15. Petitions dealing with PCT related issues in an application filed under 35 U.S.C. 111(a) (such as applications where there is a potential claim for benefit under 35 U.S.C. 365).

16. Petitions to convert a nonprovisional application filed under 37 CFR 1.53(b) to a provisional application under 37 CFR 1.53(c) where the nonprovisional application is before PCT Operations and/or the Office of the PCT Legal Administrator.

17. Petitions relating to international applications filed under the Patent Cooperation Treaty not otherwise provided for.

1002.02(q) Petitions and Requests Decided by the Director of Office of Initial Patent Examination

1. Requests under 37 CFR 1.48(d) to add the name of an inventor in a provisional application.

2. Requests under 37 CFR 1.48(e) to delete the name of the person erroneously named as an inventor in a provisional application.

3. Petitions to convert a nonprovisional application filed under 37 CFR 1.53(b) to a provisional application under 37 CFR 1.53(c) where the nonprovisional application is before the Office of Initial Patent Examination or where the nonprovisional application is before the Office of Publications.

4. Requests to convert a provisional application filed under 37 CFR 1.53(c) to a nonprovisional application under 37 CFR 1.53(b) where the provisional application is before the Office of Initial Patent Examination.

5. Petitions under 37 CFR 1.182 to accept omitted page(s) or drawing(s) and be accorded a filing date as of the date of such submission, or to accept drawings for purposes of a patent application publication.

6. Petitions to withdraw holding of abandonment where notices of abandonment were mailed by the Office of Initial Patent Examination.

7. Petitions for extension of time under 37 CFR 1.136(b) in applications before the Office of Initial Patent Examination.

1002.02(r) Petitions Decided by the Director of Office of Patent Publication [R-2]

1. Petitions to withdraw holding of abandonment where *>a notice< of abandonment *>has been, or could be< mailed by the Office of Patent Publication.

2. Petitions for express abandonment to avoid publication of the application (should be directed to **>Mail Stop Express Abandonment<), 37 CFR 1.138(c), MPEP § 711.01.

3. Requests to issue patent in name of the assignee after payment of the issue fee, 37 CFR 3.81(b), MPEP § 307.

>4. Petitions to withdraw the holding that a patent has lapsed for failure to pay the balance of the issue fee, 37 CFR 1.317.<

1002.02(s) Petitions and Matters Decided by the Special Program Examiners in the Technology Centers [R-2]

1. Petitions to make patent applications special under 37 CFR 1.102, MPEP § 708.02:

(a) on the ground of applicant's age or state of health, MPEP § 708.02, item III & IV;

(b) a continuation-in-part of an earlier application;

(c) under the Environmental Quality Program, MPEP § 708.02, item V;

(d) under the Energy Program, MPEP § 708.02, item VI;

(e) because the application invokes safety of research in the field of Recombinant DNA, MPEP § 708.02, item VII;

(f) under the Special Examining Procedure for certain new applications - accelerated examination, MPEP § 708.02, item VIII;

(g) superconductivity, MPEP § 708.02, item IX;

(h) inventions relating to HIV/AIDS and cancer, MPEP § 708.02, item X;

(i) relating to inventions for countering terrorism, MPEP § 708.02, item XI;

(j) on the ground of prospective manufacture, MPEP § 708.02, item I;

(k) on the ground of infringement, MPEP § 708.02, item II; and

(*>l<) for reasons not otherwise provided for.

2. Petitions for withdrawal of attorney from application pending in the Technology Centers, 37 CFR 1.36.

1003 Matters Submitted to Technology Center Directors [R-2]

The following is a list of matters which are submitted to the appropriate Technology Center Director, together with a reference to any section of this manual where such matters are more fully treated.

1. Requests for a Certificate of Correction in which the:

i. request raises a novel issue or about which there is some question;

ii. request is for a patent known to be in litigation; or

iii. request deals with a legal matter (e.g., the insertion of foreign priority data or cross referencing to prior U.S. patent applications) unless the file reflects that the examiner has already ruled on the matter and that failure to print the material was clearly an Office error, in which case it will be handled by the Certificate of Corrections Branch.

2. Return of papers entered on the "Contents" of the file wrapper. See MPEP § 201.14(c), § 604.04(a) and § 719.01.

3. Return of papers containing discourteous remarks. See MPEP § 714.19 and § 714.25.

4. Certain rejections on double patenting of divisional (or parent) case when restriction or election of species has previously been required, MPEP § 804.04.

5. Request for patentability report, MPEP § 705.01(e).

6. Actions which hold unpatentable claims copied from a patent for interference purposes where the grounds relied upon are equally applicable to the patentee, MPEP § 2307.02.

7. Interferences between applications neither of which is in condition for allowance, MPEP § 2303.

8. Letters requesting jurisdiction from Board of Patent Appeals and Interferences of applications involved in appeal or interference.

9. Letters to an applicant suggesting claims for purposes of interference, the adoption of which by the applicant would result in the withdrawal of an application from issue, MPEP § 2305.04.

10. Examiner's answers containing a new interpretation of law. See MPEP § 1208.

11. Proposed interferences between applications whose effective filing dates differ by more than 6 months. See MPEP § 2303.

12. Protests filed against issuance of a patent. See MPEP § 1901.06.

13. Letters suggesting claims to an application in issue for purposes of interference with a patent. See MPEP § 2305.04.

14. Requests by the examiner to the Board for reconsideration of a decision before forwarding to the Office of Petitions, MPEP § 1214.04.

15. Second or subsequent suspension of action in patent application under 37 CFR 1.103 on examiner's initiative. MPEP § 709.

16. Request by the examiner to withdraw an application from issue.

17. An unusual fact situation in a patent that establishes:

i. there is a "compelling reason" to order reexamination, and

ii. at least one claim in the patent is *prima facie* unpatentable over prior patents and/or printed publications. See 37 CFR 1.520, MPEP § 2239.

18. Applications containing examiner's answers lacking the appropriate indication that an appeal conference was held. See MPEP § 1208.

>19. Applications identified by the examiner as containing "offensive" subject matter.<

All unusual questions of practice may be referred to the Technology Center Directors.

1004 Actions Which Require the Attention of a Primary Examiner

There are some questions which existing practice requires the primary examiner to be personally responsible for. The following actions fall in this category:

Final rejection (MPEP § 706.07).

Proposing an interference (MPEP § 2309).

Disposition of an amendment in an application in interference looking to the formation of another interference involving that application (MPEP § 2364.01).

Calling Administrative Patent Judge's attention to a discovered reference which makes a claim corresponding to a count unpatentable (37 CFR 1.641, MPEP § 2341).

Rejection of a previously allowed claim (MPEP § 706.04).

Classification of allowed cases (MPEP § 903.07).

Holding of abandonment for insufficient reply (MPEP § 711.03(a)).

Suspension of examiner's action (MPEP § 709).

Treatment of newly filed application which obviously fails to comply with 35 U.S.C. 112 (MPEP § 702.01).

Consideration of the advisability of a patentability report (MPEP § 705.01(a)).

Withdrawal of final rejection (MPEP § 706.07(d) and § 706.07(e)).

All examiner's answers on appeal (MPEP § 1208).

Decision on reissue oath or declaration (MPEP § 1414).

Decision on affidavits or declarations under 37 CFR 1.131 (MPEP § 715.08) and under 37 CFR 1.132 (MPEP § 716).

Decision as to acceptance of amendments, statements, and oaths or declarations filed under 37 CFR 1.48 (MPEP § 201.03).

International Preliminary Examination Reports (MPEP § 1879).

For a list of actions that are to be submitted to the Technology Center Directors, see MPEP § 1002.02(c) and § 1003.

1005 Exceptions to Partial Signatory Authority [R-2]

Examiners who are delegated partial signatory authority are expected to sign their own actions with the exception of the following actions which require the signature of the primary examiner:

Allowances (MPEP § 1302.13).

Examiner's amendments (MPEP § 1302.04).

Quayle actions (MPEP § 714.14).

Final rejections (MPEP § 706.07 and § 803.01).

>Withdrawal of final rejection (MPEP § 706.07(d) and (e)).<

Actions on amendments submitted after final rejection (MPEP § 714.12).

Examiner's answers on appeal (MPEP § 1208).

Initiation of an interference (MPEP § 2309).

Actions suggesting claims for interference purposes (MPEP § 2305).

Actions involving copied patent claims (MPEP § 2307).

Actions reopening prosecution (MPEP § 1214.07).

Requests for withdrawal from issue (MPEP § 1308).

37 CFR 1.312 amendments (MPEP § 714.16).

Rejection of previously allowed claim (MPEP § 706.04).

