brooks Shoe Co.*, 39 USPQ2d 1773 (S.D.N.Y. 1996); *Golden Valley Microwave Food Inc. v. Weaver Popcorn Co.*, 837 F. Supp. 1444, 24 USPQ2d 1801 (N.D. Ind. 1992), *aff'd*, 11 F.3d 1072 (Fed. Cir. 1993)(table), *cert. denied*, 511 U.S. 1128 (1994). Likewise, false statements by a practitioner in a paper submitted to the Office during the prosecution of an application for patent have resulted in the patent issuing on such application also being held unenforceable. See *General Electro Music Corp. v. Samick Music Corp.*, 19 F.3d 1405, 30 USPQ2d 1149 (Fed. Cir. 1994)(false statement in a petition to make an application special constitutes inequitable conduct, and renders the patent issuing on such application unenforceable).

An applicant has no duty to conduct a prior art search as a prerequisite to filing an application for patent. See *Nordberg, Inc. v. Telsmith, Inc.*, 82 F.3d 394, 397, 38 USPQ2d 1593, 1595-96 (Fed. Cir. 1996); *FMC Corp. v. Hennessy Indus., Inc.*, 836 F.2d 521, 526 n.6, 5 USPQ2d 1272, 1275-76 n.6 (Fed. Cir. 1987); *FMC Corp. v. Manitowoc Co.*, 835 F.2d 1411, 1415, 5 USPQ2d 1112, 1115 (Fed. Cir. 1987); *American Hoist & Derrick Co. v. Sowa & Sons, Inc.*, 725 F.2d 1350, 1362, 220 USPQ 763, 772 (Fed. Cir.), *cert. denied*, 469 U.S. 821, 224 USPQ 520 (1984). Thus, the "inquiry reasonable under the circumstances" requirement of 37 CFR 10.18 does not create any new duty on the part of an applicant for patent to conduct a prior art search. See MPEP § 609; cf. *Judin v. United States*, 110 F.3d 780, 42 USPQ2d 1300 (Fed. Cir 1997)(the failure to obtain and examine the accused infringing device prior to bringing a civil action for infringement violates the 1983 version of Fed. R. Civ. P. 11). The "inquiry reasonable under the circumstances" requirement of 37 CFR 10.18, however, will require an inquiry into the underlying facts and cir-

cumstances when a practitioner provides conclusive statements to the Office (e.g., a statement that the entire delay in filing the required reply from the due date for the reply until the filing of a grantable petition pursuant to 37 CFR 1.137(b) was unintentional).

37 CFR 10.18(c) specifically provides that violations of 37 CFR 10.18(b)(1) may jeopardize the validity of the application or document, or the validity or enforceability of any patent, trademark registration, or certificate resulting therefrom, and that violations of any of 37 CFR 10.18(b)(2)(i) through (iv) are, after notice and reasonable opportunity to respond, subject to such sanctions as deemed appropriate by the Commissioner, or the Commissioner's designee, which may include, but are not limited to, any combination of:

(A) holding certain facts to have been established;

(B) returning papers;

(C) precluding a party from filing a paper, or presenting or contesting an issue;

(D) imposing a monetary sanction;

(E) requiring a terminal disclaimer for the period of the delay; or

(F) terminating the proceedings in the U.S. Patent and Trademark Office.

The Office has amended 37 CFR 1.4(d)(4) and 10.18 with the objective of discouraging the filing of frivolous or clearly unwarranted correspondence in the Office, not to routinely review correspondence for compliance with 37 CFR 10.18(b)(2) and impose sanctions under 37 CFR 10.18(c).

Where the circumstances of an application or other proceeding warrant a determination of whether there has been a violation of 37 CFR 10.18(b), the file or the application or other proceeding will be forwarded to the Office of Enrollment and Discipline (OED) for a determination of whether there has been a violation of 37 CFR 10.18(b). In the event that OED determines that a provision of 37 CFR 10.18(b) has been violated, the Commissioner, or the Commissioner's designee, will determine what (if any) sanction(s) under 37 CFR 10.18(c) is to be imposed in the application or other proceeding. In addition, if OED determines that a provision of 37 CFR 10.18(b) has been violated by a practitioner, OED will determine whether such practitioner is to be subject to disciplinary action (see 37 CFR 1.4(d)(4) and 10.18(d)). That is, OED will provide a determination of whether there has been a violation of 37 CFR 10.18(b), and if such violation is by a practitioner, whether such practitioner is to be subject to disciplinary action; however, OED will not be responsible for imposing sanctions under 37 CFR 10.18(c) in an application or other proceeding.

37 CFR 10.18(d) provides that any practitioner violating the provisions of this section may also be subject to disciplinary action. 37 CFR 10.18(d) (and the corresponding provision of 37 CFR 1.4(d)(4)) clarifies that a practitioner may be subject to disciplinary action in lieu of, or in addition to, the sanctions set forth in 37 CFR 10.18(c) for violations of 37 CFR 10.18.

Chapter 500 Receipt and Handling of Mail and Papers

501 Filing Papers With the U.S. Patent and Trademark Office [R-5]

37 CFR 1.1. Addresses for non-trademark correspondence with the United States Patent and Trademark Office.

(a) *In general.* Except as provided in paragraphs (a)(3)(i), (a)(3)(ii) and (d)(1) of this section, all correspondence intended for the United States Patent and Trademark Office must be addressed to either "Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450" or to specific areas within the Office as set out in paragraphs (a)(1), and (a)(3)(iii) of this section. When appropriate, correspondence should also be marked for the attention of a particular office or individual.

(1) *Patent correspondence.*

(i) *In general.* All correspondence concerning patent matters processed by organizations reporting to the Commissioner for Patents should be addressed to: Commissioner for Patents, PO Box 1450, Alexandria, Virginia 22313-1450.

(ii) *Board of Patent Appeals and Interferences.* See § 41.10 of this title. Notices of appeal, appeal briefs, reply briefs, requests for oral hearing, as well as all other correspondence in an application or a patent involved in an appeal to the Board for which an address is not otherwise specified, should be addressed as set out in paragraph (a)(1)(i) of this section.

(2) [Reserved]

(3) *Office of General Counsel correspondence.—*

(i) Litigation and service. Correspondence relating to pending litigation or otherwise within the scope of part 104 of this title shall be addressed as provided in § 104.2.

(ii) *Disciplinary proceedings.* Correspondence to counsel for the Director of the Office of Enrollment and Discipline relating to disciplinary proceedings pending before an Administrative Law Judge or the Director shall be mailed to: Office of the Solicitor, PO Box 16116, Arlington, Virginia 22215.

(iii) *Solicitor, in general.* Correspondence to the Office of the Solicitor not otherwise provided for shall be addressed to: Mail Stop 8, Director of the United States Patent and Trademark Office, PO Box 1450, Alexandria, Virginia 22313-1450.

(iv) *General Counsel*. Correspondence to the Office of the General Counsel not otherwise provided for, including correspondence to the General Counsel relating to disciplinary proceedings, shall be addressed to: General Counsel, United States Patent and Trademark Office, PO Box 1450, Alexandria, Virginia 22313-1450.

(v) *Improper correspondence*. Correspondence improperly addressed to a Post Office Box specified in paragraphs (a)(3)(i) and (a)(3)(ii) of this section will not be filed elsewhere in the United States Patent and Trademark Office, and may be returned.

(4) *Office of Public Records correspondence*.

(i) *Assignments.* All patent-related documents submitted by mail to be recorded by Assignment Services Division, except for documents filed together with a new application, should be addressed to: Mail Stop Assignment Recordation Services, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450. See § 3.27.

(ii) *Documents.* All requests for certified or uncertified copies of patent documents should be addressed to: Mail Stop Document Services, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450.

(5) *Office of Enrollment and Discipline correspondence*. All correspondence directed to the Office of Enrollment and Discipline concerning enrollment, registration, and investigation matters should be addressed to Mail Stop OED, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450.

(b) *Patent Cooperation Treaty.* Letters and other communications relating to international applications during the interna-

tional stage and prior to the assignment of a national serial number should be additionally marked "Mail Stop PCT."

(c) *For reexamination proceedings.*

(1) Requests for *ex parte* reexamination (*original* request papers only) should be additionally marked "Mail Stop *Ex parte* Reexam."

(2) Requests for *inter partes* reexamination (original request papers) and all subsequent *inter partes* reexamination correspondence filed in the Office, other than correspondence to the Office of the General Counsel pursuant to § 1.1(a)(3) and § 1.302(c), should be additionally marked "Mail Stop *Inter partes* Reexam."

(d) *Maintenance fee correspondence.*—

(1) *Payments.* Payments of maintenance fees in patents not submitted electronically should be mailed to: United States Patent and Trademark Office, P.O. Box 371611, Pittsburgh, Pennsylvania 15250-1611.

(2) *Other correspondence.* Correspondence related to maintenance fees other than payments of maintenance fees in patents is not to be mailed to P.O. Box 371611, Pittsburgh, Pennsylvania 15250-1611, but must be mailed to: Mail Stop M Correspondence, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450.

(e) *Patent term extension.* All applications for extension of patent term under 35 U.S.C. 156 and any communications relating thereto intended for the United States Patent and Trademark Office should be additionally marked "Mail Stop Patent Ext." When appropriate, the communication should also be marked to the attention of a particular individual, as where a decision has been rendered.

(f) [Reserved]

37 CFR 1.4. Nature of correspondence and signature requirements.

(a) Correspondence with the Patent and Trademark Office comprises:

(1) Correspondence relating to services and facilities of the Office, such as general inquiries, requests for publications supplied by the Office, orders for printed copies of patents, orders for copies of records, transmission of assignments for recording, and the like, and

(2) Correspondence in and relating to a particular application or other proceeding in the Office. See particularly the rules relating to the filing, processing, or other proceedings of national applications in subpart B, §§ 1.31 to 1.378; of international applications in subpart C, §§ 1.401 to 1.499; of ex parte reexaminations of patents in subpart D, §§ 1.501 to 1.570; of extension of patent term in subpart F, §§ 1.710 to 1.785; of inter partes reexaminations of patents in subpart H, §§ 1.902 to 1.997; and of the Board of Patent Appeals and Interferences in part 41 of this title.

(b) Since each file must be complete in itself, a separate copy of every paper to be filed in a patent, patent file, or other proceeding must be furnished for each file to which the paper pertains, even though the contents of the papers filed in two or more files may be identical. The filing of duplicate copies of correspondence in the file of an application, patent, or other proceeding should be avoided, except in situations in which the Office requires the filing of duplicate copies. The Office may dispose of duplicate copies of correspondence in the file of an application, patent, or other proceeding.

(c) Since different matters may be considered by different branches or sections of the United States Patent and Trademark Office, each distinct subject, inquiry or order must be contained in a separate paper to avoid confusion and delay in answering papers dealing with different subjects.

(d)(1) *Handwritten signature*. Each piece of correspondence, except as provided in paragraphs (d)(2), (d)(3), (e) and (f) of this section, filed in an application, patent file, or other proceeding in the Office which requires a person's signature, must:

(i) Be an original, that is, have an original handwritten signature personally signed, in permanent dark ink or its equivalent, by that person; or

(ii) Be a direct or indirect copy, such as a photocopy or facsimile transmission (§ 1.6(d)), of an original. In the event that a copy of the original is filed, the original should be retained as evidence of authenticity. If a question of authenticity arises, the Office may require submission of the original.

**>

(2) *S-signature*. An S-signature is a signature inserted between forward slash marks, but not a handwritten signature as defined by § 1.4(d)(1). An S-signature includes any signature made by electronic or mechanical means, and any other mode of making or applying a signature not covered by either a handwritten signature of § 1.4(d)(1) or an Office Electronic Filing System (EFS) character coded signature of § 1.4(d)(3). Correspondence being filed in the Office in paper, by facsimile transmission as provided in § 1.6(d), or via the Office Electronic Filing System as an EFS Tag(ged) Image File Format (TIFF) attachment, for a patent application, patent, or a reexamination proceeding may be S-signature signed instead of being personally signed (*i.e.*, with a handwritten signature) as provided for in paragraph (d)(1) of this section. The requirements for an S-signature under this paragraph (d)(2) are as follows.<

(i) The S-signature must consist only of letters, or Arabic numerals, or both, with appropriate spaces and commas, periods, apostrophes, or hyphens for punctuation, and the person signing the correspondence must insert his or her own S-signature with a first single forward slash mark before, and a second single forward slash mark after, the S-signature (*e.g.*, /Dr. James T. Jones, Jr./); and

**>

(ii) A patent practitioner (§ 1.32(a)(1)), signing pursuant to §§ 1.33(b)(1) or 1.33(b)(2), must supply his/her registration number either as part of the S-signature, or immediately below or adjacent to the S-signature. The number (#) character may be used only as part of the S-signature when appearing before a practitioner's registration number; otherwise the number character may not be used in an S-signature.<

(iii) The signer's name must be:

(A) Presented in printed or typed form preferably immediately below or adjacent the S-signature, and

(B) Reasonably specific enough so that the identity of the signer can be readily recognized.

(3) *EFS character coded signature*. Correspondence in character coded form being filed via the Office Electronic Filing System for a patent application or patent may be signed electronically. The electronic signature must consist only of letters of the English alphabet, or Arabic numerals, or both, with appropriate spaces and commas, periods, apostrophes, or hyphens for punctuation. The person signing the correspondence must personally insert the electronic signature with a first single forward slash mark before, and a second single forward slash mark after, the electronic signature (*e.g.*, /Dr. James T. Jones, Jr./).

(4) *Certifications*. (i) *Section 10.18 certifications*: The presentation to the Office (whether by signing, filing, submitting, or later advocating) of any paper by a party, whether a practitioner or non-practitioner, constitutes a certification under § 10.18(b) of this chapter. Violations of § 10.18(b)(2) of this chapter by a party, whether a practitioner or non-practitioner, may result in the imposition of sanctions under § 10.18(c) of this chapter. Any practitioner violating § 10.18(b) of this chapter may also be subject to disciplinary action. See §§ 10.18(d) and 10.23(c)(15) of this chapter.

(ii) *Certifications as to the signature*: (A) *Of another*: A person submitting a document signed by another under paragraphs (d)(2) or (d)(3) of this section is obligated to have a reasonable basis to believe that the person whose signature is present on the document was actually inserted by that person, and should retain evidence of authenticity of the signature.

(B) *Self certification*: The person inserting a signature under paragraphs (d)(2) or (d)(3) of this section in a document submitted to the Office certifies that the inserted signature appearing in the document is his or her own signature.

(C) *Sanctions*: Violations of the certifications as to the signature of another or a person's own signature, set forth in paragraphs (d)(4)(ii)(A) and (B) of this section, may result in the imposition of sanctions under § 10.18(c) and (d) of this chapter.

(e) Correspondence requiring a person's signature and relating to registration practice before the Patent and Trademark Office in patent cases, enrollment and disciplinary investigations, or disciplinary proceedings must be submitted with an original hand written signature personally signed in permanent dark ink or its equivalent by that person.

(f) When a document that is required by statute to be certified must be filed, a copy, including a photocopy or facsimile transmission, of the certification is not acceptable.

(g) An applicant who has not made of record a registered attorney or agent may be required to state whether assistance was received in the preparation or prosecution of the patent application, for which any compensation or consideration was given or charged, and if so, to disclose the name or names of the person or persons providing such assistance. Assistance includes the preparation for the applicant of the specification and amendments or other papers to be filed in the Patent and Trademark Office, as well as other assistance in such matters, but does not include merely making drawings by draftsmen or stenographic services in typing papers.

(h) *Ratification/confirmation/evidence of authenticity*: The Office may require ratification, confirmation (which includes submission of a duplicate document but with a proper signature), or evidence of authenticity of a signature, such as when the Office has reasonable doubt as to the authenticity (veracity) of the signature, *e.g.*, where there are variations of a signature, or where the signature and the typed or printed name, do not clearly identify the person signing.

I. GENERAL MAILING ADDRESSES

The U.S. Patent and Trademark Office (Office) has three separate general mailing addresses. The addresses are as follows:

A. For Patent Applications and Patent-Related Papers

Correspondence in patent-related matters under the direction of the Commissioner for Patents should be addressed to:

Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450

Such correspondence includes: patent applications, replies to notices of informality, requests for extension of time, notices of appeal to the Board of Patent Appeals and Interferences (the Board), briefs in support of an appeal to the Board, requests for oral hearing before the Board, applications for extensions of term of patent, requests for publication of Statutory Invention Registration (SIR), requests for reexamination, statutory disclaimers, certificates of correction, petitions to the Commissioner for Patents, submission of information disclosure statements, petitions to institute a public use proceeding, petitions to revive abandoned patent applications, and other correspondence related to patent applications and patents which is processed by organizations reporting to the Commissioner for Patents.

Certain patent-related correspondence requires immediate Office attention. Examples are:

(A) Petitions for express abandonment to avoid publication under 37 CFR 1.138(c);

(B) Petitions to withdraw an application from issue under 37 CFR 1.313(c);

(C) Request for expedited examination of a design application (rocket docket); and

(D) Papers required by the Office of Patent Publication to be hand-carried or faxed to the Office of Patent Publication.

Applicants are encouraged to transmit these types of correspondence by facsimile transmission (see MPEP § 502.01) or, where permitted (items B and D only), hand-carry them to the appropriate area of the Office for processing. (see MPEP § 502)

B. For Trademark Applications and Trademark-Related Papers

Correspondence in trademark-related matters under the direction of the Commissioner for Trademarks or the Trademark Trial and Appeal Board should be addressed to:

Commissioner for Trademarks

P.O. Box 1451

Alexandria, VA 22313-1451

Such correspondence includes all trademark applications and other trademark-related mail, except for trademark documents sent to the Assignment Division for recordation, correspondence for the Office's Madrid Processing Unit, requests for certified and uncertified copies of trademark documents, and filings submitted electronically. See 37 CFR 2.190.

Correspondence to be delivered by the United States Postal Service to the Office's Madrid Processing Unit must be mailed to:

Commissioner for Trademarks

P.O. Box 16471

Arlington, VA 22215-1471

Attention MPU

C. For Other Correspondence

Patent and trademark documents sent to the Assignment Division for recordation (Mail Stop Assignment Recordation Services), requests for certified or uncertified copies of patent and trademark documents (Mail Stop Document Services), and for correspondence for which an address is not otherwise specified in 37 CFR 1.1, should be addressed to:

Director of the United States Patent and Trademark Office

P.O. Box 1450

Alexandria, VA 22313-1450

II. SEPARATE MAILING ADDRESSES FOR CERTAIN CORRESPONDENCE

The Office has separate mailing addresses for certain correspondence:

(A) Certain court-related correspondence (e.g., summons and complaint) being delivered to the Office via the U.S. Postal Service (USPS) must be addressed:

General Counsel
United States Patent and Trademark Office
P.O. Box 15667
Arlington, VA 22215

(B) Correspondence directed to the Office of Enrollment and Discipline (OED) Director relating to disciplinary proceedings pending before an Administrative Law Judge or the Director must be addressed:

Office of the Solicitor
P.O. Box 16116
Arlington, Virginia 22215

(C) Payments of maintenance fees in patents being delivered to the Office via the USPS should be addressed:

United States Patent and Trademark Office
P.O. Box 371611
Pittsburgh, Pennsylvania 15250-1611

(D) A deposit account replenishment being delivered to the Office via the USPS should be addressed:

Director of the United States Patent and Trademark Office
P.O. Box **>371279
Pittsburgh, PA 15251-7279<

Persons filing correspondence with the Office should check the rules of practice, the *Official Gazette*, or the Office's Internet Web site (http://www.uspto.gov) to determine the appropriate mailing address for such correspondence.

III. HAND-DELIVERY OF PAPERS

Patent-related papers may be hand-carried to the Office. If the correspondence is hand-carried to the Office, with limited exceptions (see subsection I.A., above) it must be delivered to:

Customer Service Window
Randolph Building
401 Dulany Street
Alexandria, VA 22314

See MPEP § 502.

Trademark-related papers may be filed at the "walk-up" window located in the Trademark Assistance Center, Madison East, Concourse Level, Room C55, 600 Dulany Street, Alexandria, VA 22314.

As provided in 37 CFR 1.4(c), matters that are to be considered by different branches or sections of the USPTO must be contained in separate papers. The following form paragraph may be used to notify the applicant of this requirement when the applicant has filed a single paper containing distinct subjects, inquiries, or orders.

¶ *5.01.01 Separate Paper Required*

The **[1]** submitted **[2]** should have been submitted as a separate paper as required by 37 CFR 1.4(c). The paper has been entered. However, all future correspondence must comply with 37 CFR 1.4.

Examiner Note:

1. In bracket 1, indicate the item required to be separately submitted, such as an affidavit, petition, or other appropriate document.
2. If the applicant is a *pro se* inventor, include a copy of the rule.

Those who correspond with the USPTO are strongly encouraged not to include correspondence which will have to be directed to different areas (e.g., Patents and Trademarks) of the Office in a single envelope. Including multiple papers in a single envelope increases the likelihood that one or more of the papers will be delayed before reaching the appropriate area. Placing the papers in separately addressed envelopes will reduce the number of actions being performed by the USPTO unnecessarily or inappropriately.

Pursuant to 37 CFR 1.1, correspondence intended for the USPTO must be mailed to P.O. Box 1450, Alexandria, VA 22313-1450, except as otherwise provided. Except for certain mail addressed incorrectly to the Office of the General Counsel (see 37 CFR 1.1(a)(3)(v)), there will be no penalty for addressing a document to the wrong area within the Office, as long as one of the approved addresses is used. Use of the specific addresses listed within 37 CFR 1.1 is strongly encouraged because it will facilitate the process both for the Office and the filer. Accordingly, a new application incorrectly addressed to the Director will be treated the same as if the application was addressed to the specific Commissioner.

All mailed communications are received by the Incoming-Mail Section of the Office of Initial Patent Examination (OIPE), which opens and distributes all official mail.

Special mail stops have been established to allow the forwarding of particular types of mail to appropriate areas of the Office as quickly as possible. A list of these mail stops is published weekly in the *Official Gazette*. Only the specified type of document for a particular mail stop should be placed in an envelope addressed to that mail stop.

If any documents other than the specified type identified for each department are addressed to that department, they will be significantly delayed in reaching the appropriate area for which they were intended.

502 Depositing Correspondence [R-5]

37 CFR 1.5. Identification of patent, patent application, or patent-related proceeding.

(a) No correspondence relating to an application should be filed prior to receipt of the application number from the Patent and Trademark Office. When a letter directed to the Patent and Trademark Office concerns a previously filed application for a patent, it must identify on the top page in a conspicuous location, the application number (consisting of the series code and the serial number; e.g., 07/123,456), or the serial number and filing date assigned to that application by the Patent and Trademark Office, or the international application number of the international application. Any correspondence not containing such identification will be returned to the sender where a return address is available. The returned correspondence will be accompanied with a cover letter which will indicate to the sender that if the returned correspondence is resubmitted to the Patent and Trademark Office within two weeks of the mail date on the cover letter, the original date of receipt of the correspondence will be considered by the Patent and Trademark Office as the date of receipt of the correspondence. Applicants may use either the Certificate of Mailing or Transmission procedure under § 1.8 or the Express Mail procedure under § 1.10 for resubmissions of returned correspondence if they desire to have the benefit of the date of deposit in the United States Postal Service. If the returned correspondence is not resubmitted within the two-week period, the date of receipt of the resubmission will be considered to be the date of receipt of the correspondence. The two-week period to resubmit the returned correspondence will not be extended. In addition to the application number, all letters directed to the Patent and Trademark Office concerning applications for patent should also state the name of the applicant, the title of the invention, the date of filing

the same, and, if known, the group art unit or other unit within the Patent and Trademark Office responsible for considering the letter and the name of the examiner or other person to which it has been assigned.

(b) When the letter concerns a patent other than for purposes of paying a maintenance fee, it should state the number and date of issue of the patent, the name of the patentee, and the title of the invention. For letters concerning payment of a maintenance fee in a patent, see the provisions of § 1.366(c).

(c) [Reserved]

(d) A letter relating to a reexamination proceeding should identify it as such by the number of the patent undergoing reexamination, the reexamination request control number assigned to such proceeding, and, if known, the group art unit and name of the examiner to which it been assigned.

(e) [Reserved]

(f) When a paper concerns a provisional application, it should identify the application as such and include the application number.

37 CFR 1.6. Receipt of correspondence.

(a) *Date of receipt and Express Mail date of deposit.* Correspondence received in the Patent and Trademark Office is stamped with the date of receipt except as follows:

(1) The Patent and Trademark Office is not open for the filing of correspondence on any day that is a Saturday, Sunday, or Federal holiday within the District of Columbia. Except for correspondence transmitted by facsimile under paragraph (a)(3) of this section, or filed electronically under paragraph (a)(4) of this section, no correspondence is received in the Office on Saturdays, Sundays, or Federal holidays within the District of Columbia.

(2) Correspondence filed in accordance with § 1.10 will be stamped with the date of deposit as "Express Mail" with the United States Postal Service.

(3) Correspondence transmitted by facsimile to the Patent and Trademark Office will be stamped with the date on which the complete transmission is received in the Patent and Trademark Office unless that date is a Saturday, Sunday, or Federal holiday within the District of Columbia, in which case the date stamped will be the next succeeding day which is not a Saturday, Sunday, or Federal holiday within the District of Columbia.

(4) [Reserved]

(b) [Reserved]

(c) *Correspondence delivered by hand.* In addition to being mailed, correspondence may be delivered by hand during hours the Office is open to receive correspondence.

(d) *Facsimile transmission.* Except in the cases enumerated below, correspondence, including authorizations to charge a deposit account, may be transmitted by facsimile. The receipt date accorded to the correspondence will be the date on which the complete transmission is received in the United States Patent and Trademark Office, unless that date is a Saturday, Sunday, or Federal holiday within the District of Columbia. See § 1.6(a)(3). To facilitate proper processing, each transmission session should be limited to correspondence to be filed in a single application or other proceeding before the United States Patent and Trademark Office. The application number of a patent application, the control number of a reexamination proceeding, the interference number of an interference proceeding, or the patent number of a patent should be entered as a part of the sender's identification on a facsimile cover sheet. Facsimile transmissions are not permitted and, if submitted, will not be accorded a date of receipt in the following situations:

(1) Correspondence as specified in § 1.4(e), requiring an original signature;

(2) Certified documents as specified in § 1.4(f);

(3) Correspondence which cannot receive the benefit of the certificate of mailing or transmission as specified in § 1.8(a)(2)(i)(A) through (D) and (F), and § 1.8(a)(2)(iii)(A), except that a continued prosecution application under § 1.53(d) may be transmitted to the Office by facsimile;

(4) Color drawings submitted under §§ 1.81, 1.83 through 1.85, 1.152, 1.165, 1.173, or 1.437;

(5) A request for reexamination under § 1.510 or § 1.913;

(6) Correspondence to be filed in a patent application subject to a secrecy order under §§ 5.1 through 5.5 of this chapter and directly related to the secrecy order content of the application;

(7) [Reserved]

(8) [Reserved]

(9) In contested cases before the Board of Patent Appeals and Interferences except as the Board may expressly authorize.

(e) [Reserved]

(f) *Facsimile transmission of a patent application under § 1.53(d).* In the event that the Office has no evidence of receipt of an application under § 1.53(d) (a continued prosecution application) transmitted to the Office by facsimile transmission, the party who transmitted the application under § 1.53(d) may petition the Director to accord the application under § 1.53(d) a filing date as of the date the application under § 1.53(d) is shown to have been transmitted to and received in the Office,

(1) Provided that the party who transmitted such application under § 1.53(d):

(i) Informs the Office of the previous transmission of the application under § 1.53(d) promptly after becoming aware that the Office has no evidence of receipt of the application under § 1.53(d);

(ii) Supplies an additional copy of the previously transmitted application under § 1.53(d); and

(iii) Includes a statement which attests on a personal knowledge basis or to the satisfaction of the Director to the previous transmission of the application under § 1.53(d) and is accompanied by a copy of the sending unit's report confirming transmission of the application under § 1.53(d) or evidence that came into being after the complete transmission and within one business day of the complete transmission of the application under § 1.53(d).

(2) The Office may require additional evidence to determine if the application under § 1.53(d) was transmitted to and received in the Office on the date in question.

All applications (provisional and nonprovisional) may be sent to the U.S. Patent and Trademark Office by mail (see MPEP § 501), or they may be hand-car-

ried to the Customer Service Window. New utility patent applications and provisional applications can also be filed via the Office's Electronic Filing System (EFS). See MPEP § 1730, subsection II.B. A continued prosecution application (CPA) filed under 37 CFR 1.53(d) (available for design applications only), amendments, and other papers may be sent to the U.S. Patent and Trademark Office by mail (see MPEP § 501), by facsimile (see MPEP § 502.01) or hand-carried to the Customer Service Window. Any correspondence sent to the U.S. Patent and Trademark Office should include the sender's return address and ZIP Code designation. For correspondence hand-delivered to the Office, see subsection II. below.

See 37 CFR 2.190 and MPEP § 501 for addresses pertaining to trademark correspondence.

All correspondence related to a national patent application already filed with the U.S. Patent and Trademark Office must include the identification of the application number or the serial number and the filing date assigned to the application by the Office. Any correspondence not containing the proper identification set forth in 37 CFR 1.5(a) will be returned to the sender by OIPE. Each paper should be inspected to assure that the papers being returned contain either an "Office Date" stamp or a TC date stamp. A minor error in the identification of the application can be corrected by the Office provided the correct identification can be quickly discovered. Examples of minor errors are transposed numbers, typographical errors, and listing the parent application number. The failure to give any application number is not a minor error. The Office often experiences difficulty in matching incoming papers with the application file to which they pertain because insufficient or erroneous information is given. This applies especially to amendments, powers of attorney, changes of address, status letters, petitions for extension of time, and other petitions.

It would be of great assistance to the Office if *all* incoming papers pertaining to a filed application carried the following items:

(A) Application number (checked for accuracy, including series code and serial no.).

(B) Art Unit number (copied from most recent Office communication).

(C) Filing date.

(D) Name of the examiner who prepared the most recent Office action.

(E) Title of invention.

(F) Confirmation number (see MPEP § 503).

Applicants may be reminded of this provision by including form paragraph 5.01.

¶ *5.01 Proper Heading for Incoming Papers*

It would be of great assistance to the Office if all incoming papers pertaining to a filed application carried the following items:

1. Application number (checked for accuracy, including series code and serial no.).
2. Art Unit number (copied from most recent Office communication).
3. Filing date.
4. Name of the examiner who prepared the most recent Office action.
5. Title of invention.
6. Confirmation number (see MPEP § 503).

The Office prefers identifying indicia to be provided on the drawings. If such identifying indicia is provided, it must be placed on the front of each sheet of drawings within the top margin. See 37 CFR 1.84(c). The identifying indicia should include the title of the invention, inventor's name, application number, and confirmation number (see MPEP § 503). If the Office has not yet assigned an application number and confirmation number to the application, the docket number (if any) used by the applicant to track the application should be provided.

When the Office receives replacement sheets of drawings for patent applications after the application has been filed, a cover letter identifying the drawings by application number should accompany them. The application number and other identifying indicia should be placed on each sheet of drawings in accordance with 37 CFR 1.84(c). Each drawing sheet submitted after the filing date of the application must be identified as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

It is requested that the submission of additional or supplemental papers on a newly filed application be deferred until an application number has been received.

Documents which have no particular time or sequence requirements should be filed in the Office with materials submitted in reply to the statutory or regulatory requirements. Examples are certified cop-

ies of foreign documents to support priority in patent applications, changes of power of attorney, or changes in mailing address following first action.

All letters relating to a reexamination proceeding should identify the proceeding involved by patent number and reexamination request control number.

I. POST ALLOWANCE CORRESPONDENCE

All post allowance correspondence, except for petitions under 37 CFR 1.313(c), should be addressed "Mail Stop Issue Fee." Any petition filed under 37 CFR 1.313(c) to withdraw an application from issue after payment of the issue fee should be clearly marked "Petition under 37 CFR 1.313(c)" and be either hand-carried to the Office of Petitions or submitted by facsimile to the Office of Petitions at (571) 273-0025. All other types of petitions, if transmitted by facsimile transmission to the Office, must be directed to the central facsimile number ((571) 273-8300).

Any paper filed after receiving the Issue notification should include the indicated patent number.

Since an allowed application may be issued as a patent within about four weeks of payment of the issue fee, all post allowance correspondence should be filed prior to the date of issue fee payment to ensure the papers reach the appropriate USPTO official for consideration before the date the application issues as a patent. See MPEP § 2732 for a discussion of the patent term adjustment impact of submitting amendments or other papers after a notice of allowance has been mailed.

If the above suggestions are adopted, the processing of both new and allowed applications could proceed more efficiently and promptly through the U.S. Patent and Trademark Office.

II. HAND-DELIVERY OF PAPERS

No official paper which relates to a pending application may be personally delivered to a TC except papers that are directed to an application subject to a secrecy order pursuant to 35 U.S.C. 181, or are national security classified and that are directed to Licensing and Review. Effective December 1, 2003, all official patent application related correspondence for organizations reporting to the Commissioner for Patents (e.g., TCs, the Office of Patent Publication, and the Office of Petitions) that is hand-carried (or delivered by other delivery services) must be delivered to the Customer Service Window, with a few exceptions.

Correspondence for Which Centralized Delivery of Hand-Carried Papers Is Not Required

The following types of patent application related correspondence may be delivered to the specific location where they are processed instead of the Customer Service Window. Before hand-carrying papers to a specific location or a particular office within the USPTO, the office should be called to obtain its current location. Applicants should check the USPTO web site for the current telephone number. Any such correspondence carried to the Customer Service Window will be accepted and routed to the appropriate office, thereby incurring a delay before being processed. Correspondence which is not related to a specific patent or patent application, such as question on policy, on employment, or other general inquiry may be hand-carried to the current designated locations depending on the substance of the correspondence.

(A) *Access Requests* - Requests for access to patent application files may be hand-carried to the File Information Unit (FIU) in Room 2E04, 2900 Crystal Drive (South Tower), Arlington, VA 22202. Requests for access to patent application files that are maintained in the Image File Wrapper system and that have not yet been published may also be hand-carried to the Public Search Facility on the 1st floor of the Madison East Building, 600 Dulany Street, Alexandria, VA 22314.

(B) *Patent Term Extensions under 35 U.S.C. 156* - Applications for patent term extension under 35 U.S.C. 156 may be hand-carried to the Office of Patent Legal Administration (OPLA) in Room 07D85 of the Madison West Building, 600 Dulany Street, Alexandria, VA 22314. At the guard station in Madison West, the security guard should call the OPLA at (571) 272-*>7701< or (571) 272-7746 for delivery assistance.

(C) *Assignments to be Recorded* - Assignments may be hand-carried to the Office of Public Records Customer Service Window on the 2nd floor of the South Tower Building, 2900 Crystal Drive, Arlington, VA 22202.

(D) *Office of General Counsel* - Correspondence for the Office of General Counsel may be hand-carried to the Office of General Counsel in Room 10C20 of the Madison East Building, 600 Dulany Street, Alexandria, VA 22314. At the guard station in Madison East, the security guard should call the Office of General Counsel at (571) 272-7000 for delivery assistance.

(E) *Solicitor's Office* - Correspondence for the Solicitor's Office may be hand-carried to the Solicitor's Office in Room 8C43>-A< of the Madison West Building, 600 Dulany Street, Alexandria, VA 22314. At the guard station in Madison West, the security guard should call the Solicitor's Office at (571) 272-9035 for delivery assistance.

(F) *Interference Related Correspondence* - Correspondence relating to interferences may be hand-carried to the 1st floor lobby of Madison East Building, 600 Dulany Street, Alexandria, VA 22314, where a drop-off box for hand-carried documents to be filed with the Board of Patent Appeals and Interferences (Board) is located. Customers need to pass through the magnetometer and have the materials passed through the x-ray sensor before placing them in the drop-off box. The drop-off box is for Interference related correspondence only. Boxes are not permitted in the drop-off box. Box materials should be hand-carried to Madison East, Room 9B55-A using the following procedures. At the guard station in Madison East, the security guard should call the Board at (571) 272-9797 to obtain authorization to allow entry into the building for delivery to Room 9B55-A. Access to Room 9B55-A is available from 8:30 am to 4:45 pm only. Documents/boxes hand-carried to the drop-off box or to Room 9B55-A after 4:45 pm will receive the next day's filing date. Customers desiring a stamped return receipt for their filing need to personally bring their filing and postcard to Room 9B55-A during the hours stated above, or leave the postcard with the filing (postcard must include correct postage mail stamp and the address where the postcard is to be mailed). The Board will stamp the filing date and mail the postcard to the customer.

(G) *Secrecy Order* - Applications subject to a secrecy order pursuant to 35 U.S.C. 181, or are national security classified, and correspondence related thereto, may be hand-carried to Licensing and Review in Room 4B31 of the Knox Building, 501 Dulany Street, Alexandria, VA 22314. At the guard station in Knox, the security guard should call Licensing and Review at (571) 272-8203 for delivery assistance.

(H) *Expedited Foreign Filing License Petitions* - Petitions for foreign filing license pursuant to 37 CFR 5.12(b) for which expedited handling is requested and petitions for retroactive license under 37 CFR 5.25 may be hand-carried to **>a drop-off box located at the guard station at the lobby of the Knox Building, 501 Dulany Street, Alexandria, VA 22314. Upon approaching the guard station, the delivery personnel should state their desire to drop off the request. Correspondence packages will be inspected/scanned before being placed in the drop-off box. All requests should identify a fax number, telephone number and mailing address. All responses to the request will be sent by fax, followed by a mailed copy. If a fax number is not available, a hardcopy will be mailed to the mailing address provided.<

(I) *Petitions to Withdraw from Issue* - Petitions to withdraw from issue may be hand-carried to the Office of Petitions on the 7th floor of the Madison West Building, 600 Dulany Street, Alexandria, VA 22314. At the guard station in Madison West, the security guard should call the Office of Petitions at (571) 272-3282 for delivery assistance. Hand-carried papers will be accepted between the hours of 8:30 am to 3:45 pm.

(J) *Documents Requested by the Office of Patent Publication* - Documents requested by the Office of Patent Publication may be hand-carried to the Office of Patent Publication in Room 8A24, 2900 Crystal Drive (South Tower Building), Arlington, VA 22202, during business hours.

>

(K) *Office of Enrollment and Discipline (OED)* – Correspondence for the Office of Enrollment and Discipline may be hand-carried to the receptionist at Room 8C43-B of the Madison West Building, 600 Dulany Street, Alexandria, VA 22314. At the guard station in Madison West, the security guard should call the Office of Enrollment and Discipline at 571-272-4097 for delivery assistance.

(L) *Office of Finance* – Refund requests, deposit account replenishments, and maintenance fee payments may be hand-carried to the Office of Finance receptionist in Suite 300 of the Carlyle Place Build-

ing, 2051 Jamieson Ave., Alexandria, VA 22314. Hand-carried correspondence will only be accepted, and not processed. Although the receptionist will not process any correspondence, if the correspondence is delivered with an itemized postcard, the receptionist will provide a delivery receipt by date stamping the postcard. Depending on whether the correspondence is a refund request, deposit account related (e.g., a deposit account replenishment), or maintenance fee related (e.g., a maintenance fee payment), the correspondence should be placed in an envelope with REFUND, DEPOSIT ACCOUNT, or MAINTENANCE FEE written in dark ink across the envelope.

(M) *Office of Public Records* – Requests for certified copies of Office records including patent and trademark copies, applications-as-filed, file wrappers and contents, and assignment records may be hand-carried to the Office of Public Records' Customer Service Window on the 2nd floor of the South Tower Building, 2900 Crystal Drive, Arlington, VA 22202, during business hours.<

III. "EXPRESS MAIL" SERVICE

There are two types of "Express Mail" delivery offered by the U.S. Postal Service — "Post Office to Addressee" and "Post Office to Post Office." The only type of service which can be used for "Express Mail" directed to the U.S. Patent and Trademark Office is the "Post Office to Addressee" service of the U.S. Postal Service. 37 CFR 1.10. This service provides for the use of a mailing label which clearly indicates the date on which a particular paper or fee was deposited.

The addresses that should be used for "Express Mail" sent to the U.S. Patent and Trademark Office are set forth in 37 CFR 1.1 (see MPEP § 501).

"Post Office to Post Office" Express Mail *does not* provide for delivery but instead is retained at the postal facility of the addressee for pickup. The Postal Service *does not* notify the addressee that this type of Express Mail has been received and is awaiting pickup. If not picked up, this mail is held for 15 days and then returned to the sender.

Therefore, since the U.S. Patent and Trademark Office does not have resources for picking up any mail, including Express Mail, the "Post Office to Post Office" Express Mail will not reach the U.S. Patent and Trademark Office.

See MPEP § 513 for the use of the Express Mail Mailing procedure of 37 CFR 1.10.

502.01 Correspondence Transmitted by Facsimile [R-5]

37 CFR 1.6. Receipt of correspondence.

*****

(d) *Facsimile transmission.* Except in the cases enumerated below, correspondence, including authorizations to charge a deposit account, may be transmitted by facsimile. The receipt date accorded to the correspondence will be the date on which the complete transmission is received in the United States Patent and Trademark Office, unless that date is a Saturday, Sunday, or Federal holiday within the District of Columbia. See § 1.6(a)(3). To facilitate proper processing, each transmission session should be limited to correspondence to be filed in a single application or other proceeding before the United States Patent and Trademark Office. The application number of a patent application, the control number of a reexamination proceeding, the interference number of an interference proceeding, or the patent number of a patent should be entered as a part of the sender's identification on a facsimile cover sheet. Facsimile transmissions are not permitted and, if submitted, will not be accorded a date of receipt in the following situations:

(1) Correspondence as specified in § 1.4(e), requiring an original signature;

(2) Certified documents as specified in § 1.4(f);

(3) Correspondence which cannot receive the benefit of the certificate of mailing or transmission as specified in § 1.8(a)(2)(i)(A) through (D) and (F), and § 1.8(a)(2)(iii)(A), except that a continued prosecution application under § 1.53(d) may be transmitted to the Office by facsimile;

(4) Color drawings submitted under §§ 1.81, 1.83 through 1.85, 1.152, 1.165, 1.173, or 1.437;

(5) A request for reexamination under § 1.510 or § 1.913;

(6) Correspondence to be filed in a patent application subject to a secrecy order under §§ 5.1 through 5.5 of this chapter and directly related to the secrecy order content of the application;

(7) [Reserved]

(8) [Reserved]

(9) In contested cases before the Board of Patent Appeals and Interferences except as the Board may expressly authorize.

*****

The date of receipt accorded to any correspondence permitted to be sent by facsimile transmission, including a continued prosecution application (CPA) filed under 37 CFR 1.53(d) (for design applications only), is the date the complete transmission is received by an Office facsimile unit, unless the transmission is completed on a Saturday, Sunday, or Federal holiday within the District of Columbia. Correspondence for

which transmission was completed on a Saturday, Sunday, or Federal holiday within the District of Columbia, will be accorded a receipt date of the next succeeding day which is not a Saturday, Sunday, or Federal holiday within the District of Columbia. For example, a facsimile transmission to the Office from California starting on a Friday at 8:45 p.m. Pacific time and taking 20 minutes, would be completed at 9:05 p.m. Pacific time. The complete transmission would be received in the Office around 12:05 a.m. Eastern time on Saturday. The receipt date accorded to the correspondence is the date of the following business day, which in this case, would be Monday (assuming that Monday was not a Federal holiday within the District of Columbia). Note however, that if the Certificate of Transmission is available (for documents not proscribed by 37 CFR 1.8(a)(2)), then the above facsimile may be considered timely filed on Friday if it contains a Certificate of Transmission and is in compliance with 37 CFR 1.8(a)(1)(i)(B) and (ii).

37 CFR 1.6(d) specifies the types of correspondence which may be transmitted by facsimile. These would include CPAs filed under 37 CFR 1.53(d) (available for design applications only), amendments, declarations, petitions, information disclosure statements (IDS), terminal disclaimers, notices of appeal and appeal briefs, requests for continued examination (RCEs) under 37 CFR 1.114, assignment documents, issue fee transmittals and authorizations to charge deposit accounts. The situations where transmissions by facsimile are prohibited are identified in 37 CFR 1.6(d)(1)-(9). Prohibitions cover situations where originals are required as specified in 37 CFR 1.4(e) and (f), and situations where accepting a facsimile transmission would be unduly burdensome on the Office. As a courtesy, the Office will attempt to notify senders whenever correspondence is sent to the Office by facsimile transmission that falls within one of these prohibitions. Senders are cautioned against submitting correspondence by facsimile transmission which is not permitted under 37 CFR 1.6(d) since such correspondence will not be accorded a receipt date.

An applicant filing a CPA for a design application only by facsimile transmission must include an authorization to charge the basic filing fee to a deposit account or to a credit card, or the application will be treated under 37 CFR 1.53(f) as having been filed without the basic filing fee (as fees cannot otherwise be transmitted by facsimile).

There is a special receipt procedure for filing a CPA by fax, whereby the Office will fax back a receipt of the CPA filing if applicant submits the Office receipt form along with the CPA filing.

37 CFR 1.6. Receipt of correspondence.

*****

(f) *Facsimile transmission of a patent application under § 1.53(d)*. In the event that the Office has no evidence of receipt of an application under § 1.53(d) (a continued prosecution application) transmitted to the Office by facsimile transmission, the party who transmitted the application under § 1.53(d) may petition the Director to accord the application under § 1.53(d) a filing date as of the date the application under § 1.53(d) is shown to have been transmitted to and received in the Office,

(1) Provided that the party who transmitted such application under § 1.53(d):

(i) Informs the Office of the previous transmission of the application under § 1.53(d) promptly after becoming aware that the Office has no evidence of receipt of the application under § 1.53(d);

(ii) Supplies an additional copy of the previously transmitted application under § 1.53(d); and

(iii) Includes a statement which attests on a personal knowledge basis or to the satisfaction of the Director to the previous transmission of the application under § 1.53(d) and is accompanied by a copy of the sending unit's report confirming transmission of the application under § 1.53(d) or evidence that came into being after the complete transmission and within one business day of the complete transmission of the application under § 1.53(d).

(2) The Office may require additional evidence to determine if the application under § 1.53(d) was transmitted to and received in the Office on the date in question.

37 CFR 1.6(f) provides for the situation in which the Office has no evidence of receipt of a CPA transmitted to the Office by facsimile transmission. 37 CFR 1.6(f) requires a petition be filed requesting that the CPA be accorded a filing date as of the date the CPA is shown to have been transmitted to and received in the Office. The showing must include, *inter alia*, a copy of the sending unit's report confirming transmission of the application or evidence that came into being after the complete transmission of the application and within one business day of the complete transmission of the application.

I. CENTRALIZED FACSIMILE NUMBER FOR OFFICIAL PATENT APPLICATION RELATED CORRESPONDENCE

A. Central Number

Effective December 1, 2003, all patent application related correspondence transmitted by facsimile must be directed to the central facsimile number, with a few exceptions below. The central facsimile number is (571) 273-8300. Replies to Office actions including after-final amendments that are transmitted by facsimile must be directed to the central facsimile number. Unofficial correspondence such as draft proposed amendments for interviews may continue to be transmitted by facsimile to the Technology Centers (TCs). Office personnel should not use their personal facsimile numbers for official application related correspondence. Office personnel that inadvertently receive official application related correspondence on a personal facsimile number must either route (do not forward) the correspondence to the official central facsimile number or they may, with applicant's (or applicant's representative) permission, make the facsimile amendment part of an examiner's amendment.

B. Correspondence Which May Be Sent by Facsimile to Other Than the Central Facsimile Number

For each Office location listed below, only the particular type of correspondence indicated may be transmitted to the specific facsimile number at that Office location. All other types of facsimile transmitted correspondence must be sent to the central facsimile number ((571) 273-8300).

(1) ** *PCT Operations and PCT Legal Administration*

Correspondence subsequent to filing in an international application before the U.S. Receiving Office, the U.S. International Searching Authority, or the U.S. International Preliminary Examining Authority:

-- Papers in international applications: (571) 273-3201 facsimile number

-- Response to Decisions on Petition: (571) 273-0459 facsimile number

Note: An international application for patent or a copy of the international application and the basic national fee necessary to enter national stage, as specified in 37 CFR 1.495(b), may not be submitted by facsimile. See 37 CFR 1.6(d)(3) (referencing 37 CFR 1.8(a)(2)(i)(D) and (F)). Subsequent correspondence may be transmitted by facsimile in an application before the U.S. Receiving Office, the U.S. International Searching Authority, or the U.S. International Preliminary Examining Authority, but it will not receive the benefit of any certificate of transmission (or mailing). See 37 CFR 1.8(a)(2)(i)(E). Correspondence during the national stage, subsequent to **>entry< are handled in the same manner as a U.S. to national application.

*>-- The PCT Help Desk:

(571) 273-0419 facsimile number

(571) 272-4300 telephone number

(2) < *Office of Patent Publication*

Payment of an issue fee and any required publication fee by authorization to charge a deposit account or credit card, and drawings: **>(571) 273-2885< facsimile number

Note: Although submission of drawings by facsimile may reduce the quality of the drawings, the Office will generally print the drawings as received.

*>Office of Patent Publication telephone numbers to check on receipt of payment: (571) 272-4200 or 1-888-786-0101

(3) < *Office of Pre-Grant Publication*

Petitions for express abandonment to avoid publication under 37 CFR 1.138(c), and Requests for express abandonment under 37 CFR 1.138: (703) 305-8568 facsimile number

*>

(4) < *Electronic Business Center (EBC)*

Requests for Customer Number Data Change (PTO/SB/124), and Requests for a Customer Number (PTO/SB/125): (571) 273-0177 facsimile number

*>Note: The EBC may also be reached by e-mail at: ebc@uspto.gov. EBC telephone number for customer service and assistance: 866-217-9197

(5) < *Assignment Branch*

Assignments or other documents affecting title: (571) 273-0140 facsimile number

Note: Customers may submit documents directly into the automated Patent and Trademark Assignment System and receive the resulting recordation notice at their facsimile machine. (Assignment documents submitted through the Electronic Patent Assignment System also permit the recordation notice to be faxed to customers.) Credit card payments to record assignment documents are acceptable, and use of the Credit Card form (PTO-2038) is required for the credit card information to be separated from the assignment records. Only documents with an identified patent application or patent number, a single cover sheet to record a single type of transaction, and the fee paid by an authorization to charge a USPTO deposit account or credit card may be submitted via facsimile. Additional information regarding the submission of assignment documents via facsimile may be obtained from the USPTO web site at http://www.uspto.gov/web/offices/ac/ido/opr/ptasfax.pdf

*>Assignment Branch telephone number for assistance: (571) 272-3350

(6) < *Central Reexamination Unit (CRU)*

>*Ex parte* and< *Inter partes* reexamination correspondence, except for the initial request: **>(571) 273-9900< facsimile number

Note: **>Correspondence related to reexamination proceedings will be separately scanned in the CRU.

CRU telephone number for customer service and inquiries: (571) 272-7705<

*>

(7) < *Board of Patent Appeals and Interferences*

Correspondence related to pending interferences permitted to be transmitted by facsimile (only where expressly authorized, see 37 CFR 1.6(d)(9)): (571) 273-0042 facsimile number

Note: Correspondence should not be transmitted to this number if an interference has not yet been declared.

*>

(8) < *Office of the General Counsel*

Correspondence permitted to be transmitted by facsimile to the Office of the General Counsel: (571) 273-0099 facsimile number

*>

(9) < *Office of the Solicitor*

Correspondence permitted to be transmitted by facsimile to the Office of the Solicitor: (571) 273-0373 facsimile number

*>

(10) < *Licensing and Review*

Petitions for a foreign filing license pursuant to 37 CFR 5.12(b), including a petition for a foreign filing license where there is no corresponding U.S. application (37 CFR 5.13): (571) 273-0185 facsimile number

Note: Correspondence to be filed in a patent application subject to a secrecy order under 37 CFR 5.1 to 5.5 and directly related to the secrecy order content of the application may not be transmitted via facsimile. See 37 CFR 1.6(d)(6).

*>

(11) < *Office of Petitions*

Petitions to withdraw from issue: (571) 273-0025 facsimile number

Note: All other types of petitions must be directed to the central facsimile number (571) 273-8300. Petitions sent to the central facsimile number should be marked “Special Processing Submission.”

>

(12) *Office of the Enrollment and Discipline*

Correspondence permitted to be transmitted to the Office of the Enrollment and Discipline: (571) 273-0074 facsimile number

(13) *Office of Finance*

Refund requests, deposit account inquiries, and maintenance fee payments: (571) 273-6500 facsimile number

Office of Finance telephone number for customer service and inquiries: (571) 272-6500

(14) *Office of Public Records*

Requests for certified copies of Office records may be transmitted to: (571) 273-3250 facsimile number

The Office of Public Records’ Document Services Division telephone number for customer service and inquiries: (571) 272-3150<

II. CORRESPONDENCE RELATIVE TO PATENTS AND PATENT APPLICATIONS WHERE FILING BY FACSIMILE TRANSMISSION IS NOT PERMITTED

(A) A document that is required by statute to be certified;

(B) A national patent application specification and drawing (provisional or nonprovisional) or other correspondence for the purpose of obtaining an application filing date, other than a continued prosecution application filed under 37 CFR 1.53(d);

(C) Color drawings submitted under 37 CFR 1.81, 1.83-1.85, 1.152, 1.165, 1.173, or 1.437**;

(D) Correspondence in an interference which an Administrative Patent Judge orders to be filed by hand or "Express Mail";

(E) Agreements between parties to an interference under 35 U.S.C. 135(c);

(F) Correspondence in contested cases before the Board of Patent Appeals and Interferences, unless expressly authorized by the Board;

(G) Correspondence to be filed in a patent application subject to a secrecy order under 37 CFR 5.1-5.5 and directly related to the secrecy order content of the application;

(H) An international application for patent;

(I) A copy of the international application and the basic national fee necessary to enter the national stage, as specified in 37 CFR 1.495(b);

(J) A request for reexamination under 37 CFR 1.510 or 37 CFR 1.913.

Applicants are reminded that the facsimile process may reduce the quality of the drawings, and the Office will generally print the drawings as received.

See MPEP § 1834.01 for a discussion concerning facsimile transmissions in PCT applications.

502.02 Correspondence Signature Requirements [R-5]

37 CFR 1.4. Nature of correspondence and signature requirements.

*****

(d)(1)*Handwritten signature*. Each piece of correspondence, except as provided in paragraphs (d)(2), (d)(3), (e) and (f) of this section, filed in an application, patent file, or other proceeding in the Office which requires a person's signature, must:

(i) Be an original, that is, have an original handwritten signature personally signed, in permanent dark ink or its equivalent, by that person; or

(ii) Be a direct or indirect copy, such as a photocopy or facsimile transmission (§ 1.6(d)), of an original. In the event that a copy of the original is filed, the original should be retained as evidence of authenticity. If a question of authenticity arises, the Office may require submission of the original.

**>

(2) *S-signature*. An S-signature is a signature inserted between forward slash marks, but not a handwritten signature as defined by § 1.4(d)(1). An S-signature includes any signature made by electronic or mechanical means, and any other mode of making or applying a signature not covered by either a handwritten signature of § 1.4(d)(1) or an Office Electronic Filing System (EFS) character coded signature of § 1.4(d)(3). Correspondence being filed in the Office in paper, by facsimile transmission as provided in § 1.6(d), or via the Office Electronic Filing System as an EFS Tag(ged) Image File Format (TIFF) attachment, for a patent application, patent, or a reexamination proceeding may be S-signature signed instead of being personally signed (*i.e.*, with a handwritten signature) as provided for in paragraph (d)(1) of this section. The requirements for an S-signature under this paragraph (d)(2) are as follows.<

(i) The S-signature must consist only of letters, or Arabic numerals, or both, with appropriate spaces and commas, periods, apostrophes, or hyphens for punctuation, and the person signing the correspondence must insert his or her own S-signature with a first single forward slash mark before, and a second single forward slash mark after, the S-signature (e.g., /Dr. James T. Jones, Jr./); and

**>

(ii) A patent practitioner (§ 1.32(a)(1)), signing pursuant to §§ 1.33(b)(1) or 1.33(b)(2), must supply his/her registration number either as part of the S-signature, or immediately below or adjacent to the S-signature. The number (#) character may be used only as part of the S-signature when appearing before a practitioner's registration number; otherwise the number character may not be used in an S-signature. <

(iii) The signer's name must be:

(A) Presented in printed or typed form preferably immediately below or adjacent the S-signature, and

(B) Reasonably specific enough so that the identity of the signer can be readily recognized.

(3) *EFS character coded signature*. Correspondence in character coded form being filed via the Office Electronic Filing System for a patent application or patent may be signed electronically. The electronic signature must consist only of letters of the English alphabet, or Arabic numerals, or both, with appropriate spaces and commas, periods, apostrophes, or hyphens for punctuation. The person signing the correspondence must personally insert the electronic signature with a first single forward slash mark before, and a second single forward slash mark after, the electronic signature (*e.g.*, /Dr. James T. Jones, Jr./).

(4) *Certifications*. (i) *Section 10.18 certifications*: The presentation to the Office (whether by signing, filing, submitting, or later advocating) of any paper by a party, whether a practitioner

or non-practitioner, constitutes a certification under § 10.18(b) of this chapter. Violations of § 10.18(b)(2) of this chapter by a party, whether a practitioner or non-practitioner, may result in the imposition of sanctions under § 10.18(c) of this chapter. Any practitioner violating § 10.18(b) of this chapter may also be subject to disciplinary action. See §§ 10.18(d) and 10.23(c)(15) of this chapter.

(ii) *Certifications as to the signature*: (A) *Of another*: A person submitting a document signed by another under paragraphs (d)(2) or (d)(3) of this section is obligated to have a reasonable basis to believe that the person whose signature is present on the document was actually inserted by that person, and should retain evidence of authenticity of the signature.

(B) *Self certification*: The person inserting a signature under paragraphs (d)(2) or (d)(3) of this section in a document submitted to the Office certifies that the inserted signature appearing in the document is his or her own signature.

(C) *Sanctions*: Violations of the certifications as to the signature of another or a person's own signature, set forth in paragraphs (d)(4)(ii)(A) and (B) of this section, may result in the imposition of sanctions under § 10.18(c) and (d) of this chapter.

(e) Correspondence requiring a person's signature and relating to registration practice before the Patent and Trademark Office in patent cases, enrollment and disciplinary investigations, or disciplinary proceedings must be submitted with an original hand written signature personally signed in permanent dark ink or its equivalent by that person.

(f) When a document that is required by statute to be certified must be filed, a copy, including a photocopy or facsimile transmission, of the certification is not acceptable.

*****

(h) *Ratification/confirmation/evidence of authenticity*: The Office may require ratification, confirmation (which includes submission of a duplicate document but with a proper signature), or evidence of authenticity of a signature, such as when the Office has reasonable doubt as to the authenticity (veracity) of the signature, *e.g.*, where there are variations of a signature, or where the signature and the typed or printed name, do not clearly identify the person signing.

Correspondence filed in the Office, which requires a person's signature, may be filed with one of three types of signatures: (A) handwritten signature; (B) "S-signature;" and (C) Office Electronic Filing System (EFS) character coded signature. See 37 CFR 1.4(d).

I. HANDWRITTEN SIGNATURE

A person's handwritten signature may be an original, or a copy thereof. The word original, as used herein, is defined as correspondence which is personally signed in permanent dark ink or its equivalent by the person whose signature appears thereon. Dark ink or equivalent permits traditional ink and newer non-liquid gel type ink technologies. Since incoming correspondence is electronically stored and scanned as a black and white image, a dark color is required so that the scanned image is legible. Where copies of correspondence are acceptable, photocopies or facsimile transmissions may be filed. For example, a photocopy or facsimile transmission of an original of an amendment, declaration (e.g., under 37 CFR 1.63 or 1.67), petition, issue fee transmittal form, authorization to charge a deposit account or a credit card, may be submitted in a patent application. Where copies are permitted, second and further generation copies (i.e., copy of a copy) are acceptable. For example, a client may fax a paper to an attorney and the attorney may then fax the paper to the Office, provided the paper is eligible to be faxed (see MPEP § 502.01). The original, if not submitted to the Office, should be retained as evidence of proper execution in the event that questions arise as to the authenticity of the signature reproduced on the photocopy or facsimile-transmitted correspondence. If a question of authenticity arises, the Office may require submission of the original.

37 CFR 1.4(d)(1) covers all handwritten signatures, except for the handwritten signatures on the types of correspondence covered by 37 CFR 1.4(e). The requirement in 37 CFR 1.4(d)(1) of permanent dark ink or its equivalent relates to whether a handwritten signature is compliant and is not limiting on the type of handwritten signature that is covered by 37 CFR 1.4(d)(1). Thus, 37 CFR 1.4(d)(1) would cover handwritten signatures in red ink or in pencil; although, under 37 CFR 1.4(d)(1) neither would be acceptable since red ink is not dark, and pencil is not permanent. A scanned image of a document that contains a handwritten signature filed via the Office's EFS is permitted as a copy under 37 CFR 1.4(d)(1)(ii). A signature applied by an electric or mechanical typewriter directly to paper is not a handwritten signature, which is applied by hand. Accordingly, if a typewriter applied signature is used, it must meet the requirements of 37 CFR 1.4(d)(2). Adding forward slashes to a handwritten (or hand-printed) ink signature that is personally applied will not cause the signature to be treated under 37 CFR 1.4(d)(2). Such a signature will be treated under 37 CFR 1.4(d)(1) or (e) with the slashes ignored. The end product from a manually applied hand stamp or from a signature replication or transfer means (such as by pen or by screen) appears

to be a handwritten signature, but is not actually handwritten, and would be treated under 37 CFR 1.4(d)(2). An electronic reproduction of a handwritten signature, e.g., scanned, that is electronically applied to a document is not a personally signed original document under 37 CFR 1.4(d)(1)(i) and reproductions of such correspondence cannot be copies under 37 CFR 1.4(d)(1)(ii).

II. S-SIGNATURE

The second type of signature is an S-signature. See 37 CFR 1.4(d)(2). An S-signature is a signature inserted between forward slash marks, but not a handwritten signature as defined by 37 CFR 1.4(d)(1) or (e), or an EFS character coded signature as defined by 37 CFR 1.4(d)(3). An S-signature includes any signature made by electronic or mechanical means, and any other mode of making or applying a signature not covered by either a handwritten signature of 37 CFR 1.4(d)(1) or (e), or an EFS character coded signature of 37 CFR 1.4(d)(3). The S-signature can be used with correspondence filed in the Office in paper, by facsimile transmission as provided in 37 CFR 1.6(d), or via the Office EFS as an EFS Tag(ged) Image File Format (TIFF) attachment, for a patent application, a patent, or a reexamination proceeding. 37 CFR 1.4(d) does not authorize filing correspondence by e-mail.

An S-signature must consist only of letters, or Arabic numerals, or both, with appropriate spaces and punctuation (i.e., commas, periods, apostrophes, or hyphens). “Letters” include English and non- English alphabet letters, and text characters (e.g., Kanji). Non-text, graphic characters (e.g., a smiley face created in the True Type Wing Dings font) are not permitted. “Arabic numerals” are the numerals 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9, which are the standard numerals used in the United States. To accommodate as many varieties of names as possible, a signer may select any combination of letters, Arabic numerals, or both, for his or her S-signature under 37 CFR 1.4(d)(2)(i). The person signing the correspondence must insert his or her own S-signature with a first single forward slash mark before, and a second single forward slash mark after, the S-signature (e.g., /Dr. James T. Jones, Jr./). Additional forward slashes are not permitted as part of the S-signature. The presentation of just letters and Arabic numerals as an S-signature without the S-signature being placed between two forward slashes will be treated as an unsigned document.

Commas, periods, apostrophes, and hyphens are often found in names and will therefore be found in many S-signatures. These punctuation marks and appropriate spaces may be used with letters and Arabic numerals in an S-signature. A sample S-signature including punctuation marks and spaces, between two forward slashes, is: /John P. Doe/. Punctuation marks, *per se*, are not punctuation and are not permitted without proper association with letters and Arabic numerals. An S-signature of only punctuation marks would be improper (e.g., /- - -/). In addition, punctuation marks, such as question marks (e.g., /???/), are often utilized to represent an intent not to sign a document and may be interpreted to be a non-*bona fide* attempt at a signature, in addition to being improper.

Script fonts are not permitted for any portion of a document except the S-signature. See 37 CFR 1.52(b)(2)(ii). Presentation of a typed name in a script font without the typed name being placed between the required slashes does not present the proper indicia manifesting an intent to sign and will be treated as an unsigned document.

37 CFR 1.4(d)(2)(i) also defines who can insert an S-signature into a document. 37 CFR 1.4(d)(2)(i) requires that a person, which includes a practitioner, must insert his or her own signature using letters and/or Arabic numerals, with appropriate commas, periods, apostrophes, or hyphens as punctuation and spaces. The “must insert his or her own signature” requirement is met by the signer directly typing his or her own signature using a keyboard. The requirement does not permit one person (e.g., a secretary) to type in the signature of a second person (e.g., a practitioner) even if the second person directs the first person to do so. A person physically unable to use a keyboard, however, may, while simultaneously reviewing the document for signature, direct another person to press the appropriate keys to form the S-signature.

For consistency purposes, and to avoid raising a doubt as to who has signed, the same S-signature should be utilized each time, with variations of the signature being avoided. The signer should review any indicia of identity of the signer in the body of the document, including any printed or typed name and registration number, to ensure that the indicia of identity in the body of the document is consistent with

how the document is S-signed. Knowingly adopting an S-signature of another is not permitted.

While an S-signature need not be the name of the signer of the document, the Office strongly suggests that each signer use an S-signature that has his or her full name. The Office expects that where persons do not sign with their name it will be because they are using an S-signature that is the usual S-signature for that person, which is his or her own signature, and not something that is employed to obfuscate or misidentify the signer. Titles may be used with the signer's S-signature and must be placed between the slash marks (e.g., /Dr. John Doe/), or with the printed or typed version of the name.

37 CFR 1.4(d)(2)(ii) requires that a practitioner >(37 CFR 1.32(a)(1))< signing pursuant to 37 CFR 1.33(b)(1) or (b)(2) must place his or her registration number, either as part of, or adjacent, his or her S-signature. A number character (#) may only be used in an S-signature if it is prior to a practitioner's registration number that is part of the S-signature. When a practitioner is signing as an assignee, or as an applicant (inventor) pursuant to 37 CFR 1.33(b)(3) or (b)(4), a registration number is not required and should not be supplied to avoid confusion as to which basis the practitioner is signing, e.g., as a practitioner or as the assignee.

The signer's name must be (A) presented in printed or typed form preferably immediately below or adjacent the S-signature, and (B) reasonably specific enough so that the identity of the signer can be readily recognized. See 37 CFR 1.4(d)(2)(iii)(A). The printed or typed name requirement is intended to describe any manner of applying the signer's name to the document, including by a typewriter or machine printer. It could include a printer (mechanical, electrical, optical, etc.) associated with a computer or a facsimile machine but would not include manual or hand printing. See 37 CFR 1.52(a)(1)(iv). The printed or typed name may be inserted before or after the S-signature is applied, and it does not have to be inserted by the S-signer. A printed or typed name appearing in the letterhead or body of a document is not acceptable as the presentation of the name of the S-signer.

III. EFS CHARACTER CODED SIGNATURE

The third type of an acceptable signature established by 37 CFR 1.4(d)(3) is the EFS character coded signature, which is an electronic signature, for correspondence submitted via EFS in character coded form for a patent application, e-IDS or an assignment cover sheet signed consistent with 37 CFR 3.31. The electronic signature must consist only of letters of the English alphabet, or Arabic numerals, or both, with appropriate spaces and commas, periods, apostrophes, and hyphens as punctuation. Letters of the English alphabet are the upper and lower case letters A through Z.

EFS character coded signatures are signatures inserted into EFS menus in the Office's EFS software. The signature is inserted into transmittal, assignment, declaration, power of attorney, fee transmittal and e-IDS forms. These forms are identified in the list of EFS files transmitted as XML files. Scanned images of oaths and declarations with ink signatures (37 CFR 1.4(d)(1)) and S-signatures (37 CFR 1.4(d)(2)) may also be filed as an attachment in an EFS filing, and can be distinguished on the EFS file list as TIFF files.

IV. CERTIFICATIONS

37 CFR 1.4(d)(4)(i) establishes that the presentation to the Office (whether by signing, filing, submitting, or later advocating) of any paper by a party, whether a practitioner or non- practitioner, constitutes a certification under 37 CFR 10.18(b) of this chapter.

37 CFR 1.4(d)(4)(ii)(A) establishes certifications as to the signature of another for a person submitting a document signed by another under 37 CFR 1.4(d)(2) or (d)(3). Thus, the submitting person is obligated to have a reasonable basis to believe that the person whose signature is present on the document actually inserted the signature on the document. Such reasonable basis does not require an actual knowledge but does require some reason to believe the signature is appropriate. For example, where a practitioner e-mails a 37 CFR 1.63 declaration to an inventor for signature by the inventor and receives an executed declaration by the inventor in return from the inventor, reasonable basis would exist. Where an assignee was involved in the transmission of the declaration form and/or the executed declaration, an additional showing of chain of custody (e.g., e-mail chain with attached documents from the inventor to the assignee to the practitioner filing the declaration) involving the assignee

would be required. Additionally, evidence of authenticity should be retained. This may involve retaining the e-mails sent to the inventor and any cover letter or e-mail (with the signed document as an attachment) back to the practitioner from the inventor in the example relating to execution of a 37 CFR 1.63 declaration.

37 CFR 1.4(d)(4)(ii)(B) establishes that a person inserting a signature under 37 CFR 1.4(d)(2) or (d)(3) in a document submitted to the Office certifies that the inserted signature appearing in the document is his or her own signature. This is meant to prohibit a first person from requesting a second person to insert the first person's signature in a document. While the certification is directed at the person inserting another S-signature, the person requesting the inappropriate insertion may also be subject to sanctions.

37 CFR 1.4(d)(4)(ii)(C) establishes that violations of the certifications as to the signature of another or a person's own signature, set forth in 37 CFR 1.4(d)(4)(ii)(A) and (B), may result in the imposition of sanctions under 37 CFR 10.18(c) and (d).

V. RATIFICATION, CONFIRMATION, OR EVIDENCE OF AUTHENTICITY

Pursuant to 37 CFR 1.4(h), the Office may additionally inquire in regard to a signature so as to identify the signer and clarify the record where the identity of the signer is unclear. An example of when ratification or confirmation of a signature may be required is when there are variations in a signature or whenever a name in an S-signature is not exactly the same as the name indicated as an inventor, or a practitioner of record. Hence, whatever signature is adopted by a signer, that signature should be consistently used on all documents. Also addressed is the treatment of variations in a signature or where a printed or typed name accompanies the S-signature or the EFS character coded signature but the identity of the signer is unclear. In such cases, the Office may require ratification or confirmation of a signature. Ratification requires the person ratifying to state he/she personally signed the previously submitted document as well as, if needed, the submission of a compliant format of the signature. Confirmation includes submitting a duplicate document, which is compliantly signed if the previous signature was noncompliant (as opposed to unclear).

In lieu of ratification, the Office may require a resubmission of a properly signed duplicate document. Resubmission of a document may be required, for example, where ratification alone is inappropriate, such as where the image of the signature is of such poor quality (e.g., illegible font) that the Office is unable to store or reproduce the document with the signature image.

Ratification or confirmation alone does not provide a means for changing the name of a signer. For example, when an inventor changes her/his name and the inventor desires to change her/his name in the application, such change must be accompanied by a petition under 37 CFR 1.182 and, preferably, an Application Data Sheet (ADS). See MPEP § 605.04(c).

In addition, the Office may require evidence of authenticity where the Office has reasonable doubt as to the authenticity (veracity) of the signature. Evidence of authenticity may include evidence establishing a chain of custody of a document from the person signing the document to the person filing the document. Proper evidence of a chain of custody will aid in avoiding the impact of repudiation of a signature.

Where there has been a *bona fide* attempt to follow the rule, but where there is some doubt as to the identity of the signer of a signed document, the Office may require ratification of the signature. Note, ratification would only be an effective remedy if the signer was a proper party to have executed the document to be ratified. For example, a practitioner of record may ratify his or her signature on an amendment, but not the signature of a secretary who is not a practitioner or inventor in the application. A registered practitioner may, however, ratify the amendment made by another registered practitioner but may not ratify a document required to be signed by an inventor, such as a 37 CFR 1.63 declaration. Similarly, an inadvertent typographical error or simple misspelling of a name will be treated as a *bona fide* attempt to follow the rule, which would require ratification only where there is some doubt as to the identity of the signer rather than be treated as an unsigned paper requiring resubmission. Where there is an obvious typographical error so that the Office does not have some doubt as to the identity of the signer (and therefore notification to applicant is not needed), further action by

applicant would not be required and, where appropriate, the obvious error will be noted in the record.

The inadvertent failure to follow the format and content of an S-signature will be treated as a *bona fide* attempt at a signature but the paper will be considered as being unsigned correspondence. Examples of correspondence that will be treated as unsigned are (A) the S-signature is not enclosed in forward slashes, (B) the S-signature is composed of non-text graphic characters (e.g., a smiley face) and not letters and numerals, and (C) the S-signature is not a name and there is no other accompanying name adjacent or below the S-signature so that the identity of the signer cannot be readily recognized.

If the signer, after being required to ratify or resubmit a document with a compliant signature, repeats the same S-signature in reply without appropriate correction, the reply will not be considered to be a *bona fide* attempt to reply, and no additional time period will be given to submit a properly signed document.

VI. CERTIFICATION OF DOCUMENTS REQUIRED BY STATUTE

When a document that is required by statute to be certified must be filed (such as a certified copy of a foreign patent application pursuant to 35 U.S.C. 119 or a certified copy of an international application pursuant to 35 U.S.C. 365) a copy of the certification, including a photocopy or facsimile transmission, will not be acceptable. The requirement for an original certification does not apply to certifications such as required under 37 CFR 1.8 since these certifications are not required by statute.

502.03 Communications via the Internet [R-2]

The Office published a Patent Internet Usage Policy to

(A) establish a policy for use of the Internet by the Patent Examining Corps and other organizations within the USPTO,

(B) address use of the Internet to conduct interview-like communications and other forms of formal and informal communications,

(C) publish guidelines for locating, retrieving, citing, and properly documenting scientific and technical information sources on the Internet,

(D) inform the public how the USPTO intends to use the Internet, and

(E) establish a flexible Internet policy framework which can be modified, enhanced, and corrected as the USPTO, the public, and customers learn to use, and subsequently integrate, new and emerging Internet technology into existing business infrastructures and everyday activities to improve the patent application, examining, and granting functions.

See *Internet Usage Policy*, 64 *>FR< 33056 (June 21, 1999). The Articles of the Patent Internet Usage Policy pertinent to communications via electronic mail are summarized below. See MPEP § 904.02(c) for information pertinent to Internet searching, and MPEP § 707.05(e) for information pertaining to the citation of electronic documents. See also MPEP § 713.04 for recordation of e-mail interviews.

>

I. < CONFIDENTIALITY OF PROPRIETARY INFORMATION (ARTICLE 4)

If security and confidentiality cannot be attained for a specific use, transaction, or activity, then that specific use, transaction, or activity shall NOT be undertaken/conducted.

All use of the Internet by Patent Organization employees, contractors, and consultants shall be conducted in a manner that ensures compliance with confidentiality requirements in statutes, including 35 U.S.C. 122, and regulations. Where a written authorization is given by the applicant for the USPTO to communicate with the applicant via Internet e-mail, communications via Internet e-mail may be used.

Backup, archiving, and recovery of information sent or received via the Internet is the responsibility of individual users. The OCIO does not, and will not, as a normal practice, provide backup and recovery services for information produced, retrieved, stored, or transmitted to/from the Internet.

>

II. < COMMUNICATIONS VIA THE INTERNET AND AUTHORIZATION (ARTICLE 5)

Communications via Internet e-mail are at the discretion of the applicant.

Without a written authorization by applicant in place, the USPTO will not respond via Internet e-mail to any Internet correspondence which contains information subject to the confidentiality requirement as set forth in 35 U.S.C. 122. A paper copy of such correspondence will be placed in the appropriate patent application.

The following is a sample authorization form which may be used by applicant:

"Recognizing that Internet communications are not secure, I hereby authorize the USPTO to communicate with me concerning any subject matter of this application by electronic mail. I understand that a copy of these communications will be made of record in the application file."

A written authorization may be withdrawn by filing a signed paper clearly identifying the original authorization. The following is a sample form which may be used by applicant to withdraw the authorization:

"The authorization given on_____, to the USPTO to communicate with me via the Internet is hereby withdrawn. I understand that the withdrawal is effective when approved rather than when received."

Where a written authorization is given by the applicant, communications via Internet e-mail, other than those under 35 U.S.C. 132 or which otherwise require a signature, may be used. In such case, a printed copy of the Internet e-mail communications MUST be given a paper number, entered into the Patent Application Locating and Monitoring System (PALM) and entered in the patent application file. A reply to an Office action may NOT be communicated by applicant to the USPTO via Internet e-mail. If such a reply is submitted by applicant via Internet e-mail, a paper copy will be placed in the appropriate patent application file with an indication that the reply is NOT ENTERED. >For Image File Wrapper (IFW) processing, see IFW Manual.<

USPTO employees are NOT permitted to initiate communications with applicants via Internet e-mail unless there is a written authorization of record in the patent application by the applicant.

All reissue applications are open to public inspection under 37 CFR 1.11(a) and all papers relating to a reexamination proceeding which have been entered of record in the patent or reexamination file are open to public inspection under 37 CFR 1.11(d). USPTO employees are NOT permitted to initiate communications with applicant in a reissue application or a patentee of a reexamination proceeding via Internet e-mail unless written authorization is given by the applicant or patentee.

>

III. < AUTHENTICATION OF SENDER BY A PATENT ORGANIZATION RECIPIENT (ARTICLE 6)

The misrepresentation of a sender's identity (i.e., spoofing) is a known risk when using electronic communications. Therefore, Patent Organization users have an obligation to be aware of this risk and conduct their Internet activities in compliance with established procedures.

Internet e-mail must be initiated by a registered practitioner, or an applicant in a pro se application, and sufficient information must be provided to show representative capacity in compliance with 37 CFR 1.34. Examples of such information include the attorney registration number, attorney docket number, and patent application number.

>

IV. < USE OF ELECTRONIC MAIL SERVICES (ARTICLE 7)

Once e-mail correspondence has been received from the applicant, as set forth in Patent Internet Usage Policy Article 4, such correspondence must be responded to appropriately. The Patent Examiner may respond to an applicant's e-mail correspondence by telephone, fax, or other appropriate means.

>

V. < INTERVIEWS (ARTICLE 8)

Internet e-mail shall NOT be used to conduct an exchange of communications similar to those exchanged during telephone or personal interviews unless a written authorization has been given under Patent Internet Usage Policy Article 5 to use Internet e-mail. In such cases, a paper copy of the Internet e-mail contents MUST be made and placed in the patent application file, as required by the Federal Records Act, in the same manner as an Examiner Interview Summary Form is entered.

>

VI. < POLICY GUIDANCE AND CLARIFICATIONS (ARTICLE 13)

Within the Patent Organization, any questions regarding Internet usage policy should be directed to the user's immediate supervisor. Non-USPTO personnel should direct their questions to the Office of the Deputy Commissioner for Patent Examination Policy.

502.04 Duplicate Copies of Correspondence [R-2]

37 CFR 1.4. Nature of correspondence and signature requirements.

**>

(b) Since each file must be complete in itself, a separate copy of every paper to be filed in a patent, patent file, or other proceeding must be furnished for each file to which the paper pertains, even though the contents of the papers filed in two or more files may be identical. The filing of duplicate copies of correspondence in the file of an application, patent, or other proceeding should be avoided, except in situations in which the Office requires the filing of duplicate copies. The Office may dispose of duplicate copies of correspondence in the file of an application, patent, or other proceeding.<

*****

When the Office does not require duplicate copies of a paper, the filing of multiple copies may cause a delay in processing by the Office. Accordingly, the Office may discard duplicate copies of correspondence filed in an application or patent file.

503 Application Number and Filing Receipt [R-3]

37 CFR 1.54. Parts of application to be filed together; filing receipt.

(a) It is desirable that all parts of the complete application be deposited in the Office together; otherwise, a letter must accompany each part, accurately and clearly connecting it with the other parts of the application. See § 1.53(f) and (g) with regard to completion of an application.

(b) Applicant will be informed of the application number and filing date by a filing receipt, unless the application is an application filed under § 1.53(d).

Application numbers consisting of a series code and a serial number are assigned by the Office of Initial Patent Examination (OIPE) immediately after mail has been opened.

The following series codes are assigned to the applications identified below:

(A) 01/ - *>11</ - for nonprovisional applications (utility, plant, and reissue),

- The 01 series code was used from year 1925 to 1934,

02 – 1935 to 1947,
03 – 1948 to 1959,
04 – 1960 to 1969,
05 – 1970 to 1978,
06 – 1979 to 1986,
07 – 1987 to 1992,
08 – 1993 to 1997,
09 – 1998 to Nov. 2001, *
10 – Dec. 2001 to *>Nov. 2004, and
11 – Dec. 2004 to present;<

(B) 29/ - for design applications;

(C) 60/ - for provisional applications;

(D) 90/ - for *ex parte* reexamination proceedings; and

(E) 95/ - for *inter partes* reexamination proceedings.

If a self-addressed postcard is submitted with a patent application, that postcard will be provided with both the receipt date and application number prior to returning it to the addressee. The application number identified on such a postcard receipt is merely the preliminary assignment of an application number to the application, and should not be relied upon (e.g., with respect to foreign filings) as necessarily representing the application number assigned to such application. See 37 CFR 1.53(b).

The identifying data on the postcard should include:

(A) applicant's name(s);

(B) title of invention;

(C) number of pages of specification, claims (for nonprovisional applications), and sheets of drawing;

(D) whether oath or declaration is included;

(E) a list of any additional forms included with the application (e.g., application transmittal form, application data sheet, fee transmittal form, and/or provisional application cover sheet); and

(F) amount and manner of paying the fee.

A return postcard should be attached to *each* patent application for which a receipt is desired.

It is important that the return postcard itemize all of the components of the application. If the postcard does not itemize each of the components of the application, it will not serve as evidence that any component which was not itemized was received by the United States Patent and Trademark Office (USPTO).

It should be recognized that the identification of an application by application number does not necessarily signify that the USPTO has accepted the application as complete (37 CFR 1.53(a)).

OIPE mails a filing receipt to the attorney or agent, if any, otherwise to the applicant, for each application filed which meets the minimum requirements to receive a filing date. The filing receipt includes the application number, filing date, a confirmation number, a suggested class in the U.S. Patent Classification System (see MPEP § 902.01), and the number of an art unit where the application is likely to be examined. The filing receipt also includes other information about the application as applicable, such as continuing data, national stage data, foreign priority data, foreign filing license data, entity status information, and the date the Office anticipates publishing the application under 35 U.S.C. 122(b). The filing receipt represents the official assignment by the USPTO of a specific application number and confirmation number to a particular application. See 37 CFR 1.54(b). The application number officially assigned to an application on the filing receipt may differ from the application number identified on a postcard receipt submitted with such application, and, as between inconsistent filing receipts and postcard receipts, the application number on the filing receipt is controlling.

The confirmation number is a four-digit number that is assigned to each newly filed application. The confirmation number, in combination with the application number, is used to verify the accuracy of the application number placed on correspondence filed with the Office to avoid misidentification of an application due to a transposition error in the application number. The confirmation number may be found in the upper left-hand corner of the filing receipt. The confirmation number will also be available through the Patent Application Information Retrieval (PAIR) system (http://pair.uspto.gov). The Office eventually plans to include the application's confirmation number (in addition to the application number) on all Office actions and notices concerning the application. The confirmation number must be used when submitting an electronic filing system (EFS) copy of the application for publication to verify that the application number correctly identifies the application for which a copy is being submitted for publication. The Office also recommends that applicants include the application's confirmation number (in addition to the application number) on all correspondence submitted to the Office concerning the application.

A continued prosecution application (CPA) filed under 37 CFR 1.53(d) (design applications only) will be assigned the application number of the prior application for identification purposes.

A nonprovisional application, other than a CPA filed under 37 CFR 1.53(d), is entitled to a filing date as of the date of receipt of the specification, including claims, and any required drawing. See 37 CFR 1.53(b). The filing receipt will be mailed at the time a determination is made that the application meets the minimum requirements to receive a filing date. The oath or declaration **>, basic filing fee, and for nonprovisional applications filed on or after December 8, 2004, search fee and examination fee as set forth in 37 CFR 1.16,< may be filed later than the remaining application papers, but if so, they must be accompanied by the required surcharge >(if appropriate, see MPEP § 506)<. See 37 CFR 1.53(f). If the oath or declaration, **>basic< filing fee, **>and/or any required search fee and examination fee with the appropriate surcharge< are not timely filed, the application will be abandoned.

A provisional application is entitled to a filing date as of the date of receipt of the specification and any required drawing(s). See 37 CFR 1.53(c). A cover sheet (37 CFR 1.51(c)(1)), which may be an application data sheet (37 CFR 1.76) or a cover letter, identifying the application as a provisional application is required to prevent the provisional application from being treated as a nonprovisional application. 37 CFR 1.53(c)(1).

Each application which meets the minimum requirements to receive a filing date is given a filing date. It is important, when referring to application files, to identify them by their filing dates and confirmation numbers as well as by application numbers.

Attorney docket numbers must be limited to a maximum of 12 characters to prevent truncation. The Patent Application Locating and Monitoring (PALM)

system data base allows a maximum of 12 characters for the attorney docket numbers. Spaces, slashes, and hyphens will no longer be included in the entered docket number on the official filing receipt. In an application where CASE or NAVY-CASE appears before the first character in the docket number, only the characters after CASE or NAVY-CASE will be entered on the official filing receipt.

The application papers are **>processed by OIPE and added to the Office's Image File Wrapper (IFW) system.<

Applications which are entitled to a filing date and are filed, whether by regular mail*>, by< "Express Mail" under 37 CFR 1.10, by hand-delivery>, by the Office's Electronic Filing System (EFS),< or otherwise, will not be returned to applicant even if requested. See 37 CFR 1.59. Accordingly, applicants must be careful not to file applications which are not intended to be filed, e.g., duplicates of applications already filed. Note that 37 CFR 1.26(a) provides that a change of purpose after the payment of a fee, as when a party desires to withdraw the filing of a patent application for which the fee was paid, will not entitle the party to a refund of such fee. See MPEP § 607.02.

RETURN POSTCARD

If a receipt for any item (e.g., paper or fee) filed in the USPTO is desired, it may be obtained by enclosing with the paper a self-addressed postcard specifically identifying the item. To ensure the receipt of return receipt postcards, users must either: (A) purchase already stamped postcards from the United States Postal Service (USPS) or affix postage stamps to their postcards; or (B) if a postage meter is used, ensure that the meter postmark does not show the date. Any return receipt postcard containing a dated meter postmark may not be delivered by the USPS to the address provided on the postcard. >Users are reminded that they are solely responsible for placing the proper postage on self-addressed postcards that are submitted to the USPTO for the purpose of obtaining a receipt for correspondence being filed in the USPTO. Users should check with the USPS regarding postage and what size cards are acceptable to the USPS. Any return receipt postcard that does not contain sufficient postage or is not acceptable may not be delivered by the USPS to the address provided on the postcard, and, if returned to the USPTO, may be discarded.<

The USPTO will stamp the receipt date on the postcard and place it in the outgoing mail. A postcard receipt which itemizes and properly identifies the items which are being filed serves as *prima facie* evidence of receipt in the USPTO of all the items listed thereon on the date stamped thereon by the USPTO.

The identifying data on the postcard should be so complete as to clearly identify the item for which a receipt is requested. For example, the postcard should identify the applicant's name, application number (if known), confirmation number (if known), filing date, interference number, title of the invention, etc. The postcard should also identify the type of paper being filed, e.g., new application, affidavit, amendment, notice of appeal, appeal brief, drawings, fees, motions, supplemental oath or declaration, petition, etc., and the number of pages being submitted. If a new application is being filed, all parts of the application being submitted should be separately listed on the postcard, e.g., the number of pages of specification (including written description, claims and abstract), number of claims, number of sheets of drawings, number of pages of oath/declaration, number of pages of cover sheet (provisional application).

The postcard receipt will not serve as *prima facie* evidence of receipt of any item which is not adequately itemized on the postcard. For example, merely listing on the postcard "a complete application" or "patent application" will not serve as a proper receipt for each of the required components of an application (e.g., specification (including claims), drawings (if necessary), oath or declaration and the application filing fee) or missing portions (e.g., pages, sheets of drawings) of an application if one of the components or portion of a component is found to be missing by the USPTO. Each separate component should be specifically and properly itemized on the postcard. Furthermore, merely incorporating by reference in the postcard receipt, the items listed in a transmittal letter will not serve as *prima facie* evidence of receipt of those items.

The person receiving the item(s) in the USPTO will check the listing on the postcard against the item(s) being filed to be sure they are properly identified and that all the items listed on the postcard are presently

being submitted to the USPTO. If any of the items listed on the postcard are not being submitted to the USPTO, those items will be crossed off and the postcard initialed by the person receiving the items.

Upon return of a postcard receipt from the USPTO, the postcard receipt should be promptly reviewed by the person who filed the items to ensure that every item specifically denoted on the postcard was received by the USPTO. If the postcard receipt has been annotated to indicate that a particular item denoted on the postcard was not received by the USPTO, the postcard receipt will not serve as *prima facie* evidence of receipt of that item in the USPTO.

504 Assignment of Application for Examination

The Office of Initial Patent Examination assigns a nonprovisional application to the art unit to which it appears to belong. Provisional applications will not be examined.

505 "Office Date" Stamp of Receipt [R-3]

37 CFR 1.6. Receipt of correspondence.

(a) *Date of receipt and Express Mail date of deposit.* Correspondence received in the Patent and Trademark Office is stamped with the date of receipt except as follows:

(1) The Patent and Trademark Office is not open for the filing of correspondence on any day that is a Saturday, Sunday, or Federal holiday within the District of Columbia. Except for correspondence transmitted by facsimile under paragraph (a)(3) of this section, or filed electronically under paragraph (a)(4) of this section, no correspondence is received in the Office on Saturdays, Sundays, or Federal holidays within the District of Columbia.

(2) Correspondence filed in accordance with § 1.10 will be stamped with the date of deposit as "Express Mail" with the United States Postal Service.

(3) Correspondence transmitted by facsimile to the Patent and Trademark Office will be stamped with the date on which the complete transmission is received in the Patent and Trademark Office unless that date is a Saturday, Sunday, or Federal holiday within the District of Columbia, in which case the date stamped will be the next succeeding day which is not a Saturday, Sunday, or Federal holiday within the District of Columbia.

(4) [Reserved]

*****

The United States Patent and Trademark Office (Office) stamps papers and fees with the date of their receipt in the Office. The stamp is referred to as the "Office Date" stamp.

When the last day for taking any action or paying any fee in the Office falls on a Saturday, Sunday, or a Federal holiday within the District of Columbia, the action or the fee is considered timely if the action is taken or the fee is paid on the next succeeding business day.

Effective November 29, 1999, Public Law 106-113 amended 35 U.S.C. 119(e)(3) to extend the period of pendency of a provisional application to the next succeeding business day if the day that is 12 months after the filing date of a provisional application falls on a Saturday, Sunday, or Federal holiday within the District of Columbia. See also 37 CFR 1.7(b). 35 U.S.C. 119(e)(3) as amended by Public Law 106-113 applies to any provisional application filed on or after June 8, 1995 but has no effect on any patent which is the subject of litigation in an action commenced before November 29, 1999.

New patent applications filed in accordance with 37 CFR 1.10 will be stamped by the Office with the date of deposit as "Express Mail" with the United States Postal Service. For example, if a new patent application is deposited in "Express Mail" in accordance with 37 CFR 1.10 on a Saturday and the United States Postal Service gives it a date of deposit of Saturday, the Office will accord and stamp the correspondence with the Saturday date. 37 CFR 1.6(a)(2).