Final holding of abandonment for insufficient reply (MPEP § 711.03(a)).

Actions based on affidavit or declaration evidence (37 CFR 1.131 and 1.132 (MPEP § 715.08 and § 716)).

Suspension of examiner's action (MPEP § 709).

Reissue applications (decisions on reissue oath or declaration) (MPEP § 1444).

Requests for an extension of time under 37 CFR 1.136(b) (MPEP § 710.02(e)).

Reexamination proceedings (MPEP § 2236).

International Preliminary Examination Reports (MPEP § 1879).

Chapter 1100 Statutory Invention Registration (SIR) and Pre-Grant Publication (PG Pub)

1101 Request for Statutory Invention Registration (SIR) [R-2]

35 U.S.C. 157. Statutory invention registration.

(a) Notwithstanding any other provision of this title, the Director is authorized to publish a statutory invention registration containing the specification and drawings of a regularly filed application for a patent without examination if the applicant —

(1) meets the requirements of section 112 of this title;

(2) has complied with the requirements for printing, as set forth in regulations of the Director;

(3) waives the right to receive a patent on the invention within such period as may be prescribed by the Director; and

(4) pays application, publication, and other processing fees established by the Director.

If an interference is declared with respect to such an application, a statutory invention registration may not be published unless the issue of priority of invention is finally determined in favor of the applicant.

(b) The waiver under subsection (a)(3) of this section by an applicant shall take effect upon publication of the statutory invention registration.

(c) A statutory invention registration published pursuant to this section shall have all of the attributes specified for patents in this title except those specified in section 183 and sections 271 through 289 of this title. A statutory invention registration shall not have any of the attributes specified for patents in any other provision of law other than this title. A statutory invention registration published pursuant to this section shall give appropriate notice to the public, pursuant to regulations which the Director shall issue, of the preceding provisions of this subsection. The invention with respect to which a statutory invention certificate is published is not a patented invention for purposes of section 292 of this title.

(d) The Director shall report to the Congress annually on the use of statutory invention registrations. Such report shall include an assessment of the degree to which agencies of the federal government are making use of the statutory invention registration system, the degree to which it aids the management of federally developed technology, and an assessment of the cost savings to the Federal Government of the uses of such procedures.

37 CFR 1.293. Statutory invention registration.

(a) An applicant for an original patent may request, at any time during the pendency of applicant's pending complete application, that the specification and drawings be published as a statutory invention registration. Any such request must be signed by (1) the applicant and any assignee of record or (2) an attorney or agent of record in the application.

(b) Any request for publication of a statutory invention registration must include the following parts:

(1) A waiver of the applicant's right to receive a patent on the invention claimed effective upon the date of publication of the statutory invention registration;

(2) The required fee for filing a request for publication of a statutory invention registration as provided for in § 1.17(n) or (o);

(3) A statement that, in the opinion of the requester, the application to which the request is directed meets the requirements of 35 U.S.C. 112; and

(4) A statement that, in the opinion of the requester, the application to which the request is directed complies with the formal requirements of this part for printing as a patent.

(c) A waiver filed with a request for a statutory invention registration will be effective, upon publication of the statutory invention registration, to waive the inventor's right to receive a patent on the invention claimed in the statutory invention registration, in any application for an original patent which is pending on, or filed after, the date of publication of the statutory invention registration. A waiver filed with a request for a statutory invention registration will not affect the rights of any other inventor even if the subject matter of the statutory invention registration and an application of another inventor are commonly owned. A waiver filed with a request for a statutory invention registration will not affect any rights in a patent to the inventor which issued prior to the date of publication of the statutory invention registration unless a reissue application is filed seeking to enlarge the scope of the claims of the patent. See also § 1.104(c)(5).

A request for a statutory invention registration (SIR) may be filed at the time of filing a nonprovisional application for patent, or may be filed later during pendency of a nonprovisional application. The fee

required (37 CFR 1.17(n) or (o)) depends on when the request is filed. The application to be published as a SIR must be complete as set forth in 37 CFR 1.51(b) including a specification with a claim or claims, an oath or declaration, and drawings when necessary. Applicants should use the format set forth in form PTO/SB/94, Request for Statutory Invention Registration. Form PTO/SB/94 is available from the USPTO website (www.uspto.gov), and it is reproduced **>at the end of< this section.

A provisional application cannot include a request for a SIR.

Requests for statutory invention registrations, including those submitted in utility, plant, and design applications, are handled in art units 3641 and 3662 of Technology Center (TC) 3600. Accordingly, incoming new applications which include a request for a SIR will be processed like other new applications in the Office of Initial Patent Examination (OIPE) and then forwarded to TC 3600. TC 3600 may be assisted by other Technology Centers when the subject matter of the application makes it necessary or desirable. For example, TC 1600 may handle issues under 35 U.S.C. 112 in applications involving biotechnology.

Applications not already assigned to art unit 3641 or 3662 which receive a request for a SIR (or any other indication that they are to be published as a SIR) should be forwarded with a brief explanation to one of these art units via the technical support staff of the TC to which the application is assigned. The forwarding TC should first determine whether an Office action has been mailed in the application and issue proper SIR disposal credit to the examiner who prepared any such action where appropriate. Art unit 3662 handles applications including a request for a SIR that are electrical in nature and those that are related to computer science. Accordingly, applications from TCs 2100, 2600, and 2800 should be forwarded to art unit 3662. All other applications including a request for a SIR should be forwarded to art unit 3641. An examiner in art unit 3641 or 3662 will determine whether the request for a SIR is proper. An examiner who is not in one of these two art units should make no comment to the applicant regarding what effect the filing of a request for a SIR may have had on any outstanding rejection.

It should be noted that 37 CFR 1.211 requires the publication of most nonprovisional applications (other than for a design patent filed under 35 U.S.C. 171 and reissue applications filed under 35 U.S.C. 251) filed on or after November 29, 2000. Exceptions to publication are set forth in 35 U.S.C. 122(b)(2) and 37 CFR 1.211. Further, voluntary publication may be requested under 37 CFR 1.221(a) for applications filed before, but pending on, November 29, 2000. An applicant may find publication of an application to be a desirable alternative to requesting a SIR since publication of the application is achieved without any waiver of patent rights. >See MPEP § 1120 *et seq.* for more information pertaining to eighteen monts publication of patent applications.<

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

Request for Statutory Invention Registration

Application Number _____, or ☐ attached hereto

Filed: _____

Titled: _____

Applicant(s): _____

A. In the above identified patent application, I hereby:

1. Request and authorize the Director of Patent and Trademark Office to publish the above identified regularly filed patent application as a Statutory Invention Registration. (35 U.S.C. 157)

2. Waive the right to receive a United States patent on the same invention claimed in the above identified patent application. These rights, which are waived, include those specified in 35 U.S.C. 183 and 271 through 289 as well as all attributes specified for patents in any other provisions of law other than title 35, United States Code. The waiver includes, but is not limited to, the remedies under 19 U.S.C. 1337 and 1337a, 22 U.S.C. 2356 and 28 U.S.C. 1498. (35 U.S.C. 157(c))

3. Understand that the above waiver will be effective pursuant to 37 CFR 1.293 upon publication of the Statutory Invention Registration to waive the inventor's right to receive a United States patent on the invention claimed in the Statutory Invention Registration. (37 CFR 1.293(b)(1))

4. State that, in my opinion, the disclosure and claims of the above identified patent application meet the requirements of 35 U.S.C. 112. (37 CFR 1.293(b)(3))

5. State that, in my opinion, the above identified patent application complies with the requirements for printing as set forth in the Rules of Practice for Patent Cases, 37 CFR Part 1. (37 CFR 1.293(b)(4))

6. Enclose the fee set forth in 37 CFR 1.17(n) or (o) for requesting publication of a Statutory Invention Registration:

☐ A first Office Action has not been mailed in the above application, 37 CFR 1.17(n) _____ $ _____

☐ A first Office Action has been mailed in the above application, 37 CFR 1.17(o) _____ $ _____

Request fee $ _____

MINUS BASIC FILING FEE, IF PREVIOUSLY PAID

☐ Basic filing fee for utility patent application set forth in 37 CFR 1.16(a);

☐ Basic filing fee for design patent application set forth in 37 CFR 1.16(f); or

☐ Basic filing fee for plant patent application set forth in 37 CFR 1.16(g)
Minus basic filing fee $ _____.

Amount due $ _____

Payment charged to credit card _____. Form PTO-2038 is attached.
Amount enclosed by check or money order _____.
Please charge Deposit Account No. _____ the amount of $ _____.
If payment of any additional fee is required for publication of the Statutory Invention Registration, charge such amount to Deposit Account No. _____.

* Where this request is submitted at the time the application is filed, the filing fee is included in the fee.

[Page 1 of 2]

This collection of information is required by 37 CFR 157. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 24 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

1103 Examination of a SIR [R-2]

37 CFR 1.294. Examination of request for publication of a statutory invention registration and patent application to which the request is directed.

(a) Any request for a statutory invention registration will be examined to determine if the requirements of § 1.293 have been met. The application to which the request is directed will be examined to determine (1) if the subject matter of the application is appropriate for publication, (2) if the requirements for publication are met, and (3) if the requirements of 35 U.S.C. 112 and § 1.293 of this part are met.

(b) Applicant will be notified of the results of the examination set forth in paragraph (a) of this section. If the requirements of § 1.293 and this section are not met by the request filed, the notification to applicant will set a period of time within which to comply with the requirements in order to avoid abandonment of the application. If the application does not meet the requirements of 35 U.S.C. 112, the notification to applicant will include a rejection under the appropriate provisions of 35 U.S.C. 112. The periods for reply established pursuant to this section are subject to the extension of time provisions of § 1.136. After reply by the applicant, the application will again be considered for publication of a statutory invention registration. If the requirements of § 1.293 and this section are not timely met, the refusal to publish will be made final. If the requirements of 35 U.S.C. 112 are not met, the rejection pursuant to 35 U.S.C. 112 will be made final.

(c) If the examination pursuant to this section results in approval of the request for a statutory invention registration the applicant will be notified of the intent to publish a statutory invention registration.

An examiner in Art Unit 3641 or 3662, where appropriate, will determine whether the application in which a request for a statutory invention registration has been filed is a pending nonprovisional application. If the application was abandoned at the time the request was filed, has been patented, or has been allowed and the issue fee paid, the examiner should return the SIR request to the requester accompanied by a Return of Statutory Invention Registration Request to Requester notice (form *>SIR-C<).

If the application is pending, the examiner should ascertain whether an Office action with a rejection under 35 U.S.C. 112 has been issued and not replied to. If so, and if there remains any time to reply to the rejection, the examiner should send the applicant a courtesy notice requiring a timely reply. If no time for reply remains, the application is abandoned and the examiner should inform the applicant of this fact.

After the examiner handling the SIR has ascertained that all outstanding rejections under 35 U.S.C. 112 have been replied to, the examiner should verify that the request for a SIR meets the requirements of 37 CFR 1.293. First, applicant should be notified of any defects in the signature on the SIR request or of any inadequacy of the SIR fee. A 1-month time period should be set for applicant to correct the signature or fee before any further consideration of the SIR request is given. **>A Notice of Improper Request for a Statutory Invention Registration (form SIR-E)< may be used for this purpose. Next, applicant should be given 1 month to correct any other informalities in the SIR request under 37 CFR 1.293 and any informalities in the application under 37 CFR 1.294 using a Notice of Informal Statutory Invention Registration (SIR) Request, form *>SIR-F<. The examiner should also determine whether the application complies with 35 U.S.C. 112. If not, a rejection with a 3-month shortened statutory period for reply should be made using a Notice of Noncompliance with 35 U.S.C. 112 of application having SIR Request, form *>SIR-I<. Both form *>SIR-F< and form *>SIR-I< can be mailed at the same time. If they are, applicant should be given a 3-month shortened statutory period to reply to both forms.

If applicant's reply to form *>SIR-F< does not correct the defects, the SIR request should be finally refused using a Notice of Final Refusal of Informal Statutory Invention Registration (SIR) Request, form *>SIR-G<. If applicant's reply to the rejection set forth on form *>SIR-I< does not bring the application into compliance with 35 U.S.C. 112, the rejection should be made final.

After the application complies with 37 CFR 1.293, 37 CFR 1.294, and 35 U.S.C. 112, the examiner should determine whether the application is involved in a pending interference. If so, applicant should be notified, using form *>SIR-J<, that no decision will be made on the SIR request until the interference proceedings are concluded.

If the applicant has lost priority of any claims due to a concluded interference, applicant should be given 1 month, using form *>SIR-J<, to cancel the lost claims (if a statutory invention registration is still desired with claims on which priority was not lost) or to request withdrawal of the request for statutory invention registration (if further prosecution as to

patentability is desired). See MPEP § 1109. If none of the claims in the application was lost in interference, and if the application complies with 37 CFR 1.293, 37 CFR 1.294, and 35 U.S.C. 112, then the application is in condition to be prepared for publication. See MPEP § 1107.

An application under secrecy order will be withheld from publication during such period as the national interest requires, and the applicant should be informed of this fact by using a Notice of Statutory Invention Registration * Acceptance (Form D-11), form *>SIR-N (Form D-11)<.

1105 Review of Final Refusal to Publish SIR [R-5]

37 CFR 1.295. Review of decision finally refusing to publish a statutory invention registration.

**>

(a) Any requester who is dissatisfied with the final refusal to publish a statutory invention registration for reasons other than compliance with 35 U.S.C. 112 may obtain review of the refusal to publish the statutory invention registration by filing a petition to the Director accompanied by the fee set forth in § 1.17(g) within one month or such other time as is set in the decision refusing publication. Any such petition should comply with the requirements of § 1.181(b). The petition may include a request that the petition fee be refunded if the final refusal to publish a statutory invention registration for reasons other than compliance with 35 U.S.C. 112 is determined to result from an error by the Patent and Trademark Office.<

(b) Any requester who is dissatisfied with a decision finally rejecting claims pursuant to 35 U.S.C. 112 may obtain review of the decision by filing an appeal to the Board of Patent Appeals and Interferences pursuant to § 1.191. If the decision rejecting claims pursuant to 35 U.S.C. 112 is reversed, the request for a statutory invention registration will be approved and the registration published if all of the other provisions of § 1.293 and this section are met.

An applicant who is dissatisfied with a final refusal to publish a SIR for reasons other than compliance with 35 U.S.C. 112 may obtain review by filing a petition as set forth in 37 CFR 1.295(a). The petition should be directed to the TC Director responsible for the art unit handling the SIR.

An applicant who is dissatisfied with a decision finally rejecting claims under 35 U.S.C. 112 may obtain review by filing an appeal with the Board of Patent Appeals and Interferences as set forth in 37 CFR 1.295(b).

1107 Preparing a SIR for Publication [R-2]

>For Image File Wrapper (IFW) processing, see the IFW Manual.<

In preparing a nonprovisional application with a SIR request for publication, the examiner should fill out the face of the application file wrapper in the same manner as in a non-SIR application. Additionally, the examiner should add the notation “OK for SIR” in the space provided for the primary examiner’s signature and “SIR” should be indicated next to the space for the patent number. A form *>PTO-SIR-M< is attached to the “LABEL AREA” on the face of the file wrapper to indicate that the application is for a statutory invention registration. An issue classification slip (form PTO-270 or PTO-328) is filled out and attached inside the file wrapper for series 08/ and earlier applications in the normal manner with the additional notation of “SIR” added to the left side of the space allocated for the patent number. The index of claims inside the left flap of the file wrapper is filled out, with the notation “*****” indicating the claims to be published in the SIR. The final official classification of the application and the figure to be published in the *Official Gazette* are indicated, as in non-SIR applications, on the front of the file wrapper.

A Notice of Intent to Publish Statutory Invention Registration, form *>SIR-L<, is prepared and sent to the applicant. Requirements for corrected or formal drawings and examiner’s amendments may be attached to the Notice of Intent to Publish Statutory Invention Registration as needed. If corrected drawings are required, the examiner should set a 3 month shortened statutory period for submission of the drawings and indicate that the shortened statutory period is not extendable under 37 CFR 1.136(a) or 37 CFR 1.136(b). After the form *>SIR-L< has been mailed, the application is forwarded to the Office of Patent Publication.

1109 Withdrawal of SIR Request [R-5]

37 CFR 1.296. Withdrawal of request for publication of statutory invention registration.

**>

A request for a statutory invention registration, which has been filed, may be withdrawn prior to the date of the notice of the intent to publish a statutory invention registration issued pursuant to § 1.294(c) by filing a request to withdraw the request for publication of a statutory invention registration. The request to withdraw may also include a request for a refund of any amount paid in excess of the application filing fee and a handling fee of $130.00 which will be retained. Any request to withdraw the request for publication of a statutory invention registration filed on or after the date of the notice of intent to publish issued pursuant to § 1.294(c) must be in the form of a petition accompanied by the fee set forth in § 1.17(g).<

If a request to withdraw a SIR is filed in a nonprovisional application which contains a SIR request before a Notice of Intent to Publish Statutory Invention Registration has been mailed, the examiner handling the SIR should ascertain whether any outstanding rejection under 35 U.S.C. 112 is present in the application. If so, the examiner should require a timely reply to the rejection using a Response to Request to Withdraw Request for a Statutory Invention Registration, form SIR-K. After a timely reply to the rejection is received, the request to withdraw the SIR request will ordinarily be granted and the application forwarded for further examination to whichever art unit would ordinarily examine the art area in which the application is classifiable.