If an application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP § 506), the "Office Date" stamp establishes the "filing date." Applications will not be accepted and stamped in the Technology Centers. They must be date stamped at the Customer **>Service< Window. See MPEP § 502.

506 Completeness of Original Application [R-5]

37 CFR 1.53. Application number, filing date, and completion of application.

(a) *Application number*. Any papers received in the Patent and Trademark Office which purport to be an application for a patent will be assigned an application number for identification purposes.

(b) *Application filing requirements - Nonprovisional application*. The filing date of an application for patent filed under this section, except for a provisional application under paragraph (c) of this section or a continued prosecution application under paragraph (d) of this section, is the date on which a specification as prescribed by 35 U.S.C. 112 containing a description pursuant to § 1.71 and at least one claim pursuant to § 1.75, and any drawing

required by § 1.81(a) are filed in the Patent and Trademark Office. No new matter may be introduced into an application after its filing date. A continuing application, which may be a continuation, divisional, or continuation-in-part application, may be filed under the conditions specified in 35 U.S.C. 120, 121 or 365(c) and § 1.78(a).

(1) A continuation or divisional application that names as inventors the same or fewer than all of the inventors named in the prior application may be filed under this paragraph or paragraph (d) of this section.

(2) A continuation-in-part application (which may disclose and claim subject matter not disclosed in the prior application) or a continuation or divisional application naming an inventor not named in the prior application must be filed under this paragraph.

(c) *Application filing requirements - Provisional application*. The filing date of a provisional application is the date on which a specification as prescribed by the first paragraph of 35 U.S.C. 112, and any drawing required by § 1.81(a) are filed in the Patent and Trademark Office. No amendment, other than to make the provisional application comply with the patent statute and all applicable regulations, may be made to the provisional application after the filing date of the provisional application.

(1) A provisional application must also include the cover sheet required by § 1.51(c)(1), which may be an application data sheet (§ 1.76), or a cover letter identifying the application as a provisional application. Otherwise, the application will be treated as an application filed under paragraph (b) of this section.

(2) An application for patent filed under paragraph (b) of this section may be converted to a provisional application and be accorded the original filing date of the application filed under paragraph (b) of this section. The grant of such a request for conversion will not entitle applicant to a refund of the fees that were properly paid in the application filed under paragraph (b) of this section. Such a request for conversion must be accompanied by the processing fee set forth in § 1.17(q) and be filed prior to the earliest of:

(i) Abandonment of the application filed under paragraph (b) of this section;

(ii) Payment of the issue fee on the application filed under paragraph (b) of this section;

(iii) Expiration of twelve months after the filing date of the application filed under paragraph (b) of this section; or

(iv) The filing of a request for a statutory invention registration under § 1.293 in the application filed under paragraph (b) of this section.

(3) A provisional application filed under paragraph (c) of this section may be converted to a nonprovisional application filed under paragraph (b) of this section and accorded the original filing date of the provisional application. The conversion of a provisional application to a nonprovisional application will not result in either the refund of any fee properly paid in the provisional application or the application of any such fee to the filing fee, or any other fee, for the nonprovisional application. Conversion of a provisional application to a nonprovisional application under this paragraph will result in the term of any patent to issue from the application being measured from at least the filing date of the provisional application for which conversion is requested. Thus, applicants should consider avoiding this adverse patent term impact by filing a nonprovisional application claiming the benefit of the provisional application under 35 U.S.C. 119(e) (rather than converting the provisional application into a nonprovisional application pursuant to this paragraph). A request to convert a provisional application to a nonprovisional application must be accompanied by the fee set forth in § 1.17(i) and an amendment including at least one claim as prescribed by the second paragraph of 35 U.S.C. 112, unless the provisional application under paragraph (c) of this section otherwise contains at least one claim as prescribed by the second paragraph of 35 U.S.C.112. The nonprovisional application resulting from conversion of a provisional application must also include the filing fee, search fee, and examination fee for a nonprovisional application, an oath or declaration by the applicant pursuant to §§ 1.63, 1.162, or 1.175, and the surcharge required by § 1.16(f) if either the basic filing fee for a nonprovisional application or the oath or declaration was not present on the filing date accorded the resulting nonprovisional application (*i.e*., the filing date of the original provisional application). A request to convert a provisional application to a nonprovisional application must also be filed prior to the earliest of:

(i) Abandonment of the provisional application filed under paragraph (c) of this section; or

(ii) Expiration of twelve months after the filing date of the provisional application filed under paragraph (c) of this section.

(4) A provisional application is not entitled to the right of priority under 35 U.S.C. 119 or 365(a) or § 1.55, or to the benefit of an earlier filing date under 35 U.S.C. 120, 121 or 365(c) or § 1.78 of any other application. No claim for priority under 35 U.S.C. 119(e) or § 1.78(a)(4) may be made in a design application based on a provisional application. No request under § 1.293 for a statutory invention registration may be filed in a provisional application. The requirements of §§ 1.821 through 1.825 regarding application disclosures containing nucleotide and/or amino acid sequences are not mandatory for provisional applications.

(d) *Application filing requirements - Continued prosecution (nonprovisional) application*.

(1) A continuation or divisional application (but not a continuation-in-part) of a prior nonprovisional application may be filed as a continued prosecution application under this paragraph, provided that:

(i) The application is for a design patent:

(ii) The prior nonprovisional application is a design application that is complete as defined by § 1.51(b); and

(iii) The application under this paragraph is filed before the earliest of:

(A) Payment of the issue fee on the prior application, unless a petition under § 1.313(c) is granted in the prior application;

(B) Abandonment of the prior application; or

(C) Termination of proceedings on the prior application.

(2) The filing date of a continued prosecution application is the date on which a request on a separate paper for an applica-

tion under this paragraph is filed. An application filed under this paragraph:

(i) Must identify the prior application;

(ii) Discloses and claims only subject matter disclosed in the prior application;

(iii) Names as inventors the same inventors named in the prior application on the date the application under this paragraph was filed, except as provided in paragraph (d)(4) of this section;

(iv) Includes the request for an application under this paragraph, will utilize the file jacket and contents of the prior application, including the specification, drawings and oath or declaration from the prior application, to constitute the new application, and will be assigned the application number of the prior application for identification purposes; and

(v) Is a request to expressly abandon the prior application as of the filing date of the request for an application under this paragraph.

(3) The filing fee, search fee, and examination fee for a continued prosecution application filed under this paragraph are the basic filing fee as set forth in § 1.16(b), the search fee as set forth in § 1.16 (l), and the examination fee as set forth in § 1.16(p).

(4) An application filed under this paragraph may be filed by fewer than all the inventors named in the prior application, provided that the request for an application under this paragraph when filed is accompanied by a statement requesting deletion of the name or names of the person or persons who are not inventors of the invention being claimed in the new application. No person may be named as an inventor in an application filed under this paragraph who was not named as an inventor in the prior application on the date the application under this paragraph was filed, except by way of correction of inventorship under § 1.48.

(5) Any new change must be made in the form of an amendment to the prior application as it existed prior to the filing of an application under this paragraph. No amendment in an application under this paragraph (a continued prosecution application) may introduce new matter or matter that would have been new matter in the prior application. Any new specification filed with the request for an application under this paragraph will not be considered part of the original application papers, but will be treated as a substitute specification in accordance with § 1.125.

(6) The filing of a continued prosecution application under this paragraph will be construed to include a waiver of confidentiality by the applicant under 35 U.S.C. 122 to the extent that any member of the public, who is entitled under the provisions of § 1.14 to access to, copies of, or information concerning either the prior application or any continuing application filed under the provisions of this paragraph, may be given similar access to, copies of, or similar information concerning the other application or applications in the file jacket.

(7) A request for an application under this paragraph is the specific reference required by 35 U.S.C. 120 to every application assigned the application number identified in such request. No amendment in an application under this paragraph may delete this specific reference to any prior application.

(8) In addition to identifying the application number of the prior application, applicant should furnish in the request for an application under this paragraph the following information relating to the prior application to the best of his or her ability:

(i) Title of invention;

(ii) Name of applicant(s); and

(iii) Correspondence address.

(9) See § 1.103(b) for requesting a limited suspension of action in an application filed under this paragraph.

(e) *Failure to meet filing date requirements*.

(1) If an application deposited under paragraph (b), (c), or (d) of this section does not meet the requirements of such paragraph to be entitled to a filing date, applicant will be so notified, if a correspondence address has been provided, and given a period of time within which to correct the filing error. If, however, a request for an application under paragraph (d) of this section does not meet the requirements of that paragraph because the application in which the request was filed is not a design application, and if the application in which the request was filed was itself filed on or after June 8, 1995, the request for an application under paragraph (d) of this section will be treated as a request for continued examination under § 1.114.

(2) Any request for review of a notification pursuant to paragraph (e)(1) of this section, or a notification that the original application papers lack a portion of the specification or drawing(s), must be by way of a petition pursuant to this paragraph accompanied by the fee set forth in § 1.17(f). In the absence of a timely (§ 1.181(f)) petition pursuant to this paragraph, the filing date of an application in which the applicant was notified of a filing error pursuant to paragraph (e)(1) of this section will be the date the filing error is corrected.

(3) If an applicant is notified of a filing error pursuant to paragraph (e)(1) of this section, but fails to correct the filing error within the given time period or otherwise timely (§ 1.181(f)) take action pursuant to this paragraph, proceedings in the application will be considered terminated. Where proceedings in an application are terminated pursuant to this paragraph, the application may be disposed of, and any filing fees, less the handling fee set forth in § 1.21(n), will be refunded.

(f) *Completion of application subsequent to filing—Nonprovisional (including continued prosecution or reissue) application*.

(1) If an application which has been accorded a filing date pursuant to paragraph (b) or (d) of this section does not include the basic filing fee, the search fee, or the examination fee, or if an application which has been accorded a filing date pursuant to paragraph (b) of this section does not include an oath or declaration by the applicant pursuant to §§ 1.63, 1.162 or § 1.175, and applicant has provided a correspondence address (§1.33(a)), applicant will be notified and given a period of time within which to pay the basic filing fee, search fee, and examination fee, file an oath or declaration in an application under paragraph (b) of this section, and pay the surcharge if required by § 1.16(f) to avoid abandonment.

(2) If an application which has been accorded a filing date pursuant to paragraph (b) of this section does not include the basic filing fee, the search fee, the examination fee, or an oath or declaration by the applicant pursuant to §§ 1.63, 1.162 or § 1.175, and

applicant has not provided a correspondence address (§ 1.33(a)), applicant has two months from the filing date of the application within which to pay the basic filing fee, search fee, and examination fee, file an oath or declaration, and pay the surcharge required by § 1.16(f) to avoid abandonment.

(3) If the excess claims fees required by §§ 1.16(h) and (i) and multiple dependent claim fee required by § 1.16(j) are not paid on filing or on later presentation of the claims for which the excess claims or multiple dependent claim fees are due, the fees required by §§ 1.16(h), (i) and (j) must be paid or the claims canceled by amendment prior to the expiration of the time period set for reply by the Office in any notice of fee deficiency. If the application size fee required by § 1.16(s) (if any) is not paid on filing or on later presentation of the amendment necessitating a fee or additional fee under § 1.16(s), the fee required by § 1.16(s) must be paid prior to the expiration of the time period set for reply by the Office in any notice of fee deficiency in order to avoid abandonment.

(4) This paragraph applies to continuation or divisional applications under paragraphs (b) or (d) of this section and to continuation-in-part applications under paragraph (b) of this section. See § 1.63(d) concerning the submission of a copy of the oath or declaration from the prior application for a continuation or divisional application under paragraph (b) of this section.

(5) If applicant does not pay the basic filing fee during the pendency of the application, the Office may dispose of the application.

(g) *Completion of application subsequent to filing—Provisional application*.

(1) If a provisional application which has been accorded a filing date pursuant to paragraph (c) of this section does not include the cover sheet required by § 1.51(c)(1) or the basic filing fee (§ 1.16(d)), and applicant has provided a correspondence address (§ 1.33(a)), applicant will be notified and given a period of time within which to pay the basic filing fee, file a cover sheet (§ 1.51(c)(1)), and pay the surcharge required by § 1.16(g) to avoid abandonment.

(2) If a provisional application which has been accorded a filing date pursuant to paragraph (c) of this section does not include the cover sheet required by § 1.51(c)(1) or the basic filing fee (§ 1.16(d)), and applicant has not provided a correspondence address (§ 1.33(a)), applicant has two months from the filing date of the application within which to pay the basic filing fee, file a cover sheet (§ 1.51(c)(1)), and pay the surcharge required by § 1.16(g) to avoid abandonment.

(3) If the application size fee required by § 1.16(s) (if any) is not paid on filing, the fee required by § 1.16(s) must be paid prior to the expiration of the time period set for reply by the Office in any notice of fee deficiency in order to avoid abandonment.

(4) If applicant does not pay the basic filing fee during the pendency of the application, the Office may dispose of the application.

(h) *Subsequent treatment of application - Nonprovisional (including continued prosecution) application*. An application for a patent filed under paragraphs (b) or (d) of this section will not be placed on the files for examination until all its required parts, complying with the rules relating thereto, are received, except that certain minor informalities may be waived subject to subsequent correction whenever required.

(i) *Subsequent treatment of application - Provisional application*. A provisional application for a patent filed under paragraph (c) of this section will not be placed on the files for examination and will become abandoned no later than twelve months after its filing date pursuant to 35 U.S.C. 111(b)(1).

(j) *Filing date of international application*. The filing date of an international application designating the United States of America is treated as the filing date in the United States of America under PCT Article 11(3), except as provided in 35 U.S.C. 102(e).

I. INCOMPLETE NONPROVISIONAL APPLICATIONS FILED UNDER 37 CFR 1.53(b)

If the nonprovisional application papers filed under 37 CFR 1.53(b) do not include at least a specification containing a description and at least one claim and a drawing, if necessary under 35 U.S.C. 113 (first sentence), or if the submitted application papers are too informal to be given a filing date, the case is held in the Office of Initial Patent Examination (OIPE) as an incomplete application and the applicant is informed of the shortcomings of the papers. No filing date is granted until the incompleteness is corrected.

A Notice of Incomplete Application is prepared and mailed by OIPE when nonprovisional application papers filed under 37 CFR 1.53(b) are deemed incomplete under 35 U.S.C. 111(a).

Such incompleteness may consist of the omission of any one of the following parts of an application. The component parts of a nonprovisional application filed under 37 CFR 1.53(b) necessary to obtain a filing date are:

A specification as prescribed by 35 U.S.C. 112 and 37 CFR 1.71.

A claim as prescribed by 35 U.S.C. 112 and 37 CFR 1.75.

A drawing, if necessary under 35 U.S.C. 113 (first sentence) and 37 CFR 1.81(a).

See 37 CFR 1.53(b).

Even though an application purports to include the component parts necessary to obtain a filing date, the application will still be held to be incomplete and a filing date will be refused if the component parts fail to satisfy the requirements set forth above.

For example, if the documents purporting to be a specification are so obviously informal and incoherent that they clearly do not constitute a specification as required by 35 U.S.C. 112 and 37 CFR 1.71, the application is not acceptable for examination and it will not be accorded a filing date until corrections are made. The filing date of the application will be the date the corrections are made.

Filing dates are accorded to nonprovisional applications filed under 37 CFR 1.53(b) submitted without the names of all the inventors, the required fees (basic filing fee, and search and examination fees (for applications filed on or after December 8, 2004)) and/or the oath or declaration. In such cases, a notice is mailed by OIPE requiring the appropriate fees and the oath or declaration (which must include the names of all the inventors) be filed, accompanied by a surcharge (37 CFR 1.16(f)). For applications filed on or after December 8, 2004 but prior to July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(b), if the search and/or examination fees are paid on a date later than the filing date of the application, the surcharge under 37 CFR 1.16(f) is not required. For applications filed on or after July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(b), if any of the basic filing fee, the search fee, or the examination fee are paid on a date later than the filing date of the application, the surcharge under 37 CFR 1.16(f) is required. In addition to the basic filing fee, the search fee, and the examination fee, 37 CFR 1.16(s) sets forth the application size fee for any application (including any reissue applications) filed under 35 U.S.C. 111 on or after December 8, 2004 the specification and drawings of which, excluding a sequence listing or computer program listing filed in an electronic medium (see 37 CFR 1.52(f)), exceed 100 sheets of paper. The application size fee does not apply to any applications filed before December 8, 2004. The application size fee applies for each additional 50 sheets or fraction thereof over 100 sheets of paper. Any sequence listing in an electronic medium in compliance with 37 CFR 1.52(e) and 37 CFR 1.821(c) or (e), and any computer program listing filed in an electronic medium in compliance with 37 CFR 1.52(e) and 1.96, will be excluded when determining the application size fee required by 37 CFR 1.16(s). The application size fee required by 37 CFR 1.16(s) must be paid prior to the expiration of the time period set for reply by the Office in any notice of fee deficiency in order to avoid abandonment (37 CFR 1.53(f)(3)). See MPEP § 607 for additional information regarding fees. In addition to the basic filing fee, the search fee, the examination fee, and the application size fee required under 37 CFR 1.16, the prescribed filing fee (37 CFR 1.51(b)(4)) may include additional fees for filing more than 3 independent claims (37 CFR 1.16(h)), for filing a total of more than 20 claims (37 CFR 1.16(i)), or for filing a multiple dependent claim (37 CFR 1.16(j)). In those cases where the basic filing fee, the search fee, the examination fee, and the application size fee are paid, but additional fees are required, under 37 CFR 1.16, a notice is mailed by OIPE or the Technology Center (TC), requiring that the balance of the prescribed fee be paid.

Occasionally, nonprovisional applications filed under 37 CFR 1.53(b) which have already been signed by the inventors contain informal claims that the attorney or agent feels should not be present in the application upon filing. However, since alteration after execution by the inventor and before filing is prohibited, such applications must be filed by the attorney or agent in the form in which they were executed by the inventors. A nonprovisional application filed under 37 CFR 1.53(b) may be filed with a preliminary amendment which is limited to the cancellation of claims. Any preliminary amendment, regardless of when it is filed, must be in compliance with 37 CFR 1.121, e.g., it must include a complete listing of all of the claims. Therefore, the Office strongly recommends that applicants file their applications with a specification containing only the desired set of claims, rather than filing the application with a preliminary amendment canceling claims. If such a preliminary amendment canceling claims is filed, it will diminish the number of claims to be considered for calculation of the filing fee. Any other changes to the application should be the subject of a separate amendment which may be entered after the filing fee has been calculated and the filing date granted. If a preliminary amendment which cancels claims does not accompany the application at the time the application is filed, the notification of insufficient fee will inform the inventor, attorney, or agent of the possibility of correcting the insufficient payment by either (1) paying the additional required fee amount,

or (2) filing an amendment which cancels claims so that the remaining claims are covered by the fee submitted upon filing. However, no refund will be made once the fee for claims is properly paid, even though claims are later canceled >, unless a petition for express abandonment under 37 CFR 1.138(d) is granted. See MPEP § 711.01.<

In the past, OIPE has reviewed the claimed subject matter of newly filed nonprovisional applications to determine whether a filing date should be granted. Such applications included those drawn to perpetual motion devices and methods of doing business and applications for reissue signed by assignees or filed more than 2 years after the grant of the patent which appear to contain broadened reissue claims.

Under the current practice, a filing date is normally granted in such cases if the nonprovisional application filed under 37 CFR 1.53(b) is otherwise sufficient and then forwarded to the examiner for consideration and decision during the regular course of examination.

II. INCOMPLETE PROVISIONAL APPLICATIONS

If the provisional application papers do not include at least a specification containing a description and a drawing, if necessary under 35 U.S.C. 113 (first sentence) or if the submitted application papers are too informal to be given a filing date, the case is held in OIPE as an incomplete application and the applicant is informed of the shortcomings of the papers. No filing date is granted until the incompleteness is corrected.

Such incompleteness may consist of the omission of any one of the following parts of an application. The component parts of a provisional application necessary to obtain a filing date are:

A specification as prescribed by 35 U.S.C. 112, first paragraph, and 37 CFR 1.71.

A drawing, if necessary under 35 U.S.C. 113 (first sentence) and 37 CFR 1.81(a).

Even though an application purports to include the component parts necessary to obtain a filing date, the application will still be held to be incomplete and a filing date will be refused if the component parts fail to satisfy the requirements set forth above. For example, if the documents purporting to be a specification are so obviously informal and incoherent that they would clearly not constitute a specification as required by 35 U.S.C. 112, first paragraph, and 37 CFR 1.71, the application would not be acceptable and would not be accorded a filing date until corrections are made. The filing date of the application would be the date the corrections were made. A provisional application will not be examined. However, a provisional application which does not include a cover sheet (37 CFR 1.51(c)(1)), which may be an application data sheet (37 CFR 1.76) or a cover letter, identifying the application as a provisional application, will be treated as a nonprovisional application filed under 37 CFR 1.53(b). See 37 CFR 1.53(c)(1).

NOTE: No amendment, other than to make the provisional application comply with the patent statute and all applicable regulations, may be made to the provisional application after the filing date of the provisional application. See 37 CFR 1.53(c).

III. INFORMAL APPLICATIONS

An application is informal if it is typed on both sides of the paper, or is not permanent, legible, or reproducible. If such informalities are timely corrected, the application is given the filing date on which the original informal papers were filed.

OIPE accords a filing date, as of the date indicated by the "Office Date" stamp (see MPEP § 505), to application papers which include a specification containing a description and at least one claim (nonprovisional applications filed under 37 CFR 1.53(b)), and a drawing, if necessary under 35 U.S.C. 113 (first sentence) but are informal because they do not comply with the rules or notices. In such applications, OIPE prepares a Notice of Informal Application indicating the informality and places it in the file wrapper. The TC mails the letter to applicant. Failure to correct the informality within the specified time results in abandonment of the application.

The letter of transmittal accompanying the filing of continuing applications should include such additional information as the identification by application number of a provisional or parent application, its status, and location (if known) in the U.S. Patent and Trademark Office. The supplying of this information will simplify the processing of these applications.

506.02 Review of Refusal To Accord Filing Date [R-3]

The filing date of the provisional or nonprovisional application is the date of receipt in the Office of the application which includes a specification containing description pursuant to 37 CFR 1.71 and at least one claim (required for nonprovisional applications only) pursuant to 37 CFR 1.75, and any drawings required by 37 CFR 1.81(a). See 37 CFR 1.53(b) and (c).

If any of these items are missing, applicant will be notified to file them and the filing date will be the date of receipt of the missing part(s). If the oath or declaration for a nonprovisional application was executed and filed with the application, a supplemental oath or declaration by the inventor is required in some circumstances, e.g., where the missing item is the claim, specification, or a drawing. The supplemental declaration must identify the missing item and indicate, as appropriate, that it accurately claims, describes, or illustrates applicant's invention. See MPEP § 601.01(d)-(g) where the application is filed without all the pages of the specification, without at least one claim (nonprovisional application), without drawings, or without all the figures of the drawings. An error in or failure to identify inventorship does not raise a filing date issue.

Any review of the refusal to grant a filing date as of the date of deposit of the application would be by way of petition, accompanied by the petition fee (37 CFR 1.17(*>f<)). Petitioner should provide any arguments that he or she has that the items noted were not missing or that a filing date should be assigned in the absence of such items if they are believed to be unnecessary. If petitioner alleges that no defect exists, a request for refund of the petition fee may be included in the petition.

For applications properly filed under 37 CFR 1.10, the filing date is the date that the application was deposited as "Express Mail" in the U.S. Postal Service. For example, if a new patent application is deposited in "Express Mail" in accordance with 37 CFR 1.10 on a Saturday and the United States Postal Service gives it a date of deposit of Saturday, the Office will accord and stamp the correspondence with the Saturday date. 37 CFR 1.6(a)(2). If the proper procedures were not followed, the application will receive a filing date as of the date it was received in the Office. Any review of these matters would be by way of petition, accompanied by the petition fee (37 CFR 1.17(*>f<)), providing whatever arguments and evidence petitioner has that the application is entitled to a filing date as of the date it was deposited as "Express Mail." >See MPEP § 513.<

Petitions relating to the filing date accorded to patent applications under 37 CFR 1.53 are decided in the Office of the Deputy Commissioner for Patent Examination Policy (See MPEP § 1002.02(b)), with the exception of petitions relating to the filing date accorded to a design application, which are decided by the Director of Technology Center 2900. See MPEP § 1002.02(c)(3).

Any petition under this section should be marked to the attention of the Office of **>Petitions<.

507 Drawing Review in the Office of Initial Patent Examination [R-3]

The Office has revised the drawing review process to implement the eighteen-month publication of patent applications. Under the revised drawing review process, the Office of Initial Patent Examination (OIPE) performs an initial review of drawings in new utility and plant patent applications filed on or after November 29, 2000 to see if the drawings can be effectively scanned for publication purposes. Design applications are not published. Therefore, drawings filed in design patent applications (whether filed before, on or after November 29, 2000) will be reviewed but not for publication purposes. The standard of review employed by OIPE is such that most drawings, including those that have been indicated by applicant to be informal drawings, will be accepted.

OIPE inspects the drawings to see if they can be effectively scanned and adequately reproduced. If the drawings are not acceptable, OIPE will object to the drawings and notify applicant that a timely submission of acceptable drawings (e.g., drawings which can be scanned) is required. This initial review process in OIPE is necessary in order to ensure that applications can be timely published.

Under the OIPE review process, OIPE may object to and require corrected drawings within a set time period, if the drawings:

(A) have a line quality that is too light to be reproduced (weight of all lines and letters must be heavy

enough to permit adequate reproduction) or text that is illegible (reference characters, sheet numbers, and view numbers must be plain and legible). See 37 CFR 1.84(l) and (p)(1);

(B) have missing lead lines. See 37 CFR 1.84(q). Lead lines are those lines between the reference characters and the details referred to;

(C) contain excessive text or text that is not in English (including, for example, a flow chart that was originally not in English that has been marked up to include the English text). See 37 CFR 1.84(o) and (p)(2) and 37 CFR 1.52(d)(1);

(D) do not have the appropriate margin or are not on the correct size paper. See 37 CFR 1.84(f) and (g). Each sheet must include a top margin of at least 2.5 cm. (1 inch), a left size margin of at least 2.5 cm. (1 inch), a right size margin of at least 1.5 cm. (5/8 inch), and a bottom margin of at least 1.0 cm. (3/8 inch). The size of the sheets on which drawings are made must be either 21.0 cm. by 29.7 cm. (DIN size A4) or 21.6 cm. by 27.9 cm. (8-1/2 by 11 inches);

(E) have more than one figure and each figure is not labeled "Fig." With a consecutive Arabic numeral (1, 2, etc.) or an Arabic numeral and capital letter in the English alphabet (A, B, etc.). See 37 CFR 1.84(u)(1);

(F) include photographs of the claimed invention which are capable of illustration by other medium such as ink drawings, and which are illegible after scanning. See 37 CFR 1.84(b); and

(G) contain color drawings or color photographs, but not a petition to accept color drawings/photographs. Note that the requirement ** for a black and white photocopy of any color drawings/photographs has been *>eliminated<. **

If OIPE objects to the drawings and sends applicant a Notice requiring submission of corrected drawings within a set time period (usually two months), corrected drawings must be filed, in paper, to the mailing address set forth in the Notice, along with any other items required by OIPE, to avoid abandonment of the application. No fee will be necessary for filing corrected drawings which are required by OIPE. Otherwise, in most situations, patent application publications and patents will reflect the quality of the drawings that are included with a patent application on filing unless applicant voluntarily submits better quality drawings as set forth *>in MPEP § 1121<.

**

508 Distribution [R-2]

**>All applications filed on or after June 30, 2003, are electronically scanned and loaded into the Image File Wrapper (IFW) system. Once documents are loaded into the IFW system, examiners, technical support staff, and other Office personnel will perform further processing and examination using the IFW system.

For handling of models, exhibits, and specimen,< see MPEP § 608.03 and § 608.03(a).

508.01 Papers Sent to Wrong Technology Center (TC) [R-2]

If drawings, amendments, or other papers are delivered to the wrong TC, the TC to which this application is assigned should be obtained from PALM and be placed on the paper and then forwarded to the appropriate TC. The TC to which the application is assigned as indicated by PALM may be verified by calling the TC as indicated before forwarding the paper. >For Image File Wrapper (IFW) processing, see IFW Manual.<

508.02 Papers Received After Patenting or Abandonment [R-2]

After an application is patented or abandoned, any incoming communication which is not to become part of the record will be returned to the sender by the Technology Center. >For Image File Wrapper (IFW) processing, see IFW Manual.<

508.03 Unmatched Papers [R-2]

>For Image File Wrapper (IFW) processing, see IFW Manual. Effective December 1, 2003, no official paper which relates to a pending application may be personally delivered to a Technology Center (TC) except papers that are directed to an application subject to a secrecy order pursuant to 35 U.S.C. 181, or are national security classified and that are directed to Licensing and Review. See MPEP § 502.< Unmatched papers for nonprovisional applications >(maintained in paper application files)< within a **>TC< should be frequently reviewed to determine which should be sent to the Paper Correlating Office (PCO).

Item I below treats the papers in the "Application number too high" category. Items II-VI below are directed to all other unmatched papers not in the "Application number too high" category.

I. UNMATCHED PAPERS IN THE "APPLICATION NUMBER TOO HIGH" CATEGORY

This collection of papers being held by the TC should be reviewed *at least* once a week. Any paper having an application number which clearly should have already been received by the TC should be removed from this collection. Where the TC does not have a corresponding application for any of these papers, inquiry should be made of the Office of Initial Patent Examination (OIPE) to determine the TC of record. If another TC number is indicated, the paper should be forwarded to that TC. If OIPE does not yield a new TC number for the indicated application number, the paper should be sent to the PCO.

II. UNMATCHED PAPERS HAVING AN APPLICATION NUMBER

It can be assumed that either the TC number or the application number on these papers is incorrect. Inquiry should be made of the OIPE and PALM to determine the TC of record and the procedure set out in paragraph I above followed. An exception to this practice should be made where the paper has thereon the name of an examiner in the TC. In these situations, a careful check of the TC records and files as well as consultation with the indicated examiner should be made to determine the correct application number. If this does not yield a new application number, the paper should be sent to the PCO.

III. UNMATCHED PAPERS RELATING TO APPLICATIONS ABANDONED FROM TC

The application file should be ordered from Files Repository. If the file is not received therefrom, the paper should be forwarded to the PCO.

IV. PAPERS FOR APPLICATIONS WHICH HAVE BEEN SENT TO PUBLISHING DIVISION

All papers for applications which PALM indicates to be located in any of the locations 7400 through 7650 should be forwarded to the Publishing Division.

The instructions of this paragraph (IV) apply to all files in issue including those which have been assigned a patent number and issue date. Papers requiring examiner review and action will be returned to the TC after Publishing Division personnel have matched the paper to the appropriate file.

V. PAPERS FOR APPLICATIONS WHICH HAVE BEEN SENT TO THE FILE INFORMATION UNIT (RECORD ROOM)

If PALM indicates that the application to which a paper relates is in the File Information Unit (Record Room) (location code 9210), the paper should be forwarded to the PCO for response.

VI. UNMATCHED PAPERS FOR APPLICATIONS WHICH ARE KNOWN TO BE PENDING IN THE TC BUT CANNOT BE LOCATED

Generally, these are applications which PALM indicates are present in the TC, but the file is not available. These papers should be retained in the TC for processing.

Each paper sent to the PCO must have a PCO Transmittal Form *stapled* thereto. Each form attached to a paper should be filled out as completely as possible. Transmittal Forms attached to papers of the type described in paragraph I and paragraph II above must have an indication of the information obtained from *both* OIPE and PALM. The PALM information should be inserted in the large space at the bottom of the form. This will help eliminate duplication of effort by PCO personnel. Papers received without transmittal forms or with incompletely filled out transmittal forms may be returned to the originating TC.

508.04 Unlocatable Patent or Application Files [R-3]

37 CFR 1.251. Unlocatable file.

(a) In the event that the Office cannot locate the file of an application, patent, or other patent-related proceeding after a rea-

sonable search, the Office will notify the applicant or patentee and set a time period within which the applicant or patentee must comply with the notice in accordance with one of paragraphs (a)(1), (a)(2), or (a)(3) of this section.

(1) Applicant or patentee may comply with a notice under this section by providing:

(i) A copy of the applicant's or patentee's record (if any) of all of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding (except for U.S. patent documents);

(ii) A list of such correspondence; and

(iii) A statement that the copy is a complete and accurate copy of the applicant's or patentee's record of all of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding (except for U.S. patent documents), and whether applicant or patentee is aware of any correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding that is not among applicant's or patentee's records.

(2) Applicant or patentee may comply with a notice under this section by:

(i) Producing the applicant's or patentee's record (if any) of all of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding for the Office to copy (except for U.S. patent documents); and

(ii) Providing a statement that the papers produced by applicant or patentee are applicant's or patentee's complete record of all of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding (except for U.S. patent documents), and whether applicant or patentee is aware of any correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding that is not among applicant's or patentee's records.

(3) If applicant or patentee does not possess any record of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding, applicant or patentee must comply with a notice under this section by providing a statement that applicant or patentee does not possess any record of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding.

(b) With regard to a pending application, failure to comply with one of paragraphs (a)(1), (a)(2), or (a)(3) of this section within the time period set in the notice will result in abandonment of the application.

37 CFR 1.251 sets forth a procedure for the reconstruction of the file of a patent application, patent, or any other patent-related proceeding that cannot be located after a reasonable search. The phrase "an application" in 37 CFR 1.251 applies to any type of application (national or international), and regardless of the status (pending or abandoned) of the application>.<

37 CFR 1.251(a) provides that in the event the Office cannot locate the file of an application, patent, or any other patent-related proceeding after a reasonable search, the Office will notify the applicant or patentee and set a time period within which the applicant or patentee must comply with the notice. The applicant or patentee may comply with a notice under 37 CFR 1.251 by providing: (1) a copy of his or her record (if any) of all of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding (except for U.S. patent documents); (2) a list of such correspondence; and (3) a statement that the copy is a complete and accurate copy of the applicant's or patentee's record of all of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding (except for U.S. patent documents), and whether applicant or patentee is aware of any correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding that is not among applicant's or patentee's records (37 CFR 1.251(a)(1)). The applicant or patentee may also comply with a notice under 37 CFR 1.251 by: (1) producing his or her record (if any) of all of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding for the Office to copy (except for U.S. patent documents); and (2) providing a statement that the papers produced by applicant or patentee are applicant's or patentee's complete record of all of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding (except for U.S. patent documents), and whether applicant or patentee is aware of any correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding that is not among applicant's or patentee's records (37 CFR 1.251(a)(2)). If applicant or patentee does not possess any record of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding, the applicant or patentee must comply with a notice under 37 CFR 1.251 by providing a statement that applicant or patentee does not possess any record of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding (37 CFR 1.251(a)(3)).

According to 37 CFR 1.251(a), if the applicant or patentee possesses all or just some of the correspondence between the Office and the applicant or paten-

tee for such application, patent, or other proceeding, the applicant or patentee is to reply by providing a copy of (or producing) his or her record of all of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding (37 CFR 1.251(a)(1) or (a)(2)). If applicant or patentee does not possess any record of the correspondence between the Office and the applicant or patentee for such application, patent, or other proceeding, the applicant or patentee is to reply with a statement to that effect (37 CFR 1.251(a)(3)).

If an applicant or patentee decides to produce his or her record of the correspondence between the Office and the applicant or patentee for the application, patent, or other proceeding for copying by the Office under 37 CFR 1.251(a)(2) (rather than provide a copy under 37 CFR 1.251(a)(1)), the record should be brought to the Customer Service Center in the Office of Initial Patent Examination**.

The Office will set a time period of three months for reply in a notice under 37 CFR 1.251 in an application. The time period will be extendable under 37 CFR 1.136(a) (unless the notice indicates otherwise) by three months up to a maximum period for reply of six months in an application. See 35 U.S.C. 133. If, however, an applicant fails to reply to a notice under 37 CFR 1.251 within three months of its mailing date, any patent term adjustment under 35 U.S.C. 154(b) will be reduced by a period equal to the number of days (if any) beginning on the day after the date that is three months after the mailing date of the notice under 37 CFR 1.251 and ending on the date the reply to the notice under 37 CFR 1.251 was filed. See 35 U.S.C. 154(b)(2)(C)(ii) and 37 CFR 1.704(b). The Office will set a time period of six months for reply in a notice under 37 CFR 1.251 in a patent. The time period will **not** be extendable under 37 CFR 1.136(a) in a patent because 35 U.S.C. 41(a)(8) only authorizes the Office to charge fees for extensions of time in proceedings involving an application.

37 CFR 1.251 generally applies only to situations in which the file of an application or patent (not just certain documents) is unlocatable. When a document is missing from an application, Office practice is to call the applicant's representative and request submission (generally by facsimile) of a copy of the missing document. While the Office will generally treat missing documents in this relatively informal manner (rather than issuing a notice under 37 CFR 1.251), the Office may issue a notice under 37 CFR 1.251 to obtain a copy of a missing document if the Office's informal attempts to obtain a copy of the document are unsuccessful. The notice under 37 CFR 1.251 will include a printout of the contents entries from the Office's PALM system.

Any appendix or information disclosure statement submitted with an application is not contained in the Office's PACR database. Therefore, the applicant or patentee must also provide a copy of any appendix or information disclosure statement (except in the limited circumstance discussed below) submitted with the application. Since the Office can obtain copies of U.S. patent documents (U.S. patent application publications and patents) from its internal databases, the Office is not requiring applicants or patentees to provide copies of U.S. patent application publications and patents that are among the applicant's or patentee's record of the correspondence between the Office and the applicant or patentee for the application, patent, or other proceeding.

37 CFR 1.251(b) provides that with regard to a pending application, the **failure** to provide a reply to such a notice within the time period set in the notice will result in **abandonment** of the application. While abandonment (or expiration or lapse) of a patent is not an issue if a patentee fails to timely comply with a notice under 37 CFR 1.251, in such a situation the only certified copy of the patent file that the Office will be able to produce will be a copy of the patent and a copy of the application-as-filed (which may have an adverse impact during attempts to enforce the patent). In addition, if the patent is involved in a proceeding before the Office, the Office may take action under 37 CFR *>41.128< or 37 CFR 10.18.

509 Payment of Fees [R-5]

The latest fee schedule is available by contacting the USPTO at 1-800-PTO(786)-9199 or (571) 272-1000, or on the USPTO webpage at http://www.uspto.gov.

37 CFR 1.22. Fees payable in advance.

(a) Patent fees and charges payable to the United States Patent and Trademark Office are required to be paid in advance; that is, at the time of requesting any action by the Office for which a fee or charge is payable with the exception that under § 1.53 applications for patent may be assigned a filing date without payment of the basic filing fee.

(b) All fees paid to the United States Patent and Trademark Office must be itemized in each individual application, patent, or other proceeding in such a manner that it is clear for which purpose the fees are paid. The Office may return fees that are not itemized as required by this paragraph. The provisions of § 1.5(a) do not apply to the resubmission of fees returned pursuant to this paragraph.

37 CFR 1.23. Method of payment.

(a) All payments of money required for United States Patent and Trademark Office fees, including fees for the processing of international applications (§ 1.445), shall be made in U.S. dollars and in the form of a cashier's or certified check, Treasury note, national bank notes, or United States Postal Service money order. If sent in any other form, the Office may delay or cancel the credit until collection is made. Checks and money orders must be made payable to the Director of the United States Patent and Trademark Office. (Checks made payable to the Commissioner of Patents and Trademarks will continue to be accepted.) Payments from foreign countries must be payable and immediately negotiable in the United States for the full amount of the fee required. Money sent to the Office by mail will be at the risk of the sender, and letters containing money should be registered with the United States Postal Service.

(b) Payments of money required for United States Patent and Trademark Office fees may also be made by credit card, except for replenishing a deposit account. Payment of a fee by credit card must specify the amount to be charged to the credit card and such other information as is necessary to process the charge, and is subject to collection of the fee. The Office will not accept a general authorization to charge fees to a credit card. If credit card information is provided on a form or document other than a form provided by the Office for the payment of fees by credit card, the Office will not be liable if the credit card number becomes public knowledge.

37 CFR 1.26. Refunds.

(a) The Director may refund any fee paid by mistake or in excess of that required. A change of purpose after the payment of a fee, such as when a party desires to withdraw a patent filing for which the fee was paid, including an application, an appeal, or a request for an oral hearing, will not entitle a party to a refund of such fee. The Office will not refund amounts of twenty-five dollars or less unless a refund is specifically requested, and will not notify the payor of such amounts. If a party paying a fee or requesting a refund does not provide the banking information necessary for making refunds by electronic funds transfer (31 U.S.C. 3332 and 31 CFR part 208), or instruct the Office that refunds are to be credited to a deposit account, the Director may require such information, or use the banking information on the payment instrument to make a refund. Any refund of a fee paid by credit card will be by a credit to the credit card account to which the fee was charged.

(b) Any request for refund must be filed within two years from the date the fee was paid, except as otherwise provided in this paragraph or in § 1.28(a). If the Office charges a deposit account by an amount other than an amount specifically indicated in an authorization (§ 1.25(b)), any request for refund based upon such charge must be filed within two years from the date of the deposit account statement indicating such charge, and include a copy of that deposit account statement. The time periods set forth in this paragraph are not extendable.

(c) If the Director decides not to institute a reexamination proceeding, for *ex parte* reexaminations filed under § 1.510, a refund of $1,690 will be made to the reexamination requester. For *inter partes* reexaminations filed under § 1.913, a refund of $7,970 will be made to the reexamination requester. The reexamination requester should indicate the form in which any refund should be made (*e.g.*, by check, electronic funds transfer, credit to a deposit account, etc.). Generally, reexamination refunds will be issued in the form that the original payment was provided.

Where the Office has notified an applicant, in writing, that a fee is due and has specified a particular dollar amount for that fee, if the applicant timely submits the specified fee amount in response to the notice, the applicant should be considered to have complied with the notice so as to avoid abandonment of the application. If the fee paid by the applicant is insufficient, either because the notice specified an incorrect dollar amount for the fee or because of a fee increase effective after the mailing of the notice and before payment of the fee by the applicant, the applicant should be notified in writing by the Office of the fee insufficiency and given a new time period in which to submit the remaining balance. The written notification of the fee insufficiency should set forth the reason (i.e., the fee amount indicated by the Office in the earlier notice was incorrect or the fees have increased since the earlier notice was mailed) why applicant is being required to submit an additional fee.

37 CFR 1.22(b) sets forth that fees must be itemized in such a manner that it is clear for which purpose fees are paid. The Office may return fees that are not itemized. The intent of the fee itemization requirement is to encourage a better explanation by applicants of how fees being paid are to be applied by the Office. This will allow Office employees to properly account for the fees being paid by applicants. It should be noted that the language of 37 CFR 1.22 is not intended to create a problem when it is clear what fee is needed. A reference to "filing fee(s)" would be sufficient to cover filing fees (including search and examination fees) of all different types of applications and all types of claims. Further, in a paper submitted on a date later than the actual filing date, the reference to "filing fee(s)" would also be sufficient to cover the surcharge under 37 CFR 1.16, as the surcharge is also

required to make the application complete. A reference to "any corresponding fee under 37 CFR 1.16" would be sufficient to cover any fee (e.g., surcharge, application size fee, excess claims fees) under 37 CFR 1.16. In a petition for an extension of time filed without a specifically itemized fee, but with a general authorization to charge a deposit account, it is clear that a fee for an extension of time is needed and the deposit account should be charged the appropriate extension of time fee.

In situations in which a payment submitted for the fees due on filing in a nonprovisional application filed under 35 U.S.C. 111(a) is insufficient and the applicant has not specified the fees to which the payment is to be applied, the Office will apply the payment in the following order until the payment is expended:

(1) the basic filing fee (37 CFR 1.16(a), (b), (c), or (e));

(2) the application size fee (37 CFR 1.16(s));

(3) the late filing surcharge (37 CFR 1.16(f));

(4) the processing fee for an application filed in a language other than English (37 CFR 1.17(i));

(5) the search fee (37 CFR 1.16(k), (l), (m), or (n));

(6) the examination fee (37 CFR 1.16(o), (p), (q), or (r)); and

(7) the excess claims fee (37 CFR 1.16(h), (i), and (j)).

In situations in which a payment submitted for the fees due on filing in a provisional application filed under 35 U.S.C. 111(b) is insufficient and the applicant has not specified the fees to which the payment is to be applied, the Office will apply the payment in the following order until the payment is expended:

(1) the basic filing fee (37 CFR 1.16(d));

(2) the application size fee (37 CFR 1.16(s)); and

(3) the late filing surcharge (37 CFR 1.16(g)).

See also MPEP § 607.

PAYMENT BY CREDIT CARD

Effective June 5, 2000, 37 CFR 1.23 was amended to permit payment of any patent process fee, trademark process fee, or information product fee by credit card, subject to actual collection of the fee. The Office currently accepts charges to the following credit cards: AMERICAN EXPRESS®, DISCOVER®, MASTER CARD®, and VISA®.

Credit Card Payment Form (PTO-2038) should be used when paying a patent process or trademark process fee (or the fee for an information product) by credit card. Form PTO-2038 may be downloaded at http://www.uspto.gov/web/forms/2038.pdf. The Office will not include the Credit Card Payment Form (PTO-2038) among the records open to public inspection in the file of a patent, trademark registration, or other proceeding. The Office does **not** require customers to use this form when paying a patent process or trademark process fee by credit card. If a customer provides a credit card charge authorization in another form or document (e.g., a communication relating to the patent or trademark), the credit card information may become part of the record of an Office file that is open to public inspection. Thus, failure to use the Credit Card Payment Form (PTO-2038) when submitting a credit card payment may result in your credit card information becoming part of the record of an Office file that is open to public inspection.

Credit card payments by facsimile are permitted, except in situations in which facsimile submission of correspondence is not permitted in 37 CFR 1.6(d).

35 U.S.C. 42(d) and 37 CFR 1.26 (which concern refund of patent and trademark fees) also apply to requests for refund of fees paid by credit card. Any refund of a fee paid by credit card will be by a credit to the credit card account to which the fee was charged. See 37 CFR 1.26(a).

>See MPEP § 607.02 for returnability of fees.<

Any payment of a patent process or trademark process fee by credit card must be in writing (see 37 CFR 1.2), preferably on the Credit Card Payment Form (PTO-2038). If a Credit Card Payment Form or other document authorizing the Office to charge a patent process or trademark process fee to a credit card does not contain the information necessary to charge the fee to the credit card, the customer must submit a revised Credit Card Payment Form or document containing the necessary information. Office employees will **not** accept oral (telephonic) instructions to complete the Credit Card Payment Form or otherwise charge a patent process or trademark process fee (as opposed to information product or service fees) to a credit card.

>Beginning on January 28, 2006, credit card payment submissions made on the USPTO web site at www.uspto.gov must include the 3-digit or 4-digit security code associated with the credit card in addition to the credit card number. The security code will not be required when the paper Credit Card Payment Form (PTO-2038) or other written authorization is submitted.

The security code is part of an authentication procedure established by credit card companies to further efforts towards reducing fraudulent or unauthorized credit card use for Internet payment transactions. The security code must be entered at the time of the Internet payment transaction to verify that the physical card is in the cardholder's possession. The security code appears on all major credit cards and is not part of the credit card number itself. Each credit card company has its own name for the security code (such as CVV, CVV2, CVC2 or CID), but it functions the same for all major card types.

On DISCOVER®, MASTERCARD®, and VISA® credit cards, the security codes is a 3-digit code that is printed on the back of the card, often following the credit card number digits. For AMERICAN EXPRESS® credit cards, the security code is a 4-digit code that is printed on the front of the cards. If you cannot read the security code, you will have to contact the financial institution that issued your credit card. Effective January 28, 2006, the USPTO Internet credit card payment screen will include a mandatory field to enter the security code along with helpful information to locate the security code on the credit card.<

If the cardholder includes a credit card number on any form or document other than the Credit Card Payment Form, the United States Patent and Trademark Office will not be liable in the event that the credit card number becomes public knowledge.

United States Patent and Trademark Office

Instructions for Completing the Credit Card Payment Form

Credit Card Information

- Enter all credit card information including the payment amount to be charged to your credit card and remember to sign the form. The United States Patent and Trademark Office (USPTO) cannot process credit card payments without an authorized signature.
- The USPTO does **not** accept a general authorization to charge any payment deficiency or any additional fees to a credit card.
- The USPTO does **not** accept debit cards or check cards that require use of a personal identification number as a method of payment.

Credit Card Billing Address

- Address information is required for credit card payment as a means of verification. Failure to complete the address information, including zip/postal code, may result in the payment not being accepted by your credit card institution.

Request and Payment Information

- Provide a description of your request based on the payment amount. For example, indicate the item as "basic filing fee" (patent) *or* "first maintenance fee" (patent maintenance fee) or "application for registration" (trademark) *or* "certified copy of a patent" (other fee).
- Indicate the nature of your request by the type of fee you wish to pay: Patent Fee, Patent Maintenance Fee, Trademark Fee or Other Fee. Complete information for each type of fee as applicable to identify the nature of your request. Indicate only one type of fee per form.
- If you are requesting and paying a fee based on a previously filed patent or trademark application, indicate the application/serial number, patent number or registration number that is associated with your request. "Other Fee" is used to request copies of patent and trademark documents, certified copies, assignments, and other information products.
- IDON numbers are assigned by the USPTO for customers ordering patent and trademark information and products specified as "Other Fee" on the order form. If you have been assigned an IDON number from a previous customer order, include it with your request.
- For more information on USPTO fees and amounts, refer to the current fee schedule at www.uspto.gov (click on the "Site Index" link, "Fees, USPTO" link). To request a copy by mail, call the USPTO Contact Center at (800) 786-9199 or (571) 272-1000.

Important Information

- The USPTO will not include the Credit Card Payment Form among the patent or trademark records open for public inspection. Failure to use the Credit Card Payment Form when submitting a credit card payment may result in the release of your credit card information.
- Information on mailing addresses is available at www.uspto.gov (click on the "Site Index" link, "Mailing Addresses" link). You may also call the USPTO Contact Center for additional information, or to request a copy of the *Basic Facts about Patents* or *Basic Facts about Trademarks* information booklet by calling (800) 786-9199 or (571) 272-1000.

United States Patent and Trademark Office

Instructions for Completing the Credit Card Payment Form

Paperwork Reduction Act Statement

This Credit Card Payment Form (PTO-2038) is approved for use through 02/28/2009 under OMB Control Number 0651-0043. This collection of information is required by 15 U.S.C. § 1113 or 35 U.S.C. § 41 and 37 CFR 1.16-1.28, 1.492, or 2.6-2.7. The information must be provided by a member of the public if he or she chooses to pay a USPTO fee by credit card. This information is also used by the USPTO to charge the appropriate fee amount to the appropriate credit card account. This collection is estimated to take two minutes to complete, including gathering and preparing information and submitting the Credit Card Payment Form (PTO-2038) to the USPTO. Time will vary depending upon the individual case. Please send any comments on the amount of time required to complete this form and/or suggestions for reducing the time burden to the Chief Information Officer, USPTO, PO Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. PLEASE REFER TO THE USPTO WEB SITE, UNDER THE "SITE INDEX" LINK, "MAILING ADDRESSES" LINK FOR THE CORRECT MAILING ADDRESS.

Privacy Act Advisory Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with the request for information solicited on the Credit Card Payment Form (PTO-2038). Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the authority for the collection of this information is 15 U.S.C. § 1113 or 35 U.S.C. § 41 and 37 CFR 1.16-1.28, 1.492, or 2.6-2.7; (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the USPTO is to charge the appropriate fee amount to the appropriate credit card account. If you do not furnish the requested information, the USPTO may not be able to charge the fee to the credit card or the credit card institution may refuse to accept the charge, either of which will result in the fee being treated as not having been paid.

The information provided by you in this form will be subject to the following routine uses:

(1) The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. § 552) and the Privacy Act (5 U.S.C. § 552(a)). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.

(2) A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.

(3) A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual when the individual has requested assistance from the Member with respect to the subject matter of the record.

(4) A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform the contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. §552a(m).

(5) A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services Administration (GSA), or his designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. § 2904 and § 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.

<

509.01 Deposit Accounts [R-5]

37 CFR 1.25. Deposit accounts.

(a) For the convenience of attorneys, and the general public in paying any fees due, in ordering services offered by the Office, copies of records, etc. deposit accounts may be established in the Patent and Trademark Office upon payment of the fee for establishing a deposit account § 1.21(b)(1)). A minimum deposit of $1,000 is required for paying any fee due or in ordering any services offered by the Office. However, a minimum deposit of $300 may be paid to establish a restricted subscription deposit account used exclusively for subscription order of patent copies as issued. At the end of each month, a deposit account statement will be rendered. A remittance must be made promptly upon receipt of the statement to cover the value of items or services charged to the account and thus restore the account to its established normal deposit value. An amount sufficient to cover all fees, services, copies, etc., requested must always be on deposit. Charges to accounts with insufficient funds will not be accepted. A service charge (§ 1.21(b)(2)) will be assessed for each month that the balance at the end of the month is below $1,000. For restricted subscription deposit accounts, a service charge (§ 1.21(b)(3)) will be assessed for each month that the balance at the end of the month is below $300.

(b) Filing, issue, appeal, international-type search report, international application processing, petition, and post-issuance fees may be charged against these accounts if sufficient funds are on deposit to cover such fees. A general authorization to charge all fees, or only certain fees, set forth in §§ 1.16 to 1.18 to a deposit account containing sufficient funds may be filed in an individual application, either for the entire pendency of the application or with a particular paper filed. An authorization to charge fees under § 1.16 in an international application entering the national stage under 35 U.S.C. 371 will be treated as an authorization to charge fees under § 1.492. An authorization to charge fees set forth in § 1.18 to a deposit account is subject to the provisions of § 1.311(b). An authorization to charge to a deposit account the fee for a request for reexamination pursuant to § 1.510 or § 1.913 and any other fees required in a reexamination proceeding in a patent may also be filed with the request for reexamination. An authorization to charge a fee to a deposit account will not be considered payment of the fee on the date the authorization to charge the fee is effective as to the particular fee to be charged unless sufficient funds are present in the account to cover the fee.

(c) A deposit account holder may replenish the deposit account by submitting a payment to the United States Patent and Trademark Office. A payment to replenish a deposit account must be submitted by one of the methods set forth in paragraphs (c)(1), (c)(2), (c)(3), or (c)(4) of this section.

(1) A payment to replenish a deposit account may be submitted by electronic funds transfer through the Federal Reserve Fedwire System, which requires that the following information be provided to the deposit account holder's bank or financial institution:

(i) Name of the Bank, which is Treas NYC (Treasury New York City);

(ii) Bank Routing Code, which is 021030004;

(iii) United States Patent and Trademark Office account number with the Department of the Treasury, which is 13100001; and

(iv) The deposit account holder's company name and deposit account number.

(2) A payment to replenish a deposit account may be submitted by electronic funds transfer over the Office's Internet Web site *(www.uspto.gov).*

(3) A payment to replenish a deposit account may be submitted by mail with the USPS to: Director of the United States Patent and Trademark Office, P.O. Box 70541, Chicago, Illinois 60673.

**>

(4) A payment to replenish a deposit account may be submitted by mail with a private delivery service or by hand-carrying the payment to: Director of the U.S. Patent and Trademark Office, Attn: Deposit Accounts, 2051 Jamieson Avenue, Suite 300, Alexandria, Virginia 22314.<

An overdrawn account will be immediately suspended and no charges will be accepted against it until a proper balance is restored, together with a payment of $10 (37 CFR 1.21(b)(1)) to cover the work done by the U.S. Patent and Trademark Office incident to suspending and reinstating the account and dealing with charges which may have been made in the meantime.

If there is an authorization to charge the basic filing fee (37 CFR 1.16(a), (b), (c), (d), or (e)) to a deposit account which is overdrawn or has insufficient funds, a surcharge (37 CFR 1.16(f)) is required in addition to payment of the basic filing fee (37 CFR 1.16(a), (b), (c), (d), or (e)). For applications filed on or after July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(b) or (d), if there is an authorization to charge any of the basic filing fee, the search fee, or the examination fee to a deposit account which is overdrawn or has insufficient funds, a surcharge under 37 CFR 1.16(f) is required in addition to payment of the required fee(s). Failure to timely pay the filing fee and surcharge will result in abandonment of the application.

It is expected, however, that reasonable precautions will be taken in all cases to avoid overdrafts, and if an account is suspended repeatedly it will be closed.

Similarly, because of the burden placed on the U.S. Patent and Trademark Office incident to the operation of deposit accounts, a charge of $10 (37 CFR 1.21(b)(1)) will be made for opening each new account.

I. DEPOSIT ACCOUNT AUTHORIZATIONS

37 CFR 1.25(b) states that:

> A general authorization to charge all fees, or only certain fees, set forth in §§ 1.16 to 1.18 to a deposit account containing sufficient funds may be filed in an individual application, either for the entire pendency of the application or with respect to a particular paper filed.

As provided in 37 CFR 1.311(b), an authorization to charge the issue fee (37 CFR 1.18) to a deposit account may be filed in an individual application only after the mailing of the notice of allowance. 37 CFR 1.25(b) also makes clear that a general authorization made prior to the mailing of a notice of allowance does not apply to issue fees under 37 CFR 1.18.

In addition, a general authorization does not apply to document supply fees under 37 CFR 1.19, such as those required for certified copies, to post issuance fees under 37 CFR 1.20, such as those required for maintenance fees, or to miscellaneous fees and charges under 37 CFR 1.21, such as assignment recording fees.

Many applications contain broad language authorizing any additional fees which might have been due to be charged to a deposit account. The U.S. Patent and Trademark Office will interpret such broad authorizations to include authorization to charge to a deposit account fees set forth in 37 CFR 1.16, and 1.17. Fees under 37 CFR 1.19, 1.20, and 1.21 will not be charged as a result of a general authorization under 37 CFR 1.25 >except to cover the processing fee under 37 CFR 1.21(m) in the event a check or credit card payment is refused or charged back by a financial institution<. Effective November 7, 2000, fees under 37 CFR 1.18 will not be charged as a result of a preauthorization of issue fee payment.

*>An authorization< to charge fees relating only to a specific paper, ** could read "The Director is hereby authorized to charge any fees under 37 CFR 1.16 and 1.17 which may be required by this paper to Deposit Account No.———." Such *>an authorization< would cover situations in which a check to cover a filing and/or a processing fee under 37 CFR 1.16 and 1.17 was omitted or was for an amount less than the amount required. >An authorization covering any omission or deficiency in a check or credit card payment applies to the processing fee under 37 CFR 1.21(m) in the event a check or credit card payment is refused or charged back by a financial institution, regardless of whether such deposit account authorization is limited to other fees (e.g., fees under 37 CFR 1.16 and 1.17). If a check or credit card payment for the issue fee is refused or charged back by a financial institution, the application may be held abandoned for failure to pay the issue fee within the statutory period for reply. See MPEP § 1306.<

It is extremely important that the authorization be clear and unambiguous. If applicants file authorizations which are ambiguous and deviate from the usual forms of authorizations, the Office may not interpret the authorizations in the manner applicants intend and may return the fees. As a result, applicants could be subject to further expenses, petitions, etc. in order to have a particular fee charged to a deposit account (which was not charged as intended) or to resubmit a fee(s) due to an ambiguous authorization.

When statutory fees are to be charged to a deposit account, the processing of the application can be facilitated by submitting the applicant's transmittal letter or other correspondence specifying the account to be charged in duplicate. Submission of these documents in duplicate will eliminate the need for the Mail Center to photocopy the document and will thereby reduce the processing time of incoming mail.

The Office will treat a deposit account authorization to charge "the filing fee" as an authorization to charge the following applicable fees under 37 CFR 1.16: basic filing fee; search fee; examination fee; any excess claims fees; and any application size fee. The Office will treat a deposit account authorization to charge "the basic filing fee" as an authorization to charge the following applicable fees under 37 CFR 1.16: basic filing fee; search fee; and examination fee. Any deposit account authorization to charge the filing fee but not the search fee or examination fee must specifically limit the authorization by reference to one or more paragraphs (a)-(e) of 37 CFR 1.16.

37 CFR 1.25(b) further provides that an authorization to charge fees under 37 CFR 1.16 (which relates to national application filing fees) in an application filed under 35 U.S.C. 371 will be treated as an authorization to charge fees under 37 CFR 1.492 (which relates to national stage fees). Papers filed for the purpose of entering the national stage under 35 U.S.C. 371 and 37 CFR 1.495 that include an authorization to charge fees under 37 CFR 1.16 are treated by the Office as an authorization to charge fees under

37 CFR 1.492 since: (1) timely payment of the appropriate national fee under 37 CFR 1.492 is necessary to avoid abandonment of the application as to the United States; and (2) the basic filing fee under 37 CFR 1.16 is not applicable to such papers or applications.

II. DEPOSIT ACCOUNT REPLENISHMENTS

37 CFR 1.25(c) specifies how a deposit account holder may submit a payment to the Office to replenish the deposit account. A payment to replenish a deposit account may be submitted by:

(A) making the payment by electronic funds transfer through the Federal Reserve Fedwire System. Deposit account holders who use the Federal Reserve Fedwire System must provide the following information to their bank or financial institution: (1) Name of the Bank, which is Treas NYC (Treasury New York City); (2) Bank Routing Code, which is 021030004; (3) United States Patent and Trademark Office account number with the Department of Treasury, which is 13100001; and (4) the deposit account holder's company name and deposit account number. The deposit account holder should inform his or her bank or financial institution to use due care to ensure that all pertinent account numbers are listed on the transaction because the failure to include the proper deposit account number will delay the processing of the replenishment;

(B) electronic funds transfer over the Office's Internet web site (www.uspto.gov);

(C) mailing the payment with the United States Postal Service (USPS) to: Director of the United States Patent and Trademark Office, P.O. Box **>371279, Pittsburgh, PA 15251-7279<; or

(D) mailing the payment with a private delivery service or hand-carrying the payment to: Director of the United States Patent and Trademark Office, >Attn:< Deposit Accounts, 2051 Jamieson Avenue, Suite 300, Alexandria, VA 22314.

>In the event a payment to replenish a deposit account is refused (e.g., for insufficient funds or due to a stop payment order), the fee under 37 CFR 1.21(m) for processing the payment refusal will be charged to the deposit account.< Further information on deposit account replenishment may be obtained from the Office's Internet web site or by contacting the Deposit Account Division at (571) 272-6500.

509.02 Small Entity Status — Definitions [R-3]

Under 35 U.S.C. 41(h)(1), fees charged under 35 U.S.C. 41(a)*>,< (b) >and (d)(1)< shall be reduced by 50 percent with respect to their application to any small business concern as defined under section 3 of the Small Business Act, and to any independent inventor or nonprofit organization as defined in regulations issued by the Director.

The fees which are reduced include patent application filing fees >including the basic filing fee, search fee, examination fee, application size fee, and excess claims fees< (37 CFR 1.16), extension of time, revival, and appeal fees (37 CFR 1.17), patent issue fees (37 CFR 1.18), statutory disclaimer fee (37 CFR 1.20(d)), and maintenance fees on patents (37 CFR 1.20). Other fees, established under section 41 (c) or *>(d)(2)< of Title 35, United States Code, are not reduced for small entities since such a reduction is not permitted or authorized by 35 U.S.C. 41(h)(1).

Fees which are not reduced include petition and processing fees (other than revival), 37 CFR 1.17(*>f<)-(k), document supply fees, 37 CFR 1.19, certificate of correction fees, 37 CFR 1.20(a), request for reexamination fees, 37 CFR 1.20(c), miscellaneous fees and charges, 37 CFR 1.21, and international application fees, 37 CFR 1.445.

>The Consolidated Appropriations Act, 2005, provides that the filing fee charged under 35 U.S.C. 41(a)(1)(A) shall be reduced by 75 percent with respect to its application to any small entity "if the application is filed by electronic means as prescribed by the Director" (35 U.S.C. 41(h)(3)). Therefore, the filing fee for a nonprovisional original utility application filed on or after December 8, 2004 by a small entity in compliance with the Office electronic filing system is reduced by 75 percent. See 37 CFR 1.16(a)(1). The 75 percent reduction set forth in 35 U.S.C. 41(h)(3) does not apply to design applications, plant applications, reissue applications, or provisional applications.<

35 U.S.C. 41(h)(1) gives the Director the authority to establish regulations defining independent inventors and nonprofit organizations. The Small Business Administration was given authority to establish the

definition of a small business concern. A small entity for purposes of paying reduced fees is defined in 37 CFR 1.27(a) as a person, a small business concern, or a nonprofit organization. The term "person" rather than "independent inventor" is used since individuals who are not inventors but who have received some rights in the invention are intended to be covered by 37 CFR 1.27.

37 CFR 1.27. Definition of small entities and establishing status as a small entity to permit payment of small entity fees; when a determination of entitlement to small entity status and notification of loss of entitlement to small entity status are required; fraud on the Office.

**>

(a) *Definition of small entities*. A small entity as used in this chapter means any party (person, small business concern, or nonprofit organization) under paragraphs (a)(1) through (a)(3) of this section.

(1) *Person*. A person, as used in paragraph (c) of this section, means any inventor or other individual (*e.g.*, an individual to whom an inventor has transferred some rights in the invention) who has not assigned, granted, conveyed, or licensed, and is under no obligation under contract or law to assign, grant, convey, or license, any rights in the invention. An inventor or other individual who has transferred some rights in the invention to one or more parties, or is under an obligation to transfer some rights in the invention to one or more parties, can also qualify for small entity status if all the parties who have had rights in the invention transferred to them also qualify for small entity status either as a person, small business concern, or nonprofit organization under this section.

(2) *Small business concern*. A small business concern, as used in paragraph (c) of this section, means any business concern that:

(i) Has not assigned, granted, conveyed, or licensed, and is under no obligation under contract or law to assign, grant, convey, or license, any rights in the invention to any person, concern, or organization which would not qualify for small entity status as a person, small business concern, or nonprofit organization; and

(ii) Meets the size standards set forth in 13 CFR 121.801 through 121.805 to be eligible for reduced patent fees. Questions related to standards for a small business concern may be directed to: Small Business Administration, Size Standards Staff, 409 Third Street, SW., Washington, DC 20416.

(3) *Nonprofit Organization*. A nonprofit organization, as used in paragraph (c) of this section, means any nonprofit organization that:

(i) Has not assigned, granted, conveyed, or licensed, and is under no obligation under contract or law to assign, grant, convey, or license, any rights in the invention to any person, concern, or organization which would not qualify as a person, small business concern, or a nonprofit organization; and

(ii) Is either:

(A) A university or other institution of higher education located in any country;

(B) An organization of the type described in section 501(c)(3) of the Internal Revenue Code of 19 86 (26 U.S.C. 501(c)(3)) and exempt from taxation under section 501(a) of the Internal Revenue Code (26 U.S.C. 501(a));

(C) Any nonprofit scientific or educational organization qualified under a nonprofit organization statute of a state of this country (35 U.S.C. 201 (i)); or

(D) Any nonprofit organization located in a foreign country which would qualify as a nonprofit organization under paragraphs (a)(3)(ii)(B) of this section or (a)(3)(ii)(C) of this section if it were located in this country.

(4) *License to a Federal agency*. (i) For persons under paragraph (a)(1) of this section, a license to the Government resulting from a rights determination under Executive Order 10096 does not constitute a license so as to prohibit claiming small entity status.

(ii) For small business concerns and nonprofit organizations under paragraphs (a)(2) and (a)(3) of this section, a license to a Federal agency resulting from a funding agreement with that agency pursuant to 35 U.S.C. 202 (c)(4) does not constitute a license for the purposes of paragraphs (a)(2)(i) and (a)(3)(i) of this section.

(5) *Security Interest.* A security interest does not involve an obligation to transfer rights in the invention for the purposes of paragraphs (a)(1) through (a)(3) of this section unless the security interest is defaulted upon.

*****

<

I. PERSON

37 CFR 1.27(a)(1) defines a person as any inventor or other individual (e.g., an individual to whom an inventor has transferred some rights in the invention), who has not assigned, granted, conveyed, or licensed, and is under no obligation under contract or law to assign, grant, convey, or license, any rights in the invention. An inventor or other individual who has transferred some rights, or is under an obligation to transfer some rights in the invention to one or more parties, can also qualify for small entity status if all the parties who have had rights in the invention transferred to them also qualify for small entity status either as a person, small business concern, or nonprofit organization.

II. SMALL BUSINESS CONCERN

In order to be eligible for reduced patent fees as a "small business concern" under 37 CFR 1.27(a)(2), a business concern must meet the standards set forth in

13 CFR **>121.801 through 121.805<. Questions relating to standards for a small business concern may be directed to:

Small Business Administration
Office of Size Standards
409 Third Street, S.W.
Washington, DC 20416
(202)205-6618
E-mail: sizestandards@sba.gov

III. NONPROFIT ORGANIZATIONS

37 CFR 1.27(a)(3) defines a nonprofit organization by utilizing and interpreting the definition contained in 35 U.S.C. 201(i). The term "university or other institution of higher education" as used in 37 CFR 1.27(a)(3)(ii)(A) means an educational institution which

(A) admits as regular students only persons having a certificate of graduation from a school providing secondary education, or the recognized equivalent of such a certificate,

(B) is legally authorized within the jurisdiction in which it operates to provide a program of education beyond secondary education,

(C) provides an educational program for which it awards a bachelor's degree or provides not less than a 2-year program which is acceptable for full credit toward such a degree,

(D) is a public or other nonprofit institution, and

(E) is accredited by a nationally recognized accrediting agency or association, or if not so accredited, is an institution that has been granted preaccreditation status by such agency or association that has been recognized by the Secretary for the granting of preaccreditation status, and the Secretary has determined that there is satisfactory assurance that the institution will meet the accreditation standards of such an agency or association within a reasonable time.

The definition of "university or other institution of higher education" as set forth herein essentially follows the definition of "institution of higher education" contained in 20 U.S.C. 1000. Institutions which are strictly research facilities, manufacturing facilities, service organizations, etc., are not intended to be included within the term "other institution of higher education" even though such institutions may perform an educational function or publish the results of their work.

Nonprofit organizations also include organizations of the type described in section 501(c)(3) of the Internal Revenue Code of 1986 (26 U.S.C. 501(c)(3)) and which are exempt from taxation under 26 U.S.C. 501(a). Organizations described in 26 U.S.C. 501(c)(3) include corporations, and any community chest, fund, or foundation, organized and operated exclusively for religious, charitable, scientific, testing for public safety, literary, or educational purposes, or to foster national or international amateur sports competition (but only if no part of its activities involve the provision of athletic facilities or equipment), or for the prevention of cruelty to children or animals, no part of the net earnings of which inures to the benefit of any private shareholder or individual, no substantial part of the activities of which is carrying on propaganda, or otherwise attempting to influence legislation (limited exceptions may apply under 26 U.S.C. 501(h)) and which does not participate in, or intervene in (including the publishing or distributing of statements), any political campaign on behalf of (or in opposition to) any candidate for public office.

IV. LOCATION OF SMALL ENTITY

Small entities may claim reduced fees regardless of the country in which they are located. There is no restriction requiring that the person, small business concern, or nonprofit organization be located in the United States. The same definitions apply to all applicants equally in accordance with the Paris Convention for the Protection of Industrial Property.

V. RIGHTS IN THE INVENTION AND TRANSFER OF RIGHTS

The "rights in the invention" under 37 CFR 1.27(a)(1), (a)(2)(i), and (a)(3)(i) are the rights in the United States. Rights in the invention include the right to exclude others from making, using, offering for sale, or selling the invention throughout the United States or importing the invention into the United States. Therefore, for example, status as a small entity is lost by an inventor who has transferred or has an obligation to transfer a shop right to an employer who could not qualify as a small entity.

Individual inventors (37 CFR 1.27(a)(1)), small business concerns (37 CFR 1.27(a)(2)), and nonprofit organizations (37 CFR 1.27(a)(3)) can make an assignment, grant, conveyance, or license of partial rights in the invention to another individual(s), small business concern, or nonprofit organization who could qualify as a person (37 CFR 1.27(a)(1)), small business concern, or nonprofit organization. Under the circumstances described, the individual inventor, small business concern, or nonprofit organization could still qualify for small entity status. However, if the individual inventor, small business concern, or nonprofit organization assigned, granted, conveyed, or licensed, or came under an obligation to assign, grant, convey, or license, any rights to the invention to any individual, small business concern, or nonprofit organization which would not qualify as a small entity (37 CFR 1.27(a)), then the inventor, small business concern, or nonprofit organization would no longer qualify for small entity status.

With regard to transfer of rights in the invention, the rights in question are those in the United States to be covered by an application or patent. Transfer of rights to a Japanese patent, for example, would not affect small entity status if no rights in the United States to a corresponding patent were likewise transferred.

The payment of reduced fees under 35 U.S.C. 41 is limited to those situations in which all of the rights in the invention are owned by small entities, i.e., persons, small business concerns, or nonprofit organizations. To do otherwise would be clearly contrary to the intended purpose of the legislation which contains no indication that fees are to be reduced in circumstances where rights are owned by non-small entities. For example, a non-small entity is not permitted to transfer patent rights to a small business concern which would pay the reduced fees and grant a license to the entity.

If rights transferred to a non-small entity are later returned to a small entity so that all rights are held by small entities, reduced fees may be claimed.

The term "license" in the definitions includes nonexclusive as well as exclusive licenses and royalty free as well as royalty generating licenses. Implied licenses to use and resell patented articles purchased from a small entity, however, will not preclude the proper claiming of small entity status. Likewise, an order by an applicant to a firm to build a prototype machine or product for the applicant's own use is not considered to constitute a license for purposes of the definitions. A grant of a non-exclusive license to a *>non-small< entity will disqualify applicant from claiming small entity status. See *Ulead Systems, Inc. v. Lex Computer & Management Corp.*, 351 F.3d 1139, 1142, 69 USPQ2d 1097, 1099 (Fed. Cir. 2003).

>A security interest does not involve an obligation to transfer rights in the invention for the purposes of 37 CFR 1.27(a)(1) through (a)(3) unless the security interest is defaulted upon. See 37 CFR 1.27(a)(5). For example, an applicant or patentee may take out a loan from a large entity banking institution and the loan may be secured with rights in a patent application or patent of the applicant or patentee, respectively. The granting of such a security interest to the banking institution is not a currently enforceable obligation to assign, grant, convey, or license any rights in the invention to the banking institution. Only if the loan is defaulted upon will the security interest permit a transfer of rights in the application or patent to the banking institution. Thus, where the banking institution is a large entity, the applicant or patentee would not be prohibited from claiming small entity status merely because the banking institution has been granted a security interest, but if the loan is defaulted upon, there would be a loss of entitlement to small entity status. Pursuant to 37 CFR 1.27(g), notification of the loss of entitlement due to default on the terms of the security interest would need to be filed in the application or patent prior to paying, or at the time of paying, the earliest of the issue fee or any maintenance fee due after the date on which small entity status is no longer appropriate. See MPEP § 509.03, subsection VII. Removal of Status.<

VI. RIGHTS HELD BY GOVERNMENT ORGANIZATIONS

Also, although the Federal government agencies do not qualify as nonprofit organizations for paying reduced fees under the rules, a license to a Federal agency resulting from a funding agreement with the agency pursuant to 35 U.S.C. 202(c)(4) will not preclude the proper claiming of small entity status. Furthermore, a license to the Government resulting from a rights determination under Executive Order 10096 does not constitute a license so as to prohibit claiming

small entity status by a person under 37 CFR 1.27(a)(1).

Public Law 96-517 added a new chapter 18 of Title 35 of the United States Code entitled "Patent Rights in Inventions Made With Federal Assistance." Under the provisions of the statute, each funding agreement between a Federal agency and an individual, small business firm, or nonprofit organization must provide, *inter alia*, that ". . . the Federal agency shall have a nonexclusive, nontransferable, irrevocable, paid-up license to practice or have practiced for or on behalf of the United States any subject invention . . ." See 35 U.S.C. 202(c)(4). The Federal agencies do not qualify as nonprofit organizations for paying reduced patent fees under the rules. Applying this construction to the licensing of an invention to a Federal agency by a person, small business concern, or nonprofit organization pursuant to a funding agreement under 35 U.S.C. 202(c)(4) would preclude their qualifying for paying reduced fees. This, however, would frustrate the intent of Public Law 97-247 and Public Law 96-517 when taken together.

Government organizations as such, whether domestic or foreign, cannot qualify as nonprofit organizations as defined in 37 CFR 1.27(a)(3). Thus, for example, a government research facility or other government-owned corporation could not qualify. 37 CFR 1.27(a)(3) was based upon 35 U.S.C. 201(i), as established by Public Law 96-517. The limitation to "an organization of the type described in section 501(c)(3) of the Internal Revenue Code of 1986 (26 U.S.C. 501(c)(3)) and exempt from taxation under section 501(a) of the Internal Revenue Code (26 U.S.C. 501(a))" would by its nature exclude the U.S. government and its agencies and facilities, including research facilities and government corporations. State and foreign governments and governmental agencies and facilities would be similarly excluded. 37 CFR 1.27(a)(3) is not intended to include within the definition of a nonprofit organization government organizations of any kind located in any country. A university or other institution of higher education located in any country would qualify, however, as a "nonprofit organization" under 37 CFR 1.27(a)(3) even though it has some government affiliation since such institutions are specifically included.

A wholly owned subsidiary of a nonprofit organization or of a university is considered a part of the nonprofit organization or university and is not precluded from qualifying for small entity status.

509.03 Claiming Small Entity Status [R-3]

37 CFR 1.27. Definition of small entities and establishing status as a small entity to permit payment of small entity fees; when a determination of entitlement to small entity status and notification of loss of entitlement to small entity status are required; fraud on the Office.

*****

**>

(b) *Establishment of small entity status permits payment of reduced fees*.

(1) A small entity, as defined in paragraph (a) of this section, who has properly asserted entitlement to small entity status pursuant to paragraph (c) of this section will be accorded small entity status by the Office in the particular application or patent in which entitlement to small entity status was asserted. Establishment of small entity status allows the payment of certain reduced patent fees pursuant to 35 U.S.C. 41(h)(1).

(2) Submission of an original utility application in compliance with the Office electronic filing system by an applicant who has properly asserted entitlement to small entity status pursuant to paragraph (c) of this section in that application allows the payment of a reduced filing fee pursuant to 35 U.S.C. 41(h)(3).<

(c) *Assertion of small entity status*. Any party (person, small business concern or nonprofit organization) should make a determination, pursuant to paragraph (f) of this section, of entitlement to be accorded small entity status based on the definitions set forth in paragraph (a) of this section, and must, in order to establish small entity status for the purpose of paying small entity fees, actually make an assertion of entitlement to small entity status, in the manner set forth in paragraphs (c)(1) or (c)(3) of this section, in the application or patent in which such small entity fees are to be paid.

(1) *Assertion by writing*. Small entity status may be established by a written assertion of entitlement to small entity status. A written assertion must:

(i) Be clearly identifiable;

(ii) Be signed (see paragraph (c)(2) of this section); and

(iii) Convey the concept of entitlement to small entity status, such as by stating that applicant is a small entity, or that small entity status is entitled to be asserted for the application or patent. While no specific words or wording are required to assert small entity status, the intent to assert small entity status must be clearly indicated in order to comply with the assertion requirement.

(2) *Parties who can sign and file the written assertion*. The written assertion can be signed by:

(i) One of the parties identified in § 1.33(b) (*e.g.*, an attorney or agent registered with the Office), § 3.73(b) of this chapter notwithstanding, who can also file the written assertion;

(ii) At least one of the individuals identified as an inventor (even though a § 1.63 executed oath or declaration has not been submitted), notwithstanding § 1.33(b)(4), who can also file the written assertion pursuant to the exception under § 1.33(b) of this part; or

(iii) An assignee of an undivided part interest, notwithstanding §§ 1.33(b)(3) and 3.73(b) of this chapter, but the partial assignee cannot file the assertion without resort to a party identified under § 1.33(b) of this part.

**>

(3) *Assertion by payment of the small entity basic filing or basic national fee*. The payment, by any party, of the exact amount of one of the small entity basic filing fees set forth in §§ 1.16(a), 1.16(b), 1.16(c), 1.16(d), 1.16(e), or the small entity basic national fee set forth in § 1.492(a), will be treated as a written assertion of entitlement to small entity status even if the type of basic filing or basic national fee is inadvertently selected in error.

(i) If the Office accords small entity status based on payment of a small entity basic filing or basic national fee under paragraph (c)(3) of this section that is not applicable to that application, any balance of the small entity fee that is applicable to that application will be due along with the appropriate surcharge set forth in § 1.16(f), or § 1.16(g).

(ii) The payment of any small entity fee other than those set forth in paragraph (c)(3) of this section (whether in the exact fee amount or not) will not be treated as a written assertion of entitlement to small entity status and will not be sufficient to establish small entity status in an application or a patent.<

(4) *Assertion required in related, continuing, and reissue applications*. Status as a small entity must be specifically established by an assertion in each related, continuing and reissue application in which status is appropriate and desired. Status as a small entity in one application or patent does not affect the status of any other application or patent, regardless of the relationship of the applications or patents. The refiling of an application under § 1.53 as a continuation, divisional, or continuation-in-part application (including a continued prosecution application under § 1.53(d)), or the filing of a reissue application, requires a new assertion as to continued entitlement to small entity status for the continuing or reissue application.

(d) *When small entity fees can be paid*. Any fee, other than the small entity basic filing fees and the small entity national fees of paragraph (c)(3) of this section, can be paid in the small entity amount only if it is submitted with, or subsequent to, the submission of a written assertion of entitlement to small entity status, except when refunds are permitted by § 1.28(a).

(e) *Only one assertion required*.

(1) An assertion of small entity status need only be filed once in an application or patent. Small entity status, once established, remains in effect until changed pursuant to paragraph (g)(1) of this section. Where an assignment of rights or an obligation to assign rights to other parties who are small entities occurs subsequent to an assertion of small entity status, a second assertion is not required.

(2) Once small entity status is withdrawn pursuant to paragraph (g)(2) of this section, a new written assertion is required to again obtain small entity status.

(f) *Assertion requires a determination of entitlement to pay small entity fees*. Prior to submitting an assertion of entitlement to small entity status in an application, including a related, continuing, or reissue application, a determination of such entitlement should be made pursuant to the requirements of paragraph (a) of this section. It should be determined that all parties holding rights in the invention qualify for small entity status. The Office will generally not question any assertion of small entity status that is made in accordance with the requirements of this section, but note paragraph (h) of this section.

(g)(1) *New determination of entitlement to small entity status is needed when issue and maintenance fees are due*. Once status as a small entity has been established in an application or patent, fees as a small entity may thereafter be paid in that application or patent without regard to a change in status until the issue fee is due or any maintenance fee is due.

(2) *Notification of loss of entitlement to small entity status is required when issue and maintenance fees are due*. Notification of a loss of entitlement to small entity status must be filed in the application or patent prior to paying, or at the time of paying, the earliest of the issue fee or any maintenance fee due after the date on which status as a small entity as defined in paragraph (a) of this section is no longer appropriate. The notification that small entity status is no longer appropriate must be signed by a party identified in § 1.33(b). Payment of a fee in other than the small entity amount is not sufficient notification that small entity status is no longer appropriate.

(h) *Fraud attempted or practiced on the Office*.

(1) Any attempt to fraudulently establish status as a small entity, or pay fees as a small entity, shall be considered as a fraud practiced or attempted on the Office.

(2) Improperly, and with intent to deceive, establishing status as a small entity, or paying fees as a small entity, shall be considered as a fraud practiced or attempted on the Office.

37 CFR 1.4. Nature of correspondence and signature requirements.

*****

**>

(d)(4) *Certifications*. (i) *Section 10.18 certifications*: The presentation to the Office (whether by signing, filing, submitting, or later advocating) of any paper by a party, whether a practitioner or non-practitioner, constitutes a certification under § 10.18(b) of this chapter. Violations of § 10.18(b)(2) of this chapter by a party, whether a practitioner or non-practitioner, may result in the imposition of sanctions under § 10.18(c) of this chapter. Any practitioner violating § 10.18(b) of this chapter may also be subject to disciplinary action. See §§ 10.18(d) and 10.23(c)(15) of this chapter.

(ii) *Certifications as to the signature*: (A) *Of another*: A person submitting a document signed by another under paragraphs (d)(2) or (d)(3) of this section is obligated to have a reasonable basis to believe that the person whose signature is present on

the document was actually inserted by that person, and should retain evidence of authenticity of the signature.

(B) *Self certification*: The person inserting a signature under paragraphs (d)(2) or (d)(3) of this section in a document submitted to the Office certifies that the inserted signature appearing in the document is his or her own signature.

(C) *Sanctions*: Violations of the certifications as to the signature of another or a person's own signature, set forth in paragraphs (d)(4)(ii)(A) and (B) of this section, may result in the imposition of sanctions under § 10.18(c) and (d) of this chapter.<

*****

37 CFR 10.18. Signature and certificate for correspondence filed in the Patent and Trademark Office.

*****

(b) By presenting to the Office (whether by signing, filing, submitting, or later advocating) any paper, the party presenting such paper, whether a practitioner or non-practitioner, is certifying that—

(1) All statements made therein of the party's own knowledge are true, all statements made therein on information and belief are believed to be true, and all statements made therein are made with the knowledge that whoever, in any matter within the jurisdiction of the Patent and Trademark Office, knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or device a material fact, or makes any false, fictitious or fraudulent statements or representations, or makes or uses any false writing or document knowing the same to contain any false, fictitious or fraudulent statement or entry, shall be subject to the penalties set forth under 18 U.S.C. 1001, and that violations of this paragraph may jeopardize the validity of the application or document, or the validity or enforceability of any patent, trademark registration, or certificate resulting therefrom; and

(2) To the best of the party's knowledge, information and belief, formed after an inquiry reasonable under the circumstances, that —

(i) The paper is not being presented for any improper purpose, such as to harass someone or to cause unnecessary delay or needless increase in the cost of prosecution before the Office;

(ii) The claims and other legal contentions therein are warranted by existing law or by a nonfrivolous argument for the extension, modification, or reversal of existing law or the establishment of new law;

(iii) The allegations and other factual contentions have evidentiary support or, if specifically so identified, are likely to have evidentiary support after a reasonable opportunity for further investigation or discovery; and

(iv) The denials of factual contentions are warranted on the evidence, or if specifically so identified, are reasonably based on a lack of information or belief.

*****

In order to establish small entity status for the purpose of paying small entity fees, any party (person, small business concern or nonprofit organization) must make an assertion of entitlement to small entity status in the manner set forth in 37 CFR 1.27(c)(1) or (c)(3), in the application or patent in which such small entity fees are to be paid. Under 37 CFR 1.27, as long as all of the rights remain in small entities, the fees established for a small entity can be paid. This includes circumstances where the rights were divided between a person, a small business concern, and a nonprofit organization, or any combination thereof.

Under 37 CFR 1.4(d)(*>4<), an assertion of entitlement to small entity status, including the mere payment of an exact small entity basic filing fee, inherently contains a certification under 37 CFR 10.18(b). It is not required that an assertion of entitlement to small entity status be filed with each fee paid. Rather, once status as a small entity has been established in an application or patent, fees as a small entity may thereafter be paid in that application or patent without regard to a change in status until the issue fee is due or any maintenance fee is due. 37 CFR 1.27(g)(1). Notification of a loss of entitlement to small entity status must be filed in the application or patent prior to paying, or at the time of paying, the earliest of the issue fee or any maintenance fee due after the date on which status as a small entity is no longer appropriate. 37 CFR 1.27(g)(2).

Status as a small entity may be established in a provisional application by complying with 37 CFR 1.27.

Status as a small entity must be specifically established in each application or patent in which the status is available and desired. Status as a small entity in one application or patent does not affect any other application or patent, including applications or patents which are directly or indirectly dependent upon the application or patent in which the status has been established. The filing of an application under 37 CFR 1.53 as a continuation-in-part, continuation or division (including a continued prosecution application under 37 CFR 1.53(d)), or the filing of a reissue application requires a new assertion as to continued entitlement to small entity status for the continuing or reissue application. Submission of a request for continued examination (RCE) under 37 CFR 1.114 does not require a new determination or assertion of entitlement to small entity status since it is not a new application.

Examiners may use the following form paragraph to notify applicant that he or she may qualify for small entity status.

¶ *5.05 Small Entity Status*

This application may qualify for "Small Entity Status" and, therefore, applicant may be entitled to the payment of reduced fees. In order to establish small entity status for the purpose of paying small entity fees, applicant must make a determination of entitlement to small entity status under 37 CFR 1.27(f) and make an assertion of entitlement to small entity status in the manner set forth in 37 CFR 1.27(c)(1) or 37 CFR 1.27(c)(3). Accordingly, if applicant meets the requirements of 37 CFR 1.27(a), applicant must submit a written assertion of entitlement to small entity status under 37 CFR 1.27(c) before fees can be paid in the small entity amount. See 37 CFR 1.27(d). The assertion must be signed, clearly identifiable, and convey the concept of entitlement to small entity status. See 37 CFR 1.27(c)(1). No particular form is required.

I. ASSERTION BY WRITING

Small entity status may be established by the submission of a simple written assertion of entitlement to small entity status. The assertion must be signed, clearly identifiable, and convey the concept of entitlement to small entity status. 37 CFR 1.27(c)(1). The written assertion is not required to be presented in any particular form. Written assertions of small entity status or references to small entity fees will be liberally interpreted to represent the required assertion. The written assertion can be made in any paper filed in or with the application and need be no more than a simple sentence or a box checked on an application transmittal letter.

Practitioners may continue to use former USPTO forms or similar forms if they believe such small entity forms serve an educational purpose for their clients.

II. PARTIES WHO CAN ASSERT AND SIGN AN ENTITLEMENT TO SMALL ENTITY STATUS BY WRITING

The parties who can assert entitlement to small entity status by writing include all parties permitted by 37 CFR 1.33(b) to file a paper in an application, including a registered practitioner. 37 CFR 1.27(c)(2)(i). Additionally, one of the individuals identified as an inventor, or a partial assignee, can also sign the written assertion. 37 CFR 1.27(c)(2)(ii) and (iii). By way of example, in the case of three *pro se* inventors for a particular application, one of the three inventors upon filing the application can submit a written assertion of entitlement to small entity status and thereby establish small entity status for the application, (but see paragraph VI. below). Where rights are divided between a person, small business concern, and nonprofit organization, or any combination thereof, only one party is required to assert small entity status. For example, where one of two inventors has assigned his or her rights in the invention, it is sufficient if either of the two inventors or the assignee asserts entitlement to small entity status.

Any inventor is permitted to submit a written assertion of small entity status, including individuals identified as inventors but who are not officially named of record as an executed oath or declaration under 37 CFR 1.63 has not yet been submitted. See 37 CFR 1.41(a)(1). Where an application is filed without an executed oath or declaration pursuant to 37 CFR 1.53(f), the Office will accept the written assertion of an individual who has merely been identified as an inventor on filing of the application (e.g., application transmittal letter) as opposed to having to be named as an inventor by the filing of an executed oath or declaration under 37 CFR 1.63 (37 CFR 1.41(a)(1)). 37 CFR 1.4(d)(*>4<) and 37 CFR 10.18(b) are seen as sufficient basis to permit any individual to provide a written assertion so long as the individual identifies himself or herself as an inventor. An actual inventor who has not been identified as an inventor (e.g., by way of application transmittal letter) or named as an inventor (i.e., executed 37 CFR 1.63 oath or declaration) in the file record may not file a written assertion as to small entity entitlement.

Where an oath or declaration under 37 CFR 1.63 is later filed, any original written assertion as to small entity status (which has been previously appropriately submitted to the Office) will remain unless changed by an appropriate party under 37 CFR 1.27(g)(2). Where a later-filed oath or declaration under 37 CFR 1.63 sets forth an inventive entity that does not include the person who initially was identified as an inventor and who asserted small entity status, small entity status will also remain.

An assignee asserting small entity status is not required to submit a 37 CFR 3.73(b) certification whether the assignee is a partial assignee or an assignee of the entire right, title, and interest, (but see paragraph III. below).