Any request to withdraw a SIR filed after the mailing date of the Notice of Intent to Publish Statutory Invention Registration must be in the form of a petition ** accompanied by the fee set forth in 37 CFR 1.17(*>g<). The TC Director responsible for the art unit handling the SIR will inform the applicant of the decision on the petition via a form SIR-K or Response to Petition under 37 CFR 1.295(a), form SIR-H.

Note that an original SIR application can be abandoned in favor of a continuing application for a patent, claiming the filing date of the earlier filed application, by filing an express abandonment of the original application and a timely request or petition to withdraw the request for a SIR prior to publication of the SIR.

1111 SIR Publication and Effect

37 CFR 1.297. Publication of statutory invention registration.

(a) If the request for a statutory invention registration is approved the statutory invention registration will be published. The statutory invention registration will be mailed to the requester at the correspondence address as provided for in § 1.33(a). A notice of the publication of each statutory invention registration will be published in the *Official Gazette*.

(b) Each statutory invention registration published will include a statement relating to the attributes of a statutory invention registration. The statement will read as follows:

> A statutory invention registration is not a patent. It has the defensive attributes of a patent but does not have the enforceable attributes of a patent. No article or advertisement or the like may use the term patent, or any term suggestive of a patent, when referring to a statutory invention registration. For more specific information on the rights associated with a statutory invention registration see 35 U.S.C. 157.

Published SIRs are sequentially numbered in a separate "H" series, starting with number "H1". For a description of the "kind codes" used on other documents published by the U.S. Patent and Trademark Office, see MPEP § 901.04(a).

In accordance with 35 U.S.C. 157(c), a published SIR will be treated the same as a U.S. patent for all defensive purposes, usable as a reference as of its filing date in the same manner as a patent. A SIR is a "constructive reduction to practice" under 35 U.S.C. 102(g) and "prior art" under all applicable sections of 35 U.S.C. 102 including section 102(e). SIRs are classified, cross-referenced, and placed in the search files, disseminated to foreign patent offices, stored in U.S. Patent and Trademark Office computer tapes, made available in commercial data bases, and announced in the *Official Gazette.*

The waiver of patent rights to the subject matter claimed in a statutory invention registration takes effect on publication (37 CFR 1.293(c)) and may affect the patentability of claims in related applications without SIR requests, such as divisional or other continuing applications, since the waiver of patent rights is effective for all inventions claimed in the SIR and would effectively waive the right of the inventor to obtain a patent on the invention claimed in the same application or on the same invention claimed in any other application not issued before the publication date of the SIR. If an application containing generic

claims is published as a SIR, the waiver in that application applies to any other related applications to the extent that the same invention claimed in the SIR is claimed in the other application. Examiners should apply standards similar to those applied in making "same invention" double patenting determinations to determine whether a waiver by an inventor to claims in a SIR precludes patenting by the same inventor to subject matter in any related application. If the same subject matter is claimed in an application and in a published statutory invention registration naming a common inventor, the claims in the application should be rejected as being precluded by the waiver in the statutory invention registration. See 37 CFR 1.104(c)(5). A rejection as being precluded by a waiver in a SIR cannot be overcome by a terminal disclaimer.

The holder of a SIR will not be able to file a reissue application to recapture the rights, including the right to exclude others from making, using, selling, offering to sell, or importing the invention, that were waived by the initial publication of the SIR.

1120 Eighteen-Month Publication of Patent Applications [R-5]

35 U.S.C. 122. Confidential status of applications; publication of patent applications.

*****

(b) PUBLICATION.—

(1) IN GENERAL.—

(A) Subject to paragraph (2), each application for a patent shall be published, in accordance with procedures determined by the Director, promptly after the expiration of a period of 18 months from the earliest filing date for which a benefit is sought under this title. At the request of the applicant, an application may be published earlier than the end of such 18-month period.

(B) No information concerning published patent applications shall be made available to the public except as the Director determines.

(C) Notwithstanding any other provision of law, a determination by the Director to release or not to release information concerning a published patent application shall be final and nonreviewable.

(2) EXCEPTIONS.—

(A) An application shall not be published if that application is—

(i) no longer pending;

(ii) subject to a secrecy order under section 181 of this title;

(iii) a provisional application filed under section 111(b) of this title; or

(iv) an application for a design patent filed under chapter 16 of this title.

*****

37 CFR 1.211. Publication of applications.

(a) Each U.S. national application for patent filed in the Office under 35 U.S.C. 111(a) and each international application in compliance with 35 U.S.C. 371 will be published promptly after the expiration of a period of eighteen months from the earliest filing date for which a benefit is sought under title 35, United States Code, unless:

(1) The application is recognized by the Office as no longer pending;

(2) The application is national security classified (see § 5.2(c)), subject to a secrecy order under 35 U.S.C. 181, or under national security review;

(3) The application has issued as a patent in sufficient time to be removed from the publication process; or

(4) The application was filed with a nonpublication request in compliance with § 1.213(a).

(b) Provisional applications under 35 U.S.C. 111(b) shall not be published, and design applications under 35 U.S.C. chapter 16 and reissue applications under 35 U.S.C. chapter 25 shall not be published under this section.

**>

(c) An application filed under 35 U.S.C. 111(a) will not be published until it includes the basic filing fee (§ 1.16(a) or 1.16(c)), any English translation required by § 1.52(d), and an executed oath or declaration under § 1.63. The Office may delay publishing any application until it includes any application size fee required by the Office under § 1.16(s) or § 1.492(j), a specification having papers in compliance with § 1.52 and an abstract (§ 1.72(b)), drawings in compliance with § 1.84, and a sequence listing in compliance with §§ 1.821 through 1.825 (if applicable), and until any petition under § 1.47 is granted. <

(d) The Office may refuse to publish an application, or to include a portion of an application in the patent application publication (§ 1.215), if publication of the application or portion thereof would violate Federal or state law, or if the application or portion thereof contains offensive or disparaging material.

(e) The publication fee set forth in § 1.18(d) must be paid in each application published under this section before the patent will be granted. If an application is subject to publication under this section, the sum specified in the notice of allowance under § 1.311 will also include the publication fee which must be paid within three months from the date of mailing of the notice of allowance to avoid abandonment of the application. This three-month period is not extendable. If the application is not published under this section, the publication fee (if paid) will be refunded.

I. IN GENERAL

With certain exceptions, nonprovisional utility and plant applications for patent filed on or after November 29, 2000 are published promptly after the expiration of a period of eighteen months from the earliest filing date for which a benefit is sought under title 35, United States Code (eighteen-month publication or pre-grant publication (PGPub)). See 35 U.S.C. 122(b). The Office will generally publish:

(A) utility and plant applications filed under 35 U.S.C. 111(a) on or after November 29, 2000; and

(B) nonprovisional applications which entered the national stage after compliance with 35 U.S.C. 371 from an international application under 35 U.S.C. 363 filed on or after November 29, 2000 (regardless of whether the international application has been published by the International Bureau (IB) under PCT Article 21 in English).

The Office will not publish the following applications under 35 U.S.C. 122(b):

(A) Provisional applications filed under 35 U.S.C. 111(b) (for more information see subsection II. EXCEPTIONS below);

(B) Design applications filed under 35 U.S.C. 171; and

(C) Reissue applications filed under 35 U.S.C. 251 (because reissue applications are not kept confidential under 35 U.S.C. 122(a)).

Applications will be published after the expiration of a period of eighteen months from the earliest of: (1) the U.S. filing date; (2) the international filing date; or (3) the filing date of an earlier application **>for which a benefit is sought< under 35 U.S.C. 119, 120, 121, or 365. Applicants are encouraged to timely submit any desired priority and benefit claims to ensure that their applications will be published on time and to avoid the need to file a petition to accept unintentionally delayed priority or benefit claims under 37 CFR *>1.55< or 1.78 and the surcharge set forth in 37 CFR 1.17(t). See MPEP § 201.11 and § 201.13. Applications are normally published based on the application as filed and certain amendments. See MPEP § 1121. A proper continued prosecution application (CPA) for utility or plant patent filed on or after November 29, 2000 will be published based upon the application papers deposited on the filing date of the first prior application. (Note: CPA practice has been eliminated as to utility and plant applications effective July 14, 2003. See MPEP § 201.06(d).) Since a request for continued examination (RCE) under 37 CFR 1.114 is not the filing of a new application, filing an RCE will not cause an application filed before November 29, 2000 to be published. The Office will not mail a paper copy of the patent application publication to the applicant, but will mail a notice to the applicant indicating that the application has been published. See MPEP § 1127. Patent application publications are available on the USPTO web site (www.uspto.gov).