III. PARTIES WHO CAN FILE THE WRITTEN ASSERTION ONCE SIGNED

A distinction exists as to who can file a written assertion of entitlement to small entity status once the written assertion is signed. 37 CFR 1.27(c)(2)(ii) and 37 CFR 1.33(b) permit one of several inventors to file as well as to sign a written assertion. The same is not true for a partial assignee. 37 CFR 1.27(c)(2)(iii). While a partial assignee may sign a written assertion, the written assertion must be filed by an appropriate party under 37 CFR 1.33(b).

IV. ASSERTION BY PAYMENT OF SMALL ENTITY BASIC FILING OR BASIC NATIONAL FEE

The payment of an exact small entity basic filing (37 CFR 1.16(a), (*>b<), (*>c<), (*>d<), or (*>e<)) or basic national fee (37 CFR 1.492(a)**) is also considered to be a sufficient assertion of entitlement to small entity status. 37 CFR 1.27(c)(3). An applicant filing a patent application and paying an exact small entity basic filing or basic national fee automatically establishes small entity status for the application even without any other assertion of small entity status. This is so even if an applicant inadvertently selects the wrong type of small entity basic filing or basic national fee for the application being filed (e.g., the exact small entity basic filing fee for a design application is selected but the application is a utility application). If small entity status was not established when the basic filing or basic national fee was paid, such as by payment of a *>non-small< entity basic filing or basic national fee, a later claim to small entity status requires a written assertion under 37 CFR 1.27(c)(1). Payment of a small entity fee other than a small entity basic filing or basic national fee (e.g., extension of time fee, or issue fee) without inclusion of a written assertion is not sufficient.

Even though applicants can assert small entity status only by payment of an exact small entity basic filing or basic national fee, the Office encourages applicants to also file a written assertion of small entity status as well as to pay the exact amount of the small entity basic filing or basic national fee. The Office's application transmittal forms include a check box that can be used to submit a written assertion of small entity status. A written assertion will provide small entity status should applicant fail to pay the exact small entity basic filing or basic national fee. The provision providing for small entity status by payment of an exact small entity basic filing or basic national fee is intended to act as a safety net to avoid possible financial loss to inventors or small businesses that qualify for small entity status.

Even though small entity status is accorded where the wrong type of small entity basic filing fee or basic national fee is selected but the exact amount of the fee is paid, applicant still needs to pay the correct small entity amount for the basic filing or basic national fee where selection of the wrong type of fee results in a deficiency. While an accompanying general authorization to charge any additional fees suffices to pay the balance due of the proper small entity basic filing or basic national fee, specific authorizations to charge fees under 37 CFR 1.17 or extension of time fees do not suffice to pay any balance due of the proper small entity basic filing or basic national fee because they do not actually authorize payment of small entity amounts. If payment is attempted of the proper type of basic filing or basic national fee (applicant correctly identifies the type of fee for the type of application being filed), but the amount of the fee paid is not the exact small entity fee required (an incorrect fee amount is supplied) and a written assertion of small entity status is not present, small entity status will not be accorded. The Office will mail a notice of insufficient basic filing or basic national fee with a surcharge due if an authorization to charge the basic filing or basic national fee is not present. The Office does not consider a basic filing or basic national fee submitted in an amount above the correct fee amount, but below the non-small entity fee amount, as a request to establish small entity status unless an additional written assertion is also present. The submission of a basic filing or basic national fee below the correct fee amount also does not serve to establish small entity status.

Where an application is originally filed by a party, who is in fact a small entity, with an authorization to charge fees (including basic filing or national fees) and there is no indication (assertion) of entitlement to small entity status present, that authorization is not sufficient to establish small entity status unless the authorization is specifically directed to small entity basic filing or basic national fees. The general authorization to charge fees will continue to be acted upon immediately and the full (not small entity) basic filing

or basic national fees will be charged. Applicant will have three months under 37 CFR 1.28 to request a refund by asserting entitlement to small entity status. This is so even if the application is a continuing application where small entity status had been established in the prior application.

V. PARTIES WHO CAN ASSERT AND FILE SMALL ENTITY STATUS BY PAYMENT

Where small entity status is sought by way of payment of the basic filing or basic national fee, any party (including a third party), may submit payment, such as by check, and small entity status will be accorded.

VI. CONTINUED OBLIGATIONS FOR THOROUGH INVESTIGATION OF SMALL ENTITY STATUS

While small entity status is not difficult to obtain, it should be clearly understood that applicants need to do a complete and thorough investigation of all facts and circumstances before making a determination of actual entitlement to small entity status. 37 CFR 1.27(f). Where entitlement to small entity status is uncertain, it should not be claimed.

The assertion of small entity status (even by mere payment of the exact small entity basic filing fee) is not appropriate until such an investigation has been completed. For example, where there are three *pro se* inventors, before one of the inventors pays the small entity basic filing or basic national fee to establish small entity status, the single inventor asserting entitlement to small entity status should check with the other two inventors to determine whether small entity status is appropriate.

If small entity status is desired on the basis that the entity is a small business concern, the investigation should include a review of whether the business is a small business concern as defined by section 3 of the Small Business Act (Public Law 85-536 as amended by Public Law 106-50). Review of whether the business concern meets the >size< standards set forth in 13 CFR **>121.801 through 121.805< to be eligible for reduced patent fees is also appropriate. Additionally, if the business has assigned, granted, conveyed or licensed (or is under an obligation to do so) any rights in the invention to others directly or indirectly, the same review for each other entity would also be appropriate.

Furthermore, once status as a small entity has been established in an application, a new determination of entitlement to small entity status is needed (1) when the issue fee is due and (2) when any maintenance fee is due. It should be appreciated that the costs incurred in appropriately conducting the initial and subsequent investigations may outweigh the benefit of claiming small entity status. For some applicants it may be desirable to file as a *>non-small< entity (by not filing a written assertion of small entity status and by submitting *>non-small< entity fees) rather than undertaking the appropriate investigations which may be both difficult and time-consuming and which may be cost effective only where several applications are involved.

The intent of 37 CFR 1.27 is that the person making the assertion of entitlement to small entity status is the person in a position to know the facts about whether or not status as a small entity can be properly established. That person, thus, has a duty to investigate the circumstances surrounding entitlement to small entity status to the fullest extent. It is important to note that small entity status must not be claimed unless the person or persons can unequivocally make the required self-certification.

The U.S. Patent and Trademark Office does not give advisory opinions as to whether or not a specific individual or organization qualifies as a small entity. In establishing reduced fees for persons, small business concerns, and nonprofit organizations, the Congressional consideration of the legislation which became Public Law 97-247 indicated an intent that the U.S. Patent and Trademark Office rely exclusively on a self-certification that a patent applicant qualifies as an independent inventor (now person), small business concern, or nonprofit organization. In addition, it was also stated during Congressional consideration of the legislation that no additional resources would be required to administer the system whereby fees would be reduced for small entities.

In view of the intent expressed during Congressional consideration of the legislation, it would be inappropriate for the U.S. Patent and Trademark Office to give advisory opinions as to entitlement to small entity status. Accordingly, any individual seeking to establish status as a small entity for purposes of paying the fee in an application or patent must file the

assertion required by 37 CFR 1.27 and in so doing is self-certifying entitlement to small entity status.

Consistent with 37 CFR 1.4(d)(*>4<), the payment of a small entity basic filing or national fee constitutes a certification under 37 CFR 10.18(b). Thus, a simple payment of the small entity basic filing or basic national fee, without a specific written assertion, activates the provisions of 37 CFR 1.4(d)(*>4<) and, by that, invokes the self-certification requirement set forth in 37 CFR 10.18(b), regardless of whether the party is a practitioner or non-practitioner.

VII. REMOVAL OF STATUS

Once small entity status is established in an application or patent, fees as a small entity may thereafter be paid in that application or patent without regard to a change in status until the issue fee is due or any maintenance fee is due. 37 CFR 1.27(g)(1). 37 CFR 1.27(g)(2) requires that notification of any change in status resulting in loss of entitlement to small entity status be filed in the application or patent prior to paying, or at the time of paying, the earliest of the issue fee or any maintenance fee due after the date on which status as a small entity is no longer appropriate. 37 CFR 1.27(g)(2) also requires that the notification of loss of entitlement to small entity status be in the form of a specific written assertion to that extent, rather than only payment of a *>non-small< entity fee. For example, when paying the issue fee in an application that has previously been accorded small entity status and the required new determination of continued entitlement to small entity status reveals that status has been lost, applicant should not just simply pay the *>non-small entity< issue fee or cross out the recitation of small entity status on Part B of the Notice of Allowance and Fee(s) Due (PTOL-85), but should **>(A) check the appropriate box on Part B of the PTOL-85 form to indicate that there has been a change in entity status and applicant is no longer claiming small entity status, and (B) pay the fee amount for a non-small entity.<

For correcting errors in small entity status, see paragraph X below.

VIII. IMPROPERLY ESTABLISHING SMALL ENTITY STATUS

37 CFR 1.27(h) indicates that any attempt to fraudulently establish status as a small entity or pay fees as a small entity will be considered as a fraud practiced or attempted on the Office. Applicants should not rely on any oral advice inadvertently given by an Office employee as to entitlement to small entity status. In addition, improperly and with intent to deceive establishing status as a small entity or paying fees as a small entity will be considered as a fraud practiced or attempted on the Office. Normally, the Office will not question a claim to status as a small entity.

IX. REFUNDS BASED ON LATER ESTABLISHMENT OF SMALL ENTITY STATUS

37 CFR 1.28. Refunds when small entity status is later established; how errors in small entity status are excused.

(a) *Refunds based on later establishment of small entity status*. A refund pursuant to § 1.26, based on establishment of small entity status, of a portion of fees timely paid in full prior to establishing status as a small entity may only be obtained if an assertion under § 1.27(c) and a request for a refund of the excess amount are filed within three months of the date of the timely payment of the full fee. The three-month time period is not extendable under § 1.136. Status as a small entity is waived for any fee by the failure to establish the status prior to paying, at the time of paying, or within three months of the date of payment of, the full fee.

(b) *Date of payment*.

(1) The three-month period for requesting a refund, pursuant to paragraph (a) of this section, starts on the date that a full fee has been paid;

(2) The date when a deficiency payment is paid in full determines the amount of deficiency that is due, pursuant to paragraph (c) of this section.

*****

37 CFR 1.28(a) provides a three-month time period for requesting a refund of a portion of a *>non-small< entity fee based on later establishment of small entity status. The start date of the three-month refund period of 37 CFR 1.28(a) is the date the full fee has been paid. See 37 CFR 1.28(b)(1). Payment by authorization to charge a deposit account is treated for refund purposes the same as payments by other means (e.g., check or credit card authorizations), with each being treated as paid (for refund purposes) on the date of receipt in the Office as defined by 37 CFR 1.6. Thus, the date of receipt of an authorization to charge fees starts the three-month period for refunds under 37 CFR 1.28(a), not the date of debit of the fee to a deposit account. If a payment is mailed with a Certificate of Mailing under 37 CFR 1.8, the three month period for requesting a refund will start on the actual date of receipt of the payment in the Office, and not

the Certificate of Mailing date. If a payment is filed by Express Mail under 37 CFR 1.10, the date of deposit with the United States Postal Service (shown by the "date-in" on the Express Mail mailing label or other official USPS notation) is the date of receipt of the payment by the Office under 37 CFR 1.10(a) and the three month period for requesting a refund starts on the date shown by the "date-in" on the Express Mail mailing label rather than the date when the payment actually reaches the Office.

Request for refunds, along with the assertions under 37 CFR 1.27(c), should be addressed to Mail Stop 16, Director of the U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450.

X. CORRECTING ERRORS IN SMALL ENTITY STATUS

37 CFR 1.28. Refunds when small entity status is later established; how errors in small entity status are excused.

*****

(c) *How errors in small entity status are excused*. If status as a small entity is established in good faith, and fees as a small entity are paid in good faith, in any application or patent, and it is later discovered that such status as a small entity was established in error, or that through error the Office was not notified of a loss of entitlement to small entity status as required by § 1.27(g)(2), the error will be excused upon: compliance with the separate submission and itemization requirements of paragraphs (c)(1) and (c)(2) of this section, and the deficiency payment requirement of paragraph (c)(2) of this section:

(1) *Separate submission required for each application or patent*. Any paper submitted under this paragraph must be limited to the deficiency payment (all fees paid in error), required by paragraph (c)(2) of this section, for one application or one patent. Where more than one application or patent is involved, separate submissions of deficiency payments (*e.g.*, checks) and itemizations are required for each application or patent. See § 1.4(b).

(2) *Payment of deficiency owed.* The deficiency owed, resulting from the previous erroneous payment of small entity fees, must be paid.

(i) *Calculation of the deficiency owed*. The deficiency owed for each previous fee erroneously paid as a small entity is the difference between the current fee amount (for other than a small entity) on the date the deficiency is paid in full and the amount of the previous erroneous (small entity) fee payment. The total deficiency payment owed is the sum of the individual deficiency owed amounts for each fee amount previously erroneously paid as a small entity. Where a fee paid in error as a small entity was subject to a fee decrease between the time the fee was paid in error and the time the deficiency is paid in full, the deficiency owed is equal to the amount (previously) paid in error;

(ii) *Itemization of the deficiency payment*. An itemization of the total deficiency payment is required. The itemization must include the following information:

(A) Each particular type of fee that was erroneously paid as a small entity, (*e.g.*, basic statutory filing fee, two-month extension of time fee) along with the current fee amount for a non-small entity;

(B) The small entity fee actually paid, and when. This will permit the Office to differentiate, for example, between two one-month extension of time fees erroneously paid as a small entity but on different dates;

(C) The deficiency owed amount (for each fee erroneously paid); and

(D) The total deficiency payment owed, which is the sum or total of the individual deficiency owed amounts set forth in paragraph (c)(2)(ii)(C) of this section.

(3) *Failure to comply with requirements*. If the requirements of paragraphs (c)(1) and (c)(2) of this section are not complied with, such failure will either: be treated as an authorization for the Office to process the deficiency payment and charge the processing fee set forth in § 1.17(i), or result in a requirement for compliance within a one-month non-extendable time period under § 1.136(a) to avoid the return of the fee deficiency paper, at the option of the Office.

(d) *Payment of deficiency operates as notification of loss of status*. Any deficiency payment (based on a previous erroneous payment of a small entity fee) submitted under paragraph (c) of this section will be treated under § 1.27(g)(2) as a notification of a loss of entitlement to small entity status.

*****

37 CFR 1.28(c) provides that if small entity status is established in good faith and the small entity fees are paid in good faith, and it is later discovered that such status as a small entity was established in error or through error the Office was not notified of a change of status, the error will be excused upon compliance with the separate submission and itemization requirements of 37 CFR 1.28(c)(1) and (c)(2), and the deficiency payment requirement of 37 CFR 1.28(c)(2). The deficiency amount owed under 37 CFR 1.28(c) is calculated using the date on which the deficiency was paid in full. See 37 CFR 1.28(b)(2).

37 CFR 1.28(c)(1) requires that a deficiency paper be limited to one application or patent file. Where, for example, the same set of facts has caused errors in payment in more than one application and/or patent file, a separate paper must be submitted in each file for which an error is to be excused.

37 CFR 1.28(c)(2) requires that for each fee that was erroneously paid as a small entity, the deficiencies owed must be paid, and the payment of the defi-

ciencies must be itemized. The deficiency owed for each previous fee erroneously paid as a small entity is the difference between the current fee amount (for other than a small entity) on the date the deficiency is paid in full and the amount of the previous erroneous (small entity) fee payment. Where there has been a fee decrease, the deficiency owed is equal to the amount (previously) paid in error, not the difference between the amount (previously) paid in error and the new lower *>non-small< entity fee. 37 CFR 1.28(c)(2)(ii) requires the following itemizations: (A) the particular fee involved (e.g., basic filing fee, extension of time fee); (B) the small entity fee amount actually paid and when (for example, distinguishing between two one-month extension of time fees erroneously paid on two different dates); (C) the actual deficiency owed for each fee previously paid in error; and (D) the total deficiency owed (i.e., the sum of the individual deficiencies owed).

Under 37 CFR 1.28(c)(3), the failure to comply with the requirements of 37 CFR 1.28(c)(1) and (c)(2) permits the Office at its option to either charge a processing fee (37 CFR 1.17(i)) to process the paper or require compliance within a one-month non-extendable time period to avoid return of the paper.

Any paper submitted under 37 CFR 1.28(c) is treated as a notification of loss of small entity status under 37 CFR 1.27(g)(2). See 37 CFR 1.28(d).

A maintenance fee improperly paid as a small entity where small entity status has been established but is no longer appropriate will be treated as a matter under 37 CFR 1.28(c) and will not be considered to involve expiration of the patent under 37 CFR 1.378. On the other hand, payment of a maintenance fee in the small entity amount where small entity status has not been established would result in the expiration of the patent under 37 CFR 1.378 unless the full maintenance fee due or a written assertion of small entity status is timely filed.

510 U.S. Patent and Trademark Office Business Hours [R-3]

The U.S. Patent and Trademark Office >(USPTO or Office)< working hours are 8:30 a.m. to 5:00 p.m., Monday through Friday, excluding Federal holidays in the District of Columbia. Outside these hours, only **>USPTO< employees are authorized to be in areas of the **>USPTO< other than the Public Search Rooms.

The hours for the **>Public Search Facility in Alexandria< are 8:00 a.m. to 8:00 p.m., and the hours for the Trademark **>Paper Facility in Arlington< are 8:00 a.m. to *>5:00< p.m., Monday through Friday, excluding Federal holidays in the District of Columbia.

During working hours, all applicants, attorneys, and other members of the public should announce their presence to the Office personnel in the area of their visit. In the Technology Centers (TCs), visitors should inform the TC receptionist of their presence before visiting other areas of the TC.

>

I. < FILING OF PAPERS DURING UNSCHEDULED CLOSINGS OF THE U.S. PATENT AND TRADEMARK OFFICE

37 CFR 1.9(h) provides that the definition of "Federal holiday within the District of Columbia" includes an official closing of the Office. When the entire **>USPTO< is officially closed for business for an entire day, for reasons due to adverse weather or other causes, the Office will consider each such day a "Federal holiday within the District of Columbia" under 35 U.S.C. 21. Any action or fee due on such a day may be taken, or fee paid, on the next succeeding business day the Office is open. In addition, 37 CFR 1.6(a)(1) provides "[t]he Patent and Trademark Office is not open for the filing of correspondence on any day that is a Saturday, Sunday or Federal holiday within the District of Columbia" to clarify that any day that is a Saturday, Sunday or Federal holiday within the District of Columbia is a day that the **>USPTO< is not open for the filing of applications within the meaning of Article 4(C)(3) of the Paris Convention. Note further that in accordance with 37 CFR 1.6(a)(2), even when the Office is not open for the filing of correspondence on any day that is a Saturday, Sunday or Federal holiday within the District of Columbia, correspondence deposited as Express Mail with the United States Postal Service in accordance with 37 CFR 1.10 will be considered filed on the date of its deposit, regardless of whether that date is a Saturday, Sunday or Federal holiday within the District of Columbia (under 35 U.S.C. 21(b) or 37 CFR 1.7).

When the **>USPTO< is open for business during any part of a business day between 8:30 a.m. and 5:00 p.m., papers are due on that day even though the Office may be officially closed for some period of time during the business day because of an unscheduled event. The procedures of 37 CFR 1.10 may be used for filing applications.

Information regarding whether or not the Office is officially closed on any particular day may be obtained by calling **>1-800-PTO(786)-9199 or (571) 272-1000<.

Effective November 29, 1999, Public Law 106-113 amended 35 U.S.C. 119(e)(3) to extend the period of pendency of a provisional application to the next succeeding business day if the day that is 12 months after the filing date of a provisional application falls on a Saturday, Sunday, or Federal holiday within the District of Columbia. 35 U.S.C. 119(e)(3) as amended by Public Law 106-113 applies to any provisional applications filed on or after June 8, 1995 but has no effect on any patent which is the subject of litigation in an action commenced before November 29, 1999. See also 37 CFR 1.7(b).

New patent applications filed in accordance with 37 CFR 1.10 will be stamped by the Office with the date of deposit as "Express Mail" with the United States Postal Service. For example, if a new patent application is deposited in "Express Mail" in accordance with 37 CFR 1.10 on a Saturday and the United States Postal Service gives it a date of deposit of Saturday, the Office will accord and stamp the correspondence with the Saturday date. 37 CFR 1.6(a)(2).
>

II. < REGULATIONS FOR THE PUBLIC USE OF RECORDS IN THE PATENT SEARCH ROOM OF THE **>USPTO<

The **>USPTO< has established procedures and regulations for using the facilities of the Patent Search Room. The procedures for the Search Room include the requirement that users obtain and show, prior to entering the Search Room facilities, a User Pass. This pass can be obtained **>from the Office of Security next door to the Public Search Facility located on the first floor of the Madison East Building, 600 Dulany Street, Alexandria, VA 22314.< User Passes will be issued to persons not under prohibition from using the search facilities who sign an application form and acknowledge receipt of a copy of the noted regulations. User Passes are nontransferable and are valid until reissue or revocation for cause. Office employees must show their building pass in order to enter the Patent Search Room. >An On-line Service Card is required for access to all Public Search Facilities and on-line systems. On-line Service Cards are obtained at the Public Search Facility Receptionist Desk on a user's first visit.<

Persons exiting the Search Room will automatically pass electronic sensing equipment designed to detect any marked documents or materials being removed from the Search Room. The sensing equipment is capable of detecting marked documents and materials in briefcases and parcels and under clothing. The equipment does not use X-ray or other high energy radiation and is, therefore, completely safe and harmless to persons, photographic film, magnetic tape, and electronic or mechanical devices such as wrist watches.

Whenever a marked document is transported past the sensing equipment, U.S. Patent and Trademark Office officials and the security guards will be alerted to the removal of the document. Persons triggering the alarm will be asked to cooperate in identifying the source for the alarm. Failure to cooperate when the alarm is triggered could result in detention of the person, seizure of any briefcase or the like, or other legal measures deemed necessary and appropriate in the specific case.

The regulations for the Search Room are reprinted in a regulation brochure. It is available in the Search Room. In order to maintain an environment conducive to search, the regulations will be strictly enforced.

Although these procedures and regulations may cause some inconvenience, it is hoped that with understanding and cooperation they will result in improvement in search facilities which will benefit all participants in the U.S. patent system.

Persons violating the regulations may be denied the use of the facilities in the Patent Search Room, and may further be subjected to prosecution under the Criminal Code. Additionally, the name of any person violating these regulations who is registered to practice before the ** Office may be forwarded to the Office of Enrollment and Discipline for appropriate action under 37 CFR Part 10.

>

III. < USE OF TECHNOLOGY CENTER FACILITIES

**Regulations appearing below were established for those authorized members of the public using the facilities of the TCs.
**>

IV. < REGULATIONS FOR USERS OF THE TECHNOLOGY CENTER * FACILITIES

(A) TC facilities are defined as those areas in **>Carlyle (Alexandria, VA)< where the TCs are located.

(B) The use of the TC facilities ** is strictly limited to ** the regular business >hours< of **>the USPTO,< between the hours of 8:45 a.m. and 4:45 p.m. on regular business days.

(C) Authorized Officials, under these regulations, include Supervisory Patent Examiners and TC Directors.

(D) Under applicable statutes and regulations, including 40 U.S.C. 486(c); 41 CFR Subpart 101-20.3; and appropriate Sections of Department Organization Orders 30-3A and 30-3B of the Department of Commerce, the regulations appearing below are established for those members of the public using the TC Facilities.

(1) All persons using these facilities are subject to the Regulations Governing Conduct on Federal Property, as specified in 41 CFR Subpart 101-20.3.

(2) All posted Official Notices are to be complied with.

(3) A valid User Pass must be prominently displayed when * in the TC Facilities. User Passes are nontransferable and must be surrendered upon request to authorized officials.

(4) All persons holding User Passes must register with the TC Receptionist, unless otherwise directed, in each TC **.

(5) No * records, or other documents of the **>USPTO< shall be removed from the TC Facilities except by express written authorization by an authorized official in the TC where the material resides. **

(6) Smoking is not permitted except in designated areas.

(7) No food or beverages in any form are to be consumed except in designated areas.

(8) Loud talking, use of radios, and any other form of activity which may disturb other members of the public or **>Office< personnel are forbidden.

(9) Children brought into the TC Facilities must not be allowed to disturb others.

(10) The presence or use of equipment such as dictation equipment, reproducing machines, typewriters, and photographic equipment is prohibited without prior permission from an authorized official in the TC where the use is intended and then is permitted where its use does not conflict with regulation (8) above.

(11) **All packages, briefcases, or other personal effects brought into the TC Facilities are subject to search by authorized officials upon request and must be removed when leaving the TC Facilities.
*>

(12)< All verbal requests for compliance with these regulations or other posted **>USPTO< Notices pertaining to activity in the TC Facilities, when made by authorized officials, must be promptly complied with.

(E) Persons violating these regulations may be denied the use of the facilities in the TC and Patent Search Room, and may further be subject to prosecution under the Criminal Code. Additionally, the name of any person violating these regulations who is registered to practice before the **>USPTO< may be forwarded to the Office of Enrollment and Discipline for appropriate action under 37 CFR Part 10.

If any individual is observed in violation of any of the regulations, immediate compliance should be courteously requested. If a verbal request is not complied with, a note should be made of the individual's name and User's Pass number, if possible (the User's Pass is required to be prominently displayed) and a report of the incident should be made to the Supervisory Patent Examiner, Supervisory Applications Examiner, or other appropriate supervisor who will take further action.

In addition, if any individual in **>TC Facilities< appears to be a stranger and is not wearing a User's Pass, some identification, such as a Building or User's Pass, should be requested. If the individual refuses, notify a supervisor. Consequently, all Office employees are expected to carry their Building Pass with them at all times**.

Supervisors, when aware of violations of the posted regulations, should prepare a memorandum detailing

the facts of the incident and forward this memorandum to the Deputy Commissioner for Patent Operations via their TC Director. Supervisory Patent Examiners and TC Directors are authorized to demand surrender of User Passes on-the-spot. If the Supervisory Patent Examiner exercises this function, the TC Director should be immediately notified, followed up by a memorandum as previously set forth.

511 Postal Service Interruptions and Emergencies [R-3]

35 U.S.C. 21. Filing date and day for taking action.

(a) The Director may by rule prescribe that any paper or fee required to be filed in the Patent and Trademark Office will be considered filed in the Office on the date on which it was deposited with the United States Postal Service or would have been deposited with the United States Postal Service but for postal service interruptions or emergencies designated by the Director.

*****

**>

37 CFR 1.10. Filing of correspondence by "Express Mail."

*****

(g) Any person who mails correspondence addressed as set out in § 1.1 (a) to the Office with sufficient postage utilizing the "Express Mail Post Office to Addressee" service of the USPS, but has the correspondence returned by the USPS due to an interruption or emergency in "Express Mail" service, may petition the Director to consider such correspondence as filed on a particular date in the Office, provided that:

(1) The petition is filed promptly after the person becomes aware of the return of the correspondence;

(2) The number of the "Express Mail" mailing label was placed on the paper(s) or fee(s) that constitute the correspondence prior to the original mailing by "Express Mail";

(3) The petition includes the original correspondence or a copy of the original correspondence showing the number of the "Express Mail" mailing label thereon and a copy of the "Express Mail" mailing label showing the "date-in"; and

(4) The petition includes a statement which establishes, to the satisfaction of the Director, the original deposit of the correspondence and that the correspondence or copy of the correspondence is the original correspondence or a true copy of the correspondence originally deposited with the USPS on the requested filing date. The Office may require additional evidence to determine if the correspondence was returned by the USPS due to an interruption or emergency in "Express Mail" service.

(h) Any person who attempts to mail correspondence addressed asset out in § 1.1 (a) to the Office with sufficient postage utilizing the "Express Mail Post Office to Addressee" service of the USPS, but has the correspondence refused by an employee of the USPS due to an interruption or emergency in "Express Mail" service, may petition the Director to consider such correspondence as filed on a particular date in the Office, provided that:

(1) The petition is filed promptly after the person becomes aware of the refusal of the correspondence;

(2) The number of the "Express Mail" mailing label was placed on the paper(s) or fee(s) that constitute the correspondence prior to the attempted mailing by "Express Mail";

(3) The petition includes the original correspondence or a copy of the original correspondence showing the number of the "Express Mail" mailing label thereon; and

(4) The petition includes a statement by the person who originally attempted to deposit the correspondence with the USPS which establishes, to the satisfaction of the Director, the original attempt to deposit the correspondence and that the correspondence or copy of the correspondence is the original correspondence or a true copy of the correspondence originally attempted to be deposited with the USPS on the requested filing date. The Office may require additional evidence to determine if the correspondence was refused by an employee of the USPS due to an interruption or emergency in "Express Mail" service.

(i) Any person attempting to file correspondence under this section that was unable to be deposited with the USPS due to an interruption or emergency in "Express Mail" service which has been so designated by the Director, may petition the Director to consider such correspondence as filed on a particular date in the Office, provided that:

(1) The petition is filed in a manner designated by the Director promptly after the person becomes aware of the designated interruption or emergency in "Express Mail" service;

(2) The petition includes the original correspondence or a copy of the original correspondence; and

(3) The petition includes a statement which establishes, to the satisfaction of the Director, that the correspondence would have been deposited with the USPS but for the designated interruption or emergency in "Express Mail" service, and that the correspondence or copy of the correspondence is the original correspondence or a true copy of the correspondence originally attempted to be deposited with the USPS on the requested filing date.<

*****

In the event of a postal interruption or emergency, an announcement will be placed on the USPTO web site at www.uspto.gov >and a notice will be published in the *Official Gazette*<, providing instructions about the filing of patent applications, and other papers related to patent applications and patents.

37 CFR *>1.10(i)< provides a procedure under which **>applicant may petition the Director to have correspondence (papers and fees) which was unable to be deposited with the United States Postal Service (USPS) because of an interruption or emergency in "Express Mail" service which is so designated by the Director considered as having been filed on a par-

ticular date in the Office. Authority for such a practice is found in 35 U.S.C. 21(a), as amended by Public Law 97-247. In addition, the Director has designated certain events as a postal service interruption or emergency by rule (37 CFR 1.10(g) and (h)). 37 CFR 1.10(g) provides a procedure under which applicant may petition the Director to have correspondence that was returned by the USPS due to an interruption or emergency in "Express Mail" service considered as filed on a particular date in the Office. 37 CFR 1.10(h) provides a procedure under which applicant may petition the Director to have correspondence that was refused by an employee of the USPS due to an interruption or emergency in "Express Mail" service considered as filed on a particular date in the Office. For more information on filing a petition under 37 CFR 1.10(g), (h), or (i), see MPEP § 513.<

Applicants are cautioned that the provisions of 35 U.S.C. 21(a) and 37 CFR *>1.10(g) to (i)< only apply to postal interruptions and emergencies. The provisions of 35 U.S.C. 21(a) and 37 CFR *>1.10(g) to (i)< do not provide for granting of a filing date to correspondence as of the date on which it would have been filed but for other exigencies, such as the unavailability of a computer or word processing equipment, or the inaccessibility of an office or building other than a USPS facility. 35 U.S.C. 21(a) requires, in part, that "any paper or fee required to be filed in the Patent and Trademark Office…would have been deposited with the United States Postal Service but for postal service interruptions or emergencies designated by the Director." The statute requires that the correspondence was complete and ready to be deposited with the USPS on the filing date requested (e.g., complete application papers have been prepared and printed) and that the correspondence could not have been deposited with the USPS on the requested filing date for the sole reason that the postal service was not available due to the interruption or emergency designated by the Office.

In general, applicants should consider filing correspondence by facsimile when permitted. See 37 CFR 1.6(d) and MPEP § 502.01. Applicants should also consider filing correspondence with a Certificate of Mailing or a Certificate of Transmission under 37 CFR 1.8 when permitted. See MPEP § 512. Even if the post office is closed due to an emergency, applicants should ordinarily be able to deposit correspondence in a mailbox for first class mail. New applications **cannot** be transmitted by facsimile and are **not** entitled to the benefit of a Certificate of Transmission under 37 CFR 1.8. A request for a continued prosecution application (CPA) filed under 37 CFR 1.53(d) (available only for design applications) may be transmitted to the Office by facsimile (37 CFR 1.6(d)(3)); however, it is not entitled to the benefit of a Certificate of Transmission (see 37 CFR 1.8(a)(2)(i)(A)). The Office strongly recommends that applicants file new applications by "Express Mail" in accordance with 37 CFR 1.10 since such correspondence will be accorded the date of deposit in "Express Mail" with the USPS as the filing date. See 37 CFR 1.6(a) and MPEP § 513. Applications that are not filed by "Express Mail" can only be accorded the date of receipt in the Office as the filing date (unless there is a postal interruption or emergency designated by the Office and applicants are instructed to file their applications in a manner other than by "Express Mail"). Any applicant who files an application by first class mail bears the risk of any delay in the delivery of the application to the Office, even if the delay is unusually significant due to some unforeseen event. New patent applications, computer readable format (CRF) biosequence listings, pre-grant publication submissions, and electronic information disclosure statements (e-IDS) may also be submitted to the USPTO via the Internet by using the Electronic Filing System (EFS). Information regarding EFS may be obtained via the USPTO web site at www.uspto.gov/ebc/efs/index.html.

512 Certificate of Mailing or Transmission [R-3]

37 CFR 1.8. Certificate of mailing or transmission.

**>

(a) Except in the situations enumerated in paragraph (a)(2) of this section or as otherwise expressly excluded in this chapter, correspondence required to be filed in the U.S. Patent and Trademark Office within a set period of time will be considered as being timely filed if the procedure described in this section is followed. The actual date of receipt will be used for all other purposes.

(1) Correspondence will be considered as being timely filed if:

(i) The correspondence is mailed or transmitted prior to expiration of the set period of time by being:

(A) Addressed as set out in § 1.1(a) and deposited with the U.S. Postal Service with sufficient postage as first class mail; or

(B) Transmitted by facsimile to the Patent and Trademark Office in accordance with § 1.6(d); and

(ii) The correspondence includes a certificate for each piece of correspondence stating the date of deposit or transmission. The person signing the certificate should have reasonable basis to expect that the correspondence would be mailed or transmitted on or before the date indicated.

(2) The procedure described in paragraph (a)(1) of this section does not apply to, and no benefit will be given to a Certificate of Mailing or Transmission on, the following:

(i) *Relative to Patents and Patent Applications—*

(A) The filing of a national patent application specification and drawing or other correspondence for the purpose of obtaining an application filing date, including a request for a continued prosecution application under § 1.53(d);

(B) [Reserved]

(C) Papers filed in contested cases before the Board of Patent Appeals and Interferences, which are governed by § 41.106 (f) of this title;

(D) The filing of an international application for patent;

(E) The filing of correspondence in an international application before the U.S. Receiving Office, the U.S. International Searching Authority, or the U.S. International Preliminary Examining Authority;

(F) The filing of a copy of the international application and the basic national fee necessary to enter the national stage, as specified in § 1.495(b).

(ii) *[Reserved]*

(iii) *Relative to Disciplinary Proceedings—*

(A) Correspondence filed in connection with a disciplinary proceeding under part 10 of this chapter.

(B) [Reserved]

(b) In the event that correspondence is considered timely filed by being mailed or transmitted in accordance with paragraph (a) of this section, but not received in the U.S. Patent and Trademark Office after a reasonable amount of time has elapsed from the time of mailing or transmitting of the correspondence, or after the application is held to be abandoned, or after the proceeding is dismissed, terminated, or decided with prejudice, the correspondence will be considered timely if the party who forwarded such correspondence:

(1) Informs the Office of the previous mailing or transmission of the correspondence promptly after becoming aware that the Office has no evidence of receipt of the correspondence;

(2) Supplies an additional copy of the previously mailed or transmitted correspondence and certificate; and

(3) Includes a statement which attests on a personal knowledge basis or to the satisfaction of the Director to the previous timely mailing or transmission. If the correspondence was sent by facsimile transmission, a copy of the sending unit's report confirming transmission may be used to support this statement.<

(c) The Office may require additional evidence to determine if the correspondence was timely filed.

A suggested format for a Certificate of Mailing and a Certificate of Transmission under 37 CFR 1.8 to be included with the correspondence is reproduced below.

Certificate of Mailing

I hereby certify that this correspondence is being deposited with the United States Postal Service with sufficient postage as first class mail in an envelope addressed to:

Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450

on _____.
(Date)

Typed or printed name of person signing this certificate

_____

Signature_____

Certificate of Transmission

I hereby certify that this correspondence is being facsimile transmitted to the U.S. Patent and Trademark Office (Fax No. (*>___<)___-____)

on_____.
(Date)

Typed or printed name of person signing this certificate

_____

Signature_____

**>

¶ *5.02 Format of Certificate of Mailing or Transmission*

The following are suggested formats for either a Certificate of Mailing or Certificate of Transmission under 37 CFR 1.8(a). The certification may be included with all correspondence concerning this application or proceeding to establish a date of mailing or transmission under 37 CFR 1.8(a). Proper use of this procedure will result in such communication being considered as timely if the established date is within the required period for reply. The Certificate should be signed by the individual actually depositing or transmitting the correspondence or by an individual who, upon information and belief, expects the correspondence to be mailed or transmitted in the normal course of business by another no later than the date indicated.

Certificate of Mailing

I hereby certify that this correspondence is being deposited with the United States Postal Service with sufficient postage as first class mail in an envelope addressed to:

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

on _____.

(Date)

Typed or printed name of person signing this certificate:

_____

Signature: _____

Registration Number: _____

Certificate of Transmission

I hereby certify that this correspondence is being facsimile transmitted to the United States Patent and Trademark Office, Fax No. (___)_____ -_____ on _____. (Date)

Typed or printed name of person signing this certificate:

_____

Signature: _____

Registration Number: _____

Please refer to 37 CFR 1.6(d) and 1.8(a)(2) for filing limitations concerning facsimile transmissions and mailing, respectively.

<

Under 37 CFR 1.8, a person may state on certain papers directed to the Office (>some< exceptions are stated in 37 CFR 1.8), the date on which the paper will be deposited in the United States Postal Service or transmitted by facsimile. If the date stated is within the period for reply, the reply in most instances will be considered to be timely. This is true even if the paper does not actually reach the Office until after the end of the period for reply. The Certificate of Mailing procedure does not apply to papers mailed in a foreign country.

The Certificate of Transmission procedure, however, also applies to papers transmitted to the Office from a foreign country provided that the correspondence being transmitted is not prohibited from being transmitted by facsimile and is not otherwise precluded from receiving the benefits under 37 CFR 1.8.

It should be noted, however, that the Office will continue its normal practice of stamping the date of receipt ("Office Date" Stamp) on all papers received through the mail or by facsimile except those filed under 37 CFR 1.10 (See MPEP § 513). The date stamped will also be the date which is entered on Office records and from which any subsequent periods are calculated. For example, 37 CFR *>41.37< gives an appellant 2 months from the date of the appeal to file an appeal brief. For example, if the last day to reply to a final rejection was November 10, 1997, and applicant deposited a Notice of Appeal with fee in the U.S. mail on November 10, 1997, and so certified, that appeal is timely even if it was not received in the U.S. Patent and Trademark Office until November 16, 1997. Since the date of receipt will be used to calculate the time at which the brief is due, the brief was due on January 16, 1998. This is 2 months after the Mail Center date.

37 CFR 1.8(a)(2)(i)(A) specifically refers to a request for a continued prosecution application (CPA) filed under 37 CFR 1.53(d) (available only for design applications) as a correspondence filed for the purposes of obtaining an application filing date and the procedures and benefit set forth in 37 CFR 1.8(a)(1) are not applicable to a request for a CPA. The date on a certificate of mailing or transmission (37 CFR 1.8(a)) of a CPA is not controlling or even relevant. A CPA filed by facsimile transmission will <u>not</u> be accorded a filing date as of the date on the certificate of transmission unless Office records indicate, or applicant otherwise establishes pursuant to 37 CFR 1.6(f), receipt in the Office of the complete CPA on the date on the certificate of transmission and that date is not a Saturday, Sunday, or Federal holiday within the District of Columbia.

I. PROCEDURE BY APPLICANT

(A) The certification requires a signature. Specifically, if the certification appears on a paper that requires a signature, two signatures are required, one for the paper and one for the certification. Although not specifically required by 37 CFR 1.8, it is preferred that the certificate be signed by the applicant, assignee, or registered practitioner.

(B) When possible, the certification should appear on a portion of the paper being submitted. However, if there is insufficient space to make the certification on the same paper, the certification should be on a separate sheet securely attached to the paper.

(C) When the certification is presented on a separate sheet, that sheet must (1) be signed and (2) fully identify and be securely attached to the paper it accompanies. The required identification should include the application number and filing date of the application as well as the type of paper being filed, e.g., reply to rejection or refusal, Notice of Appeal, etc. An unsigned certification will not be considered acceptable.

Moreover, without the proper identifying data, a certification presented on a separate sheet will not be considered acceptable if there is any question or doubt concerning the connection between the sheet and the paper filed.

If the sheet should become detached from the paper and thereafter not associated with the appropriate file, evidence that this sheet was received in the Office can be supported by submitting a copy of a postcard receipt specifically identifying this sheet and the paper and by submitting a copy of the sheet as originally mailed. Attention is directed to MPEP § 503 relative to the use of postcards as receipts.

(D) In situations wherein the correspondence includes papers for more than one application (e.g., a single envelope containing separate papers responding to Office actions in different applications) or papers for various parts of the Office (e.g., a patent issue fee transmittal form PTOL-85B and an assignment), each paper must have its own certification as a part thereof or attached thereto.

Although Part B of Form PTOL-85, Notice of Allowance and Fee(s) Due, may contain a Certificate of Mailing thereon, a separate Certificate of Mailing is required for all papers included with this form, including *>replacement< drawings. Checks submitted with the papers do not require certification.

(E) In situations wherein the correspondence includes several papers directed to the same area of the Office for the same application (for example, a proposed reply under 37 CFR 1.116 and a Notice of Appeal), each paper should have its own certification as a part thereof or attached thereto.

(F) For the purposes of 37 CFR 1.8(a)(1)(i)(A), first class mail is interpreted as including "Express Mail" and "Priority Mail" deposited with the U.S. Postal Service.

Alternatively, the correspondence may be submitted with a cover or transmittal letter which itemizes the papers and on which is placed the certificate under 37 CFR 1.8.

II. USE OF STAMPED CERTIFICATION

Some practitioners place the certification language on the first page of a paper with an inked stamp. Such a practice is encouraged because the certification is not only readily visible but also forms an integral part of the paper.

III. OFFICE PROCEDURE

A. Mail Center of the Office of Initial Patent Examination

The Mail Center of the Office of Initial Patent Examination will continue to date stamp the actual date of receipt of all papers received by mail in the Office. No attempt will be made to retain the envelopes in which the papers are received or to indicate on the papers the postal cancellation date (postmark).

However, the benefits of 37 CFR 1.8 or 37 CFR 1.10 apply only to documents delivered to the Office by the U.S. Postal Service. A number of instances have been uncovered where individuals are certifying that documents were deposited with the U.S. Postal Service when, in fact, the documents were hand-carried or delivered to the Office via commercial couriers, e.g., "Federal Express," "DHL," "Purolator," "Air Borne," "UPS." In those instances where documents include a Certificate of Mailing under 37 CFR 1.8 or "Express Mail" mailing label (commonly used to comply with 37 CFR 1.10) but were delivered to the Office by other than the U.S. Postal Service, Mail Center personnel are placing a notice indicating that fact on the correspondence involved to alert Office personnel that the benefits of 37 CFR 1.8 or 37 CFR 1.10 do not apply.

B. Processing Areas

When papers are received in a specific location of the Office (e.g., Pre-Grant Publication Division,

Office of Patent Publication, Office of Petitions - see MPEP § 502 and § 502.01), the date of receipt in the Office is stamped on the papers in accordance with 37 CFR 1.6(a).

The date indicated on the Certificate of Mailing or of Transmission will be used by the Office only to determine if the paper was deposited in the United States Postal Service or transmitted by facsimile within the period for reply. If the paper was actually received in the Office within the period for reply, there is no need to refer to the Certificate. Note however, that 37 CFR 1.6(a)(3) provides that "[c]orrespondence transmitted by facsimile to the Patent and Trademark Office will be stamped with the date on which the complete transmission is received in the Patent and Trademark Office unless that date is a Saturday, Sunday, or Federal holiday within the District of Columbia, in which case the date stamped will be the next succeeding day which is not a Saturday, Sunday, or Federal holiday within the District of Columbia."

If, however, the paper was received in the U.S. Patent and Trademark Office after the end of the period for reply, the paper should be inspected to determine if a Certificate of Mailing or of Transmission has been included. Where no such Certificate is found, the paper is untimely since applicant did not reply within the period for reply. This may result in abandonment of the application or other loss of rights.

In those instances where a Certificate of Mailing or of Transmission does appear in the paper or a cover letter thereto, a check should be made to determine whether the indicated date of deposit or transmission is within the period for reply. If the date indicated in the Certificate is after the end of the period for reply, the paper is untimely and no notation of the date need be made. Where the date indicated on the Certificate is within the period for reply, the paper should be considered to be timely filed. A notation should be made adjacent to the Office stamp indicating the date of receipt ("Office Date" Stamp) which notes the date stated on the Certificate. This notation should be "C of Mail" or "C of Fax" followed by the date. A paper with a certificate dated November 10, 1997, would be noted next to the "Office Date" Stamp "(C of Mail. 11/10/97)." This notation should also appear on the "Contents" portion of the file wrapper. For Image File Wrapper (IFW) processing, see IFW Manual.

If the period set for taking an action in the U.S. Patent and Trademark Office ends on a Saturday, Sunday, or Federal holiday within the District of Columbia (37 CFR 1.7), the action will be considered to be timely if deposited in the United States mail or transmitted by facsimile and certified under 37 CFR 1.8(a) on the next succeeding day which is not a Saturday, Sunday, or a Federal holiday.

It should be noted that the filing of a paper for the purpose of obtaining a continuation or division application under 37 CFR 1.53(d) (available only for design applications) ** is excluded from the Certificate practice under 37 CFR 1.8(a)(2)(i)(A) since it is considered to be the filing of a national patent application.

Effective November 29, 1999, Public Law 106-113 amended 35 U.S.C. 119(e)(3) to extend the period of pendency of a provisional application to the next succeeding business day if the day that is 12 months after the filing date of a provisional application falls on a Saturday, Sunday, or Federal holiday within the District of Columbia. See also 37 CFR 1.7(b). 35 U.S.C. 119(e)(3) as amended by Public Law 106-113 applies to any provisional applications filed on or after June 8, 1995 but has no effect on any patent which is the subject of litigation in an action commenced before November 29, 1999.

No benefit will be given to a Certificate of Mailing or Transmission relative to the filing of a national patent application specification and drawing or other correspondence for the purpose of obtaining an application filing date. However, note that new patent applications filed in accordance with 37 CFR 1.10 will be stamped by the Office with the date of deposit as "Express Mail" with the United States Postal Service. For example, if a new patent application is deposited as "Express Mail" in accordance with 37 CFR 1.10 on a Saturday and the United States Postal Service gives it a date of deposit of Saturday, the Office will accord and stamp the correspondence with the Saturday date. 37 CFR 1.6(a)(2).

All Certificates of Mailing or Transmission filed in applications should be placed in the file wrappers directly below the papers to which they refer. For Image File Wrapper (IFW) processing, see IFW Manual.

Office personnel receiving a hand-delivered paper from other than U.S. Postal Service personnel

should inspect the paper to ensure that the benefits of 37 CFR 1.8 or "Express Mail" benefits under 37 CFR 1.10 are not accorded in error. If the paper contains a certificate of mailing under 37 CFR 1.8 or "Express Mail" mailing label (commonly used to comply with 37 CFR 1.10), the words "HAND DELIVERED" should be written adjacent to the date stamp.

Applicant should be notified in the next Office action when a paper containing a Certificate of Mailing has been denied the benefits under 37 CFR 1.8 or a paper containing an "Express Mail" mailing label (commonly used to comply with 37 CFR 1.10) is denied benefits under 37 CFR 1.10 by including, for example, form paragraph 5.04.

¶ *5.04 Benefit of Certificate of Mailing Denied*

The **[1]** filed **[2]** is not entitled to the benefits of 37 CFR 1.**[3]** since it was not deposited with the U. S. Postal Service for delivery to the U.S. Patent and Trademark Office. Therefore, the date of receipt in the U.S. Patent and Trademark Office has been used to determine the timeliness of the paper.

Examiner Note:

1. This form paragraph is to be used in those situations where correspondence contains a Certificate of Mailing under 37 CFR 1.8 or requests the benefit of "Express Mail" under 37 CFR 1.10, but the correspondence was not actually deposited with the U. S. Postal Service.

2. In bracket 3, insert --8-- or --10--, as appropriate.

Misuse of a Certificate of Mailing under 37 CFR 1.8 or improperly claiming the benefit of 37 CFR 1.10 which appears to be more than a one-time, inadvertent error should be brought to the attention of the Office of Enrollment and Discipline.

IV. ORIGINAL MAILED PAPER NOT DELIVERED

Paragraphs (b) and (c) of 37 CFR 1.8 concern the situation where a paper containing a Certificate was timely deposited in the U.S. mail or transmitted by facsimile, but never received by the U.S. Patent and Trademark Office. In the TCs, all submissions under these paragraphs should be considered and the sufficiency thereof determined by the TC Director. The statement required by 37 CFR 1.8(b)(3) is no longer required to be verified.

>37 CFR 1.8(b) permits a party to notify the Office of a previous mailing, or transmitting, of correspondence when a reasonable amount of time has elapsed from the time of mailing or transmitting of the correspondence. In the event that correspondence may be considered timely filed because it was mailed or transmitted in accordance with 37 CFR 1.8(a), but was not received in the Office after a reasonable amount of time has elapsed, (e.g., more than one month from the time the correspondence was mailed), applicant is not required to wait until the end of the maximum extendable period for reply set in a prior Office action (for the Office to hold the application abandoned) before informing the Office of the previously submitted correspondence. Applicant may notify the Office of the previous mailing or transmission and supply a duplicate copy of the previously mailed or transmitted correspondence and a statement attesting on a personal knowledge basis or to the satisfaction of the Director to the previous timely mailing or transmission. If the person signing the statement did not sign the certificate of mailing, then the person signing the statement should explain how they have firsthand knowledge of the previous timely mailing or transmission. Such a statement should be filed promptly after the person becomes aware that the Office has not received the correspondence.

Before notifying the Office of a previously submitted correspondence that appears not to have been received by the Office, applicants are encouraged to check the private Patent Application Information Retrieval (PAIR) System to see if the correspondence has been entered into the application file.<

513 Deposit as Express Mail with U.S. Postal Service [R-3]

35 U.S.C. 21. Filing date and day for taking action.

(a) The Director may by rule prescribe that any paper or fee required to be filed in the Patent and Trademark Office will be considered filed in the Office on the date on which it was deposited with the United States Postal Service or would have been deposited with the United States Postal Service but for postal service interruptions or emergencies designated by the Director.

*****

37 CFR 1.6. Receipt of correspondence.

(a) *Date of receipt and Express Mail date of deposit.* Correspondence received in the Patent and Trademark Office is stamped with the date of receipt except as follows:

(1) The Patent and Trademark Office is not open for the filing of correspondence on any day that is a Saturday, Sunday, or Federal holiday within the District of Columbia. Except for correspondence transmitted by facsimile under paragraph (a)(3) of this section, or filed electronically under paragraph (a)(4) of this

section, no correspondence is received in the Office on Saturdays, Sundays, or Federal holidays within the District of Columbia.

(2) Correspondence filed in accordance with § 1.10 will be stamped with the date of deposit as "Express Mail" with the United States Postal Service.

(3) Correspondence transmitted by facsimile to the Patent and Trademark Office will be stamped with the date on which the complete transmission is received in the Patent and Trademark Office unless that date is a Saturday, Sunday, or Federal holiday within the District of Columbia, in which case the date stamped will be the next succeeding day which is not a Saturday, Sunday, or Federal holiday within the District of Columbia.

(4) [Reserved]

*****

37 CFR 1.10. Filing of correspondence by "Express Mail".

(a)(1)Any correspondence received by the U.S. Patent and Trademark Office (USPTO) that was delivered by the "Express Mail Post Office to Addressee" service of the United States Postal Service (USPS) will be considered filed with the USPTO on the date of deposit with the USPS.

(2) The date of deposit with USPS is shown by the "date in" on the "Express Mail" label or other official USPS notation. If the USPS deposit date cannot be determined, the correspondence will be accorded the USPTO receipt date as the filing date. See § 1.6(a).

(b) Correspondence should be deposited directly with an employee of the USPS to ensure that the person depositing the correspondence receives a legible copy of the "Express Mail" mailing label with the "date-in" clearly marked. Persons dealing indirectly with the employees of the USPS (such as by deposit in an "Express Mail" drop box) do so at the risk of not receiving a copy of the "Express Mail" mailing label with the desired "date-in" clearly marked. The paper(s) or fee(s) that constitute the correspondence should also include the "Express Mail" mailing label number thereon. See paragraphs (c), (d) and (e) of this section.

(c) Any person filing correspondence under this section that was received by the Office and delivered by the "Express Mail Post Office to Addressee" service of the USPS, who can show that there is a discrepancy between the filing date accorded by the Office to the correspondence and the date of deposit as shown by the "date-in" on the "Express Mail" mailing label or other official USPS notation, may petition the Director to accord the correspondence a filing date as of the "date-in" on the "Express Mail" mailing label or other official USPS notation, provided that:

(1) The petition is filed promptly after the person becomes aware that the Office has accorded, or will accord, a filing date other than the USPS deposit date;

(2) The number of the "Express Mail" mailing label was placed on the paper(s) or fee(s) that constitute the correspondence prior to the original mailing by "Express Mail;" and

(3) The petition includes a true copy of the "Express Mail" mailing label showing the "date-in," and of any other official notation by the USPS relied upon to show the date of deposit.

(d) Any person filing correspondence under this section that was received by the Office and delivered by the "Express Mail Post Office to Addressee" service of the USPS, who can show that the "date-in" on the "Express Mail" mailing label or other official notation entered by the USPS was incorrectly entered or omitted by the USPS, may petition the Director to accord the correspondence a filing date as of the date the correspondence is shown to have been deposited with the USPS, provided that:<

(1) The petition is filed promptly after the person becomes aware that the Office has accorded, or will accord, a filing date based upon an incorrect entry by the USPS;

(2) The number of the "Express Mail" mailing label was placed on the paper(s) or fee(s) that constitute the correspondence prior to the original mailing by "Express Mail"; and

(3) The petition includes a showing which establishes, to the satisfaction of the Director, that the requested filing date was the date the correspondence was deposited in the "Express Mail Post Office to Addressee" service prior to the last scheduled pickup for that day. Any showing pursuant to this paragraph must be corroborated by evidence from the USPS or that came into being after deposit and within one business day of the deposit of the correspondence in the "Express Mail Post Office to Addressee" service of the USPS.

(e) Any person mailing correspondence addressed as set out in § 1.1(a) to the Office with sufficient postage utilizing the "Express Mail Post Office to Addressee" service of the USPS but not received by the Office, may petition the Director to consider such correspondence filed in the Office on the USPS deposit date, provided that:

(1) The petition is filed promptly after the person becomes aware that the Office has no evidence of receipt of the correspondence;

(2) The number of the "Express Mail" mailing label was placed on the paper(s) or fee(s) that constitute the correspondence prior to the original mailing by "Express Mail";

(3) The petition includes a copy of the originally deposited paper(s) or fee(s) that constitute the correspondence showing the number of the "Express Mail" mailing label thereon, a copy of any returned postcard receipt, a copy of the "Express Mail" mailing label showing the "date-in," a copy of any other official notation by the USPS relied upon to show the date of deposit, and, if the requested filing date is a date other than the "date-in" on the "Express Mail" mailing label or other official notation entered by the USPS, a showing pursuant to paragraph (d)(3) of this section that the requested filing date was the date the correspondence was deposited in the "Express Mail Post Office to Addressee" service prior to the last scheduled pickup for that day; and

(4) The petition includes a statement which establishes, to the satisfaction of the Director, the original deposit of the correspondence and that the copies of the correspondence, the copy of the "Express Mail" mailing label, the copy of any returned postcard receipt, and any official notation entered by the USPS are true copies of the originally mailed correspondence, original "Express Mail" mailing label, returned postcard receipt, and official notation entered by the USPS.

(f) The Office may require additional evidence to determine if the correspondence was deposited as "Express Mail" with the USPS on the date in question.

>

(g) Any person who mails correspondence addressed as set out in § 1.1 (a) to the Office with sufficient postage utilizing the "Express Mail Post Office to Addressee" service of the USPS, but has the correspondence returned by the USPS due to an interruption or emergency in "Express Mail" service, may petition the Director to consider such correspondence as filed on a particular date in the Office, provided that:

(1) The petition is filed promptly after the person becomes aware of the return of the correspondence;

(2) The number of the "Express Mail" mailing label was placed on the paper(s) or fee(s) that constitute the correspondence prior to the original mailing by "Express Mail";

(3) The petition includes the original correspondence or a copy of the original correspondence showing the number of the "Express Mail" mailing label thereon and a copy of the "Express Mail" mailing label showing the "date-in"; and

(4) The petition includes a statement which establishes, to the satisfaction of the Director, the original deposit of the correspondence and that the correspondence or copy of the correspondence is the original correspondence or a true copy of the correspondence originally deposited with the USPS on the requested filing date. The Office may require additional evidence to determine if the correspondence was returned by the USPS due to an interruption or emergency in "Express Mail" service.

(h) Any person who attempts to mail correspondence addressed as set out in § 1.1 (a) to the Office with sufficient postage utilizing the "Express Mail Post Office to Addressee" service of the USPS, but has the correspondence refused by an employee of the USPS due to an interruption or emergency in "Express Mail" service, may petition the Director to consider such correspondence as filed on a particular date in the Office, provided that:

(1) The petition is filed promptly after the person becomes aware of the refusal of the correspondence;

(2) The number of the "Express Mail" mailing label was placed on the paper(s) or fee(s) that constitute the correspondence prior to the attempted mailing by "Express Mail";

(3) The petition includes the original correspondence or a copy of the original correspondence showing the number of the "Express Mail" mailing label thereon; and

(4) The petition includes a statement by the person who originally attempted to deposit the correspondence with the USPS which establishes, to the satisfaction of the Director, the original attempt to deposit the correspondence and that the correspondence or copy of the correspondence is the original correspondence or a true copy of the correspondence originally attempted to be deposited with the USPS on the requested filing date. The Office may require additional evidence to determine if the correspondence was refused by an employee of the USPS due to an interruption or emergency in "Express Mail" service.

(i) Any person attempting to file correspondence under this sect ion that was unable to be deposited with the USPS due to an interruption or emergency in "Express Mail" service which has been so designated by the Director, may petition the Director to consider such correspondence as filed on a particular date in the Office, provided that:

(1) The petition is filed in a manner designated by the Director promptly after the person becomes aware of the designated interruption or emergency in "Express Mail" service;

(2) The petition includes the original correspondence or a copy of the original correspondence; and

(3) The petition includes a statement which establishes, to the satisfaction of the Director, that the correspondence would have been deposited with the USPS but for the designated interruption or emergency in "Express Mail" service, and that the correspondence or copy of the correspondence is the original correspondence or a true copy of the correspondence originally attempted to be deposited with the USPS on the requested filing date.<

The statutory authority for the granting of a filing date based on the date of deposit for correspondence sent by "Express Mail" and received by the Office is found in section 21(a) of Title 35 of the United States Code.

The specific rule for obtaining a filing date as of the date of deposit in "Express Mail" (rather than the date of receipt at the Office) is 37 CFR 1.10.

35 U.S.C. 21(a) is limited to correspondence deposited with the United States Postal Service (USPS). The procedure in 37 CFR 1.10 is limited to correspondence deposited in the "Express Mail Post Office to Addressee" service of the USPS. There are no similar provisions and no similar benefit can be obtained for correspondence deposited in International Express Mail.

I. EFFECTIVE DATE, WEEKENDS & HOLIDAYS

Effective December 2, 1996, 37 CFR 1.6(a)(2) provides that correspondence deposited as "Express Mail" in accordance with 37 CFR 1.10 will be stamped, and, therefore, considered as filed on the date of its deposit, regardless of whether that date is a Saturday, Sunday or Federal holiday within the District of Columbia. 37 CFR 1.10 provides a procedure for assigning the date on which any paper or fee is deposited as "Express Mail" with the USPS as the filing date of the paper or fee in the U.S. Patent and Trademark Office (Office). The date of deposit with the USPS is shown by the "date-in" on the "Express Mail" mailing label or other official USPS notation. This holds true for any day that the correspondence may be accepted as "Express Mail" by the USPS, even when the paper or fee is deposited and accepted

on a Saturday, Sunday or Federal holiday within the District of Columbia. For example, if a person files a patent application by "Express Mail" with the USPS on a Saturday in compliance with 37 CFR 1.10, he or she will receive the benefit of the Saturday date, even though the Office is closed on Saturdays and, therefore, the person could not have filed the application by depositing it directly at the Office on that Saturday. See 37 CFR 1.6(a)(1). In those cases where the procedure of 37 CFR 1.10(a) has not been properly followed, e.g., the "date-in" is illegible, the filing date of the correspondence will be the date of actual receipt in the Office. An applicant may file a petition under the conditions specified in 37 CFR 1.10(c), (d) or (e) (discussed below) presenting whatever arguments and evidence that the paper or fee is entitled to a filing date other than the filing date accorded by the Office.

II. DATE-IN, DIRECT DEPOSIT, "EXPRESS MAIL" BOX RECEPTACLES & LOG BOOKS

The procedure in 37 CFR 1.10(a) requires the use of the "Express Mail Post Office to Addressee" service of the USPS. This service provides for the use of a mailing label on which the USPS clearly indicates the date on which it was deposited. Correspondence sent by the "Express Mail Post Office to Addressee" service is considered filed in the Office on the "date-in" entered by the USPS. The "date-in" on the "Express Mail" mailing label must be completed by the USPS, not by the applicant. For correspondence filed in accordance with 37 CFR 1.10, Office personnel will routinely look to the "Express Mail" mailing label, and stamp the "date-in" or other official USPS notation as the filing date of the correspondence. Accordingly, if the USPS enters the deposit date as its "date-in," the correspondence will receive the deposit date as its filing date. If the USPS deposit date cannot be determined, the correspondence will be accorded the date of receipt in the Office as the filing date. An applicant may file a petition under the conditions specified in 37 CFR 1.10(c), (d), * (e)>, (g), (h), or (i)< (discussed below) presenting whatever arguments and evidence that the paper or fee is entitled to a filing date other than the filing date accorded by the Office.

37 CFR 1.10(b) further provides that correspondence should be deposited directly with an employee of the USPS to ensure that the person depositing the correspondence receives a legible copy of the "Express Mail" mailing label with the "date-in" clearly marked, and that persons dealing indirectly with the employees of the USPS (such as by depositing correspondence in an "Express Mail" drop box) do so at the risk of not receiving a copy of the "Express Mail" mailing label with the desired "date-in" clearly marked. On petition, the failure to obtain an "Express Mail" receipt with the "date-in" clearly marked may be considered an omission that could have been avoided by the exercise of due care, as discussed below. While the Office strongly urges direct deposit of "Express Mail" correspondence in order to obtain a legible copy of the "Express Mail" mailing label, parties are not precluded from using "Express Mail" drop boxes, but do so at their own risk.

A paper or fee placed in an "Express Mail" box receptacle after the box has been cleared for the last time on a given day will be considered to be deposited as of the date of receipt ("date-in") indicated on the "Express Mail" mailing label by the Postal Service "Express Mail" acceptance clerk. 37 CFR 1.10(d) permits the Office to correct a USPS "date-in" error when the correspondence is deposited in an "Express Mail" drop box prior to last scheduled pick up of the day, that is, the time clearly marked on the "Express Mail" drop box indicating when the box will be cleared for the last time on the date of deposit. 37 CFR 1.10(d) sets forth the procedures to be followed to be entitled to such a correction.

Parties who do use drop boxes can protect themselves from uncertainty due to illegible mailing labels by routinely maintaining a log of "Express Mail" deposits in which notations are entered by the person who deposited the correspondence as "Express Mail" within one business day after deposit with the USPS. Such evidence could be useful to later support a petition filed under 37 CFR 1.10(c), (d) * (e)>, or (g)<. Evidence that came into being after deposit and within one day after the deposit of the correspondence as "Express Mail" may be in the form of a log book which contains information such as the "Express Mail" number; the application number, attorney docket number or other such file identification number; the place, date and time of deposit; the time of the last scheduled pick-up for that date and place of

deposit; the depositor's initials or signature; and the date and time of entry in the log.

III. "EXPRESS MAIL" MAILING LABEL NUMBER

Effective December 2, 1996, 37 CFR 1.10(b) no longer requires a certificate of mailing by "Express Mail" or that the "Express Mail" mailing label number be placed on the correspondence prior to mailing. Correspondence deposited with the USPS on or after December 2, 1996, and which is actually received by the Office will not be denied a filing date as of the "date-in" appearing on the "Express Mail" mailing label because the number of the "Express Mail" mailing label was not placed on the correspondence prior to the original mailing. However, if the number of the mailing label did not appear on the correspondence as originally filed, relief will not be granted on petition under 37 CFR 1.10(c) **>, (d), (e), (g) or (h)<, even if the party who filed the correspondence satisfies the other requirements of 37 CFR 1.10(c), 1.10(d) * 1.10(e)>, 1.10(g), or 1.10(h)<. To be effective, the number must be placed on each separate paper and each fee transmittal either directly on the document or by a separate paper firmly and securely attached thereto. In situations wherein the correspondence includes several papers directed to the same application (for example, the specification, drawings, and declaration for a new application), the correspondence may be submitted with a cover or transmittal letter which should itemize the papers. It is not necessary that the number be placed on each page of a particular paper or fee transmittal. Merely placing the number in one prominent location on each separate paper or fee transmittal (or cover sheet or transmittal letter which should itemize the separate papers and fees) will be sufficient.

Since the filing of correspondence under 37 CFR 1.10 without the number of the "Express Mail" mailing label thereon is an oversight that can be avoided by the exercise of reasonable care, requests for waiver of this requirement will not be granted on petition. A party's inadvertent failure to comply with the requirements of a rule is not deemed to be an extraordinary situation that would warrant waiver of a rule under 37 CFR 1.183, 2.146(a)(5) or 2.148, nor is such an inadvertent omission considered "unavoidable," within the meaning of 15 U.S.C. 1062(b), 35 U.S.C. 133, 37 CFR 1.137(a) or 37 CFR 2.66(a). See *Honigsbaum v. Lehman*, 903 F. Supp. 8, 37 USPQ2d 1799 (D.D.C. 1995) (Commissioner did not abuse his discretion in refusing to waive requirements of 37 CFR 1.10(c) in order to grant filing date to patent application, where applicant failed to produce "Express Mail" customer receipt or any other evidence that application was actually deposited with USPS as "Express Mail."), *aff'd without opinion*, 95 F.3d 1166 (Fed. Cir. 1996); *Nitto Chemical Industry. Co., Ltd. v. Comer*, 39 USPQ2d 1778, 1782 (D.D.C. 1994) (Commissioner's refusal to waive requirements of 37 CFR 1.10 in order to grant priority filing date to patent application not arbitrary and capricious, because failure to comply with the requirements of 37 CFR 1.10 is an "avoidable" oversight that could have been prevented by the exercise of ordinary care or diligence, and thus not an extraordinary situation under 37 CFR 1.183.); *Vincent v. Mossinghoff*, 230 USPQ 621 (D.D.C. 1985) (misunderstanding of 37 CFR 1.8 not unavoidable delay in responding to Office Action); *Gustafson v. Strange*, 227 USPQ 174 (Comm'r Pat. 1985) (counsel's unawareness of 37 CFR 1.8 not extraordinary situation warranting waiver of a rule); *In re Chicago Historical Antique Automobile Museum, Inc.*, 197 USPQ 289 (Comm'r Pat. 1978) (since certificate of mailing procedure under 37 CFR 1.8 was available to petitioner, lateness due to mail delay not deemed to be extraordinary situation).

IV. PETITIONS

37 CFR 1.10(c) through 1.10(e) >and 1.10(g)< set forth procedures for petitioning the Director to accord a filing date as of the date of deposit as "Express Mail." Briefly, 37 CFR 1.10(c) applies where there is a discrepancy between the filing date accorded by the Office and the "date-in" entered by the USPS on the "Express Mail" mailing label or other official USPS notation; 37 CFR 1.10(d) applies where the "date-in" is incorrectly entered by the USPS; * 37 CFR 1.10(e) applies where correspondence deposited with the USPS as "Express Mail" is not received by the Office>; and 37 CFR 1.10(g) applies where correspondence deposited with the USPS as "Express Mail" was returned by the USPS due to an interruption or emergency in "Express Mail" service.

37 CFR 1.10(h) and 1.10(i) set forth procedures for petitioning the Director when correspondence was

attempted to be deposited as "Express Mail." 37 CFR 1.10(h) applies where correspondence was refused by an employee of the USPS due to an interruption or emergency in "Express Mail" service; and 37 CFR 1.10(i) applies where correspondence was unable to be deposited with the USPS due to an interruption or emergency in "Express Mail" service which has been so designated by the Director.<

V. PETITION TO CORRECT FILING DATE AND DATE-IN DISCREPANCY

37 CFR 1.10(c) sets forth procedures for filing a petition to the Director for a filing date as of the date of deposit with the USPS, where there is a discrepancy between the filing date initially accorded by the Office and the "date-in" entered by the USPS or other official USPS notation. Such a petition should:

(A) be filed promptly after the person becomes aware that the Office has accorded, or will accord, a filing date other than the USPS deposit date;

(B) include a showing that the number of the "Express Mail" mailing label was placed on each piece of correspondence prior to the original mailing; and

(C) include a true copy of the "Express Mail" mailing label showing the "date-in" or other official notation by the USPS.

VI. PETITION TO CORRECT INCORRECTLY ENTERED DATE-IN

37 CFR 1.10(d) sets forth procedures for filing a petition to the Director to accord a filing date as of the actual date of deposit with the USPS, where the "date-in" or other official notation is incorrectly entered by the USPS. Such a petition should:

(A) be filed promptly after the person becomes aware that the Office has accorded, or will accord, a filing date based upon an incorrect entry by the USPS;

(B) include a showing that the number of the "Express Mail" mailing label was placed on each piece of correspondence prior to the original mailing; and

(C) include a showing that the correspondence was deposited as "Express Mail" prior to the last scheduled pickup on the requested filing date.

The showing under 37 CFR 1.10(d) must be corroborated by (1) evidence from the USPS, or (2) evidence that came into being after deposit and within one business day of the deposit of the correspondence as "Express Mail." Evidence from the USPS may be the "Express Mail" Corporate Account Mailing Statement. Evidence that came into being within one day after the deposit of the correspondence as "Express Mail" may be in the form of a log book which contains information such as the "Express Mail" number; the application number, attorney docket number or other such file identification number; the place, date and time of deposit; the time of the last scheduled pick-up for that date and place of deposit; the depositor's initials or signature; and the date and time of entry in the log.

The reason the Office considers correspondence to have been filed as of the date of deposit as "Express Mail" is that this date has been verified by a disinterested USPS employee, through the insertion of a "date-in," or other official USPS notation, on the "Express Mail" mailing label. Due to the questionable reliability of evidence from a party other than the USPS that did not come into being contemporaneously with the deposit of the correspondence with the USPS, 37 CFR 1.10(d) specifically requires that any petition under 37 CFR 1.10(d) be corroborated either by evidence from the USPS, or by evidence that came into being after deposit and within one business day after the deposit of the correspondence as "Express Mail."

A petition alleging that the USPS erred in entering the "date-in" will be denied if it is supported only by evidence (other than from the USPS) which was:

(A) created prior to the deposit of the correspondence as "Express Mail" with the USPS (e.g., an application transmittal cover letter, or a client letter prepared prior to the deposit of the correspondence); or

(B) created more than one business day after the deposit of the correspondence as "Express Mail" (e.g., an affidavit or declaration prepared more than one business day after the correspondence was deposited with the USPS as "Express Mail").

On the other hand, a notation in a log book, entered after deposit by the person who deposited the correspondence as "Express Mail" within one business day

of such deposit, setting forth the items indicated above, would be deemed on petition to be an adequate showing of the date of deposit under 37 CFR 1.10(d)(3).

37 CFR 1.10(d)(3) further provides that a party must show that correspondence was deposited as "Express Mail" before the last scheduled pickup on the requested filing date in order to obtain a filing date as of that date.

VII. PETITION FOR CORRESPONDENCE NEVER RECEIVED

37 CFR 1.10(e) sets forth procedures for filing a petition to the Director to accord a filing date as of the date of deposit with the USPS, where correspondence deposited as "Express Mail" is never received by the Office. Such a petition should:

(A) be filed promptly after the person becomes aware that the Office has no evidence of receipt of the correspondence;

(B) include a showing that the number of the "Express Mail" mailing label was placed on each piece of correspondence prior to the original mailing;

(C) include a true copy of the originally deposited correspondence showing the number of the "Express Mail" mailing label thereon, a copy of any returned postcard receipt, a copy of the "Express Mail" mailing label showing the "date-in" or other official notation entered by the USPS; and

(D) include a statement, signed by the person who deposited the documents as "Express Mail" with the USPS, setting forth the date and time of deposit, and declaring that the copies of the correspondence, "Express Mail" mailing label, and returned postcard receipt accompanying the petition are true copies of the correspondence, mailing label and returned postcard receipt originally mailed or received.

37 CFR 1.10(e) provides for the filing of a petition to accord correspondence a filing date as of the date of deposit with the USPS as "Express Mail" only where the correspondence was mailed with sufficient postage and addressed as set out in 37 CFR 1.1(a). There is no corresponding provision that correspondence be properly addressed and mailed with sufficient postage in 37 CFR 1.10(a), (c) and (d), because these sections apply only to correspondence that is actually received by the Office. Correspondence mailed by "Express Mail" that is actually received by the Office will not be denied a filing date as of the date of deposit as "Express Mail" simply because the correspondence was not mailed with sufficient postage or not addressed as set out in 37 CFR 1.1(a). 37 CFR 1.10(e)(3) provides that if the requested filing date is a date other than the "date-in" on the "Express Mail" mailing label, the petition should include a showing under 37 CFR 1.10(d)(3), as discussed above, that the correspondence was deposited as "Express Mail" before the last scheduled pickup on the requested filing date in order to obtain a filing date as of that date. 37 CFR 1.10(e) applies only in those situations in which the correspondence at issue was lost *in toto* (i.e., the entire correspondence was not delivered to the Office). Where there is a dispute as to the contents of correspondence submitted to the Office (e.g., an applicant asserts that three sheets of drawings were submitted under 37 CFR 1.10 with an application, but the Office records indicate receipt of only two sheets of drawings with the application), an applicant may not rely upon the provisions of 37 CFR 1.10(e) to establish what document(s) and/or fee(s) were filed in the Office with such correspondence. Rather, where the records of the Office (e.g., the file of the application) contain any document(s) or fee(s) corresponding to the contents of the correspondence at issue, the Office will rely upon its official record of the contents of such correspondence in absence of convincing evidence (e.g., a postcard receipt under MPEP § 503 containing specific itemization of the document(s) or fee(s) purported to have been filed with the correspondence at issue) that the Office received and misplaced any document(s) or fee(s) that is not among the official records of the Office.

VIII. ADDITIONAL EVIDENCE MAY BE REQUIRED

37 CFR 1.10(f) provides that the Office may require additional evidence to determine whether the correspondence was deposited as "Express Mail" with the USPS on the date in question.

>

IX. PETITION FOR CORRESPONDENCE RETURNED DUE TO POSTAL INTERRUPTION OR EMERGENCY

37 CFR 1.10(g) provides that any person who mails correspondence addressed as set out in 37 CFR 1.1(a) to the Office with sufficient postage utilizing the "Express Mail Post Office to Addressee" service of the USPS, but has the correspondence returned by the USPS due to an interruption or emergency in "Express Mail" service, may petition the Director to consider the correspondence as filed on a particular date in the Office. Such a petition must:

(A) be filed promptly after the person becomes aware of the return of the correspondence;

(B) include a showing that the number of the "Express Mail" mailing label was placed on the paper(s) or fee(s) that constitute the correspondence prior to the original mailing by "Express Mail;"

(C) include the original correspondence or a copy of the original correspondence showing the number of the "Express Mail" mailing label thereon and a copy of the "Express Mail" mailing label showing the "date-in;" and

(D) include a statement which establishes, to the satisfaction of the Director, the original deposit of the correspondence and that the correspondence or the copy of the correspondence is the original correspondence or a true copy of the correspondence originally deposited with the USPS on the requested filing date.

The Office may require additional evidence to determine if the correspondence was returned by the USPS due to an interruption or emergency in "Express Mail" service. For example, the Office may require a letter from the USPS confirming that the return was due to an interruption or emergency in the "Express Mail" service.

This procedure does not apply where the USPS returned the "Express Mail" for a reason other than an interruption or emergency in "Express Mail" service such as the address was incomplete or the correspondence included insufficient payment for the "Express Mail" service.

X. PETITION FOR CORRESPONDENCE REFUSED DUE TO POSTAL INTERRUPTION OR EMERGENCY

37 CFR 1.10(h) provides that any person who attempts to mail correspondence addressed as set out in 37 CFR 1.1(a) to the Office with sufficient postage utilizing the "Express Mail Post Office to Addressee" service of the USPS, but has the correspondence refused by an employee of the USPS due to an interruption or emergency in "Express Mail" service, may petition the Director to consider the correspondence as filed on a particular date in the Office. Such a petition must:

(A) be filed promptly after the person becomes aware of the refusal of the correspondence;

(B) include a showing that the number of the "Express Mail" mailing label was placed on the paper(s) or fee(s) that constitute the correspondence prior to the attempted mailing by "Express Mail;"

(C) include the original correspondence or a copy of the original correspondence showing the number of the "Express Mail" mailing label thereon; and

(D) include a statement by the person who originally attempted to deposit the correspondence with the USPS which establishes, to the satisfaction of the Director, the original attempt to deposit the correspondence and that the correspondence or copy of the correspondence is the original correspondence or a true copy of the correspondence originally attempted to be deposited with the USPS on the requested filing date.

The Office may require additional evidence to determine if the correspondence was refused by an employee of the USPS due to an interruption or emergency in "Express Mail" service. For example, the Office may require a letter from the USPS confirming that the refusal was due to an interruption or emergency in the "Express Mail" service.

This procedure does not apply where the USPS refused the "Express Mail" for a reason other than an interruption or emergency in "Express Mail" service such as the address was incomplete or the correspondence included insufficient payment for the "Express Mail" service. In addition, this procedure does not apply because an "Express Mail" drop box is unavailable or a Post Office facility is closed.

XI. PETITION FOR CORRESPONDENCE UNABLE TO BE DEPOSITED DUE TO A DIRECTOR-DESIGNATED POSTAL INTERRUPTION OR EMERGENCY

37 CFR 1.10(i) provides that any person attempting to file correspondence by "Express Mail" that was unable to be deposited with the USPS due to an interruption or emergency in "Express Mail" service which has been so designated by the Director may petition the Director to consider such correspondence as filed on a particular date in the Office. Such a petition must:

(A) be filed in a manner designated by the Director promptly after the person becomes aware of the designated interruption or emergency in "Express Mail" service;

(B) include the original correspondence or a copy of the original correspondence; and

(C) include a statement which establishes, to the satisfaction of the Director, that the correspondence would have been deposited with the USPS but for the designated interruption or emergency in "Express Mail" service, and that the correspondence or copy of the correspondence is the original correspondence or a true copy of the correspondence originally attempted to be deposited with the USPS on the requested filing date.

This procedure applies only when the Director designates an interruption or emergency in "Express Mail" service. In the notice designating the interruption or emergency the Director will provide guidance on the manner in which petitions under 37 CFR 1.10(i) should be filed. The notice will be placed on the USPTO web site at www.uspto.gov and published in the *Official Gazette*.<

Chapter 600 Parts, Form, and Content of Application

601 Content of Provisional and Non-provisional Applications [R-7]

35 U.S.C. 111. Application

(a) IN GENERAL.—

(1) WRITTEN APPLICATION.—An application for patent shall be made, or authorized to be made, by the inventor, except as otherwise provided in this title, in writing to the Director.

(2) CONTENTS.—Such application shall include—

(A) a specification as prescribed by section 112 of this title;

(B) a drawing as prescribed by section 113 of this title; and

(C) an oath by the applicant as prescribed by section 115 of this title.

(3) FEE AND OATH.—The application must be accompanied by the fee required by law. The fee and oath may be submitted after the specification and any required drawing are submitted, within such period and under such conditions, including the payment of a surcharge, as may be prescribed by the Director.

(4) FAILURE TO SUBMIT.—Upon failure to submit the fee and oath within such prescribed period, the application shall be regarded as abandoned, unless it is shown to the satisfaction of the Director that the delay in submitting the fee and oath was unavoidable or unintentional. The filing date of an application shall be the date on which the specification and any required drawing are received in the Patent and Trademark Office.

(b) PROVISIONAL APPLICATION.—

(1) AUTHORIZATION.—A provisional application for patent shall be made or authorized to be made by the inventor, except as otherwise provided in this title, in writing to the Director. Such application shall include—

(A) a specification as prescribed by the first paragraph of section 112 of this title; and

(B) a drawing as prescribed by section 113 of this title.

(2) CLAIM.—A claim, as required by the second through fifth paragraphs of section 112, shall not be required in a provisional application.

(3) FEE.—

(A) The application must be accompanied by the fee required by law.

(B) The fee may be submitted after the specification and any required drawing are submitted, within such period and under such conditions, including the payment of a surcharge, as may be prescribed by the Director.

(C) Upon failure to submit the fee within such prescribed period, the application shall be regarded as abandoned, unless it is shown to the satisfaction of the Director that the delay in submitting the fee was unavoidable or unintentional.

(4) FILING DATE.—The filing date of a provisional application shall be the date on which the specification and any required drawing are received in the Patent and Trademark Office.

(5) ABANDONMENT.—Notwithstanding the absence of a claim, upon timely request and as prescribed by the Director, a provisional application may be treated as an application filed under subsection (a). Subject to section 119(e)(3) of this title, if no such request is made, the provisional application shall be regarded as abandoned 12 months after the filing date of such application and shall not be subject to revival after such 12-month period.

(6) OTHER BASIS FOR PROVISIONAL APPLICATION.—Subject to all the conditions in this subsection and section 119(e) of this title, and as prescribed by the Director, an application for patent filed under subsection (a) may be treated as a provisional application for patent.

(7) NO RIGHT OF PRIORITY OR BENEFIT OF EARLIEST FILING DATE.—A provisional application shall not be entitled to the right of priority of any other application under section 119 or 365(a) of this title or to the benefit of an earlier filing date in the United States under section 120, 121, or 365(c) of this title.

(8) APPLICABLE PROVISIONS.—The provisions of this title relating to applications for patent shall apply to provisional applications for patent, except as otherwise provided, and except that provisional applications for patent shall not be subject to sections 115, 131, 135, and 157 of this title.

37 CFR 1.51. General requisites of an application.

(a) Applications for patents must be made to the Director of the United States Patent and Trademark Office.

(b) A complete application filed under § 1.53(b) or § 1.53(d) comprises:

(1) A specification as prescribed by 35 U.S.C. 112, including a claim or claims, see §§ 1.71 to 1.77;

(2) An oath or declaration, see §§ 1.63 and 1.68;

(3) Drawings, when necessary, see §§ 1.81 to 1.85; and

(4) The prescribed filing fee, search fee, examination fee, and application size fee, see § 1.16.

(c) A complete provisional application filed under § 1.53(c) comprises:

(1) A cover sheet identifying:

(i) The application as a provisional application,

(ii) The name or names of the inventor or inventors, (see § 1.41(a)(2)),

(iii) The residence of each named inventor,

(iv) The title of the invention,

(v) The name and registration number of the attorney or agent (if applicable),

(vi) The docket number used by the person filing the application to identify the application (if applicable),

(vii)The correspondence address, and

(viii)The name of the U.S. Government agency and Government contract number (if the invention was made by an agency of the U.S. Government or under a contract with an agency of the U.S. Government);

(2) A specification as prescribed by the first paragraph of 35 U.S.C. 112, see § 1.71;

(3) Drawings, when necessary, see §§ 1.81 to 1.85; and

(4) The prescribed filing fee and application size fee, see § 1.16.

(d) Applicants are encouraged to file an information disclosure statement in nonprovisional applications. See § 1.97 and § 1.98. No information disclosure statement may be filed in a provisional application.

I. GUIDELINES FOR DRAFTING A NONPROVISIONAL PATENT APPLICATION UNDER 35 U.S.C. 111(a)

The following guidelines illustrate the preferred layout and content of patent applications filed under 35 U.S.C. 111(a). These guidelines are suggested for the applicant's use. See also 37 CFR 1.77 and MPEP § 608.01(a). If an application data sheet (37 CFR 1.76) is used, data supplied in the application data sheet need not be provided elsewhere in the application except that the citizenship of each inventor must be provided in the oath or declaration under 37 CFR 1.63 even if this information is provided in the application data sheet (see 37 CFR 1.76(b)). If there is a discrepancy between the information submitted in an application data sheet and the information submitted elsewhere in the application, the application data sheet will control except for the naming of the inventors and the citizenship of the inventors. See MPEP § 601.05.

A complete application filed under 35 U.S.C. 111(a) comprises a specification, including claims, as prescribed by 35 U.S.C. 112, drawings as prescribed by 35 U.S.C. 113, an oath or declaration as prescribed by 35 U.S.C. 115, and the prescribed filing fee search fee, examination fee and application size fee.

Arrangement and Contents of the Specification

The following order of arrangement is preferable in framing the specification. See also MPEP § 608.01(a). Each of the lettered items should appear in upper case, without underlining or bold type, as section headings.

(A) Title of the invention. (See MPEP § 606).

(B) Cross-reference to related applications. (See MPEP § 201.11).

(C) Statement regarding federally sponsored research or development. (See MPEP § 310).

(D) The names of the parties to a joint research agreement (see 37 CFR 1.71(g)).

(E) Reference to a "Sequence Listing," a table, or a computer program listing appendix submitted on

compact disc and an incorporation-by-reference of the material on the compact disc. For computer listings filed on or prior to March 1, 2001, reference to a "Microfiche appendix" (see former 37 CFR 1.96(c) for Microfiche appendix).

(F) Background of the invention. (See MPEP § 608.01(c)).

(1) Field of the invention.

(2) Description of related art including information disclosed under 37 CFR 1.97 and 37 CFR 1.98.

(G) Brief summary of the invention. (See MPEP § 608.01(d)).

(H) Brief description of the several views of the drawing. (See MPEP § 608.01(f)).

(I) Detailed description of the invention. (See MPEP § 608.01(g)).

(J) Claim(s) (commencing on a separate sheet). (See MPEP § 608.01(i)-(p)).

(K) Abstract of the Disclosure (commencing on a separate sheet). (See MPEP § 608.01(b)).

(L) Sequence Listing, if on paper (see 37 CFR 1.821 through 1.825).

II. GUIDELINES FOR DRAFTING A PROVISIONAL APPLICATION UNDER 35 U.S.C. 111(b)

A provisional application should preferably conform to the arrangement guidelines for nonprovisional applications. The specification must, however, comply with the first paragraph of 35 U.S.C. 112 and refer to drawings, where necessary for an understanding of the invention. Unlike an application filed under 35 U.S.C. 111(a), a provisional application does not need claims. Furthermore, no oath or declaration is required. See MPEP § 201.04(b).

A cover sheet providing identifying information is required for a complete provisional application. In accordance with 37 CFR 1.51(c)(1) the cover sheet must state that it is for a provisional application, it must identify and give the residence of the inventor or inventors, and it must give a title of the invention. The cover sheet must also give the name and registration number of the attorney or agent (if applicable), the docket number used by the person filing the application (if applicable) and the correspondence address. If there is a governmental interest, the cover sheet must include a statement as to rights to inventions made under Federally sponsored research and development (See MPEP § 310). 37 CFR 1.51(c)(1)(viii) requires the name of the Government agency and the contract number, if the invention was developed by or while under contract with an agency of the U.S. Government.

Unlike applications filed under 35 U.S.C. 111(a), provisional applications should not include an information disclosure statement. See 37 CFR 1.51(d). Since no substantive examination is made, such statements are unnecessary. The Office will not accept an information disclosure statement in a provisional application. Any such statement received, will be returned or disposed of at the convenience of the Office.

This cover sheet information enables the Office to prepare a proper filing receipt and provides the Office of **>Patent Application Processing (OPAP)< with most of the information needed to process the provisional application. See MPEP § 201.04(b) for a sample cover sheet.

III. THE APPLICATION

The parts of the application may be included in a single document.

The paper standard requirements for papers submitted as part of the record of a patent application is covered in MPEP § 608.01 under the heading "Paper Requirement."

Determination of completeness of an application is covered in MPEP § 506 and § 601.01 - § 601.01(g).

The elements of the application are secured together in a file wrapper, bearing appropriate identifying data including the application number and filing date (MPEP § 719).

Note

Provisional applications, MPEP § 201.04(b).

Divisional applications, MPEP § 201.06.

Continuation applications, MPEP § 201.07.

Continued prosecution applications, MPEP § 201.06(d).

Reissue applications, MPEP § 1401.

Design applications, MPEP Chapter 1500.

Plant applications, MPEP Chapter 1600.

Ex Parte Reexamination, MPEP Chapter 2200.

Inter Partes Reexamination, MPEP Chapter 2600.

A model, exhibit, or specimen is normally not admitted as part of the application, although it may be required in the prosecution of the application (37 CFR 1.91 and 1.93, MPEP § 608.03).

Copies of an application will be provided by the USPTO upon request and payment of the fee set forth in 37 CFR 1.19(b) unless the application has been disposed of (see 37 CFR 1.53(e), (f) and (g)).

All applicants are requested to include a preliminary classification on newly filed patent applications. The preliminary classification, preferably class and subclass designations, should be identified in the upper right-hand corner of the letter of transmittal accompanying the application papers, or in the application data sheet after the title of the invention (see 37 CFR 1.76(b)(3)), for example "Proposed Class 2, subclass 129."

601.01 Complete Application [R-3]

37 CFR 1.53. Application number, filing date, and completion of application.

(a) *Application number*. Any papers received in the Patent and Trademark Office which purport to be an application for a patent will be assigned an application number for identification purposes.

(b) *Application filing requirements - Nonprovisional application*. The filing date of an application for patent filed under this section, except for a provisional application under paragraph (c) of this section or a continued prosecution application under paragraph (d) of this section, is the date on which a specification as prescribed by 35 U.S.C. 112 containing a description pursuant to § 1.71 and at least one claim pursuant to § 1.75, and any drawing required by § 1.81(a) are filed in the Patent and Trademark Office. No new matter may be introduced into an application after its filing date. A continuing application, which may be a continuation, divisional, or continuation-in-part application, may be filed under the conditions specified in 35 U.S.C. 120, 121 or 365(c) and § 1.78(a).

(1) A continuation or divisional application that names as inventors the same or fewer than all of the inventors named in the prior application may be filed under this paragraph or paragraph (d) of this section.

(2) A continuation-in-part application (which may disclose and claim subject matter not disclosed in the prior application) or a continuation or divisional application naming an inventor not named in the prior application must be filed under this paragraph.

(c) *Application filing requirements - Provisional application*. The filing date of a provisional application is the date on which a specification as prescribed by the first paragraph of 35 U.S.C. 112, and any drawing required by § 1.81(a) are filed in the Patent and Trademark Office. No amendment, other than to make the provisional application comply with the patent statute and all applicable regulations, may be made to the provisional application after the filing date of the provisional application.

(1) A provisional application must also include the cover sheet required by § 1.51(c)(1), which may be an application data sheet (§ 1.76), or a cover letter identifying the application as a provisional application. Otherwise, the application will be treated as an application filed under paragraph (b) of this section.

(2) An application for patent filed under paragraph (b) of this section may be converted to a provisional application and be accorded the original filing date of the application filed under paragraph (b) of this section. The grant of such a request for conversion will not entitle applicant to a refund of the fees that were properly paid in the application filed under paragraph (b) of this section. Such a request for conversion must be accompanied by the processing fee set forth in § 1.17(q) and be filed prior to the earliest of:

(i) Abandonment of the application filed under paragraph (b) of this section;

(ii) Payment of the issue fee on the application filed under paragraph (b) of this section;

(iii) Expiration of twelve months after the filing date of the application filed under paragraph (b) of this section; or

(iv) The filing of a request for a statutory invention registration under § 1.293 in the application filed under paragraph (b) of this section.

(3) **>A provisional application filed under paragraph (c) of this section may be converted to a nonprovisional application filed under paragraph (b) of this section and accorded the original filing date of the provisional application. The conversion of a provisional application to a nonprovisional application will not result in either the refund of any fee properly paid in the provisional application or the application of any such fee to the filing fee, or any other fee, for the nonprovisional application. Conversion of a provisional application to a nonprovisional application under this paragraph will result in the term of any patent to issue from the application being measured from at least the filing date of the provisional application for which conversion is requested. Thus, applicants should consider avoiding this adverse patent term impact by filing a nonprovisional application claiming the benefit of the provisional application under 35 U.S.C. 119(e) (rather than converting the provisional application into a nonprovisional application pursuant to this paragraph). A request to convert a provisional application to a nonprovisional application must be accompanied by the fee set forth in § 1.17(i) and an amendment including at least one claim as prescribed by the second paragraph of 35 U.S.C. 112, unless the provisional application under paragraph (c) of this section otherwise contains at least one claim as prescribed by the second paragraph of 35 U.S.C.112. The nonprovisional application resulting from conversion of a provisional application must also include the filing fee, search fee, and examination fee for a nonprovisional application, an oath or declaration by the applicant pursuant to §§ 1.63, 1.162, or 1.175, and the surcharge required by § 1.16(f) if either the basic filing fee for a nonprovisional application or the oath or declaration was not present on the filing date accorded the resulting nonprovisional application (*i.e.*, the filing date of the original provisional application). A

request to convert a provisional application to a nonprovisional application must also be filed prior to the earliest of:

(i) Abandonment of the provisional application filed under paragraph (c) of this section; or

(ii) Expiration of twelve months after the filing date of the provisional application filed under paragraph (c) of this section.<

(4) A provisional application is not entitled to the right of priority under 35 U.S.C. 119 or 365(a) or § 1.55, or to the benefit of an earlier filing date under 35 U.S.C. 120, 121 or 365(c) or § 1.78 of any other application. No claim for priority under 35 U.S.C. 119(e) or § 1.78(a)(4) may be made in a design application based on a provisional application. No request under § 1.293 for a statutory invention registration may be filed in a provisional application. The requirements of §§ 1.821 through 1.825 regarding application disclosures containing nucleotide and/or amino acid sequences are not mandatory for provisional applications.

(d) *Application filing requirements - Continued prosecution (nonprovisional) application*.

(1) A continuation or divisional application (but not a continuation-in-part) of a prior nonprovisional application may be filed as a continued prosecution application under this paragraph, provided that:

(i) The application is for a design patent;

(ii) The prior nonprovisional application is a design application that is complete as defined by § 1.51(b); and

(iii) The application under this paragraph is filed before the earliest of:

(A) Payment of the issue fee on the prior application, unless a petition under § 1.313(c) is granted in the prior application;

(B) Abandonment of the prior application; or

(C) Termination of proceedings on the prior application.

(2) The filing date of a continued prosecution application is the date on which a request on a separate paper for an application under this paragraph is filed. An application filed under this paragraph:

(i) Must identify the prior application;

(ii) Discloses and claims only subject matter disclosed in the prior application;

(iii) Names as inventors the same inventors named in the prior application on the date the application under this paragraph was filed, except as provided in paragraph (d)(4) of this section;

(iv) Includes the request for an application under this paragraph, will utilize the file jacket and contents of the prior application, including the specification, drawings and oath or declaration from the prior application, to constitute the new application, and will be assigned the application number of the prior application for identification purposes; and

(v) Is a request to expressly abandon the prior application as of the filing date of the request for an application under this paragraph.

(3) **>The filing fee, search fee, and examination fee for a continued prosecution application filed under this paragraph are the basic filing fee as set forth in § 1.16(b), the search fee as set forth in § 1.16 (l), and the examination fee as set forth in § 1.16(p).<

(4) An application filed under this paragraph may be filed by fewer than all the inventors named in the prior application, provided that the request for an application under this paragraph when filed is accompanied by a statement requesting deletion of the name or names of the person or persons who are not inventors of the invention being claimed in the new application. No person may be named as an inventor in an application filed under this paragraph who was not named as an inventor in the prior application on the date the application under this paragraph was filed, except by way of correction of inventorship under § 1.48.

(5) Any new change must be made in the form of an amendment to the prior application as it existed prior to the filing of an application under this paragraph. No amendment in an application under this paragraph (a continued prosecution application) may introduce new matter or matter that would have been new matter in the prior application. Any new specification filed with the request for an application under this paragraph will not be considered part of the original application papers, but will be treated as a substitute specification in accordance with § 1.125.

(6) The filing of a continued prosecution application under this paragraph will be construed to include a waiver of confidentiality by the applicant under 35 U.S.C. 122 to the extent that any member of the public, who is entitled under the provisions of § 1.14 to access to, copies of, or information concerning either the prior application or any continuing application filed under the provisions of this paragraph, may be given similar access to, copies of, or similar information concerning the other application or applications in the file jacket.

(7) A request for an application under this paragraph is the specific reference required by 35 U.S.C. 120 to every application assigned the application number identified in such request. No amendment in an application under this paragraph may delete this specific reference to any prior application.

(8) In addition to identifying the application number of the prior application, applicant should furnish in the request for an application under this paragraph the following information relating to the prior application to the best of his or her ability:

(i) Title of invention;

(ii) Name of applicant(s); and

(iii) Correspondence address.

(9) **>See § 1.103(b) for requesting a limited suspension of action in an application filed under this paragraph.<

(e) *Failure to meet filing date requirements*.

(1) If an application deposited under paragraph (b), (c), or (d) of this section does not meet the requirements of such paragraph to be entitled to a filing date, applicant will be so notified, if a correspondence address has been provided, and given a period of time within which to correct the filing error. If, however, a request for an application under paragraph (d) of this section does not meet the requirements of that paragraph because the application in which the request was filed is not a design application, and if the application in which the request was filed was itself filed on or after June 8, 1995, the request for an application under paragraph (d) of this section will be treated as a request for continued examination under § 1.114.

(2) Any request for review of a notification pursuant to paragraph (e)(1) of this section, or a notification that the original application papers lack a portion of the specification or drawing(s), must be by way of a petition pursuant to this paragraph accompanied by the fee set forth in § 1.17(f). In the absence of a timely (§ 1.181(f)) petition pursuant to this paragraph, the filing date of an application in which the applicant was notified of a filing error pursuant to paragraph (e)(1) of this section will be the date the filing error is corrected.

(3) If an applicant is notified of a filing error pursuant to paragraph (e)(1) of this section, but fails to correct the filing error within the given time period or otherwise timely (§ 1.181(f)) take action pursuant to this paragraph, proceedings in the application will be considered terminated. Where proceedings in an application are terminated pursuant to this paragraph, the application may be disposed of, and any filing fees, less the handling fee set forth in 1.21(n), will be refunded.

(f) **>*Completion of application subsequent to filing—Nonprovisional (including continued prosecution or reissue) application*.

(1) If an application which has been accorded a filing date pursuant to paragraph (b) or (d) of this section does not include the basic filing fee, the search fee, or the examination fee, or if an application which has been accorded a filing date pursuant to paragraph (b) of this section does not include an oath or declaration by the applicant pursuant to §§ 1.63, 1.162 or § 1.175, and applicant has provided a correspondence address (§1.33(a)), applicant will be notified and given a period of time within which to pay the basic filing fee, search fee, and examination fee, file an oath or declaration in an application under paragraph (b) of this section, and pay the surcharge if required by § 1.16(f) to avoid abandonment.

(2) If an application which has been accorded a filing date pursuant to paragraph (b) of this section does not include the basic filing fee, the search fee, the examination fee, or an oath or declaration by the applicant pursuant to §§ 1.63, 1.162 or § 1.175, and applicant has not provided a correspondence address (§ 1.33(a)), applicant has two months from the filing date of the application within which to pay the basic filing fee, search fee, and examination fee, file an oath or declaration, and pay the surcharge required by § 1.16(f) to avoid abandonment.

(3) If the excess claims fees required by §§ 1.16(h) and (i) and multiple dependent claim fee required by § 1.16(j) are not paid on filing or on later presentation of the claims for which the excess claims or multiple dependent claim fees are due, the fees required by §§ 1.16(h), (i) and (j) must be paid or the claims canceled by amendment prior to the expiration of the time period set for reply by the Office in any notice of fee deficiency. If the application size fee required by § 1.16(s) (if any) is not paid on filing or on later presentation of the amendment necessitating a fee or additional fee under § 1.16(s), the fee required by § 1.16(s) must be paid prior to the expiration of the time period set for reply by the Office in any notice of fee deficiency in order to avoid abandonment.

(4) This paragraph applies to continuation or divisional applications under paragraphs (b) or (d) of this section and to continuation-in-part applications under paragraph (b) of this section. See § 1.63(d) concerning the submission of a copy of the oath or declaration from the prior application for a continuation or divisional application under paragraph (b) of this section.

(5) If applicant does not pay the basic filing fee during the pendency of the application, the Office may dispose of the application.<

(g) **>*Completion of application subsequent to filing—Provisional application.*

(1) If a provisional application which has been accorded a filing date pursuant to paragraph (c) of this section does not include the cover sheet required by § 1.51(c)(1) or the basic filing fee (§ 1.16(d)), and applicant has provided a correspondence address (§ 1.33(a)), applicant will be notified and given a period of time within which to pay the basic filing fee, file a cover sheet (§ 1.51(c)(1)), and pay the surcharge required by § 1.16(g) to avoid abandonment.

(2) If a provisional application which has been accorded a filing date pursuant to paragraph (c) of this section does not include the cover sheet required by § 1.51(c)(1) or the basic filing fee (§ 1.16(d)), and applicant has not provided a correspondence address (§ 1.33(a)), applicant has two months from the filing date of the application within which to pay the basic filing fee, file a cover sheet (§ 1.51(c)(1)), and pay the surcharge required by § 1.16(g) to avoid abandonment.

(3) If the application size fee required by § 1.16(s) (if any) is not paid on filing, the fee required by § 1.16(s) must be paid prior to the expiration of the time period set for reply by the Office in any notice of fee deficiency in order to avoid abandonment.

(4) If applicant does not pay the basic filing fee during the pendency of the application, the Office may dispose of the application.<

(h) *Subsequent treatment of application - Nonprovisional (including continued prosecution) application.* An application for a patent filed under paragraphs (b) or (d) of this section will not be placed on the files for examination until all its required parts, complying with the rules relating thereto, are received, except that certain minor informalities may be waived subject to subsequent correction whenever required.

(i) *Subsequent treatment of application - Provisional application.* A provisional application for a patent filed under paragraph (c) of this section will not be placed on the files for examination and will become abandoned no later than twelve months after its filing date pursuant to 35 U.S.C. 111(b)(1).

(j) *Filing date of international application.* The filing date of an international application designating the United States of America is treated as the filing date in the United States of America under PCT Article 11(3), except as provided in 35 U.S.C. 102(e).

37 CFR 1.53 relates to application numbers, filing dates, and completion of applications. 37 CFR 1.53(a) indicates that an application number is assigned for identification purposes to any paper which purports to be an application for a patent, even if the application is incomplete or informal. The remaining sections of 37 CFR 1.53 treat nonprovisional applications filed under 35 U.S.C. 111(a) separately from provisional applications filed under 35 U.S.C. 111(b).

37 CFR 1.53(d) sets forth the filing date requirements for a continued prosecution application (CPA). A CPA is a nonprovisional application which must be filed on or after December 1, 1997. Only a continuation or divisional application (but not a continuation-in-part) may be filed as a CPA. See MPEP § 201.06(d). Effective July 14, 2003, CPA practice under 37 CFR 1.53(d) does not apply to utility and plant applications. CPAs can only be filed in design applications.

601.01(a) Nonprovisional Applications - Filed Under 35 U.S.C. 111(a) [R-3]

The procedure for filing a nonprovisional application under 35 U.S.C. 111(a) is set forth in 37 CFR 1.53(b) and 37 CFR 1.53(d). 37 CFR 1.53(b) may be used to file any original, reissue, or substitute nonprovisional application and any continuing application, i.e., continuation, divisional, or continuation-in-part. Under 37 CFR 1.53(b), a filing date is assigned to a nonprovisional application as of the date a specification containing a description and claim and any necessary drawings are filed in the U.S. Patent and Trademark Office (USPTO). Failure to meet any of the requirements in 37 CFR 1.53(b) will result in the application being denied a filing date. The filing date to be accorded such an application is the date on which all of the requirements of 37 CFR 1.53(b) are met.

37 CFR 1.53(d) may be used to file either a continuation or a divisional application (but not a continuation-in-part) of a design application. The prior nonprovisional application must be a design application that is complete as defined by 37 CFR 1.51(b). Any application filed under 37 CFR 1.53(d) must disclose and claim only subject matter disclosed in the prior nonprovisional application and must name as inventors the same or less than all of the inventors named in the prior nonprovisional application. Under 37 CFR 1.53(d), the filing date assigned is the date on which a request, on a separate paper, for an application under 37 CFR 1.53(d) is filed. An application filed under 37 CFR 1.53(d) must be filed before the earliest of:

(A) payment of the issue fee on the prior application, unless a petition under 37 CFR 1.313(c) is granted in the prior application;

(B) abandonment of the prior application; or

(C) termination of proceedings on the prior application.

The filing fee >, search fee and examination fee< for an application filed under 37 CFR 1.53(b) or 37 CFR 1.53(d) and the oath or declaration for an application filed under 37 CFR 1.53(b) can be submitted after the filing date. However, no amendment may introduce new matter into the disclosure of an application after its filing date.

37 CFR 1.53(e) provides for notifying applicant of any application which is incomplete under 37 CFR 1.53(b) or 37 CFR 1.53(d) and giving the applicant a time period to correct any omission. If the omission is not corrected within the time period given, the application will be returned or otherwise disposed of and a handling fee set forth in 37 CFR 1.21(n) will be retained from any refund of a filing fee.

37 CFR 1.53(f) provides that, where a filing date has been assigned to an application filed under 37 CFR 1.53(b) or 37 CFR 1.53(d), the applicant will be notified if a correspondence address has been provided and be given a period of time in which to file the missing *>fees<, oath or declaration, and to pay *>any< surcharge >(37 CFR 1.16(f))< due in order to prevent abandonment of the application. The time period usually set is 2 months from the mailing date of notification by the USPTO. This time period may be extended under 37 CFR 1.136(a).

>

For applications filed on or after December 8, 2004 but prior to July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(b) or (d), if the search and/or examination fees are paid on a date later than the filing date of the application, the surcharge under 37 CFR 1.16(f) is not required. For applications filed on or after July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(b) or (d), if any of the basic filing fee, the search fee, or the examination fee are paid on a date later than the filing date of the application, the surcharge under 37 CFR 1.16(f) is required.<

If the required basic filing fee is not timely paid, or the processing and retention fee set forth in 37 CFR 1.21(l) is not paid during the pendency of the application, the application will be disposed of. >Effective July 1, 2005, the processing and retention fee (formerly 37 CFR 1.21(l)) practice has been eliminated. The basic filing fee (rather than just the processing and retention fee set forth in former 37 CFR 1.21(l)) must be paid within the pendency of a nonprovisional application in order to permit benefit of the application to be claimed under 35 U.S.C. 120, 121, or 365(c) in a subsequent nonprovisional or international application.< The notification under 37 CFR 1.53(f) may be made simultaneously with any notification pursuant to 37 CFR 1.53(e). If no correspondence address is included in the application, applicant has 2 months from the filing date to file the *>fee(s)<, oath or declaration and to pay the >required< surcharge as set forth in 37 CFR 1.16*>(f)< in order to prevent abandonment of the application.

Copies of an application will be provided by the USPTO upon request and payment of the fee set forth in 37 CFR 1.19(b) unless the application has been disposed of (see 37 CFR 1.53(e) and (f)). *>Prior to July 1, 2005, the< basic filing fee or the processing and retention fee must be paid in a nonprovisional application, if any claim for benefits under 35 U.S.C. 120, 121, or 365(c) based on that application is made in a subsequently filed copending nonprovisional application. **>Effective July 1, 2005, the basic filing fee must be paid within the pendency of a nonprovisional application in order to permit benefit of the application to be claimed under 35 U.S.C. 120, 121 or 365(c) in a subsequent nonprovisional or international application. See 37 CFR 1.78(a)(1).<

37 CFR 1.53(h) indicates that a patent application will not be forwarded for examination on the merits until all required parts have been received. 37 CFR 1.53(j) indicates that international applications filed under the Patent Cooperation Treaty which designate the United States of America are considered to have a United States filing date under PCT Article 11(3), except as provided in 35 U.S.C. 102(e), on the date the requirements of PCT Article 11(1)(i) to (iii) are met.

In accordance with the provisions of 35 U.S.C. 111(a) and 37 CFR 1.53(b), a filing date is granted to a nonprovisional application for patent, which includes at least a specification containing a description pursuant to 37 CFR 1.71 and at least one claim pursuant to 37 CFR 1.75, and any drawing referred to in the specification or required by 37 CFR 1.81(a), which is filed in the U.S. Patent and Trademark Office. If an application which has been accorded a filing date does not include the appropriate filing fee>, search fee, examination fee,< or oath or declaration, applicant will be so notified and given a period of time within which to file the missing parts to complete the application and to pay the surcharge as set forth in 37 CFR 1.16*>(f)< in order to prevent abandonment of the application.

Applicants should submit a copy of the notice(s) to file missing parts and the notice(s) of incomplete applications with the reply submitted to the U.S. Patent and Trademark Office. Applicants should also include the application number on all correspondence to the Office. These measures will aid the Office in matching papers to applications, thereby expediting the processing of applications.

In order for the Office to so notify the applicant, a correspondence address must also be provided in the application. The correspondence address may be different from the mailing (post office) address of the applicant. For example, the address of applicant's registered attorney or agent may be used as the correspondence address. If applicant fails to provide the Office with a correspondence address, the Office will be unable to provide applicant with notification to complete the application and to pay the surcharge as set forth in 37 CFR 1.16*>(f)<. In such a case, applicant will be considered to have constructive notice as of the filing date that the application must be completed within 2 months from the filing date before

abandonment occurs per 37 CFR 1.53(f). This time period may be extended pursuant to 37 CFR 1.136.

The oath or declaration filed in reply to such a notice under 37 CFR 1.53(f) must be executed by the inventors and must identify the specification and any amendment filed with the specification **>which includes subject matter not otherwise included in the specification (including claims) or drawings of the application as filed.< See MPEP § 602. If an amendment is filed with the oath or declaration filed after the filing date of the application, it may be identified in the oath or declaration but may not include new matter. No new matter may be included after the filing date of the application. See MPEP § 608.04(b). If the oath or declaration improperly refers to an amendment **>filed after the filing date of the application which contains< new matter, a supplemental oath or declaration will be required pursuant to 37 CFR 1.67(b), deleting the reference to the amendment containing new matter. If an amendment is filed on the same day that the application filed under 37 CFR 1.53(b) is filed ** it *>is< a part of the original application papers and the question of new matter is not considered. Similarly, if the application papers are altered prior to execution of the oath or declaration and the filing of the application, new matter is not a consideration since the alteration is considered as part of the original disclosure.

601.01(b) Provisional Applications Filed Under 35 U.S.C. 111(b) [R-3]

A provisional application will be given a filing date in accordance with 37 CFR 1.53(c) as of the date the written description and any necessary drawings are filed in the Office. The filing date requirements for a provisional application set forth in 37 CFR 1.53(c) parallel the requirements for a nonprovisional application set forth in 37 CFR 1.53(b), except that no claim is required. Amendments, other than those required to make the provisional application comply with applicable regulations, are not permitted after the filing date of the provisional application.

When the specification or drawing are omitted, 37 CFR 1.53(e) requires that the applicant be notified and given a time period in which to submit the missing element to complete the filing. See MPEP § 601.01(f) and § 601.01(g) for treatment of applications filed without drawings, or filed without all figures of drawings, respectively.

37 CFR 1.53(c)(1) requires all provisional applications be filed with a cover sheet, which may be an application data sheet (37 CFR 1.76) or a cover letter identifying the application as a provisional application. The Office will treat an application as having been filed under paragraph (b), unless the application is clearly identified as a provisional application. A provisional application, which is identified as such, but which does not have a complete cover sheet as required by 37 CFR 1.51(c)(1) will be treated as a provisional application. However, the complete cover sheet and a surcharge will be required to be submitted at a later date in conformance with 37 CFR 1.53(g).

When the provisional application does not have a complete cover sheet or the appropriate fee, the applicant will be notified pursuant to 37 CFR 1.53(g) and given a time period in which to provide the necessary fee or cover sheet and to pay the surcharge as set forth in 37 CFR 1.16*>(g)< in order to avoid abandonment of the application. The time period will usually be set at 2 months from the date of notification. This time period may be extended under 37 CFR 1.136(a). If the filing fee is not timely paid, the Office may dispose of the provisional application. If no correspondence address has been provided, applicant has 2 months from the filing date to file the basic filing fee, cover sheet, and to pay the surcharge as set forth in 37 CFR 1.16*>(g)< in order to avoid abandonment of the provisional application. Copies of a provisional application will be provided by the USPTO upon request and payment of the fee set forth in 37 CFR 1.19(b) unless the provisional application has been disposed of (see 37 CFR 1.53(e) and (g)).

The basic filing fee must be paid in a provisional application on filing or within the time period set forth in 37 CFR 1.53(g), and the provisional application must be entitled to a filing date under 37 CFR 1.53(c), if any claim for benefits under 35 U.S.C. 119(e) based on that application is made in a subsequently filed nonprovisional application. 37 CFR 1.78(a)(4).

37 CFR 1.53(e)(2) requires that any request for review of a refusal to accord an application a filing date be made by way of a petition accompanied by the fee set forth in 37 CFR 1.17*>(f)< (see MPEP § 506.02).

601.01(c) Conversion to or from a Provisional Application [R-7]

I. CONVERSION FROM A NONPROVISIONAL APPLICATION TO A PROVISIONAL APPLICATION

37 CFR 1.53. Application number, filing date, and completion of application.

*****

(c)(2) An application for patent filed under paragraph (b) of this section may be converted to a provisional application and be accorded the original filing date of the application filed under paragraph (b) of this section. The grant of such a request for conversion will not entitle applicant to a refund of the fees that were properly paid in the application filed under paragraph (b) of this section. Such a request for conversion must be accompanied by the processing fee set forth in § 1.17(q) and be filed prior to the earliest of:

(i) Abandonment of the application filed under paragraph (b) of this section;

(ii) Payment of the issue fee on the application filed under paragraph (b) of this section;

(iii) Expiration of twelve months after the filing date of the application filed under paragraph (b) of this section; or

(iv) The filing of a request for a statutory invention registration under § 1.293 in the application filed under paragraph (b) of this section.

*****

An application filed under 37 CFR 1.53(b) may be converted to a provisional application in accordance with the procedure described in 37 CFR 1.53(c)(2). The procedure requires the filing of a request for conversion and the processing fee set forth in 37 CFR 1.17(q) >(a provisional application filing fee is not required)<. Filing of the request in the nonprovisional application is required prior to the abandonment of the 37 CFR 1.53(b) application, the payment of the issue fee, the expiration of 12 months after the filing date of the 37 CFR 1.53(b) application, or the filing of a request for a statutory invention registration under 37 CFR 1.293, whichever event is earlier. The grant of any such request does not entitle applicant to a refund of the fees properly paid in the application filed under 37 CFR 1.53(b).

Converting a nonprovisional application to a provisional application will not avoid the publication of the nonprovisional application unless the request to convert is recognized in sufficient time to permit the appropriate officials to remove the nonprovisional application from the publication process. The Office cannot ensure that it can remove an application from publication or avoid publication of application information any time after the publication process for the application has been initiated. For information on procedures for removing an application from publication, see MPEP § 1120.

A provisional application is not entitled to claim priority to or benefit of a prior-filed application under 35 U.S.C. 119, 120, 121, or 365. See MPEP § 201.04(b). After the nonprovisonal application has been converted to a provisional application, any priority or benefit claims submitted in the nonprovisional application will be disregarded.

Applicants who wish to file a request for conversion under 37 CFR 1.53(c)(2) by mail should designate "Mail Stop Conversion" as part of the U. S. Patent and Trademark Office address.

II. CONVERSION FROM A PROVISIONAL APPLICATION TO A NONPROVISIONAL APPLICATION

37 CFR 1.53. Application number, filing date, and completion of application.

*****

(3) A provisional application filed under paragraph (c) of this section may be converted to a nonprovisional application filed under paragraph (b) of this section and accorded the original filing date of the provisional application. The conversion of a provisional application to a nonprovisional application will not result in either the refund of any fee properly paid in the provisional application or the application of any such fee to the filing fee, or any other fee, for the nonprovisional application. Conversion of a provisional application to a nonprovisional application under this paragraph will result in the term of any patent to issue from the application being measured from at least the filing date of the provisional application for which conversion is requested. Thus, applicants should consider avoiding this adverse patent term impact by filing a nonprovisional application claiming the benefit of the provisional application under 35 U.S.C. 119(e) (rather than converting the provisional application into a nonprovisional application pursuant to this paragraph). A request to convert a provisional application to a nonprovisional application must be accompanied by the fee set forth in § 1.17(i) and an amendment including at least one claim as prescribed by the second paragraph of 35 U.S.C. 112, unless the provisional application under para-

graph (c) of this section otherwise contains at least one claim as prescribed by the second paragraph of 35 U.S.C.112. The nonprovisional application resulting from conversion of a provisional application must also include the filing fee, search fee, and examination fee for a nonprovisional application, an oath or declaration by the applicant pursuant to §§ 1.63, 1.162, or 1.175, and the surcharge required by § 1.16(f) if either the basic filing fee for a nonprovisional application or the oath or declaration was not present on the filing date accorded the resulting nonprovisional application (*i.e.*, the filing date of the original provisional application). A request to convert a provisional application to a nonprovisional application must also be filed prior to the earliest of:

(i) Abandonment of the provisional application filed under paragraph (c) of this section; or

(ii) Expiration of twelve months after the filing date of the provisional application filed under paragraph (c) of this section.

*****

An application filed under 37 CFR 1.53(c) may be converted to a nonprovisional application in accordance with the procedure described in 37 CFR 1.53(c)(3). Applicants should carefully consider the patent term consequences of requesting conversion rather than simply filing a nonprovisional application claiming the benefit of the filing date of the provisional application under 35 U.S.C. 119(e). Claiming the benefit of the provisional application under 35 U.S.C. 119(e) is less expensive and will result in a longer patent term. The procedure requires the filing of a request for the conversion of the provisional application to a nonprovisional application and the fee set forth in 37 CFR 1.17(i) as well as the basic filing fee, search fee, and examination fee for the nonprovisional application. In addition, if the provisional application was not filed with an executed oath or declaration and the appropriate fees for a nonprovisional application, the surcharge set forth in 37 CFR 1.16(f) is required. See MPEP § 601.01(a). Filing of the request for conversion in the provisional application is required prior to the abandonment of the provisional application or the expiration of 12 months after the filing date of the 37 CFR 1.53(c) application, whichever event is earlier. The grant of any such request does not entitle applicant to a refund of the fees properly paid in the application filed under 37 CFR 1.53(c).

Applicants who wish to file a request for conversion under 37 CFR 1.53(c)(3) by mail should designate "Mail Stop Conversion" as part of the U. S. Patent and Trademark Office address.

601.01(d) Application Filed Without All Pages of Specification [R-7]

The Office of **>Patent Application Processing (OPAP)< reviews application papers to determine whether all of the pages of specification are present in the application. If the application is filed without all of the page(s) of the specification, but containing something that can be construed as a written description, at least one drawing figure, if necessary under 35 U.S.C. 113 (first sentence), and, in a nonprovisional application, at least one claim, *>OPAP< will mail a "Notice of Omitted Items" indicating that the application papers so deposited have been accorded a filing date, but are lacking some page(s) of the specification.

If the application does not contain anything that can be construed as a written description, *>OPAP< will mail a Notice of Incomplete Application indicating that the application lacks the specification required by 35 U.S.C. 112 and no filing date is granted.

I. APPLICATION ENTITLED TO FILING DATE

The mailing of a "Notice of Omitted Item(s)" will permit the applicant to:

(A) promptly establish prior receipt in the USPTO of the page(s) at issue. An applicant asserting that the page(s) was in fact received by the USPTO with the application papers must, within 2 months from the date of the "Notice of Omitted Item(s)," file a petition under 37 CFR 1.53(e) with the petition fee set forth in 37 CFR 1.17(f), along with evidence of such deposit (37 CFR 1.181(f)). The petition fee will be refunded if it is determined that the page(s) was in fact received by the USPTO with the application papers deposited on filing. The 2-month period is not extendable under 37 CFR 1.136;

(B) promptly submit the omitted page(s) in a nonprovisional application and accept the date of such submission as the application filing date. An applicant desiring to submit the omitted page(s) in a nonprovisional application and accept the date of such submission as the application filing date must, within 2 months from the date of the "Notice of Omitted Item(s)," file any omitted page(s) with an oath or declaration in compliance with 37 CFR 1.63 and 37 CFR 1.64 referring to such page(s) and a petition under 37

CFR 1.182 with the petition fee set forth in 37 CFR 1.17(f), requesting the later filing date (37 CFR 1.181(f)). The 2-month period is not extendable under 37 CFR 1.136; or

(C) accept the application as deposited in the USPTO. Applicant may accept the application as deposited in the USPTO by either:

(1) not filing a petition under 37 CFR 1.53(e) or 37 CFR 1.182 (and the required petition fee) as discussed above within 2 months of the date of the "Notice of Omitted Item(s)". The failure to file a petition under 37 CFR 1.53(e) or 37 CFR 1.182 will be treated as constructive acceptance by the applicant of the application as deposited in the USPTO. The application will maintain the filing date as of the date of deposit of the application papers in the USPTO, and the original application papers (i.e., the original disclosure of the invention) will include only those application papers present in the USPTO on the date of deposit. Amendment of the specification is required in a nonprovisional application to renumber the pages consecutively and cancel any incomplete sentences caused by the absence of the omitted page(s). Such amendment should be by way of preliminary amendment submitted prior to the first Office action to avoid delays in the prosecution of the application, or

(2) filing an amendment under 37 CFR 1.57(a). If an application was filed on or after September 21, 2004, and contains a claim under 37 CFR 1.55 for priority of a prior-filed foreign application, or a claim under 37 CFR 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application that was present on the filing date of the application, and the omitted portion of the specification was inadvertently omitted from the application and is completely contained in the prior-filed application, applicant may submit an amendment to include the inadvertently omitted portion of the specification pursuant to 37 CFR 1.57(a). Such amendment should be by way of a preliminary amendment and the preliminary amendment must be submitted within 2 months from the date of the "Notice of Omitted Item(s)." The amendment should be identified as an amendment pursuant to 37 CFR 1.57(a) and must comply with the requirements of 37 CFR 1.57(a) and 37 CFR 1.121. See MPEP § 201.17. The application will maintain the filing date as of the date of deposit of the original application papers in the USPTO. The original application papers (i.e., the original disclosure of the invention) will include only those application papers present in the USPTO on the original date of deposit. The 2-month period is not extendable under 37 CFR 1.136.

Any petition under 37 CFR 1.53(e) or 37 CFR 1.182 not filed within the 2-month period set in the "Notice of Omitted Item(s)" may be dismissed as untimely. 37 CFR 1.181(f). Under the adopted procedure, the USPTO may strictly adhere to the 2-month period set forth in 37 CFR 1.181(f), and dismiss as untimely any petition not filed within the 2-month period. This strict adherence to the 2-month period set forth in 37 CFR 1.181(f) is justified as such applications will now be forwarded for examination at the end of the 2-month period. It is further justified in instances in which applicant seeks to submit the omitted page(s) in a nonprovisional application and request the date of such submission as the application filing date as: (A) according the application a filing date later than the date of deposit may affect the date of expiration of any patent issuing on the application due to the changes to 35 U.S.C. 154 contained in Public Law 103-465, § 532, 108 Stat. 4809 (1994); and (B) the filing of a continuation-in-part application is a sufficiently equivalent mechanism for adding additional subject matter to avoid the loss of patent rights.

The submission of omitted page(s) in a nonprovisional application and acceptance of the date of such submission as the application filing date is tantamount to simply filing a new application. Thus, applicants should consider filing a new application as an alternative to submitting a petition under 37 CFR 1.182 (with the petition fee under 37 CFR 1.17(f)) with any omitted page(s), which is a cost effective alternative in instances in which a nonprovisional application is deposited without filing fees. Likewise, in view of the relatively low filing fee for provisional applications, and the USPTO's desire to minimize the processing of provisional applications, the USPTO will not grant petitions under 37 CFR 1.182 to accept omitted page(s) and accord an application filing date as of the date of such submission in provisional applications. The applicant should simply file a new completed provisional application.

Applications in which a "Notice of Omitted Item(s)" has been mailed will be retained in *>OPAP< for a period of 2 months from the mailing

date of the notice. Nonprovisional applications that are complete under 37 CFR 1.51(b) will then be forwarded to the appropriate Technology Center for examination of the application. Provisional applications that are complete under 37 CFR 1.51(c) will then be forwarded to the Files Repository. The current practice for treating applications that are not complete under 37 CFR 1.51(b) and (c) will remain unchanged (37 CFR 1.53(f) and (g)).

II. APPLICATION NOT ENTITLED TO FILING DATE

If the application does not contain anything that can be construed as a written description, *>OPAP< will mail a Notice of Incomplete Application indicating that the application lacks the specification required by 35 U.S.C. 112. Applicant may:

(A) file a petition under 37 CFR 1.53(e) with the petition fee set forth in 37 CFR 1.17(f), asserting that (1) the missing specification was submitted, or (2) the application papers as deposited contain an adequate written description under 35 U.S.C. 112. The petition under 37 CFR 1.53(e) must be accompanied by sufficient evidence (37 CFR 1.181(b)) to establish applicant's entitlement to the requested filing date (e.g., a date-stamped postcard receipt (MPEP § 503) to establish prior receipt in the USPTO of the missing specification);

(B) submit the omitted specification, including at least one claim in a nonprovisional application, accompanied by an oath or declaration in compliance with 37 CFR 1.63 and 37 CFR 1.64 referring to the specification being submitted and accept the date of such submission as the application filing date; or

(C) submit an amendment under 37 CFR 1.57(a). If an application was filed on or after September 21, 2004, and contains a claim under 37 CFR 1.55 for priority of a prior-filed foreign application, or a claim under 37 CFR 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application that was present on the filing date of the application, and the specification was inadvertently omitted from the application and is completely contained in the prior-filed application, applicant may submit an amendment to include the inadvertently omitted specification pursuant to 37 CFR 1.57(a). The amendment must be accompanied by a petition under 37 CFR 1.57(a)(3) along with the petition fee set forth in 37 CFR 1.17(f). See MPEP § 201.17. The amendment should be identified as an amendment pursuant to 37 CFR 1.57(a) and must comply with the requirements of 37 CFR 1.57(a) and 37 CFR 1.121. The 2-month period is not extendable under 37 CFR 1.136.

Applications in which a "Notice of Incomplete Application" has been mailed will be retained in *>OPAP< to await action by the applicant since further action by the applicant is necessary for the application to be accorded a filing date. Unless applicant completes the application, or files a petition under 37 CFR 1.53(e) with the petition fee set forth in 37 CFR 1.17(f), or files a petition under 37 CFR 1.57(a)(3) with the petition fee set forth in 37 CFR 1.17(f), within the period set in the "Notice of Incomplete Application," the application will be processed as an incomplete application under 37 CFR 1.53(e).

III. APPLICATION LOCATED IN A TECHNOLOGY CENTER

If it is discovered that an application, located in a Technology Center (TC), was filed without all of the page(s) of the specification, and a Notice of Omitted Items has not been mailed by *>OPAP<, the examiner should review the application to determine whether the application is entitled to a filing date. An application is entitled to a filing date if the application contains something that can be construed as a written description, at least one drawing figure (if necessary under 35 U.S.C. 113, first sentence), and at least one claim.

A. Application Entitled to a Filing Date

If the application is entitled to a filing date, the examiner should notify applicant of the omission in the next Office action and require applicant to do one of the following:

(A) accept the application, as filed, without all of the page(s) of the specification;

(B) file any omitted page(s) with an oath or declaration in compliance with 37 CFR 1.63 and 37 CFR 1.64 referring to the omitted page(s) and a petition under 37 CFR 1.182 with the petition fee set forth in 37 CFR 1.17(f), requesting the date of submission of the omitted page(s) as the application filing date; or

(C) file a petition under 37 CFR 1.53(e) with the petition fee set forth in 37 CFR 1.17(f) alleging that

the page(s) indicated as omitted was in fact deposited with the USPTO with the application papers, including any and all evidence supporting the allegation. See MPEP § 503. The petition fee will be refunded if it is determined that the page(s) was in fact received by the USPTO with the application papers deposited on filing.

If applicant is willing to accept the application, as filed, without all of the page(s) of the application (item A above), an amendment of the specification is required to renumber the pages of the application consecutively and to cancel any incomplete sentences caused by the absence of the omitted page(s). The amendment should be submitted in response to the Office action.

If an application was filed on or after September 21, 2004, and contains a claim under 37 CFR 1.55 for priority of a prior-filed foreign application, or a claim under 37 CFR 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application that was present on the filing date of the application, and the omitted portion of the specification was inadvertently omitted from the application and is completely contained in the prior-filed application, applicant may submit an amendment to include the inadvertently omitted portion of the specification pursuant to 37 CFR 1.57(a). The amendment should be submitted in response to the Office action and must comply with 37 CFR 1.57(a) and 37 CFR 1.121. See MPEP § 201.17.

Any petition filed in accordance with item B or C above should be filed with the TC. The TC will match the petition with the application file and forward the application file with the petition to the Office of Petitions, along with a brief explanation as to the page(s) of the specification that has been omitted on filing, for consideration of the petition in due course. For Image File Wrapper (IFW) processing, see IFW Manual section 5.3.

B. Application NOT Entitled to a Filing Date

If upon review of the application, the examiner determines that the application is NOT entitled to a filing date, the examiner should forward the application to *>OPAP< for mailing of a "Notice of Incomplete Application."

601.01(e) Nonprovisional Application Filed Without at Least One Claim [R-3]

35 U.S.C. 111(a)(2) requires that an application for patent include, *inter alia*, "a specification as prescribed by section 112 of this title," and 35 U.S.C. 111(a)(4) provides that the "filing date of an application shall be the date on which the specification and any required drawing are received in the Patent and Trademark Office." 35 U.S.C. 112, first paragraph, provides, in part, that "[t]he specification shall contain a written description of the invention," and 35 U.S.C. 112, second paragraph, provides that "[t]he specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention." Also, the Court of Appeals for the Federal Circuit stated in *Litton Systems, Inc. v. Whirlpool Corp.*:

> Both statute, 35 U.S.C. 111 [(a)], and federal regulations, 37 CFR 1.51 [(b)], make clear the requirement that an application for a patent *must* include. . . a specification and claims. . . . The omission of any *one* of these component parts makes a patent application incomplete and thus not entitled to a filing date.

728 F.2d 1423, 1437, 221 USPQ 97, 105 (Fed. Cir. 1984)(citing *Gearon v. United States*, 121 F. Supp 652, 654, 101 USPQ 460, 461 (Ct. Cl. 1954), *cert. denied*, 348 U.S. 942, 104 USPQ 409 (1955))(emphasis in the original).

Therefore, in an application filed under 35 U.S.C. 111(a), a claim is a statutory requirement for according a filing date to the application. 35 U.S.C. 162 and 35 U.S.C. 171 make 35 U.S.C. 112 applicable to plant and design applications, and 35 U.S.C. 162 specifically requires the specification in a plant patent application to contain a claim. 35 U.S.C. 111(b)(2), however, provides that "[a] claim, as required by the second through fifth paragraphs of section 112, shall not be required in a provisional application." Thus, with the exception of provisional applications filed under 35 U.S.C. 111(b), any application filed without at least one claim is incomplete and not entitled to a filing date.

If a nonprovisional application does not contain at least one claim, a "Notice of Incomplete Application" will be mailed to the applicant(s) indicating that no

filing date has been granted and setting a period for submitting a claim. The filing date will be the date of receipt of at least one claim. See *In re Mattson*, 208 USPQ 168 (Comm'r Pat. 1980). An oath or declaration in compliance with 37 CFR 1.63 and 37 CFR 1.64 referring to the claim being submitted is also required.

If a nonprovisional application is accompanied by a preliminary amendment which cancels all claims without presenting any new >or substitute< claims, the Office will **>disapprove< such an amendment. See >37 CFR 1.115(b)(1) and< *Exxon Corp. v. Phillips Petroleum Co*., 265 F.3d 1249, 60 USPQ2d 1368 (Fed. Cir. 2001). Thus, the application will not be denied a filing date merely because such a preliminary amendment was submitted on filing. For fee calculation purposes, the Office will treat such an application as containing only a single claim.

As 37 CFR 1.53(c)(2) permits the conversion of an application filed under 35 U.S.C. 111(a) to an application under 35 U.S.C. 111(b), an applicant in an application, other than for a design patent, filed under 35 U.S.C. 111(a) on or after June 8, 1995, without at least one claim has the alternative of filing a petition under 37 CFR 1.53(c)(2) to convert such application into an application under 35 U.S.C. 111(b), which does not require a claim to be entitled to its date of deposit as a filing date. Such a petition, however, must be filed prior to the expiration of 12 months after the date of deposit of the application under 35 U.S.C. 111(a), and comply with the other requirements of 37 CFR 1.53(c)(2). See MPEP § 601.01(c).

The treatment of an application subsequent to the mailing of a "Notice of Incomplete Application" is discussed in MPEP § 601.01(d).

601.01(f) Applications Filed Without Drawings [R-7]

35 U.S.C. 111(a)(2)(B) and 35 U.S.C. 111(b)(1)(B) each provide, in part, that an "application shall include . . . a drawing as prescribed by section 113 of this title" and 35 U.S.C. 111(a)(4) and 35 U.S.C. 111(b)(4) each provide, in part, that the "filing date. . . shall be the date on which . . . any required drawing are received in the Patent and Trademark Office." 35 U.S.C. 113 (first sentence) in turn provides that an "applicant shall furnish a drawing where necessary for the understanding of the subject matter sought to be patented."

Applications filed without drawings are initially inspected to determine whether a drawing is referred to in the specification, and if not, whether a drawing is necessary for the understanding of the invention. 35 U.S.C. 113 (first sentence).

It has been USPTO practice to treat an application that contains at least one process or method claim as an application for which a drawing is not necessary for an understanding of the invention under 35 U.S.C. 113 (first sentence). The same practice has been followed in composition applications. Other situations in which drawings are usually not considered necessary for the understanding of the invention under 35 U.S.C. 113 (first sentence) are:

(A) *Coated articles or products*: where the invention resides solely in coating or impregnating a conventional sheet (*e.g.*, paper or cloth, or an article of known and conventional character with a particular composition), unless significant details of structure or arrangement are involved in the article claims;

(B) *Articles made from a particular material or composition*: where the invention consists in making an article of a particular material or composition, unless significant details of structure or arrangement are involved in the article claims;

(C) *Laminated structures*: where the claimed invention involves only laminations of sheets (and coatings) of specified material unless significant details of structure or arrangement (other than the mere order of the layers) are involved in the article claims; or

(D) *Articles, apparatus, or systems where sole distinguishing feature is presence of a particular material*: where the invention resides solely in the use of a particular material in an otherwise old article, apparatus or system recited broadly in the claims, for example:

(1) A hydraulic system distinguished solely by the use therein of a particular hydraulic fluid;

(2) Packaged sutures wherein the structure and arrangement of the package are conventional and the only distinguishing feature is the use of a particular material.

A nonprovisional application having at least one claim, or a provisional application having at least

some disclosure, directed to the subject matter discussed above for which a drawing is usually not considered essential for a filing date, not describing drawing figures in the specification, and filed without drawings will simply be processed, so long as the application contains something that can be construed as a written description. A nonprovisional application having at least one claim, or a provisional application having at least some disclosure, directed to the subject matter discussed above for which a drawing is usually not considered essential for a filing date, describing drawing figure(s) in the specification, but filed without drawings will be treated as an application filed without all of the drawing figures referred to in the specification as discussed in MPEP § 601.01(g), so long as the application contains something that can be construed as a written description. In a situation in which the appropriate Technology Center (TC) determines that drawings are necessary under 35 U.S.C. 113 (first sentence) the filing date issue will be reconsidered by the USPTO. The application will be returned to the Office of **>Patent Application Processing (OPAP)< for mailing of a "Notice of Incomplete Application."

If a nonprovisional application does not have at least one claim directed to the subject matter discussed above for which a drawing is usually not considered essential for a filing date, or a provisional application does not have at least some disclosure directed to the subject matter discussed above for which a drawing is usually not considered essential for a filing date, and is filed without drawings, >OPAP< will mail a "Notice of Incomplete Application" indicating that the application lacks drawings and that 35 U.S.C. 113 (first sentence) requires a drawing where necessary for the understanding of the subject matter sought to be patented.

Applicant may file a petition under 37 CFR 1.53(e) with the petition fee set forth in 37 CFR 1.17(f), asserting that (A) the drawing(s) at issue was submitted, or (B) the drawing(s) is not necessary under 35 U.S.C. 113 (first sentence) for a filing date. The petition must be accompanied by sufficient evidence to establish applicant's entitlement to the requested filing date (e.g., a date-stamped postcard receipt (MPEP § 503) to establish prior receipt in the USPTO of the drawing(s) at issue). Alternatively, applicant may submit drawing(s) accompanied by an oath or declaration in compliance with 37 CFR 1.63 and 1.64 referring to the drawing(s) being submitted and accept the date of such submission as the application filing date.

As an alternative to a petition under 37 CFR 1.53(e), if the drawing(s) was inadvertently omitted from an application filed on or after September 21, 2004, and the application contains a claim under 37 CFR 1.55 for priority of a prior-filed foreign application, or a claim under 37 CFR 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application, that was present on the filing date of the application, and the inadvertently omitted drawing(s) is completely contained in the prior-filed application, the applicant may submit the omitted drawing(s) by way of an amendment in compliance with 37 CFR 1.57(a). The amendment must be by way of a petition under 37 CFR 1.57(a)(3) accompanied by the petition fee set forth in 37 CFR 1.17(f). See MPEP § 201.17.

In design applications, >OPAP< will mail a "Notice of Incomplete Application" indicating that the application lacks the drawings required under 35 U.S.C. 113 (first sentence). The applicant may: (A) promptly file a petition under 37 CFR 1.53(e) with the petition fee set forth in 37 CFR 1.17(f), asserting that the missing drawing(s) was submitted; or (B) promptly submit drawing(s) accompanied by an oath or declaration in compliance with 37 CFR 1.63 and 37 CFR 1.64 and accept the date of such submission as the application filing date. Applicant may also be able to file an amendment by way of a petition under 37 CFR 1.57(a)(3) as discussed above. 37 CFR 1.153(a) provides that the claim in a design application "shall be in formal terms to the ornamental design for the article (specifying name) as shown, or as shown and described." As such, petitions under 37 CFR 1.53(e) asserting that drawings are unnecessary under 35 U.S.C. 113 (first sentence) for a filing date in a design application will not be found persuasive.

The treatment of an application subsequent to the mailing of a "Notice of Incomplete Application" is discussed in MPEP § 601.01(d).

601.01(g) Applications Filed Without All Figures of Drawings [R-7]

The Office of **>Patent Application Processing (OPAP)< reviews application papers to determine whether all of the figures of the drawings that are

mentioned in the specification are present in the application. If the application is filed without all of the drawing figure(s) referred to in the specification, and the application contains something that can be construed as a written description, at least one drawing, if necessary under 35 U.S.C. 113 (first sentence), and, in a nonprovisional application, at least one claim, >OPAP< will mail a "Notice of Omitted Item(s)" indicating that the application papers so deposited have been accorded a filing date, but are lacking some of the figures of drawings described in the specification.

The mailing of a "Notice of Omitted Item(s)" will permit the applicant to:

(A) promptly establish prior receipt in the USPTO of the drawing(s) at issue. An applicant asserting that the drawing(s) was in fact received by the USPTO with the application papers must, within 2 months from the date of the "Notice of Omitted Item(s)," file a petition under 37 CFR 1.53(e) with the petition fee set forth in 37 CFR 1.17(f), along with evidence of such deposit (37 CFR 1.181(f)). The petition fee will be refunded if it is determined that the drawing(s) was in fact received by the USPTO with the application papers deposited on filing. The 2-month period is not extendable under 37 CFR 1.136;

(B) promptly submit the omitted drawing(s) in a nonprovisional application and accept the date of such submission as the application filing date. An applicant desiring to submit the omitted drawing(s) in a nonprovisional application and accept the date of such submission as the application filing date must, within 2 months from the date of the "Notice of Omitted Item(s)," file any omitted drawing(s) with an oath or declaration in compliance with 37 CFR 1.63 and 37 CFR 1.64 referring to such drawing(s) and a petition under 37 CFR 1.182 with the petition fee set forth in 37 CFR 1.17(f), requesting the later filing date (37 CFR 1.181(f)). The 2-month period is not extendable under 37 CFR 1.136; or

(C) accept the application as deposited in the USPTO. Applicant may accept the application as deposited in the USPTO by either:

(1) not filing a petition under 37 CFR 1.53(e) or 37 CFR 1.182 (and the required petition fee) as discussed above within 2 months of the date of the "Notice of Omitted Item(s)." The failure to file a petition under 37 CFR 1.53(e) or 37 CFR 1.182 will be treated as constructive acceptance by the applicant of the application as deposited in the USPTO. The application will maintain the filing date as of the date of deposit of the original application papers in the USPTO. The original application papers (i.e., the original disclosure of the invention) will include only those application papers present in the USPTO on the original date of deposit. Amendment of the specification is required in a nonprovisional application to cancel all references to the omitted drawing, both in the brief and detailed descriptions of the drawings and including any reference numerals shown only in the omitted drawings. In addition, an amendment with replacement sheets of drawings in compliance with 37 CFR 1.121(d) is required in a nonprovisional application to renumber the drawing figures consecutively, if necessary, and amendment of the specification is required to correct the references to the drawing figures to correspond with any relabeled drawing figures, both in the brief and detailed descriptions of the drawings. Such amendment should be by way of preliminary amendment submitted prior to the first Office action to avoid delays in the prosecution of the application, or

(2) filing an amendment under 37 CFR 1.57(a). If an application was filed on or after September 21, 2004, and contains a claim under 37 CFR 1.55 for priority of a prior-filed foreign application, or a claim under 37 CFR 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application that was present on the filing date of the application, and the omitted portion of the drawings was inadvertently omitted from the application and is completely contained in the prior-filed application, applicant may submit an amendment to include the inadvertently omitted portion of the drawings pursuant to 37 CFR 1.57(a). Such amendment should be by way of a preliminary amendment and the preliminary amendment must be submitted within 2 months from the date of the "Notice of Omitted Item(s)." The amendment should be identified as an amendment pursuant to 37 CFR 1.57(a) and must comply with the requirements of 37 CFR 1.57(a) and 37 CFR 1.121. See MPEP § 201.17. The application will maintain the filing date as of the date of deposit of the original application papers in the USPTO. The original application papers (i.e., the original disclosure of the invention) will include only those application papers present in the USPTO on the original date of deposit.

The 2-month period is not extendable under 37 CFR 1.136.

Any petition under 37 CFR 1.53(e) or 37 CFR 1.182 not filed within the 2-month period set in the "Notice of Omitted Item(s)" may be dismissed as untimely. 37 CFR 1.181(f). Under the adopted procedure, the USPTO may strictly adhere to the 2-month period set forth in 37 CFR 1.181(f), and dismiss as untimely any petition not filed within the 2-month period. This strict adherence to the 2-month period set forth in 37 CFR 1.181(f) is justified as such applications will now be forwarded for examination at the end of the 2-month period. It is further justified in instances in which applicant seeks to submit the omitted drawing(s) in a nonprovisional application and request the date of such submission as the application filing date as: (A) according the application a filing date later than the date of deposit may affect the date of expiration of any patent issuing on the application due to the changes to 35 U.S.C. 154 contained in Public Law 103-465, § 532, 108 Stat. 4809 (1994); and (B) the filing of a continuation-in-part application is a sufficiently equivalent mechanism for adding additional subject matter to avoid the loss of patent rights.

The submission of omitted drawing(s) in a nonprovisional application and acceptance of the date of such submission as the application filing date is tantamount to simply filing a new application. Thus, applicants should consider filing a new application as an alternative to submitting a petition under 37 CFR 1.182 (with the petition fee under 37 CFR 1.17(f)) with any omitted drawing(s), which is a cost effective alternative in instances in which a nonprovisional application is deposited without filing fees. Likewise, in view of the relatively low filing fee for provisional applications, and the USPTO's desire to minimize the processing of provisional applications, the USPTO will not grant petitions under 37 CFR 1.182 to accept omitted drawing(s) and accord an application filing date as of the date of such submission in provisional applications. The applicant should simply file a new completed provisional application.

Applications in which a "Notice of Omitted Item(s)" has been mailed will be retained in *>OPAP< for a period of 2 months from the mailing date of the notice. Nonprovisional applications that are complete under 37 CFR 1.51(b) will then be forwarded to the appropriate Technology Center for examination of the application. Provisional applications that are complete under 37 CFR 1.51(c) will then be forwarded to the Files Repository. The current practice for treating applications that are not complete under 37 CFR 1.51(b) and (c) will remain unchanged (37 CFR 1.53(f) and (g)).

The treatment of an application subsequent to the mailing of a "Notice of Omitted Item(s)" is discussed in MPEP § 601.01(d).

Applications are often filed with drawings with several views of the invention where the views are labeled using a number-letter combination, e.g., Fig. 1A, Fig. 1B, and Fig. 1C. *>OPAP< will not mail a "Notice of Omitted Item(s)" if a figure which is referred to in the specification by a particular number cannot be located among the drawings, if the drawings include at least one figure labeled with that particular number in combination with a letter. For example, if the drawings show Figures 1A, 1B, and 1C and the brief description of the drawings refers only to Figure 1, this is an error in the specification which must be corrected, rather than an application filed without all figures of drawings.

APPLICATION LOCATED IN A TECHNOLOGY CENTER

If it is discovered that an application, located in a Technology Center (TC), was filed without all of the drawing figure(s) referred to in the specification, and a Notice of Omitted Items has not been mailed by the *>OPAP<, the examiner should review the application to determine whether the application is entitled to a filing date. An application is entitled to a filing date if the application contains something that can be construed as a written description, at least one drawing figure (if necessary under 35 U.S.C. 113, first sentence), and at least one claim.

A. Application Entitled to a Filing Date

If the application is entitled to a filing date, the examiner should notify applicant of the omission in the next Office action and require applicant to do one of the following:

(A) accept the application, as filed, without all of the drawing figure(s) referred to in the specification;

(B) file any omitted drawing figure(s) with an oath or declaration in compliance with 37 CFR 1.63

and 37 CFR 1.64 referring to the omitted drawing figure(s) and a petition under 37 CFR 1.182 with the petition fee set forth in 37 CFR 1.17(f), requesting the date of submission of the omitted drawing figure(s) as the application filing date; or

(C) file a petition under 37 CFR 1.53(e) with the petition fee set forth in 37 CFR 1.17(f) alleging that the drawing figure(s) indicated as omitted was in fact deposited with the USPTO with the application papers, including any and all evidence supporting the allegation. See MPEP § 503. The petition fee will be refunded if it is determined that the drawing figure(s) was in fact received by the USPTO with the application papers deposited on filing.

If applicant is willing to accept the application, as filed, without all of the drawing figure(s) referred to in the application (item A above), applicant is required to submit (1) an amendment to the specification canceling all references to the omitted drawing figure(s) including any reference numerals shown only in the omitted drawing figure(s), (2) an amendment with replacement sheets of drawings in compliance with 37 CFR 1.121(d) renumbering the drawing figure(s) submitted on filing consecutively, and (3) a further amendment to the specification correcting references to drawing figure(s) to correspond with the relabeled drawing figure(s), both in the brief and detailed descriptions of the drawings. The amendment should be submitted in response to the Office action.

If an application was filed on or after September 21, 2004, and contains a claim under 37 CFR 1.55 for priority of a prior-filed foreign application, or a claim under 37 CFR 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application that was present on the filing date of the application, and the omitted portion of the drawing(s) was inadvertently omitted from the application and is completely contained in the prior-filed application, applicant may submit an amendment to include the inadvertently omitted portion of the drawing(s) pursuant to 37 CFR 1.57(a). The amendment should be submitted in response to the Office action and must comply with 37 CFR 1.57(a) and 37 CFR 1.121. See MPEP § 201.17.

Any petition filed in accordance with item (B) or (C) above should be filed with the TC. The TC will match the petition with the application file and forward the application file with the petition to the Office of Petitions, along with a brief explanation as to the drawing figure(s) that has been omitted on filing, for consideration of the petition in due course.

B. Application NOT Entitled to a Filing Date

If upon review of the application, the examiner determines that the application is NOT entitled to a filing date because the application does not contain any drawing figure, and at least one drawing figure is necessary under 35 U.S.C 113, first sentence, the examiner should forward the application to *>OPAP< for mailing of a "Notice of Incomplete Application."

601.01(h) Forms [R-7]

The Office of **>Patent Application Processing (OPAP)< is no longer using pre-printed forms and is instead using individualized notices generated by a computer to notify applicants of defects.

601.02 Power of Attorney [R-7]

The attorney's or agent's full mailing address (including ZIP Code) must be given in every power of attorney. The telephone and fax numbers of the attorney or agent should also be included in the power. The prompt delivery of communications will thereby be facilitated.

A power of attorney may be incorporated in the oath or declaration form when the power of attorney is given by inventors. Otherwise, a separate power of attorney (e.g., PTO/SB/81) should be used. (See MPEP § 402.)

**>

PTO/SB/81 (07-08)
Approved for use through 12/31/2008. OMB 0651-0035
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

POWER OF ATTORNEY OR REVOCATION OF POWER OF ATTORNEY WITH A NEW POWER OF ATTORNEY AND CHANGE OF CORRESPONDENCE ADDRESS

Application Number	
Filing Date	
First Named Inventor	
Title	
Art Unit	
Examiner Name	
Attorney Docket Number	

I hereby revoke all previous powers of attorney given in the above-identified application.

☐ A Power of Attorney is submitted herewith.

OR

☐ I hereby appoint Practitioner(s) associated with the following Customer Number as my/our attorney(s) or agent(s) to prosecute the application identified above, and to transact all business in the United States Patent and Trademark Office connected therewith:

OR

☐ I hereby appoint Practitioner(s) named below as my/our attorney(s) or agent(s) to prosecute the application identified above, and to transact all business in the United States Patent and Trademark Office connected therewith:

Practitioner(s) Name	Registration Number

Please recognize or change the correspondence address for the above-identified application to:

☐ The address associated with the above-mentioned Customer Number.

OR

☐ The address associated with Customer Number:

OR

☐ Firm or Individual Name					
Address					
City		State		Zip	
Country					
Telephone		Email			

I am the:

☐ Applicant/Inventor.

OR

☐ Assignee of record of the entire interest. See 37 CFR 3.71.
Statement under 37 CFR 3.73(b) (Form PTO/SB/96) submitted herewith or filed on _____.

SIGNATURE of Applicant or Assignee of Record

Signature		Date

Title and Company			

NOTE: Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required. Submit multiple forms if more than one signature is required, see below*.

☐ *Total of _____ forms are submitted.

This collection of information is required by 37 CFR 1.31, 1.32 and 1.33. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

601.03 Change of Correspondence Address [R-7]

37 CFR 1.33. Correspondence respecting patent applications, reexamination proceedings, and other proceedings.

(a) **>*Correspondence address and daytime telephone number*. When filing an application, a correspondence address must be set forth in either an application data sheet (§ 1.76), or elsewhere, in a clearly identifiable manner, in any paper submitted with an application filing. If no correspondence address is specified, the Office may treat the mailing address of the first named inventor (if provided, see §§ 1.76 (b)(1) and 1.63 (c)(2)) as the correspondence address. The Office will direct, or otherwise make available, all notices, official letters, and other communications relating to the application to the person associated with the correspondence address. For correspondence submitted via the Office's electronic filing system, however, an electronic acknowledgment receipt will be sent to the submitter. The Office will generally not engage in double correspondence with an applicant and a patent practitioner, or with more than one patent practitioner except as deemed necessary by the Director. If more than one correspondence address is specified in a single document, the Office will select one of the specified addresses for use as the correspondence address and, if given, will select the address associated with a Customer Number over a typed correspondence address. For the party to whom correspondence is to be addressed, a daytime telephone number should be supplied in a clearly identifiable manner and may be changed by any party who may change the correspondence address. The correspondence address may be changed as follows:<

(1) *Prior to filing of § 1.63 oath or declaration by any of the inventors*. If a § 1.63 oath or declaration has not been filed by any of the inventors, the correspondence address may be changed by the party who filed the application. If the application was filed by a patent practitioner, any other patent practitioner named in the transmittal papers may also change the correspondence address. Thus, the inventor(s), any patent practitioner named in the transmittal papers accompanying the original application, or a party that will be the assignee who filed the application, may change the correspondence address in that application under this paragraph.

(2) *Where a § 1.63 oath or declaration has been filed by any of the inventors.* If a § 1.63 oath or declaration has been filed, or is filed concurrent with the filing of an application, by any of the inventors, the correspondence address may be changed by the parties set forth in paragraph (b) of this section, except for paragraph (b)(2).

*****

37 CFR 1.33(a) provides that the application must specify a correspondence address to which the Office will send notice, letters, and other communications relating to an application. The correspondence address must either be in an application data sheet (37 CFR 1.76) or in a clearly identifiable manner elsewhere in any papers submitted with the application filing. If more than one correspondence address is specified in a single document, the Office will select one of the specified addresses for use as the correspondence address and, if given, will select the address associated with a Customer Number over a typed correspondence address. Additionally, applicants will often specify the correspondence address in more than one paper that is filed with an application, and the address given in the different places sometimes conflicts. Where the applicant specifically directs the Office to use non-matching correspondence addresses in more than one paper, priority will be accorded to the correspondence address specified in the following order: (A) Application data sheet (ADS); (B) application transmittal; (C) oath or declaration (unless power of attorney is more current); and (D) power of attorney. Accordingly, if the ADS includes a typed correspondence address, and the declaration gives a different address (i.e., the address associated with a Customer Number) as the correspondence address, the Office will use the typed correspondence address as included on the ADS. In the experience of the Office, the ADS is the most recently created document and tends to have the most current address. After the correspondence address has been entered according to the above procedure, it will only be changed pursuant to 37 CFR 1.33(a)(1).

The submission of a daytime telephone number of the party to whom correspondence is to be addressed is requested pursuant to 37 CFR 1.33(a). While business is to be conducted on the written record (37 CFR 1.2), a daytime telephone number would be useful in initiating contact that could later be reduced to writing. Any party who could change the correspondence address could also change the telephone number.

37 CFR 1.33(a)(1) provides that the party filing the application and setting forth a correspondence address may later change the correspondence address provided that an executed oath or declaration under 37 CFR 1.63 by any of the inventors has <u>not</u> been filed. If a patent practitioner (i.e., registered attorney or agent) filed the application, any other patent practitioners named in the transmittal letter may also change the correspondence address. A patent practitioner named in a letterhead would not be considered as being named in the transmittal letter for purposes of chang-

ing the correspondence address. A clear identification of the individual as a representative would be required. If an application is filed by a company to whom the invention has been assigned or to whom there is an obligation to assign the invention, a person who has the authority to act on behalf of the company may change the correspondence address. Thus, the inventor(s), any patent practitioner named in the transmittal papers accompanying the original application, or a party that will be the assignee who filed the application, may change the correspondence address pursuant to 37 CFR 1.33(a)(1). The filing of an executed oath or declaration that does not include a correspondence address does not affect any correspondence address previously established on filing of the application, or changed pursuant to 37 CFR 1.33(a)(1).

Where a correspondence address has been established on filing of the application or changed pursuant to 37 CFR 1.33(a)(1) (prior to the filing of an executed oath or declaration under 37 CFR 1.63 by any of the inventors), that correspondence address remains in effect upon filing of an executed oath or declaration under 37 CFR 1.63 and can only be subsequently changed pursuant to 37 CFR 1.33(a)(2). Under 37 CFR 1.33(a)(2), where an executed oath or declaration under 37 CFR 1.63 has been filed by any of the inventors, the correspondence address may be changed by (A) a patent practitioner of record, (B) an assignee as provided for under 37 CFR 3.71(b), or (C) all of the applicants (37 CFR 1.41(b)) for patent, unless there is an assignee of the entire interest and such assignee has taken action in the application in accordance with 37 CFR 3.71. See 37 CFR1.33(a)(2).

Where an attorney or agent of record (or applicant, if he or she is prosecuting the application *pro se*) changes his or her correspondence address, he or she is responsible for promptly notifying the U.S. Patent and Trademark Office of the new correspondence address (including ZIP Code). See 37 CFR 11.11. The notification should also include his or her telephone number. A change of correspondence address may not be signed by an attorney or agent not of record (see MPEP § 405).

Unless the correspondence address is designated as the address associated with a Customer Number, a separate notification must be filed in each application for which a person is intended to receive communications from the Office. See MPEP § 403 for Customer Number Practice. In those instances where a change in the correspondence address of a registered attorney or agent is necessary in a plurality of applications, the notification filed in each application may be a reproduction of a properly executed, original notification. The original notice may either be sent to the Office of Enrollment and Discipline as notification to the Attorney's Roster of the change of address, or may be retained by applicant. See MPEP § 502.02.

Special care should be taken in continuation or divisional applications to ensure that any change of correspondence address in a prior application is reflected in the continuation or divisional application. For example, where a copy of the oath or declaration from the prior application is submitted for a continuation or divisional application filed under 37 CFR 1.53(b) and the copy of the oath or declaration from the prior application designates an old correspondence address, the Office may not recognize, in the continuation or divisional application, the change of correspondence address made during the prosecution of the prior application. Applicant is required to identify the change of correspondence address in the continuation or divisional application to ensure that communications from the Office are mailed to the current correspondence address. 37 CFR 1.63(d)(4).

See MPEP § 711.03(c) for treatment of petitions to revive applications abandoned as a consequence of failure to timely receive an Office action addressed to the old correspondence address.

The required notification of change of correspondence address need take no particular form. However, it should be provided in a manner calling attention to the fact that a change of address is being made. Thus, the mere inclusion, in a paper being filed for another purpose, of an address which is different from the previously provided correspondence address, without mention of the fact that an address change is being made would not ordinarily be recognized or deemed as instructions to change the correspondence address on the file record.

The obligation (see 37 CFR 11.11) of a registered attorney or agent to notify the Attorney's Roster by letter of any change of his or her address for entry on the register is separate from the obligation to file a notice of change of address filed in individual applications. See MPEP § 402.

601.04 National Stage Requirements of the United States as a Designated Office

See MPEP Chapter 1800, especially MPEP § 1893.01 for requirements for entry into the national stage before the Designated Office or Elected Office under the Patent Cooperation Treaty (PCT).

601.05 Bibliographic Information - Application Data Sheet (ADS) [R-5]

37 CFR 1.76. Application Data Sheet

(a) *Application data sheet*. An application data sheet is a sheet or sheets, that may be voluntarily submitted in either provisional or nonprovisional applications, which contains bibliographic data, arranged in a format specified by the Office. An application data sheet must be titled "Application Data Sheet" and must contain all of the section headings listed in paragraph (b) of this section, with any appropriate data for each section heading. If an application data sheet is provided, the application data sheet is part of the provisional or nonprovisional application for which it has been submitted.

(b) *Bibliographic data*. Bibliographic data as used in paragraph (a) of this section includes:

(1) *Applicant information*. This information includes the name, residence, mailing address, and citizenship of each applicant (§ 1.41(b)). The name of each applicant must include the family name, and at least one given name without abbreviation together with any other given name or initial. If the applicant is not an inventor, this information also includes the applicant's authority (§§ 1.42, 1.43, and 1.47) to apply for the patent on behalf of the inventor.

(2) *Correspondence information*. This information includes the correspondence address, which may be indicated by reference to a customer number, to which correspondence is to be directed (see § 1.33(a)).

(3) *Application information*. This information includes the title of the invention, a suggested classification, by class and subclass, the Technology Center to which the subject matter of the invention is assigned, the total number of drawing sheets, a suggested drawing figure for publication (in a nonprovisional application), any docket number assigned to the application, the type of application (*e.g.*, utility, plant, design, reissue, provisional), whether the application discloses any significant part of the subject matter of an application under a secrecy order pursuant to § 5.2 of this chapter (see § 5.2(c)), and, for plant applications, the Latin name of the genus and species of the plant claimed, as well as the variety denomination. The suggested classification and Technology Center information should be supplied for provisional applications whether or not claims are present. If claims are not present in a provisional application, the suggested classification and Technology Center should be based upon the disclosure.

(4) *Representative information*. This information includes the registration number of each practitioner having a power of attorney in the application (preferably by reference to a customer number). Providing this information in the application data sheet does not constitute a power of attorney in the application (see § 1.32).

(5) *Domestic priority information*. This information includes the application number, the filing date, the status (including patent number if available), and relationship of each application for which a benefit is claimed under 35 U.S.C. 119(e), 120, 121, or 365(c). Providing this information in the application data sheet constitutes the specific reference required by 35 U.S.C. 119(e) or 120, and § 1.78(a)(2) or § 1.78(a)(5), and need not otherwise be made part of the specification.

(6) *Foreign priority information*. This information includes the application number, country, and filing date of each foreign application for which priority is claimed, as well as any foreign application having a filing date before that of the application for which priority is claimed. Providing this information in the application data sheet constitutes the claim for priority as required by 35 U.S.C. 119(b) and § 1.55(a).

(7) *Assignee information*. This information includes the name (either person or juristic entity) and address of the assignee of the entire right, title, and interest in an application. Providing this information in the application data sheet does not substitute for compliance with any requirement of part 3 of this chapter to have an assignment recorded by the Office.

(c) *Supplemental application data sheets*. Supplemental application data sheets:

(1) May be subsequently supplied prior to payment of the issue fee either to correct or update information in a previously submitted application data sheet, or an oath or declaration under § 1.63 or § 1.67, except that inventorship changes are governed by § 1.48, correspondence changes are governed by § 1.33(a), and citizenship changes are governed by § 1.63 or § 1.67; and

(2) Must be titled "Supplemental Application Data Sheet," include all of the section headings listed in paragraph (b) of this section, include all appropriate data for each section heading, and must identify the information that is being changed, preferably with underlining for insertions, and strike-through or brackets for text removed.

(d) *Inconsistencies between application data sheet and other documents*. For inconsistencies between information that is supplied by both an application data sheet under this section and other documents.

(1) The latest submitted information will govern notwithstanding whether supplied by an application data sheet, an amendment to the specification, a designation of a correspondence address, or by a § 1.63 or § 1.67 oath or declaration, except as provided by paragraph (d)(3) of this section;

(2) The information in the application data sheet will govern when the inconsistent information is supplied at the same time by an amendment to the specification, a designation of correspondence address, or a § 1.63 or § 1.67 oath or declaration, except as provided by paragraph (d)(3) of this section;

(3) The oath or declaration under § 1.63 or § 1.67 governs inconsistencies with the application data sheet in the naming

of inventors (§ 1.41 (a)(1)) and setting forth their citizenship (35 U.S.C. 115);

(4) The Office will capture bibliographic information from the application data sheet (notwithstanding whether an oath or declaration governs the information). Thus, the Office shall generally, for example, not look to an oath or declaration under § 1.63 to see if the bibliographic information contained therein is consistent with the bibliographic information captured from an application data sheet (whether the oath or declaration is submitted prior to or subsequent to the application data sheet). Captured bibliographic information derived from an application data sheet containing errors may be corrected if applicant submits a request therefor and a supplemental application data sheet.

37 CFR 1.76 provides for the voluntary inclusion of an application data sheet in provisional and nonprovisional applications. A guide to preparing an application data sheet (Patent Application Bibliographic Data Entry Format) can be found on the U.S. Patent and Trademark Office (Office) Web site "http:\\www.uspto.gov".

An application data sheet (ADS) is a sheet or set of sheets containing bibliographic data, which is arranged in a format specified by the Office. When an application data sheet is provided in a provisional or nonprovisional application, the application data sheet becomes part of the provisional or nonprovisional application and must comply with 37 CFR 1.52. While the use of an application data sheet is optional, the Office prefers its use to help facilitate the electronic capturing of this important data. For example, in a national stage application filed under 35 U.S.C. 371, the Office could look to the publication of the international application for the title (see MPEP § 1893.03(e)) and to other documents for the listing of inventors and the correspondence address, but it is more desirable for the Office to only refer to a single document, i.e., an application data sheet. The data that is suggested to be supplied by way of an application data sheet can also be provided elsewhere in the application papers, but it is to applicant's advantage to submit the data via an application data sheet. To help ensure that the Office can, in fact, efficiently capture the data, the Office specifies a particular format to be used. The Office does not, however, provide an application data sheet paper form because of the variability in the data submitted (e.g., one application may have no domestic priority data and a single inventor, and others may have domestic priority data to a number of prior U.S. applications and have multiple joint inventors).

37 CFR 1.76(a) requires that any ADS contain the seven headings listed in 37 CFR 1.76(b) with any appropriate data for each section heading. The ADS must be titled "Application Data Sheet" and any label (e.g., the label "Given Name" in the "Applicant Information" heading) that does not contain any corresponding data will be interpreted by the Office to mean that there is no corresponding data for that label anywhere in the application. By requiring an ADS to contain all seven section headings, and any appropriate data for the sections, the accuracy of bibliographic data in patent applications will be enhanced and the need for corrected filing receipts related to Office errors will be reduced.

Bibliographic data under 37 CFR 1.76(b) includes: (1) applicant information; (2) correspondence information; (3) application information; (4) representative information; (5) domestic priority information; (6) foreign priority information; and (7) assignee information. The naming of the inventors and the setting forth of the citizenship of each inventor must be provided in the oath or declaration under 37 CFR 1.63 (as is required by 35 U.S.C 115) even if this information is provided in the application data sheet.

Applicant information includes the name, residence, mailing address, and citizenship of each applicant (37 CFR 1.41(b)). The name of each applicant must include the family name, and at least one given name without abbreviation together with any other given name or initial. If the applicant is not an inventor, this information also includes the applicant's authority (37 CFR 1.42, 1.43, and 1.47) to apply for the patent on behalf of the inventor. The "mailing address" is the address where applicant customarily receives mail.

Correspondence information includes the correspondence address, which may be indicated by reference to a customer number, to which correspondence is to be directed (see 37 CFR 1.33(a)).

Application information includes the title of the invention, a suggested classification by class and subclass, the Technology Center (TC) to which the subject matter of the invention is assigned, the total number of drawing sheets, a suggested drawing figure for publication (in a nonprovisional application), any docket number assigned to the application, and the type of application (e.g., utility, plant, design, reissue, provisional). Application information also includes

whether the application discloses any significant part of the subject matter of an application under a secrecy order pursuant to 37 CFR 5.2(c).

Although the submission of the information related to a suggested classification and TC is desired for both provisional and nonprovisional applications, the Office will not be bound to follow such information if submitted, as the Office will continue to follow its present procedures for classifying and assigning new applications. Similarly for the suggested drawing figure, the Office may decide to print another figure on the front page of any patent issuing from the application.

Application information also includes information about provisional applications, particularly their class and subclass, and the TC. Provisional applications are not examined or even processed (e.g., having a class and subclass assigned or being forwarded to a TC). Even though provisional applications are not examined, the TC and the class and subclass, if known to applicants, would be of benefit to the Office in giving an indication of where nonprovisional applications may be eventually received in the Office and their technologies so that the Office will be better able to plan for future workloads.

37 CFR 1.76(b)(3) also requests that the plant patent applicant state the Latin name and the variety denomination for the plant claimed. The Latin name and the variety denomination of the claimed plant are usually included in the specification of the plant patent application, and will be included in any plant patent or plant patent application publication if included in an application data sheet or patent application. The Office, pursuant to the "International Convention for the Protection of New Varieties of Plants" (generally known by its French acronym as the UPOV convention), has been asked to compile a database of the plants patented and the database must include the Latin name and the variety denomination of each patented plant. Having this information in separate sections of the plant patent will make the process of compiling this database more efficient.

Representative information includes the registration number appointed with a power of attorney in the application (preferably by reference to a customer number). 37 CFR 1.76(b)(4) states that providing this information in the application data sheet does not constitute a power of attorney in the application (see 37 CFR 1.32). This is because the Office does not expect the application data sheet to be executed by the party (applicant or assignee) who may appoint a power of attorney in the application.

Domestic priority information includes the application number (series code and serial number), the filing date, the status (including patent number if available), and relationship of each application for which a benefit is claimed under 35 U.S.C. 119(e), 120, 121, or 365(c). 37 CFR 1.76(b)(5) states that providing this information in the application data sheet constitutes the specific reference required by 35 U.S.C.119(e) or 120. Since the application data sheet, if provided, is considered part of the application, the specific reference to an earlier filed provisional or nonprovisional application in the application data sheet satisfies the "specific reference" requirement of 35 U.S.C.119(e)(1) or 120, and it also complies with 37 CFR 1.78(a)(2) (iii) or (a)(5)(iii). Thus, a specific reference does not otherwise have to be made in the specification, such as in the first sentence(s) of the specification. If continuity data is included in an application data sheet, but not in the first sentence(s) of the specification, the continuity data for the patent front page will be taken from the application data sheet. No continuity data will be included in the first sentence(s) of the specification if applicant does not provide it there. 37 CFR 1.76(b)(5) does not apply to provisional applications.

Foreign priority information includes the application number, country, and filing date of each foreign application for which priority is claimed, as well as any foreign application having a filing date before that of the application for which priority is claimed. 37 CFR 1.76(b)(6) states that providing this information in the application data sheet constitutes the claim for priority as required by 35 U.S.C. 119(b) and 37 CFR 1.55(a). The patent statute, 35 U.S.C. 119(b), does not require that a claim to the benefit of a prior foreign application take any particular form. 37 CFR 1.76(b)(6) does not apply to provisional applications.

37 CFR 1.76(b)(7) provides that the assignee information includes the name (either person or juristic entity) and address of the assignee of the entire right, title, and interest in an application. The inclusion of this information in the application data sheet does not substitute for compliance with any requirement of 37 CFR part 3 to have an assignment recorded by the

Office. Providing assignee information in the application data sheet is considered a request to include such information on the patent application publication, since there is no other reason for including such information in the application data sheet. Assignment information must be recorded to have legal effect.

Supplemental application data sheets may be subsequently supplied prior to payment of the issue fee to either correct or update information in a previously submitted application data sheet, or an oath or declaration under 37 CFR 1.63 or 1.67. See 37 CFR 1.76(c)(1). A supplemental data sheet cannot be used to correct the following: (1) inventorship changes (37 CFR 1.48); (2) correspondence changes (37 CFR 1.33(a)); and (3) citizenship changes (37 CFR 1.63 or 37 CFR 1.67). Supplemental application data sheets must be titled "Supplemental Application Data Sheet" and also contain all of the seven section headings listed in 37 CFR 1.76(b) with all appropriate data for each heading. Supplemental application data sheets identifying only the information that is being changed (added, deleted, or modified) in the supplemental ADS are not acceptable. A supplemental ADS containing only new or changed information is likely to confuse the record, create unnecessary work for the Office, and does not comply with 37 CFR 1.76. If no ADS was originally filed, but applicant wants to submit an ADS to correct, modify, or augment the original application data, the ADS, even though it is the first-filed ADS, must be titled "Supplemental Application Data Sheet."

SUPPLEMENTAL ADS SUBMISSIONS

When submitting an application data sheet supplemental to the initial filing of the application, to correct, modify, or augment the original application data sheet, the following applies:

(A) the supplemental application data sheet must be titled "Supplemental Application Data Sheet" (while the title "Supplemental Application Data Sheet" is preferred, "Supp. ADS", "Supplemental ADS" or other variations thereof will be accepted);

(B) the supplemental application data sheet must be a full replacement copy of the original ADS, if any, with each of the seven section headings listed in 37 CFR 1.76(b), and with all appropriate data for the section heading;

(C) the supplemental application data sheet must be submitted with all changes indicated, preferably with insertions or additions indicated by underlining, and deletions, with or without replacement data, indicated by strike-through or brackets; and

(D) the footer information should include the word "Supplemental" in place of "Initial" and should also contain the Application Number and Filing Date.

A supplemental ADS that is being used to correct data shown in an oath or declaration, such as foreign priority or residence information for an inventor, would show the original incorrect information with strike-through or brackets, and the new information with underlining, as if an ADS had originally been used to submit the information. For example, if the original oath or declaration included a foreign priority claim, in order to delete the foreign priority claim, applicant should provide a supplemental ADS showing the foreign priority claim with strike-through or brackets to ensure that the patent will reflect such change.

Resolution of inconsistent information supplied by both an application data sheet and other documents (e.g., the oath or declaration under 37 CFR 1.63, or 37 CFR 1.67) are addressed in 37 CFR 1.76(d). If an ADS is inconsistent with the information provided in another document that was submitted at the same time or previous to the ADS submission, the ADS will control. 37 CFR 1.76(d)(1) provides that the latest submitted information will govern notwithstanding whether supplied by an application data sheet, an amendment to the specification, a designation of a correspondence address, or by an oath or declaration under 37 CFR 1.63 or 37 CFR 1.67, except as provided by 37 CFR 1.76(d)(3). This is because the application data sheet is intended as the means by which applicants will provide most information to the Office. In the small number of instances where another document has more accurate information than a concurrently supplied application data sheet (37 CFR 1.76(d)(2)), a supplemental application data sheet should be submitted to conform the information presented by the supplemental application data sheet with the correct information in the other document(s) (37 CFR 1.76(d)(1)).

If an application is filed with an application data sheet improperly identifying the residence of one of the inventors, inventor B, and an executed 37 CFR

1.63 declaration setting forth the correct but different residence of inventor B, the Office will capture the residence of inventor B found in the application data sheet as the residence of B, and include that information in the filing receipt. If applicant desires correction of the residence, applicant should submit a supplemental application data sheet under 37 CFR 1.76(c), with the name of inventor B and the corrected residence for inventor B.

Pursuant to 37 CFR 1.76(d)(3), the oath or declaration under 37 CFR 1.63 or 37 CFR 1.67 governs inconsistencies with the application data sheet in the naming of inventors and setting forth their citizenship. If different inventors are listed in the application data sheet than are named in the oath or declaration for the application, the inventors named in the oath or declaration are considered to be the inventors named in the patent application. See 37 CFR 1.76(d)(3). Any change in the inventorship set forth in the oath or declaration under 37 CFR 1.63 must be by way of *>a request< under 37 CFR 1.48(a) notwithstanding identification of the correct inventive entity in an application data sheet or supplemental application data sheet. Similarly, if the oath or declaration under 37 CFR 1.63 incorrectly sets forth the citizenship of one of the inventors, that inventor must submit a supplemental oath or declaration under 37 CFR 1.67 with the correct citizenship notwithstanding the correct identification of the citizenship in an application data sheet or supplemental application data sheet. If the spelling of the inventor's name is incorrect, however, only a supplemental application data sheet is required. See MPEP § 605.04(b).

The Office will rely upon information supplied in the application data sheet over an oath or declaration to capture the data even where the type of information supplied (citizenship, inventorship) is governed by the oath or declaration according to statute (35 U.S.C. 115) or other rule (37 CFR 1.41(a)(1)). Where the oath or declaration under 37 CFR 1.63 or 37 CFR 1.67 contains the correct information regarding inventors or their citizenship and the application data sheet does not, even though the oath or declaration governs pursuant to 37 CFR 1.76(d)(3), the information in the application data sheet must be corrected by submission of a request for correction and a supplemental application data sheet. If the spelling of the inventor's name is incorrect, however, only a supplemental application data sheet is required. See MPEP § 605.04(b).

If an application is filed with an application data sheet correctly setting forth the citizenship of inventor B, and an executed 37 CFR 1.63 declaration setting forth a different incorrect citizenship of inventor B, the Office will capture the citizenship of inventor B found in the application data sheet. Applicant, however, must submit a supplemental oath or declaration under 37 CFR 1.67 by inventor B setting forth the correct citizenship even though it appears correctly in the application data sheet. A supplemental application data sheet cannot be used to correct the citizenship error in the oath or declaration. If, however, the error is one of residence, no change would be required (37 CFR 1.76(d)(2)).

Although 37 CFR 1.76 does not change the practice in MPEP § 201.03 and § 605.04(b) regarding correction of a typographical or transliteration error in the spelling of an inventor's name whereby all that is required is notification of the error to the Office, the Office strongly encourages the filing of an application data sheet or a supplemental application data sheet to correct a typographical or transliteration error in the spelling of an inventor's name. A supplemental oath or declaration is not required.

If applicant merely files a statement notifying the Office of the typographical or transliteration error in the spelling of an inventor's name without submitting an application data sheet or a supplemental application data sheet, any patent to issue is less likely to reflect the correct spelling since the spelling of the inventor's name is taken from the oath or declaration, or any subsequently filed application data sheet.

As to the submission of class/subclass information in the application data sheet, the Office notes that there is a distinction between permitting applicants to aid in the identification of the appropriate Art Unit to examine the application and requiring the Office to always honor such identification/request, which could lead to misuse by some applicants of forum shopping. Even when an applicant's identification of an Art Unit is appropriate, internal staffing/workload requirements may dictate that the application be handled by another Art Unit qualified to do so, particularly when the art or claims encompass the areas of expertise of more than one Art Unit.

An application data sheet must be labeled "Application Data Sheet" and should provide the following information:

Applicant Information
Inventor One Given Name:
Family Name:
Name Suffix:
Mailing Address Line One:
Mailing Address Line Two:
City:
State or Province:
Postal or Zip Code:

City of Residence:
State or Prov. of Residence:
Country of Residence:

Citizenship Country:

[repeat for additional inventors]

If the applicant is not an inventor, the applicant information should also include the applicant's authority to apply for the patent on behalf of the inventor (see 37 CFR 1.42, 1.43 and 1.47). For example, if the inventor is deceased or legally incapacitated, the applicant should include "Legal Representative" as the authority. Similarly, if a petition under 37 CFR 1.47(b) is filed, the applicant's authority would be "Party in Interest under 35 U.S.C. 118." If the application is filed by the Administrator of NASA, the applicant's authority would be "Government Property Interest.":

602 Original Oath or Declaration [R-7]

35 U.S.C. 25. Declaration in lieu of oath.

(a) The Director may by rule prescribe that any document to be filed in the Patent and Trademark Office and which is required by any law, rule, or other regulation to be under oath may be subscribed to by a written declaration in such form as the Director may prescribe, such declaration to be in lieu of the oath otherwise required.

(b) Whenever such written declaration is used, the document must warn the declarant that willful false statements and the like are punishable by fine or imprisonment, or both (18 U.S.C. 1001).

35 U.S.C. 26. Effect of defective execution.

Any document to be filed in the Patent and Trademark Office and which is required by any law, rule, or other regulation to be executed in a specified manner may be provisionally accepted by the Director despite a defective execution, provided a properly executed document is submitted within such time as may be prescribed.

35 U.S.C. 115. Oath of applicant.

The applicant shall make oath that he believes himself to be the original and first inventor of the process, machine, manufacture, or composition of matter, or improvement thereof, for which he solicits a patent; and shall state of what country he is a citizen. Such oath may be made before any person within the United States authorized by law to administer oaths, or, when made in a foreign country, before any diplomatic or consular officer of the United States authorized to administer oaths, or before any officer having an official seal and authorized to administer oaths in the foreign country in which the applicant may be, whose authority is proved by certificate of a diplomatic or consular officer of the United States, or apostille of an official designated by a foreign country which, by treaty or convention, accords like effect to apostilles of designated officials in the United States. Such oath is valid if it complies with the laws of the state or country where made. When the application is made as provided in this title by a person other than the inventor, the oath may be so varied in form that it can be made by him. For purposes of this section, a consular officer shall include any United States citizen serving overseas, authorized to perform notarial functions pursuant to section 1750 of the Revised Statutes, as amended (22 U.S.C. 4221).

37 CFR 1.63. Oath or declaration.

(a) An oath or declaration filed under § 1.51(b)(2) as a part of a nonprovisional application must:

(1) Be executed, *i.e.*, signed, in accordance with either § 1.66 or § 1.68. There is no minimum age for a person to be qualified to sign, but the person must be competent to sign, *i.e.*, understand the document that the person is signing;

(2) Identify each inventor by full name, including the family name, and at least one given name without abbreviation together with any other given name or initial;

(3) Identify the country of citizenship of each inventor; and

(4) State that the person making the oath or declaration believes the named inventor or inventors to be the original and first inventor or inventors of the subject matter which is claimed and for which a patent is sought.

(b) In addition to meeting the requirements of paragraph (a) of this section, the oath or declaration must also:

(1) Identify the application to which it is directed;

(2) State that the person making the oath or declaration has reviewed and understands the contents of the application, including the claims, as amended by any amendment specifically referred to in the oath or declaration; and

(3) State that the person making the oath or declaration acknowledges the duty to disclose to the Office all information known to the person to be material to patentability as defined in § 1.56.

(c) Unless such information is supplied on an application data sheet in accordance with § 1.76, the oath or declaration must also identify:

(1) The mailing address, and the residence if an inventor lives at a location which is different from where the inventor customarily receives mail, of each inventor; and

(2) Any foreign application for patent (or inventor's certificate) for which a claim for priority is made pursuant to § 1.55, and any foreign application having a filing date before that of the application on which priority is claimed, by specifying the application number, country, day, month, and year of its filing.

(d)(1)A newly executed oath or declaration is not required under § 1.51(b)(2) and § 1.53(f) in a continuation or divisional application, provided that:

(i) The prior nonprovisional application contained an oath or declaration as prescribed by paragraphs (a) through (c) of this section;

(ii) The continuation or divisional application was filed by all or by fewer than all of the inventors named in the prior application;

(iii) The specification and drawings filed in the continuation or divisional application contain no matter that would have been new matter in the prior application; and

(iv) A copy of the executed oath or declaration filed in the prior application, showing the signature or an indication thereon that it was signed, is submitted for the continuation or divisional application.

(2) The copy of the executed oath or declaration submitted under this paragraph for a continuation or divisional application must be accompanied by a statement requesting the deletion of the name or names of the person or persons who are not inventors in the continuation or divisional application.

(3) Where the executed oath or declaration of which a copy is submitted for a continuation or divisional application was originally filed in a prior application accorded status under § 1.47, the copy of the executed oath or declaration for such prior application must be accompanied by:

(i) A copy of the decision granting a petition to accord § 1.47 status to the prior application, unless all inventors or legal representatives have filed an oath or declaration to join in an application accorded status under § 1.47 of which the continuation or divisional application claims a benefit under 35 U.S.C. 120, 121, or 365(c); and

(ii) If one or more inventor(s) or legal representative(s) who refused to join in the prior application or could not be found or reached has subsequently joined in the prior application or another application of which the continuation or divisional application claims a benefit under 35 U.S.C. 120, 121, or 365(c), a copy of the subsequently executed oath(s) or declaration(s) filed by the inventor or legal representative to join in the application.

(4) Where the power of attorney or correspondence address was changed during the prosecution of the prior application, the change in power of attorney or correspondence address must be identified in the continuation or divisional application. Otherwise, the Office may not recognize in the continuation or divisional application the change of power of attorney or correspondence address during the prosecution of the prior application.

(5) A newly executed oath or declaration must be filed in a continuation or divisional application naming an inventor not named in the prior application.