II. EXCEPTIONS

An application will not be published if one of the following exceptions as set forth in 37 CFR 1.211 applies:

(A) The application is recognized by the Office as no longer pending; for information on express abandonment to avoid publication see 37 CFR 1.138(c) and MPEP § 1125;

(B) The application is national security classified (see 37 CFR 5.2(c)), subject to a secrecy order under 35 U.S.C. 181, or under national security review;

(C) The application has issued as a patent in sufficient time to be removed from the publication process; or

(D) The application was filed with a nonpublication request in compliance with 37 CFR 1.213(a). See MPEP §§ 1122-1124.

The Office will not publish applications that are recognized as no longer pending. See 37 CFR 1.211(a)(1). An application is not "recognized by the Office as no longer pending" when the period for reply (either the shortened statutory period for reply or the maximum extendable period for reply) to an Office action has expired, but the Office has not yet entered the change of status (to abandoned) of the application in the Office's Patent Application Locating and Monitoring (PALM) system and mailed a notice of abandonment. An application will remain in the publication process until the PALM system indicates that the application is abandoned. Once the PALM system indicates that an application is abandoned, the Office will attempt to remove the application from the publication process and avoid dissemination of the application information.

Unless an applicant has received a notice of abandonment at least 4 weeks prior to the projected publication date, an applicant who wants to abandon the application to avoid publication must file a petition under 37 CFR 1.138(c) to expressly abandon the application and avoid publication. See MPEP § 1125. An applicant who seeks to avoid publication by permitting an application to become abandoned (for failure to reply to an Office action) and passively waiting for the Office to recognize that the application has become abandoned bears the risk that the Office will not recognize that the application has become abandoned and change the status of the application in the PALM system in sufficient time to avoid publication.

The Office will not publish applications that have issued as patents in sufficient time to be removed from the publication process. See 37 CFR 1.211(a)(3). If the pre-grant publication process coincides with the patent issue process, the Office will continue with the pre-grant publication process until a patent actually issues. This is because there are many instances in which the Office mails a notice of allowance in an application but the application does not issue as a patent in regular course (e.g., abandonment due to failure to pay the issue fee, or withdrawal from issue). Therefore, the Office will not discontinue the pregrant publication process until a patent has actually issued. Since the Office cannot discontinue the pregrant publication process during the last two to four weeks of the publication process, this will result in a few applications being issued as patents and subsequently being published as patent application publications.

The Office may refuse to publish an application, or to include a portion of an application in the publication, if publication of the application or portion thereof would violate Federal or state law, or if the application or portion thereof contains offensive or disparaging material. See 37 CFR 1.211(d). The Office may require a substitute specification to delete the portion of the application that would violate Federal or state law, or that contains offensive or disparaging material.

Converting a nonprovisional application to a provisional application will not avoid the publication of the nonprovisional application unless the request to convert is recognized in sufficient time to permit the appropriate officials to remove the nonprovisional application from the publication process. The Office cannot ensure that it can remove an application from the publication process or avoid publication of application information any time after the publication process for the application has been initiated. Technical preparations for publication of an application generally begin four months prior to the projected publication date. The projected publication date is indicated on the filing receipt for the patent application.

III. APPLICATION MUST BE COMPLETE

In accordance with 37 CFR 1.211(c), publication will not occur or will be delayed in certain circumstances. The Office will not publish an application until the application includes:

(A) the basic filing fee;

(B) an English translation if the application is in a language other than English; and

(C) an executed oath or declaration under 37 CFR 1.63.

The Office may delay publication until the application includes:

>(A) any application size fee required by the Office under 37 CFR 1.16(s) or 1.492(j);<

*>

(B) < a specification in compliance with 37 CFR 1.52;

*>

(C) < an abstract in compliance with 37 CFR 1.72(b);

*>

(D) < drawings (if any) in compliance with 37 CFR 1.84; and

*>

(E) < a sequence listing in compliance with 37 CFR 1.821 through 1.825 (if applicable).

The Office may also delay publication until any petition under 37 CFR 1.47 is granted.

If an application does not contain the content specified in 37 CFR 1.211(c) and papers or drawings of sufficient quality to create a patent application publication by eighteen months from the earliest filing date for which benefit is claimed, the Office will publish the application as soon as practical after these deficiencies are corrected. For example, publication of the patent application publication may be delayed if the

application papers submitted on the filing date of the application do not include the content needed (e.g., an abstract or an executed oath or declaration) or the specification (including claims) or drawings are not of sufficient quality to be used to create a patent application publication. In such a situation, the Office will issue a preexamination notice requiring a substitute specification or replacement drawings. The applicant's reply (e.g., substitute specification or replacement drawings) to the notice will be used for creating the patent application publication. If the application on filing includes papers that are of sufficient quality to create the publication, the Office will publish the application using the originally filed application papers.

Applicants who attempt to delay publication by intentionally delaying the submission of the application content necessary for publication may encounter a reduction in any patent term adjustment under 35 U.S.C. 154(b). See 35 U.S.C. 154(b)(2)(C)(ii) and 37 CFR 1.704(b).

IV. PROJECTED PUBLICATION DATE

Once the application is complete, the Office will provide applicants the projected publication date of the application on a filing receipt. The projected publication date normally will be the later of: (1) eighteen months from the earliest filing date claimed; or (2) fourteen weeks from the mailing date of the filing receipt. The publication process takes about fourteen weeks. Publication occurs on Thursday of each week.

Applicants should carefully and promptly review their filing receipts. Applicants >should promptly file a request for corrected filing receipt if the information on the filing receipt needs to be corrected. In addition, applicants< should contact the Pre-Grant Publication Division (see MPEP § 1730) if the projected publication date is incorrect or if a projected publication date has been assigned to an application that should not be published. Applicants should also promptly check any priority or benefit claims provided on the filing receipt and timely file >or correct< any * priority or benefit claims if the filing receipt does not include the desired claims >or includes incorrect claims<. This will avoid the need to file a petition under 37 CFR 1.55 or 1.78 to accept unintentionally delayed claims and the surcharge under 37 CFR 1.17(t). See MPEP §§ 201.11 and 201.13. >Furthermore, if the corrections are not recognized by the Pre-Grant Publication Division before the technical preparation for publication has begun, the Office cannot change the projected publication date and include the corrections in the publication.<

1121 Content of a Patent Application Publication [R-5]

37 CFR 1.215. Patent application publication

**>

(a) The publication of an application under 35 U.S.C. 122(b) shall include a patent application publication. The date of publication shall be indicated on the patent application publication. The patent application publication will be based upon the specification and drawings deposited on the filing date of the application, as well as the executed oath or declaration submitted to complete the application. The patent application publication may also be based upon amendments to the specification (other than the abstract or the claims) that are reflected in a substitute specification under § 1.125(b), amendments to the abstract under § 1.121(b), amendments to the claims that are reflected in a complete claim listing under § 1.121(c), and amendments to the drawings under § 1.121(d), provided that such substitute specification or amendment is submitted in sufficient time to be entered into the Office file wrapper of the application before technical preparations for publication of the application have begun. Technical preparations for publication of an application generally begin four months prior to the projected date of publication. The patent application publication of an application that has entered the national stage under 35 U.S.C. 371 may also include amendments made during the international stage. See paragraph (c) of this section for publication of an application based upon a copy of the application submitted via the Office electronic filing system.<

(b) If applicant wants the patent application publication to include assignee information, the applicant must include the assignee information on the application transmittal sheet or the application data sheet (§ 1.76). Assignee information may not be included on the patent application publication unless this information is provided on the application transmittal sheet or application data sheet included with the application on filing. Providing this information on the application transmittal sheet or the application data sheet does not substitute for compliance with any requirement of part 3 of this chapter to have an assignment recorded by the Office.

**>

(c) At applicant's option, the patent application publication will be based upon the copy of the application (specification, drawings, and oath or declaration) as amended, provided that applicant supplies such a copy in compliance with the Office electronic filing system requirements within one month of the mailing date of the first Office communication that includes a confirmation number for the application, or fourteen months of the earliest filing date for which a benefit is sought under title 35, United States Code, whichever is later.<

(d) If the copy of the application submitted pursuant to paragraph (c) of this section does not comply with the Office electronic filing system requirements, the Office will publish the application as provided in paragraph (a) of this section. If, however, the Office has not started the publication process, the Office may use an untimely filed copy of the application supplied by the applicant under paragraph (c) of this section in creating the patent application publication.

A patent application publication includes a front page containing information similar to that contained on the front page of a patent, the drawings (if any), and the specification (including claims). The patent application publication will generally be based upon the following:

(A) The patent application papers and drawings deposited on the filing date of the application;

(B) The executed oath or declaration submitted to complete the application;

(C) Any subsequently filed application papers and drawings submitted in reply to a preexamination notice requiring a title and abstract in compliance with 37 CFR 1.72, application papers in compliance with 37 CFR 1.52, drawings in compliance with 37 CFR 1.84, or a sequence listing in compliance with 37 CFR 1.821 through 1.825; and

(D) The correspondence address for the application according to Office records at the time the publication process was initiated.

>

I. AMENDMENTS<

The patent application publication may also be based upon amendments that expedite the publication process, provided that such amendments are submitted in sufficient time to be entered into the application file before technical preparations for publication of the application have begun (generally four months prior to the projected publication date). For example, the patent application publication may also be based upon >the following amendments because they are in formats useable for publication<:

(A) Amendments to the specification that are reflected in a substitute specification under 37 CFR 1.125(b);

(B) An amendment to the abstract under 37 CFR 1.121(b);

(C) Amendments to the claims that are reflected in a complete claim listing under 37 CFR 1.121(c); and

(D) Amendments to drawings under 37 CFR 1.121(d).

The patent application publication of an application that has entered the national stage under 35 U.S.C. 371 may also include amendments made during the international stage, such as: amendments under Article 34 and 19; rectifications; corrections of physical defects under PCT Rule 26; and an abstract rewritten by the International Searching Authority.

If an applicant wants the publication to include drawings other than those submitted with the application as filed (e.g., better quality or amended drawings), applicant may file the replacement drawings in sufficient time to be entered into the application file before four months prior to the projected publication date. The Office cannot guarantee that the latest amendment or any particular amendment will be included in the patent application publication. If applicant wishes to have **>the patent application publication be based upon a copy of the application (specification, drawings and oath or declaration) as amended, applicant must supply such a copy< via the electronic filing system (EFS) within one month of the mailing date of the first Office correspondence (e.g., filing receipt) including a confirmation number for the application or fourteen months of the earliest filing date for which a benefit is sought under title 35, United States Code, whichever is later (see 37 CFR 1.215(c) and *Assignment of Confirmation Number and Time Period for Filing a Copy of an Application by EFS for Eighteen-Month Publication Purposes*, 1241 *Off. Gaz. Pat. Office* 97 (December 12, 2000)). See also III. AMENDED APPLICATION FILED VIA EFS, below. The Office will use the electronic copy provided by the applicant to create the publication. A proper continued prosecution application (CPA) filed on or after November 29, 2000 (but before July 14, 2003) will be published based upon the application papers deposited on the filing date of the first prior application.

Applicants may review the bibliographic information contained in the Office's database, and application papers that have been scanned into the Image File Wrapper system, via the Office's Patent Application Information Retrieval (PAIR) system. Applicants

should bring any errors to the Office's attention before technical preparations for publication of the application have begun (generally four months prior to the projected publication date).

Long nucleotide and/or amino acid sequences or large numbers of such sequences are very difficult for the Office to publish as part of patent application publications. Therefore, long sequence listings will only be published in electronic form on the USPTO sequence homepage (http://seqdata.uspto.gov) as an ASCII text file. The patent application publication will include a statement that the application contains a lengthy sequence listing section and a hyperlink to the web page containing the sequence listing. See *Notice of Change in Publishing of Patents and Patent Application Publications With Sequence Listings,* 1250 *Off. Gaz. Pat. Office* 70 (September 11, 2001).

>Avoid Filing Preliminary Amendments

Applicants should not file any preliminary amendment with the application. Submitting applications without any accompanying preliminary amendment reduces the processing required of the Office, and will help to ensure that patent application publications are printed correctly.

A preliminary amendment that is present on the filing date of the application is part of the original disclosure of the application under 37 CFR 1.115(a)(1). The Office will include such a preliminary amendment that is present on the filing date of the application in the patent application publication. If the preliminary amendment that is present on the filing date of the application is not in a format that is useable for publication, the Office will issue a notice requiring the applicant to submit the amendment in a format useable for publication. Generally, a substitute specification (excluding claims) is required for any preliminary amendments to the specification (other than the claims) that are present on the filing date of the application. Even though a substitute specification is a useable format for publication, applicant should not file a substitute specification with the application because the application size fee will be calculated based on the application papers including the clean version and marked-up version of the substitute specification.<

To avoid submitting preliminary amendments, applicants should incorporate any desired amendments into the text of the specification including a new set of claims, even where the application is a continuation or divisional application of a previously-filed patent application. In such a continuation or divisional application, a new specification (e.g., reflecting amendments made in the parent application) may be submitted together with a copy of the oath or declaration from the previously filed application so long as no new matter is included in the specification. See 37 CFR 1.63(d)(1)(iii). >The specific reference to the prior application required by 35 U.S.C. 119(e) or 120 and 37 CFR 1.78(a) can be submitted in an application data sheet (ADS) rather than in a preliminary amendment to the first sentence(s) of the specification. If the specific reference is submitted in a preliminary amendment, however, a substitute specification will not be required if the preliminary amendment only adds or amends a benefit claim.<

Additionally, applications with poor quality text, which may be acceptable for scanning and examination purposes, may lead to errors in the patent application publication. Correction of these errors and inclusion of any desired amendments into the text of the originally-filed specification and drawings will only occur if applicant files a request for republication under 37 CFR 1.221(a). They will not be corrected by the Office in a corrected publication under 37 CFR 1.221(b). See MPEP § 1130.

II. APPENDICES

Appendices, other than those containing sequence listings or certain tables, are not printed if they are contained on pages located after the claims. If the application includes multiple claim sets in the specification, the Office may treat pages located after the first set of claims as appendices. Note that computer program listings may be printed if they are included in the specification before the claims, but that computer program listings that are provided on compact disc in accordance with 37 CFR 1.96(c) and 1.52(e) are not printed as part of the patent or patent application publication.

III. AMENDED APPLICATION FILED VIA EFS

At applicant's option, a patent application publication may be based upon **>a copy of the application (specification, drawings and oath or declaration) as

amended, provided that applicant supplies such a copy in compliance with the Office electronic filing system (EFS) requirements within one month of the mailing date of the first Office communication that includes a confirmation number for the application, or fourteen months of the earliest filing date for which a benefit is sought under title 35, United States Code, whichever is later. 37 CFR 1.215(c). If the copy of the application submitted under 37 CFR 1.215(c) does not comply with the Office EFS requirements, the Office will publish the application as provided in 37 CFR 1.215(a). If the copy of the application submitted under 37 CFR 1.215(c) was untimely, the Office may use the untimely filed copy of the application supplied by the applicant under 37 CFR 1.215(c) in creating the patent application publication so long as the copy was received before the Office has started the publication process.< For further information about EFS, see the Electronic Business Center on the USPTO web site (www.uspto.gov).

IV. ASSIGNEE INFORMATION

If the applicant would like the assignee data to be published, the information *>must< be provided on the application transmittal letter or the application data sheet (ADS) filed with the application. **>Providing this information on the application transmittal letter or the application data sheet does not substitute for compliance with any requirement of 37 CFR Part 3 to have an assignment recorded by the Office.< If the assignee data is recorded with the Assignment Division only, the information will not be published as part of the patent application publication.

Errors in assignee information printed on the publication are not considered material mistakes by the Office under 37 CFR 1.221(b) (e.g., errors in the assignee's name). See MPEP § 1130. Thus, these assignment errors and applicant's failure to include assignment data may only be corrected if applicant files a request for republication under 37 CFR 1.221(a).

1122 Requests for Nonpublication [R-5]

35 U.S.C. 122. Confidential status of applications; publication of patent applications.

*****

(b) PUBLICATION.—

*****

(2) EXCEPTIONS.—

*****

(B)(i) If an applicant makes a request upon filing, certifying that the invention disclosed in the application has not and will not be the subject of an application filed in another country, or under a multilateral international agreement, that requires publication of applications 18 months after filing, the application shall not be published as provided in paragraph (1).