(e) A newly executed oath or declaration must be filed in any continuation-in-part application, which application may name all, more, or fewer than all of the inventors named in the prior application.

37 CFR 1.68. Declaration in lieu of oath.

Any document to be filed in the Patent and Trademark Office and which is required by any law, rule, or other regulation to be under oath may be subscribed to by a written declaration. Such declaration may be used in lieu of the oath otherwise required, if, and only if, the declarant is on the same document, warned that willful false statements and the like are punishable by fine or imprisonment, or both (18 U.S.C. 1001) and may jeopardize the validity of the application or any patent issuing thereon. The declarant must set forth in the body of the declaration that all statements made of the declarant's own knowledge are true and that all statements made on information and belief are believed to be true.

18 U.S.C. 1001. Statements or entries generally.

Whoever, in any matter within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals, or covers up by any trick, scheme, or device a material fact, or makes any false, fictitious or fraudulent statements or representations, or makes or uses any false writing or document knowing the same to contain any false, fictitious or fraudulent statement or entry, shall be fined not more than $10,000 or imprisoned not more than five years, or both.

A provisional application does not require an oath or declaration to be complete. See 37 CFR 1.51(c).

I. OATH

A seal is usually impressed on an oath. See 37 CFR 1.66, MPEP § 604 and § 604.01. Documents with seals cannot be adequately scanned for retention in an Image File Wrapper, and since the Office maintains patent applications in an image form, the Office strongly encourages the use of declarations rather than oaths. However, oaths executed in many states including Alabama, Louisiana, Maryland, Massachusetts, New Jersey, New York, Rhode Island, South Carolina, and Virginia need not be impressed with a seal. See MPEP § 604 for execution of an oath, and MPEP § 604.01 and § 604.02 for information regarding seals and venue.

II. STATUTORY DECLARATIONS

U.S. Patent and Trademark Office personnel are authorized to accept a statutory declaration under 28 U.S.C. 1746 filed in the U.S. Patent and Trademark Office in lieu of an "oath" or declaration under 35 U.S.C. 25 and 37 CFR 1.68, provided that the statutory declaration otherwise complies with the requirements of law.

Section 1746 of Title 28 of the United States Code provides:

> Whenever, under any law of the United States or under any rule, regulation, order, or requirement made pursuant to law, any matter is required to be supported, evidenced, established, or proved by sworn declaration, verification, certificate, statement, oath or affidavit, in writing of the person making the same (other than a deposition, or an oath of office, or an oath required to be taken before a specified official other than notary public), such matter may, with like force and effect, be supported, evidenced, established, or proved by the unsworn declaration, certificate, verification, or statement, in writing of such person which is subscribed by him, as true under penalty of perjury, and dated, in substantially the following form:

[1] If executed without the United States:

"I declare (or certify, verify, or state) under penalty of perjury under the laws of the United States of America that the foregoing is true and correct. Executed on (date).

(Signature)."

[2]If executed within the United States its territories, possessions, or commonwealths:

"I declare (or certify, verify, or state) under penalty of perjury that the foregoing is true and correct. Executed on (date).

(Signature)."

A 37 CFR 1.68 declaration need not be ribboned to the other papers, even if signed in a country foreign to the United States. When a declaration is used, it is unnecessary to appear before any official in connection with the making of the declaration. It must, however, since it is an integral part of the application, be maintained together therewith.

By statute, 35 U.S.C. 25, the Director has been empowered to prescribe instances when a written declaration may be accepted in lieu of the oath for "any document to be filed in the Patent and Trademark Office."

The filing of a written declaration is acceptable in lieu of an original application oath that is informal.

The following form paragraphs may be used to notify applicant that the oath or declaration is defective because it was not properly executed.

¶ *6.05 Oath or Declaration Defective, Heading*

The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

Examiner Note:

1. One or more of the appropriate form paragraphs 6.05.01 to 6.05.20 must follow this paragraph.
2. If none of the form paragraphs apply, then an appropriate explanation of the defect should be given immediately following this paragraph.

¶ *6.05.01 Improper Execution*

It was not executed in accordance with either 37 CFR 1.66 or 1.68.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

¶ *6.05.17 Declaration Clause Omitted*

The clause regarding "willful false statements ..." required by 37 CFR 1.68 has been omitted.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

III. EARLIER FOREIGN APPLICATIONS

Oaths and declarations must make reference to any foreign application for patent (or inventor's certificate) for which priority is claimed and any foreign application filed prior to the filing date of an application on which priority is claimed, unless such information is included in an application data sheet. See 37 CFR 1.63(c)(2).

If all foreign applications have been filed within 12 months of the U.S. filing date, applicant is required only to recite the first such foreign application of which priority is claimed, and it should be clear that the foreign application referred to is the first filed foreign application. The applicant is required to recite all foreign applications filed prior to the application on which priority is claimed. It is required to give the foreign application number and name of the country or office in which filed, as well as the filing date of the first filed foreign application.

If the information regarding the foreign application has not been included in an application data sheet, or in an oath or declaration, form paragraphs 6.05 and 6.05.08 may be used to notify applicant that the oath or declaration is defective because the prior foreign application has not been identified.

¶ *6.05.08 Identification of Foreign Applications Omitted*

It does not identify the foreign application for patent or inventor's certificate on which priority is claimed pursuant to 37 CFR 1.55, and any foreign application having a filing date before that of the application on which priority is claimed, by specifying the application number, country, day, month and year of its filing.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

IV. SOLE OR JOINT DESIGNATION

37 CFR 1.63 no longer requires the oath or declaration to state that the inventor is a sole or joint inventor of the invention claimed.

When joint inventors execute separate oaths or declarations, each oath or declaration should make reference to the fact that the affiant is a joint inventor together with each of the other inventors indicating

them by name. This may be done by stating that he or she does verily believe himself or herself to be the original, first and joint inventor together with "A" or "A & B, etc." as the facts may be.

V. NEW MATTER ISSUES

For applications filed on or after September 21, 2004, a preliminary amendment that is present on the filing date of the application is part of the original disclosure of the application. For applications filed before September 21, 2004, a preliminary amendment that is present on the filing date of the application is part of the original disclosure of the application if the preliminary amendment was referred to in the first executed oath or declaration under 37 CFR 1.63 filed in the application. See MPEP § 608.04(b) and § 714.01(e).

If a preliminary amendment is present on the filing date of an application, and the oath or declaration under 37 CFR 1.63 does not refer to the preliminary amendment, the normal operating procedure is to not screen the preliminary amendment to determine whether it contains subject matter not otherwise included in the specification or drawings of the application as filed (i.e., subject matter that is "new matter" relative to the specification and drawings of the application). As a result, it is applicant's obligation to review the preliminary amendment to ensure that it does not contain subject matter not otherwise included in the specification or drawings of the application as filed. If the preliminary amendment contains subject matter not otherwise included in the specification and drawings of the application, applicant must provide a supplemental oath or declaration under 37 CFR 1.67 referring to such preliminary amendment. The failure to submit a supplemental oath or declaration under 37 CFR 1.67 referring to a preliminary amendment that contains subject matter not otherwise included in the specification or drawings of the application as filed removes safeguards that are implied in the oath or declaration requirements that the inventor review and understand the contents of the application, and acknowledge the duty to disclose to the Office all information known to be material to patentability as defined in 37 CFR 1.56.

Applicants can avoid the need to file an oath or declaration referring to any preliminary amendment by incorporating any desired amendments into the text of the specification including a new set of claims when filing the application instead of filing a preliminary amendment, even where the application is a continuation or divisional application of a prior-filed application. Furthermore, applicants are strongly encouraged to avoid submitting any preliminary amendments so as to minimize the burden on the Office in processing preliminary amendments and reduce delays in processing the application.

During examination, if an examiner determines that a preliminary amendment that is present on the filing date of the application includes subject matter not otherwise supported by the originally filed specification and drawings, and the oath or declaration does not refer to the preliminary amendment, the examiner may require the applicant to file a supplemental oath or declaration under 37 CFR 1.67 referring to the preliminary amendment. In response to the requirement, applicant must submit (A) an oath or declaration that refers to the preliminary amendment, (B) an amendment that cancels the subject matter not supported by the originally filed specification and drawings, or (C) a request for reconsideration.

For applications filed prior to September 21, 2004, a preliminary amendment that is present on the filing date of an application may be considered a part of the original disclosure if it is referred to in a first filed oath or declaration in compliance with 37 CFR 1.63. If the preliminary amendment was not referred to in the oath or declaration, applicant will be required to submit a supplemental oath or declaration under 37 CFR 1.67 referring to both the application and the preliminary amendment filed with the original application. A surcharge under 37 CFR 1.16(f) will also be required unless it has been previously paid.

If an oath or declaration improperly refers to an amendment filed after the filing date of the application and containing new matter, a supplemental oath or declaration will be required pursuant to 37 CFR 1.67(b), deleting the reference to the amendment containing new matter. See also MPEP § 608.04. If the application papers are altered prior to the execution of the oath or declaration and the filing of the application, new matter is not a consideration since the alteration is considered as part of the original disclosure.

See MPEP § 602.05(a) where a continuation application under 37 CFR 1.53(b) is filed with a copy of a

declaration from a prior application, but the continuation application is filed with a rewritten specification.

If a claim is presented for matter not originally claimed or embraced in the original statement of invention in the specification a supplemental oath or declaration is required, 37 CFR 1.67, MPEP § 603.

VI. IDENTIFICATION OF APPLICATION

37 CFR 1.63 requires that an oath or declaration identify the specification to which it is directed. The declaration form suggested by the Office includes spaces for filling in the names of the inventors, title of the invention, application number, filing date, and foreign priority application information. While this information should be provided, it is not essential that all of these spaces be completed in order to adequately identify the specification in compliance with 37 CFR 1.63(b)(1).

The following combination of information supplied in an oath or declaration filed on the application filing date with a specification are acceptable as minimums for identifying a specification and compliance with any one of the items below will be accepted as complying with the identification requirement of 37 CFR 1.63:

(A) name of inventor(s), and reference to an attached specification which is both attached to the oath or declaration at the time of execution and submitted with the oath or declaration on filing;

(B) name of inventor(s), and attorney docket number which was on the specification as filed; or

(C) name of inventor(s), and title of the invention which was on the specification as filed.

Filing dates are granted on applications filed without an oath or declaration in compliance with 37 CFR 1.63, the oath or declaration being filed later with a surcharge. The following combinations of information supplied in an oath or declaration filed after the filing date of the application are acceptable as minimums for identifying a specification and compliance with any one of the items below will be accepted as complying with the identification requirement of 37 CFR 1.63:

(A) application number (consisting of the series code and the serial number, e.g., 08/123,456);

(B) serial number and filing date;

(C) attorney docket number which was on the specification as filed;

(D) title of the invention which was on the specification as filed and reference to an attached specification which is both attached to the oath or declaration at the time of execution and submitted with the oath or declaration; or

(E) title of the invention which was on the specification as filed and accompanied by a cover letter accurately identifying the application for which it was intended by either the application number (consisting of the series code and the serial number, e.g., 08/123,456), or serial number and filing date. Absent any statement(s) to the contrary, it will be presumed that the application filed in the USPTO is the application which the inventor(s) executed by signing the oath or declaration.

Form paragraphs 6.05 and 6.05.20 may be used to notify applicant that the oath or declaration is defective because the specification has not been adequately identified.

¶ *6.05.20 Specification Not Identified*

The specification to which the oath or declaration is directed has not been adequately identified. See MPEP § 602.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

Any specification that is filed attached to an oath or declaration on a date later than the application filing date will not be compared with the specification submitted on filing. Absent any statement(s) to the contrary, the "attached" specification will be presumed to be a copy of the specification and any amendments thereto, which were filed in the USPTO in order to obtain a filing date for the application.

Any variance from the above guidelines will only be considered upon the filing of a petition for waiver of the rules under 37 CFR 1.183 accompanied by a petition fee (37 CFR 1.17(f)).

Further an oath or declaration attached to a cover letter referencing an incorrect application may not become associated with the correct application and,

therefore, could result in the abandonment of the correct application.

Supplemental oaths or declarations in accordance with 37 CFR 1.67 will be required in applications in which the oaths or declarations are not in compliance with the other requirements of 37 CFR 1.63 but contain sufficient information to identify the specifications to which they apply as detailed above.

See MPEP § 1896 for the identification requirements for a declaration filed in a U.S. national stage application filed under 35 U.S.C. 371.

VII. COPIES OF OATHS OR DECLARATIONS ARE ENCOURAGED

A copy, such as a photocopy or facsimile transmission, of an originally executed oath or declaration is encouraged to be filed (see MPEP § 502.01), especially since applications are maintained in electronic form, not paper. The original should be retained by applicant, or his or her representative as evidence of authenticity. If a question of authenticity arises, the U.S. Patent and Trademark Office may require submission of the original. See 37 CFR 1.4(d)(1)(ii).

Note

See MPEP § 602.03 for other defects in the oath or declaration.

DECLARATION FOR UTILITY OR DESIGN PATENT APPLICATION (37 CFR 1.63)

☐ Declaration Submitted With Initial Filing ***OR*** ☐ Declaration Submitted after Initial Filing (surcharge (37 CFR 1.16 (f)) required)

Attorney Docket Number	
First Named Inventor	
COMPLETE IF KNOWN	
Application Number	
Filing Date	
Art Unit	
Examiner Name	

I hereby declare that: (1) Each inventor's residence, mailing address, and citizenship are as stated below next to their name; and (2) I believe the inventor(s) named below to be the original and first inventor(s) of the subject matter which is claimed and for which a patent is sought on the invention entitled:

(Title of the Invention)

the application of which

☐ is attached hereto

OR

☐ was filed on (MM/DD/YYYY) ☐ as United States Application Number or PCT International Application Number ☐ and was amended on (MM/DD/YYYY) ☐ (if applicable).

I hereby state that I have reviewed and understand the contents of the above identified application, including the claims, as amended by any amendment specifically referred to above.

I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56, including for continuation-in-part applications, material information which became available between the filing date of the prior application and the national or PCT international filing date of the continuation-in-part application.

Authorization To Permit Access To Application by Participating Offices

☐ If checked, the undersigned hereby grants the USPTO authority to provide the European Patent Office (EPO), the Japan Patent Office (JPO), and any other intellectual property offices in which a foreign application claiming priority to the above-identified application is filed access to the above-identified patent application. See 37 CFR 1.14(c) and (h). This box should not be checked if the applicant does not wish the EPO, JPO, or other intellectual property office in which a foreign application claming priority to the above-identified application is filed to have access to the application.

In accordance with 37 CFR 1.14(h)(3), access will be provided to a copy of the application-as-filed with respect to: 1) the above-identified application, 2) any foreign application to which the above-identified application claims priority under 35 USC 119(a)-(d) if a copy of the foreign application that satisfies the certified copy requirement of 37 CFR 1.55 has been filed in the above-identified US application, and 3) any U.S. application from which benefit is sought in the above-identified application.

In accordance with 37 CFR 1.14(c), access may be provided to information concerning the date of filing the Authorization to Permit Access to Application by Participating Offices.

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available. Petitioner/applicant is advised that documents which form the record of a patent application (such as the PTO/SB/01) are placed into the Privacy Act system of records DEPARTMENT OF COMMERCE, COMMERCE-PAT-7, System name: *Patent Application Files*. Documents not retained in an application file (such as the PTO-2038) are placed into the Privacy Act system of COMMERCE/PAT-TM-10, System name: *Deposit Accounts and Electronic Funds Transfer Profiles*.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001 and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

DECLARATION (37 CFR 1.63) FOR UTILITY OR DESIGN APPLICATION USING AN APPLICATION DATA SHEET (37 CFR 1.76)

Title of Invention	

As the below named inventor(s), I/we declare that:

This declaration is directed to:

☐ The attached application, or

☐ Application No. _____ filed on _____

☐ As amended on _____ (if applicable);

I/we believe that I/we am/are the original and first inventor(s) of the subject matter which is claimed and for which a patent is sought;

I/we have reviewed and understand the contents of the above-identified application, including the claims, as amended by any amendment specifically referred to above;

I/we acknowledge the duty to disclose to the United States Patent and Trademark Office all information known to me/us to be material to patentability as defined in 37 CFR 1.56, including for continuation-in-part applications, material information which became available between the filing date of the prior application and the national or PCT International filing date of the continuation-in-part application.

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

All statements made herein of my/our own knowledge are true, all statements made herein on information and belief are believed to be true, and further that these statements were made with the knowledge that willful false statements and the like are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001, and may jeopardize the validity of the application or any patent issuing thereon.

FULL NAME OF INVENTOR(S)

Inventor one: _____ Date: _____

Signature: _____ Citizen of: _____

Inventor two: _____ Date: _____

Signature: _____ Citizen of: _____

☐ Additional inventors or a legal representative are being named on _____ additional form(s) attached hereto.

This collection of information is required by 35 U.S.C. 115 and 37 CFR 1.63. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 1 minute to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

602.01 Oath Cannot Be Amended

The wording of an oath or declaration cannot be amended, altered or changed in any manner after it has been signed. If the wording is not correct or if all of the required affirmations have not been made, or if it has not been properly subscribed to, a new oath or declaration must be required. However, in some cases, a deficiency in the oath or declaration can be corrected by a supplemental paper such as an application data sheet (see 37 CFR 1.76 and MPEP § 601.05) and a new oath or declaration is not necessary. See 37 CFR 1.63(c)(1) and (c)(2).

For example, if the oath does not set forth evidence that the notary was acting within his or her jurisdiction at the time he or she administered the oath, a certificate of the notary that the oath was taken within his or her jurisdiction will correct the deficiency. See MPEP § 602 and § 604.02.

Applicant may be so advised by using form paragraph 6.03.

¶ *6.03 Oath, Declaration Cannot Be Amended*

A new oath or declaration is required because **[1]**. The wording of an oath or declaration cannot be amended. If the wording is not correct or if all of the required affirmations have not been made or if it has not been properly subscribed to, a new oath or declaration is required. The new oath or declaration must properly identify the application of which it is to form a part, preferably by application number and filing date in the body of the oath or declaration. See MPEP §§ 602.01 and 602.02.

Examiner Note:

1. This form paragraph is intended primarily for use in *pro se* applications.

2. Use form paragraph 6.05 and one or more of form paragraphs 6.05.01 to 6.05.20 for a defective oath or declaration in a case where there is a power of attorney.

3. Some corrections may be made by an application data sheet. If the error is correctable by an application data sheet, applicant should be informed of the requirements of an application data sheet. See 37 CFR 1.76 and MPEP § 601.05.

¶ *6.05.16 Non-Initialed/Non-Dated Alterations*

Non-initialed and/or non - dated alterations have been made to the oath or declaration. See 37 CFR 1.52(c).

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

602.02 New Oath or Substitute for Original [R-2]

In requiring a new oath or declaration, the examiner should always give the reason for the requirement and call attention to the fact that the application of which it is to form a part must be properly identified in the body of the new oath or declaration, preferably by giving the application number and the date of filing. Any one of the combinations of information identified in MPEP § *>602< as acceptable for an oath or declaration filed after the filing date may be used.

Where neither the original oath or declaration, nor the substitute oath or declaration is complete in itself, but each oath or declaration names all of the inventors and the two taken together give all the required data, no further oath or declaration is needed.

602.03 Defective Oath or Declaration [R-7]

In the first Office action the examiner must point out every deficiency in a declaration or oath and require that the same be remedied. Applicant may be informed of deficiencies in the declaration or oath by form paragraphs 6.05 and 6.05.01 - 6.05.20.

The following form paragraph 6.05 must be used to introduce one or more of Form Paragraphs 6.05.01 - 6.05.20, which explain errors in the oath or declaration. One or more of the following form paragraphs may be used to notify applicant of the objections to the oath or declaration due to a missing “reviewed and understands” statement, “original and first” statement, duty to disclose statement, or if the oath or declaration is not in permanent ink. See MPEP § 602 for defects in the execution of the oath or declaration, failure to properly reference to an earlier foreign application, or a failure to properly identify the application papers. See MPEP § 602.04 for a defective foreign executed oath and MPEP § 602.04(a) for an oath with an improperly attached ribbon.

¶ *6.05 Oath or Declaration Defective, Heading*

The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

Examiner Note:

1. One or more of the appropriate form paragraphs 6.05.01 to 6.05.20 must follow this paragraph.
2. If none of the form paragraphs apply, then an appropriate explanation of the defect should be given immediately following this paragraph.

¶ *6.05.05 "Reviewed and Understands" Statement Omitted*

It does not state that the person making the oath or declaration has reviewed and understands the contents of the specification, including the claims, as amended by any amendment specifically referred to in the oath or declaration.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

¶ *6.05.06 Original and First Omitted*

It does not state that the person making the oath or declaration believes the named inventor or inventors to be the original and first inventor or inventors of the subject matter which is claimed and for which a patent is sought.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

**>

¶ *6.05.07 Duty To Disclose Not Properly Acknowledged*

It does not state that the person making the oath or declaration acknowledges the duty to disclose to the Office all information known to the person to be "material to patentability as defined in 37 CFR 1.56."

Examiner Note:

1. This paragraph must be preceded by form paragraph 6.05.
2. Oaths or declarations acknowledging a duty to disclose information "material to the examination of the application in accordance with 37 CFR 1.56(a)," as was required by 37 CFR 1.63(b)(3) prior to March 16, 1992, are no longer acceptable. See 1327 OG 112 (February 12, 2008).

<

¶ *6.05.15 Not in Permanent Ink*

The **[1]** is not in permanent ink, or its equivalent in quality, as required under 37 CFR 1.52(a)(1)(iv).

Examiner Note:

1. In bracket 1, insert either signature or oath/declaration.
2. This paragraph must be preceded by form paragraph 6.05.
3. If other portions of the disclosure are not in permanent ink, use form paragraph 6.32.

When an application is otherwise ready for issue, an examiner with full signatory authority may waive the following minor deficiencies:

Minor deficiencies in the body of the oath or declaration where the deficiencies are self-evidently cured in the rest of the oath or declaration. *In re Searles*, 422 F.2d 431, 437, 164 USPQ 623, 628 (CCPA 1970).

If such a deficiency is waived, the examiner with full signatory authority should write in the margin of the declaration or oath a notation why the deficiency was waived, indicate that the application is ready for issue, and provide his or her initials and the date. For Image File Wrapper (IFW) processing, see IFW Manual.

Of course, requirements of the statute, e.g., that the applicant state his or her citizenship or believes himself or herself to be the original and first inventor or that the oath be administered before a person authorized to administer oaths or that a declaration pursuant to 35 U.S.C. 25 or contain the language required therein, cannot be waived.

If the defect cannot be waived, form paragraph 6.46 should be used when the application is allowable.

¶ *6.46 Application Allowed, Substitute Declaration Needed*

Applicant is now required to submit a substitute declaration or oath to correct the deficiencies set forth **[1]**. The substitute oath or declaration must be filed within the THREE MONTH shortened statutory period set for reply in the "Notice of Allowability" (PTO-37). Extensions of time may NOT be obtained under the provisions of 37 CFR 1.136. Failure to timely file the substitute declaration (or oath) will result in **ABANDONMENT** of the application. The transmittal letter accompanying the declaration (or oath) should indicate the date of the "Notice of Allowance" (PTOL-85) and the application number in the upper right hand corner.

Examiner Note:

In the bracket, insert appropriate information, e.g., --in this communication--, --in the Office action mailed _____--.

602.04 Foreign Executed Oath

An oath executed in a foreign country must be properly authenticated. See 37 CFR 1.66 and MPEP § 604.

Where the authority of the foreign officer is not certified, form paragraphs 6.05 (reproduced in MPEP § 602.03) and 6.05.13 may be used.

¶ *6.05.13 Authority of Foreign Officer Not Certified*

It does not include an apostille, a consular certificate, or the position of authority of the officer signing an apostille or consular certificate, see 37 CFR 1.66(a).

Examiner Note:

This paragraph applies only to foreign executed oaths and must be preceded by form paragraph 6.05.

602.04(a) Foreign Executed Oath Is Ribboned to Other Application Papers [R-7]

37 CFR 1.66. Officers authorized to administer oaths.

*****

(b) When the oath is taken before an officer in a country foreign to the United States, any accompanying application papers, except the drawings, must be attached together with the oath and a ribbon passed one or more times through all the sheets of the application, except the drawings, and the ends of said ribbon brought together under the seal before the latter is affixed and impressed, or each sheet must be impressed with the official seal of the officer before whom the oath is taken. If the papers as filed are not properly ribboned or each sheet impressed with the seal, the case will be accepted for examination, but before it is allowed, duplicate papers, prepared in compliance with the foregoing sentence, must be filed.

Where the papers are not properly ribboned, use form paragraphs 6.05 (reproduced in MPEP § 602.03) and 6.05.14.

¶ *6.05.14 No Ribbon Properly Attached*

It does not have a ribbon properly attached.

Examiner Note:

This paragraph applies only to foreign executed oaths and must be preceded by form paragraph 6.05.

U.S. ACCESSION TO HAGUE CONVENTION ABOLISHING THE REQUIREMENT OF LEGALIZATION FOR FOREIGN PUBLIC DOCUMENTS

On Oct. 15, 1981, the Hague "Convention Abolishing the Requirement of Legalization for Foreign Public Documents" entered into force between the United States and 28 foreign countries as parties to the Convention. Subsequently, additional countries have become parties to the Convention. The Convention applies to any document submitted to the United States Patent and Trademark Office for filing or recording, which is sworn to or acknowledged by a notary public in any one of the member countries. The Convention abolishes the certification of the authority of the notary public in a member country by a diplomatic or consular officer of the United States and substitutes certification by a special certificate, or apostille, executed by an officer of the member country. Accordingly, the Office will accept for filing or recording a document sworn to or acknowledged before a notary public in a member country if the document bears, or has appended to it, an apostille certifying the notary's authority. The requirement for a diplomatic or consular certificate, specified in 37 CFR 1.66, will not apply to a document sworn to or acknowledged before a notary public in a member country if an apostille is used.

**

A list of the current member countries that are parties to the Hague Convention can be obtained from the Internet web site of the Hague Conference on Private International Law at **>http://www.hcch.net/index_en.php by selecting "Apostille Section" under "International Legal Co-operation and Litigation" and then selecting "Status table of the Apostille Convention" under "Contracting States."<

The Convention prescribes the following form for the apostille:

Model of Certificate

The certificate will be in the form of a square with sides at least 9 centimeters long.

APOSTILLE
(Convention de La Haye du Oct. 5, 1961)

1. Country .....
This public document
2. has been signed by .....
3. acting in the capacity of .....
4. bears the seal/stamp of .....

Certified

5. at .....
6. the .....
7. by .....
8. No. .....
9. Seal/stamp: 10. Signature:

.....

Note that a declaration in lieu of application oath (37 CFR 1.68) need not be ribboned to the other papers. It must, however, be maintained together therewith.

602.05 Oath or Declaration — Date of Execution

The Office no longer checks the date of execution of the oath or declaration and the Office will no longer require a newly executed oath or declaration based on an oath or declaration being stale (that is when the date of execution is more than 3 months prior to the filing date of the application) or where the date of execution has been omitted. However, applicants are reminded that they have a continuing duty of disclosure under 37 CFR 1.56.

602.05(a) Oath or Declaration in Continuation and Divisional Applications [R-7]

A continuation or divisional application filed under 37 CFR 1.53(b) (other than a continuation-in-part (CIP)) may be filed with a copy of the oath or declaration from the prior nonprovisional application. See 37 CFR 1.63(d)(1)(iv).

A copy of an oath or declaration from a prior application may be submitted with a continuation or divisional application even if the oath or declaration identifies the application number of the prior application. However, if such a copy of the oath or declaration is filed after the filing date of the continuation or divisional application and an application number has been assigned to the continuation or divisional application (see 37 CFR 1.5(a)), the cover letter accompanying the oath or declaration should identify the application number of the continuation or divisional application. The cover letter should also indicate that the oath or declaration submitted is a copy of the oath or declaration from a prior application to avoid the oath or declaration being incorrectly matched with the prior application file. Furthermore, applicant should also label the copy of the oath or declaration with the application number of the continuation or divisional application in the event that the cover letter is separated from the copy of the oath or declaration.

A copy of the oath or declaration from a prior nonprovisional application may be filed in a continuation or divisional application even if the specification for the continuation or divisional application is different from that of the prior application, in that revisions have been made to clarify the text to incorporate amendments made in the prior application, or to make other changes provided the changes do not constitute new matter relative to the prior application. See 37 CFR 1.52(c)(3). If the examiner determines that the continuation or divisional application contains new matter relative to the prior application, the examiner should so notify the applicant in the next Office action. The examiner should also (A) require a new oath or declaration along with the surcharge set forth in 37 CFR 1.16(f); and (B) indicate that the application should be redesignated as a continuation-in-part.

A continuation or divisional application of a prior application accorded status under 37 CFR 1.47 will be accorded status under 37 CFR 1.47 if a copy of the decision according 37 CFR 1.47 status in the prior application is filed in the continuation or divisional application, unless an oath or declaration signed by all of the inventors is included upon filing the continuation or divisional application. An oath or declaration in an application accorded status under 37 CFR 1.47 is generally not signed by all of the inventors. Accordingly, if a copy of an oath or declaration of a prior application is submitted in a continuation or divisional application filed under 37 CFR 1.53(b) and the copy of the oath or declaration omits the signature of one or more inventors, the Office of **>Patent Application Processing (OPAP)< should send a "Notice to File Missing Parts" requiring the signature of the nonsigning inventor, unless a copy of the decision according status under 37 CFR 1.47 is also included at the time of filing of the continuation or divisional application. If *>OPAP< mails such a Notice, a copy of the decision according status under 37 CFR 1.47, together with a surcharge under 37 CFR 1.16(f) for its late filing, will be an acceptable reply to the Notice. Alternatively, applicant may submit an oath or declaration signed by the previously nonsigning inventor together with the surcharge set forth in 37 CFR 1.16(f) in reply to the Notice.

If an inventor named in a prior application is not an inventor in a continuation or divisional application filed under 37 CFR 1.53(b), the continuation or divisional application may either be filed (A) with a copy of an oath or declaration from a prior application and a statement requesting the deletion of the name or names of the person or persons who are not inventors of the invention being claimed in the continuation or divisional application (see 37 CFR 1.63(d)), or (B)

with a newly executed oath or declaration naming the correct inventive entity. If an inventor named in a prior application is not an inventor in a continuation or divisional application filed under 37 CFR 1.53(d), the request for filing the continuation or divisional application must be accompanied by a statement requesting the deletion of the name or names of the person or persons who are not inventors of the invention being claimed in the continuation or divisional application (see 37 CFR 1.53(d)(4)).

A continuation or divisional application filed under 37 CFR 1.53(b) of a prior application in which a petition (or request) under 37 CFR 1.48 to add an inventor was filed should be filed with a copy of the executed declaration naming the correct inventive entity from the prior application or a newly executed declaration naming the correct inventive entity. A copy of any decision under 37 CFR 1.48 from the prior application is not required to be filed in the continuation or divisional application.

602.06 Non-English Oath or Declaration [R-3]

37 CFR 1.69. Foreign language oaths and declarations.

(a) Whenever an individual making an oath or declaration cannot understand English, the oath or declaration must be in a language that such individual can understand and shall state that such individual understands the content of any documents to which the oath or declaration relates.

(b) **>Unless the text of any oath or declaration in a language other than English is in a form provided by the Patent and Trademark Office or in accordance with PCT Rule 4.17(iv), it must be accompanied by an English translation together with a statement that the translation is accurate, except that in the case of an oath or declaration filed under § 1.63, the translation may be filed in the Office no later than two months from the date applicant is notified to file the translation.<

37 CFR 1.69 requires that oaths and declarations be in a language which is understood by the individual making the oath or declaration, i.e., a language which the individual comprehends. If the individual comprehends the English language, he or she should preferably use it. If the individual cannot comprehend the English language, any oath or declaration must be in a language which the individual can comprehend. If an individual uses a language other than English for an oath or declaration, the oath or declaration must include a statement that the individual understands the content of any documents to which the oath or declaration relates. If the documents are in a language the individual cannot comprehend, the documents may be explained to him or her so that he or she is able to understand them.

The Office will accept a single non-English language oath or declaration where there are joint inventors, of which only some understand English but all understand the non-English language of the oath or declaration.

602.07 Oath or Declaration Filed in United States as a Designated Office [R-3]

See MPEP § 1893.01>(e)<.

603 Supplemental Oath or Declaration

37 CFR 1.67. Supplemental oath or declaration.

(a) The Office may require, or inventors and applicants may submit, a supplemental oath or declaration meeting the requirements of § 1.63 or § 1.162 to correct any deficiencies or inaccuracies present in the earlier filed oath or declaration.

(1) Deficiencies or inaccuracies relating to all the inventors or applicants (§§ 1.42, 1.43, or § 1.47) may be corrected with a supplemental oath or declaration signed by all the inventors or applicants.

(2) Deficiencies or inaccuracies relating to fewer than all of the inventor(s) or applicant(s) (§§ 1.42, 1.43 or § 1.47) may be corrected with a supplemental oath or declaration identifying the entire inventive entity but signed only by the inventor(s) or applicant(s) to whom the error or deficiency relates.

(3) Deficiencies or inaccuracies due to the failure to meet the requirements of § 1.63(c) (*e.g.*, to correct the omission of a mailing address of an inventor) in an oath or declaration may be corrected with an application data sheet in accordance with § 1.76.

(4) Submission of a supplemental oath or declaration or an application data sheet (§ 1.76), as opposed to who must sign the supplemental oath or declaration or an application data sheet, is governed by § 1.33(a)(2) and paragraph (b) of this section.

(b) A supplemental oath or declaration meeting the requirements of § 1.63 must be filed when a claim is presented for matter originally shown or described but not substantially embraced in the statement of invention or claims originally presented or when an oath or declaration submitted in accordance with § 1.53(f) after the filing of the specification and any required drawings specifically and improperly refers to an amendment which includes new matter. No new matter may be introduced into a nonprovisional application after its filing date even if a supplemental oath or declaration is filed. In proper situations, the oath or declaration here required may be made on information and belief by an applicant other than the inventor.

(c) [Reserved]

37 CFR 1.67 requires in the supplemental oath or declaration substantially all the data called for in 37

CFR 1.63 for the original oath or declaration. As to the purpose to be served by the supplemental oath or declaration, the examiner should bear in mind that it cannot be availed of to introduce new matter into an application.

Deficiencies or inaccuracies in an oath or declaration may be corrected by a supplemental oath or declaration. The supplemental oath or declaration must (1) identify the entire inventive entity, and (2) be signed by all the inventors when the correction relates to all the inventors or applicants (37 CFR 1.42, 1.43, or 1.47), or by only those inventor(s) or applicants (37 CFR 1.42, 1.43, or 1.47) to whom the corrections relates. See 37 CFR 1.67(a). A deficiency or inaccuracy relating to information required by 37 CFR 1.63(c) may also be corrected with an application data sheet (37 CFR 1.67(a)(3)). The following examples illustrate how certain deficiencies or inaccuracies in an oath or declaration may be corrected:

Example 1: An application was filed with a declaration under 37 CFR 1.63 executed by inventors A, B, and C. If it is later determined that the citizenship of inventor C was in error, a supplemental declaration identifying inventors A, B, and C may be signed by inventor C alone correcting C's citizenship.

Example 2: An application was filed with a declaration under 37 CFR 1.63 executed by inventors A, B, and C. If it is later determined that the duty to disclose clause was omitted, a supplemental declaration identifying inventors A, B, and C must be signed by inventors A, B, and C. If separate declarations had been executed by each of the inventors and the duty to disclose clause had been omitted only in the declaration by inventor B, then only inventor B would need to execute a supplemental declaration identifying the entire inventive entity.

Example 3: An application was filed with a declaration under 37 CFR 1.63 executed by inventors A, and B, and the legal representative of deceased inventor C. It is later determined that an error was made in the citizenship of deceased inventor C. A supplemental declaration identifying A, B, and C as the inventors would be required to be signed by the legal representative of deceased inventor C alone correcting C's citizenship.

Example 4: An application was filed with a declaration under 37 CFR 1.63 executed by inventors A and B. If it is later determined that an error exists in the mailing address of inventor B, the mailing address of inventor B may be corrected by a supplemental declaration identifying the entire inventive entity and signed by inventor B alone, or an application data sheet under 37 CFR 1.76 containing only a change in inventor B's mailing address.

When an inventor who executed the original declaration is refusing or cannot be found to execute a required supplemental declaration, the requirement for that inventor to sign the supplemental declaration may be suspended or waived in accordance with 37 CFR 1.183. All available joint inventor(s) must sign the supplemental declaration on behalf of themselves, if appropriate, and on behalf of the nonsigning inventor. See MPEP § 409.03(a). If there are no joint inventor(s), then the party with sufficient proprietary interest must sign the supplemental declaration on behalf of the nonsigning inventor. See MPEP § 409.03(b).

A new oath may be required by using form paragraph 6.06.

¶ *6.06 New Oath for Subject Matter Not Originally Claimed*

This application presents a claim for subject matter not originally claimed or embraced in the statement of the invention. **[1]**. A supplemental oath or declaration is required under 37 CFR 1.67. The new oath or declaration must properly identify the application of which it is to form a part, preferably by application number and filing date in the body of the oath or declaration. See MPEP §§ 602.01 and 602.02.

Examiner Note:

Explain new claimed matter in bracket 1. The brief summary of the invention must be commensurate with the claimed invention and may be required to be modified. See MPEP § 608.01(d) and 1302, and 37 CFR 1.73.

603.01 Supplemental Oath or Declaration Filed After Allowance [R-7]

Since the decision in *Cutter Co. v. Metropolitan Electric Mfg. Co.*, 275 F. 158 (2d Cir. 1921), many supplemental oaths and declarations covering the claims in the application have been filed after the applications were allowed. Such oaths and declarations may be filed as a matter of right and when received they will be placed in the file by the Office of **>Data Management<, but their receipt will not be acknowledged to the party filing them. They should not be filed or considered as amendments under 37

CFR 1.312, since they make no change in the wording of the papers on file. See MPEP § 714.16.

604 Administration or Execution of Oath

37 CFR 1.66. Officers authorized to administer oaths.

(a) The oath or affirmation may be made before any person within the United States authorized by law to administer oaths. An oath made in a foreign country, may be made before any diplomatic or consular officer of the United States authorized to administer oaths, or before any officer having an official seal and authorized to administer oaths in the foreign country in which the applicant may be, whose authority shall be proved by a certificate of a diplomatic or consular officer of the United States, or by an apostille of an official designated by a foreign country which, by treaty or convention, accords like effect to apostilles of designated officials in the United States. The oath shall be attested in all cases in this and other countries, by the proper official seal of the officer before whom the oath or affirmation is made. Such oath or affirmation shall be valid as to execution if it complies with the laws of the State or country where made. When the person before whom the oath or affirmation is made in this country is not provided with a seal, his official character shall be established by competent evidence, as by a certificate from a clerk of a court of record or other proper officer having a seal.

*****

See MPEP § 602.04(a) for foreign executed oath.

604.01 Seal [R-3]

Documents with seals cannot be adequately scanned for retention in an Image File Wrapper, and since the Office maintains patent applications in an image form **, the Office strongly encourages the use of declarations rather than oaths. When the person before whom the oath or affirmation is made in this country is not provided with a seal, his or her official character shall be established by competent evidence, as by a certificate from a clerk of a court of record or other proper officer having a seal, except as noted in MPEP § 604.03(a), in which situations no seal is necessary. When the issue concerns the authority of the person administering the oath, the examiner should require proof of authority. Depending on the jurisdiction, the seal may be either embossed or rubber stamped. The latter should not be confused with a stamped legend indicating only the date of expiration of the notary's commission.

See also MPEP § 602.04(a) on foreign executed oath and seal. In some jurisdictions, the seal of the notary is not required but the official title of the officer must be on the oath. This applies to Alabama, California (certain notaries), Louisiana, Maryland, Massachusetts, New Jersey, New York, Ohio, Puerto Rico, Rhode Island, South Carolina, and Virginia.

¶ *6.06 New Oath for Subject Matter Not Originally Claimed*

This application presents a claim for subject matter not originally claimed or embraced in the statement of the invention. **[1]**. A supplemental oath or declaration is required under 37 CFR 1.67. The new oath or declaration must properly identify the application of which it is to form a part, preferably by application number and filing date in the body of the oath or declaration. See MPEP §§ 602.01 and 602.02.

Examiner Note:

Explain new claimed matter in bracket 1. The brief summary of the invention must be commensurate with the claimed invention and may be required to be modified. See MPEP § 608.01(d) and 1302, and 37 CFR 1.73.

¶ *6.05.11 Notary Signature*

It does not include the notary's signature, or the notary's signature is in the wrong place.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

¶ *6.05.12 Notary Seal and Venue Omitted*

It does not include the notary's seal and venue.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

604.02 Venue

That portion of an oath or affidavit indicating where the oath is taken is known as the venue. Where the county and state in the venue agree with the county and state in the seal, no problem arises. If the venue and seal do not correspond in county and state, the jurisdiction of the notary must be determined from statements by the notary appearing on the oath. Venue and notary jurisdiction must correspond or the oath is improper. The oath should show on its face that it was taken within the jurisdiction of the certifying officer or notary. This may be given either in the venue or in the body of the jurat. Otherwise, a new oath or declaration, or a certificate of the notary that the oath was taken within his or her jurisdiction, must be required. *Ex parte Delavoye*, 1906 C.D. 320, 124 O.G. 626 (Comm'r Pat. 1906); *Ex parte Irwin*, 1928 C.D. 13, 367 O.G. 701 (Comm'r Pat. 1928).

Form paragraph 6.07 may be used where the venue is not shown.

¶ *6.07 Lack of Venue*

The oath lacks the statement of venue. Applicant is required to furnish either a new oath or declaration in proper form, identifying the application by application number and filing date, or a certificate by the officer before whom the original oath was taken stating that the oath was executed within the jurisdiction of the officer before whom the oath was taken when the oath was administered. The new oath or declaration must properly identify the application of which it is to form a part, preferably by application number and filing date in the body of the oath or declaration. See MPEP §§ 602.01 and 602.02.

Where the seal and venue differ, applicant should be notified by using the "Notice of Informal Application" form.

604.03(a) Notarial Powers of Some Military Officers

Public Law 506 (81st Congress, Second Session) Article 136: (a) The following persons on active duty in the armed forces . . . shall have the general powers of a notary public and of a consul of the United States, in the performance of all notarial acts to be executed by members of any of the armed forces, wherever they may be, and by other persons subject to this code [Uniform Code of Military Justice] outside the continental limits of the United States:

(A) All judge advocates of the Army and Air Force;

(B) All law specialists;

(C) All summary courts-martial;

(D) All adjutants, assistant adjutants, acting adjutants, and personnel adjutants;

(E) All commanding officers of the Navy and Coast Guard;

(F) All staff judge advocates and legal officers, and acting or assistant staff judge advocates and legal officers; and

(G) All other persons designated by regulations of the armed forces or by statute.

(H) The signature without seal of any such person acting as notary, together with the title of his office, shall be *prima facie* evidence of his authority.

604.04 Consul

On Oct. 15, 1981, the "Hague Convention Abolishing the Requirement of Legalization for Foreign Public Documents" entered into force between the United States and 28 foreign countries as parties to the Convention. Subsequently, additional countries have become parties to the conventions. See MPEP § 604.04(a).

When the oath is made in a foreign country not a member of the Hague Convention Abolishing the Requirement of Legalization for Foreign Public Documents, the authority of any officer other than a diplomatic or consular officer of the United States authorized to administer oaths must be proved by certificate of a diplomatic or consular officer of the United States. See 37 CFR 1.66, MPEP § 604. This proof may be through an intermediary, e.g., the consul may certify as to the authority and jurisdiction of another official who, in turn, may certify as to the authority and jurisdiction of the officer before whom the oath is taken.

604.04(a) Consul – Omission of Certificate [R-2]

Where the oath is taken before an officer in a foreign country other than a diplomatic or consular officer of the United States and whose authority is not authenticated or accompanied with an apostille certifying the notary's authority (see MPEP § 602.04(a)), the application is nevertheless accepted for purposes of examination. The examiner, in the first Office action, should note this informality and require **>a new properly authenticated< oath by an appropriate diplomatic or consular officer, the filing of proper apostille, or a declaration (37 CFR 1.68). >The Office no longer returns improperly authenticated oaths for proper authentication.<

Form paragraph 6.08 may be used to notify applicant.

**>

¶ *6.08 Consul-Omission of Certificate*

The oath is objected to as being informal. It lacks authentication by a diplomatic or consular officer of the United States; 37 CFR 1.66(a). This informality can be overcome by filing either a declaration under 37 CFR 1.68, or a new properly authenticated oath under 37 CFR 1.66. The new oath or declaration must properly identify the application of which it is to form a part, preferably by application number and filing date in the body of the oath or declaration. See MPEP §§ 602.01 and 602.02.

<

604.06 By Attorney in Application

The language of 37 CFR 1.66 and 35 U.S.C. 115 is such that an attorney in the application is not barred from administering the oath as notary. The Office presumes that an attorney acting as notary is cognizant of the extent of his or her authority and jurisdiction and will not knowingly jeopardize his or her client's rights by performing an illegal act. If such practice is permissible under the law of the jurisdiction where the oath is administered, then the oath is a valid oath.

The law of the District of Columbia prohibits the administering of oaths by the attorney in the case. If the oath is known to be void because of being administered by the attorney in a jurisdiction where the law holds this to be invalid, the proper action is to require a new oath or declaration and refer the file to the Office of Enrollment and Discipline. (*Riegger v. Beierl*, 1910 C.D. 12, 150 O.G. 826 (Comm'r Pat. 1910)). See 37 CFR 1.66 and MPEP § 604.

605 Applicant [R-2]

37 CFR 1.41. Applicant for patent.

(a) A patent is applied for in the name or names of the actual inventor or inventors.

(1) The inventorship of a nonprovisional application is that inventorship set forth in the oath or declaration as prescribed by § 1.63, except as provided for in §§ 1.53(d)(4) and 1.63(d). If an oath or declaration as prescribed by § 1.63 is not filed during the pendency of a nonprovisional application, the inventorship is that inventorship set forth in the application papers filed pursuant to § 1.53(b), unless applicant files a paper, including the processing fee set forth in § 1.17(i), supplying or changing the name or names of the inventor or inventors.

(2) The inventorship of a provisional application is that inventorship set forth in the cover sheet as prescribed by § 1.51(c)(1). If a cover sheet as prescribed by § 1.51(c)(1) is not filed during the pendency of a provisional application, the inventorship is that inventorship set forth in the application papers filed pursuant to § 1.53(c), unless applicant files a paper including the processing fee set forth in § 1.17(q), supplying or changing the name or names of the inventor or inventors.

(3) In a nonprovisional application filed without an oath or declaration as prescribed by § 1.63 or a provisional application filed without a cover sheet as prescribed by § 1.51(c)(1), the name, residence, and citizenship of each person believed to be an actual inventor should be provided when the application papers pursuant to § 1.53(b) or § 1.53(c) are filed.

**>

(4) The inventorship of an international application entering the national stage under 35 U.S.C. 371 is that inventorship set forth in the international application, which includes any change effected under PCT Rule 92bis. See § 1.497(d) and (f) for filing an oath or declaration naming an inventive entity different from the inventive entity named in the international application, or if a change to the inventive entity has been effected under PCT Rule 92bis subsequent to the execution of any declaration filed under PCT Rule 4.17(iv) (§ 1.48(f)(1) does not apply to an international application entering the national stage under 35 U.S.C. 371).<

(b) Unless the contrary is indicated the word "applicant" when used in these sections refers to the inventor or joint inventors who are applying for a patent, or to the person mentioned in §§ 1.42, 1.43 or 1.47 who is applying for a patent in place of the inventor.

(c) Any person authorized by the applicant may physically or electronically deliver an application for patent to the Office on behalf of the inventor or inventors, but an oath or declaration for the application (§ 1.63) can only be made in accordance with § 1.64.

(d) A showing may be required from the person filing the application that the filing was authorized where such authorization comes into question.

37 CFR 1.45. Joint inventors.

(a) Joint inventors must apply for a patent jointly and each must make the required oath or declaration; neither of them alone, nor less than the entire number, can apply for a patent for an invention invented by them jointly, except as provided in § 1.47.

(b) Inventors may apply for a patent jointly even though

(1) They did not physically work together or at the same time,

(2) Each inventor did not make the same type or amount of contribution, or

(3) Each inventor did not make a contribution to the subject matter of every claim of the application.

(c) If multiple inventors are named in a nonprovisional application, each named inventor must have made a contribution, individually or jointly, to the subject matter of at least one claim of the application and the application will be considered to be a joint application under 35 U.S.C. 116. If multiple inventors are named in a provisional application, each named inventor must have made a contribution, individually or jointly, to the subject matter disclosed in the provisional application and the provisional application will be considered to be a joint application under 35 U.S.C. 116.

37 CFR 1.41 and 37 CFR 1.53 were amended effective December 1, 1997, to remove the requirement that the name(s) of the inventor(s) be identified in the application papers in order to accord the application a filing date. 37 CFR 1.41(a)(1) now defines the inventorship of a nonprovisional application as that inventorship set forth in the oath or declaration filed to comply with the requirements of 37 CFR 1.63, except as provided for in 37 CFR 1.53(d)(4) and 37 CFR 1.63(d). The oath or declaration may be filed on the filing date of the application or on a later date. If an oath or declaration is not filed during the pendency of

a nonprovisional application, the inventorship is that inventorship set forth in the application papers filed pursuant to 37 CFR 1.53(b), unless an applicant files a paper under 37 CFR 1.41(a)(*>1<) accompanied by the processing fee set forth in 37 CFR 1.17(i) supplying or changing the name or names of the inventor or inventors.

The name, residence, and citizenship of each person believed to be an actual inventor should be provided as an application identifier when application papers under 37 CFR 1.53(b) are filed without an oath or declaration, or application papers under 37 CFR 1.53(c) are filed without a cover sheet. See 37 CFR 1.41(a)(3). Naming the individuals known to be inventors or the persons believed to be the inventors may enable the Office to identify the application, if applicant does not know the application number. Where no inventor(s) is known and applicant cannot name a person believed to be an inventor on filing, the Office requests that an alphanumeric identifier be submitted for the application. The use of very short identifiers should be avoided to prevent confusion. Without supplying at least a unique identifying name the Office may have no ability or only a delayed ability to match any papers submitted after filing of the application and before issuance of an identifying application number with the application file. Any identifier used that is not an inventor's name should be specific, alphanumeric characters of reasonable length, and should be presented in such a manner that it is clear to application processing personnel what the identifier is and where it is to be found. Failure to apprise the Office of an application identifier such as the names of the inventors or the alphanumeric identifier being used may result in applicants having to resubmit papers that could not be matched with the application and proof of the earlier receipt of such papers where submission was time dependent.

For correction of inventorship, see MPEP § 201.03.

This section concerns filing by the actual inventor. If the application is filed by another, see MPEP § 409.03.

For assignments of application by inventor, see MPEP § 301. For an inventor who is dead or insane, see MPEP § 409.

605.01 Applicant's Citizenship

The statute (35 U.S.C. 115) requires an applicant, in a nonprovisional application, to state his or her citizenship. Where an applicant is not a citizen of any country, a statement to this effect is accepted as satisfying the statutory requirement, but a statement as to citizenship applied for or first papers taken out looking to future citizenship in this (or any other) country does not meet the requirement.

Form paragraphs 6.05 and 6.05.03 may be used to notify applicant that the applicant's citizenship is omitted.

¶ *6.05 Oath or Declaration Defective, Heading*

The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

Examiner Note:

1. One or more of the appropriate form paragraphs 6.05.01 to 6.05.20 must follow this paragraph.
2. If none of the form paragraphs apply, then an appropriate explanation of the defect should be given immediately following this paragraph.

¶ *6.05.03 Citizenship Omitted*

It does not identify the citizenship of each inventor.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05

605.02 Applicant's Residence [R-7]

Applicant's place of residence, that is, the city and either state or foreign country, is required to be included in the oath or declaration in a nonprovisional application for compliance with 37 CFR 1.63 unless it is included in an application data sheet (37 CFR 1.76). In the case of an applicant who is in one of the U.S. Armed Services, a statement to that effect is sufficient as to residence. For change of residence, see MPEP § 719.02(b). Applicant's residence must be included on the cover sheet for a provisional application unless it is included in an application data sheet (37 CFR 1.76).

If the residence is not included in the executed oath or declaration filed under 37 CFR 1.63, the Office of **>Patent Application Processing (OPAP)< will normally so indicate on a "Notice of Informal Application," so as to require the submission of the residence information within a set period for reply. If the exam-

iner notes that the residence has not been included in the oath or declaration or in an application data sheet, form paragraphs 6.05 (reproduced in MPEP § 605.01) and 6.05.02 should be used.

¶ *6.05.02 Residence Omitted*

It does not identify the city and either state or foreign country of residence of each inventor. The residence information may be provided on either an application data sheet or a supplemental oath or declaration.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

605.03 Applicant's Mailing or Post Office Address [R-7]

Each applicant's mailing or post office address is required to be supplied on the oath or declaration, if not stated in an application data sheet. Applicant's mailing address means that address at which he or she customarily receives his or her mail. Either applicant's home or business address is acceptable as the mailing address. The mailing address should include the ZIP Code designation. Since the term "post office address" as previously used in 37 CFR 1.63 may be confusing, effective November 7, 2000, 37 CFR 1.63 was amended to use the term "mailing address" instead.

The object of requiring each applicant's mailing address is to enable the Office to communicate directly with the applicant if desired; hence, the address of the attorney with instruction to send communications to applicant in care of the attorney is not sufficient.

In situations where an inventor does not execute the oath or declaration and the inventor is not deceased, such as in an application filed under 37 CFR 1.47, the inventor's most recent home address must be given to enable the Office to communicate directly with the inventor as necessary.

If an oath or declaration was filed prior to December 1, 1997 and the post office address was incomplete or omitted from the oath or declaration, "Notice of Informal Application" or form paragraph 6.09.01 may be used to notify applicant of the deficiency of the post office address.

¶ *6.09.01 Post Office Address Omitted, Residence Given*

Applicant has not given a post office address anywhere in the application papers as required by 37 CFR 1.33(a), which was in effect at the time of filing of the oath or declaration. A statement over applicant's signature providing a complete post office address is required.

Examiner Note:

1. This form paragraph should only be used where the Post Office address has been omitted in an oath or declaration filed prior to December 1, 1997. Use form paragraphs 6.05 and 6.05.19 if the oath or declaration was filed on or after December 1, 1997.

2. If both the post office address and residence are incomplete, not uniform or omitted, use form paragraphs 6.05 and 6.05.02.

Oaths or declarations filed on or after December 1, 1997 must include the mailing or post office address of each inventor. Effective November 7, 2000 the mailing address of each inventor may be provided in an application data sheet. See 37 CFR 1.63(c) and 37 CFR 1.76. In an application filed before November 29, 2000, the Office of **>Patent Application Processing (OPAP)< will normally indicate the omission of an inventor's mailing address on a "Notice of Informal Application," requiring a new oath or declaration when the form is sent out with an Office action. For utility and plant applications filed on or after November 29, 2000, applicant's mailing address may be needed for any patent application publication. If the mailing address of any inventor has been omitted, *>OPAP< will notify applicant of the omission and require the omitted mailing address in response to the notice. If the examiner notes that the mailing or post office address has not been included in an oath or declaration filed on or after December 1, 1997, and the mailing address is not provided in an application data sheet, form paragraphs 6.05 (reproduced in MPEP § 605.01) and 6.05.19 may be used to notify applicant that the mailing or post office address has been omitted from the oath or declaration.

¶ *6.05.19 Mailing Address Omitted*

It does not identify the mailing address of each inventor. A mailing address is an address at which an inventor customarily receives his or her mail and may be either a home or business address. The mailing address should include the ZIP Code designation. The mailing address may be provided in an application data sheet or a supplemental oath or declaration. See 37 CFR 1.63(c) and 37 CFR 1.76.

Examiner Note:

This paragraph must be preceded by form paragraph 6.05.

605.04(a) Applicant's Signature and Name [R-7]

37 CFR 1.64. Person making oath or declaration.

(a) The oath or declaration (§ 1.63), including any supplemental oath or declaration (§ 1.67), must be made by all of the actual inventors except as provided for in §§ 1.42, 1.43, 1.47, or § 1.67.

(b) If the person making the oath or declaration or any supplemental oath or declaration is not the inventor (§§ 1.42, 1.43, 1.47, or § 1.67), the oath or declaration shall state the relationship of the person to the inventor, and, upon information and belief, the facts which the inventor is required to state. If the person signing the oath or declaration is the legal representative of a deceased inventor, the oath or declaration shall also state that the person is a legal representative and the citizenship, residence, and mailing address of the legal representative.

I. EXECUTION OF OATHS OR DECLARATIONS OF PATENT APPLICATIONS

United States patent applications which have not been prepared and executed in accordance with the requirements of Title 35 of the United States Code and Title 37 of the Code of Federal Regulations may be abandoned. Although the statute and the rules have been in existence for many years, the Office continues to receive a number of applications which have been improperly executed and/or filed. Since the improper execution and/or filing of patent applications can ultimately result in a loss of rights, it is appropriate to emphasize the importance of proper execution and filing.

There is no requirement that a signature be made in any particular manner. See MPEP § 605.04(d). If applicant signs his or her name using non-English characters, then such a signature will be accepted.

Applications filed through the Electronic Filing System must also contain an oath or declaration personally signed by the inventor.

It is improper for an applicant to sign an oath or declaration which is not attached to or does not identify a specification and/or claims.

Attached does not necessarily mean that all the papers must be literally fastened. It is sufficient that the specification, including the claims, and the oath or declaration are physically located together at the time of execution. Physical connection is not required. Copies of declarations are encouraged. See MPEP § 502.01, § 502.02, § 602, and § 602.05(a).

An oath or declaration under 37 CFR 1.63 by each actual inventor must be presented. While each inventor need not execute the same oath or declaration, each oath or declaration executed by an inventor must contain a complete listing of all inventors so as to clearly indicate what each inventor believes to be the appropriate inventive entity. >Where individual declarations are executed, they must be submitted as individual declarations rather than combined into one declaration (by combining the signature pages).<

The provisions of 35 U.S.C. 363 for filing an international application under the Patent Cooperation Treaty (PCT) which designates the United States and thereby has the effect of a regularly filed United States national application, except as provided in 35 U.S.C. 102(e), are somewhat different than the provisions of 35 U.S.C. 111. The oath or declaration requirements for an international application before the Patent and Trademark Office are set forth in 35 U.S.C. 371(c)(4) and 37 CFR 1.497.

37 CFR 1.52(c)(1) states that "[a]ny interlineation, erasure, cancellation or other alteration of the application papers filed must be made before the signing of any accompanying oath or declaration pursuant to § 1.63 referring to those application papers and should be dated and initialed or signed by the applicant on the same sheet of paper. Application papers containing alterations made after the signing of an oath or declaration referring to those application papers must be supported by a supplemental oath or declaration under § 1.67. In either situation, a substitute specification (§ 1.125) is required if the application papers do not comply with paragraphs (a) and (b) of this section." 37 CFR 1.52(c)(2) states that after the signing of the oath or declaration referring to the application papers, amendments may only be made in the manner provided by 37 CFR 1.121. An application submitted through the electronic filing system (EFS) may include scanned images of a declaration executed by the inventor. The reformatting of an application in submitting the specification of the application using EFS, is not an "alteration of the application papers" requiring a substitute oath or declaration. It is acceptable to print out a copy of the specification prepared using traditional word processing software for the inventor to review as he or she signs the oath or declaration, and then cut and paste from the electronic document to prepare the EFS version of the specification

and to submit a scanned copy of the declaration with the EFS submission.

In summary, it is emphasized that the application filed must be the application executed by the applicant and it is improper for anyone, including counsel, to alter, rewrite, or partly fill in any part of the application, including the oath or declaration, after execution of the oath or declaration by the applicant. This provision should particularly be brought to the attention of foreign applicants by their United States counsel since the United States law and practice in this area may differ from that in other countries.

Any changes made in ink in the application or oath prior to signing should be initialed and dated by the applicants prior to execution of the oath or declaration. The Office ** will require a new oath or declaration >if the alterations are not initialed and dated<. Form paragraph 6.02.01 may be used to call noninitialed and/or nondated alterations to applicant's attention.

**>

¶ *6.02.01 Non-Initialed and/or Non-Dated Alterations in Application Papers*

The application is objected to because of alterations which have not been initialed and/or dated as is required by 37 CFR 1.52(c). A properly executed oath or declaration which complies with 37 CFR 1.67(a) and identifies the application by application number and filing date is required.

<

The signing and execution by the applicant of oaths or declarations in certain continuation or divisional applications may be omitted. See MPEP § 201.06, § 201.07, and § 602.05(a).

For the signature on a reply, see MPEP § 714.01(a) to § 714.01(d).

II. EXECUTION OF OATH OR DECLARATION ON BEHALF OF INVENTOR

The oath or declaration required by 35 U.S.C. 115 must be signed by all of the actual inventors, except under limited circumstances. 35 U.S.C. 116 provides that joint inventors can sign on behalf of an inventor who cannot be reached or refuses to join. See MPEP § 409.03(a). 35 U.S.C. 117 provides that the legal representative of a deceased or incapacitated inventor can sign on behalf of the inventor. If a legal representative executes an oath or declaration on behalf of a deceased inventor, the legal representative must state that the person is a legal representative and provide the citizenship, residence, and mailing address of the legal representative. See 37 CFR 1.64, MPEP § 409.01 and § 409.02. 35 U.S.C. 118 provides that a party with proprietary interest in the invention claimed in an application can sign on behalf of the inventor, if the inventor cannot be reached or refuses to join in the filing of the application. See MPEP § 409.03(b) and § 409.03(f). The oath or declaration may not be signed by an attorney on behalf of the inventor, even if the attorney has been given a power of attorney to do so. *Opinion of Hon. Edward Bates,* 10 Op. Atty. Gen. 137 (1861). See also *Staeger v. Commissioner of Patents and Trademarks*, 189 USPQ 272 (D.D.C. 1976) and *In re Striker*, 182 USPQ 507 (PTO Solicitor 1973) (In each case, an oath or declaration signed by the attorney on behalf of the inventor was defective because the attorney did not have a proprietary interest in the invention.).

605.04(b) One Full Given Name Required [R-7]

37 CFR 1.63(a)(2) requires that each inventor be identified by full name, including the family name, and at least one given name without abbreviation together with any other given name or initial in the oath or declaration. For example, if the applicant's full name is "John Paul Doe," either "John P. Doe" or "J. Paul Doe" is acceptable.

Form paragraphs 6.05 (reproduced in MPEP § 602.03) and 6.05.18 may be used to notify applicant that the oath or declaration is defective because the full given name of each inventor has not been adequately stated.

¶ *6.05.18 Full Given Name Is Not Set Forth*

The full name of each inventor (family name and at least one given name together with any initial) has not been set forth.

Examiner Note:

This paragraph must be preceded by paragraph 6.05.

A situation may arise where an inventor's full given name is a singular letter, or is a plurality of singular letters. For example, an inventor's full given name may be "J. Doe" or "J.P. Doe," i.e., the "J" and the "P" are not initials. In such a situation, identifying the inventor by his or her family name and the singular letter(s) is acceptable, since that is the inventor's full given name. In order to avoid an objection under 37

CFR1.63(a)(2), applicant should point out in the oath or declaration that the singular lettering set forth is the inventor's given name. A statement to this effect, accompanying the filing of the oath or declaration, will also be acceptable. Without such a statement, the examiner should treat the singular letter(s) as an abbreviation of the inventor's given name and should object to the oath or declaration using the appropriate form paragraphs. Applicant may overcome this objection by filing a responsive statement that the singular letter(s) is/are the inventor's given name(s).

In an application where the name is typewritten with a *middle name* or *initial*, but the signature does not contain such middle name or initial, the typewritten version of the name will be used as the inventor's name for the purposes of the application and any patent that may issue from the application. No objection should be made in this instance, since the inventor's signature may differ from his or her legal name. Except for correction of a typographical or transliteration error in the spelling of an inventor's name, a request to have the name changed from the typewritten version to the signed version or any other corrections in the name of the inventor(s) will not be entertained, unless accompanied by a petition under 37 CFR 1.182 together with an appropriate petition fee. Since amendments are not permitted after the payment of the issue fee (37 CFR 1.312), a petition under 37 CFR 1.182 to change the name of the inventor cannot be granted if filed after the payment of the issue fee. The petition should be directed to the attention of the Office of Petitions. Upon granting of the petition, if the application is maintained in paper, the left margin of the original oath or declaration should be marked in red ink "See paper No. ___ for correction of the inventor's name," and the application should be sent to the Office of **>Patent Application Processing (OPAP)< for correction of its records, unless the application is an application with an application data sheet (e.g., an 09/ series application), in which case the Office of Petitions will correct the Office computer records and print a new bibliographic data sheet. If the application is assigned, it will be forwarded by *>OPAP< or the Office of Petitions to the Assignment Division for a change in the assignment record.

When a typographical or transliteration error in the spelling of an inventor's name is discovered during pendency of an application, a petition is not required, nor is a new oath or declaration under 37 CFR 1.63 needed. However, applicants are strongly encouraged to use an application data sheet such that any patent to issue will reflect the correct spelling of the inventor's name. Without an application data sheet with the corrected spelling, any patent to issue is less likely to reflect the correct spelling since the spelling of the inventor's name is taken from the oath or declaration, or any subsequently filed application data sheet.

If the error is not detected until after the payment of the issue fee, because amendments are not permitted after the payment of the issue fee, either (A) the application must be withdrawn from issue under 37 CFR 1.313(c)(2) and a request to correct the spelling of the inventor's name submitted with a request for continued examination (RCE) under 37 CFR 1.114, or (B) a certificate of correction must be filed after the patent issues requesting correction of the spelling of the inventor's name.

When any correction or change is effected, the Office computer records must be changed. If the application is maintained in paper, the change should be noted on the original oath or declaration by writing in red ink in the left column "See Paper No. __ for inventorship changes." See MPEP §§ 201.03 and 605.04(g). If the application is an Image File Wrapper (IFW) application, after the Office records are corrected, a new bib-data sheet must be printed and added to the IFW.

605.04(c) Inventor Changes Name [R-7]

In cases where an inventor's name has been changed after the application has been filed and the inventor desires to change his or her name on the application, he or she must submit a petition under 37 CFR 1.182. Applicants are also strongly encouraged to submit an application data sheet (37 CFR 1.76) showing the new name. The petition should be directed to the attention of the Office of Petitions. The petition must include an appropriate petition fee and a statement signed by the inventor setting forth both names and the procedure whereby the change of name was effected, or a copy of the court order.

Since amendments are not permitted after the payment of the issue fee (37 CFR 1.312), a petition under 37 CFR 1.182 to change the name of the inventor can-

not be granted if filed after the payment of the issue fee.

If an application data sheet is not submitted, the petition may still be granted, but the patent may not reflect the correct spelling of the inventor's name.

If the petition is granted, if the application is maintained in paper with a file jacket label (i.e., the application is an 08/ or earlier series application), the original declaration must be marked in red ink, in the left margin "See paper No. _ for correction of inventor name" and the application should be sent to the Office of **>Patent Application Processing (OPAP)< for change of name on the file wrapper and in the PALM database. If the petition is granted in an Image File Wrapper (IFW) application or if the application is an 09/ or later series application, the spelling of the inventor's name should be changed in the Office computer records and a new PALM bib-data sheet should be printed. If the application is assigned, applicant should submit a corrected assignment document along with a cover sheet and the recording fee as set forth in 37 CFR 1.21(h) to the Assignment Division for a change in the assignment record.

605.04(d) Applicant Unable to Write

If the applicant is unable to write, his or her mark as affixed to the oath or declaration must be attested to by a witness. In the case of the oath, the notary's signature to the jurat is sufficient to authenticate the mark.

605.04(e) May Use Title With Signature

It is permissible for an applicant to use a title of nobility or other title, such as "Dr.", in connection with his or her signature. The title will not appear in the printed patent.

605.04(f) Signature on Joint Applications - Order of Names [R-7]

The order of names of joint patentees in the heading of the patent is taken from the order in which the typewritten names appear in the original oath or declaration. Care should therefore be exercised in selecting the preferred order of the typewritten names of the joint inventors, before filing, as requests for subsequent shifting of the names would entail changing numerous records in the Office. Since the particular order in which the names appear is of no consequence insofar as the legal rights of the joint applicants are concerned, no changes will be made except when a petition under 37 CFR 1.182 is granted. The petition should be directed to the attention of the Office of Petitions. The petition to change the order of names must be signed by either the attorney or agent of record or all the applicants. Applicants are strongly encouraged to submit an application data sheet showing the new order of inventor names to ensure appropriate printing of the inventor names in any patent to issue. It is suggested that all typewritten and signed names appearing in the application papers should be in the same order as the typewritten names in the oath or declaration. When the Office of Petitions grants a petition to change the order of the names of the inventors, the Office of Petitions will change the order of the names in the Office computer records and print a new bib-data sheet, unless the application is an 08/ or earlier series application, in which case, the application should be sent to the Office of **>Patent Application Processing (OPAP)< for correction on the file wrapper label and the PALM database. Since a change to the order of the inventor's names is an amendment to the application and amendments are not permitted after the payment of the issue fee (37 CFR 1.312), a petition under 37 CFR 1.182 to change the order of the inventor's name cannot be granted if filed after the payment of the issue fee.

In those instances where the joint applicants file separate oaths or declarations, the order of names is taken from the order in which the several oaths or declarations appear in the application papers unless a different order is requested at the time of filing.

605.04(g) Correction of Inventorship [R-7]

When *>a< request is granted to add or delete inventors under 37 CFR 1.48, the change should be noted in red ink in the left margin of the original oath or declaration, if the application is maintained in paper. The notation should read "See Paper No. ____ for inventorship changes." For Image File Wrapper (IFW) processing, see IFW Manual. The application (other than 09/ or later series applications) should be sent to the Office of **>Patent Application Processing (OPAP)< for correction on the file wrapper label and the PALM database regarding the inventorship. A

brief explanation on an "Application Division Data Base Routing Slip" (available from the Technology Center (TC) technical support staff) should accompany the application file to >OPAP<. For 09/ or later series applications, the examiner should have the TC's technical support staff enter the correction in the PALM database and print a new PALM bib-data sheet, which will then be placed in the file wrapper, if correction of the database and printing of a new PALM bib-data sheet was not already done by the Office of Petitions.

605.05 Administrator, Executor, or Other Legal Representative

In an application filed by a legal representative of the inventor, the specification should not be written in the first person.

For prosecution by administrator or executor, see MPEP § 409.01(a).

For prosecution by heirs, see MPEP § 409.01(a) and § 409.01(d).

For prosecution by representative of legally incapacitated inventor, see MPEP § 409.02.

For prosecution by other than inventor, see MPEP § 409.03.

605.07 Joint Inventors

35 U.S.C. 116. Inventors

When an invention is made by two or more persons jointly, they shall apply for patent jointly and each make the required oath, except as otherwise provided in this title. Inventors may apply for a patent jointly even though (1) they did not physically work together or at the same time, (2) each did not make the same type or amount of contribution, or (3) each did not make a contribution to the subject matter of every claim of the patent.

*****

35 U.S.C. 116, as amended by Public Law 98-622, recognizes the realities of modern team research. A research project may include many inventions. Some inventions may have contributions made by individuals who are not involved in other, related inventions.

35 U.S.C. 116 allows inventors to apply for a patent jointly even though

(A) they did not physically work together or at the same time,

(B) each did not make the same type or amount of contribution, or

(C) each did not make a contribution to the subject matter of every claim of the patent.

Items (A) and (B) adopt the rationale stated in decisions such as *Monsanto Co. v. Kamp*, 269 F. Supp. 818, 824, 154 USPQ 259, 262 (D.D.C. 1967).

Item (C) adopts the rationale of cases such as *SAB Industrie AB v. Bendix Corp.*, 199 USPQ 95 (E.D. Va. 1978).

With regard to item (A), see *Kimberly-Clark Corp. v. Procter & Gamble Distributing Co.*, 973 F.2d 911, 916-17, 23 USPQ 2d 1921, 1925-26 (Fed. Cir. 1992) (some quantum of collaboration or connection is required in order for persons to be "joint" inventors under 35 U.S.C. 116, and thus individuals who are completely ignorant of what each other has done until years after their individual independent efforts cannot be considered joint inventors).

Like other patent applications, jointly filed applications are subject to the requirements of 35 U.S.C. 121 that an application be directed to only a single invention. If more than one invention is included in the application, the examiner may require the application to be restricted to one of the inventions. In such a case, a "divisional" application complying with 35 U.S.C. 120 would be entitled to the benefit of the earlier filing date of the original application.

It is possible that different claims of an application or patent may have different dates of inventions even though the patent covers only one independent and distinct invention within the meaning of 35 U.S.C. 121. When necessary, the U.S. Patent and Trademark Office or a court may inquire of the patent applicant or owner concerning the inventors and the invention dates for the subject matter of the various claims.

GUIDELINES

37 CFR 1.45. Joint inventors.

*****

(b) Inventors may apply for a patent jointly even though

(1) They did not physically work together or at the same time,

(2) Each inventor did not make the same type or amount of contribution, or

(3) Each inventor did not make a contribution to the subject matter of every claim of the application.

(c) If multiple inventors are named in a nonprovisional application, each named inventor must have made a contribution, individually or jointly, to the subject matter of at least one claim of the application and the application will be considered to be a

joint application under 35 U.S.C. 116. If multiple inventors are named in a provisional application, each named inventor must have made a contribution, individually or jointly, to the subject matter disclosed in the provisional application and the provisional application will be considered to be a joint application under 35 U.S.C. 116.

Since provisional applications may be filed without claims, 37 CFR 1.45(c) states that each inventor named in a joint provisional application must have made a contribution to the subject matter disclosed in the application.

The significant features resulting from the amendments to 35 U.S.C. 116 by Public Law 98-622 are the following:

(A) The joint inventors do not have to separately "sign the application," but only need apply for the patent jointly and make the required oath or declaration by signing the same; this is a clarification, but not a change in current practice.

(B) Inventors may apply for a patent jointly even though "they did not work together or at the same time," thereby clarifying (a) that it is not necessary that the inventors physically work together on a project, and (b) that one inventor may "take a step at one time, the other an approach at different times." *(Monsanto Co. v. Kamp,* 269 F. Supp. 818, 824, 154 USPQ 259, 262 (D.D.C. 1967)).

(C) Inventors may apply for a patent jointly even though "each did not make the same type or amount of contribution," thereby clarifying the "fact that each of the inventors play a different role and that the contribution of one may not be as great as that of another does not detract from the fact that the invention is joint, if each makes some original contribution, though partial, to the final solution of the problem." *Monsanto Co. v. Kamp,* 269 F. Supp. at 824, 154 USPQ at 262.

(D) Inventors may apply for a patent jointly even though "each did not make a contribution to the subject matter of every claim of the patent."

(E) Inventors may apply for a patent jointly as long as each inventor made a contribution, i.e., was an inventor or joint inventor, of the subject matter of at least one claim of the patent; there is no requirement that all the inventors be joint inventors of the subject matter of any one claim.

(F) If an application by joint inventors includes more than one independent and distinct invention, restriction may be required with the possible result of a necessity to change the inventorship named in the application if the elected invention was not the invention of all the originally named inventors.

(G) The amendment to 35 U.S.C. 116 increases the likelihood that different claims of an application or patent may have different dates of invention; when necessary the Office or court may inquire of the patent applicant or owner concerning the inventors and the invention dates for the subject matter of the various claims.

Pending nonprovisional applications will be permitted to be amended by complying with 37 CFR 1.48 to add claims to inventions by inventors not named when the application was filed as long as such inventions were disclosed in the application as filed since 37 CFR 1.48 permits correction of inventorship where the correct inventor or inventors are not named in an application for patent through error without any deceptive intention on the part of the person being added as an inventor. This is specially covered in 37 CFR 1.48(c).

Under 35 U.S.C. 116, an examiner may reject claims under 35 U.S.C. 102(f) only in circumstances where a named inventor is not the inventor of at least one claim in the application; no rejection under 35 U.S.C. 102(f) is appropriate if a named inventor made a contribution to the invention defined in any claim of the application.

Under 35 U.S.C. 116, considered in conjunction with 35 U.S.C. 103(c), a rejection may be appropriate under 35 U.S.C. 102(f)/103 where the subject matter, i.e., prior art, and the claimed invention were not owned by, or subject to an obligation of assignment to, the same person at the time the invention was made.

Applicants are responsible for correcting, and are required to correct, the inventorship in compliance with 37 CFR 1.48 when the application is amended to change the claims so that one (or more) of the named inventors is no longer an inventor of the subject matter of a claim remaining in the application.

In requiring restriction in an application filed by joint inventors, the examiner should remind applicants of the necessity to correct the inventorship pursuant to 37 CFR 1.48 if an invention is elected and the claims to the invention of one or more inventors are canceled.

The examiner should not inquire of the patent applicant concerning the inventors and the invention dates for the subject matter of the various claims until *it becomes necessary* to do so in order to properly examine the application.

If an application is filed with joint inventors, the examiner should assume that the subject matter of the various claims was commonly owned at the time the inventions covered therein were made, unless there is evidence to the contrary. If inventors of subject matter, not commonly owned at the time of the later invention, file a joint application, applicants have an obligation pursuant to 37 CFR 1.56 to point out the inventor and invention dates of each claim and the lack of common ownership at the time the later invention was made in order that the examiner may consider the applicability of 35 U.S.C. 102(e)/103, 35 U.S.C. 102(f)/103 or 35 U.S.C. 102(g)/103. The examiner should assume, unless there is evidence to the contrary, that applicants are complying with their duty of disclosure. It should be pointed out that 35 U.S.C. 119(a) benefit may be claimed to any foreign application as long as the U.S. named inventor was the inventor of the foreign application invention and 35 U.S.C. 119(a)-(d) requirements are met. Where two or more foreign applications are combined in a single U.S. application, to take advantage of the changes to 35 U.S.C. 103 or 35 U.S.C. 116, the U.S. application may claim benefit under 35 U.S.C. 119(a) to each of the foreign applications provided all the requirements of 35 U.S.C. 119(a)-(d) are met. One of the conditions for benefit under 35 U.S.C. 119(a) is that the foreign application must be for "the same invention" as the application in the United States. Therefore, a claim in the U.S. application which relies on the combination of prior foreign applications may not be entitled to the benefit under 35 U.S.C. 119(a) if the subject matter of the claim is not sufficiently disclosed in the prior foreign application. *Cf. Studiengesellschaft Kohle m.b.H. v. Shell Oil Co.*, 112 F.3d 1561, 42 USPQ2d 1674 (Fed. Cir. 1997). For example:

> If foreign applicant A invents X and files a foreign application; foreign applicant B invents Y and files separate foreign application. A+B combine inventions X+Y and A and B are proper joint inventors under 35 U.S.C. 116 and file U.S. application to X+Y. The U.S. application may claim benefit under 35 U.S.C. 119(a) to each of the foreign applications provided the requirements of 35 U.S.C. 119(a)-(d) are met.

606 Title of Invention [R-5]

37 CFR 1.72. Title and abstract.

(a) The title of the invention may not exceed 500 characters in length and must be as short and specific as possible. Characters that cannot be captured and recorded in the Office's automated information systems may not be reflected in the Office's records in such systems or in documents created by the Office. Unless the title is supplied in an application data sheet (§ 1.76), the title of the invention should appear as a heading on the first page of the specification.

*****

The title of the invention should be placed at the top of the first page of the specification unless it is provided in the application data sheet (see 37 CFR 1.76). The title should be brief but technically accurate and descriptive and should contain fewer than 500 characters. Inasmuch as the words >"new,"< "improved," "improvement of," and "improvement in" are not considered as part of the title of an invention, these words should not be included at the beginning of the title of the invention and will be deleted when the Office enters the title into the Office's computer records, and when any patent issues. >Similarly, the articles "a," "an," and "the" should not be included as the first words of the title of the invention and will be deleted when the Office enters the title into the Office's computer records, and when any patent issues.<

606.01 Examiner May Require Change in Title [R-2]

Where the title is not descriptive of the invention claimed, the examiner should require the substitution of a new title that is clearly indicative of the invention to which the claims are directed. Form paragraphs 6.11 and 6.11.01 may be used.

¶ *6.11 Title of Invention Is Not Descriptive*

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Examiner Note:

If a change in the title of the invention is being suggested by the examiner, follow with form paragraph 6.11.01.

¶ *6.11.01 Title of Invention, Suggested Change*

The following title is suggested: " **[1]**"

This may result in slightly longer titles, but the loss in brevity of title will be more than offset by the gain in its informative value in indexing, classifying, searching, etc. If a satisfactory title is not supplied by the applicant, the examiner may, at the time of allowance, change the title by examiner's amendment. If the change in the title is the only change being made by the examiner at the time of allowance, >and the application is maintained in paper,< a separate examiner's amendment need not be prepared. The examiner is to indicate the change in the title on the file label (or bib-data sheet in 09/ series applications) using BLACK ink and place his or her initials and the date in the margin. >For Image File Wrapper (IFW) applications, informal examiner's amendments are not permitted and a separate examiner's amendment must be prepared, and a copy of the bib-data sheet must be added to the IFW.< When the Technology Center (TC) technical support staff prepares the application for issue and sees that the title has been changed, the TC technical support staff will make the required change in >the Office computer record systems<.

607 Filing Fee [R-5]

Patent application filing fees are set in accordance with 35 U.S.C. 41 and are listed in 37 CFR 1.16.

I. BASIC FILING, SEARCH, AND EXAMINATION FEES

The Consolidated Appropriations Act, 2005 (Consolidated Appropriations Act), effective December 8, 2004, provides for a separate filing fee, search fee, and examination fee during fiscal years 2005 and 2006. For nonprovisional applications filed under 35 U.S.C. 111(a) on or after December 8, 2004 (including reissue applications), the following fees are required: basic filing fee as set forth in 37 CFR 1.16(a)(1), (b)(1), (c)(1) or (e)(1); search fee as set forth in 37 CFR 1.16(k), (l), (m), or (n); examination fee as set forth in 37 CFR 1.16(o), (p), (q), or (r); application size fee, if applicable (see subsection II. below); and excess claims fees, if applicable (see subsection III. below).

For nonprovisional applications filed under 35 U.S.C. 111(a) before December 8, 2004 (including reissue applications), the following fees are required: basic filing fee as set forth in 37 CFR 1.16(a)(2), (b)(2), (c)(2) or (e)(2)); and excess claims fees, if applicable (see subsection III. below). No search and examination fees are required for nonprovisional applications filed under 35 U.S.C. 111(a) before December 8, 2004.

The basic filing, search and examination fees are due on filing of the nonprovisional application under 35 U.S.C. 111(a). These fees may be paid on a date later than the filing date of the application provided they are paid within the time period set forth in 37 CFR 1.53(f) and include the surcharge set forth in 37 CFR 1.16(f). For applications filed on or after December 8, 2004 but prior to July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(b) or (d), if the search and/or examination fees are paid on a date later than the filing date of the application, the surcharge under 37 CFR 1.16(f) is <u>not</u> required. For applications filed on or after July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(b) or (d), if any of the basic filing fee, the search fee, or the examination fee are paid on a date later than the filing date of the application, the surcharge under 37 CFR 1.16(f) is required.

For provisional applications filed under 35 U.S.C. 111(b), the basic filing fee set forth in 37 CFR 1.16(d) is required. The basic filing fee is due on filing of the provisional application, but may be paid later, if paid within the time period set forth in 37 CFR 1.53(g) and accompanied by payment of a surcharge as set forth in 37 CFR 1.16(g).

For international applications entering the national stage under 35 U.S.C. 371, see 37 CFR 1.492 for the required fees. See also MPEP § 1893.01(c).

See also MPEP § 1415 for reissue application fees.

II. APPLICATION SIZE FEE

The Consolidated Appropriations Act also provides for an application size fee. 37 CFR 1.16(s) sets forth the application size fee for any application (including any provisional applications and any reissue applications) filed under 35 U.S.C. 111 on or after December 8, 2004 the specification >(including claims)< and drawings of which, excluding a sequence listing or computer program listing filed in an electronic medium in compliance with the rules (see 37 CFR 1.52(f)), exceed 100 sheets of paper. The application size fee does not apply to any applications filed before December 8, 2004. The application size fee applies

for each additional 50 sheets or fraction thereof over 100 sheets of paper. Any sequence listing in an electronic medium in compliance with 37 CFR 1.52(e) and 37 CFR 1.821(c) or (e), and any computer program listing filed in an electronic medium in compliance with 37 CFR 1.52(e) and 1.96, will be excluded when determining the application size fee required by 37 CFR 1.16(s).

For purposes of determining the application size fee required by 37 CFR 1.16(s), for an application the specification >(including claims)< and drawings of which, excluding any sequence listing in compliance with 37 CFR 1.52(e) and 37 CFR 1.821(c) or (e), and any computer program listing filed in an electronic medium in compliance with 37 CFR 1.52(e) and 37 CFR 1.96, are submitted in whole or in part on an electronic medium other than the Office electronic filing system, each three kilobytes of content submitted on an electronic medium shall be counted as a sheet of paper. See 37 CFR 1.52(f)(1).

The paper size equivalent of the specification >(including claims)< and drawings of an application submitted via the Office electronic filing system will be considered to be seventy five percent of the number of sheets of paper present in the specification >(including claims)< and drawings of the application when entered into the Office file wrapper after being rendered by the Office electronic filing system for purposes of computing the application size fee required by 37 CFR 1.16(s). Any sequence listing in compliance with 37 CFR 1.821(c) or (e), and any computer program listing in compliance with 37 CFR 1.96, submitted via the Office electronic filing system will be excluded when determining the application size fee required by 37 CFR 1.16(s) if the listing is submitted in American Standard Code for Information Interchange (ASCII) text as part of an associated file of the application. See 37 CFR 1.52(f)(2). Sequence listings or computer program listings submitted via the Office electronic filing system in Portable Document Format (PDF) as part of the specification or as Tagg(ed) Image File Format (TIFF) drawing files would not be excluded when determining the application size fee required by 37 CFR 1.16(s).

For international applications entering the national stage where the basic national fee was not paid before December 8, 2004, see 37 CFR 1.492(j).

III. EXCESS CLAIMS FEES

37 CFR 1.16(h) sets forth the excess claims fee for each independent claim in excess of three. 37 CFR 1.16(i) sets forth the excess claims fee for each claim (whether independent or dependent) in excess of twenty. The Consolidated Appropriations Act provides that the excess claims fees specified in 35 U.S.C. 41(a)(2) shall apply only as to those claims (independent or dependent) that, after taking into account any claims that have been canceled, are in excess of the number of claims for which the excess claims fee specified in 35 U.S.C. 41 was paid before December 8, 2004. Thus, the Office will charge the excess claims fees specified in 37 CFR 1.16(h) and (i) if an applicant in an application filed before and pending on or after December 8, 2004, adds a claim (independent or total) in excess of the number of claims (independent or total) for which the excess claims fee was previously paid (under the current or previous fee schedule). The excess claims fees specified in 37 CFR 1.16(h) and (i) apply to any excess claims fee paid on or after December 8, 2004, regardless of the filing date of the application and regardless of the date on which the claim necessitating the excess claims fee payment was added to the application.

The excess claims fees specified in 37 CFR 1.16(h) and (i) also apply to all reissue applications pending on or after December 8, 2004. Under 35 U.S.C. 41(a)(2) as amended by the Consolidated Appropriations Act, the claims in the original patent are not taken into account in determining the excess claims fee for a reissue application. The excess claims fees specified in 37 CFR 1.16(h) and (i) are required for each independent claim in excess of three that is presented in a reissue application on or after December 8, 2004, and for each claim (whether independent or dependent) in excess of twenty that is presented in a reissue application on or after December 8, 2004.

Fees for a proper multiple dependent claim are calculated based on the number of claims to which the multiple dependent claim refers, 37 CFR 1.75(c), and a separate fee is required in each application containing a proper multiple dependent claim. See 37 CFR 1.16(j). For an improper multiple dependent claim, the fee charged is that charged for a single dependent claim. See MPEP § 608.01(n) for multiple dependent claims.

Upon submission of an amendment (whether entered or not) affecting the claims, payment of fees for those claims in excess of the number previously paid for is required.

Amendments before the first action, or not filed in reply to an Office action, presenting additional claims in excess of the number already paid for, not accompanied by the full additional fee due, will not be entered in whole or in part and applicant will be so advised. Such amendments filed in reply to an Office action will be regarded as not responsive thereto and the practice set forth in MPEP § 714.03 will be followed.

The additional fees, if any, due with an amendment are calculated on the basis of the claims (total and independent) which would be present, if the amendment were entered. The amendment of a claim, unless it changes a dependent claim to an independent claim or adds to the number of claims referred to in a multiple dependent claim, and the replacement of a claim by a claim of the same type, unless it is a multiple dependent claim which refers to more prior claims, do not require any additional fees.

For purposes of determining the fee due the U.S. Patent and Trademark Office, a claim will be treated as dependent if it contains reference to one or more other claims in the application. A claim determined to be dependent by this test will be entered if the fee paid reflects this determination.

Any claim which is in dependent form but which is so worded that it, in fact, is not a proper dependent claim, as for example it does not include every limitation of the claim on which it depends, will be required to be canceled as not being a proper dependent claim; and cancellation of any further claim depending on such a dependent claim will be similarly required. The applicant may thereupon amend the claims to place them in proper dependent form, or may redraft them as independent claims, upon payment of any necessary additional fee.

After a requirement for restriction, nonelected claims will be included in determining the fees due in connection with a subsequent amendment unless such claims are canceled.

An amendment canceling claims accompanying the papers constituting the application will be effective to diminish the number of claims to be considered in calculating the filing fees to be paid. A preliminary amendment filed concurrently with a response to a Notice To File Missing Parts of Application that required the fees set forth in 37 CFR 1.16, which preliminary amendment cancels or adds claims, will be taken into account in determining the appropriate fees due in response to the Notice To File Missing Parts of Application. No refund will be made for claims being canceled in the response that have already been paid for.

The additional fees, if any, due with an amendment are required prior to any consideration of the amendment by the examiner.

Money paid in connection with the filing of a proposed amendment will not be refunded by reason of the nonentry of the amendment. However, unentered claims will not be counted when calculating the fee due in subsequent amendments.

Amendments affecting the claims cannot serve as the basis for granting any refund. >See MPEP § 607.02 subsection V for refund of excess claims fees.<

Excess claims fees set forth in 37 CFR 1.20(c)(3) and (c)(4) apply to excess claims that are presented on or after December 8, 2004 during a reexamination proceeding.

IV. APPLICANT DOES NOT SPECIFY FEES TO WHICH PAYMENT IS TO BE APPLIED

In situations in which a payment submitted for the fees due on filing in a nonprovisional application filed under 35 U.S.C. 111(a) is insufficient and the applicant has not specified the fees to which the payment is to be applied, the Office will apply the payment in the following order until the payment is expended:

(1) the basic filing fee (37 CFR 1.16(a), (b), (c), or (e));

(2) the application size fee (37 CFR 1.16(s));

(3) the late filing surcharge (37 CFR 1.16(f));

(4) the processing fee for an application filed in a language other than English (37 CFR 1.17(i));

(5) the search fee (37 CFR 1.16(k), (l), (m), or (n));

(6) the examination fee (37 CFR 1.16(o), (p), (q), or (r)); and

(7) the excess claims fee (37 CFR 1.16(h), (i), and (j)).

In situations in which a payment submitted for the fees due on filing in a provisional application filed under 35 U.S.C. 111(b) is insufficient and the applicant has not specified the fees to which the payment is to be applied, the Office will apply the payment in the following order until the payment is expended:

(1) the basic filing fee (37 CFR 1.16(d));

(2) the application size fee (37 CFR 1.16(s)); and

(3) the late filing surcharge (37 CFR 1.16(g)).

See also MPEP § 509.