*****

37 CFR 1.213. Nonpublication request.

(a) If the invention disclosed in an application has not been and will not be the subject of an application filed in another country, or under a multilateral international agreement, that requires publication of applications eighteen months after filing, the application will not be published under 35 U.S.C. 122(b) and § 1.211 provided:

(1) A request (nonpublication request) is submitted with the application upon filing;

(2) The request states in a conspicuous manner that the application is not to be published under 35 U.S.C. 122(b);

(3) The request contains a certification that the invention disclosed in the application has not been and will not be the subject of an application filed in another country, or under a multilateral international agreement, that requires publication at eighteen months after filing; and

(4) The request is signed in compliance with § 1.33(b).

*****

If the invention disclosed in an application filed under 35 U.S.C. 111(a) has not been and will not be the subject of a foreign or international application filed in another country, or under a multilateral international agreement, that requires publication of applications eighteen months after filing (e.g., a counterpart PCT application), applicants may request that the application filed under 35 U.S.C. 111(a) not be published by filing a nonpublication request under 37 CFR 1.213(a). The Office will not publish an application filed under 35 U.S.C. 111(a) with a nonpublication request in compliance with the following:

(A) The request for nonpublication under 37 CFR 1.213(a) must be submitted with the application **upon filing** (this is a statutory requirement and cannot be waived);

(B) The request for nonpublication must state in a **conspicuous** manner that the application is not to be published under 35 U.S.C. 122(b) (see Form PTO/SB/35 in MPEP § 1135);

(C) The request must contain a certification that the invention disclosed in the application **has not been and will not** be the subject of an application filed in another country, or under a multilateral international agreement, that requires eighteen-month publication. Before making the certification, the person who signs the certification must make an **actual inquiry** to determine whether the certification under 35 U.S.C. 122(b)(2)(B)(i) and 37 CFR 1.213(a)(3) can be appropriately made (see I. REQUIREMENTS PRIOR TO FILING A NONPUBLICATION REQUEST, below); and

(D) The request is signed in compliance with 37 CFR 1.33(b).

If applicant filed a nonpublication request and later decides to file a counterpart foreign or international application in another country, or under a multilateral agreement, that requires eighteen-month publication, applicant must either: (1) rescind the nonpublication request before filing such foreign or international application; or (2) notify the Office of such filing no later than 45 days after the filing date of the counterpart foreign or international application. See MPEP §§ 1123 and 1124.

I. REQUIREMENTS PRIOR TO FILING A NONPUBLICATION REQUEST

A nonpublication request is not appropriate unless the person who is signing the nonpublication request has made an actual inquiry consistent with the requirements of 37 CFR 10.18(b) to determine that:

(A) The application under 35 U.S.C. 111(a) has not been the subject of a foreign or international application filed in another country, or under a multilateral international agreement, that requires publication of applications at eighteen months after filing (e.g., a counterpart PCT application); and

(B) The applicant's intent at the time the nonpublication request is being filed is that the application under 35 U.S.C. 111(a) will not be the subject of a foreign or international application filed in another country, or under a multilateral international agreement, that requires publication of applications at eighteen months after filing.

Only when both conditions are satisfied, can applicants file a nonpublication request under 37 CFR 1.213(a). A nonpublication request is not appropriate if applicants have already filed a counterpart foreign or international application in another country, or under a multilateral international agreement, that requires publication of applications at eighteen months after filing. A nonpublication request is not proper even if the foreign or international application is abandoned before the foreign or international application is published.

A nonpublication request also is not appropriate if the applicant has not yet made a decision whether to file a counterpart application in a foreign country, or under a multilateral international agreement, that requires publication of applications at eighteen months after filing. A certification under 37 CFR 1.213(a)(3) cannot be made based on a lack of knowledge of the applicant's plans concerning the filing of any counterpart application that would be subject to eighteen-month publication or the applicant's past practices or tendencies with respect to the filing of foreign counterpart applications. The fact that a particular applicant has a tendency to file counterpart applications for fewer than fifty percent of its U.S. applications is not alone an adequate basis for filing all or any of the U.S. applications with a nonpublication request. The applicant must have an affirmative intent not to file a counterpart application, and not just the absence of any intent or plan concerning the filing of any counterpart application that would be subject to eighteen-month publication. A nonpublication request is only appropriate if the applicant's intent at the time the nonpublication request is being filed is not to file a counterpart foreign or international application that would be subject to eighteen-month publication.

II. FILING A NONPUBLICATION REQUEST

Applicants should use the format set forth in form PTO/SB/35, Nonpublication Request under 35 U.S.C. 122(b)(2)(B)(i), to ensure that the certification includes the proper language required by the statute and the request is stated in a conspicuous manner. Form PTO/SB/35 is available from the USPTO website (www.uspto.gov), and is reproduced in MPEP § 1135. A nonpublication request that does not include the language required by 35 U.S.C. 122(b)(2)(B)(i) (i.e., certifying that the "invention disclosed in the application has not and will not be the subject of an application filed in another country, or

under a multilateral international agreement, that requires publication of applications 18 months after filing") will not be accepted. >A request for nonpublication may not be recognized unless it is conspicuous. See 37 CFR 1.213(a)(2). Providing text as one paragraph among numerous other paragraphs with no highlighting of the request for nonpublication is not conspicuous, and thus the Office's assignment of a publication date would be appropriate.<

A nonpublication request must be **>filed upon the filing of the application.< This is a statutory requirement and cannot be waived. >For example, a nonpublication request filed with a request under 37 CFR 1.53(c)(3) to convert a provisional application to a nonprovisional application will not be accepted as timely filed because the nonprovisional application would be accorded the original filing date of the provisional application if the request to convert is granted. The nonpublication request must also be included with the application papers. The nonpublication request cannot be filed separately on the same date as the filing date of the application (e.g., the nonpublication request is filed in a different "Express Mail" package than the package that contains the application).< If the Office mistakenly accepts an improper nonpublication request, applicants should notify the Pre-Grant Publication Division and rescind the request immediately. See MPEP § 1730 for contact information.
**

When the Office recognizes the nonpublication request, the filing receipt will not include a projected publication date. If applicant includes a nonpublication request as specified by 35 U.S.C. 122(b)(2)(B)(i) and the filing receipt reflects a projected publication date, applicant should promptly contact the Office and determine whether the nonpublication request was overlooked.

III. INAPPROPRIATE NONPUBLICATION REQUEST

If prior to filing a U.S. application under 35 U.S.C. 111(a), applicants have filed a counterpart foreign or international application in a foreign country, or under a multilateral international agreement, that requires publication of applications 18 months after filing, a nonpublication request would not be appropriate in the U.S. application. If applicants filed a nonpublication request in a U.S. application that claims the benefit to an earlier foreign or international application, the Office will not accept the nonpublication request and will assign a projected publication date. The applicant will be notified that the certification is inconsistent with the priority claim. The notice will provide a non-extendable time period of 30 days from the mail date of the notice for applicant to provide a satisfactory explanation as to how the certification submitted is valid in light of the priority claim. If applicants fail to provide a satisfactory explanation, the Office will publish the U.S. application.

If an applicant files a PCT application, abandons the PCT application before the International Bureau publishes the PCT application, and thereafter files a corresponding U.S. application under 35 U.S.C. 111(a) with a non-publication request under 37 CFR 1.213, the nonpublication request is improper. The mere filing of the PCT application precludes the proper use of a nonpublication request, since the invention disclosed in the U.S. application was the subject of an application that was filed under an international agreement requiring publication at 18 months (the PCT application). 35 U.S.C. 122(b)(2)(B)(i) states that an application will not be published "[i]f an applicant makes a request upon filing, certifying that the invention disclosed in the application has not and will not be the subject of an application filed in another country, or under a multilateral international agreement, that requires publication of applications 18 months after filing, ..." The trigger in the statute is not whether the other application will be published, but rather the trigger is the act of filing where eighteen-month publication of patent applications is required. Abandonment of the foreign application, or the application under a multilateral international agreement, prior to foreign publication at 18-months has no bearing on the propriety of requesting nonpublication of the U.S. application.

Where a foreign or PCT application is filed first, and a U.S. application is filed thereafter with an (improper) nonpublication request, the Office will not consider the U.S. application as abandoned for having made the nonpublication request. This is because the statute only provides for an application to be regarded as abandoned when the applicant fails to notify the Office within 45 days of a subsequently filed application that is directed to the same subject as the

invention of the U.S. application in another country, or under a multilateral international agreement, that requires eighteen-month publication of applications. 35 U.S.C. 122(b)(2)(B)(iii) does not apply to the situation where the applicant has made an improper certification subsequent to the foreign filing. A petition to revive under 37 CFR 1.137(b)/(f) is inappropriate and not necessary in the above-noted situation because the U.S. application is pending (unless the application is abandoned for other reasons). If a petition to revive under 37 CFR 1.137(b)/(f) is filed, the Office will dismiss the petition as inappropriate but retain the petition fee because the Office was required to evaluate the merits of the petition before being able to determine that the petition was not appropriate.