Since the basic filing fee, search fee, and examination fee under the new patent fee structure are often referred to as the "filing fee," the Office will treat a deposit account authorization to charge "the filing fee" as an authorization to charge the applicable fees under 37 CFR 1.16 (the basic filing fee, search fee, examination fee, any excess claims fee, and any application size fee) to the deposit account. The Office will also treat a deposit account authorization to charge "the basic filing fee" as an authorization to charge the applicable basic filing fee, search fee, and examination fee to the deposit account. Any deposit account authorization to charge the filing fee but not the search fee or examination fee must specifically limit the authorization by reference to one or more of paragraphs (a) through (e) of 37 CFR 1.16. See MPEP § 509.01.

607.02 Returnability of Fees [R-7]

35 U.S.C. 42. Patent and Trademark Office funding

*****

(d) The Director may refund any fee paid by mistake or any amount paid in excess of that required.

*****

37 CFR 1.26. Refunds.

(a) The Director may refund any fee paid by mistake or in excess of that required. A change of purpose after the payment of a fee, such as when a party desires to withdraw a patent filing for which the fee was paid, including an application, an appeal, or a request for an oral hearing, will not entitle a party to a refund of such fee. The Office will not refund amounts of twenty-five dollars or less unless a refund is specifically requested, and will not notify the payor of such amounts. If a party paying a fee or requesting a refund does not provide the banking information necessary for making refunds by electronic funds transfer (31 U.S.C. 3332 and 31 CFR part 208), or instruct the Office that refunds are to be credited to a deposit account, the Director may require such information, or use the banking information on the payment instrument to make a refund. Any refund of a fee paid by credit card will be by a credit to the credit card account to which the fee was charged.

(b) Any request for refund must be filed within two years from the date the fee was paid, except as otherwise provided in this paragraph or in § 1.28(a). If the Office charges a deposit account by an amount other than an amount specifically indicated in an authorization (§ 1.25(b)), any request for refund based upon such charge must be filed within two years from the date of the deposit account statement indicating such charge, and include a copy of that deposit account statement. The time periods set forth in this paragraph are not extendable.

(c) If the Director decides not to institute a reexamination proceeding, for *ex parte* reexaminations filed under § 1.510, a refund of $1,690 will be made to the reexamination requester. For *inter partes* reexaminations filed under § 1.913, a refund of $7,970 will be made to the reexamination requester. The reexamination requester should indicate the form in which any refund should be made (*e.g.*, by check, electronic funds transfer, credit to a deposit account, etc.). Generally, reexamination refunds will be issued in the form that the original payment was provided.

Under 35 U.S.C. 42(d) and 37 CFR 1.26, the Office may refund: (1) a fee paid by mistake (e.g., fee paid when no fee is required); or (2) any fee paid in excess of the amount of fee that is required. See *Ex parte Grady*, 59 USPQ 276, 277 (Comm'r Pat. 1943) (the statutory authorization for the refund of fees under the "by mistake" clause is applicable only to a mistake relating to the fee payment).

When an applicant or patentee takes an action "by mistake" (e.g., files an application or maintains a patent in force "by mistake"), the submission of fees required to take that action (e.g., a filing fee submitted with such application or a maintenance fee submitted for such patent) is not a "fee paid by mistake" within the meaning of 35 U.S.C. 42(d).

37 CFR 1.26(a) also provides that a change of purpose after the payment of a fee, as when a party desires to withdraw the filing of a patent application for which the fee was paid, will not entitle the party to a refund of such fee.

All questions pertaining to the return of fees are referred to the Refunds Section of the Receipts Division of the Office of Finance. No opinions should be expressed to attorneys or applicants as to whether or not fees are returnable in particular cases. Such questions may also be treated, to the extent appropriate, in decisions on petition decided by various U.S. Patent and Trademark Office officials.

I. MANNER OF MAKING A REFUND

Effective November 7, 2000, 37 CFR 1.26(a) was amended to authorize the Office to obtain the banking information necessary for making refunds by electronic funds transfer, or obtain the deposit account information to make the refund to the deposit account. If a party paying a fee or requesting a refund does not instruct the refund to be credited to a deposit account, the Office will attempt to make the refund by electronic fund transfer. The Office may (1) use the banking information on a payment instrument (e.g., a personal check) to refund an amount paid by the payment instrument in excess of that required, or (2) in other situations, require the banking information necessary for electronic funds transfer or require instructions to credit a deposit account. If it is not cost effective to require the banking information, the Office may obtain the deposit account information or simply issue any refund by treasury check.

37 CFR 1.26(a) further provides that any refund of a fee paid by credit card will be by a credit to the credit card account to which the fee was charged. The Office will not refund a fee paid by credit card by treasury check, electronic funds transfer, or credit to a deposit account.

II. TIME PERIOD FOR REQUESTING A REFUND

Any request for a refund which is not based upon subsequent entitlement to small entity status (see 37 CFR 1.28(a)) must be filed within the two-year nonextendable time limit set forth in 37 CFR 1.26(b).

III. FEES PAID BY DEPOSIT ACCOUNT

Effective November 7, 2000, the Office no longer treats authorizations to charge a deposit account as being received by the Office on the date the deposit account is actually debited for purposes of refund payments under 37 CFR 1.26 and 37 CFR 1.28. Payment by authorization to charge a deposit account will be treated for refund purposes the same as payments by other means (e.g., check or credit card charge authorization), with each being treated as paid on the date of receipt in the Office as defined by 37 CFR 1.6. Accordingly, the time period for requesting a refund of any fee paid by a deposit account begins on the date the charge authorization is received in the Office. For refund purposes: where a 37 CFR 1.8 certificate is used, the refund period will begin on the date of actual receipt (not the 37 CFR 1.8 date of mailing); where Express Mail under 37 CFR 1.10 is used, the "date-in" on the Express Mail label will control (not the actual date of receipt by the Office). The use of payment receipt date for refund purposes has no affect on the certificate of mailing practice under 37 CFR 1.8 for making a timely reply to an Office action.

Notwithstanding the foregoing, if the Office charges a deposit account by an amount other than an amount specifically indicated on the charge authorization, any request for refund based upon such charge must be filed within two years from the date of the deposit account statement indicating such charge, and must include a copy of that deposit account statement. This provision of 37 CFR 1.26(b) applies, for example, in the following types of situations: (1) a deposit account charged for an extension of time pursuant to 37 CFR 1.136(a)(3) as a result of there being a prior general authorization in the application; or (2) a deposit account charged for the outstanding balance of a fee as a result of an insufficient fee submitted with an authorization to charge the deposit account for any additional fees that are due. In these situations, the party providing the charge authorization is not in a position to know the exact amount by which the deposit account will be charged until the date of the deposit account statement indicating the amount of the charge. Therefore, the two-year time period set forth in 37 CFR 1.26(b) does not begin until the date of the deposit account statement indicating the amount of the charge.

IV. LATER ESTABLISHMENT OF SMALL ENTITY STATUS

Effective November 7, 2000, 37 CFR 1.28(a) was amended to provide a three-month period (instead of the former two-month period) for requesting a refund based on later establishment of small entity status. As the Office now treats the receipt date of a deposit account charge authorization as the fee payment date (for refund purposes), any request for a refund under 37 CFR 1.28(a) must be made within three months from the date the charge authorization is received in the Office.

V. REFUND OF SEARCH FEE AND EXCESS *>CLAIMS< FEE

Effective March 10, 2006, the Office may refund the search fee and any excess claims fee paid in an application filed under 35 U.S.C. 111(a) on or after December 8, 2004, if applicant files a petition under 37 CFR 1.138(d) to expressly abandon the application before an examination has been made of the application. See MPEP § 711.01.

The basic filing fee, the examination fee, and the application size fee cannot be refunded unless the fee was paid by mistake or in excess of that required.

608 Disclosure [R-2]

In return for a patent, the inventor gives as consideration a complete revelation or disclosure of the invention for which protection is sought. All amendments or claims must find descriptive basis in the original disclosure, or they involve new matter. Applicant may rely for disclosure upon the specification with original claims and drawings, as filed. See also **>37 CFR 1.121(f)< and MPEP § 608.04.

If during the course of examination of a patent application, an examiner notes the use of language that could be deemed offensive to any race, religion, sex, ethnic group, or nationality, he or she should object to the use of the language as failing to comply with the Rules of Practice. 37 CFR 1.3 proscribes the presentation of papers which are lacking in decorum and courtesy. There is a further basis for objection in that the inclusion of such proscribed language in a Federal Government publication would not be in the public interest. Also, the inclusion in application drawings of any depictions or caricatures that might reasonably be considered offensive to any group should be similarly objected to, on like authority.

*>An application should not be classified for publication under 35 U.S.C. 122(b) and an< examiner should not pass the application to issue until such language or drawings have been deleted, or questions relating to the propriety thereof fully resolved.

For design application practice, see MPEP § 1504.

608.01 Specification [R-7]

35 U.S.C. 22. Printing of papers filed.

The Director may require papers filed in the Patent and Trademark Office to be printed, typewritten, or on an electronic medium.

37 CFR 1.71. Detailed description and specification of the invention.

(a) The specification must include a written description of the invention or discovery and of the manner and process of making and using the same, and is required to be in such full, clear, concise, and exact terms as to enable any person skilled in the art or science to which the invention or discovery appertains, or with which it is most nearly connected, to make and use the same.

(b) The specification must set forth the precise invention for which a patent is solicited, in such manner as to distinguish it from other inventions and from what is old. It must describe completely a specific embodiment of the process, machine, manufacture, composition of matter or improvement invented, and must explain the mode of operation or principle whenever applicable. The best mode contemplated by the inventor of carrying out his invention must be set forth.

(c) In the case of an improvement, the specification must particularly point out the part or parts of the process, machine, manufacture, or composition of matter to which the improvement relates, and the description should be confined to the specific improvement and to such parts as necessarily cooperate with it or as may be necessary to a complete understanding or description of it.

(d) A copyright or mask work notice may be placed in a design or utility patent application adjacent to copyright and mask work material contained therein. The notice may appear at any appropriate portion of the patent application disclosure. For notices in drawings, see § 1.84(s). The content of the notice must be limited to only those elements provided for by law. For example, "©1983 John Doe"(17 U.S.C. 401) and "*M* John Doe" (17 U.S.C. 909) would be properly limited and, under current statutes, legally sufficient notices of copyright and mask work, respectively. Inclusion of a copyright or mask work notice will be permitted only if the authorization language set forth in paragraph (e) of this section is included at the beginning (preferably as the first paragraph) of the specification.

(e) The authorization shall read as follows:

> A portion of the disclosure of this patent document contains material which is subject to (copyright or mask work) protection. The (copyright or mask work) owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent file or records, but otherwise reserves all (copyright or mask work) rights whatsoever.

(f) The specification must commence on a separate sheet. Each sheet including part of the specification may not include other parts of the application or other information. The claim(s), abstract and sequence listing (if any) should not be included on a sheet including any other part of the application.

(g)(1) The specification may disclose or be amended to disclose the names of the parties to a joint research agreement (35 U.S.C. 103(c)(2)(C)).

(2) An amendment under paragraph (g)(1) of this section must be accompanied by the processing fee set forth § 1.17(i) if not filed within one of the following time periods:

(i) Within three months of the filing date of a national application;

(ii) Within three months of the date of entry of the national stage as set forth in § 1.491 in an international application;

(iii) Before the mailing of a first Office action on the merits; or

(iv) Before the mailing of a first Office action after the filing of a request for continued examination under § 1.114.

(3) If an amendment under paragraph (g)(1) of this section is filed after the date the issue fee is paid, the patent as issued may not necessarily include the names of the parties to the joint research agreement. If the patent as issued does not include the names of the parties to the joint research agreement, the patent must be corrected to include the names of the parties to the joint research agreement by a certificate of correction under 35 U.S.C. 255 and § 1.323 for the amendment to be effective.

The specification is a written description of the invention and of the manner and process of making and using the same. The specification must be in such full, clear, concise, and exact terms as to enable any person skilled in the art or science to which the invention pertains to make and use the same. See 35 U.S.C. 112 and 37 CFR 1.71. If a newly filed application obviously fails to disclose an invention with the clarity required by 35 U.S.C. 112, revision of the application should be required. See MPEP § 702.01. The written description must not include information that is not related to applicant's invention, e.g., prospective disclaimers regarding comments made by examiners. If such information is included in the written description, the examiner will object to the specification and require applicant to take appropriate action, e.g., cancel the information. The specification must commence on a separate sheet. Each sheet including part of the specification may not include other parts of the application or other information. The claim(s), abstract and sequence listing (if any) should not be included on a sheet including any other part of the application (37 CFR 1.71(f)). That is, the claim(s), abstract and sequence listings (if any) should each begin on a new page since each of these sections (specification, abstract, claims, sequence listings) of the disclosure are separately indexed in the Image File Wrapper (IFW). There should be no overlap on a single page of more than one section of the disclosure.

The specification does not require a date.

Certain cross references to other related applications may be made. References to foreign applications or to applications identified only by the attorney's docket number should be required to be canceled. U.S. applications identified only by the attorney's docket number may be amended to properly identify the earlier application(s). See 37 CFR 1.78.

As the specification is never returned to applicant under any circumstances, the applicant should retain an accurate copy thereof. In amending the specification, the attorney or the applicant must comply with 37 CFR 1.121 (see MPEP § 714).

Examiners should not object to the specification and/or claims in patent applications merely because applicants are using British English spellings (e.g., colour) rather than American English spellings. It is not necessary to replace the British English spellings with the equivalent American English spellings in the U.S. patent applications. Note that 37 CFR 1.52(b)(1)(ii) only requires the application to be in the English language. There is no additional requirement that the English must be American English.

Form paragraph 7.29 may be used where the disclosure contains minor informalities.

¶ *7.29 Disclosure Objected to, Minor Informalities*

The disclosure is objected to because of the following informalities: **[1]**. Appropriate correction is required.

Examiner Note:

Use this paragraph to point out minor informalities such as spelling errors, inconsistent terminology, numbering of elements, etc., which should be corrected. See form paragraphs 6.28 to 6.32 for specific informalities.

Form paragraphs 6.29-6.31 should be used where appropriate.

¶ *6.29 Specification, Spacing of Lines*

The spacing of the lines of the specification is such as to make reading difficult. New application papers with lines 1 1/2 or double spaced on good quality paper are required.

¶ *6.30 Numerous Errors in Specification*

35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: **[1]**.

¶ *6.31 Lengthy Specification, Jumbo Application*

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Examiner Note:

This paragraph is applicable in so-called "Jumbo Applications" (more than 20 pages, exclusive of claims).

I. PAPER REQUIREMENTS

37 CFR 1.52. Language, paper, writing, margins, compact disc specifications.

(a) *Papers that are to become a part of the permanent United States Patent and Trademark Office records in the file of a patent application or a reexamination proceeding.*

(1) All papers, other than drawings, that are submitted on paper or by facsimile transmission, and are to become a part of the permanent United States Patent and Trademark Office records in the file of a patent application or reexamination proceeding, must be on sheets of paper that are the same size, not permanently bound together, and:

(i) Flexible, strong, smooth, non-shiny, durable, and white;

(ii) Either 21.0 cm by 29.7 cm (DIN size A4) or 21.6 cm by 27.9 cm (8 1/2 by 11 inches), with each sheet including a top margin of at least 2.0 cm (3/4 inch), a left side margin of at least 2.5 cm (1 inch), a right side margin of at least 2.0 cm (3/4 inch), and a bottom margin of at least 2.0 cm (3/4 inch);

(iii) Written on only one side in portrait orientation;

(iv) Plainly and legibly written either by a typewriter or machine printer in permanent dark ink or its equivalent; and

(v) Presented in a form having sufficient clarity and contrast between the paper and the writing thereon to permit the direct reproduction of readily legible copies in any number by use of photographic, electrostatic, photo-offset, and microfilming processes and electronic capture by use of digital imaging and optical character recognition.

(2) All papers that are submitted on paper or by facsimile transmission and are to become a part of the permanent records of the United States Patent and Trademark Office should have no holes in the sheets as submitted.

(3) The provisions of this paragraph and paragraph (b) of this section do not apply to the pre-printed information on paper forms provided by the Office, or to the copy of the patent submitted on paper in double column format as the specification in a reissue application or request for reexamination.

(4) *See* § 1.58 for chemical and mathematical formulae and tables, and § 1.84 for drawings.

(5) Papers that are submitted electronically to the Office must be formatted and transmitted in compliance with the Office's electronic filing system requirements.

(b) *The application (specification, including the claims, drawings, and oath or declaration) or reexamination proceeding and any amendments or corrections to the application or reexamination proceeding*.

(1) The application or proceeding and any amendments or corrections to the application (including any translation submitted pursuant to paragraph (d) of this section) or proceeding, except as provided for in § 1.69 and paragraph (d) of this section, must:

(i) Comply with the requirements of paragraph (a) of this section; and

(ii) Be in the English language or be accompanied by a translation of the application and a translation of any corrections or amendments into the English language together with a statement that the translation is accurate.

(2) The specification (including the abstract and claims) for other than reissue applications and reexamination proceedings, and any amendments for applications (including reissue applications) and reexamination proceedings to the specification, except as provided for in §§ 1.821 through 1.825, must have:

(i) Lines that are 1 1/2 or double spaced;

(ii) Text written in a nonscript type font (*e.g.*, Arial, Times Roman, or Courier, preferably a font size of 12) lettering style having capital letters which should be at least 0.3175 cm. (0.125 inch) high, but may be no smaller than 0.21 cm. (0.08 inch) high (*e.g.*, a font size of 6); and

(iii) Only a single column of text.

(3) The claim or claims must commence on a separate physical sheet or electronic page (§ 1.75(h)).

(4) The abstract must commence on a separate physical sheet or electronic page or be submitted as the first page of the patent in a reissue application or reexamination proceeding (§ 1.72(b)).

(5) Other than in a reissue application or reexamination proceeding, the pages of the specification including claims and abstract must be numbered consecutively, starting with 1, the numbers being centrally located above or preferably below, the text.

(6) Other than in a reissue application or reexamination proceeding, the paragraphs of the specification, other than in the claims or abstract, may be numbered at the time the application is filed, and should be individually and consecutively numbered using Arabic numerals, so as to unambiguously identify each paragraph. The number should consist of at least four numerals enclosed in square brackets, including leading zeros (*e.g.*, [0001]). The numbers and enclosing brackets should appear to the right of the left margin as the first item in each paragraph, before the first word of the paragraph, and should be highlighted in bold. A gap, equivalent to approximately four spaces, should follow the number. Nontext elements (*e.g.*, tables, mathematical or chemical formulae, chemical structures, and sequence data) are considered part of the numbered paragraph around or above the elements, and should not be independently numbered. If a nontext element extends to the left margin, it should not be numbered as a separate and independent paragraph. A list is also treated as part of the paragraph around or above the list, and should not be independently numbered. Paragraph or section headers (titles), whether abutting the left margin or centered on the page, are not considered paragraphs and should not be numbered.

(c)(1) Any interlineation, erasure, cancellation or other alteration of the application papers filed must be made before the signing of any accompanying oath or declaration pursuant to § 1.63

referring to those application papers and should be dated and initialed or signed by the applicant on the same sheet of paper. Application papers containing alterations made after the signing of an oath or declaration referring to those application papers must be supported by a supplemental oath or declaration under § 1.67. In either situation, a substitute specification (§ 1.125) is required if the application papers do not comply with paragraphs (a) and (b) of this section.

(2) After the signing of the oath or declaration referring to the application papers, amendments may only be made in the manner provided by § 1.121.

(3) Notwithstanding the provisions of this paragraph, if an oath or declaration is a copy of the oath or declaration from a prior application, the application for which such copy is submitted may contain alterations that do not introduce matter that would have been new matter in the prior application.

(d) A nonprovisional or provisional application may be in a language other than English.

(1) *Nonprovisional application.* If a nonprovisional application is filed in a language other than English, an English language translation of the non-English language application, a statement that the translation is accurate, and the processing fee set forth in § 1.17(i) are required. If these items are not filed with the application, applicant will be notified and given a period of time within which they must be filed in order to avoid abandonment.

(2) *Provisional application.* If a provisional application is filed in a language other than English, an English language translation of the non-English language provisional application will not be required in the provisional application. See § 1.78(a) for the requirements for claiming the benefit of such provisional application in a nonprovisional application.

(e) *Electronic documents that are to become part of the permanent United States Patent and Trademark Office records in the file of a patent application or reexamination proceeding*.

(1) The following documents may be submitted to the Office on a compact disc in compliance with this paragraph:

(i) A computer program listing (see § 1.96);

(ii) A "Sequence Listing" (submitted under § 1.821(c)); or

(iii) Any individual table (see § 1.58) if the table is more than 50 pages in length, or if the total number of pages of all of the tables in an application exceeds 100 pages in length, where a table page is a page printed on paper in conformance with paragraph (b) of this section and § 1.58(c).

(2) A compact disc as used in this part means a Compact Disc-Read Only Memory (CD-ROM) or a Compact Disc-Recordable (CD-R) in compliance with this paragraph. A CD-ROM is a "read-only" medium on which the data is pressed into the disc so that it cannot be changed or erased. A CD-R is a "write once" medium on which once the data is recorded, it is permanent and cannot be changed or erased.

(3)(i) Each compact disc must conform to the International Standards Organization (ISO) 9660 standard, and the contents of each compact disc must be in compliance with the American Standard Code for Information Interchange (ASCII). CD-R discs must be finalized so that they are closed to further writing to the CD-R.

(ii) Each compact disc must be enclosed in a hard compact disc case within an unsealed padded and protective mailing envelope and accompanied by a transmittal letter on paper in accordance with paragraph (a) of this section. The transmittal letter must list for each compact disc the machine format (*e.g.*, IBM-PC, Macintosh), the operating system compatibility (*e.g.*, MS-DOS, MS-Windows, Macintosh, Unix), a list of files contained on the compact disc including their names, sizes in bytes, and dates of creation, plus any other special information that is necessary to identify, maintain, and interpret (*e.g.*, tables in landscape orientation should be identified as landscape orientation or be identified when inquired about) the information on the compact disc. Compact discs submitted to the Office will not be returned to the applicant.

(4) Any compact disc must be submitted in duplicate unless it contains only the "Sequence Listing" in computer readable form required by § 1.821(e). The compact disc and duplicate copy must be labeled "Copy 1" and "Copy 2," respectively. The transmittal letter which accompanies the compact disc must include a statement that the two compact discs are identical. In the event that the two compact discs are not identical, the Office will use the compact disc labeled "Copy 1" for further processing. Any amendment to the information on a compact disc must be by way of a replacement compact disc in compliance with this paragraph containing the substitute information, and must be accompanied by a statement that the replacement compact disc contains no new matter. The compact disc and copy must be labeled "COPY 1 REPLACEMENT MM/DD/YYYY" (with the month, day and year of creation indicated), and "COPY 2 REPLACEMENT MM/DD/YYYY," respectively.

(5) The specification must contain an incorporation-by-reference of the material on the compact disc in a separate paragraph (§ 1.77(b)(5)), identifying each compact disc by the names of the files contained on each of the compact discs, their date of creation and their sizes in bytes. The Office may require applicant to amend the specification to include in the paper portion any part of the specification previously submitted on compact disc.

(6) A compact disc must also be labeled with the following information:

(i) The name of each inventor (if known);

(ii) Title of the invention;

(iii) The docket number, or application number if known, used by the person filing the application to identify the application; and

(iv) A creation date of the compact disc.

(v) If multiple compact discs are submitted, the label shall indicate their order (*e.g.* "1 of X").

(vi) An indication that the disk is "Copy 1" or "Copy 2" of the submission. See paragraph (b)(4) of this section.

(7) If a file is unreadable on both copies of the disc, the unreadable file will be treated as not having been submitted. A file is unreadable if, for example, it is of a format that does not comply with the requirements of paragraph (e)(3) of this section, it is corrupted by a computer virus, or it is written onto a defective compact disc.

(f)(1) Any sequence listing in an electronic medium in compliance with §§ 1.52(e) and 1.821(c) or (e), and any computer program listing filed in an electronic medium in compliance with §§ 1.52(e) and 1.96, will be excluded when determining the application size fee required by § 1.16(s) or § 1.492(j). For purposes of determining the application size fee required by § 1.16(s) or § 1.492(j), for an application the specification and drawings of which, excluding any sequence listing in compliance with § 1.821(c) or (e), and any computer program listing filed in an electronic medium in compliance with §§ 1.52(e) and 1.96, are submitted in whole or in part on an electronic medium other than the Office electronic filing system, each three kilobytes of content submitted on an electronic medium shall be counted as a sheet of paper.

(2) Except as otherwise provided in this paragraph, the paper size equivalent of the specification and drawings of an application submitted via the Office electronic filing system will be considered to be seventy-five percent of the number of sheets of paper present in the specification and drawings of the application when entered into the Office file wrapper after being rendered by the Office electronic filing system for purposes of determining the application size fee required by § 1.16(s). Any sequence listing in compliance with § 1.821(c) or (e), and any computer program listing in compliance with § 1.96, submitted via the Office electronic filing system will be excluded when determining the application size fee required by § 1.16(s) if the listing is submitted in ASCII text as part of an associated file.

37 CFR 1.58. Chemical and mathematical formulae and tables.

(a) The specification, including the claims, may contain chemical and mathematical formulae, but shall not contain drawings or flow diagrams. The description portion of the specification may contain tables, but the same tables may only be included in both the drawings and description portion of the specification if the application was filed under 35 U.S.C. 371. Claims may contain tables either if necessary to conform to 35 U.S.C. 112 or if otherwise found to be desirable.

(b) Tables that are submitted in electronic form (§§ 1.96(c) and 1.821(c)) must maintain the spatial relationships (*e.g.*, alignment of columns and rows) of the table elements when displayed so as to visually preserve the relational information they convey. Chemical and mathematical formulae must be encoded to maintain the proper positioning of their characters when displayed in order to preserve their intended meaning.

(c) Chemical and mathematical formulae and tables must be presented in compliance with § 1.52(a) and (b), except that chemical and mathematical formulae or tables may be placed in a landscape orientation if they cannot be presented satisfactorily in a portrait orientation. Typewritten characters used in such formulae and tables must be chosen from a block (nonscript) type font or lettering style having capital letters which should be at least 0.422 cm. (0.166 inch) high (e.g., preferably Arial, Times Roman, or Courier with a font size of 12), but may be no smaller than 0.21 cm. (0.08 inch) high (e.g., a font size of 6). A space at least 0.64 cm. (1/4 inch) high should be provided between complex formulae and tables and the text. Tables should have the lines and columns of data closely spaced to conserve space, consistent with a high degree of legibility.

The pages of the specification including claims and abstract must be numbered consecutively, starting with 1, the numbers being centrally located above or preferably, below, the text. The lines of the specification, and any amendments to the specification, must be 1 1/2 or double spaced. The text must be written in a nonscript type font (e.g., Arial, Times Roman, or Courier, preferably a font size of 12) lettering style having capital letters which should be at least 0.3175 cm. (0.125 inch) high, but may be no smaller than 0.21 cm. (0.08 inch) high (e.g., a font size of 6) (37 CFR 1.52(b)(2)(ii)). The text may not be written solely in capital letters.

All application papers (specification, including claims, abstract, any drawings, oath or declaration, and other papers), and also papers subsequently filed, must have each page plainly written on only one side of a sheet of paper. The specification must commence on a separate sheet. Each sheet including part of the specification may not include other parts of the application or other information. The claim(s), abstract and sequence listing (if any) should not be included on a sheet including any other part of the application (37 CFR 1.71(f)). The claim or claims must commence on a separate sheet or electronic page and any sheet including a claim or portion of a claim may not contain any other parts of the application or other material (37 CFR 1.75(h)). The abstract must commence on a separate sheet and any sheet including an abstract or portion of an abstract may not contain any other parts of the application or other material (37 CFR 1.72(b)).

All application papers that are submitted on paper or by facsimile transmission which are to become a part of the permanent record of the U.S. Patent and Trademark Office must be on sheets of paper which are the same size (for example, an amendment should not have two different sizes of paper, but the specification can have one size of paper and the drawings a different size) and are either 21.0 cm. by 29.7 cm. (DIN size A4) or 21.6 cm. by 27.9 cm. (8 1/2 by 11 inches). See 37 CFR 1.52(a)(1) and 37 CFR 1.84(f). Application papers submitted by the Office Electronic Filing System (EFS) must conform with the user instructions for EFS. Each sheet, other than the drawings, must include a top margin of at least 2.0 cm. (3/4

inch), a left side margin of at least 2.5 cm. (1 inch), a right side margin of at least 2.0 cm. (3/4 inch), and a bottom margin of at least 2.0 cm. (3/4 inch). No holes should be made in the sheets as submitted.

Applicants must make every effort to file patent applications in a form that is clear and reproducible. If the papers are not of the required quality, substitute typewritten or mechanically printed papers of suitable quality will be required. See 37 CFR 1.125 for filing substitute typewritten or mechanically printed papers constituting a substitute specification required by the Office. See also MPEP § 608.01(q). All papers which are to become a part of the permanent records of the U.S. Patent and Trademark Office must be legibly written either by a typewriter or mechanical printer in permanent dark ink or its equivalent in portrait orientation on flexible, strong, smooth, nonshiny, durable, and white paper. Typed, mimeographed, xeroprinted, multigraphed or nonsmearing carbon copy forms of reproduction are acceptable.

Where an application is filed with papers that do not comply with 37 CFR 1.52, the Office of Initial Patent Examination will mail a "Notice to File Corrected Application Papers" indicating the deficiency and setting a time period within which the applicant must correct the deficiencies to avoid abandonment. The failure to submit application papers in compliance with 37 CFR 1.52 does not effect the grant of a filing date, and original application papers that do not comply with 37 CFR 1.52 will be retained in the application file as the original disclosure of the invention. The USPTO will not return papers simply because they do not comply with 37 CFR 1.52.

Legibility includes ability to be photocopied and photomicrographed so that suitable reprints can be made and ability to be electronically reproduced by use of digital imaging and optical character recognition. This requires a high contrast, with black lines and a white background. Gray lines and/or a gray background sharply reduce photo reproduction quality. Legibility of some application papers may become impaired due to abrasion or aging of the printed material during examination and ordinary handling of the file. It may be necessary to require that legible and permanent copies be furnished at later stages after filing, particularly when preparing for issue.

Some of the patent application papers received by the U.S. Patent and Trademark Office are copies of the original, ribbon copy. These are acceptable if, in the opinion of the Office, they are legible and permanent.

The paper used must have a surface such that amendments may be written thereon in ink. So-called "Easily Erasable" paper having a special coating so that erasures can be made more easily may not provide a "permanent" copy, 37 CFR 1.52(a)(1)(iv). If a light pressure of an ordinary (pencil) eraser removes the imprint, the examiner should, as soon as this becomes evident, notify applicant by use of Form paragraph 6.32 that it will be necessary for applicant to order a copy of the specification and claims to be made by the U.S. Patent and Trademark Office at the applicant's expense for incorporation in the file. It is not necessary to return this copy to applicant for signature. Since application papers are now maintained in an Image File Wrapper, the type of paper is unlikely to be an issue so long as the Office was able to scan and reproduce the papers that were filed.

¶ *6.32 Application on Easily Erasable Paper or Erasable Ink*

The application papers are objected to because they are not a permanent copy as required by 37 CFR 1.52(a)(1)(iv). Reference is made to **[1]**.

Applicant is required either (1) to submit permanent copies of the identified parts or (2) to order a photocopy of the above identified parts to be made by the U.S. Patent and Trademark Office at applicant's expense for incorporation in the file. See MPEP § 608.01.

Examiner Note:

In the bracket, identify: 1) all of the specification; 2) certain pages of the specification; 3) particular claim(s); 4) the oath or declaration; 5) etc.

See *In re Benson*, 1959 C.D. 5, 744 O.G. 353 (Comm'r Pat. 1959). Reproductions prepared by heat-sensitive, hectographic, or spirit duplication processes are also not satisfactory.

¶ *6.32.01 Application Papers Must Be Legible*

The specification (including the abstract and claims), and any amendments for applications, except as provided for in 37 CFR 1.821 through 1.825, must have text written plainly and legibly either by a typewriter or machine printer in a nonscript type font (*e.g.*, Arial, Times Roman, or Courier, preferably a font size of 12) lettering style having capital letters which should be at least 0.3175 cm. (0.125 inch) high, but may be no smaller than 0.21 cm. (0.08 inch) high (*e.g.*, a font size of 6) in portrait orientation and presented in a form having sufficient clarity and contrast between

the paper and the writing thereon to permit the direct reproduction of readily legible copies in any number by use of photographic, electrostatic, photo-offset, and microfilming processes and electronic capture by use of digital imaging and optical character recognition; and only a single column of text. See 37 CFR 1.52(a) and (b).

The application papers are objected to because **[1]**.

A legible substitute specification in compliance with 37 CFR 1.52(a) and (b) and 1.125 is required.

Examiner Note:

1. In bracket 1, identify the part of the specification that is illegible: all of the specification; or certain pages of the specification.

2. Do not use this form paragraph for reissue applications or reexamination proceedings.

II. ALTERATION OF APPLICATION PAPERS

37 CFR 1.52(c) relating to interlineations and other alterations is strictly enforced. See *In re Swanberg*, 129 USPQ 364 (Comm'r Pat. 1960). See also MPEP § 605.04(a).

III. CERTIFIED COPIES OF AN APPLICATION-AS-FILED

If an application-as-filed does not meet the sheet size/margin and quality requirements of 37 CFR 1.52 and 1.84(f) and (g), certified copies of such application may be illegible and/or ineffective as priority documents. When an applicant requests that the USPTO provide a certified copy of an application-as-filed and pays the fee set forth in 37 CFR 1.19(b)(1), the USPTO will make a copy of the application-as-filed from the records in the IFW database (or the microfilm database). If papers submitted in the application-as-filed are not legible, certified copies of the application as originally filed will not be legible.

The USPTO performs exception processing when scanning application papers that do not comply with the sheet size/margin and quality requirements. If papers submitted in the application-as-filed (including any transmittal letter or cover sheet) do not meet the sheet size requirement of 37 CFR 1.52 and 1.84(f) (e.g., the papers are legal size (8 $^{1}/_{2}$ by 14 inches)), the USPTO must reduce such papers to be able to image-scan the entire application and record it in the IFW database. In addition, if papers submitted in the application-as-filed do not meet the quality requirements of 37 CFR 1.52 (e.g., the papers are shiny or non-white), the USPTO will attempt to enhance such papers before scanning to make the resulting electronic record in the IFW database more readable. However, if exception processing is required to make the IFW copy, certified copies of the application as originally filed may not be legible.

If application papers are filed that do not meet sheet size/margin and quality requirements, the USPTO will require the applicant to file substitute papers that do comply with the requirements of 37 CFR 1.52 and 1.84(e), (f) and (g). The substitute papers submitted in reply to the above-mentioned requirement will provide the USPTO with an image- and OCR-scannable copy of the application for printing the application as a patent publication or patent. However, the USPTO will not treat application papers submitted after the filing date of an application as the original disclosure of the application for making a certified copy of the application-as-filed or any other purpose. That is, even if an applicant subsequently files substitute application papers that comply with 37 CFR 1.52 and then requests that the USPTO provide a certified copy of an application-as-filed, paying the fee set forth in 37 CFR 1.19(b)(1), the USPTO will still make a copy of the application-as-filed rather than a copy of the subsequently filed substitute papers.

IV. USE OF METRIC SYSTEM OF MEASUREMENTS IN PATENT APPLICATIONS

In order to minimize the necessity in the future for converting dimensions given in the English system of measurements to the metric system of measurements when using printed patents as research and prior art search documents, all patent applicants should use the metric (S.I.) units followed by the equivalent English units when describing their inventions in the specifications of patent applications.

The initials S.I. stand for "Le Système International d' Unités," the French name for the International System of Units, a modernized metric system adopted in 1960 by the International General Conference of Weights and Measures based on precise unit measurements made possible by modern technology.

V. FILING OF NON-ENGLISH LANGUAGE APPLICATIONS

37 CFR 1.52. Language, Paper, Writing, Margins, Compact Disc Specifications.

*****

(d) A nonprovisional or provisional application may be in a language other than English.

(1) *Nonprovisional application.* If a nonprovisional application is filed in a language other than English, an English language translation of the non-English language application, a statement that the translation is accurate, and the processing fee set forth in § 1.17(i) are required. If these items are not filed with the application, applicant will be notified and given a period of time within which they must be filed in order to avoid abandonment.

(2) *Provisional application.* If a provisional application is filed in a language other than English, an English language translation of the non-English language provisional application will not be required in the provisional application. See § 1.78(a) for the requirements for claiming the benefit of such provisional application in a nonprovisional application.

*****

The U.S. Patent and Trademark Office will accord a filing date to an application meeting the requirements of 35 U.S.C. 111(a), or a provisional application in accordance with 35 U.S.C. 111(b), even though some or all of the application papers, including the written description and the claims, is in a language other than English and hence does not comply with 37 CFR 1.52.

If a nonprovisional application is filed in a language other than English, an English translation of the non-English language papers, a statement that the translation is accurate, the fees set forth in 37 CFR 1.16, the oath or declaration and fee set forth in 37 CFR 1.17(i) should either accompany the nonprovisional application papers or be filed in the Office within the time set by the Office. If a provisional application is filed in a language other than English, an English translation of the non-English language provisional application and a statement that the translation is accurate must be submitted if benefit of the provisional application is claimed in a later-filed nonprovisional application (see 37 CFR 1.78(a)(5)). If the translation and statement were not previously filed in the provisional application, applicant will be notified in the nonprovisional application that claims the benefit of the provisional application and be given a period of time within which to file the translation and statement in the provisional application. Applicants may file the translation and statement in the provisional application even if the provisional application has become abandoned. A timely reply to such notice must include the filing in the nonprovisional application of either a confirmation that the translation and statement were filed in the provisional application, or an amendment or Supplemental Application Data Sheet withdrawing the benefit claim. Failure to take one of the above actions will result in the abandonment of the nonprovisional application.

A subsequently filed English translation must contain the complete identifying data for the application in order to permit prompt association with the papers initially filed. Accordingly, it is strongly recommended that the original application papers be accompanied by a cover letter and a self-addressed return postcard, each containing the following identifying data in English: (a) applicant's name(s); (b) title of invention; (c) number of pages of specification, claims, and sheets of drawings; (d) whether an oath or declaration was filed and (e) amount and manner of paying the fees set forth in 37 CFR 1.16.

The translation must be a literal translation and must be accompanied by a statement that the translation is accurate. The translation must also be accompanied by a signed request from the applicant, his or her attorney or agent, asking that the English translation be used as the copy for examination purposes in the Office. If the English translation does not conform to idiomatic English and United States practice, it should be accompanied by a preliminary amendment making the necessary changes without the introduction of new matter prohibited by 35 U.S.C. 132. If such an application is published as a patent application publication, the document that is published is the translation. See 37 CFR 1.215(a) and MPEP § 1121 regarding the content of the application publication. In the event that the English translation and the statement are not timely filed in the nonprovisional application, the nonprovisional application will be regarded as abandoned.

It should be recognized that this practice is intended for emergency situations to prevent loss of valuable rights and should not be routinely used for filing applications. There are at least two reasons why this should not be used on a routine basis. First, there are obvious dangers to applicant and the public if he or

she fails to obtain a correct literal translation. Second, the filing of a large number of applications under the procedure will create significant administrative burdens on the Office.

VI. ILLUSTRATIONS IN THE SPECIFICATION

Graphical illustrations, diagrammatic views, flowcharts, and diagrams in the descriptive portion of the specification do not come within the purview of 37 CFR 1.58(a), which permits tables, chemical and mathematical formulas in the specification in lieu of formal drawings. The examiner should object to such descriptive illustrations in the specification and request drawings in accordance with 37 CFR 1.81 when an application contains graphs, drawings, or flow charts in the specification.

The specification, including any claims, may contain chemical formulas and mathematical equations, but >the written description portion of the specification< must not contain drawings or flow diagrams. >A claim may incorporate by reference to a specific figure or table where there is no practical way to define the invention in words. See MPEP § 2173.05(s).< The description portion of the specification may contain tables, but the same tables must not be included in both the drawings as a figure and in the description portion of the specification. Applications filed under 35 U.S.C. 371 are excluded from the prohibition from having the same tables in both the description portion of the specification and drawings. Claims may contain tables either if necessary to conform to 35 U.S.C. 112 or if otherwise found to be desirable. See MPEP § 2173.05(s). When such a patent is printed, however, the table will not be included as part of the claim, and instead the claim will contain a reference to the table number.

See MPEP § 601.01(d) for treatment of applications filed without all pages of the specification.

VII. HYPERLINKS AND OTHER FORMS OF BROWSER-EXECUTABLE CODE IN THE SPECIFICATION

Examiners must review patent applications to make certain that hyperlinks and other forms of browser-executable code, especially commercial site URLs, are not included in a patent application. 37 CFR 1.57(d) states that an incorporation by reference by hyperlink or other form of browser executable code is not permitted. Examples of a hyperlink or a browser-executable code are a URL placed between these symbols "< >" and http:// followed by a URL address. When a patent application with embedded hyperlinks and/or other forms of browser-executable code issues as a patent (or is published as a patent application publication) and the patent document is placed on the USPTO web page, when the patent document is retrieved and viewed via a web browser, the URL is interpreted as a valid HTML code and it becomes a live web link. When a user clicks on the link with a mouse, the user will be transferred to another web page identified by the URL, if it exists, which could be a commercial web site. USPTO policy does not permit the USPTO to link to any commercial sites since the USPTO exercises no control over the organization, views or accuracy of the information contained on these outside sites.

If hyperlinks and/or other forms of browser-executable code are embedded in the text of the patent application, examiners should object to the specification and indicate to applicants that the embedded hyperlinks and/or other forms of browser-executable code are impermissible and require deletion. This requirement does not apply to electronic documents listed on forms PTO-892 and PTO/SB/08 where the electronic document is identified by reference to a URL.

The attempt to incorporate subject matter into the patent application by reference to a hyperlink and/or other forms of browser-executable code is considered to be an improper incorporation by reference. See 37 CFR 1.57(d) and MPEP § 608.01(p), paragraph I regarding incorporation by reference. Where the hyperlinks and/or other forms of browser-executable codes themselves rather than the contents of the site to which the hyperlinks are directed are part of applicant's invention and it is necessary to have them included in the patent application in order to comply with the requirements of 35 U.S.C. 112, first paragraph, and applicant does not intend to have these hyperlinks be active links, examiners should not object to these hyperlinks. The Office will disable these hyperlinks when preparing the text to be loaded onto the USPTO web database.

Note that nucleotide and/or amino acid sequence data placed between the symbols "< >" are not considered to be hyperlinks and/or browser-executable

code and therefore should not be objected to as being an improper incorporation by reference (see 37 CFR 1.821 – 1.825).

¶ *7.29.04 Disclosure Objected To, Embedded Hyperlinks or Other Forms of Browser-Executable Code*

The disclosure is objected to because it contains an embedded hyperlink and/or other form of browser-executable code. Applicant is required to delete the embedded hyperlink and/or other form of browser-executable code. See MPEP § 608.01.

Examiner Note:

1. Examples of a hyperlink or a browser-executable code are a URL placed between these symbols "< >" and http://followed by a URL address. Nucleotide and/or amino acid sequence data placed between the symbols "< >" are not considered to be hyperlinks and/or browser-executable code.

2. If the application attempts to incorporate essential or nonessential subject matter into the patent application by reference to the contents of the site to which a hyperlink and/or other form of browser-executable code is directed, use form paragraph 6.19 or 6.19.01 instead. See also MPEP § 608.01(p).

3. The requirement to delete an embedded hyperlink or other form of browser-executable code does not apply to electronic documents listed on forms PTO-892 and PTO-1449 where the electronic document is identified by reference to a URL.

4. Examiners should not object to hyperlinks where the hyperlinks and/or browser-executable codes themselves (rather than the contents of the site to which the hyperlinks are directed) are necessary to be included in the patent application in order to meet the requirements of 35 U.S.C. 112, first paragraph, and applicant does not intend to have those hyperlinks be active links.

608.01(a) Arrangement of Application [R-5]

37 CFR 1.77. Arrangement of application elements.

(a) The elements of the application, if applicable, should appear in the following order:

(1) Utility application transmittal form.

(2) Fee transmittal form.

(3) Application data sheet (see § 1.76).

(4) Specification.

(5) Drawings.

(6) Executed oath or declaration.

(b) The specification should include the following sections in order:

(1) Title of the invention, which may be accompanied by an introductory portion stating the name, citizenship, and residence of the applicant (unless included in the application data sheet).

(2) Cross-reference to related applications (unless included in the application data sheet).

(3) Statement regarding federally sponsored research or development.

(4) The names of the parties to a joint research agreement.

(5) Reference to a "Sequence Listing," a table, or a computer program listing appendix submitted on a compact disc and an incorporation-by-reference of the material on the compact disc (see § 1.52(e)(5)). The total number of compact discs including duplicates and the files on each compact disc shall be specified.

(6) Background of the invention.

(7) Brief summary of the invention.

(8) Brief description of the several views of the drawing.

(9) Detailed description of the invention.

(10) A claim or claims.

(11) Abstract of the disclosure.

(12) "Sequence Listing," if on paper (see §§ 1.821 through 1.825).

(c) The text of the specification sections defined in paragraphs (b)(1) through (b)(12) of this section, if applicable, should be preceded by a section heading in uppercase and without underlining or bold type.

For design patent specification, see MPEP § 1503.01.

For plant patent specification, see MPEP § 1605.

For reissue patent specification, see MPEP § 1411.

The following order of arrangement of specification elements is preferable in framing the nonprovisional specification and each of the lettered items should appear in upper case, without underlining or bold type, as section headings. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading. It is recommended that provisional applications follow the same general format, although claims are not required. If an application data sheet (37 CFR 1.76) is used, data supplied in the application data sheet need not be provided elsewhere in the application except that the citizenship of each inventor must be provided in the oath or declaration under 37 CFR 1.63 even if this information is provided in the application data sheet. If there is a discrepancy between the information submitted in an application data sheet and the information submitted elsewhere in the application, the application data sheet will control except for the naming of the inventors and the citizenship of the inventors. See 37 CFR 1.76(d) and MPEP § 601.05.

(A) Title of the Invention.

(B) Cross-References to Related Applications.

(C) Statement Regarding Federally Sponsored Research or Development.

(D) The names of the parties to a joint research agreement.

(E) Reference to a "Sequence Listing," a table, or a computer program listing appendix submitted on a compact disc and an incorporation-by-reference of the material on the compact disc (See 37 CFR 1.52(e)(5)). The total number of compact discs including duplicates and the files on each compact disc must be specified.

(F) Background of the Invention.

(1) Field of the Invention.

(2) Description of the related art including information disclosed under 37 CFR 1.97 and 1.98.

(G) Brief Summary of the Invention.

(H) Brief Description of the Several Views of the Drawings.

(I) Detailed Description of the Invention.

(J) Claim or Claims.

(K) Abstract of the Disclosure.

(L) "Sequence Listing," if on paper (See 37 CFR 1.821-1.825).

Applicant (typically a *pro se*) may be advised of the proper arrangement by using Form Paragraph 6.01 or 6.02.

**>

¶ *6.01 Arrangement of the Sections of the Specification in a Utility Application*

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

(a) TITLE OF THE INVENTION.

(b) CROSS-REFERENCE TO RELATED APPLICATIONS.

(c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.

(d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.

(e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.

(f) BACKGROUND OF THE INVENTION.

(1) Field of the Invention.

(2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.

(g) BRIEF SUMMARY OF THE INVENTION.

(h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).

(i) DETAILED DESCRIPTION OF THE INVENTION.

(j) CLAIM OR CLAIMS (commencing on a separate sheet).

(k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).

(l) SEQUENCE LISTING. (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc.)

Examiner Note:

For the arrangement of the sections of the specification in a design application, see 37 CFR 1.154(b). Form paragraph 15.05 may be used for a design application. For the arrangement of the sections of the specification in a plant application, see 37 CFR 1.163(c). For the requirements of the specification in a reissue application, see 37 CFR 1.173(a)(1).

<

**>

¶ *6.02 Content of Specification*

Content of Specification

(a) TITLE OF THE INVENTION: See 37 CFR 1.72(a) and MPEP § 606. The title of the invention should be placed at the top of the first page of the specification unless the title is provided in an application data sheet. The title of the invention should be brief but technically accurate and descriptive, preferably from two to seven words. It may not contain more than 500 characters.

(b) CROSS-REFERENCES TO RELATED APPLICATIONS: See 37 CFR 1.78 and MPEP § 201.11.

(c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT: See MPEP § 310.

(d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT. See 37 CFR 1.71(g).

(e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC: The specification is required to include an incorporation-by-reference of electronic documents that are to become part of the permanent United States Patent and Trademark Office records in the file of a patent application. See 37 CFR 1.52(e) and MPEP § 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text were permitted as electronic documents on compact discs beginning on September 8, 2000.

(f) BACKGROUND OF THE INVENTION: See MPEP § 608.01(c). The specification should set forth the Background of the Invention in two parts:

(1) Field of the Invention: A statement of the field of art to which the invention pertains. This statement may include a paraphrasing of the applicable U.S. patent classification definitions of

the subject matter of the claimed invention. This item may also be titled "Technical Field."

(2) Description of the Related Art including information disclosed under 37 CFR 1.97 and 37 CFR 1.98: A description of the related art known to the applicant and including, if applicable, references to specific related art and problems involved in the prior art which are solved by the applicant's invention. This item may also be titled "Background Art."

(g) BRIEF SUMMARY OF THE INVENTION: See MPEP § 608.01(d). A brief summary or general statement of the invention as set forth in 37 CFR 1.73. The summary is separate and distinct from the abstract and is directed toward the invention rather than the disclosure as a whole. The summary may point out the advantages of the invention or how it solves problems previously existent in the prior art (and preferably indicated in the Background of the Invention). In chemical cases it should point out in general terms the utility of the invention. If possible, the nature and gist of the invention or the inventive concept should be set forth. Objects of the invention should be treated briefly and only to the extent that they contribute to an understanding of the invention.

(h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S): See MPEP § 608.01(f). A reference to and brief description of the drawing(s) as set forth in 37 CFR 1.74.

(i) DETAILED DESCRIPTION OF THE INVENTION: See MPEP § 608.01(g). A description of the preferred embodiment(s) of the invention as required in 37 CFR 1.71. The description should be as short and specific as is necessary to describe the invention adequately and accurately. Where elements or groups of elements, compounds, and processes, which are conventional and generally widely known in the field of the invention described, and their exact nature or type is not necessary for an understanding and use of the invention by a person skilled in the art, they should not be described in detail. However, where particularly complicated subject matter is involved or where the elements, compounds, or processes may not be commonly or widely known in the field, the specification should refer to another patent or readily available publication which adequately describes the subject matter.

(j) CLAIM OR CLAIMS: See 37 CFR 1.75 and MPEP § 608.01(m). The claim or claims must commence on a separate sheet or electronic page (37 CFR 1.52(b)(3)). Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation. There may be plural indentations to further segregate subcombinations or related steps. See 37 CFR 1.75 and MPEP 608.01(i)-(p).

(k) ABSTRACT OF THE DISCLOSURE: See 37 CFR 1.72(b) and MPEP § 608.01(b). A brief narrative of the disclosure as a whole in a single paragraph of 150 words or less commencing on a separate sheet following the claims. In an international application which has entered the national stage (37 CFR 1.491(b)), the applicant need not submit an abstract commencing on a separate sheet if an abstract was published with the international application under PCT Article 21. The abstract that appears on the cover page of the pamphlet published by the International Bureau (IB) of the World Intellectual Property Organization (WIPO) is the abstract that will be used by the USPTO. See MPEP § 1893.03(e).

(l) SEQUENCE LISTING: See 37 CFR 1.821-1.825 and MPEP §§ 2421-2431. The requirement for a sequence listing applies to all sequences disclosed in a given application, whether the sequences are claimed or not. See MPEP § 2421.02.

Examiner Note:

In this paragraph an introductory sentence will be necessary. This paragraph is intended primarily for use in *pro se* applications.

<

608.01(b) Abstract of the Disclosure [R-7]

37 CFR 1.72. Title and abstract.

*****

(b) A brief abstract of the technical disclosure in the specification must commence on a separate sheet, preferably following the claims, under the heading "Abstract" or "Abstract of the Disclosure." The sheet or sheets presenting the abstract may not include other parts of the application or other material. The abstract in an application filed under 35 U.S.C. 111 may not exceed 150 words in length. The purpose of the abstract is to enable the United States Patent and Trademark Office and the public generally to determine quickly from a cursory inspection the nature and gist of the technical disclosure.<

The Office of **>Patent Application Processing (OPAP)< will review all applications filed under 35 U.S.C. 111(a) for compliance with 37 CFR 1.72 and will require an abstract, if one has not been filed. In all other applications which lack an abstract, the examiner in the first Office action should require the submission of an abstract directed to the technical disclosure in the specification. See Form Paragraph 6.12 (below). Applicants may use either "Abstract" or "Abstract of the Disclosure" as a heading.

If the abstract contained in the application does not comply with the guidelines, the examiner should point out the defect to the applicant in the first Office action, or at the earliest point in the prosecution that the defect is noted, and require compliance with the guidelines. Since the abstract of the disclosure has been interpreted to be a part of the specification for the purpose of compliance with paragraph 1 of 35 U.S.C. 112 (*In re Armbruster*, 512 F.2d 676, 678-79, 185 USPQ 152, 154 (CCPA 1975)), it would ordinarily be preferable that the applicant make the necessary changes to the abstract to bring it into compliance with the guidelines. See Form Paragraphs 6.13-6.16 (below).

Replies to such actions requiring either a new abstract or amendment to bring the abstract into com-

pliance with the guidelines should be treated under 37 CFR 1.111(b) practice like any other formal matter. Any submission of a new abstract or amendment to an existing abstract should be carefully reviewed for introduction of new matter, 35 U.S.C. 132, MPEP § 608.04.

Upon passing the application to issue, the examiner should make certain that the abstract is an adequate and clear statement of the contents of the disclosure and generally in line with the guidelines. If the application is otherwise in condition for allowance except that the abstract does not comply with the guidelines, the examiner generally should make any necessary revisions by a formal examiner's amendment after obtaining applicant's authorization (see MPEP § 1302.04 rather than issuing an *Ex parte Quayle* action requiring applicant to make the necessary revisions.

Under current practice, in all instances where the application contains an abstract when sent to issue, the abstract will be printed on the patent.

GUIDELINES FOR THE PREPARATION OF PATENT ABSTRACTS

A. Background

The Rules of Practice in Patent Cases require that each application for patent include an abstract of the disclosure, 37 CFR 1.72(b).

The content of a patent abstract should be such as to enable the reader thereof, regardless of his or her degree of familiarity with patent documents, to determine quickly from a cursory inspection of the nature and gist of the technical disclosure and should include that which is new in the art to which the invention pertains.

B. Content

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains.

If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure.

If the patent is in the nature of an improvement in old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement.

In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or a use thereof.

If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following: (1) if a machine or apparatus, its organization and operation; (2) if an article, its method of making; (3) if a chemical compound, its identity and use; (4) if a mixture, its ingredients; (5) if a process, the steps. Extensive mechanical and design details of apparatus should not be given.

With regard particularly to chemical patents, for compounds or compositions, the general nature of the compound or composition should be given as well as the use thereof, e.g., "The compounds are of the class of alkyl benzene sulfonyl ureas, useful as oral antidiabetics." Exemplification of a species could be illustrative of members of the class. For processes, the type reaction, reagents and process conditions should be stated, generally illustrated by a single example unless variations are necessary.

C. Language and Format

The abstract must commence on a separate sheet, preferably following the claims, under the heading "Abstract" or "Abstract of the Disclosure." The sheet or sheets presenting the abstract may not include other parts of the application or other material. Form paragraph 6.16.01 (below) may be used if the abstract does not commence on a separate sheet. Note that the abstract for a national stage application filed under 35 U.S.C. 371 may be found on the front page of the Patent Cooperation Treaty publication (i.e., pamphlet). See MPEP § 1893.03(e).

The abstract should be in narrative form and generally limited to a single paragraph within the range of

50 to 150 words. The abstract should not exceed 15 lines of text. Abstracts exceeding 15 lines of text should be checked to see that it does not exceed 150 words in length since the space provided for the abstract on the computer tape by the printer is limited. If the abstract cannot be placed on the computer tape because of its excessive length, the application will be returned to the examiner for preparation of a shorter abstract. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should sufficiently describe the disclosure to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "This disclosure concerns," "The disclosure defined by this invention," "This disclosure describes," etc.

D. Responsibility

Preparation of the abstract is the responsibility of the applicant. Background knowledge of the art and an appreciation of the applicant's contribution to the art are most important in the preparation of the abstract. The review of the abstract for compliance with these guidelines, with any necessary editing and revision on allowance of the application, is the responsibility of the examiner.

E. Sample Abstracts

(1) A heart valve which has an annular valve body defining an orifice and a plurality of struts forming a pair of cages on opposite sides of the orifice. A spherical closure member is captively held within the cages and is moved by blood flow between open and closed positions in check valve fashion. A slight leak or backflow is provided in the closed position by making the orifice slightly larger than the closure member. Blood flow is maximized in the open position of the valve by providing an inwardly convex contour on the orifice-defining surfaces of the body. An annular rib is formed in a channel around the periphery of the valve body to anchor a suture ring used to secure the valve within a heart.

(2) A method for sealing whereby heat is applied to seal, overlapping closure panels of a folding box made from paperboard having an extremely thin coating of moisture-proofing thermoplastic material on opposite surfaces. Heated air is directed at the surfaces to be bonded, the temperature of the air at the point of impact on the surfaces being above the char point of the board. The duration of application of heat is made so brief, by a corresponding high rate of advance of the boxes through the air stream, that the coating on the reverse side of the panels remains substantially non-tacky. The bond is formed immediately after heating within a period of time for any one surface point less than the total time of exposure to heated air of that point. Under such conditions the heat applied to soften the thermoplastic coating is dissipated after completion of the bond by absorption into the board acting as a heat sink without the need for cooling devices.

(3) Amides are produced by reacting an ester of a carbonized acid with an amine, using as catalyst an dioxide of an alkali metal. The ester is first heated to at least 75°C under a pressure of no more than 500 mm. of mercury to remove moisture and acid gases which would prevent the reaction, and then converted to an amide without heating to initiate the reaction.

¶ *6.12 Abstract Missing (Background)*

This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Examiner Note:

1. For *pro se* applicant, consider form paragraphs 6.14 to 6.16.
2. This form paragraph should not be used during the national stage prosecution of international applications ("371 applications") if an abstract was published with the international application under PCT Article 21.

¶ *6.13 Abstract Objected To: Minor Informalities*

The abstract of the disclosure is objected to because **[1]**. Correction is required. See MPEP § 608.01(b).

Examiner Note:

In bracket 1, indicate the informalities that should be corrected. Use this paragraph for minor informalities such as the inclusion of legal phraseology, undue length, etc.

¶ *6.14 Abstract of the Disclosure: Content*

Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature,

the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following:

(1) if a machine or apparatus, its organization and operation;

(2) if an article, its method of making;

(3) if a chemical compound, its identity and use;

(4) if a mixture, its ingredients;

(5) if a process, the steps.

Extensive mechanical and design details of an apparatus should not be included in the abstract.

Examiner Note:

See form paragraph 6.16.

¶ *6.15 Abstract of the Disclosure: Chemical Cases*

Applicant is reminded of the proper content of an abstract of the disclosure.

In chemical patent abstracts for compounds or compositions, the general nature of the compound or composition should be given as well as its use, *e.g.*, "The compounds are of the class of alkyl benzene sulfonyl ureas, useful as oral anti-diabetics." Exemplification of a species could be illustrative of members of the class. For processes, the type reaction, reagents and process conditions should be stated, generally illustrated by a single example unless variations are necessary.

Complete revision of the content of the abstract is required on a separate sheet.

¶ *6.16 Abstract of the Disclosure: Language*

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Examiner Note:

See also form paragraph 6.14.

¶ *6.16.01 Abstract of the Disclosure: Placement*

The abstract of the disclosure does not commence on a separate sheet in accordance with 37 CFR 1.52(b)(4). A new abstract of the disclosure is required and must be presented on a separate sheet, apart from any other text.

Examiner Note:

1. This paragraph should only be used for applications filed on or after September 23, 1996.
2. 37 CFR 1.72(b) requires that the abstract be set forth on a separate sheet. This requirement applies to amendments to the abstract as well as to the initial filing of the application.
3. This form paragraph should not be used during the national stage prosecution of international applications ("371 applications") if an abstract was published with the international application under PCT Article 21.

608.01(c) Background of the Invention

The Background of the Invention ordinarily comprises two parts:

(1) Field of the Invention: A statement of the field of art to which the invention pertains. This statement may include a paraphrasing of the applicable U.S. patent classification definitions. The statement should be directed to the subject matter of the claimed invention.

(2) Description of the related art including information disclosed under 37 CFR 1.97 and 37 CFR 1.98: A paragraph(s) describing to the extent practical the state of the prior art or other information disclosed known to the applicant, including references to specific prior art or other information where appropriate. Where applicable, the problems involved in the prior art or other information disclosed which are solved by the applicant's invention should be indicated. See also MPEP § 608.01(a), § 608.01(p) and § 707.05(b).

608.01(d) Brief Summary of Invention

37 CFR 1.73. Summary of the invention.

A brief summary of the invention indicating its nature and substance, which may include a statement of the object of the invention, should precede the detailed description. Such summary should, when set forth, be commensurate with the invention as claimed and any object recited should be that of the invention as claimed.

Since the purpose of the brief summary of invention is to apprise the public, and more especially those interested in the particular art to which the invention

relates, of the nature of the invention, the summary should be directed to the specific invention being claimed, in contradistinction to mere generalities which would be equally applicable to numerous preceding patents. That is, the subject matter of the invention should be described in one or more clear, concise sentences or paragraphs. Stereotyped general statements that would fit one application as well as another serve no useful purpose and may well be required to be canceled as surplusage, and, in the absence of any illuminating statement, replaced by statements that are directly on point as applicable exclusively to the case at hand.

The brief summary, if properly written to set out the exact nature, operation, and purpose of the invention, will be of material assistance in aiding ready understanding of the patent in future searches. The brief summary should be more than a mere statement of the objects of the invention, which statement is also permissible under 37 CFR 1.73.

The brief summary of invention should be consistent with the subject matter of the claims. Note final review of application and preparation for issue, MPEP § 1302.

608.01(e) Reservation Clauses Not Permitted

37 CFR 1.79. Reservation clauses not permitted.

A reservation for a future application of subject matter disclosed but not claimed in a pending application will not be permitted in the pending application, but an application disclosing unclaimed subject matter may contain a reference to a later filed application of the same applicant or owned by a common assignee disclosing and claiming that subject matter.

608.01(f) Brief Description of Drawings [R-7]

37 CFR 1.74. Reference to drawings.

When there are drawings, there shall be a brief description of the several views of the drawings and the detailed description of the invention shall refer to the different views by specifying the numbers of the figures, and to the different parts by use of reference letters or numerals (preferably the latter).

The Office of **>Patent Application Processing (OPAP)< will review the specification, including the brief description, to determine whether all of the figures of drawings described in the specification are present. If the specification describes a figure which is not present in the drawings, the application will be treated as an application filed without all figures of drawings in accordance with MPEP § 601.01(g), unless the application lacks any drawings, in which case the application will be treated as an application filed without drawings in accordance with MPEP § 601.01(f).

The examiner should see to it that the figures are correctly described in the brief description of the drawing, that all section lines used are referred to, and that all needed section lines are used. **>If the drawings show Figures 1A, 1B, and 1C and the brief description of the drawings refers only to Figure 1, the examiner should object to the brief description, and require applicant to provide a brief description of Figures 1A, 1B, and 1C.<

The specification must contain or be amended to contain proper reference to the existence of drawings executed in color as required by 37 CFR 1.84.

37 CFR 1.84. Standards for drawings.

(a) *Drawings*. There are two acceptable categories for presenting drawings in utility and design patent applications.

(1) *Black ink*. Black and white drawings are normally required. India ink, or its equivalent that secures solid black lines, must be used for drawings; or

(2) Color. On rare occasions, color drawings may be necessary as the only practical medium by which to disclose the subject matter sought to be patented in a utility or design patent application or the subject matter of a statutory invention registration. The color drawings must be of sufficient quality such that all details in the drawings are reproducible in black and white in the printed patent. Color drawings are not permitted in international applications (see PCT Rule 11.13), or in an application, or copy thereof, submitted under the Office electronic filing system. The Office will accept color drawings in utility or design patent applications and statutory invention registrations only after granting a petition filed under this paragraph explaining why the color drawings are necessary. Any such petition must include the following:

(i) The fee set forth in § 1.17(h);

(ii) Three (3) sets of color drawings;

(iii) An amendment to the specification to insert (unless the specification contains or has been previously amended to contain) the following language as the first paragraph of the brief description of the drawings:

> The patent or application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawing(s) will be provided by the Office upon request and payment of the necessary fee.

(b) *Photographs*.—

(1) *Black and white*. Photographs, including photocopies of photographs, are not ordinarily permitted in utility and design patent applications. The Office will accept photographs in utility

and design patent applications, however, if photographs are the only practicable medium for illustrating the claimed invention. For example, photographs or photomicrographs of: electrophoresis gels, blots (*e.g.*, immunological, western, Southern, and northern), auto- radiographs, cell cultures (stained and unstained), histological tissue cross sections (stained and unstained), animals, plants, in vivo imaging, thin layer chromatography plates, crystalline structures, and, in a design patent application, ornamental effects, are acceptable. If the subject matter of the application admits of illustration by a drawing, the examiner may require a drawing in place of the photograph. The photographs must be of sufficient quality so that all details in the photographs are reproducible in the printed patent.

(2) *Color photographs*. Color photographs will be accepted in utility and design patent applications if the conditions for accepting color drawings and black and white photographs have been satisfied. See paragraphs (a)(2) and (b)(1) of this section.

*****

608.01(g) Detailed Description of Invention [R-7]

A detailed description of the invention and drawings follows the general statement of invention and brief description of the drawings. This detailed description, required by 37 CFR 1.71, MPEP § 608.01, must be in such particularity as to enable any person skilled in the pertinent art or science to make and use the invention without involving extensive experimentation. An applicant is ordinarily permitted to use his or her own terminology, as long as it can be understood. Necessary grammatical corrections, however, should be required by the examiner, but it must be remembered that an examination is not made for the purpose of securing grammatical perfection.

The reference characters must be properly applied, no single reference character being used for two different parts or for a given part and a modification of such part. **>See 37 CFR 1.84(p).< Every feature specified in the claims must be illustrated, but there should be no superfluous illustrations.

The description is a dictionary for the claims and should provide clear support or antecedent basis for all terms used in the claims. See 37 CFR 1.75, MPEP § 608.01(i), § 608.01(o), and § 1302.01.

For completeness, see MPEP § 608.01(p).

USE OF SYMBOL "Phi" IN PATENT APPLICATION

The Greek letter "Phi" has long been used as a symbol in equations in all technical disciplines. It further has special uses which include the indication of an electrical phase or clocking signal as well as an angular measurement. The recognized symbols for the upper and lower case Greek Phi characters, however, do not appear on most typewriters. This apparently has led to the use of a symbol composed by first striking a zero key and then backspacing and striking the "cancel" or "slash" key to result in an approximation of accepted symbols for the Greek character Phi. In other instances, the symbol is composed using the upper or lower case letter "O" with the "cancel" or "slash" superimposed thereon by backspacing, or it is simply handwritten in a variety of styles. These expedients result in confusion because of the variety of type sizes and styles available on modern typewriters.

In recent years, the growth of data processing has seen the increasing use of this symbol ("Ø") as the standard representation of zero. The "slashed" or "canceled" zero is used to indicate zero and avoid confusion with the upper case letter "O" in both text and drawings.

Thus, when the symbol "Ø" in one of its many variations, as discussed above, appears in patent applications being prepared for printing, confusion as to the intended meaning of the symbol arises. Those (such as examiners, attorneys, and applicants) working in the art can usually determine the intended meaning of this symbol because of their knowledge of the subject matter involved, but editors preparing these applications for printing have no such specialized knowledge and confusion arises as to which symbol to print. The result, at the very least, is delay until the intended meaning of the symbol can be ascertained.

Since the Office does not have the resources to conduct a technical editorial review of each application before printing, and in order to eliminate the problem of printing delays associated with the usage of these symbols, any question about the intended symbol will be resolved by the editorial staff of the Office of Patent Publication by printing the symbol Ø whenever that symbol is used by the applicant. Any Certificate of Correction necessitated by the above practice will be at the patentee's expense (37 CFR 1.323) because the intended symbol was not accurately presented by

the Greek upper or lower case Phi letters in the patent application.

608.01(h) Mode of Operation of Invention

The best mode contemplated by the inventor of carrying out his or her invention must be set forth in the description. See 35 U.S.C. 112. There is no statutory requirement for the disclosure of a specific example. A patent specification is not intended nor required to be a production specification. *Spectra-Physics, Inc. v. Coherent, Inc.*, 827 F.2d 1524, 1536, 3 USPQ2d 1737, 1745 (Fed. Cir. 1987); *In re Gay*, 309 F.2d 769, 135 USPQ 311 (CCPA 1962). The absence of a specific working example is not necessarily evidence that the best mode has not been disclosed, nor is the presence of one evidence that it has. *In re Honn*, 364 F.2d 454, 150 USPQ 652 (CCPA 1966). In determining the adequacy of a best mode disclosure, only evidence of concealment (accidental or intentional) is to be considered. That evidence must tend to show that the quality of an applicant's best mode disclosure is so poor as to effectively result in concealment. *Spectra-Physics, Inc. v. Coherent, Inc.*, 827 F.2d 1524, 1536, 3 USPQ2d 1737, 1745 (Fed. Cir. 1987); *In re Sherwood*, 613 F.2d 809, 204 USPQ 537 (CCPA 1980).

The question of whether an inventor has or has not disclosed what he or she feels is his or her best mode is a question separate and distinct from the question of sufficiency of the disclosure. *Spectra-Physics, Inc. v. Coherent, Inc.*, 827 F.2d 1524, 1532, 3 USPQ2d 1737, 1742 (Fed. Cir. 1987); *In re Glass*, 492 F.2d 1228, 181 USPQ 31 (CCPA 1974); *In re Gay*, 309 F.2d 769, 135 USPQ 311 (CCPA 1962). See 35 U.S.C. 112 and 37 CFR 1.71(b).

If the best mode contemplated by the inventor at the time of filing the application is not disclosed, such defect cannot be cured by submitting an amendment seeking to put into the specification something required to be there when the application was originally filed. *In re Hay*, 534 F.2d 917, 189 USPQ 790 (CCPA 1976). Any proposed amendment of this type should be treated as new matter.

Patents have been held invalid in cases where the patentee did not disclose the best mode known to him or her. See *Chemcast Corp. v. Arco Indus. Corp.*, 913 F.2d 923. 16 USPQ2d 1033 (Fed. Cir. 1990); *Dana Corp. v. IPC Ltd. Partnership*, 860 F.2d 415, 8 USPQ2d 1692 (Fed. Cir. 1988); *Spectra-Physics, Inc. v. Coherent, Inc.*, 821 F.2d 1524, 3 USPQ2d 1737 (Fed. Cir. 1987).

For completeness, see MPEP § 608.01(p) and § 2165 to § 2165.04.

608.01(i) Claims [R-3]

37 CFR 1.75. Claims

(a) The specification must conclude with a claim particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention or discovery.

(b) More than one claim may be presented provided they differ substantially from each other and are not unduly multiplied.

(c) >One or more claims may be presented in dependent form, referring back to and further limiting another claim or claims in the same application. Any dependent claim which refers to more than one other claim ("multiple dependent claim") shall refer to such other claims in the alternative only. A multiple dependent claim shall not serve as a basis for any other multiple dependent claim. For fee calculation purposes under § 1.16, a multiple dependent claim will be considered to be that number of claims to which direct reference is made therein. For fee calculation purposes also, any claim depending from a multiple dependent claim will be considered to be that number of claims to which direct reference is made in that multiple dependent claim. In addition to the other filing fees, any original application which is filed with, or is amended to include, multiple dependent claims must have paid therein the fee set forth in § 1.16(j). Claims in dependent form shall be construed to include all the limitations of the claim incorporated by reference into the dependent claim. A multiple dependent claim shall be construed to incorporate by reference all the limitations of each of the particular claims in relation to which it is being considered.<

(d)(1)The claim or claims must conform to the invention as set forth in the remainder of the specification and the terms and phrases used in the claims must find clear support or antecedent basis in the description so that the meaning of the terms in the claims may be ascertainable by reference to the description (See § 1.58(a).)

(2) See §§ 1.141 to 1.146 as to claiming different inventions in one application.

(e) Where the nature of the case admits, as in the case of an improvement, any independent claim should contain in the following order:

(1) A preamble comprising a general description of all the elements or steps of the claimed combination which are conventional or known,

(2) A phrase such as "wherein the improvement comprises," and

(3) Those elements, steps, and/or relationships which constitute that portion of the claimed combination which the applicant considers as the new or improved portion.

(f) If there are several claims, they shall be numbered consecutively in Arabic numerals.

(g) The least restrictive claim should be presented as claim number 1, and all dependent claims should be grouped together

with the claim or claims to which they refer to the extent practicable.

(h) The claim or claims must commence on a separate physical sheet or electronic page. Any sheet including a claim or portion of a claim may not contain any other parts of the application or other material.

(i) Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation.

For numbering of claims, see MPEP § 608.01(j).

For form of claims, see MPEP § 608.01(m).

For dependent claims, see MPEP § 608.01(n).

For examination of claims, see MPEP § 706.

For claims in excess of fee, see MPEP § 714.10.

608.01(j) Numbering of Claims

37 CFR 1.126. Numbering of claims.

The original numbering of the claims must be preserved throughout the prosecution. When claims are canceled the remaining claims must not be renumbered. When claims are added, they must be numbered by the applicant consecutively beginning with the number next following the highest numbered claim previously presented (whether entered or not). When the application is ready for allowance, the examiner, if necessary, will renumber the claims consecutively in the order in which they appear or in such order as may have been requested by applicant.

In a single claim case, the claim is not numbered.

Form paragraph 6.17 may be used to notify applicant.

¶ *6.17 Numbering of Claims, 37 CFR 1.126*

The numbering of claims is not accordance with 37 CFR 1.126, which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claim **[1]** been renumbered **[2]**.

Examiner Note:

1. In bracket 1, insert appropriate claim number(s) and --has-- or -- have --.

2. In bracket 2, insert correct claim number(s) and --, respectively -- if more than one claim is involved.

608.01(k) Statutory Requirement of Claims

35 U.S.C. 112 requires that the applicant shall particularly point out and distinctly claim the subject matter which he or she regards as his or her invention. The portion of the application in which he or she does this forms the claim or claims. This is an important part of the application, as it is the definition of that for which protection is granted.

608.01(l) Original Claims

In establishing a disclosure, applicant may rely not only on the description and drawing as filed but also on the original claims if their content justifies it.

Where subject matter not shown in the drawing or described in the description is claimed in the application as filed, and such original claim itself constitutes a clear disclosure of this subject matter, then the claim should be treated on its merits, and requirement made to amend the drawing and description to show this subject matter. The claim should not be attacked either by objection or rejection because this subject matter is lacking in the drawing and description. It is the drawing and description that are defective, not the claim.

It is, of course, to be understood that this disclosure in the claim must be sufficiently specific and detailed to support the necessary amendment of the drawing and description.

608.01(m) Form of Claims [R-7]

The claim or claims must commence on a separate physical sheet or electronic page and should appear after the detailed description of the invention. Any sheet including a claim or portion of a claim may not contain any other parts of the application or other material. While there is no set statutory form for claims, the present Office practice is to insist that each claim must be the object of a sentence starting with "I (or we) claim," "The invention claimed is" (or the equivalent). If, at the time of allowance, the quoted terminology is not present, it is inserted by the Office of **>Data Management<. Each claim begins with a capital letter and ends with a period. Periods may not be used elsewhere in the claims except for abbreviations. See *Fressola v. Manbeck,* 36 USPQ2d 1211 (D.D.C. 1995). Where a claim sets forth a plurality of

elements or steps, each element or step of the claim should be separated by a line indentation, 37 CFR 1.75(i).

There may be plural indentations to further segregate subcombinations or related steps. In general, the printed patent copies will follow the format used but printing difficulties or expense may prevent the duplication of unduly complex claim formats.

Reference characters corresponding to elements recited in the detailed description and the drawings may be used in conjunction with the recitation of the same element or group of elements in the claims. The reference characters, however, should be enclosed within parentheses so as to avoid confusion with other numbers or characters which may appear in the claims. The use of reference characters is to be considered as having no effect on the scope of the claims.

Many of the difficulties encountered in the prosecution of patent applications after final rejection may be alleviated if each applicant includes, at the time of filing or no later than the first reply, claims varying from the broadest to which he or she believes he or she is entitled to the most detailed that he or she is willing to accept.

Claims should preferably be arranged in order of scope so that the first claim presented is the least restrictive. All dependent claims should be grouped together with the claim or claims to which they refer to the extent practicable. Where separate species are claimed, the claims of like species should be grouped together where possible. Similarly, product and process claims should be separately grouped. Such arrangements are for the purpose of facilitating classification and examination.

The form of claim required in 37 CFR 1.75(e) is particularly adapted for the description of improvement-type inventions. It is to be considered a combination claim. The preamble of this form of claim is considered to positively and clearly include all the elements or steps recited therein as a part of the claimed combination.

For rejections not based on prior art, see MPEP § 706.03.

The following form paragraphs may be used to object to the form of the claims.

¶ *6.18.01 Claims: Placement*

The claims in this application do not commence on a separate sheet or electronic page in accordance with 37 CFR 1.52(b)(3). Appropriate correction is required in response to this action.

Examiner Note:

This paragraph should only be used for applications filed on or after September 23, 1996.

¶ *7.29.01 Claims Objected to, Minor Informalities*

Claim[1] objected to because of the following informalities: [2]. Appropriate correction is required.

Examiner Note:

1. Use this form paragraph to point out minor informalities such as spelling errors, inconsistent terminology, etc., which should be corrected.
2. If the informalities render the claim(s) indefinite, use form paragraph 7.34.01 instead to reject the claim(s) under 35 U.S.C. 112, second paragraph.

¶ *7.29.02 Claims Objected to, Reference Characters Not Enclosed Within Parentheses*

The claims are objected to because they include reference characters which are not enclosed within parentheses.

Reference characters corresponding to elements recited in the detailed description of the drawings and used in conjunction with the recitation of the same element or group of elements in the claims should be enclosed within parentheses so as to avoid confusion with other numbers or characters which may appear in the claims. See MPEP § 608.01(m).

Examiner Note:

1. Use of this paragraph is optional. You may instead choose to correct the error yourself at time of allowance by informal examiner's amendment.
2. If the lack of parentheses renders the claim(s) indefinite, use form paragraph 7.34.01 instead to reject the claim(s) under 35 U.S.C. 112, second paragraph.

¶ *7.29.03 Claims Objected to, Spacing of Lines*

The claims are objected to because the lines are crowded too closely together, making reading difficult. Substitute claims with lines one and one-half or double spaced on good quality paper are required. See 37 CFR 1.52(b).

Amendments to the claims must be in compliance with 37 CFR 1.121(c).

608.01(n) Dependent Claims [R-7]

I. MULTIPLE DEPENDENT CLAIMS

37 CFR 1.75. Claim(s).

*****

(c) One or more claims may be presented in dependent form, referring back to and further limiting another claim or claims in the same application. Any dependent claim which refers to more

than one other claim ("multiple dependent claim") shall refer to such other claims in the alternative only. A multiple dependent claim shall not serve as a basis for any other multiple dependent claim. For fee calculation purposes under § 1.16, a multiple dependent claim will be considered to be that number of claims to which direct reference is made therein. For fee calculation purposes also, any claim depending from a multiple dependent claim will be considered to be that number of claims to which direct reference is made in that multiple dependent claim. In addition to the other filing fees, any original application which is filed with, or is amended to include, multiple dependent claims must have paid therein the fee set forth in § 1.16(j). Claims in dependent form shall be construed to include all the limitations of the claim incorporated by reference into the dependent claim. A multiple dependent claim shall be construed to incorporate by reference all the limitations of each of the particular claims in relation to which it is being considered.

*****

Generally, a multiple dependent claim is a dependent claim which refers back in the alternative to more than one preceding independent or dependent claim.

The second paragraph of 35 U.S.C. 112 has been revised in view of the multiple dependent claim practice introduced by the Patent Cooperation Treaty. Thus 35 U.S.C. 112 authorizes multiple dependent claims in applications filed on and after January 24, 1978, as long as they are in the alternative form (e.g., "A machine according to claims 3 or 4, further comprising ---"). Cumulative claiming (e.g., "A machine according to claims 3 and 4, further comprising ---") is not permitted. A multiple dependent claim may refer in the alternative to only one set of claims. A claim such as "A device as in claims 1, 2, 3, or 4, made by a process of claims 5, 6, 7, or 8" is improper. 35 U.S.C. 112 allows reference to only a particular claim. Furthermore, a multiple dependent claim may not serve as a basis for any other multiple dependent claim, either directly or indirectly. These limitations help to avoid undue confusion in determining how many prior claims are actually referred to in a multiple dependent claim.

A multiple dependent claim which depends from another multiple dependent claim should be objected to by using form paragraph 7.45.

¶ *7.45 Improper Multiple Dependent Claims*

Claim **[1]** objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim **[2]**. See MPEP § 608.01(n). Accordingly, the claim **[3]** not been further treated on the merits.

Examiner Note:

1. In bracket 2, insert --should refer to other claims in the alternative only--, and/or, --cannot depend from any other multiple dependent claim--.
2. Use this paragraph rather than 35 U.S.C. 112, fifth paragraph.
3. In bracket 3, insert --has-- or --s have--.

Assume each claim example given below is from a different application.

A. Acceptable Multiple Dependent Claim Wording

Claim 5. A gadget according to claims 3 or 4, further comprising ---

Claim 5. A gadget as in any one of the preceding claims, in which ---

Claim 5. A gadget as in any one of claims 1, 2, and 3, in which ---

Claim 3. A gadget as in either claim 1 or claim 2, further comprising ---

Claim 4. A gadget as in claim 2 or 3, further comprising ---

Claim 16. A gadget as in claims 1, 7, 12, or 15, further comprising ---

Claim 5. A gadget as in any of the preceding claims, in which ---

Claim 8. A gadget as in one of claims 4-7, in which ---

Claim 5. A gadget as in any preceding claim, in which ---

Claim 10. A gadget as in any of claims 1-3 or 7-9, in which ---

Claim 11. A gadget as in any one of claims 1, 2, or 7-10 inclusive, in which ---

B. Unacceptable Multiple Dependent Claim Wording

1. Claim Does Not Refer Back in the Alternative Only

Claim 5. A gadget according to claim 3 and 4, further comprising ---

Claim 9. A gadget according to claims 1-3, in which ---

Claim 9. A gadget as in claims 1 or 2 and 7 or 8, which ---

Claim 6. A gadget as in the preceding claims in which ---

Claim 6. A gadget as in claims 1, 2, 3, 4 and/or 5, in which ---

Claim 10. A gadget as in claims 1-3 or 7-9, in which ---

2. Claim Does Not Refer to a Preceding Claim

Claim 3. A gadget as in any of the following claims, in which ---

Claim 5. A gadget as in either claim 6 or claim 8, in which ---

3. Reference to Two Sets of Claims to Different Features

Claim 9. A gadget as in claim 1 or 4 made by the process of claims 5, 6, 7, or 8, in which ---

4. Reference Back to Another Multiple Dependent Claim

Claim 8. A gadget as in claim 5 (claim 5 is a multiple dependent claim) or claim 7, in which ---

35 U.S.C. 112 indicates that the limitations or elements of each claim incorporated by reference into a multiple dependent claim must be considered separately. Thus, a multiple dependent claim, as such, does not contain all the limitations of all the alternative claims to which it refers, but rather contains in any one embodiment only those limitations of the particular claim referred to for the embodiment under consideration. Hence, a multiple dependent claim must be considered in the same manner as a plurality of single dependent claims.

C. Restriction Practice

For restriction purposes, each embodiment of a multiple dependent claim is considered in the same manner as a single dependent claim. Therefore, restriction may be required between the embodiments of a multiple dependent claim. Also, some embodiments of a multiple dependent claim may be held withdrawn while other embodiments are considered on their merits.

*D. Handling of Multiple Dependent Claims by the Office of **>Patent Application Processing<*

The Office of **>Patent Application Processing (OPAP)< is responsible for verifying whether multiple dependent claims filed with the application are in proper alternative form, that they depend only upon prior independent or single dependent claims and also for calculating the amount of the filing fee. Form PTO/SB/07 has been designed to be used in conjunction with the current fee calculation form PTO/SB/06.

E. Handling of Multiple Dependent Claims by the Technology Center Technical Support Staff

The Technology Center (TC) technical support staff is responsible for verifying compliance with the statute and rules of multiple dependent claims added by amendment and for calculating the amount of any additional fees required. This calculation should be performed on form PTO/SB/07.

*There is no need for a TC technical support staff to check the accuracy of the initial filing fee since this has already been verified by the Office of **>Patent Application Processing< when granting the filing date*.

If a multiple dependent claim (or claims) is added in an amendment without the proper fee, either by adding references to prior claims or by adding a new multiple dependent claim, the amendment should not be entered until the fee has been received. In view of the requirements for multiple dependent claims, no amendment containing new claims or changing the dependency of claims should be entered before checking whether the paid fees cover the costs of the amended claims. The applicant, or his or her attorney or agent, should be contacted to pay the additional fee. Where a letter is written in an insufficient fee situation, a copy of the multiple dependent claim fee calculation, form PTO/SB/07 should be included for applicant's information.

Where the TC technical support staff notes that the reference to the prior claims is improper in an added or amended multiple dependent claim, a notation should be made in the left margin next to the claim itself and the number 1, which is inserted in the "Dep. Claim" column of that amendment on form PTO/SB/

07 should be circled in order to call this matter to the examiner's attention.

F. Handling of Multiple Dependent Claims by the Examiner

Public Law 94-131, the implementing legislation for the Patent Cooperation Treaty amended 35 U.S.C. 112 to state that "a claim in dependent form shall contain a reference to a claim *previously set forth*." The requirement to refer to a previous claim had existed only in 37 CFR 1.75(c) before.

The following procedures are to be followed by examiners when faced with claims which refer to numerically succeeding claims:

If any series of dependent claims contains a claim with an improper reference to a numerically following claim which cannot be understood, the claim referring to a following claim should normally be objected to and not treated on the merits.

However, in situations where a claim refers to a numerically following claim and the dependency is clear, both as presented and as it will be renumbered at issue, all claims should be examined on the merits and no objection as to form need be made. In such cases, the examiner will renumber the claims into proper order at the time the application is allowed. (See Example B, below.)

Any unusual problems should be brought to the supervisor's attention.

Example A

(Claims 4 and 6 should be objected to as not being understood and should not be treated on the merits.)

1. Independent
2. Dependent on claim 5
3. Dependent on claim 2
4. ". . . as in any preceding claim"
5. Independent
6. Dependent on claim 4

Example B

Note: Parenthetical numerals represent the claim numbering for issue should all claims be allowed.

(All claims should be examined.)

1. (1) Independent
2. (5) Dependent on claim 5 (4)
3. (2) Dependent on claim 1 (1)
4. (3) Dependent on claim 3 (2)
5. (4) Dependent on either claim 1 (1) or claim 3 (2)

The following practice is followed by patent examiners when making reference to a dependent claim either singular or multiple:

(A) When identifying a singular dependent claim which does not include a reference to a multiple dependent claim, either directly or indirectly, reference should be made only to the number of the dependent claim.

(B) When identifying the embodiments included within a multiple dependent claim, or a singular dependent claim which includes a reference to a multiple dependent claim, either directly or indirectly, each embodiment should be identified by using the number of the claims involved, starting with the highest, *to the extent necessary* to specifically identify each embodiment.

(C) When all embodiments included within a multiple dependent claim or a singular dependent claim which includes a reference to a multiple dependent claim, either directly or indirectly, are subject to a common rejection, objection, or requirement, reference may be made only to the number of the dependent claim.

The following table illustrates the current practice where each embodiment of each claim must be treated on an individual basis:

Claim No.	Claim dependency	Identification All claims	Approved practice
1	Independent	1	1
2	Depends from 1	2/1	2
3	Depends from 2	3/2/1	3
4	Depends from 2 or 3	4/2/1 4/3/2/1	4/2 4/3

Claim No.	Claim dependency	Identification All claims	Approved practice
5	Depends from 3	5/3/2/1	5
6	Depends from 2, 3, or 5	6/2/1 6/3/2/1 6/5/3/2/1	6/2 6/3 6/5
7	Depends from 6	7/6/2/1 7/6/3/2/1 7/6/5/3/2/1	7/6/2 7/6/3 7/6/5

When all embodiments in a multiple dependent claim situation (claims 4, 6, and 7 above) are subject to a common rejection, objection, or requirements, reference may be made to the number of the individual dependent claim only. For example, if 4/2 and 4/3 were subject to a common ground of rejection, reference should be made only to claim 4 in the statement of that rejection.

The provisions of 35 U.S.C. 132 require that each Office action make it explicitly clear what rejection, objection and/or requirement is applied to each claim embodiment.

G. Fees for Multiple Dependent Claims

1. Use of Form PTO/SB/07

To assist in the computation of the fees for multiple dependent claims, a separate "Multiple Dependent Claim Fee Calculation Sheet," form PTO/SB/07 has been designed for use with the current "Patent Application Fee Determination Record," form PTO/SB/06. Form PTO/SB/07 will be placed in the application file by the Office of **>Patent Application Processing (OPAP)< where multiple dependent claims are in the application as filed. For Image File Wrapper (IFW) processing, see IFW Manual. If multiple dependent claims are not included upon filing, but are later added by amendment, the TC technical support staff will place the form in the application file. If there are multiple dependent claims in the application, the total number of independent and dependent claims for fee purposes will be calculated on form PTO/SB/07 and the total number of claims and number of independent claims is then placed on form PTO/SB/06 for final fee calculation purposes.

2. Calculation of Fees

(a) Proper Multiple Dependent Claim

35 U.S.C. 41(a), provides that claims in proper multiple dependent form may not be considered as single dependent claims for the purpose of calculating fees. Thus, a multiple dependent claim is considered to be that number of dependent claims to which it refers. Any proper claim depending directly or indirectly from a multiple dependent claim is also considered as the number of dependent claims as referred to in the multiple dependent claim from which it depends.

(b) Improper Multiple Dependent Claim

If none of the multiple dependent claims is proper, the multiple dependent claim fee set forth in 37 CFR 1.16(j) will not be required. However, the multiple dependent claim fee is required if at least one multiple dependent claim is proper.

If any multiple dependent claim is improper, *>OPAP< may indicate that fact by placing an encircled numeral "1" in the "Dep. Claims" column of form PTO/SB/07. The fee for any improper multiple dependent claim, whether it is defective for either not being in the alternative form or for being directly or indirectly dependent on a prior multiple dependent claim, will only be one, since only an objection to the form of such a claim will normally be made. This procedure also greatly simplifies the calculation of fees. Any claim depending from an improper multiple dependent claim will also be considered to be improper and be counted as one dependent claim.

(c) Fee calculation example

Claim No.		*Ind.*	*Dep.*
1.	Independent	1	
2.	Dependent on claim 1		1
3.	Dependent on claim 2		1
4.	Dependent on claim 2 or 3		2
5.	Dependent on claim 4		2
6.	Dependent on claim 5		2
7.	Dependent on claim 4, 5 or 6		(1)
8.	Dependent on claim 7		(1)
9.	Independent	1	
10.	Dependent on claim 1 or 9		2
11.	Dependent on claims 1 and 9		(1)
	Total	2	13

i) Comments On Fee Calculation Example

Claim 1 — This is an independent claim; therefore, a numeral "1" is placed opposite claim number 1 in the "Ind." column.

Claim 2 — Since this is a claim dependent on a single independent claim, a numeral "1" is placed opposite claim number 2 of the "Dep." column.

Claim 3 — Claim 3 is also a single dependent claim, so a numeral "1" is placed in the "Dep." column.

Claim 4 — Claim 4 is a proper multiple dependent claim. It refers directly to two claims in the alternative, namely, claim 2 *or* 3. Therefore, a numeral "2" to indicate direct reference to two claims is placed in the "Dep." column opposite claim number 4.

Claim 5 — This claim is a singularly dependent claim depending from a multiple dependent claim. For fee calculation purposes, such a claim is counted as being that number of claims to which direct reference is made in the multiple dependent claim from which it depends. In this case, the multiple dependent claim number 4 it depends from counts as 2 claims; therefore, claim 5 also counts as 2 claims. Accordingly, a numeral "2" is placed opposite claim number 5 in the "Dep." column.

Claim 6 — Claim 6 depends indirectly from a multiple dependent claim 4. Since claim 4 counts as 2 claims, claim 6 also counts as 2 dependent claims. Consequently, a numeral "2" is placed in the "Dep." column after claim 6.

Claim 7 — This claim is a multiple dependent claim since it refers to claims 4, 5, or 6. However, as can be seen by looking at the "2" in the "Dep." column opposite claim 4, claim 7 depends from a multiple dependent claim. This practice is improper under 35 U.S.C.112 and 37 CFR 1.75(c). Following the procedure for calculating fees for improper multiple dependent claims, a numeral "1" is placed in the "Dep." column with a circle drawn around it to alert the examiner that the claim is improper.

Claim 8 — Claim 8 is improper since it depends from an improper claim. If the base claim is in error, this error cannot be corrected by adding additional claims depending therefrom. Therefore, a numeral "1" with a circle around it is placed in the "Dep." column.

Claim 9 — Here again we have an independent claim which is always indicated with a numeral "1" in the "Ind." column opposite the claim number.

Claim 10 — This claim refers to two independent claims in the alternative. A numeral "2" is, therefore, placed in the "Dep." column opposite claim 10.

Claim 11 — Claim 11 is a dependent claim which refers to two claims in the conjunctive ("1" *and* "9") rather than in the alternative ("1" *or* "9"). This form is improper under 35 U.S.C. 112 and 37 CFR 1.75(c). Accordingly, since claim 11 is improper, an encircled number "1" is placed in the "Dep." column opposite Claim 11.

ii) Calculation of Fee in Fee Example

After the number of "Ind." and "Dep." claims are noted on form PTO/SB/07, each column is added. In this example, there are 2 independent claims and 13 dependent claims or a total of 15 claims. The number of independent and total claims can then be placed on form PTO/SB/06 and the fee calculated.

II. TREATMENT OF IMPROPER DEPENDENT CLAIMS

The initial determination, for fee purposes, as to whether a claim is dependent must be made by persons other than examiners; it is necessary, at that time, to accept as dependent virtually every claim which refers to another claim, without determining whether there is actually a true dependent relationship. The initial acceptance of a claim as a dependent claim does not, however, preclude a subsequent holding by the examiner that a claim is not a proper dependent claim. Any claim which is in dependent form but which is so worded that it, in fact is not, as, for exam-

ple, it does not include every limitation of the claim on which it depends, will be required to be *canceled* as not being a proper dependent claim; and cancelation of any further claim depending on such a dependent claim will be similarly required. Where a claim in dependent form is not considered to be a proper dependent claim under 37 CFR 1.75(c), the examiner should object to such claim under 37 CFR 1.75(c) and require cancellation of such improper dependent claim or rewriting of such improper dependent claim in independent form. See *Ex parte Porter*, 25 USPQ2d 1144, 1147 (Bd. of Pat. App. & Inter. 1992) (A claim determined to be an improper dependent claim should be treated as a formal matter, in that the claim should be objected to and applicant should be required to cancel the claim (or replace the improper dependent claim with an independent claim) rather than treated by a rejection of the claim under 35 U.S.C. 112, fourth paragraph.). The applicant may thereupon amend the claims to place them in proper dependent form, or may redraft them as independent claims, upon payment of any *necessary* additional fee.

Note, that although 37 CFR 1.75(c) requires the dependent claim to further limit a preceding claim, this rule does not apply to product-by-process claims.

Claims which are in improper dependent form for failing to further limit the subject matter of a previous claim should be objected to under 37 CFR 1.75(c) by using form paragraph 7.36.

¶ *7.36 Objection, 37 CFR 1.75(c), Improper Dependent Claim*

Claim **[1]** objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. **[2]**.

Examiner Note:

1. In bracket 2, insert an explanation of what is in the claim and why it does not constitute a further limitation.

2. Note *Ex parte Porter*, 25 USPQ2d 1144 (Bd. Pat. App. & Inter. 1992) for situations where a method claim is considered to be properly dependent upon a parent apparatus claim and should not be objected to or rejected under 35 U.S.C. 112, fourth paragraph. See also MPEP § 608.01(n), "Infringement Test" for dependent claims. The test for a proper dependent claim is whether the dependent claim includes every limitation of the parent claim. The test is <u>not</u> whether the claims differ in scope. A proper dependent claim shall not conceivably be infringed by anything which would not also infringe the basic claim.

III. INFRINGEMENT TEST

The test as to whether a claim is a proper dependent claim is that it shall include every limitation of the claim from which it depends (35 U.S.C. 112, fourth paragraph) or in other words that it shall not conceivably be infringed by anything which would not also infringe the basic claim.

A dependent claim does not lack compliance with 35 U.S.C. 112, fourth paragraph, simply because there is a question as to (1) the significance of the further limitation added by the dependent claim, or (2) whether the further limitation in fact changes the scope of the dependent claim from that of the claim from which it depends. The test for a proper dependent claim under the fourth paragraph of 35 U.S.C. 112 is whether the dependent claim includes every limitation of the claim from which it depends. The test is not one of whether the claims differ in scope.

Thus, for example, if claim 1 recites the combination of elements A, B, C, and D, a claim reciting the structure of claim 1 in which D was omitted or replaced by E would not be a proper dependent claim, even though it placed further limitations on the remaining elements or added still other elements.

Examiners are reminded that a dependent claim is directed to a combination including everything recited in the base claim and what is recited in the dependent claim. It is this combination that must be compared with the prior art, exactly as if it were presented as one independent claim.

The fact that a dependent claim which is otherwise proper might relate to a separate invention which would require a separate search or be separately classified from the claim on which it depends would not render it an improper dependent claim, although it might result in a requirement for restriction.

The fact that the independent and dependent claims are in different statutory classes does not, in itself, render the latter improper. Thus, if claim 1 recites a specific product, a claim for the method of making the product of claim 1 in a particular manner would be a proper dependent claim since it could not be infringed without infringing claim 1. Similarly, if claim 1 recites a method of making a product, a claim for a product made by the method of claim 1 could be a proper dependent claim. On the other hand, if claim 1 recites a method of making a specified product, a claim to the product set forth in claim 1 would not be

a proper dependent claim since it is conceivable that the product claim can be infringed without infringing the base method claim if the product can be made by a method other than that recited in the base method claim.

IV. CLAIM FORM AND ARRANGEMENT

A singular dependent claim 2 could read as follows:

2. The product of claim 1 in which . . . .

A series of singular dependent claims is permissible in which a dependent claim refers to a preceding claim which, in turn, refers to another preceding claim.

A claim which depends from a *dependent* claim should not be separated therefrom by any claim which does not also depend from said "dependent claim." It should be kept in mind that a dependent claim may refer back to any preceding independent claim. These are the only restrictions with respect to the sequence of claims and, in general, applicant's sequence should not be changed. See MPEP § 608.01(j). Applicant may be so advised by using form paragraph 6.18.

¶ *6.18 Series of Singular Dependent Claims*

A series of singular dependent claims is permissible in which a dependent claim refers to a preceding claim which, in turn, refers to another preceding claim.

A claim which depends from a dependent claim should not be separated by any claim which does not also depend from said dependent claim. It should be kept in mind that a dependent claim may refer to any preceding independent claim. In general, applicant's sequence will not be changed. See MPEP § 608.01(n).

During prosecution, the order of claims may change and be in conflict with the requirement that dependent claims refer to a preceding claim. Accordingly, the numbering of dependent claims and the numbers of preceding claims referred to in dependent claims should be carefully checked when claims are renumbered upon allowance.

V. REJECTION AND OBJECTION

If the base claim has been canceled, a claim which is directly or indirectly dependent thereon should be rejected as incomplete. If the base claim is rejected, the dependent claim should be objected to rather than rejected, if it is otherwise allowable.

Form paragraph 7.43 can be used to state the objection.

¶ *7.43 Objection to Claims, Allowable Subject Matter*

Claim **[1]** objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

608.01(o) Basis for Claim Terminology in Description [R-3]

The meaning of every term used in any of the claims should be apparent from the descriptive portion of the specification with clear disclosure as to its import; and in mechanical cases, it should be identified in the descriptive portion of the specification by reference to the drawing, designating the part or parts therein to which the term applies. A term used in the claims may be given a special meaning in the description. **>See MPEP § 2111.01 and § 2173.05(a).<

Usually the terminology of the original claims follows the nomenclature of the specification, but sometimes in amending the claims or in adding new claims, new terms are introduced that do not appear in the specification. The use of a confusing variety of terms for the same thing should not be permitted.

New claims and amendments to the claims already in the application should be scrutinized not only for new matter but also for new terminology. While an applicant is not limited to the nomenclature used in the application as filed, he or she should make appropriate amendment of the specification whenever this nomenclature is departed from by amendment of the claims so as to have clear support or antecedent basis in the specification for the new terms appearing in the claims. This is necessary in order to insure certainty in construing the claims in the light of the specification, *Ex parte Kotler*, 1901 C.D. 62, 95 O.G. 2684 (Comm'r Pat. 1901). See 37 CFR 1.75, MPEP § 608.01(i) and § 1302.01. Note that examiners should ensure that the terms and phrases used in claims presented late in prosecution of the application (including claims amended via an examiner's amendment) find clear support or antecedent basis in the description so that the meaning of the terms in the claims may be ascertainable by reference to the description, see 37 CFR 1.75(d)(1). If the examiner determines that the claims presented late in prosecution do not comply with 37 CFR 1.75(d)(1), applicant will be

required to make appropriate amendment to the description to provide clear support or antecedent basis for the terms appearing in the claims provided no new matter is introduced.

The specification should be objected to if it does not provide proper antecedent basis for the claims by using form paragraph 7.44.

¶ *7.44 Claimed Subject Matter Not in Specification*

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: **[1]**

608.01(p) Completeness [R-3]

Newly filed applications obviously failing to disclose an invention with the clarity required are discussed in MPEP § 702.01.

A disclosure in an application, to be complete, must contain such description and details as to enable any person skilled in the art or science to which the invention pertains to make and use the invention as of its filing date. *In re Glass,* 492 F.2d 1228, 181 USPQ 31 (CCPA 1974).

While the prior art setting may be mentioned in general terms, the essential novelty, the essence of the invention, must be described in such details, including proportions and techniques, where necessary, as to enable those persons skilled in the art to make and utilize the invention.

Specific operative embodiments or examples of the invention must be set forth. Examples and description should be of sufficient scope as to justify the scope of the claims. *Markush* claims must be provided with support in the disclosure for each member of the *Markush* group. Where the constitution and formula of a chemical compound is stated only as a probability or speculation, the disclosure is not sufficient to support claims identifying the compound by such composition or formula.

A complete disclosure should include a statement of utility. This usually presents no problem in mechanical cases. In chemical cases, varying degrees of specificity are required.

A disclosure involving a new chemical compound or composition must teach persons skilled in the art how to make the compound or composition. Incomplete teachings may not be completed by reference to subsequently filed applications.

For "Guidelines For Examination Of Applications For Compliance With The Utility Requirement of 35 U.S.C. 101," see MPEP § 2107.

For "General Principles Governing Utility Rejections," see MPEP § 2107.01.

For a discussion of the utility requirement under 35 U.S.C. 112, first paragraph, in drug cases, see MPEP § 2107.03 and § 2164.06(a).

For "Procedural Considerations Related to Rejections for Lack of Utility," see MPEP § 2107.02.

For "Special Considerations for Asserted Therapeutic or Pharmacological Utilities," see MPEP § 2107.03.

I. INCORPORATION BY REFERENCE

>

37 CFR 1.57. Incorporation by reference.

(a) Subject to the conditions and requirements of this paragraph, if all or a portion of the specification or drawing(s) is inadvertently omitted from an application, but the application contains a claim under § 1.55 for priority of a prior-filed foreign application, or a claim under § 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application, that was present on the filing date of the application, and the inadvertently omitted portion of the specification or drawing(s) is completely contained in the prior-filed application, the claim under § 1.55 or § 1.78 shall also be considered an incorporation by reference of the prior-filed application as to the inadvertently omitted portion of the specification or drawing(s).

(1) The application must be amended to include the inadvertently omitted portion of the specification or drawing(s) within any time period set by the Office, but in no case later than the close of prosecution as defined by § 1.114 (b), or abandonment of the application, whichever occurs earlier. The applicant is also required to:

(i) Supply a copy of the prior-filed application, except where the prior-filed application is an application filed under 35 U.S.C. 111;

(ii) Supply an English language translation of any prior-filed application that is in a language other than English; and

(iii) Identify where the inadvertently omitted portion of the specification or drawings can be found in the prior-filed application.

(2) Any amendment to an international application pursuant to this paragraph shall be effective only as to the United States, and shall have no effect on the international filing date of the application. In addition, no request to add the inadvertently omitted portion of the specification or drawings in an international application designating the United States will be acted upon by the Office prior to the entry and commencement of the national stage (§ 1.491) or the filing of an application under 35 U.S.C. 111 (a) which claims benefit of the international application.

(3) If an application is not otherwise entitled to a filing date under § 1.53(b), the amendment must be by way of a petition pursuant to this paragraph accompanied by the fee set forth in § 1.17(f).

(b) Except as provided in paragraph (a) of this section, an incorporation by reference must be set forth in the specification and must:

(1) Express a clear intent to incorporate by reference by using the root words "incorporat(e)" and "reference" (*e.g.*, "incorporate by reference"); and

(2) Clearly identify the referenced patent, application, or publication.

(c) "Essential material" may be incorporated by reference, but only by way of an incorporation by reference to a U.S. patent or U.S. patent application publication, which patent or patent application publication does not itself incorporate such essential material by reference. "Essential material" is material that is necessary to:

(1) Provide a written description of the claimed invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same, and set forth the best mode contemplated by the inventor of carrying out the invention as required by the first paragraph of 35 U.S.C. 112;

(2) Describe the claimed invention in terms that particularly point out and distinctly claim the invention as required by the second paragraph of 35 U.S.C. 112; or

(3) Describe the structure, material, or acts that correspond to a claimed means or step for performing a specified function as required by the sixth paragraph of 35 U.S.C. 112.

(d) Other material ("Nonessential material") may be incorporated by reference to U.S. patents, U.S. patent application publications, foreign patents, foreign published applications, prior and concurrently filed commonly owned U.S. applications, or nonpatent publications. An incorporation by reference by hyperlink or other form of browser executable code is not permitted.

(e) The examiner may require the applicant to supply a copy of the material incorporated by reference. If the Office requires the applicant to supply a copy of material incorporated by reference, the material must be accompanied by a statement that the copy supplied consists of the same material incorporated by reference in the referencing application.

(f) Any insertion of material incorporated by reference into the specification or drawings of an application must be by way of an amendment to the specification or drawings. Such an amendment must be accompanied by a statement that the material being inserted is the material previously incorporated by reference and that the amendment contains no new matter.

(g) An incorporation of material by reference that does not comply with paragraphs (b), (c), or (d) of this section is not effective to incorporate such material unless corrected within any time period set by the Office, but in no case later than the close of prosecution as defined by § 1.114(b), or abandonment of the application, whichever occurs earlier. In addition:

(1) A correction to comply with paragraph (b)(1) of this section is permitted only if the application as file d clearly conveys an intent to incorporate the material by reference. A mere reference to material does not convey an intent to incorporate the material by reference.

(2) A correction to comply with paragraph (b)(2) of this section is only permitted for material that was sufficiently described to uniquely identify the document.<

The Director has considerable discretion in determining what may or may not be incorporated by reference in a patent application. *General Electric Co. v. Brenner*, 407 F.2d 1258, 159 USPQ 335 (D.C. Cir. 1968). >Effective October 21, 2004, the Office codified in 37 CFR 1.57(b) – (g) existing practice with respect to explicit incorporations by reference with a few changes to reflect the eighteen-month publication of applications. In addition, 37 CFR 1.57(a) was added to provide a safeguard for applicants when a page(s) of the specification, or a portion thereof, or a sheet(s) of the drawing(s), or a portion thereof, is inadvertently omitted from an application, such as through a clerical error. 37 CFR 1.57(a) applies to applications filed on or after September 21, 2004. 37 CFR 1.57(a) permits inadvertently omitted material to be added to the application by way of a later filed amendment if the inadvertently omitted portion of the specification or drawing(s) is completely contained in a prior-filed application (for which priority/benefit is claimed) even though there is no explicit incorporation by reference of the prior-filed application. See MPEP § 201.17 for discussion regarding 37 CFR 1.57(a). <

The incorporation by reference practice with respect to applications which issue as U.S. patents provides the public with a patent disclosure which minimizes the public's burden to search for and obtain copies of documents incorporated by reference which may not be readily available. Through the Office's incorporation by reference policy, the Office ensures that reasonably complete disclosures are published as U.S. patents. The following is the manner in which the Director has elected to exercise that discretion. Section A provides the guidance for incorporation by reference in applications which are to issue as U.S. patents. Section B provides guidance for incorporation by reference in benefit applications; i.e., those domestic (35 U.S.C. 120) or foreign (35 U.S.C. 119(a)) applications relied on to establish an earlier effective filing date. See MPEP § 2181 for the impact

of incorporation by reference on the determination of whether applicant has complied with the requirements of 35 U.S.C. 112, second paragraph when 35 U.S.C. 112, sixth paragraph is invoked.

A. Review of Applications Which Are To Issue as Patents.

An application as filed must be complete in itself in order to comply with 35 U.S.C. 112. Material nevertheless may be incorporated by reference, *Ex parte Schwarze*, 151 USPQ 426 (Bd. App. 1966). An application for a patent when filed may incorporate "essential material" by reference to (1) a U.S. patent, >or< (2) a U.S. patent application publication, **>which patent or patent application publication does not itself incorporate such essential material by reference. See 37 CFR 1.57(c). Prior to October 21, 2004, Office policy also permitted incorporation by reference to< a pending U.S. application**.

"Essential material" is defined >in 37 CFR 1.57(c)< as that which is necessary to (1) **>provide a written description of the claimed invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same, and set forth the best mode contemplated by the inventor of carrying out the invention as required by the first paragraph of 35 U.S.C. 112, (2) describe the claimed invention in terms that particularly point out and distinctly claim the invention as required by the second paragraph of 35 U.S.C. 112, or (3) describe the structure, material, or acts that correspond to a claimed means or step for performing a specified function as required by the sixth paragraph of 35 U.S.C. 112. In any application that is to issue as a U.S. patent, essential material may only be incorporated by reference to a U.S. patent or patent application publication. The practice of permitting incorporation by reference of material from unpublished applications in which the issue fee was paid was discontinued by rule on October 21, 2004.

Other material ("nonessential subject matter")< may be incorporated by reference to (1) patents or applications published by the United States or foreign countries or regional patent offices, (2) prior >and concurrently< filed, commonly owned U.S. applications, or (3) non-patent publications **. Nonessential subject matter is subject matter referred to for purposes of indicating the background of the invention or illustrating the state of the art.

>An incorporation by reference by hyperlink or other form of browser executable code is not permitted. See 37 CFR 1.57(d) and MPEP § 608.01.<

Mere reference to another application, patent, or publication is not an incorporation of anything therein into the application containing such reference for the purpose of the disclosure required by 35 U.S.C. 112, first paragraph. *In re de Seversky*, 474 F.2d 671, 177 USPQ 144 (CCPA 1973). >37 CFR 1.57(b)(1) limits a proper incorporation by reference (except as provided in 37 CFR 1.57(a)) to instances only where the perfecting words "incorporated by reference" or the root of the words "incorporate" (e.g., incorporating, incorporated) and "reference" (e.g., referencing) appear. The requirement for specific root words will bring greater clarity to the record and provide a bright line test as to where something is being referred to is an incorporation by reference. The Office intends to treat references to documents that do not meet this "bright line" test as noncompliant incorporations by reference and may require correction pursuant to 37 CFR 1.57(g). If a reference to a document does not clearly indicate an intended incorporation by reference, examination will proceed as if no incorporation by reference statement has been made and the Office will not expend resources trying to determine if an incorporation by reference was intended.< In addition to other requirements for an application, the referencing application *>must< include an identification of the referenced patent, application, or publication. >See 37 CFR 1.57(b)(2)< Particular attention should be directed to specific portions of the referenced document where the subject matter being incorporated may be found. Guidelines for situations where applicant is permitted to fill in a number for Application No. _____ left blank in the application as filed can be found in *In re Fouche*, 439 F.2d 1237, 169 USPQ 429 (CCPA 1971) (Abandoned applications less than 20 years old can be incorporated by reference to the same extent as copending applications; both types are open to the public upon the referencing application issuing as a patent. See >37 CFR 1.14(a)(i)(iv) and (vi) and< MPEP § 103).

1. Complete Disclosure Filed

If an application is filed with a complete disclosure, essential material may be canceled by amendment and may be substituted by reference to a U.S. patent or **>a U.S. patent application publication.< The amendment must be accompanied by **>a statement< signed by the applicant, or a practitioner representing the applicant, stating that the material canceled from the application is the same material that has been incorporated by reference >and no new matter has been included (see 37 CFR 1.57(f). The same procedure is available for nonessential material.<

If an application as filed incorporates * material by reference **>, a copy of the incorporated by reference material may be required to be submitted to the Office even if the material is properly incorporated by reference. The examiner may require a copy of the incorporated material to review and to understand what is being incorporated or to put the description of the material in its proper context. Another instance where a copy of the incorporated material may be required is where the material is being inserted by amendment into the body of the application to replace an improper incorporation by reference statement so that the Office can determine that the material being added by amendment in lieu of the incorporation is the same material as was attempted to be incorporated. If the Office requires the applicant to supply a copy of the material incorporated by reference, the material must be accompanied by a statement that the copy supplied consists of the same material incorporated by reference in the referencing application. See 37 CFR 1.57(e).<

2. Improper Incorporation

**

>37 CFR 1.57(f) addresses corrections of incorporation by reference by inserting the material previously incorporated by reference. A noncompliant incorporation by reference statement may be corrected by an amendment. 37 CFR 1.57(f). However, the amendment must not include new matter. Incorporating by reference material that was not incorporated by reference on filing of an application may introduce new matter. An incorporation by reference of essential material to an unpublished U.S. patent application, a foreign application or patent, or to a publication is improper under 37 CFR 1.57(c). The improper incorporation by reference is not effective to incorporate the material unless corrected by the applicant (37 CFR 1.57(g)). Any underlying objection or rejection (e.g., under 35 U.S.C. 112) should be made by the examiner until applicant corrects the improper incorporation by reference by submitting an amendment to amend the specification or drawings to include the material incorporated by reference. A statement that the material being inserted is the material previously incorporated by reference and that the amendment contains no new matter is also required. 37 CFR 1.57(f). See also *In re Hawkins*, 486 F.2d 569, 179 USPQ 157 (CCPA 1973); *In re Hawkins*, 486 F.2d 579, 179 USPQ 163 (CCPA 1973); *In re Hawkins*, 486 F.2d 577, 179 USPQ 167 (CCPA 1973). Improper incorporation by reference statements and late corrections thereof require expenditure of unnecessary examination resources and slow the prosecution process. Applicants know (or should know) whether they want material incorporated by reference, and must timely correct any incorporation by reference errors. Correction must be done within the time period set forth in 37 CFR 1.57(g).

An incorporation by reference that does not comply with 37 CFR 1.57(b), (c), or (d) is not effective to incorporate such material unless corrected within any time period set by the Office (should the noncompliant incorporation by reference be first noticed by the Office and applicant informed thereof), but in no case later than the close of prosecution as defined by 37 CFR 1.114(b) (should applicant be the first to notice the noncompliant incorporation by reference and the Office informed thereof), or abandonment of the application, whichever occurs earlier. The phrase “or abandonment of the application” is included in 37 CFR 1.57(g) to address the situations where an application is abandoned prior to the close of prosecution, e.g., the situation where an application is abandoned after a non-final Office action.

37 CFR 1.57(g)(1) authorizes the correction of noncompliant incorporation by reference statements that do not use the root of the words “incorporate” and “reference” in the incorporation by reference statement. This correction cannot be made when the material was merely referred to and there was no clear specific intent to incorporate it by reference.

37 CFR 1.57(g)(2) states that a citation of a document can be corrected where the document is sufficiently described to uniquely identify the document. Correction of a citation for a document that cannot be identified as the incorporated document may be new matter and is not authorized by 37 CFR 1.57(g)(2). An example would be where applicant intended to incorporate a particular journal article but supplied the citation information for a completely unrelated book by a different author, and there is no other information to identify the correct journal article. Since it cannot be determined from the citation originally supplied what article was intended to be incorporated, it would be improper (e.g., new matter) to replace the original incorporation by reference with the intended incorporation by reference. A citation of a patent application by attorney docket number, inventor name, filing date and title of invention may sufficiently describe the document, but even then correction should be made to specify the application number.

A petition under 37 CFR 1.183 to suspend the time period requirement set forth in 37 CFR 1.57(g) will not be appropriate. After the application has been abandoned, applicant must file a petition to revive under 37 CFR 1.137 for the purpose of correcting the incorporation by reference. After the application has issued as a patent, applicant may correct the patent by filing a reissue application. Correcting an improper incorporation by reference with a certificate of correction is not an appropriate means of correction because it may alter the scope of the claims. The scope of the claims may be altered because 37 CFR 1.57(g) provides that an incorporation by reference that does not comply with paragraph (b), (c), or (d) is not an effective incorporation. For example, an equivalent means omitted from a patent disclosure by an ineffective incorporation by reference would be outside the scope of the patented claims. Hence, a correction of an incorporation by reference pursuant to 37 CFR 1.57 may alter the scope of the claims by adding the omitted equivalent means. Changes involving the scope of the claims should be done via the reissue process. Additionally, the availability of the reissue process for corrections would make a successful showing required under 37 CFR 1.183 unlikely. The following examples show when an improper incorporation by reference is required to be corrected:

Example 1:

Upon review of the specification, the examiner noticed that the specification included an incorporation by reference statement incorporating essential material disclosed in a foreign patent. In a non-final Office action, the examiner required the applicant to amend the specification to include the essential material.

In reply to the non-final Office action, applicant must correct the improper incorporation by reference by filing an amendment to add the essential material disclosed in the foreign patent and a statement in compliance with 37 CFR1.57(f) within the time period for reply set forth in the non-final Office action.

Example 2:

Upon review of the specification, the examiner determined that the subject matter incorporated by reference from a foreign patent was “nonessential material” and therefore, did not object to the incorporation by reference. In reply to a non-final Office action, applicant filed an amendment to the claims to add a new limitation that was supported only by the foreign patent. The amendment filed by the applicant caused the examiner to re-determine that the incorporated subject matter was “essential material” under 37 CFR 1.57(c). The examiner rejected the claims that include the new limitation under 35 U.S.C. 112, first paragraph, in a final Office action.

Since the rejection under 35 U.S.C. 112, first paragraph was necessitated by the applicant’s amendment, the finality of the Office action is proper. If the applicant wishes to overcome the rejection under 35 U.S.C. 112, first paragraph by filing an amendment under 37 CFR 1.57(f) to add the subject material disclosed in the foreign patent into the specification, applicant may file the amendment as an after final amendment in compliance with 37 CFR 1.116. Alternatively, applicant may file an RCE under 37 CFR 1.114 accompanied by the appropriate fee, and an amendment per 37 CFR 1.57(f) within the time period for reply set forth in the final Office action.

The following form paragraphs may be used:

¶ *6.19 Incorporation by Reference, Unpublished U.S. Application, Foreign Patent or Application, Publication*

The incorporation of essential material in the specification by reference to an unpublished U.S. application, foreign application or patent, or to a publication is improper. Applicant is required to amend the disclosure to include the material incorporated by reference, if the material is relied upon to overcome any objection, rejection, or other requirement imposed by the Office. The amendment must be accompanied by a statement executed by the applicant, or a practitioner representing the applicant, stating that the material being inserted is the material previously incorporated by reference and that the amendment contains no new matter. 37 CFR 1.57(f).

Examiner Note:

Since the material that applicant is attempting to incorporate in the specification is considered to be essential material, an appropriate objection to the specification and/or rejection of the claim(s) under 35 U.S.C. 112, should be made. One or more of form paragraphs 7.31.01 to 7.31.04, as for example, should be used following this form paragraph.

¶ *6.19.01 Ineffective Incorporation by Reference, General*

The attempt to incorporate subject matter into this application by reference to **[1]** is ineffective because **[2]**.

Examiner Note:

1. In bracket 1, identify the document such as an application or patent number or other identification.

2. In bracket 2, give reason(s) why it is ineffective (e.g., the root words "incorporate" and/or "reference" have been omitted, see 37 CFR 1.57(b)(1); the reference document is not clearly identified as required by 37 CFR 1.57(b)(2)).

3. This form paragraph should be followed by form paragraph 6.19.03.

¶ *6.19.03 Correction of Ineffective Incorporation by Reference*

The incorporation by reference will not be effective until correction is made to comply with 37 CFR 1.57(b), (c), or (d). If the incorporated material is relied upon to meet any outstanding objection, rejection, or other requirement imposed by the Office, the correction must be made within any time period set by the Office for responding to the objection, rejection, or other requirement for the incorporation to be effective. Compliance will not be held in abeyance with respect to responding to the objection, rejection, or other requirement for the incorporation to be effective. In no case may the correction be made later than the close of prosecution as defined in 37 CFR 1.114(b), or abandonment of the application, whichever occurs earlier.

Any correction inserting material by amendment that was previously incorporated by reference must be accompanied by a statement that the material being inserted is the material incorporated by reference and the amendment contains no new matter. 37 CFR 1.57(f).

The filing date of any application wherein essential material is improperly incorporated by reference will not be affected by applicant's correction where (A) there is a clear intent to incorporate by reference the intended material and the correction is to add the root words of "incorporate" and "reference," (B) the incorporated document can be uniquely identified and the correction is to clarify the document's identification, and (C) where the correction is to insert the material from the reference where incorporation is to an unpublished U.S. patent application, foreign application or patent, or to a publication.<

Reliance on a commonly assigned >, prior filed or concurrently filed< copending application by a different inventor may ordinarily be made for the purpose of completing the disclosure >provided the incorporated material is directed to nonessential material. See 37 CFR 1.57(d)<. See *In re Fried*, 329 F.2d 323, 141 USPQ 27 (CCPA 1964), and *General Electric Co. v. Brenner*, 407 F.2d 1258, 159 USPQ 335 (D.C. Cir. 1968).

Since a disclosure must be complete as of the filing date, subsequent publications or subsequently filed applications cannot be relied on to establish a constructive reduction to practice or an enabling disclosure as of the filing date. *White Consol. Indus., Inc. v. Vega Servo-Control, Inc.*, 713 F.2d 788, 218 USPQ 961 (Fed. Cir. 1983); *In re Scarbrough*, 500 F.2d 560, 182 USPQ 298 (CCPA 1974); *In re Glass*, 492 F.2d 1228, 181 USPQ 31 (CCPA 1974).

B. Review of Applications Which Are Relied on To Establish an Earlier Effective Filing Date.

The limitations on the material which may be incorporated by reference in U.S. patent applications which are to issue as U.S. patents do not apply to applications relied on only to establish an earlier effective filing date under 35 U.S.C. 119 or 35 U.S.C. 120. Neither 35 U.S.C. 119(a) nor 35 U.S.C. 120 places any restrictions or limitations as to how the claimed invention must be disclosed in the earlier application to comply with 35 U.S.C. 112, first paragraph. Accordingly, an application is entitled to rely upon the filing date of an earlier application, even if the earlier application itself incorporates essential material by reference to another document. See *Ex parte Maziere*,

27 USPQ2d 1705, 1706-07 (Bd. Pat. App. & Inter. 1993).

The reason for incorporation by reference practice with respect to applications which are to issue as U.S. patents is to provide the public with a patent disclosure which minimizes the public's burden to search for and obtain copies of documents incorporated by reference which may not be readily available. Through the Office's incorporation by reference policy, the Office ensures that reasonably complete disclosures are published as U.S. patents. The same policy concern does not apply where the sole purpose for which an applicant relies on an earlier U.S. or foreign application is to establish an earlier filing date. Incorporation by reference in the earlier application of (1) patents or applications published by foreign countries or regional patent offices, (2) nonpatent publications, (3) a U.S. patent or application which itself incorporates "essential material" by reference, or (4) a foreign application, is not critical in the case of a "benefit" application.

When an applicant, or a patent owner in a reexamination or interference, claims the benefit of the filing date of an earlier application which incorporates material by reference, the applicant or patent owner may be required to supply copies of the material incorporated by reference. For example, an applicant may claim the benefit of the filing date of a foreign application which itself incorporates by reference another earlier filed foreign application. If necessary, due to an intervening reference, applicant should be required to supply a copy of the earlier filed foreign application, along with an English language translation. A review can then be made of the foreign application and all material incorporated by reference to determine whether the foreign application discloses the invention sought to be patented in the manner required by the first paragraph of 35 U.S.C. 112 so that benefit may be accorded. *In re Gosteli*, 872 F.2d 1008, 10 USPQ2d 1614 (Fed. Cir. 1989).

As a safeguard against the omission of a portion of a prior application for which priority is claimed under 35 U.S.C. 119(a)-(d) or (f), or for which benefit is claimed under 35 U.S.C. 119(e) or 120, applicant may include a statement at the time of filing of the later application incorporating by reference the prior application. See MPEP § 201.06(c) >and § 201.11< where domestic benefit is claimed. See MPEP § 201.13 where foreign priority is claimed. >See MPEP § 201.17 regarding 37 CFR 1.57(a) for applications filed on or after September 21, 2004.< The inclusion of such an incorporation by reference statement in the later-filed application will permit applicant to include subject matter from the prior application into the later-filed application without the subject matter being considered as new matter. For the incorporation by reference to be effective as a proper safeguard, the incorporation by reference statement must be filed at the time of filing of the later-filed application. An incorporation by reference statement added after an application's filing date is not effective because no new matter can be added to an application after its filing date (see 35 U.S.C. 132(a).

II. SIMULATED OR PREDICTED TEST RESULTS OR PROPHETIC EXAMPLES

Simulated or predicted test results and prophetical examples (paper examples) are permitted in patent applications. Working examples correspond to work actually performed and may describe tests which have actually been conducted and results that were achieved. Paper examples describe the manner and process of making an embodiment of the invention which has not actually been conducted. Paper examples should not be represented as work actually done. No results should be represented as actual results unless they have actually been achieved. Paper examples should not be described using the past tense. *Hoffman-La Roche, Inc. v. Promega Corp*., 323 F.3d 1354, 1367, 66 USPQ2d 1385, 1394 (Fed. Cir. 2003).

For problems arising from the designation of materials by trademarks and trade names, see MPEP § 608.01(v).

608.01(q) Substitute or Rewritten Specification [R-3]

37 CFR 1.125. Substitute specification.

(a) If the number or nature of the amendments or the legibility of the application papers renders it difficult to consider the application, or to arrange the papers for printing or copying, the Office may require the entire specification, including the claims, or any part thereof, be rewritten.

(b) Subject to § 1.312, a substitute specification, excluding the claims, may be filed at any point up to payment of the issue fee if it is accompanied by a statement that the substitute specification includes no new matter.

(c) A substitute specification submitted under this section must be submitted with markings showing all the changes relative to the immediate prior version of the specification of record. The text of any added subject matter must be shown by underlining the added text. The text of any deleted matter must be shown by strike-through except that double brackets placed before and after the deleted characters may be used to show deletion of five or fewer consecutive characters. The text of any deleted subject matter must be shown by being placed within double brackets if strike-through cannot be easily perceived. An accompanying clean version (without markings) must also be supplied. Numbering the paragraphs of the specification of record is not considered a change that must be shown pursuant to this paragraph.

(d) A substitute specification under this section is not permitted in a reissue application or in a reexamination proceeding.

The specification is sometimes in such faulty English that a new specification is necessary; in such instances, a new specification should be required.

Form paragraph 6.28 may be used where the specification is in faulty English.

**>

¶ *6.28 Idiomatic English*

A substitute specification in proper idiomatic English and in compliance with 37 CFR 1.52(a) and (b) is required. The substitute specification filed must be accompanied by a statement that it contains no new matter.

37 CFR 1.125(a) applies to a substitute specification required by the Office. If the number or nature of the amendments or the legibility of the application papers renders it difficult to consider the application, or to arrange the papers for printing or copying, the Office may require the entire specification, including the claims, or any part thereof be rewritten.

Form paragraph 6.28.01 may be used where the examiner, for reasons other than faulty English, requires a substitute specification.

**>

¶ *6.28.01 Substitute Specification Required by Examiner*

A substitute specification **[1]** the claims is required pursuant to 37 CFR 1.125(a) because **[2]**.

A substitute specification must not contain new matter. The substitute specification must be submitted with markings showing all the changes relative to the immediate prior version of the specification of record. The text of any added subject matter must be shown by underlining the added text. The text of any deleted matter must be shown by strikethrough except that double brackets placed before and after the deleted characters may be used to show deletion of five or fewer consecutive characters. The text of any deleted subject matter must be shown by being placed within double brackets if strikethrough cannot be easily perceived. An accompanying clean version (without markings) and a statement that the substitute specification contains no new matter must also be supplied. Numbering the paragraphs of the specification of record is not considered a change that must be shown.

Examiner Note:

1. In bracket 1, insert either --excluding-- or --including--.
2. In bracket 2, insert clear and concise examples of why a new specification is required.
3. A new specification is required if the number or nature of the amendments render it difficult to consider the application or to arrange the papers for printing or copying, 37 CFR 1.125.
4. See also form paragraph 13.01 for partial rewritten specification.

<

37 CFR 1.125(b) applies to a substitute specification voluntarily filed by the applicant. Subject to the provisions of 37 CFR 1.312, a substitute specification, excluding claims, may be voluntarily filed by the applicant at any point up to the payment of the issue fee provided it is accompanied by a statement that the substitute specification includes no new matter. The Office will accept a substitute specification voluntarily filed by the applicant if the requirements of 37 CFR 1.125(b) are satisfied.

37 CFR 1.125(c) requires a substitute specification filed under 37 CFR 1.125(a) or (b) be submitted in clean form without markings. A marked-up copy of the substitute specification showing all the changes relative to the immediate prior version of the specification of record must also be submitted. The text of any added subject matter must be shown by underlining the added text. The text of any deleted matter must be shown by strike-through except that double brackets placed before and after the deleted characters may be used to show deletion of five of fewer consecutive characters. The text of any deleted subject matter must be shown by being placed within double brackets if strike-through cannot be easily perceived. Numbering the paragraphs of the specification of record is not considered a change that must be shown under 37 CFR 1.125(c) The paragraphs of any substitute specification, other than the claims, should be individually numbered in Arabic numerals (for example [0001]) so that any amendment to the specification may be made by replacement paragraph in accordance with 37 CFR 1.121(b)(1).

A substitute specification filed under 37 CFR 1.125(b) must be accompanied by a statement indicating that no new matter was included. There is no obligation on the examiner to make a detailed comparison

between the old and the new specifications for determining whether or not new matter has been added. If, however, an examiner becomes aware that new matter is present, objection thereto should be made.

The filing of a substitute specification rather than amending the original application has the advantage for applicants of eliminating the need to prepare an amendment of the specification. If word processing equipment is used by applicants, substitute specifications can be easily prepared. The Office receives the advantage of saving the time needed to enter amendments in the specification and a reduction in the number of printing errors. A substitute specification is not permitted in a reissue application or in a reexamination proceeding. 37 CFR 1.125(d).

A substitute specification which complies with 37 CFR 1.125 should normally be entered. The examiner should write "Enter" or "OK to Enter" and his or her initials in ink in the left margin of the first page of the substitute specification. A substitute specification which is denied entry should be so marked.

Form paragraph 6.28.02 may be used to notify applicant that a substitute specification submitted under 37 CFR 1.125(b) has not been entered. For Image File Wrapper (IFW) processing, see IFW Manual.

¶ *6.28.02 Substitute Specification Filed Under 37 CFR 1.125(b) and (c) Not Entered.*

The substitute specification filed **[1]** has not been entered because it does not conform to 37 CFR 1.125(b) and (c) because: **[2]**

Examiner Note:

1. In bracket 2, insert statement of why the substitute specification is improper, for example:

-- the statement as to a lack of new matter under 37 CFR 1.125(b) is missing--,

-- a marked-up copy of the substitute specification has not been supplied (in addition to the clean copy)--;

-- a clean copy of the substitute specification has not been supplied (in addition to the marked-up copy)--; or,

-- the substitute specification has been filed:

- in a reissue application or in a reexamination proceeding, 37 CFR 1.125(d)-, or

- after payment of the issue fee-, or

- containing claims (to be amended)- --.

2. A substitute specification filed after final action or appeal is governed by 37 CFR 1.116. A substitute specification filed after the mailing of a notice of allowance is governed by 37 CFR 1.312.

See MPEP § 714.20 regarding entry of amendments which include an unacceptable substitute specification.

For new matter in amendment, see MPEP § 608.04.

For application prepared for issue, see MPEP § 1302.02.

608.01(r) Derogatory Remarks About Prior Art in Specification

The applicant may refer to the general state of the art and the advance thereover made by his or her invention, but he or she is not permitted to make derogatory remarks concerning the inventions of others. Derogatory remarks are statements disparaging the products or processes of any particular person other than the applicant, or statements as to the merits or validity of applications or patents of another person. Mere comparisons with the prior art are not considered to be disparaging, *per se*.

608.01(s) Restoration of Canceled Matter [R-5]

Canceled text in the specification can be reinstated only by a subsequent amendment presenting the previously canceled matter as a new insertion. 37 CFR 1.121(b)(4). A claim canceled by amendment (deleted in its entirety) may be reinstated only by a subsequent amendment presenting the claim as a new claim with a new claim number. 37 CFR 1.121(c)(5). See MPEP § *>714<.

608.01(t) Use in Subsequent Application

A reservation for a future application of subject matter disclosed but not claimed in a pending application will not be permitted in the pending application. 37 CFR 1.79; MPEP § 608.01(e).

No part of a specification can normally be transferred to another application. Drawings may be transferred to another application only upon the granting of a petition filed under the provisions of 37 CFR 1.182. See MPEP § 608.02(i).

608.01(u) Use of Formerly Filed Incomplete Application [R-3]

Parts of an incomplete application which have been retained by the Office may be used as part of a com-

plete application if the missing parts are later supplied. See MPEP § 506**.

608.01(v) Trademarks and Names Used in Trade [R-7]

The expressions "trademarks" and "names used in trade" as used below have the following meanings:

Trademark: a word, letter, symbol, or device adopted by one manufacturer or merchant and used to identify and distinguish his or her product from those of others. It is a proprietary word, letter, symbol, or device pointing distinctly to the product of one producer.

Names Used in Trade: a nonproprietary name by which an article or product is known and called among traders or workers in the art, although it may not be so known by the public, generally. Names used in trade do not point to the product of one producer, but they identify a single article or product irrespective of producer.

Names used in trade are permissible in patent applications if:

(A) Their meanings are established by an accompanying definition which is sufficiently precise and definite to be made a part of a claim, or

(B) In this country, their meanings are well-known and satisfactorily defined in the literature.

Condition (A) or (B) must be met at the time of filing of the complete application.

I. TRADEMARKS

The relationship between a trademark and the product it identifies is sometimes indefinite, uncertain, and arbitrary. The formula or characteristics of the product may change from time to time and yet it may continue to be sold under the same trademark. In patent specifications, every element or ingredient of the product should be set forth in positive, exact, intelligible language, so that there will be no uncertainty as to what is meant. Arbitrary trademarks which are liable to mean different things at the pleasure of manufacturers do not constitute such language. *Ex Parte Kattwinkle*, 12 USPQ 11 (Bd. App. 1931).

However, if the product to which the trademark refers is set forth in such language that its identity is clear, the examiners are authorized to permit the use of the trademark if it is distinguished from common descriptive nouns by capitalization. If the trademark has a fixed and definite meaning, it constitutes sufficient identification unless some physical or chemical characteristic of the article or material is involved in the invention. In that event, as also in those cases where the trademark has no fixed and definite meaning, identification by scientific or other explanatory language is necessary. *In re Gebauer-Fuelnegg*, 121 F.2d 505, 50 USPQ 125 (CCPA 1941).

The matter of sufficiency of disclosure must be decided on an individual case-by-case basis. *In re Metcalfe*, 410 F.2d 1378, 161 USPQ 789 (CCPA 1969).

Where the identification of a trademark is introduced by amendment, it must be restricted to the characteristics of the product known at the time the application was filed to avoid any question of new matter.

If proper identification of the product sold under a trademark, or a product referred to only by a name used in trade, is omitted from the specification and such identification is deemed necessary under the principles set forth above, the examiner should hold the disclosure insufficient and reject on the ground of insufficient disclosure any claims based on the identification of the product merely by trademark or by the name used in trade. If the product cannot be otherwise defined, an amendment defining the process of its manufacture may be permitted. Such amendments must be supported by satisfactory showings establishing that the specific nature or process of manufacture of the product as set forth in the amendment was known at the time of filing of the application.

Although the use of trademarks having definite meanings is permissible in patent applications, the proprietary nature of the marks should be respected. Trademarks should be identified by capitalizing each letter of the mark (in the case of word or letter marks) or otherwise indicating the description of the mark (in the case of marks in the form of a symbol or device or other nontextual form). Every effort should be made to prevent their use in any manner which might adversely affect their validity as trademarks.

Form paragraph 6.20 may be used.

**>

¶ *6.20 Trademarks and Their Use*

The use of the trademark **[1]** has been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Examiner Note:

1. Capitalize each letter of the word in the bracket or include a proper trademark symbol, such as ™ or ® following the word.
2. Examiners may conduct a trademark search by using the Trademark Electronic Search System (TESS) which is available on the USPTO website to determine whether a trademark identified in the patent application is a registered trademark or not.

<

The examiner should not permit the use of language such as "the product X (a descriptive name) commonly known as Y (trademark)" since such language does not bring out the fact that the latter is a trademark. Language such as "the product X (a descriptive name) sold under the trademark Y" is permissible.

The use of a trademark in the title of an application should be avoided as well as the use of a trademark coupled with the word "type", e.g., "Band-Aid type bandage."

In the event that the proprietary trademark is a "symbol or device" depicted in a drawing, either the brief description of the drawing or the detailed description of the drawing should specify that the "symbol or device" is a registered trademark of Company X.

The owner of a trademark may be identified in the specification.

Technology Center Directors should reply to all trademark misuse complaint letters and forward a copy to the editor of this manual. >Where a letter demonstrates a trademark misuse in a patent application publication, the Office should, where the application is still pending, ensure that the trademark is replaced by appropriate generic terminology.<

See Appendix I for a partial listing of trademarks and the particular goods to which they apply.

II. INCLUSION OF COPYRIGHT OR MASK WORK NOTICE IN PATENTS

37 CFR 1.71. Detailed description and specification of the invention

*****

(d) A copyright or mask work notice may be placed in a design or utility patent application adjacent to copyright and mask work material contained therein. The notice may appear at any appropriate portion of the patent application disclosure. For notices in drawings, see § 1.84(s). The content of the notice must be limited to only those elements provided for by law. For example, "©1983 John Doe" (17 U.S.C. 401) and "*M* John Doe" (17 U.S.C. 909) would be properly limited and, under current statutes, legally sufficient notices of copyright and mask work, respectively. Inclusion of a copyright or mask work notice will be permitted only if the authorization language set forth in paragraph (e) of this section is included at the beginning (preferably as the first paragraph) of the specification.

(e) The authorization shall read as follows:

> A portion of the disclosure of this patent document contains material which is subject to (copyright or mask work) protection. The (copyright or mask work) owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent file or records, but otherwise reserves all (copyright or mask work) rights whatsoever.

*****

37 CFR 1.84. Standards for drawings

*****

(s) *Copyright or Mask Work Notice*. A copyright or mask work notice may appear in the drawing, but must be placed within the sight of the drawing immediately below the figure representing the copyright or mask work material and be limited to letters having a print size of.32 cm. to.64 cm. (1/8 to 1/4 inches) high. The content of the notice must be limited to only those elements provided for by law. For example, " ©1983 John Doe" (17 U.S.C. 401) and "*M* John Doe" (17 U.S.C. 909) would be properly limited and, under current statutes, legally sufficient notices of copyright and mask work, respectively. Inclusion of a copyright or mask work notice will be permitted only if the authorization language set forth in § 1.71(e) is included at the beginning (preferably as the first paragraph) of the specification.

*****

The U.S. Patent and Trademark Office will permit the inclusion of a copyright or mask work notice in a design or utility patent application, and thereby any patent issuing therefrom, which discloses material on which copyright or mask work protection has previously been established, under the following conditions:

(A) The copyright or mask work notice must be placed adjacent to the copyright or mask work material. Therefore, the notice may appear at any appropriate portion of the patent application disclosure, including the drawing. However, if appearing in the drawing, the notice must comply with 37 CFR 1.84(s). If placed on a drawing in conformance with these provisions, the notice will not be objected to as extraneous matter under 37 CFR 1.84.

(B) The content of the notice must be limited to only those elements required by law. For example, "©1983 John Doe"(17 U.S.C. 401) and "*M* John Doe" (17 U.S.C. 909) would be properly limited, and under current statutes, legally sufficient notices of copyright and mask work respectively.

(C) Inclusion of a copyright or mask work notice will be permitted only if the following authorization in 37 CFR 1.71(e) is included at the beginning (preferably as the first paragraph) of the specification to be printed for the patent:

> A portion of the disclosure of this patent document contains material which is subject to (copyright or mask work) protection. The (copyright or mask work) owner has no objection to the facsimile reproduction by anyone of the patent disclosure, as it appears in the Patent and Trademark Office patent files or records, but otherwise reserves all (copyright or mask work) rights whatsoever.

(D) Inclusion of a copyright or mask work notice after a Notice of Allowance has been mailed will be permitted only if the criteria of 37 CFR 1.312 have been satisfied.

The inclusion of a copyright or mask work notice in a design or utility patent application, and thereby any patent issuing therefrom, under the conditions set forth above will serve to protect the rights of the author/inventor, as well as the public, and will serve to promote the mission and goals of the U.S. Patent and Trademark Office. Therefore, the inclusion of a copyright or mask work notice which complies with these conditions will be permitted. However, any departure from these conditions may result in a refusal to permit the desired inclusion. If the authorization required under condition (C) above does not include the specific language "(t)he (copyright or mask work) owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent files or records,..." the notice will be objected to as improper by the examiner of the application. If the examiner maintains the objection upon reconsideration, a petition may be filed in accordance with 37 CFR 1.181.

608.02 Drawing [R-7]

35 U.S.C. 113. Drawings.

The applicant shall furnish a drawing where necessary for the understanding of the subject matter to be patented. When the nature of such subject matter admits of illustration by a drawing and the applicant has not furnished such a drawing, the Commissioner may require its submission within a time period of not less than two months from the sending of a notice thereof. Drawings submitted after the filing date of the application may not be used (i) to overcome any insufficiency of the specification due to lack of an enabling disclosure or otherwise inadequate disclosure therein, or (ii) to supplement the original disclosure thereof for the purpose of interpretation of the scope of any claim.

37 CFR 1.81. Drawings required in patent application.

(a) The applicant for a patent is required to furnish a drawing of his or her invention where necessary for the understanding of the subject matter sought to be patented; this drawing, or a high quality copy thereof, must be filed with the application. Since corrections are the responsibility of the applicant, the original drawing(s) should be retained by the applicant for any necessary future correction.

(b) Drawings may include illustrations which facilitate an understanding of the invention (for example, flow sheets in cases of processes, and diagrammatic views).

(c) Whenever the nature of the subject matter sought to be patented admits of illustration by a drawing without its being necessary for the understanding of the subject matter and the applicant has not furnished such a drawing, the examiner will require its submission within a time period of not less than two months from the date of the sending of a notice thereof.

(d) Drawings submitted after the filing date of the application may not be used to overcome any insufficiency of the specification due to lack of an enabling disclosure or otherwise inadequate disclosure therein, or to supplement the original disclosure thereof for the purpose of interpretation of the scope of any claim.

I. DRAWING REQUIREMENTS

The first sentence of 35 U.S.C 113 requires a drawing to be submitted upon filing where such drawing is necessary for the understanding of the invention. In this situation, the lack of a drawing renders the application incomplete and, as such, the application cannot be given a filing date until the drawing is received. The second sentence of 35 U.S.C. 113 addresses the situation wherein a drawing is not necessary for the understanding of the invention, but the subject matter sought to be patented admits of illustration and no drawing was submitted on filing. The lack of a drawing in this situation does not render the application incomplete but rather is treated as an informality. The examiner should require such drawings in almost all such instances. Such drawings could be required during the initial processing of the application but do not have to be furnished at the time the application is filed. The applicant is given at least

2 months from the date of the letter requiring drawings to submit the drawing(s).

If the specification includes a sequence listing or a table, such a sequence listing or table is not permitted to be reprinted in the drawings. 37 CFR 1.83(a) and 1.58(a). If a sequence listing as shown in the drawings has more information than is contained in the specification, the sequence listing could be included in the specification and the drawings. Applications filed under 35 U.S.C. 371 are excluded from the prohibition from having the same tables and sequence listings in both the description portion of the specification and drawings.

II. RECEIPT OF DRAWING AFTER THE FILING DATE

If the examiner discovers new matter in a substitute or additional drawing, the drawing should not be entered. The drawing should be objected to as containing new matter. A new drawing without such new matter may be required if the examiner determines that a drawing is needed under 37 CFR 1.81 or 37 CFR 1.83. The examiner's decision would be reviewable by filing a petition under 37 CFR 1.181. The Technology Center (TC) Director would decide such a petition.

III. HANDLING OF DRAWING REQUIREMENTS UNDER THE FIRST SENTENCE OF 35 U.S.C 113

The Office of **>Patent Application Processing (OPAP)< will make the initial decision in all new applications as to whether a drawing is "necessary" under the first sentence of 35 U.S.C. 113. A drawing will be considered necessary under the first sentence of 35 U.S.C. 113 in all applications where the drawing is referred to in the specification and one or more figures have been omitted.

The determination under 35 U.S.C. 113 (first sentence) as to when a drawing is necessary will be handled in *>OPAP< in accordance with the following procedure. *>OPAP< will make the initial determination as to whether drawings are required for the understanding of the subject matter of the invention. When no drawings are included in the application as filed and drawings are required, the application is treated as incomplete and the applicant is so informed by *>OPAP<. A filing date will not be granted and applicant will be notified to complete the application (37 CFR 1.53(e)). If a drawing is later furnished, a filing date may be granted as of the date of receipt of such drawing.

An *>OPAP< formality examiner should not treat an application without drawings as incomplete if drawings are not required. A drawing is not required for a filing date under 35 U.S.C. 111 and 113 if the application contains:

(A) at least one process claim including the term "process" or "method" in its introductory phrase;

(B) at least one composition claim including the term "composition," "compound," "mixture" or "pharmaceutical" in its introductory phrase;

(C) at least one claim directed to a coated article or product or to an article or product made from a particular material or composition (i.e., an article of known and conventional character (e.g., a table), coated with or made of a particular composition (e.g., a specified polymer such as polyvinyl-chloride));

(D) at least one claim directed to a laminated article or product (i.e., a laminated article of known and conventional character (e.g., a table)); or

(E) at least one claim directed to an article, apparatus, or system where the sole distinguishing feature is the presence of a particular material (e.g., a hydraulic system using a particular hydraulic fluid, or a conventional packaged suture using a particular material).

For a more complete explanation about when a drawing is required, see MPEP § 601.01(f). For applications submitted without all of the drawings described in the specification, see MPEP § 601.01(g).

If an examiner determines that a filing date should not have been granted in an application because it does not contain drawings, the matter should be brought to the attention of the supervisory patent examiner (SPE) for review. If the SPE decides that drawings are required to understand the subject matter of the invention, the SPE should return the application to *>OPAP< with a typed, signed, and dated memorandum requesting cancellation of the filing date and identifying the subject matter required to be illustrated.

IV. HANDLING OF DRAWING REQUIREMENTS UNDER THE SECOND SENTENCE OF 35 U.S.C 113 - ILLUSTRATION SUBSEQUENTLY REQUIRED

35 U.S.C.113 addresses the situation wherein a drawing is not necessary for the understanding of the invention, but the subject matter sought to be patented admits of illustration by a drawing and the applicant has not furnished a drawing. The lack of a drawing in this situation does not render the application incomplete but rather is treated as an informality. A filing date will be accorded with the original presentation of the papers, despite the absence of drawings. The acceptance of an application without a drawing does not preclude the examiner from requiring an illustration in the form of a drawing under 37 CFR 1.81(c) or 37 CFR 1.83(c). In requiring such a drawing, the examiner should clearly indicate that the requirement is made under 37 CFR 1.81(c) or 37 CFR 1.83(a) and be careful not to state that he or she is doing so "because it is necessary for the understanding of the invention," as that might give rise to an erroneous impression as to the completeness of the application as filed. Examiners making such requirements are to specifically require, as a part of the applicant's next reply, at least an ink sketch or permanent print of any drawing in reply to the requirement, even though no allowable subject matter is yet indicated. This will afford the examiner an early opportunity to determine the sufficiency of the illustration and the absence of new matter. See 37 CFR 1.121 and 37 CFR 1.81(d). One of the following form paragraphs may be used to require a drawing:

¶ *6.23 Subject Matter Admits of Illustration*

The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81(c). No new matter may be introduced in the required drawing. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

Examiner Note:

When requiring drawings before examination use form paragraph 6.23.01 with a PTOL-90 or PTO-90C form as a cover sheet.

¶ *6.23.01 Subject Matter Admits of Illustration (No Examination of Claims)*

The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81. No new matter may be introduced in the required drawing.

Applicant is given a TWO MONTH time period to submit a drawing in compliance with 37 CFR 1.81. Extensions of time may be obtained under the provisions of 37 CFR 1.136(a). Failure to timely submit a drawing will result in **ABANDONMENT** of the application.

Examiner Note:

1. Use of this form paragraph should be extremely rare and limited to those instances where no examination can be performed due to lack of an illustration of the invention resulting in a lack of understanding of the claimed subject matter.

2. Use a PTOL-90 or PTO-90C form as a cover sheet for this communication.

Applicant should also amend the specification accordingly to reference to the new illustration at the time of submission of the drawing(s). This may obviate further correspondence where an amendment places the application in condition for allowance.

V. DRAWING STANDARDS

37 CFR 1.84. Standards for drawings.

(a) *Drawings*. There are two acceptable categories for presenting drawings in utility and design patent applications.

(1) *Black ink*. Black and white drawings are normally required. India ink, or its equivalent that secures solid black lines, must be used for drawings; or

(2) *Color.* On rare occasions, color drawings may be necessary as the only practical medium by which to disclose the subject matter sought to be patented in a utility or design patent application or the subject matter of a statutory invention registration. The color drawings must be of sufficient quality such that all details in the drawings are reproducible in black and white in the printed patent. Color drawings are not permitted in international applications (see PCT Rule 11.13), or in an application, or copy thereof, submitted under the Office electronic filing system. The Office will accept color drawings in utility or design patent applications and statutory invention registrations only after granting a petition filed under this paragraph explaining why the color drawings are necessary. Any such petition must include the following:

(i) The fee set forth in § 1.17(h);

(ii) Three (3) sets of color drawings;

(iii) An amendment to the specification to insert (unless the specification contains or has been previously amended to contain) the following language as the first paragraph of the brief description of the drawings:

The patent or application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawing(s) will be provided by the Office upon request and payment of the necessary fee.

(b) *Photographs*.—

(1) *Black and white*. Photographs, including photocopies of photographs, are not ordinarily permitted in utility and design patent applications. The Office will accept photographs in utility and design patent applications, however, if photographs are the only practicable medium for illustrating the claimed invention. For example, photographs or photomicrographs of: electrophoresis gels, blots (*e.g.*, immunological, western, Southern, and northern), auto- radiographs, cell cultures (stained and unstained), histological tissue cross sections (stained and unstained), animals, plants, in vivo imaging, thin layer chromatography plates, crystalline structures, and, in a design patent application, ornamental effects, are acceptable. If the subject matter of the application admits of illustration by a drawing, the examiner may require a drawing in place of the photograph. The photographs must be of sufficient quality so that all details in the photographs are reproducible in the printed patent.

(2) *Color photographs*. Color photographs will be accepted in utility and design patent applications if the conditions for accepting color drawings and black and white photographs have been satisfied. See paragraphs (a)(2) and (b)(1) of this section.

(c) *Identification of drawings*. Identifying indicia should be provided, and if provided, should include the title of the invention, inventor's name, and application number, or docket number (if any) if an application number has not been assigned to the application. If this information is provided, it must be placed on the front of each sheet within the top margin. Each drawing sheet submitted after the filing date of an application must be identified as either "Replacement Sheet" or "New Sheet" pursuant to § 1.121(d). If a marked-up copy of any amended drawing figure including annotations indicating the changes made is filed, such marked-up copy must be clearly labeled as "Annotated Sheet" pursuant to § 1.121(d)(1).

(d) *Graphic forms in drawings*. Chemical or mathematical formulae, tables, and waveforms may be submitted as drawings and are subject to the same requirements as drawings. Each chemical or mathematical formula must be labeled as a separate figure, using brackets when necessary, to show that information is properly integrated. Each group of waveforms must be presented as a single figure, using a common vertical axis with time extending along the horizontal axis. Each individual waveform discussed in the specification must be identified with a separate letter designation adjacent to the vertical axis.

(e) *Type of paper*. Drawings submitted to the Office must be made on paper which is flexible, strong, white, smooth, non-shiny, and durable. All sheets must be reasonably free from cracks, creases, and folds. Only one side of the sheet may be used for the drawing. Each sheet must be reasonably free from erasures and must be free from alterations, overwritings, and interlineations. Photographs must be developed on paper meeting the sheet-size requirements of paragraph (f) of this section and the margin requirements of paragraph (g) of this section. See paragraph (b) of this section for other requirements for photographs.

(f) *Size of paper*. All drawing sheets in an application must be the same size. One of the shorter sides of the sheet is regarded as its top. The size of the sheets on which drawings are made must be:

(1) 21.0 cm. by 29.7 cm. (DIN size A4), or

(2) 21.6 cm. by 27.9 cm. (8 1/2 by 11 inches).

(g) *Margins*. The sheets must not contain frames around the sight (*i.e.*, the usable surface), but should have scan target points (*i.e.*, cross-hairs) printed on two cater-corner margin corners. Each sheet must include a top margin of at least 2.5 cm. (1 inch), a left side margin of at least 2.5 cm. (1 inch), a right side margin of at least 1.5 cm. (5/8 inch), and a bottom margin of at least 1.0 cm. (3/8 inch), thereby leaving a sight no greater than 17.0 cm. by 26.2 cm. on 21.0 cm. by 29.7 cm. (DIN size A4) drawing sheets, and a sight no greater than 17.6 cm. by 24.4 cm. (6 15/16 by 9 5/8 inches) on 21.6 cm. by 27.9 cm. (8 1/2 by 11 inch) drawing sheets.

(h) *Views*. The drawing must contain as many views as necessary to show the invention. The views may be plan, elevation, section, or perspective views. Detail views of portions of elements, on a larger scale if necessary, may also be used. All views of the drawing must be grouped together and arranged on the sheet(s) without wasting space, preferably in an upright position, clearly separated from one another, and must not be included in the sheets containing the specifications, claims, or abstract. Views must not be connected by projection lines and must not contain center lines. Waveforms of electrical signals may be connected by dashed lines to show the relative timing of the waveforms.

(1) *Exploded views*. Exploded views, with the separated parts embraced by a bracket, to show the relationship or order of assembly of various parts are permissible. When an exploded view is shown in a figure which is on the same sheet as another figure, the exploded view should be placed in brackets.

(2) *Partial views*. When necessary, a view of a large machine or device in its entirety may be broken into partial views on a single sheet, or extended over several sheets if there is no loss in facility of understanding the view. Partial views drawn on separate sheets must always be capable of being linked edge to edge so that no partial view contains parts of another partial view. A smaller scale view should be included showing the whole formed by the partial views and indicating the positions of the parts shown. When a portion of a view is enlarged for magnification purposes, the view and the enlarged view must each be labeled as separate views.

(i) Where views on two or more sheets form, in effect, a single complete view, the views on the several sheets must be so arranged that the complete figure can be assembled without concealing any part of any of the views appearing on the various sheets.

(ii) A very long view may be divided into several parts placed one above the other on a single sheet. However, the relationship between the different parts must be clear and unambiguous.

(3) *Sectional views*. The plane upon which a sectional view is taken should be indicated on the view from which the sec-

tion is cut by a broken line. The ends of the broken line should be designated by Arabic or Roman numerals corresponding to the view number of the sectional view, and should have arrows to indicate the direction of sight. Hatching must be used to indicate section portions of an object, and must be made by regularly spaced oblique parallel lines spaced sufficiently apart to enable the lines to be distinguished without difficulty. Hatching should not impede the clear reading of the reference characters and lead lines. If it is not possible to place reference characters outside the hatched area, the hatching may be broken off wherever reference characters are inserted. Hatching must be at a substantial angle to the surrounding axes or principal lines, preferably 45°. A cross section must be set out and drawn to show all of the materials as they are shown in the view from which the cross section was taken. The parts in cross section must show proper material(s) by hatching with regularly spaced parallel oblique strokes, the space between strokes being chosen on the basis of the total area to be hatched. The various parts of a cross section of the same item should be hatched in the same manner and should accurately and graphically indicate the nature of the material(s) that is illustrated in cross section. The hatching of juxtaposed different elements must be angled in a different way. In the case of large areas, hatching may be confined to an edging drawn around the entire inside of the outline of the area to be hatched. Different types of hatching should have different conventional meanings as regards the nature of a material seen in cross section.

(4) *Alternate position*. A moved position may be shown by a broken line superimposed upon a suitable view if this can be done without crowding; otherwise, a separate view must be used for this purpose.

(5) *Modified forms*. Modified forms of construction must be shown in separate views.

(i) *Arrangement of views***.** One view must not be placed upon another or within the outline of another. All views on the same sheet should stand in the same direction and, if possible, stand so that they can be read with the sheet held in an upright position. If views wider than the width of the sheet are necessary for the clearest illustration of the invention, the sheet may be turned on its side so that the top of the sheet, with the appropriate top margin to be used as the heading space, is on the right-hand side. Words must appear in a horizontal, left-to-right fashion when the page is either upright or turned so that the top becomes the right side, except for graphs utilizing standard scientific convention to denote the axis of abscissas (of X) and the axis of ordinates (of Y).

(j) *Front page view*. The drawing must contain as many views as necessary to show the invention. One of the views should be suitable for inclusion on the front page of the patent application publication and patent as the illustration of the invention. Views must not be connected by projection lines and must not contain center lines. Applicant may suggest a single view (by figure number) for inclusion on the front page of the patent application publication and patent.

(k) *Scale*. The scale to which a drawing is made must be large enough to show the mechanism without crowding when the drawing is reduced in size to two-thirds in reproduction. Indications such as “actual size” or “scale 1/2” on the drawings are not permitted since these lose their meaning with reproduction in a different format.

(l) *Character of lines, numbers, and letters.* All drawings must be made by a process which will give them satisfactory reproduction characteristics. Every line, number, and letter must be durable, clean, black (except for color drawings), sufficiently dense and dark, and uniformly thick and well-defined. The weight of all lines and letters must be heavy enough to permit adequate reproduction. This requirement applies to all lines however fine, to shading, and to lines representing cut surfaces in sectional views. Lines and strokes of different thicknesses may be used in the same drawing where different thicknesses have a different meaning.

(m) *Shading*. The use of shading in views is encouraged if it aids in understanding the invention and if it does not reduce legibility. Shading is used to indicate the surface or shape of spherical, cylindrical, and conical elements of an object. Flat parts may also be lightly shaded. Such shading is preferred in the case of parts shown in perspective, but not for cross sections. See paragraph (h)(3) of this section. Spaced lines for shading are preferred. These lines must be thin, as few in number as practicable, and they must contrast with the rest of the drawings. As a substitute for shading, heavy lines on the shade side of objects can be used except where they superimpose on each other or obscure reference characters. Light should come from the upper left corner at an angle of 45°. Surface delineations should preferably be shown by proper shading. Solid black shading areas are not permitted, except when used to represent bar graphs or color.

(n) *Symbols*. Graphical drawing symbols may be used for conventional elements when appropriate. The elements for which such symbols and labeled representations are used must be adequately identified in the specification. Known devices should be illustrated by symbols which have a universally recognized conventional meaning and are generally accepted in the art. Other symbols which are not universally recognized may be used, subject to approval by the Office, if they are not likely to be confused with existing conventional symbols, and if they are readily identifiable.

(o) *Legends*. Suitable descriptive legends may be used subject to approval by the Office, or may be required by the examiner where necessary for understanding of the drawing. They should contain as few words as possible.

(p) *Numbers, letters, and reference characters.*

(1) Reference characters (numerals are preferred), sheet numbers, and view numbers must be plain and legible, and must not be used in association with brackets or inverted commas, or enclosed within outlines, *e.g*., encircled. They must be oriented in the same direction as the view so as to avoid having to rotate the sheet. Reference characters should be arranged to follow the profile of the object depicted.

(2) The English alphabet must be used for letters, except where another alphabet is customarily used, such as the Greek alphabet to indicate angles, wavelengths, and mathematical formulas.

(3) Numbers, letters, and reference characters must measure at least.32 cm. (1/8 inch) in height. They should not be placed in the drawing so as to interfere with its comprehension. There-

fore, they should not cross or mingle with the lines. They should not be placed upon hatched or shaded surfaces. When necessary, such as indicating a surface or cross section, a reference character may be underlined and a blank space may be left in the hatching or shading where the character occurs so that it appears distinct.

(4) The same part of an invention appearing in more than one view of the drawing must always be designated by the same reference character, and the same reference character must never be used to designate different parts.

(5) Reference characters not mentioned in the description shall not appear in the drawings. Reference characters mentioned in the description must appear in the drawings.

(q) *Lead lines*. Lead lines are those lines between the reference characters and the details referred to. Such lines may be straight or curved and should be as short as possible. They must originate in the immediate proximity of the reference character and extend to the feature indicated. Lead lines must not cross each other. Lead lines are required for each reference character except for those which indicate the surface or cross section on which they are placed. Such a reference character must be underlined to make it clear that a lead line has not been left out by mistake. Lead lines must be executed in the same way as lines in the drawing. See paragraph (l) of this section.

(r) *Arrows*. Arrows may be used at the ends of lines, provided that their meaning is clear, as follows:

(1) On a lead line, a freestanding arrow to indicate the entire section towards which it points;

(2) On a lead line, an arrow touching a line to indicate the surface shown by the line looking along the direction of the arrow; or

(3) To show the direction of movement.

(s) *Copyright or Mask Work Notice*. A copyright or mask work notice may appear in the drawing, but must be placed within the sight of the drawing immediately below the figure representing the copyright or mask work material and be limited to letters having a print size of 32 cm. to 64 cm. (1/8 to 1/4 inches) high. The content of the notice must be limited to only those elements provided for by law. For example, "©1983 John Doe" (17 U.S.C. 401) and "*M* John Doe" (17 U.S.C. 909) would be properly limited and, under current statutes, legally sufficient notices of copyright and mask work, respectively. Inclusion of a copyright or mask work notice will be permitted only if the authorization language set forth in § 1.71(e) is included at the beginning (preferably as the first paragraph) of the specification.

(t) *Numbering of sheets of drawings*. The sheets of drawings should be numbered in consecutive Arabic numerals, starting with 1, within the sight as defined in paragraph (g) of this section. These numbers, if present, must be placed in the middle of the top of the sheet, but not in the margin. The numbers can be placed on the right-hand side if the drawing extends too close to the middle of the top edge of the usable surface. The drawing sheet numbering must be clear and larger than the numbers used as reference characters to avoid confusion. The number of each sheet should be shown by two Arabic numerals placed on either side of an oblique line, with the first being the sheet number and the second being the total number of sheets of drawings, with no other marking.

(u) *Numbering of views.*

(1) The different views must be numbered in consecutive Arabic numerals, starting with 1, independent of the numbering of the sheets and, if possible, in the order in which they appear on the drawing sheet(s). Partial views intended to form one complete view, on one or several sheets, must be identified by the same number followed by a capital letter. View numbers must be preceded by the abbreviation "FIG." Where only a single view is used in an application to illustrate the claimed invention, it must not be numbered and the abbreviation "FIG." must not appear.

(2) Numbers and letters identifying the views must be simple and clear and must not be used in association with brackets, circles, or inverted commas. The view numbers must be larger than the numbers used for reference characters.

(v) *Security markings***.** Authorized security markings may be placed on the drawings provided they are outside the sight, preferably centered in the top margin.

(w) *Corrections*. Any corrections on drawings submitted to the Office must be durable and permanent.

(x) *Holes*. No holes should be made by applicant in the drawing sheets.

(y) *Types of drawings*. See § 1.152 for design drawings, § 1.165 for plant drawings, and § 1.173(a)(2) for reissue drawings.

Drawings on paper are acceptable as long as they are in compliance with 37 CFR 1.84. Corrections thereto must be made in the form of replacement sheets labeled, in the header, "Replacement Sheet" since the Office does not release drawings for correction. See 37 CFR 1.85.

Each drawing sheet submitted after the filing date of an application must be identified as either "Replacement Sheet" or "New Sheet" so that the Office will recognize how to treat such a drawing sheet for entry into the application. See 37 CFR 1.84(c). If a marked-up copy of any amended drawing figure, including annotations indicating the changes made, is filed, such marked-up copy must be clearly labeled as "Annotated Sheet."

Good quality copies made on office copiers are acceptable if the lines are uniformly thick, black, and solid. Facsimile copies of drawings are acceptable if included with application papers mailed or hand-carried to the Office or if submitted at the time of payment of the issue fee (see "Payment of the Issue Fee and Filing Related Correspondence by Facsimile," 1254 O.G. 91 (January 15, 2002)). Applicants should ensure that the facsimile transmission process does not unreasonably degrade the quality of the drawings.

Drawings are currently accepted in two different size formats. It is, however, required that all drawing

sheets in a particular application be the same size for ease of handling and reproduction.

For examples of proper drawings, in addition to selected rules of practice related to patent drawings and interpretations of those rules, see the "Guide for the Preparation of Patent Drawings" which is available from the USPTO web site at www.uspto.gov.

For information regarding certified copies of an application-as-filed which does not meet the sheet size/margin and quality requirements of 37 CFR 1.52, 1.84(f), and 1.84(g), see MPEP § 608.01.

For design patent drawings, 37 CFR 1.152, see MPEP § 1503.02.

For plant patent drawings, 37 CFR 1.165, see MPEP § 1606.

For reissue application drawings, see MPEP § 1413.

For correction of drawings, see MPEP § 608.02(p). For prints, preparation and distribution, see MPEP § 508 and § 608.02(m). For prints, return of drawings, see MPEP § 608.02(y).

For amendment of drawings, see MPEP § 714.

For pencil notations of classification and name or initials of assistant examiner to be placed on drawings, see MPEP § 719.03.

The filing of a divisional or continuation application under the provisions of 37 CFR 1.53(b) (unexecuted application) does not obviate the need for acceptable drawings. See MPEP § 608.02(b).

See MPEP § 601.01(f) for treatment of applications filed without drawings and MPEP § 601.01(g) for treatment of applications filed without all figures of drawings.

VI. DEFINITIONS

A number of different terms are used when referring to drawings in patent applications. The following definitions are used in this Manual.

Original drawings: The drawing submitted with the application when filed.

Substitute drawing: A drawing filed later than the filing date of an application. Usually submitted to replace an original informal drawing.

Acceptable drawing: A drawing that is acceptable for publication of the application or issuance of the patent.

Corrected drawing: A drawing that includes corrections of informalities and changes approved by the examiner.

Informal drawing: A drawing which does not comply with the form requirements of 37 CFR 1.84. Drawings may be informal because they are not on the proper size sheets, the quality of the lines is poor, or for other reasons such as the size of reference elements. Informal drawings could be acceptable for the purposes of publication and examination. An objection will generally only be made to an informal drawing if the Office is unable to reproduce the drawing or the contents of the drawing are unacceptable to the examiner.

Drawing print: This term is used for the white paper print prepared by the Scanning Division of the Office of **>Patent Application Processing (OPAP)< of original drawings in paper application files. The drawing prints contain the application number near the left-hand margin. Drawing prints should be placed on the top on the right-hand flap of the application file wrapper. A drawing print is not made for image file wrapper (IFW) applications. For IFW processing, see IFW Manual.

Interference print: This term is used to designate the copy prepared of the original drawings filed in file cabinets separate from the paper file wrappers and used to make interference searches. For IFW processing, see IFW Manual.

Plan: This term is used to illustrate the top view.

Elevation This term is used to illustrate views showing the height of objects.

VII. BLACK AND WHITE PHOTOGRAPHS

37 CFR 1.84. Standards for drawings.

*****

(b) *Photographs.*—

(1) *Black and white*. Photographs, including photocopies of photographs, are not ordinarily permitted in utility and design patent applications. The Office will accept photographs in utility and design patent applications, however, if photographs are the only practicable medium for illustrating the claimed invention. For example, photographs or photomicrographs of: electrophoresis gels, blots (*e.g.*, immunological, western, Southern, and northern), auto- radiographs, cell cultures (stained and unstained), histological tissue cross sections (stained and unstained), animals, plants, in vivo imaging, thin layer chromatography plates, crystalline structures, and, in a design patent application, ornamental effects, are acceptable. If the subject matter of the application admits of illustration by a drawing, the examiner may require a

drawing in place of the photograph. The photographs must be of sufficient quality so that all details in the photographs are reproducible in the printed patent.

*****

Photographs or photomicrographs (not photolithographs or other reproductions of photographs made by using screens) printed on sensitized paper are acceptable as final drawings, in lieu of India ink drawings, to illustrate inventions which are incapable of being accurately or adequately depicted by India ink drawings, e.g., electrophoresis gels, blots, (e.g., immunological, western, Southern, and northern), autoradiographs, cell cultures (stained and unstained), histological tissue cross sections (stained and unstained), animals, plants, in vivo imaging, thin layer chromatography plates, crystalline structures, metallurgical microstructures, textile fabrics, grain structures and ornamental effects. The photographs or photomicrographs must show the invention more clearly than they can be done by India ink drawings and otherwise comply with the rules concerning such drawings.

Black and white photographs submitted in lieu of ink drawings must comply with 37 CFR 1.84(b). There is no requirement for a petition or petition fee, and only one set of photographs is required. See 1213 O.G. 108 (Aug. 4, 1998) and 1211 O.G. 34 (June 9, 1998) and 37 CFR 1.84(b)(1).

Such photographs to be acceptable must be made on photographic paper having the following characteristics which are generally recognized in the photographic trade: double weight paper with a surface described as smooth with a white tint. Note that photographs filed on or after October 1, 2001 may no longer be mounted on Bristol Board. See 37 CFR 1.84(e) and 1246 O.G. 106 (May 22, 2001). If several photographs are used to make one sheet of drawings, the photographs must be contained (i.e., developed) on a single sheet.

See MPEP § 1503.02 for discussion of photographs used in design patent applications.

Photographs may be treated as artifacts and maintained in an artifact folder when the patent application is an IFW application since the photographs may not be able to be accurately reproduced by scanning.

VIII. COLOR DRAWINGS OR COLOR PHOTOGRAPHS

37 CFR 1.84. Standards for drawings.

(a) Drawings. There are two acceptable categories for presenting drawings in utility and design patent applications:

*****

(2) *Color.* On rare occasions, color drawings may be necessary as the only practical medium by which to disclose the subject matter sought to be patented in a utility or design patent application or the subject matter of a statutory invention registration. The color drawings must be of sufficient quality such that all details in the drawings are reproducible in black and white in the printed patent. Color drawings are not permitted in international applications (see PCT Rule 11.13), or in an application, or copy thereof, submitted under the Office electronic filing system. The Office will accept color drawings in utility or design patent applications and statutory invention registrations only after granting a petition filed under this paragraph explaining why the color drawings are necessary. Any such petition must include the following:

(i) The fee set forth in § 1.17(h);

(ii) Three (3) sets of color drawings;

(iii) **>An amendment to the specification to insert (unless the specification contains or has been previously amended to contain) the following language as the first paragraph of the brief description of the drawings:

> The patent or application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawing(s) will be provided by the Office upon request and payment of the necessary fee.<

(b) Photographs.

*****

(2) *Color photographs*. Color photographs will be accepted in utility and design patent applications if the conditions for accepting color drawings and black and white photographs have been satisfied. See paragraphs (a)(2) and (b)(1) of this section.

*****

Limited use of color drawings in utility patent applications is provided for in 37 CFR 1.84(a)(2) and (b)(2). Unless a petition is filed and granted, color drawings or color photographs will not be accepted in a utility or design patent application. The examiner must object to the color drawings or color photographs as being improper and require applicant either to cancel the drawings or to provide substitute black and white drawings.

Under 37 CFR 1.84(a)(2) and (b)(2), the applicant must file a petition with fee requesting acceptance of the color drawings or color photographs. Three sets of

color drawings or color photographs must also be submitted (37 CFR1.84(a)(2)(ii)). The petition is decided by a Supervisory Patent Examiner. See MPEP § 1002.02(d).

If the application is an IFW application, the color photographs are maintained in an artifact folder.

Where color drawings or color photographs are filed in a continuing application, applicant must renew the petition under 37 CFR 1.84(a)(2) and (b)(2) even though a similar petition was filed in the prior application. Until the renewed petition is granted, the examiner must object to the color drawings or color photographs as being improper.

In light of the substantial administrative and economic burden associated with printing a utility patent with color drawings or color photographs, the patent copies which are printed at issuance of the patent will depict the drawings in black and white only. However, a set of color drawings or color photographs will be attached to the Letters Patent. Moreover, copies of the patent with color drawings or color photographs attached thereto will be provided by the U.S. Patent and Trademark Office upon special request and payment of the fee necessary to recover the actual costs associated therewith.

Accordingly, the petition must also be accompanied by a proposed amendment to insert the following language as the first paragraph in the portion of the specification containing a brief description of the drawings:

> The patent or application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawing(s) will be provided by the U.S. Patent and Trademark Office upon request and payment of the necessary fee.

If color drawings or color photographs have been filed, but the required petition has not, form paragraph 6.24.01 may be used to notify applicant that a petition is needed.

¶ *6.24.01 Color Photographs and Color Drawings, Petition Required*

Color photographs and color drawings are not accepted unless a petition filed under 37 CFR 1.84(a)(2) is granted. Any such petition must be accompanied by the appropriate fee set forth in 37 CFR 1.17(h), three sets of color drawings or color photographs, as appropriate, and, unless already present, an amendment to include the following language as the first paragraph of the brief description of the drawings section of the specification:

> The patent or application file contains at least one drawing executed in color. Copies of this patent or patent application publication with color drawing(s) will be provided by the Office upon request and payment of the necessary fee.

Color photographs will be accepted if the conditions for accepting color drawings and black and white photographs have been satisfied. See 37CFR 1.84(b)(2).

Examiner Note:

1. This form paragraph should be used only if the application contains color photographs or color drawings as the drawings required by 37 CFR 1.81.
2. Do not use this form paragraph for black and white photographs. Black and white photographs are permitted pursuant to 37 CFR 1.84(b).

It is anticipated that such a petition will be granted only when the U.S. Patent and Trademark Office has determined that a color drawing or color photograph is the only practical medium by which to disclose in a printed utility patent the subject matter to be patented.

It is emphasized that a decision to grant the petition should not be regarded as an indication that color drawings or color photographs are necessary to comply with a statutory requirement. In this latter respect, clearly it is desirable to file any desired color drawings or color photographs as part of the original application papers in order to avoid issues concerning statutory defects (e.g., lack of enablement under 35 U.S.C. 112 or new matter under 35 U.S.C. 132).

IX. DRAWING SYMBOLS

37 CFR 1.84(n) indicates that graphic drawing symbols and other labeled representations may be used for conventional elements where appropriate, subject to approval by the Office. Also, suitable legends may be used, or may be required, in proper cases. For examples of suitable symbols and legends, see the "Guide for the Preparation of Patent Drawings" available from the USPTO web site at www.uspto.gov.

The American National Standards Institute (ANSI) is a private non-profit organization whose numerous publications include some that pertain to graphical symbols. Such publications, for examples, Graphic Symbols for Fluid Power Diagrams, IEEE Standard Graphic Symbols for Logic Functions, Graphic Symbols for Electrical and Electronics Diagrams, are considered to be generally acceptable in patent drawings. ANSI headquarters are at 1819 L Street, NW, Suite 600, Washington, DC 20036, with offices at 25 West

43rd Street, New York, NY 10036. The organization's Internet address is www.ansi.org. Although ANSI documents and other published sources may be used as guides during the selection of graphic symbols for patent drawings, the Office will not "approve" any published collection of symbols as a group because their use and clarity must be decided on a case-by-case basis. Overly specific symbols should be avoided. Symbols with unclear meanings should be labeled for clarification.

The following symbols should be used to indicate various materials where the material is an important feature of the invention. The use of conventional features is very helpful in making prior art searches.

608.02(a) New Drawing — When Replacement is Required Before Examination [R-7]

See MPEP § 608.02 for the procedure to follow when drawings have not been filed, but a drawing will aid in the understanding of the invention. See MPEP § 601.01(f) for the procedure to follow when applications appear to be missing sheets of drawings. Drawings in utility and plant applications will be reviewed by the Office of **>Patent Application Processing (OPAP)< for compliance with certain requirements of 37 CFR 1.84. >OPAP< will send a Notice to File Corrected Application Papers if the drawings are not acceptable for purposes of publication. The notice will give applicant a time period of 2 months from the mailing date of the notice to file acceptable drawings. This time period for reply is extendable under 37 CFR 1.136(a). >OPAP< will not release applications to the Technology Centers until acceptable drawings are filed in the applications.

If at the time of the initial assignment of an application to an examiner's docket, or if at the time the application is taken up for action, the supervisory patent examiner believes the drawings to be of such a condition as to not permit reasonable examination of the application, applicant should be required to immediately submit corrected drawings. However, if the drawings do permit reasonable examination and the supervisory patent examiner believes the drawings are of such a character as to render the application defective under 35 U.S.C. 112, examination should begin immediately with a requirement for corrected drawings and a rejection of the claims as not being in compliance with 35 U.S.C. 112, first paragraph, being made.

If the drawings have been indicated by the applicant as informal, but no objection has been made to the drawings by *>OPAP< (drawings considered acceptable by *>OPAP<, the examiner should not require replacement of the "informal" drawings with new drawings. If the examiner does make objections to the drawings, the examiner should require correction in reply to the Office action and not permit the objection to be held in abeyance. See MPEP § 608.02(b), § 608.02(d) - § 608.02(h) and § 608.02(p) for further information on specific grounds for finding drawings informalities.

UNTIMELY FILED DRAWINGS

If a drawing is not timely received in reply to a notice from the Office or a letter from the examiner who requires a drawing, the application becomes abandoned for failure to reply.

For the handling of additional, duplicate, or substitute drawings, see MPEP § 608.02(h).

608.02(b) Informal Drawings [R-7]

37 CFR 1.85. Corrections to drawings.

(a) A utility or plant application will not be placed on the files for examination until objections to the drawings have been corrected. Except as provided in § 1.215(c), any patent application publication will not include drawings filed after the application has been placed on the files for examination. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not be held in abeyance, and a request to hold objections to the drawings in abeyance will not be considered a *bona fide* attempt to advance the application to final action (§ 1.135(c)). If a drawing in a design application meets the requirements of § 1.84(e), (f), and (g) and is suitable for reproduction, but is not otherwise in compliance with § 1.84, the drawing may be admitted for examination.

(b) The Office will not release drawings for purposes of correction. If corrections are necessary, new corrected drawings must be submitted within the time set by the Office.

(c) If a corrected drawing is required or if a drawing does not comply with § 1.84 at the time an application is allowed, the Office may notify the applicant and set a three-month period of time from the mail date of the notice of allowability within which the applicant must file a corrected drawing in compliance with § 1.84 to avoid abandonment. This time period is not extendable under § 1.136 (a) or § 1.136 (b).

In instances where the drawing is such that the prosecution can be carried on without the corrections, applicant is informed of the reasons why the drawing is objected to on Form PTO-948 or in an examiner's action, and that the drawing is admitted for examination purposes only (see MPEP § 707.07(a)). To be fully responsive, an amendment must include corrected drawings. See 37 CFR 1.85(c) and 37 CFR 1.121(d). The objection to the drawings will not be held in abeyance.

I. INFORMAL DRAWINGS

The Office no longer considers drawings as formal or informal. Drawings are either acceptable or not acceptable. Drawings will be accepted by the Office of **>Patent Application Processing (OPAP)< if the

drawings are readable and reproducible for publication purposes. See MPEP § 507.

Examiners should review the drawings for disclosure of the claimed invention and for proper use of reference numerals. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not be held in abeyance. A request to hold objections to the drawings in abeyance will not be considered a *bona fide* attempt to advance the application to final action (37 CFR 1.135(c)). Drawing corrections should be made promptly before allowance of the application in order to avoid delays in issuance of the application as a patent or a reduction to any term adjustment. See 37 CFR 1.704(c)(10).

II. NOTIFYING APPLICANT

If the original drawings are not acceptable, a 2-part form, PTO-948, may be used to indicate what the objections are and that new corrected drawings are required. In either case, the drawings will be accepted as satisfying the requirements of 37 CFR 1.51. The examiners are directed to advise the applicants by way of form PTO-948 (see MPEP § 707.07(a)) in the first Office action of the reasons why the drawings are not acceptable. If the examiner discovers a defect in the content of the drawing, one or more of the form paragraphs reproduced below may be used to notify applicant.

¶ *6.21 New Drawings, Competent Draftsperson*

New corrected drawings are required in this application because **[1]**. Applicant is advised to employ the services of a competent patent draftsperson outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

¶ *6.22 Drawings Objected To*

The drawings are objected to because **[1]**. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Examiner Note:

1. In bracket 1, insert the reason for the objection, for example, --the drawings do not show every feature of the invention specified in the claims-- or --the unlabeled rectangular box(es) shown in the drawings should be provided with descriptive text labels--.
2. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not be held in abeyance, and a request to hold objections to the drawings in abeyance will not be considered a bona fide attempt to advance the application to final action. See 37 CFR 1.85(a).
3. This form paragraph may be followed by form paragraph 6.27 to require a marked up copy of the amended drawing figure(s) including annotations indicating the changes made in the corrected drawings.

¶ *6.26 Informal Drawings Do Not Permit Examination*

The informal drawings are not of sufficient quality to permit examination. Accordingly, replacement drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to this Office action. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action.

Applicant is given a TWO MONTH time period to submit new drawings in compliance with 37 CFR 1.81. Extensions of time may be obtained under the provisions of 37 CFR 1.136(a). Failure to timely submit replacement drawing sheets will result in ABANDONMENT of the application.

Examiner Note:

1. Use of this form paragraph should be extremely rare and limited to those instances where no examination can be performed due to the poor quality of the drawings resulting in a lack of understanding of the claimed subject matter.
2. Use a PTOL-90 or PTO-90C form as a cover sheet for this communication.

¶ *6.27 Requirement for Marked-up Copy of Drawing Corrections*

In addition to Replacement Sheets containing the corrected drawing figure(s), applicant is required to submit a marked-up copy of each Replacement Sheet including annotations indicating the changes made to the previous version. The marked-up copy must be clearly labeled as "Annotated Sheet" and must be presented in the amendment or remarks section that explains the change(s) to the drawings. See 37 CFR 1.121(d)(1). Failure to timely submit the corrected drawing and marked-up copy will result in the abandonment of the application.

Examiner Note:

1. When this form paragraph is used by the examiner, the applicant must provide a marked-up copy of any amended drawing figure, including annotations indicating the changes made in the drawing replacement sheets. See 37 CFR 1.121(d)(2).

2. Applicants should be encouraged to submit corrected drawings before allowance in order to avoid having any term adjustment reduced pursuant to 37 CFR 1.704(c)(10).

III. HANDLING OF REPLACEMENT DRAWINGS

In those situations where an application is filed with unacceptable drawings, applicants will be notified by *>OPAP< to file new acceptable drawings complying with 37 CFR 1.84 and 1.121(d). If the requirement for corrected drawings appears on the notice of allowability (PTOL-37), the drawings must be filed within three months of the date of mailing of the notice of allowability. Also, each sheet of the drawing should include the application number and the art unit in the upper center margin (37 CFR 1.84(c)) and labeled, in the header, "Replacement Sheet." In the past, some drawings have been misdirected because the art unit indicated on the filing receipt was used rather than that indicated on the notice forms.

In utility applications, the examination will normally be conducted using the originally presented drawings. The sufficiency of disclosure, as concerns the subject matter claimed, will be made by the examiner utilizing the original drawings. IT IS APPLICANT'S RESPONSIBILITY TO SEE THAT NO NEW MATTER IS ADDED when submitting replacement drawings after allowance since they will not normally be reviewed by an examiner. Of course, if the examiner notices new matter in the replacement drawings, appropriate action to have the new matter deleted should be undertaken.

608.02(c) Drawing Print Kept in File Wrapper [R-2]

The drawing prints must always be kept on top of the papers on the right side of the file wrapper under any bibliographic data sheet >, if the application is maintained in paper. If the application is maintained in an image file wrapper (IFW) and the drawings are photographs or in color, the original photographs or color drawings may be maintained in an artifact folder. For IFW processing, see IFW Manual<.

Applications may be sent to issue or to the Files Repository without the original drawing, if any, if the drawing cannot be located. For an application sent to issue with missing drawings, see MPEP § 608.02(z). For abandoned applications sent to the Files Repository, a notation should be made on the Contents portion of the file wrapper that the drawings were missing.

Upon initial processing, the original drawings are placed in the center portion of the application file wrapper under the specification >, if the application is maintained in paper,< and the executed oath or declaration by the Scanning Division.

608.02(d) Complete Illustration in Drawings [R-3]

37 CFR 1.83. Content of drawing.

(a) **>The drawing in a nonprovisional application must show every feature of the invention specified in the claims. However, conventional features disclosed in the description and claims, where their detailed illustration is not essential for a proper understanding of the invention, should be illustrated in the drawing in the form of a graphical drawing symbol or a labeled representation (*e.g.*, a labeled rectangular box). In addition, tables and sequence listings that are included in the specification are, except for applications filed under 35 U.S.C. 371, not permitted to be included in the drawings.<

(b) When the invention consists of an improvement on an old machine the drawing must when possible exhibit, in one or more views, the improved portion itself, disconnected from the old structure, and also in another view, so much only of the old structure as will suffice to show the connection of the invention therewith.

(c) Where the drawings in a nonprovisional application do not comply with the requirements of paragraphs (a) and (b) of this section, the examiner shall require such additional illustration within a time period of not less than two months from the date of the sending of a notice thereof. Such corrections are subject to the requirements of § 1.81(d).

Any structural detail that is of sufficient importance to be described should be shown in the drawing. (*Ex parte Good*, 1911 C.D. 43, 164 O.G. 739 (Comm'r Pat. 1911).)

Form paragraph 6.22.01, 6.22.04, or 6.36, where appropriate, may be used to require illustration.
**>

¶ *6.22.01 Drawings Objected To, Details Not Shown*

The drawings are objected to under 37 CFR 1.83(a) because they fail to show **[1]** as described in the specification. Any struc-

tural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Examiner Note:

1. In bracket 1, identify the structural details not shown in the drawings.

2. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not be held in abeyance, and a request to hold objections to the drawings in abeyance will not be considered a bona fide attempt to advance the application to final action. See 37 CFR 1.85(a).

3. This form paragraph may be followed by form paragraph 6.27 to require a marked up copy of the amended drawing figure(s) including annotations indicating the changes made in the corrected drawings.

¶ *6.22.04 Drawings Objected to, Incomplete*

The drawings are objected to under 37 CFR 1.83(b) because they are incomplete. 37 CFR 1.83(b) reads as follows:

> When the invention consists of an improvement on an old machine the drawing must when possible exhibit, in one or more views, the improved portion itself, disconnected from the old structure, and also in another view, so much only of the old structure as will suffice to show the connection of the invention therewith.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Examiner Note:

1. Supply a full explanation, if it is not readily apparent how the drawings are incomplete.

2. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not be held in abeyance, and a request to hold objections to the drawings in abeyance will not be considered a bona fide attempt to advance the application to final action. See 37 CFR 1.85(a).

3. This form paragraph may be followed by form paragraph 6.27 to require a marked up copy of the amended drawing figure(s) including annotations indicating the changes made in the corrected drawings.

<

¶ *6.36 Drawings Do Not Show Claimed Subject Matter*

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the **[1]** must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Examiner Note:

In bracket 1, insert the features that must be shown.

See also MPEP § 608.02.

608.02(e) Examiner Determines Completeness and Consistency of Drawings [R-3]

The examiner should see to it that the figures are correctly described in the brief description of the several views of the drawing section of the specification, that the reference characters are properly applied, that no single reference character is used for two different parts or for a given part and a modification of such part, and that there are no superfluous illustrations.

One or more of the following form paragraphs may be used to require correction.

**>

¶ *6.22.01 Drawings Objected To, Details Not Shown*

The drawings are objected to under 37 CFR 1.83(a) because they fail to show **[1]** as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Examiner Note:

1. In bracket 1, identify the structural details not shown in the drawings.

2. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not be held in abeyance, and a request to hold objections to the drawings in abeyance will not be considered a bona fide attempt to advance the application to final action. See 37 CFR 1.85(a).

3. This form paragraph may be followed by form paragraph 6.27 to require a marked up copy of the amended drawing figure(s) including annotations indicating the changes made in the corrected drawings.

¶ *6.22.03 Drawings Objected to, Different Parts Referred to by Same Number*

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "**[1]**" has been used to designate both **[2]** and **[3]**. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet " or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Examiner Note:

1. In bracket 1, identify the number which refers to the different parts.
2. In brackets 2 and 3, identify the parts which are referred to by the same number.
3. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not be held in abeyance, and a request to hold objections to the drawings in abeyance will not be considered a bona fide attempt to advance the application to final action. See 37 CFR 1.85(a).
4. This form paragraph may be followed by form paragraph 6.27 to require a marked up copy of the amended drawing figure(s) including annotations indicating the changes made in the corrected drawings.

¶ *6.22.06 Drawings Objected to, Reference Numbers Not in Drawings*

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: **[1]**. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Examiner Note:

1. In bracket 1, specify the reference characters which are not found in the drawings, including the page and line number where they first occur in the specification.
2. This form paragraph may be modified to require or allow the applicant to delete the reference character(s) from the description instead of adding them to the drawing(s).
3. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not

be held in abeyance, and a request to hold objections to the drawings in abeyance will not be considered a bona fide attempt to advance the application to final action. See 37 CFR 1.85(a).

4. This form paragraph may be followed by form paragraph 6.27 to require a marked up copy of the amended drawing figure(s) including annotations indicating the changes made in the corrected drawings.

<

¶ *6.22.07 Drawings Objected to, Reference Numbers Not in Specification*

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: **[1]**. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d) If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Examiner Note:

1. In bracket 1, specify the reference characters which are not found in the specification, including the figure in which they occur.

2. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not be held in abeyance, and a request to hold objections to the drawings in abeyance will not be considered a bona fide attempt to advance the application to final action. See 37 CFR 1.85(a).

3. This form paragraph may be followed by form paragraph 6.27 to require a marked up copy of the amended drawing figure(s) including annotations indicating the changes made in the corrected drawings.

608.02(f) Modifications in Drawings [R-3]

Modifications may not be shown in broken lines on figures which show in solid lines another form of the invention. *Ex parte Badger,* 1901 C.D. 195, 97 O.G. 1596 (Comm'r Pat. 1901).

All modifications described must be illustrated, or the text canceled. (*Ex parte Peck*, 1901 C.D. 136, 96 O.G. 2409 (Comm'r Pat. 1901).) This requirement does not apply to a mere reference to minor variations nor to well-known and conventional parts.

Form paragraph 6.22.05 may be used to require correction.

**>

¶ *6.22.05 Drawings Objected to, Modifications in Same Figure*

The drawings are objected to under 37 CFR 1.84(h)(5) because Figure **[1]** show(s) modified forms of construction in the same view. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Examiner Note:

1. In bracket 1, insert the appropriate Figure number(s).

2. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not be held in abeyance, and a request to hold objections to the drawings in abeyance will not be considered a bona fide attempt to advance the application to final action. See 37 CFR 1.85(a).

3. This form paragraph may be followed by form paragraph 6.27 to require a marked up copy of the amended drawing figure(s) including annotations indicating the changes made in the corrected drawings.

<

608.02(g) Illustration of Prior Art [R-3]

Figures showing the prior art are usually unnecessary and should be canceled. *Ex parte Elliott*, 1904 C.D. 103, 109 O.G. 1337 (Comm'r Pat. 1904). However, where needed to understand applicant's invention, they may be retained if designated by a legend such as "Prior Art."

If the prior art figure is not labeled, form paragraph 6.36.01 may be used.

**>

¶ *6.36.01 Illustration of "Prior Art"*

Figure **[1]** should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

<

608.02(h) Replacement Drawings [R-3]

When an amendment is filed stating that replacement sheets of drawings are filed with the amendment and such drawings have not been transmitted to the Technology Center (TC), the technical support staff in the TC should attempt to locate the missing drawings. In the next communication of the examiner, the applicant is notified if the drawings have been received and whether or not the replacement drawings have been entered in the application. If the replacement drawings are not entered, the examiner should give the applicant a concise and complete explanation as to why the drawings were not entered.

Replacement drawings, together with the file wrapper, may be routed through the TC Draftsperson if the examiner would like the draftsperson's assistance in identifying errors in the drawings. For Image File Wrapper (IFW) processing, see IFW Manual. The draftsperson will note any defects of the drawings on a PTO-948.

The examiner should not overlook such factors as new matter, the necessity for the replacement sheets and consistency with other sheets. The technical support staff will routinely enter all replacement sheets in the contents of the application. For IFW processing, see IFW Manual. If the examiner decides that the sheets should not be entered, the examiner should provide the applicant with the complete, explicit reasoning for the denial of entry. The entries made by the technical support staff will be marked "(N.E.)."

Form paragraph 6.37 may be used to acknowledge replacement drawing sheets.

**>

¶ *6.37 Acknowledgment of Replacement Drawing Sheets*

The drawings were received on **[1]**. These drawings are **[2]**.

Examiner Note:

1. In bracket 2, insert either --acceptable-- or --not acceptable--.
2. If not acceptable because of noncompliance with 37 CFR 1.121(d), an explanation must be provided. Form PTOL-324 may be used instead of this form paragraph to provide the explanation.
3. If not acceptable because of informalities noted on PTO-948, use form paragraph 6.43.

<

Alternatively, PTOL-326 Office Action Summary includes a block for acknowledgment of replacement drawings.

For return of drawing, see MPEP § 608.02(y).

608.02(i) Transfer of Drawings From Prior Applications

Transfer of drawings from a first pending application to another will be made only upon the granting of a petition filed under 37 CFR 1.182 which must set forth a hardship situation requiring such transfer of drawings.

608.02(m) Drawing Prints [R-3]

Preparation and distribution of drawing prints is discussed in MPEP § 508.

Prints are made of acceptable drawings of an application maintained in paper. These prints are kept on top of the papers on the right side of the file wrapper under any bibliographic data sheet. See MPEP § 719.01(b). No drawing prints are made for an image file wrapper (IFW) application.

The original drawing, of course, should not be marked up by the examiner. Where, as in an electrical wiring application, it is desirable to identify the various circuits by different colors, or in any more or less complex application, it is advantageous to apply legends, arrows, or other indicia, the drawing prints may be used and retained unofficially in the file since the drawing prints are no longer needed for a record of the drawings as originally filed. If the application is maintained in paper, the drawing prints, as colored by the examiner, may be retained in the paper application

file. If the application is an IFW application, the drawing prints may be retained by the examiner.

Prints remain in the paper application file at all times except as provided in MPEP § 608.02(c).

**

608.02(n) Duplicate Prints in Patentability Report Applications

In patentability report cases having drawings, the examiner to whom the application is assigned should normally obtain a duplicate set of the interference prints of the drawing for filing in the Technology Center (TC) to which the application is referred.

When an application that has had patentability report prosecution is passed for issue or becomes abandoned, notification of this fact is given by the TC having jurisdiction of the case to each TC that submitted a patentability report. The examiner of each such reporting TC notes the date of allowance or abandonment on his or her duplicate set of prints. At such time as these prints become of no value to the reporting TC, they may be destroyed.

For patentability reports, see MPEP § 705 to § 705.01(f).

608.02(o) Notations Entered on Drawing [R-2]

**

>Drawings are no longer endorsed with an application number or receipt date.< A draftsperson's "stamp" to indicate approval is no longer required on patent drawings, and these stamps are no longer used by draftspersons. If the drawings in an allowed application are not indicated as having been disapproved or canceled, the most-recently filed drawings will be used for printing the patent.

608.02(p) Correction of Drawings [R-3]

37 CFR 1.121. Manner of making amendments in application.

*****

(d) **>*Drawings*: One or more application drawings shall be amended in the following manner: Any changes to an application drawing must be in compliance with § 1.84 and must be submitted on a replacement sheet of drawings which shall be an attachment to the amendment document and, in the top margin, labeled "Replacement Sheet". Any replacement sheet of drawings shall include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is amended. Any new sheet of drawings containing an additional figure must be labeled in the top margin as "New Sheet". All changes to the drawings shall be explained, in detail, in either the drawing amendment or remarks section of the amendment paper.

(1) A marked-up copy of any amended drawing figure, including annotations indicating the changes made, may be included. The marked-up copy must be clearly labeled as "Annotated Sheet" and must be presented in the amendment or remarks section that explains the change to the drawings.

(2) A marked-up copy of any amended drawing figure, including annotations indicating the changes made, must be provided when required by the examiner.<

*****

37 CFR 1.85. Corrections to drawings.

(a) A utility or plant application will not be placed on the files for examination until objections to the drawings have been corrected. Except as provided in § 1.215(c), any patent application publication will not include drawings filed after the application has been placed on the files for examination. Unless applicant is otherwise notified in an Office action, objections to the drawings in a utility or plant application will not be held in abeyance, and a request to hold objections to the drawings in abeyance will not be considered a *bona fide* attempt to advance the application to final action (§ 1.135(c)). If a drawing in a design application meets the requirements of § 1.84(e), (f), and (g) and is suitable for reproduction, but is not otherwise in compliance with § 1.84, the drawing may be admitted for examination.

(b) The Office will not release drawings for purposes of correction. If corrections are necessary, new corrected drawings must be submitted within the time set by the Office.

(c) **>If a corrected drawing is required or if a drawing does not comply with § 1.84 at the time an application is allowed, the Office may notify the applicant and set a three-month period of time from the mail date of the notice of allowability within which the applicant must file a corrected drawing in compliance with § 1.84 to avoid abandonment. This time period is not extendable under § 1.136(a) or § 1.136(b).<

**>See also< MPEP § 608.02(b). For correction at allowance and issue, see MPEP § 608.02(w) and MPEP § 1302.05.

A canceled figure may be reinstated. An amendment should be made to the specification adding the brief description of the view if a canceled figure is reinstated.

The following form paragraphs may be used to notify applicants of drawing corrections.

¶ *6.39 USPTO No Longer Makes Drawing Changes*

The United States Patent and Trademark Office no longer makes drawing changes. See 1017 O.G. 4. It is applicant's responsibility to ensure that the drawings are corrected. Corrections must be made in accordance with the instructions below.

Examiner Note:

This form paragraph is to be used whenever the applicant has filed a request for the Office to make drawing changes. Form paragraph 6.40 must follow.

**>

¶ *6.40 Information on How To Effect Drawing Changes*

INFORMATION ON HOW TO EFFECT DRAWING CHANGES

Replacement Drawing Sheets

Drawing changes must be made by presenting replacement sheets which incorporate the desired changes and which comply with 37 CFR 1.84. An explanation of the changes made must be presented either in the drawing amendments section, or remarks, section of the amendment paper. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). A replacement sheet must include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of the amended drawing(s) must not be labeled as "amended." If the changes to the drawing figure(s) are not accepted by the examiner, applicant will be notified of any required corrective action in the next Office action. No further drawing submission will be required, unless applicant is notified.

Identifying indicia, if provided, should include the title of the invention, inventor's name, and application number, or docket number (if any) if an application number has not been assigned to the application. If this information is provided, it must be placed on the front of each sheet and within the top margin.

Annotated Drawing Sheets

A marked-up copy of any amended drawing figure, including annotations indicating the changes made, may be submitted or required by the examiner. The annotated drawing sheets must be clearly labeled as "Annotated Sheet" and must be presented in the amendment or remarks section that explains the change(s) to the drawings.

Timing of Corrections

Applicant is required to submit acceptable corrected drawings within the time period set in the Office action. See 37 CFR 1.85(a). Failure to take corrective action within the set period will result in ABANDONMENT of the application.

If corrected drawings are required in a Notice of Allowability (PTOL-37), the new drawings MUST be filed within the THREE MONTH shortened statutory period set for reply in the "Notice of Allowability." Extensions of time may NOT be obtained under the provisions of 37 CFR 1.136 for filing the corrected drawings after the mailing of a Notice of Allowability.

<

¶ *6.41 Reminder That USPTO No Longer Makes Drawing Changes*

Applicant is reminded that the U.S. Patent and Trademark Office no longer makes drawing changes and that it is applicant's responsibility to ensure that the drawings are corrected in accordance with the instructions set forth in the paper mailed on **[1]**.

Examiner Note:

This form paragraph is to be used when the applicant has been previously provided with information on how to effect drawing changes (i.e., either by way of form paragraph 6.40 or a PTO-948 has been previously sent).

¶ *6.42 Reminder That Applicant Must Make Drawing Changes*

Applicant is reminded that in order to avoid an abandonment of this application, the drawings must be corrected in accordance with the instructions set forth in the paper mailed on **[1]**.

Examiner Note:

This form paragraph is to be used when allowing the application and when applicant has previously been provided with information on how to effect drawing changes (i.e., by way of form paragraph 6.40 or a PTO-948 has been previously sent).

¶ *6.43 Drawings Contain Informalities, Application Allowed*

The drawings filed on**[1]** are acceptable subject to correction of the informalities indicated on the attached "Notice of Draftsperson's Patent Drawing Review," PTO-948. In order to avoid abandonment of this application, correction is required in reply to the Office action. The correction will not be held in abeyance.

Examiner Note:

Use this form paragraph when allowing the application, particularly at time of first action issue. Form paragraph 6.40 or 6.41 must follow.

¶ *6.47 Examiner's Amendment Involving Drawing Changes*

The following changes to the drawings have been approved by the examiner and agreed upon by applicant: **[1]**. In order to avoid abandonment of the application, applicant must make these agreed upon drawing changes.

Examiner Note:

1. In bracket 1, insert the agreed upon drawing changes.
2. Form paragraphs 6.39 and 6.40 should follow, as appropriate.

608.02(q) Conditions Precedent to Amendment of Drawing

See MPEP § 507 for changes to the patent drawings for purposes of a patent application publication.

If applicant wishes to amend the original drawings, at his or her own initiative, applicant is encouraged to submit new drawings as soon as possible, and preferably before allowance of the application.

608.02(t) Cancelation of Figures [R-2]

**>If a drawing figure is canceled, a replacement sheet of drawings must be submitted without the figure (see 37 CFR 1.121(d)). If the canceled drawing figure was the only drawing on the sheet, then only a marked-up copy of the drawing sheet including an annotation showing that the drawing has been cancelled is required. The marked-up (annotated) copy must be clearly labeled as 'Annotated Sheet' and must be presented in the amendment or remarks section of the amendment document which explains the changes to the drawings (see 37 CFR 1.121(d)(1)). The brief description of the drawings should also be amended to reflect this change.<

608.02(v) Drawing Changes Which Require Annotated Sheets [R-2]

When changes are to be made in the drawing itself, other than mere changes in reference characters, designations of figures, or inking over lines pale and rough, **>a< marked-up copy of the drawing should be filed with a replacement drawing. >The marked-up copy must be clearly labeled as "Annotated Sheet." See 37 CFR 1.84(c) and 1.121(d).< Ordinarily, broken lines may be changed to full without a sketch.

Annotated sheets filed by an applicant and used for correction of the drawing will not be returned. All such annotated sheets must be in ink or permanent prints.

608.02(w) Drawing Changes Which May Be Made Without Applicant's *>Annotated Sheets< [R-2]

Where an application is ready for issue except for a slight defect in the drawing not involving change in structure, the examiner will prepare a letter to the applicant indicating the change to be made and **>include a marked-up copy of< the drawing >showing< the addition or alteration to be made. The marked-up copy of the drawing should be attached to the letter to the applicant >and a copy placed in the application file<.

The correction must be made at applicant's expense.

As a guide to the examiner, the following corrections are illustrative of those that may be made by **>an annotated sheet<:

(A) Adding two or three reference characters or exponents.

(B) Changing one or two numerals or figure ordinals. *Garrett v. Cox*, 233 F.2d 343, 346, 110 USPQ 52, 54 (CCPA 1956).

(C) Removing superfluous matter.

(D) Adding or reversing directional arrows.

(E) Changing Roman Numerals to Arabic Numerals to agree with specification.

(F) Adding section lines or brackets, where easily executed.

(G) Changing lead lines.

(H) Correcting misspelled legends.

608.02(x) ** Drawing Corrections >or Changes Accepted Unless Notified Otherwise< [R-2]

**>Drawing corrections or changes will be entered at the time they are presented, unless applicant is notified to the contrary by the examiner in the action following the amended drawing submission.<

CORRECTION **>OR CHANGE NOT ACCEPTED<

Where the **>corrected or changed drawing is not accepted<, for example, because the *>submitted corrections or< changes are erroneous, or involve new matter or ** do not include all necessary corrections, the >applicant will be notified and informed of any required corrective action in the next Office action. The <examiner should explicitly and clearly set forth all the reasons for not approving the corrections to the drawings in the next communication to the applicant. See MPEP § 608.02(p) for suggested form paragraphs that may be used by examiners to notify applicants of drawing corrections.

608.02(y) Return of Drawing [R-2]

**>Drawings< will not be returned to the applicant.

608.02(z) Allowable Applications Needing Drawing Corrections or Corrected Drawings [R-7]

If an application is being allowed, and corrected drawings have not been filed, form PTOL-37 provides an appropriate check box for requiring corrected drawings.

Allowable applications with drawings that were indicated by the applicant to be informal should be turned in for counting and forwarding to the **>Office of Data Management< without the drawings having been corrected. Examiners should not require new drawings merely because the applicant indicated that the drawings submitted on filing were informal. If at allowance, the examiner determines that correction is required, the drawings requiring correction should be placed as the top papers in the center fold of the file wrapper, if the application is maintained in paper. For Image File Wrapper (IFW) processing, see IFW Manual. A proposed drawing correction, for example a drawing sheet with corrections marked in pencil, should be stapled to the right outside flap of the file wrapper over the area having the search information. Care should be taken to make certain that the corrections have been approved by the examiner. Such approval should be made by the examiner prior to counting the allowance of the application by writing "Approved," the examiner's initials or full name, and the date, on the front page of the proposed drawing corrections. In IFW applications, generally, the most recently filed drawings will be used for printing, unless they have been indicated as "Not Entered."

Extensions of time to provide acceptable drawings after the mailing of a notice of allowability are no longer permitted. If the Office of *>Data Management< receives drawings that cannot be scanned or are otherwise unacceptable for publication, the Office of *>Data Management< will mail a requirement for corrected drawings, giving applicant a shortened statutory period of two months (with no extensions of time permitted) to reply. The drawings will ordinarily not be returned to the examiner for corrections.

I. APPLICATIONS HAVING LOST DRAWINGS

A replacement drawing should be obtained from the Office of **>Patent Application Processing's< records of the application as originally filed. If the reproduced drawings are not acceptable for publishing, applicant should be required to submit corrected drawings.

The Notice of Allowability is verified and printed using PALM, and the Notice is mailed to the applicant.

The application is then forwarded to Licensing and Review or the **>Office of Data Management<, as appropriate, using the PALM transaction code after the application has been revised for issue.

II. UTILITY PATENT APPLICATIONS RECEIVING FORMAL DRAWINGS AFTER THE NOTICE OF ALLOWABILITY

Where replacement drawings are received in utility patent applications examined with informal drawings and the Notice of Allowability was mailed prior to the receipt of the replacement drawings, the technical support staff should forward the replacement drawings to the **>Office of Data Management<. Submission to the examiner is not necessary unless an amendment accompanies the drawings which changes the specification, such as where the description of figures is added or canceled.
**

III. ** 37 CFR 1.312 AMENDMENTS

For information on handling amendments to drawings filed under 37 CFR 1.312, see MPEP § 714.16.

608.03 Models, Exhibits, Specimens [R-3]

35 U.S.C. 114. Models, specimens.

The Director may require the applicant to furnish a model of convenient size to exhibit advantageously the several parts of his invention.

When the invention relates to a composition of matter, the Director may require the applicant to furnish specimens or ingredients for the purpose of inspection or experiment.

37 CFR 1.91. Models or exhibits not generally admitted as part of application or patent.

(a) A model or exhibit will not be admitted as part of the record of an application unless it:

(1) Substantially conforms to the requirements of § 1.52 or § 1.84;

(2) Is specifically required by the Office; or

(3) Is filed with a petition under this section including:

(i) The fee set forth in § 1.17(h); and

(ii) An explanation of why entry of the model or exhibit in the file record is necessary to demonstrate patentability.

(b) Notwithstanding the provisions of paragraph (a) of this section, a model, working model, or other physical exhibit may be required by the Office if deemed necessary for any purpose in examination of the application.

(c) Unless the model or exhibit substantially conforms to the requirements of § 1.52 or § 1.84 under paragraph (a)(1) of this section, it must be accompanied by photographs that show multiple views of the material features of the model or exhibit and that substantially conform to the requirements of § 1.84.

Models or exhibits are generally not admitted as part of an application or patent unless the requirements of 37 CFR 1.91 are satisfied.

With the exception of cases involving perpetual motion, a model is not ordinarily required by the Office to demonstrate the operability of a device. If operability of a device is questioned, the applicant must establish it to the satisfaction of the examiner, but he or she may choose his or her own way of so doing.

**

>Models or exhibits that are required by the Office or filed with a petition under 37 CFR 1.91(a)(3) must be accompanied by photographs that (A) show multiple views of the material features of the model or exhibit, and (B) substantially conform to the requirements of 37 CFR 1.84. See 37 CFR 1.91(c). Material features are considered to be those features which represent that portion(s) of the model or exhibit forming the basis for which the model or exhibit has been submitted. Where a video or DVD or similar item is submitted as a model or exhibit, applicant must submit photographs of what is depicted in the video or DVD (the content of the material such as a still image single frame of a movie) and not a photograph of a video cassette, DVD disc or compact disc.<

37 CFR 1.93. Specimens.

When the invention relates to a composition of matter, the applicant may be required to furnish specimens of the composition, or of its ingredients or intermediates, for the purpose of inspection or experiment.

See MPEP Chapter 2400 regarding treatment of biotechnology deposits.

608.03(a) Handling of Models, Exhibits, and Specimens [R-3]

All models and exhibits received in the U.S. Patent and Trademark Office should be taken to the Technology Center (TC) assigned the related application for examination. The receipt of all models and exhibits which are to be entered into the application file record must be properly recorded on the "Contents" portion of the application file wrapper or, if the application is an Image File Wrapper (IFW) application, on an artifact sheet. For IFW processing, see IFW Manual section 3.6.

A label indicating the application number, filing date, and attorney's name and address should be attached to the model or exhibit so that it is clearly identified and easily returned**>. The Office may return the model, exhibit, or specimen, at any time once it is no longer necessary for the conduct of business before the Office and return of the model or exhibit is appropriate.< See 37 CFR 1.94.

If the model or exhibit cannot be conveniently stored within the application file wrapper or in an artifact folder, it should not be accepted.

Models and exhibits may be presented for demonstration purposes during an interview. The models and exhibits should be taken away by applicant or his/her attorney or agent at the conclusion of the interview since models or exhibits are generally not permitted to be admitted as part of the application or patent unless the requirements of 37 CFR 1.91 are satisfied. See MPEP § 713.08. A full description of what was demonstrated or exhibited during the interview must be made of record. See 37 CFR 1.133. Any model or exhibit that is left with the examiner at the conclusion of the interview, which is not made part of the application or patent, may be disposed of at the discretion of the Office.

37 CFR 1.94. Return of models, exhibits or specimens.

**>

(a) Models, exhibits, or specimens may be returned to the applicant if no longer necessary for the conduct of business before the Office. When applicant is notified that a model, exhibit, or specimen is no longer necessary for the conduct of business before the Office and will be returned, applicant must arrange for the return of the model, exhibit, or specimen at the applicant's expense. The Office will dispose of perishables without notice to applicant unless applicant notifies the Office upon submission of the model, exhibit or specimen that a return is desired and makes arrangements for its return promptly upon notification by the

Office that the model, exhibit or specimen is no longer necessary for the conduct of business before the Office.

(b) Applicant is responsible for retaining the actual model, exhibit, or specimen for the enforceable life of any patent resulting from the application. The provisions of this paragraph do not apply to a model or exhibit that substantially conforms to the requirements of § 1.52 or § 1.84, where the model or exhibit has been described by photographs that substantially conform to § 1.84, or where the model, exhibit or specimen is perishable.

(c) Where applicant is notified, pursuant to paragraph (a) of this section, of the need to arrange for return of a model, exhibit or specimen, applicant must arrange for the return within the period set in such notice, to avoid disposal of the model, exhibit or specimen by the Office. Extensions of time are available under § 1.136, except in the case of perishables. Failure to establish that the return of the item has been arranged for within the period set or failure to have the item removed from Office storage within a reasonable amount of time notwithstanding any arrangement for return, will permit the Office to dispose of the model, exhibit or specimen.<

**>When applicant is notified that a model, exhibit, or specimen is no longer necessary for the conduct of business before the Office and will be returned, applicant must make arrangements for the return of the model, exhibit, or specimen at applicant's expense. The Office may return the model, exhibit, or specimen at any time once it is no longer necessary for the conduct of business and need not wait until the close of prosecution or later. Where the model, exhibit, or specimen is a perishable, the Office will be presumed to have permission to dispose of the item without notice to applicant, unless applicant notifies the Office upon submission of the item that a return is desired and arrangements are promptly made for the item's return upon notification by the Office.

For models, exhibits, or specimens that are returned, applicant is responsible for retaining the actual model, exhibit, or specimen for the enforceable life of any patent resulting from the application except where: (A) the model or exhibit substantially conforms to the requirements of 37 CFR 1.52 or 1.84; (B) the model or exhibit has been described by photographs that substantially conform to 37 CFR 1.84; or (C) the model, exhibit, or specimen is perishable. Applicant may be called upon to resubmit such returned model, exhibit, or specimen under appropriate circumstances, such as where a continuing application is filed.

The notification to applicant that a model, exhibit, or specimen is no longer necessary for the conduct of business before the Office will set a time period within which applicant must make arrangements for a return of a model, exhibit, or specimen. The time period is normally one month from the mailing date of the notification, unless the item is perishable, in which case the time period will be shorter. Extensions of time are available under 37 CFR 1.136, except in the case of perishables. Failure by applicant to establish that arrangements for the return of a model, exhibit, or specimen have been made within the time period set in the notice will result in the disposal of the model, exhibit, or specimen by the Office.

Form paragraph 6.48 may be used to notify applicant that the model, exhibit, or specimen is no longer necessary for the conduct of business before the Office and that applicant must make arrangement for the return of the model, exhibit, or specimen.<

>

¶ *6.48 Model, Exhibit, or Specimen - Applicant Must Make Arrangements for Return*

The **[1]** is no longer necessary for the conduct of business before the Office. Applicant must arrange for the return of the model, exhibit or specimen at the applicant's expense in accordance with 37 CFR 1.94(a).

Applicant is given ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing date of this letter to make arrangements for return of the above-identified model, exhibit, or specimen to avoid its disposal in accordance with 37 CFR 1.94(c). Extensions of time are available under 37 CFR 1.136, except in the case of perishables.

Applicant is responsible for retaining the actual model, exhibit, or specimen for the enforceable life of any patent resulting from the application unless one of the exceptions set forth in 37 CFR 1.94(b) applies.

Examiner Note:

1. In bracket 1, identify the model, exhibit, or specimen that is no longer needed by the Office.

2. The Office will dispose of **perishables** without notice to Applicant unless applicant notifies the Office upon submission of the model, exhibit or specimen that a return is desired and makes arrangements for its return promptly upon notification by the Office that the model, exhibit or specimen is no longer necessary for the conduct of business before the Office.

For plant specimens, see MPEP § 1607 and 37 CFR 1.166.

37 CFR 1.95. Copies of exhibits.

Copies of models or other physical exhibits will not ordinarily be furnished by the Office, and any model or exhibit in an application or patent shall not be taken from the Office except in the custody of an employee of the Office specially authorized by the Director.

608.04 New Matter

37 CFR 1.121. Manner of making amendments in applications.

*****

(f) *No new matter*. No amendment may introduce new matter into the disclosure of an application.

*****

In establishing a disclosure, applicant may rely not only on the specification and drawing as filed but also on the original claims if their content justifies it. See MPEP § 608.01(l).

While amendments to the specification and claims involving new matter are ordinarily entered, such matter is required to be canceled from the descriptive portion of the specification, and the claims affected are rejected under 35 U.S.C. 112, first paragraph.

When new matter is introduced into the specification, the amendment should be objected to under 35 U.S.C. 132 (35 U.S.C. 251 if a reissue application) and a requirement made to cancel the new matter. The subject matter which is considered to be new matter must be clearly identified by the examiner. If the new matter has been entered into the claims or affects the scope of the claims, the claims affected should be rejected under 35 U.S.C. 112, first paragraph, because the new matter is not described in the application as originally filed.

A "new matter" amendment of the drawing is ordinarily not entered; neither is an additional or substitute sheet containing "new matter" even though provisionally entered by the TC technical support staff. See MPEP § 608.02(h).

The examiner's holding of new matter may be petitionable or appealable. See MPEP § 608.04(c).

For new matter in reissue application, see MPEP § 1411.02. For new matter in substitute specification, see MPEP § 608.01(q).

Note: No amendment is permitted in a provisional application after it receives a filing date.

608.04(a) Matter Not in Original Specification, Claims, or Drawings

Matter not in the original specification, claims, or drawings is usually new matter. Depending on circumstances such as the adequacy of the original disclosure, the addition of inherent characteristics such as chemical or physical properties, a new structural formula or a new use may be new matter. See *Ex parte Vander Wal*, 109 USPQ 119, 1956 C.D. 11, 705 O.G. 5 (Bd. App. 1955) (physical properties), *Ex parte Fox*, 128 USPQ 157, 1960 C.D. 28, 761 O.G. 906 (Bd. App. 1957) (new formula) and *Ex parte Ayers*, 108 USPQ 444 (Bd. App. 1955) (new use). For rejection of claim involving new matter, see MPEP § 706.03(o).

For completeness of disclosure, see MPEP § 608.01(p). For trademarks and tradenames, see MPEP § 608.01(v).

608.04(b) New Matter by Preliminary Amendment [R-3]

**>A preliminary amendment present on the filing date of the application (e.g., filed along with the filing of the application) is considered a part of the original disclosure. See MPEP § 714.01(e) and § 602. A preliminary amendment filed after the filing date of the application is not part of the original disclosure of the application. See MPEP § 706.03(o). For applications filed on or after September 21, 2004, the Office will automatically treat any preliminary amendment under 37 CFR 1.115(a)(1) that is present on the filing date of the application as part of the original disclosure. If a preliminary amendment is present on the filing date of an application, and the oath or declaration under 37 CFR 1.63 does not also refer to the preliminary amendment, the normal operating procedure is to not screen the preliminary amendment to determine whether it contains subject matter not otherwise included in the specification or drawings of the application as filed (i.e., subject matter that is "new matter" relative to the specification and drawings of the application). As a result, it is applicant's obligation to review the preliminary amendment to ensure that it does not contain subject matter not otherwise included in the specification or drawings of the application as filed. If the preliminary amendment contains subject matter not otherwise included in the specification and drawings of the application, applicant must provide a supplemental oath or declaration under 37 CFR 1.67 referring to such preliminary amendment. The failure to submit a supplemental oath or declaration under 37 CFR 1.67 referring to a preliminary amendment that contains subject matter not otherwise included in the specification or drawings of the appli-

cation as filed removes safeguards that are implied in the oath or declaration requirements that the inventor review and understand the contents of the application, and acknowledge the duty to disclose to the Office all information known to be material to patentability as defined in 37 CFR 1.56.

Applicants can avoid the need to file an oath or declaration referring to any preliminary amendment by incorporating any desired amendments into the text of the specification including a new set of claims when filing the application instead of filing a preliminary amendment, even where the application is a continuation or divisional application of a prior-filed application. Furthermore, applicants are strongly encouraged to avoid submitting any preliminary amendments so as to minimize the burden on the Office in processing preliminary amendments and reduce delays in processing the application.

During examination, if an examiner determines that a preliminary amendment that is present on the filing date of the application includes subject matter not otherwise supported by the originally filed specification and drawings, and the oath or declaration does not refer to the preliminary amendment, the examiner may require the applicant to file a supplemental oath or declaration under 37 CFR 1.67 referring to the preliminary amendment. In response to the requirement, applicant must submit (1) an oath or declaration that refers to the preliminary amendment, (2) an amendment that cancels the subject matter not supported by the originally filed specification and drawings, or (3) a request for reconsideration.

For applications filed prior to September 21, 2004, a preliminary amendment that was present on the filing date of an application may be considered a part of the original disclosure if it was referred to in a first filed oath or declaration in compliance with 37 CFR 1.63. If the preliminary amendment was not referred to in the oath or declaration, applicant will be required to submit a supplemental oath or declaration under 37 CFR 1.67 referring to both the application and the preliminary amendment filed with the original application. A surcharge under 37 CFR 1.16(f) will also be required unless it has been previously paid.<

608.04(c) Review of Examiner's Holding of New Matter

Where the new matter is confined to amendments to the specification, review of the examiner's requirement for cancelation is by way of petition. But where the alleged new matter is introduced into or affects the claims, thus necessitating their rejection on this ground, the question becomes an appealable one, and should not be considered on petition even though that new matter has been introduced into the specification also. 37 CFR 1.181 and 37 CFR 1.191 afford the explanation of this seemingly inconsistent practice as affecting new matter in the specification.

608.05 Sequence Listing Table, or Computer Program Listing Appendix Submitted on a Compact Disc [R-7]

37 CFR 1.52. Language, paper, writing, margins, compact disc specifications.

*****

(e) *Electronic documents that are to become part of the permanent United States Patent and Trademark Office records in the file of a patent application or reexamination proceeding*.

(1) The following documents may be submitted to the Office on a compact disc in compliance with this paragraph:

(i) A computer program listing (see § 1.96);

(ii) A "Sequence Listing" (submitted under § 1.821(c)); or

(iii) Any individual table (see § 1.58) if the table is more than 50 pages in length, or if the total number of pages of all of the tables in an application exceeds 100 pages in length, where a table page is a page printed on paper in conformance with paragraph (b) of this section and § 1.58(c).

(2) A compact disc as used in this part means a Compact Disc-Read Only Memory (CD-ROM) or a Compact Disc-Recordable (CD-R) in compliance with this paragraph. A CD-ROM is a "read-only" medium on which the data is pressed into the disc so that it cannot be changed or erased. A CD-R is a "write once" medium on which once the data is recorded, it is permanent and cannot be changed or erased.

(3)(i) Each compact disc must conform to the International Standards Organization (ISO) 9660 standard, and the contents of each compact disc must be in compliance with the American Standard Code for Information Interchange (ASCII). CD-R discs must be finalized so that they are closed to further writing to the CD-R.

(ii) Each compact disc must be enclosed in a hard compact disc case within an unsealed padded and protective mailing envelope and accompanied by a transmittal letter on paper in

accordance with paragraph (a) of this section. The transmittal letter must list for each compact disc the machine format (e.g., IBM-PC, Macintosh), the operating system compatibility (e.g., MS-DOS, MS-Windows, Macintosh, Unix), a list of files contained on the compact disc including their names, sizes in bytes, and dates of creation, plus any other special information that is necessary to identify, maintain, and interpret (e.g., tables in landscape orientation should be identified as landscape orientation or be identified when inquired about) the information on the compact disc. Compact discs submitted to the Office will not be returned to the applicant.

(4) Any compact disc must be submitted in duplicate unless it contains only the "Sequence Listing" in computer readable form required by § 1.821(e). The compact disc and duplicate copy must be labeled "Copy 1" and "Copy 2," respectively. The transmittal letter which accompanies the compact disc must include a statement that the two compact discs are identical. In the event that the two compact discs are not identical, the Office will use the compact disc labeled "Copy 1" for further processing. Any amendment to the information on a compact disc must be by way of a replacement compact disc in compliance with this paragraph containing the substitute information, and must be accompanied by a statement that the replacement compact disc contains no new matter. The compact disc and copy must be labeled "COPY 1 REPLACEMENT MM/DD/YYYY" (with the month, day and year of creation indicated), and "COPY 2 REPLACEMENT MM/DD/YYYY," respectively.

(5) The specification must contain an incorporation-by-reference of the material on the compact disc in a separate paragraph (§ 1.77(b)(5)), identifying each compact disc by the names of the files contained on each of the compact discs, their date of creation and their sizes in bytes. The Office may require applicant to amend the specification to include in the paper portion any part of the specification previously submitted on compact disc.<

(6) A compact disc must also be labeled with the following information:

(i) The name of each inventor (if known);

(ii) Title of the invention;

(iii) The docket number, or application number if known, used by the person filing the application to identify the application; and

(iv) A creation date of the compact disc.

(v) If multiple compact discs are submitted, the label shall indicate their order (*e.g.* "1 of X").

(vi) An indication that the disk is "Copy 1" or "Copy 2" of the submission. See paragraph (b)(4) of this section.

(7) If a file is unreadable on both copies of the disc, the unreadable file will be treated as not having been submitted. A file is unreadable if, for example, it is of a format that does not comply with the requirements of paragraph (e)(3) of this section, it is corrupted by a computer virus, or it is written onto a defective compact disc.

(f)(1) Any sequence listing in an electronic medium in compliance with §§ 1.52(e) and 1.821(c) or (e), and any computer program listing filed in an electronic medium in compliance with §§ 1.52(e) and 1.96, will be excluded when determining the application size fee required by § 1.16(s) or § 1.492(j). For purposes of determining the application size fee required by § 1.16(s) or § 1.492(j), for an application the specification and drawings of which, excluding any sequence listing in compliance with § 1.821(c) or (e), and any computer program listing filed in an electronic medium in compliance with §§ 1.52(e) and 1.96, are submitted in whole or in part on an electronic medium other than the Office electronic filing system, each three kilobytes of content submitted on an electronic medium shall be counted as a sheet of paper.

(2) Except as otherwise provided in this paragraph, the paper size equivalent of the specification and drawings of an application submitted via the Office electronic filing system will be considered to be the number of sheets of paper present in the specification and drawings of the application when entered into the Office file wrapper after being rendered by the Office electronic filing system for purposes of computing the application size fee required by § 1.16(s). Any sequence listing in compliance with § 1.821(c) or (e), and any computer program listing in compliance with § 1.96, submitted via the Office electronic filing system will be excluded when determining the application size fee required by § 1.16(s) if the listing is submitted in ACSII text as part of an associated file.

37 CFR 1.77. Arrangement of application elements.

(a) The elements of the application, if applicable, should appear in the following order:

(1) Utility application transmittal form.

(2) Fee transmittal form.

(3) Application data sheet (see § 1.76).

(4) Specification.

(5) Drawings.

(6) Executed oath or declaration.

(b) The specification should include the following sections in order:

(1) Title of the invention, which may be accompanied by an introductory portion stating the name, citizenship, and residence of the applicant (unless included in the application data sheet).

(2) Cross-reference to related applications (unless included in the application data sheet).

(3) Statement regarding federally sponsored research or development.

(4) The names of the parties to a joint research agreement.

(5) Reference to a "Sequence Listing," a table, or a computer program listing appendix submitted on a compact disc and an incorporation-by-reference of the material on the compact disc (see § 1.52(e)(5)). The total number of compact discs including duplicates and the files on each compact disc shall be specified.

(6) Background of the invention.

(7) Brief summary of the invention.

(8) Brief description of the several views of the drawing.

(9) Detailed description of the invention.

(10) A claim or claims.

(11) Abstract of the disclosure.

(12) "Sequence Listing," if on paper (see §§ 1.821 through 1.825).

(c) The text of the specification sections defined in paragraphs (b)(1) through (b)(12) of this section, if applicable, should be preceded by a section heading in uppercase and without underlining or bold type.

Special procedures for the presentation of large tables, computer program listings and certain biosequences on compact discs are set forth in 37 CFR 1.52(e). Use of compact discs is desirable in view of the lengthy data listings being submitted as part of the disclosure in some patent applications. Such listings are often several hundred pages or more in length. By filing and publishing such data listings on compact disc rather than on paper, substantial cost savings can result to the applicants, the public, and the U.S. Patent and Trademark Office.

BACKGROUND

A compact disc submitted under 37 CFR 1.52(e) must either be a CD-ROM or a CD-R. A CD-ROM is made by a process of pressing the disc from a master template; the data cannot be erased or rewritten. A CD-R is a compact disc that has a recording medium only capable of writing once. CD-RW type media which are erasable and rewriteable are not acceptable. Limiting the media types to CD-ROM and CD-R media will ensure the longevity and integrity of the data submitted. CD-R discs must be finalized so that they are closed to further writing to the CD-R. The files stored on the compact disc must contain only ASCII characters. No non-ASCII characters or proprietary file formats are permitted. A text viewer is recommended for viewing ASCII files. While virtually any word processor may be used to view an ASCII file, care must be taken since a word processor will often not distinguish ASCII and non-ASCII files when displayed. For example, a word processor normally does not display hidden proprietary non-ASCII characters used for formatting when viewing a non-ASCII word processor file.

Compact disc(s) filed on the date that the application was accorded a filing date are to be treated as part of the originally filed disclosure even if the requisite "incorporation by reference" statement (see 37 CFR 1.77(b)(5)) is omitted. Similarly, if a preliminary amendment that accompanies the application when it is filed in the Office is identified in the oath or declaration, and the preliminary amendment includes compact disc(s), the compact disc(s) will be treated as part of the original disclosure. The compact disc(s) is considered part of the original disclosure by virtue of its inclusion with the application on the date the application is accorded a filing date. The incorporation by reference statement of the material on the compact disc is required to be part of the specification to allow the Office the option of separately printing the material on compact disc. The examiner should require applicant(s) to insert this statement if it is omitted or the examiner may insert the statement by examiner's amendment at the time of allowance.

37 CFR 1.52(e)(3)(ii) requires that each compact disc must be enclosed in a hard compact disc case within an unsealed padded and protective mailing envelope and accompanied by a transmittal letter on paper in accordance with 37 CFR 1.52(a). The transmittal letter must list for each compact disc the machine format (e.g., IBM-PC, Macintosh), the operating system compatibility (e.g., MS-DOS, MS-Windows, Macintosh, Unix), a list of files contained on the compact disc including their names, sizes in bytes, and dates of creation, plus any other special information that is necessary to identify, maintain, and interpret the information on the compact disc. Compact discs submitted to the Office will not be returned to the applicant.

All compact discs submitted under 37 CFR 1.52(e) must be submitted in duplicate labeled as "copy 1" and "copy 2" respectively. If more than one compact disc is required to hold all of the information, each compact disc must be submitted in duplicate to form two sets of discs: one set labeled "copy 1" and a second set labeled "copy 2." Both disc copies should initially be routed to the Office of **>Patent Application Processing (OPAP)<. The compact discs will be checked by *>OPAP< for viruses, readability, the presence of non-ASCII files, and compliance with the file and disc labeling requirements. *>OPAP< will retain one copy of the discs and place the other copy in a holder fastened into the application file jacket. For Image File Wrapper (IFW) processing, see IFW Manual sections 2.2 and 3.6. In the event that there is not a complete set of files on both copies of the originally filed discs, *>OPAP< will retain the originally filed discs and send a notice to the applicant to submit an additional complete copy. For provisional applications, *>OPAP< will provide applicant notification and, where appropriate, require correction for virus

infected compact discs, unreadable compact discs (or unreadable files thereon), and missing duplicate discs. An amendment to the material on a compact disc must be done by submitting a replacement compact disc with the amended file(s). The amendment should include a corresponding amendment to the description of the compact disc and the files contained on the compact disc in the paper portion of the specification. A replacement compact disc containing the amended files must contain all of the files of the original compact disc that were not amended. This will insure that the Office, printer, and public can quickly access all of the current files in an application or patent by referencing only the latest set of compact discs.

Compact discs should be stored in the compact disc holder provided in each application file. The compact discs, especially the non-label side, should not be scratched, marked or otherwise altered or deformed. Compact discs and application files containing compact discs should not be stored in areas exposed to heat and humidity that might damage the discs.

If a compact disc becomes damaged or lost from the file wrapper, *>OPAP< will make a duplicate replacement copy of the disc from the copy retained in *>OPAP<. At time of allowance, if a replacement disc is required, the application file and replacement request should be forwarded to *>OPAP< to provide the replacement disc.

Examiners may view the files on the application compact disc using virtually any text reader or the MS Word word processor software installed on their workstation. Special text viewing software will be provided on examiner workstations in Technology Centers that receive ASCII files that are not readily readable using the MS Word word processor software.

The following form paragraphs may be used to notify applicant of corrections needed with respect to compact disc submissions.

¶ *6.60.01 CD-ROM/CD-R Requirements (No Statement that CDs are Identical)*

This application is objected to under 37 CFR 1.52(e)(4) because it does not contain a statement in the transmittal letter that the two compact discs are identical. Correction is required.

¶ *6.60.02 CD-ROM/CD-R Requirements (No Listing in Transmittal Letter)*

This application is objected to because it contains a data file on CD-ROM/CD-R, however, the transmittal letter does not list for each compact disc, the machine format, the operating system compatibility, a list of files contained on the compact disc including their names, sizes in bytes, and dates of creation, plus any other special information that is necessary to identify, maintain, and interpret the information on the compact disc as required by 37 CFR 1.52(e)(3). A statement listing the required information is required.

¶ *6.61.01 Specification Lacking List of Compact Disc(s) and /or Associated Files*

Portions of this application are contained on compact disc(s). When portions of an application are contained on a compact disc, the paper portion of the specification must identify the compact disc(s) and list the files including name, file size, and creation date on each of the compact discs. See 37 CFR 1.52(e). Compact disc labeled**[1]** is not identified in the paper portion of the specification with a listing of all of the files contained on the disc. Applicant is required to amend the specification to identify each disc and the files contained on each disc including the file name, file size, and file creation date.

Examiner Note:

In bracket 1, insert the name on the label of the compact disc.

¶ *6.61.02 Specification Lacking An Incorporation By Reference Statement for the Compact Disc*

This application contains compact disc(s) as part of the originally filed subject matter, but does not contain an incorporation by reference statement for the compact discs. See 37 CFR 1.77(b)(4). Applicant(s) are required to insert in the specification an incorporation-by-reference of the material on the compact disc(s).

¶ *6.62 Data File on CD-ROM/CD-R Not in ASCII File Format*

This application contains a data file on CD-ROM/CD-R that is not in an ASCII file format. See 37 CFR 1.52(e). File **[1]** is not in an ASCII format. Applicant is required to resubmit file(s) in ASCII format. No new matter may be introduced in presenting the file(s) in ASCII format.

Examiner Note:

1. This form paragraph must be used to indicate whenever a data file (table, computer program listing or Sequence Listing) is submitted in a non-ASCII file format. The file may be in a file format that is proprietary, e.g., a Microsoft Word, Excel or Word Perfect file format; and/or the file may contain non-ASCII characters.
2. In bracket 1, insert the name of the file and whether the file is a non-text proprietary file format and/or contains non-ASCII characters.

The following form paragraphs should be used to respond to amendments which include amended or substituted compact discs.

¶ *6.70.01 CD-ROM/CD-R Requirements (Amendment Does Not Include Statement that CDs are Identical)*

The amendment filed **[1]** is objected to under 37 CFR 1.52(e)(4) because it does not contain a statement in the transmittal letter that the two compact discs are identical. Correction is required.

¶ *6.70.02 CD-ROM/CD-R Requirements (No Listing in Transmittal Letter Submitted With Amendment)*

The amendment filed **[1]** contains data on compact disc(s). Compact disc labeled **[2]** is not identified in the transmittal letter and/or the transmittal letter does not list for each compact disc, the machine format, the operating system compatibility, a list of files contained on the compact disc including their names, sizes in bytes, and dates of creation, plus any other special information that is necessary to identify, maintain, and interpret the information on the compact disc as required by 37 CFR 1.52(e)(3). A statement listing the required information is required.

Examiner Note:

1. Use this form paragraph when the transmittal letter does not include a listing of the files and required information.
2. In bracket 1, insert the date of the amendment.
3. In bracket 2, insert the name on the label of the compact disc.

¶ *6.71.01 Specification Lacking List of Compact Disc(s) and/or Associated Files (Amendment Filed With Compact Disc(s))*

The amendment filed **[1]** contains data on compact disc(s). Compact disc labeled **[2]** is not identified in the paper portion of the specification with a listing of all of the files contained on the disc. Applicant is required to amend the specification to identify each disc and the files contained on each disc including the file name, file size, and file creation date. See 37 CFR 1.52(e).

Examiner Note:

1. In bracket 1, insert the date of the amendment.
2. In bracket 2, insert the name on the label of the compact disc.

¶ *6.71.02 Specification Lacking An Incorporation By Reference Statement for the Compact Disc (Amendment Filed With Compact Disc)*

The amendment filed **[1]** amends or adds a compact disc(s). See 37 CFR 1.77(b)(4) and 1.52(e)(5). Applicant is required to update or insert an incorporation-by-reference of the material on the compact disc(s) in the specification.

Examiner Note:

1. Use this form paragraph when the CD-ROM/CD-R is filed with an amendment, but the required incorporation-by-reference statement is neither amended nor added to the specification.
2. In bracket 1, insert the date of the amendment.

¶ *6.72.01 CD-ROM/CD-R Requirements (CDs Not Identical)*

The amendment filed **[1]** is objected to under 37 CFR 1.52(e)(4) because the two compact discs are not identical. Correction is required.

Examiner Note:

1. Use this form paragraph when the two compact discs are not identical.
2. See also form paragraph 6.70.01 where the transmittal letter does not include a statement that the two compact discs are identical.

¶ *6.72.02 Data File, Submitted With Amendment, on CD-ROM/CD-R Not in ASCII File Format*

The amendment filed **[1]** contains a data file on CD-ROM/CD-R that is not in an ASCII file format. File **[2]** is not in an ASCII format. Applicant is required to resubmit file(s) in ASCII format as required by 37 CFR 1.52(e)(3). No new matter may be introduced in presenting the file(s) in ASCII format.

Examiner Note:

1. This form paragraph must be used whenever a data file (table, computer program listing or Sequence Listing) is submitted in a non-ASCII file format. The file may be in a file format that is proprietary, e.g., a Microsoft Word, Excel or Word Perfect file format; and/or the file contains non-ASCII characters.
2. In bracket 1, insert the date of the amendment.
3. In bracket 2, insert the name of the file and whether the file is a non-text proprietary file format and/or contains non-ASCII characters.

¶ *6.72.03 CD-ROM/CD-R Are Not Readable*

The amendment filed [1] contains a data file on CD-ROM/CD-R that is unreadable. Applicant is required to resubmit the file(s) in International Standards Organization (ISO) 9660 standard and American Standard Code for Information Interchange (ASCII) format as required by 37 CFR 1.52(e)(3). No new matter may be introduced in presenting the file in ISO 9660 and ASCII format.

¶ *6.72.04 CD-ROM/CD-R Contains Viruses*

The amendment filed **[1]** is objected to because the compact disc contains at least one virus. Correction is required.

¶ *6.72.05 CD-ROM/CD-R Requirements (Missing Files On Amended Compact Disc)*

The amendment to the application filed **[1]** is objected to because the newly submitted compact disc(s) do not contain all of the unamended data file(s) together with the amended data file(s) that were on the CD-ROM/CD-R. Since amendments to a compact disc can only be made by providing a replacement compact disc, the replacement disc must include all of the files, both amended and unamended, to be a complete replacement.

Examiner Note:

Use this form paragraph when a replacement compact disc is submitted that fails to include all of the files on the original compact disc(s) that have not been cancelled by amendment.

608.05(a) Deposit of Computer Program Listings [R-7]

37 CFR 1.96. Submission of computer program listings.

(a) *General.* Descriptions of the operation and general content of computer program listings should appear in the description portion of the specification. A computer program listing for the purpose of this section is defined as a printout that lists in appropriate sequence the instructions, routines, and other contents of a program for a computer. The program listing may be either in machine or machine-independent (object or source) language which will cause a computer to perform a desired procedure or

task such as solve a problem, regulate the flow of work in a computer, or control or monitor events. Computer program listings may be submitted in patent applications as set forth in paragraphs (b) and (c) of this section.

(b) *Material which will be printed in the patent:* If the computer program listing is contained in 300 lines or fewer, with each line of 72 characters or fewer, it may be submitted either as drawings or as part of the specification.

(1) *Drawings*. If the listing is submitted as drawings, it must be submitted in the manner and complying with the requirements for drawings as provided in § 1.84. At least one figure numeral is required on each sheet of drawing.

(2) *Specification*.

(i) If the listing is submitted as part of the specification, it must be submitted in accordance with the provisions of § 1.52.

(ii) Any listing having more than 60 lines of code that is submitted as part of the specification must be positioned at the end of the description but before the claims. Any amendment must be made by way of submission of a substitute sheet.

(c) *As an appendix which will not be printed*: Any computer program listing may, and any computer program listing having over 300 lines (up to 72 characters per line) must, be submitted on a compact disc in compliance with § 1.52(e). A compact disc containing such a computer program listing is to be referred to as a "computer program listing appendix." The "computer program listing appendix" will not be part of the printed patent. The specification must include a reference to the "computer program listing appendix" at the location indicated in § 1.77(b)(5).

(1) Multiple computer program listings for a single application may be placed on a single compact disc. Multiple compact discs may be submitted for a single application if necessary. A separate compact disc is required for each application containing a computer program listing that must be submitted on a "computer program listing appendix."

(2) The "computer program listing appendix" must be submitted on a compact disc that complies with § 1.52(e) and the following specifications (no other format shall be allowed):

(i) Computer Compatibility: IBM PC/XT/AT, or compatibles, or Apple Macintosh;

(ii) Operating System Compatibility: MS-DOS, MS-Windows, Unix, or Macintosh;

(iii) Line Terminator: ASCII Carriage Return plus ASCII Line Feed;

(iv) Control Codes: the data must not be dependent on control characters or codes which are not defined in the ASCII character set; and

(v) Compression: uncompressed data.

Special procedures for presentation of computer program listings in the form of compact disc files in U.S. national patent applications are set forth in 37 CFR 1.96. Use of compact disc files is desirable in view of the number of computer program listings being submitted as part of the disclosure in patent applications. Such listings are often several hundred pages in length. By filing and publishing such computer program listings on compact discs rather than on paper, substantial cost savings can result to the applicants, the public, and the U.S. Patent and Trademark Office.

I. BACKGROUND

A computer program listing, as used in these rules, means the printout that lists, in proper sequence, the instructions, routines, and other contents of a program for a computer. The listing may be either in machine or machine-independent (object or source) programming language which will cause a computer to perform a desired task, such as solving a problem, regulating the flow of work in computer, or controlling or monitoring events. The general description of the computer program listing will appear in the specification while the computer program listing may appear either directly or as a computer program listing on compact disc appendix to the specification and be incorporated into the specification by reference.

Copies of publicly available computer program listings are available from the U.S. Patent and Trademark Office on paper and on compact disc at the cost set forth in 37 CFR 1.19(a).

II. DISCUSSION OF THE BACKGROUND AND MAJOR ISSUES INVOLVED

The provisions of 37 CFR 1.52 and 37 CFR 1.84 for submitting specifications and drawings on paper have been found suitable for most patent applications. However, when lengthy computer program listings must be disclosed in a patent application in order to provide a complete disclosure, use of paper copies can become burdensome. The cost of printing long computer programs in patent documents is also very expensive to the U.S. Patent and Trademark Office. Under 37 CFR 1.96, several different methods for submitting computer program listings, including the use of compact discs, are set forth. A computer program listing contained on three hundred printout lines or less may be submitted either as drawings (in compliance with 37 CFR 1.84), as part of the written specification (in compliance with 37 CFR 1.52), or on compact disc (in compliance with 37 CFR 1.52(e)). A computer program listing contained on three hundred and one (301) printout lines or more must be submit-

ted as ASCII files on compact discs (in compliance with 37 CFR 1.96(c)).

Form paragraphs 6.64.01 through 6.64.03 may be used to notify the applicant of this requirement.

¶ *6.64.01 Computer Program Listing Appendix on Compact Disc Requirement*

The description portion of this application contains a computer program listing consisting of more than three hundred (300) lines. In accordance with 37 CFR 1.96(c), a computer program listing of more than three hundred lines must be submitted as a computer program listing appendix on compact disc conforming to the standards set forth in 37 CFR 1.96(c)(2) and must be appropriately referenced in the specification (see 37 CFR 1.77(b)(5)). Accordingly, applicant is required to cancel the computer program listing appearing in the specification on pages **[1]**, file a computer program listing appendix on compact disc in compliance with 37 CFR 1.96(c), and insert an appropriate reference to the newly added computer program listing appendix on compact disc at the beginning of the specification.

Examiner Note:

1. This form paragraph must be used whenever a computer program listing consisting of more than three hundred lines is included as part of the descriptive portion of the specification if the computer program listing was filed on or after September 8, 2000. See MPEP § 608.05(a).

2. In bracket 1, insert the range of page numbers of the specification which include the computer program listing.

¶ *6.64.02 Computer Program Listing as Printout Within the Specification (More Than 60 Lines And Not More Than Three Hundred Lines)*

This application contains a computer program listing of over sixty (60) lines and less than three hundred and one (301) lines within the written specification. In accordance with 37 CFR 1.96(b), a computer program listing contained on over sixty (60) lines and less than three hundred-one (301) lines must, if submitted as part of the specification, be positioned at the end of the specification and before the claims. Accordingly, applicant is required to cancel the computer program listing and either incorporate such listing in a compact disc in compliance with 37 CFR 1.96, or insert the computer program listing after the detailed description of the invention but before the claims, in the form of direct printouts from a computer's printer with dark solid black letters not less than 0.21 cm. high, on white, unshaded and unlined paper.

Examiner Note:

This form paragraph must be used whenever a computer program listing consisting of a paper printout of more than 60 lines and no more than three hundred lines is included as part of the descriptive portion of the specification and the computer program listing was filed on or after September 8, 2000. See MPEP § 608.05(a).

¶ *6.64.03 Computer Program Listing of More Than Three Hundred Lines*

This application contains a computer program listing of more than three hundred (300) lines. In accordance with 37 CFR 1.96(c), a computer program listing contained on more than three hundred (300) lines must be submitted as a computer program listing appendix on compact disc conforming to the standards set forth in 37 CFR 1.96(c)(2) and must be appropriately referenced in the specification (see 37 CFR 1.77(b)(5)). Accordingly, applicant is required to cancel the current computer program listing, file a computer program listing appendix on compact disc in compliance with 37 CFR 1.96(c), and insert an appropriate reference to the newly added computer program listing appendix on compact disc at the beginning of the specification.

Examiner Note:

This form paragraph must be used whenever a computer program listing consisting of a paper printout of more than three hundred lines is filed on or after September 8, 2000.

A computer program listing of more than three hundred lines will not be printed in any patent application publication, patent, or Statutory Invention Registration. See 37 CFR 1.96(c).

III. OTHER INFORMATION

A computer program listing on compact disc filed with a patent application will be referred to as a Computer Program Listing Appendix on compact disc and will be identified as such on the front page of the patent but will not be part of the printed patent. "Computer Program Listing Appendix on compact disc" denotes the total computer program listing files contained on all compact discs. The face of the file wrapper will bear a label to denote that an appendix on compact disc is included in the application. A statement must be included in the specification to the effect that a computer program listing appendix on compact disc is included in the application. The specification entry must appear at the beginning of the specification immediately following any cross-reference to related applications. 37 CFR 1.77(b)(5). When an application containing compact discs is received in the Office of **>Patent Application Processing (OPAP)<, a special envelope will be affixed to the right side of the file wrapper underneath all papers, and the compact discs inserted therein. For Image File Wrapper (IFW) processing, see IFW Manual section 3.6. The application file will then proceed on its normal course.

IV. TEMPORARY CONTINUATION OF MICROFICHE PRACTICE UNTIL MARCH 1, 2001

The Office provided for the continuation of prior microfiche appendix practice for computer listings until March 1, 2001. All computer listings as part of the application disclosure filed prior to March 2, 2001 that are in conformance with the microfiche appendix rules below may rely on the microfiche and need not submit a computer program listing appendix on compact disc; all computer listings as part of the application disclosure not in conformance with the microfiche appendix rules below must conform to the requirements of 37 CFR 1.52 and 37 CFR 1.96 as set forth above.

The prior microfiche practice continued through March 1, 2001 to accommodate applicants who incurred the time and expense of preparing microfiche. Those applicants with computer program listings in the disclosure who have not prepared microfiche will generally incur significantly less time and expense creating compact disc files than creating microfiche.

All computer listings submitted on microfiche through March 1, 2001, must conform to the requirements of former 37 CFR 1.96(c), as reproduced below:

Former 37 CFR 1.96. Submission of computer program listings.

*****

(c) *As an appendix which will not be printed.* If a computer program listing printout is eleven or more pages long, applicants must submit such listing in the form of microfiche, referred to in the specification (see § 1.77(a)(6)). Such microfiche filed with a patent application is to be referred to as a "microfiche appendix." The "microfiche appendix" will not be part of the printed patent. Reference in the application to the "microfiche appendix" must be made at the beginning of the specification at the location indicated in § 1.77(a)(6). Any amendments thereto must be made by way of revised microfiche.

(1) *Availability of appendix.* Such computer program listings on microfiche will be available to the public for inspection, and microfiche copies thereof will be available for purchase with the file wrapper and contents, after a patent based on such application is granted or the application is otherwise made publicly available.

(2) *Submission requirements.* Except as modified or clarified in this paragraph (c)(2), computer-generated information submitted as a "microfiche appendix" to an application shall be in accordance with the standards set forth in 36 CFR Part 1230 (Micrographics).

(i) Film submitted shall be a first generation (camera film) negative appearing microfiche (with emulsion on the back side of the film when viewed with the images right-reading).

(iii) At least the left-most third (50 mm. x 12 mm.) of the header or title area of each microfiche submitted shall be clear or positive appearing so that the Patent and Trademark Office can apply an application number and filing date thereto in an eye-readable form. The middle portion of the header shall be used by applicant to apply an eye-readable application identification such as the title and/or the first inventor's name. The attorney's docket number may be included. The final right-hand portion of the microfiche shall contain sequence in formation for the microfiche, such as 1 of 4, 2 of 4, etc.

(ii) Reduction ratio of microfiche submitted should be 24:1 or a similar ratio where variation from said ratio is required in order to fit the documents into the image area of the microfiche format used.

(iv) Additional requirements which apply specifically to microfiche of filmed paper copy:

(A) The first frame of each microfiche submitted shall contain a test target.

(B) The second frame of each microfiche submitted must contain a fully descriptive title and the inventor's name as filed.

(C) The pages or lines appearing on the microfiche frames should be consecutively numbered.

(D) Pagination of the microfiche frames shall be from left to right and from top to bottom.

(E) At a reduction of 24:1, resolution of the original microfilm shall be at least 120 lines per mm. (5.0 target).

(F) An index, when included, should appear in the last frame (lower-right hand corner when data is right-reading) of each microfiche.

(v) Microfiche generated by Computer Output Microfilm.

(A) The first frame of each microfiche submitted should contain a resolution test frame.

(B) The second frame of each microfiche submitted must contain a fully descriptive title and the inventor's name as filed.

(C) The pages or lines appearing on the microfiche frames should be consecutively numbered.

(D) It is preferred that pagination of the microfiche frames be from left to right and top to bottom but the alternative, i.e., from top to bottom and from left to right, is also acceptable.

(E) An index, when included, should appear on the last frame (lower-right hand corner when data is right reading) of each microfiche.

*****

A microfiche filed with a patent application will be referred to as a "Microfiche Appendix," and will be identified as such on the front page of the patent but will not be part of the printed patent. "Microfiche

Appendix" denotes the total microfiche, whether only one or two or more. One microfiche is equivalent to a maximum of either 63 (9x7) or 98 (14x7) frames (pages), or less. The face of the file wrapper will bear a label to denote that a Microfiche Appendix is included in the application. For IFW processing, see IFW Manual section 3.6. A statement must be included in the specification to the effect that a microfiche appendix is included in the application. The specification entry must appear at the beginning of the specification immediately following any cross-reference to related applications. When an application containing microfiche is received in the **>OPAP<, a special envelope will be affixed to the right side of the file wrapper underneath all papers, and the microfiche inserted therein. For IFW processing, see IFW Manual section 2.2. The application file will then proceed on its normal course.

Form paragraph 6.64.04 may be used to notify applicant of an unacceptable microfiche appendix.

¶ *6.64.04 "Microfiche Appendix" Unacceptable*

The computer program listing filed on **[1]** as a "microfiche appendix" is unacceptable. A computer program listing conforming to the requirements of 37 CFR 1.96 is required.

Examiner Note:

1. This form paragraph should be used if a "microfiche appendix" was filed after March 1, 2001 or if a "microfiche appendix" filed on or before March 1, 2001 was not in compliance with former rule 37 CFR 1.96(c). See MPEP § 608.05(a).

2. In bracket 1, insert the date the "microfiche appendix" was filed.

608.05(b) Compact Disc Submissions of Large Tables [R-7]

37 CFR 1.58. Chemical and mathematical formulae and tables.

*****

(b) Tables that are submitted in electronic form (§§ 1.96(c) and 1.821(c)) must maintain the spatial relationships (*e.g.*, alignment of columns and rows) of the table elements when displayed so as to visually preserve the relational information they convey. Chemical and mathematical formulae must be encoded to maintain the proper positioning of their characters when displayed in order to preserve their intended meaning.

*****

The provisions of 37 CFR 1.52 and 37 CFR 1.58 for submitting specifications and tables on paper have been found suitable for most patent applications. However, when lengthy tables must be disclosed in a patent application in order to provide a complete disclosure, use of paper copies can become burdensome. The cost of printing long tables in patent documents is also very expensive to the U.S. Patent and Trademark Office. In the past, all disclosures forming part of a patent application were presented on paper with the exception of microorganisms and computer program listings. Under 37 CFR 1.58, several different methods for submitting large tables, including the use of CD-ROM and CD-R, are set forth. If CD-R discs are used, 37 CFR 1.52(e)(3)(i) requires that the CD-R discs to be finalized so that they are closed to further writing to the CD-R.

The files stored on the compact disc containing the table must contain only ASCII characters. No special formatting characters or proprietary file formats are permitted. Accordingly, great care must be taken so that the spatial arrangement of the data in rows and columns is maintained in the table when the file is opened for viewing at the Office. This will allow the table to viewed with virtually any text viewer. A single table contained on fifty pages or less must be submitted either as drawings (in compliance with 37 CFR 1.84) or as part of the specification in paper (in compliance with 37 CFR 1.52).

A single table contained on 51 pages or more, or if there are multiple tables in an application and the total number of pages of the tables exceeds one hundred pages, the tables may be submitted on a CD-ROM or CD-R (in compliance with 37 CFR 1.52(e) and 37 CFR 1.58). A table page is defined in 37 CFR 1.52(e)(1)(iii) as a page printed on paper in conformance with 37 CFR 1.52(b) and 1.58(c). The presentation of a subheading to divide a large table into smaller sections of less than 51 pages should not be used to prevent an applicant from submitting the table on a compact disc unless the subdivided tables are presented as numerous files on the compact disc so as to lose their relationship to the overall large table.

Tables in landscape orientation should be identified as landscape orientation in the transmittal letter accompanying the compact disc to allow the Office to properly upload the tables into the Image File Wrapper (IFW) or other automated systems. 37 CFR 1.52(e)(3)(ii). Most tables filed with patent applications are intended to be rendered in portrait mode.

Accordingly, filings without an identification of landscape mode will be rendered as portrait mode tables by the Office.

If tables on more than two hundred consecutive pages, or large numbers of tables (lengthy tables) are submitted on a CD as provided in 37 CFR 1.52(e), or in an electronic format in response to a specific request from the Office of **>Data Management<, these lengthy tables will not be published as part of a patent document (e.g., patent, patent application publication or Statutory Invention Registration (SIR)). The lengthy tables will be published separately on the sequence homepage of the USPTO Internet web site (http://seqdata.uspto.gov) as an XML file. See, for example, patent application publication nos. US 2003/0235811 A1 and US 2003/0237110 A9.

When the lengthy tables are separately published on the USPTO Internet web site, there will be a standardized "Lengthy Table" statement, in the patent document following of the detailed description (see 37 CFR 1.77(b)(8)).

For a patent application publication, the following page-wide text would appear:

LENGTHY TABLE

The patent application contains a lengthy table section. A copy of the table is available in electronic form from the USPTO web site (http://seqdata.uspto.gov/?pageRequest=docDetail&docID=20047654321). An electronic copy of the table will also be available from the USPTO upon request and payment of the fee set forth in 37 CFR 1.19(b)(3).

For a patent, the following page-wide text would appear:

LENGTHY TABLE

The patent contains a lengthy table section. A copy of the table is available in electronic form from the USPTO web site (http://seqdata.uspto.gov/?pageRequest=docDetail&docID=7654321B1). An electronic copy of the table will also be available from the USPTO upon request and payment of the fee set forth in 37 CFR 1.19(b)(3).

For a SIR, the following page-wide text would appear:

LENGTHY TABLE

The statutory invention registration contains a lengthy table section. A copy of the table is available in electronic form from the USPTO web site (http://seqdata.uspto.gov/?pageRequest=docDetail&docID=H0009999H1). An electronic copy of the table will also be available from the USPTO upon request and payment of the fee set forth in 37 CFR 1.19(b)(3).

The Office discourages the embedding of a lengthy table in the specification of a patent application. If a lengthy table is embedded in the specification of a patent application, and if the lengthy table is available in an electronic form (either XML or a format convertible to XML), when the patent, patent application publication or SIR is published, the following single-column statement will be inserted in place of each replaced table in the document.

LENGTHY TABLE

Lengthy table referenced here. Please refer to the end of the specification for access instructions.

Form paragraphs 6.63.01 and 6.63.02 may be used to notify applicant of corrections needed to comply with the requirements of 37 CFR 1.52(e) and 37 CFR 1.58(b) with respect to tables.

¶ *6.63.01 CD-ROM/CD-R Requirements (Table Listing in Specification)*

The description portion of this application contains a table consisting of less than fifty one (51) pages only on a CD-ROM or CD-R. In accordance with 37 CFR 1.52(e), only a table of at least fifty one (51) pages may be submitted on a CD-ROM or CD-R. Accordingly, applicant is required to cancel the references to the CD-ROM/CD-R table appearing in the specification on pages**[1]**, file a paper version of the table in compliance with 37 CFR 1.52 and change all appropriate references to the former CD-ROM/CD-R table to the newly added paper version of the table in the remainder of the specification.

Examiner Note:

1. This form paragraph must be used whenever a table on a CD-ROM or CD-R consisting of less than fifty one (51) pages as part of the descriptive portion of the specification is filed on or after September 8, 2000. See MPEP § 608.05(b).
2. In bracket 1, insert the range of page numbers of the specification which reference the table.

¶ *6.63.02 Table on CD-ROM/CD-R Column/Row Relationship Not Maintained*

This application contains a table on CD-ROM/CD-R. Tables presented on CD-ROM/CD-R in compliance with 37 CFR 1.58 must maintain the spacial orientation of the cell entries. The table

submitted does not maintain the data within each table cell in its proper row/column alignment. The data is misaligned in the table as follows: **[1]**. Applicant is required to submit a replacement compact disc with the table data properly aligned.

Examiner Note:

1. This form paragraph must be used whenever the data in a table cannot be accurately read because the data in the table cells do not maintain their row and column alignments.

2. In bracket 1, insert the area of the table that does not maintain the row and column alignments.

608.05(c) Compact Disc Submissions of Biosequences

Filing of biosequence information on compact disc is now permitted in lieu of filing on paper. See MPEP § 2420 and § 2422.03.

609 Information Disclosure Statement [R-7]

37 CFR 1.97. Filing of information disclosure statement.

(a) In order for an applicant for a patent or for a reissue of a patent to have an information disclosure statement in compliance with § 1.98 considered by the Office during the pendency of the application, the information disclosure statement must satisfy one of paragraphs (b), (c), or (d) of this section.

(b) An information disclosure statement shall be considered by the Office if filed by the applicant within any one of the following time periods:

(1) Within three months of the filing date of a national application other than a continued prosecution application under § 1.53(d);

(2) Within three months of the date of entry of the national stage as set forth in § 1.491 in an international application;

(3) Before the mailing of a first Office action on the merits; or

(4) Before the mailing of a first Office action after the filing of a request for continued examination under § 1.114.

(c) An information disclosure statement shall be considered by the Office if filed after the period specified in paragraph (b) of this section, provided that the information disclosure statement is filed before the mailing date of any of a final action under § 1.113, a notice of allowance under § 1.311, or an action that otherwise closes prosecution in the application, and it is accompanied by one of:

(1) The statement specified in paragraph (e) of this section; or

(2) The fee set forth in § 1.17(p).

(d) An information disclosure statement shall be considered by the Office if filed by the applicant after the period specified in paragraph (c) of this section, provided that the information disclosure statement is filed on or before payment of the issue fee and is accompanied by:

(1) The statement specified in paragraph (e) of this section; and

(2) The fee set forth in § 1.17(p).

(e) A statement under this section must state either:

(1) That each item of information contained in the information disclosure statement was first cited in any communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of the information disclosure statement; or

(2) That no item of information contained in the information disclosure statement was cited in a communication from a foreign patent office in a counterpart foreign application, and, to the knowledge of the person signing the certification after making reasonable inquiry, no item of information contained in the information disclosure statement was known to any individual designated in § 1.56(c) more than three months prior to the filing of the information disclosure statement.

(f) No extensions of time for filing an information disclosure statement are permitted under § 1.136. If a *bona fide* attempt is made to comply with § 1.98, but part of the required content is inadvertently omitted, additional time may be given to enable full compliance.

(g) An information disclosure statement filed in accordance with this section shall not be construed as a representation that a search has been made.

(h) The filing of an information disclosure statement shall not be construed to be an admission that the information cited in the statement is, or is considered to be, material to patentability as defined in § 1.56(b).

(i) If an information disclosure statement does not comply with either this section or § 1.98, it will be placed in the file but will not be considered by the Office.

37 CFR 1.98. Content of information disclosure statement.

(a) Any information disclosure statement filed under § 1.97 shall include the items listed in paragraphs (a)(1), (a)(2) and (a)(3) of this section.

(1) A list of all patents, publications, applications, or other information submitted for consideration by the Office. U.S. patents and U.S. patent application publications must be listed in a section separately from citations of other documents. Each page of the list must include:

(i) The application number of the application in which the information disclosure statement is being submitted;

(ii) A column that provides a space, next to each document to be considered, for the examiner's initials; and

(iii) A heading that clearly indicates that the list is an information disclosure statement.

(2) A legible copy of:

(i) Each foreign patent;

(ii) Each publication or that portion which caused it to be listed, other than U.S. patents and U.S. patent application publications unless required by the Office;

(iii) For each cited pending unpublished U.S. application, the application specification including the claims, and any drawing of the application, or that portion of the application which caused it to be listed including any claims directed to that portion; and

(iv) All other information or that portion which caused it to be listed.

(3)(i) A concise explanation of the relevance, as it is presently understood by the individual designated in § 1.56(c) most knowledgeable about the content of the information, of each patent, publication, or other information listed that is not in the English language. The concise explanation may be either separate from applicant's specification or incorporated therein.

(ii) A copy of the translation if a written English-language translation of a non-English-language document, or portion thereof, is within the possession, custody, or control of, or is readily available to any individual designated in § 1.56(c).

(b)(1) Each U.S. patent listed in an information disclosure statement must be identified by inventor, patent number, and issue date.

(2) Each U.S. patent application publication listed in an information disclosure statement shall be identified by applicant, patent application publication number, and publication date.

(3) Each U.S. application listed in an information disclosure statement must be identified by the inventor, application number, and filing date.

(4) Each foreign patent or published foreign patent application listed in an information disclosure statement must be identified by the country or patent office which issued the patent or published the application, an appropriate document number, and the publication date indicated on the patent or published application.

(5) Each publication listed in an information disclosure statement must be identified by publisher, author (if any), title, relevant pages of the publication, date, and place of publication.

(c) When the disclosures of two or more patents or publications listed in an information disclosure statement are substantively cumulative, a copy of one of the patents or publications as specified in paragraph (a) of this section may be submitted without copies of the other patents or publications, provided that it is stated that these other patents or publications are cumulative.

(d) A copy of any patent, publication, pending U.S. application or other information, as specified in paragraph (a) of this section, listed in an information disclosure statement is required to be provided, even if the patent, publication, pending U.S. application or other information was previously submitted to, or cited by, the Office in an earlier application, unless:

(1) The earlier application is properly identified in the information disclosure statement and is relied on for an earlier effective filing date under 35 U.S.C. 120; and

(2) The information disclosure statement submitted in the earlier application complies with paragraphs (a) through (c) of this section.

Information Disclosure Statements (IDSs) are not permitted in provisional applications filed under 35 U.S.C. 111(b). See 37 CFR 1.51(d). Since no substantive examination is given in provisional applications, a disclosure of information is unnecessary. Any such statement filed in a provisional application will be returned or destroyed at the option of the Office.

In nonprovisional applications filed under 35 U.S.C. 111(a), applicants and other individuals substantively involved with the preparation and/or prosecution of the application have a duty to submit to the Office information which is material to patentability as defined in 37 CFR 1.56. The provisions of 37 CFR 1.97 and 37 CFR 1.98 provide a mechanism by which patent applicants may comply with the duty of disclosure provided in 37 CFR 1.56. Applicants and other individuals substantively involved with the preparation and/or prosecution of the patent application also may want the Office to consider information for a variety of other reasons; e.g., to make sure that the examiner has an opportunity to consider the same information that was considered by these individuals, or by another patent office in a counterpart or related patent application filed in another country.

Third parties (individuals not covered by 37 CFR 1.56(c)) cannot file information disclosure statements under 37 CFR 1.97 and 37 CFR 1.98. Third parties may only submit patents and publications in compliance with 37 CFR 1.99 in applications published under 35 U.S.C. 122(b). See MPEP § 1134.01. For unpublished, pending applications, any member of the public, including private persons, corporate entities, and government agencies, may file a protest under 37 CFR 1.291 prior to the mailing of a notice of allowance under 37 CFR 1.311. See MPEP Chapter 1900. Alternatively, third parties may provide information to the applicant who may submit the information to the Office in an IDS. See 37 CFR 1.56(d). The Office will review any improper IDS filed by a third party to determine whether the submission is in compliance with 37 CFR 1.99. The Office will discard any submission that is not in compliance with 37 CFR 1.99, before the application is forwarded to the examiner for examination.

An information disclosure statement filed in accordance with the provisions of 37 CFR 1.97 and 37 CFR 1.98 will be considered by the examiner assigned to the application. Individuals associated in a substantive way with the filing and prosecution of a patent application are encouraged to submit information to the Office so the examiner can evaluate its relevance to the claimed invention. The procedures for submitting an information disclosure statement under the rules are designed to encourage individuals to submit information to the Office promptly and in a uniform man-

ner. These rules provide certainty for the public by defining the requirements for submitting information disclosure statements to the Office so that the Office will consider information contained therein before a patent is granted.

The filing of an information disclosure statement shall not be construed as a representation that a search has been made. 37 CFR 1.97(g). There is no requirement that an applicant for a patent make a patentability search. Further, the filing of an information disclosure statement shall not be construed to be an admission that the information cited in the statement is, or is considered to be, material to patentability as defined in 37 CFR 1.56(b). 37 CFR 1.97(h). See MPEP § 2129 regarding admissions by applicant.

In order to have information considered by the Office during the pendency of a patent application, an information disclosure statement must be (1) in compliance with the content requirements of 37 CFR 1.98, and (2) filed in accordance with the procedural requirements of 37 CFR 1.97. The requirements as to content are discussed in MPEP § 609.04(a). The requirements based on the time of filing the statement are discussed in MPEP § 609.04(b). Examiner handling of information disclosure statements is discussed in MPEP § 609.05. For discussion of IDS filed electronically (e-IDS) via the Office's Electronic Filing System (EFS), see MPEP § 609.07. For discussion of electronic processing of IDS, see MPEP § 609.08.

Once the minimum requirements of 37 CFR 1.97 and 37 CFR 1.98 are met, the examiner has an obligation to consider the information. There is no requirement that the information must be prior art references in order to be considered by the examiner. Consideration by the examiner of the information submitted in an IDS means nothing more than considering the documents in the same manner as other documents in Office search files are considered by the examiner while conducting a search of the prior art in a proper field of search. The initials of the examiner placed adjacent to the citations on the PTO/SB/08A and 08B or its equivalent mean that the information has been considered by the examiner to the extent noted above. >In addition, the following alternative electronic signature method may be used by examiners in information disclosure statements to indicate whether the information has been considered. Examiners will no longer initial each reference citation considered, but will continue to strikethrough each citation not considered. Each page of reference citations will be stamped by the examiner with the phrase "All references considered except where lined through" along with the examiner's electronic initials, and the final page of reference citations will include the examiner's electronic signature.< Information submitted to the Office that does not comply with the requirements of 37 CFR 1.97 and 37 CFR 1.98 will not be considered by the Office but will be placed in the application file.

Multiple information disclosure statements may be filed in a single application, and they will be considered, provided each is in compliance with the appropriate requirements of 37 CFR 1.97 and 37 CFR 1.98. Use of form PTO/SB/08A and 08B, "Information Disclosure Statement," is encouraged as a means to provide the required list of information as set forth in 37 CFR1.98(a)(1). Applicants are encouraged to use the USPTO form PTO/SB/08A and 08B when preparing an information disclosure statement because this form is updated by the Office. The form PTO/SB/08A and 08B will enable applicants to comply with the requirement to list each item of information being submitted and to provide the Office with a uniform listing of citations and with a ready way to indicate that the information has been considered. A copy of form PTO/SB/08A and 08B is reproduced at the end of this section to indicate how the form should be completed.

PTO/SB/08A (07-06)
Approved for use through 09/30/2006. OMB 0651-0031
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

*EXAMINER: Initial if reference considered, whether or not citation is in conformance with MPEP 609. Draw line through citation if not in conformance and not considered. Include copy of this form with next communication to applicant. [1] Applicant's unique citation designation number (optional). [2] See Kinds Codes of USPTO Patent Documents at www.uspto.gov or MPEP 901.04. [3] Enter Office that issued the document, by the two-letter code (WIPO Standard ST.3). [4] For Japanese patent documents, the indication of the year of the reign of the Emperor must precede the serial number of the patent document. [5] Kind of document by the appropriate symbols as indicated on the document under WIPO Standard ST.16 if possible. [6] Applicant is to place a check mark here if English language Translation is attached.

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 2 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 (1-800-786-9199) and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

PTO/SB/08B (07-06)
Approved for use through 09/30/2006. OMB 0651-0031
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

609.01 Examiner Checklist for Information Disclosure Statements [R-7]

Examiners must check to see if an information disclosure statement (IDS) complies with:

(A) All the time-related requirements of 37 CFR 1.97, which are based on the time of the filing of the IDS. See MPEP § 609.04(b) for more information.

Time when IDS is filed	37 CFR 1.97 Requirements
(1)(a) for national applications (not including CPAs), within 3 months of filing or before first Office action on the merits, whichever is later; (b) for national stage applications, within 3 months of entry into national stage or before first Office action on the merits, whichever is later; (c) for RCEs and CPAs before the first Office action on the merits.	None
(2) After (1) but before final action, notice of allowance, or *Quayle* action	1.97(e) statement or 1.17(p) fee.
(3) After (2) and before (or with) payment of issue fee.	1.97(e) statement, and 1.17(p) fee.
(4) After payment of issue fee.	IDS will not be considered.

(B) All content requirements of 37 CFR 1.98. See MPEP § 609.04(a) for more information.

(1) Requirements for the IDS listing:

(a) A separate section for citations of U.S. patents and U.S. patent application publications;

(b) The application number of the application in which the IDS is being submitted on each page of the listing, if known;

(c) A column that provides a blank space next to each citation for the examiner's initials when the examiner considers the cited document; and

(d) A heading on the listing that clearly indicates that the list is an Information Disclosure Statement;

(e) Proper identification of all cited references:

(i) U.S. patents cited by patent number, issue date and inventor(s);

(ii) U.S. patent application publications cited by publication number, publication date and inventor(s);

(iii) Pending U.S. applications cited by application number, filing date and inventor(s);

(iv) Foreign patent documents cited by document number (including kind code), country and publication or issue date; and

(v) Non-patent literature cited by publisher, author (if any), title, relevant pages, and date and place of publication.

(2) The requirement of copies for:

(a) Each cited foreign patent document;

(b) Each cited non-patent literature publication, or the portion therein which caused it to be listed;

(c) Each cited U.S. pending application that is not stored in IFW;

(d) All information cited (e.g., an affidavit or Office action), other than the specification, including claims and drawings, of a pending U.S. application; and

(e) All other cited information or the portion which caused it to be listed.

(3) For non-English documents that are cited, the following must be provided:

(a) A concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, unless a complete translation is provided; and/or

(b) A written English language translation of a non-English language document, or portion thereof, if it is within the possession, custody or control of, or is readily available to any individual designated in 37 CFR 1.56(c).

After the examiner reviews the IDS for compliance with 37 CFR 1.97 and 1.98, the examiner should: (See MPEP § 609.05).

(A) Consider the information properly submitted in an IDS in the same manner that the examiner con-

siders other documents in Office search files while conducting a search of the prior art in a proper field of search.

(1) For e-IDS, use the e-IDS icon on examiner's workstation to consider cited U.S. patents and U.S. patent application publications. See MPEP § 609.07 for more information on e-IDS.

(2) Initial the blank column next to the citation to indicate that the information has been considered by the examiner >, or use the alternative electronic signature method by inserting on each page of reference citations the phrase "All references considered except where lined through" along with the examiner's electronic initials, and providing the examiner's electronic signature on the final page of reference citations<.

(B) Draw a line through the citation to show that it has not been considered if the citation fails to comply with all the requirements of 37 CFR 1.97 and 37 CFR 1.98. - The examiner should inform applicant the reasons why a citation was not considered.

(C) Write "not considered" on an information disclosure statement if none of the information listed complies with the requirements of 37 CFR 1.97 and 37 CFR 1.98. - The examiner will inform applicant the reasons why the IDS was not considered by using form paragraphs 6.49 through 6.49.09.

(D) Sign and date the bottom of the IDS listing >, or use the alternative electronic signature method noted in item (A)(2) above<.

(E) Ensure that a copy of the IDS listing that is signed and dated by the examiner is entered into the file and mailed to applicant.

For discussion of electronic processing of IDS, see MPEP § 609.08.

609.02 Information Disclosure Statements in Continued Examinations or Continuing Applications [R-5]