Applicants and their representatives should make sure that the certification is proper before signing and filing it with the Office. While applicants should rescind any improper nonpublication request as soon as possible, 35 U.S.C. 122(b)(2)(B)(i)-(iv) does not include any provision for "correction" of an improper certification. Any applicant or applicant's representative who makes a false statement (e.g., an improper certification) may be in violation of 37 CFR 10.18(b). In addition, false statements by registered patent practitioners may also violate other Disciplinary Rules (see 37 CFR Part 10).

While applicant cannot undo the fact that an improper certification was made, any applicant who has made such a mistake should promptly file a rescission of the nonpublication request and note that the original certification was improper.

>

1123 Rescission of a Nonpublication Request [R-2]

35 U.S.C. 122. Confidential status of applications; publication of patent applications

*****

(b) PUBLICATION.—

*****

(2) EXCEPTIONS.—

*****

(B)(i) If an applicant makes a request upon filing, certifying that the invention disclosed in the application has not and will not be the subject of an application filed in another country, or under a multilateral international agreement, that requires publication of applications 18 months after filing, the application shall not be published as provided in paragraph (1).

(ii) An applicant may rescind a request made under clause (i) at any time.

(iii) An applicant who has made a request under clause (i) but who subsequently files, in a foreign country or under a multilateral international agreement specified in clause (i), an application directed to the invention disclosed in the application filed in the Patent and Trademark Office, shall notify the Director of such filing not later than 45 days after the date of the filing of such foreign or international application. A failure of the applicant to provide such notice within the prescribed period shall result in the application being regarded as abandoned, unless it is shown to the satisfaction of the Director that the delay in submitting the notice was unintentional.

(iv) If an applicant rescinds a request made under clause (i) or notifies the Director that an application was filed in a foreign country or under a multilateral international agreement specified in clause (i), the application shall be published in accordance with the provisions of paragraph (1) on or as soon as is practical after the date that is specified in clause (i).

(v) If an applicant has filed applications in one or more foreign countries, directly or through a multilateral international agreement, and such foreign filed applications corresponding to an application filed in the Patent and Trademark Office or the description of the invention in such foreign filed applications is less extensive than the application or description of the invention in the application filed in the Patent and Trademark Office, the applicant may submit a redacted copy of the application filed in the Patent and Trademark Office eliminating any part or description of the invention in such application that is not also contained in any of the corresponding applications filed in a foreign country. The Director may only publish the redacted copy of the application unless the redacted copy of the application is not received within 16 months after the earliest effective filing date for which a benefit is sought under this title. The provisions of section 154(d) shall not apply to a claim if the description of the invention published in the redacted application filed under this clause with respect to the claim does not enable a person skilled in the art to make and use the subject matter of the claim.

*****

37 CFR 1.213. Nonpublication request.

*****

(b) The applicant may rescind a nonpublication request at any time. A request to rescind a nonpublication request under paragraph (a) of this section must:

(1) Identify the application to which it is directed;

(2) State in a conspicuous manner that the request that the application is not to be published under 35 U.S.C. 122(b) is rescinded; and

(3) Be signed in compliance with § 1.33(b).

*****

An applicant may rescind a previously-filed nonpublication request at any time. See 35 U.S.C. 122(b)(2)(B)(ii). Form PTO/SB/36 (revision April 2001 or later) may be used to both rescind a nonpublication request and provide notice of foreign filing. The form is reproduced in MPEP § 1135. If applicant makes a nonpublication request under 35 U.S.C. 122(b)(2)(B)(i) and then rescinds the nonpublication request before or on the date a foreign or international application (hereinafter "foreign filing" or "counterpart application") directed to the invention disclosed in the U.S. application filed under 35 U.S.C. 111(a) in the USPTO is filed in a foreign country, or under a multilateral international agreement, that requires eighteen-month publication, the nonpublication request under 35 U.S.C. 122(b)(2)(B)(i) will be treated as annulled and the application will be treated as if the nonpublication request was never made. Thus, if applicant filed a nonpublication request and then decided to file a counterpart application, applicant must file either: (1) a request to rescind the nonpublication request before filing the counterpart application; or (2) a notice of foreign filing no later than 45 days after the filing date of the counterpart application, to avoid abandonment of the application (35 U.S.C. 122(b)(2)(B)(iii) and 37 CFR 1.213(c)).

The mere filing of a request under 37 CFR 1.213(b) to rescind the previously filed nonpublication request does not comply with the notice of foreign filing requirement of 35 U.S.C. 122(b)(2)(B)(iii) and 37 CFR 1.213(c) (for applicants who submitted a nonpublication request but before filing the request to rescind, also filed a counterpart application in another country, or under a multilateral international agreement, that requires eighteen-month publication of applications). Applicants are strongly encouraged to provide a notice of foreign filing whenever rescinding a nonpublication request in anticipation of filing a counterpart application in an eighteen-month publication country. Form PTO/SB/36 (revision April 2001 or later) provides both a rescission and notice of foreign filing. See MPEP § 1135. No benefit can be given to a certificate of mailing or transmission under 37 CFR 1.8 on a request to rescind a nonpublication request in determining whether there has been a rescission of a nonpublication request before or on the date a counterpart application is filed in an eighteen-month publication country. A rescission of a nonpublication request is not a paper required to be filed in the USPTO as provided for in 37 CFR 1.8(a). Thus, the provisions of 37 CFR 1.8 by their terms do not apply in this situation, and the USPTO must use the actual date of receipt in the USPTO as defined in 37 CFR 1.6 as the date of the rescission to determine whether the nonpublication request has been rescinded before or on the date of the filing of a counterpart application such that the application may be considered an application in which no nonpublication request under 35 U.S.C. 122(b)(1)(B)(i) was made. Since a notice of foreign filing is required by the statute and 37 CFR 1.215(c), the benefit of a certificate of mailing or transmission under 37 CFR 1.8 will be given to a notice of foreign filing.

After either a rescission of a nonpublication request or a notice of foreign filing is received by the Office, the Office will enter the rescission or notice of foreign filing into the Office Pre-Examination System to schedule the application for publication. A notice (e.g., a "Notice Regarding Rescission Of Nonpublication Request and Notice of Foreign Filing") should be sent to inform the applicant of the projected publication date. The application will be published promptly after the expiration of a period of 18 months from the earliest filing date for which a benefit is sought under title 35, United States Code, or as soon as practicable after mailing this notice. See 35 U.S.C. 122(b)(2)(B)(iv).

An applicant should not rescind a nonpublication request or provide a notice of foreign filing unless a nonpublication request was actually made, because filing a rescission when one is not needed leads to a waste of Office resources and may delay prosecution in the application. Furthermore, filing a rescission of a nonpublication request where a nonpublication request was not originally made may result in a reduction to any patent term adjustment under 35 U.S.C. 154(b).<

>

1124 Notice of Foreign Filing [R-2]

35 U.S.C. 122. Confidential status of applications; publication of patent applications.

*****

(b) PUBLICATION.—

*****

(2) EXCEPTIONS.—

*****

(B)(iii)An applicant who has made a request under clause (i) but who subsequently files, in a foreign country or under a multilateral international agreement specified in clause (i), an application directed to the invention disclosed in the application filed in the Patent and Trademark Office, shall notify the Director of such filing not later than 45 days after the date of the filing of such foreign or international application. A failure of the applicant to provide such notice within the prescribed period shall result in the application being regarded as abandoned, unless it is shown to the satisfaction of the Director that the delay in submitting the notice was unintentional.

(iv) If an applicant rescinds a request made under clause (i) or notifies the Director that an application was filed in a foreign country or under a multilateral international agreement specified in clause (i), the application shall be published in accordance with the provisions of paragraph (1) on or as soon as is practical after the date that is specified in clause (i).

*****

37 CFR 1.213. Nonpublication request.

*****

(c) If an applicant who has submitted a nonpublication request under paragraph (a) of this section subsequently files an application directed to the invention disclosed in the application in which the nonpublication request was submitted in another country, or under a multilateral international agreement, that requires publication of applications eighteen months after filing, the applicant must notify the Office of such filing within forty-five days after the date of the filing of such foreign or international application. The failure to timely notify the Office of the filing of such foreign or international application shall result in abandonment of the application in which the nonpublication request was submitted (35 U.S.C. 122(b)(2)(B)(iii)).

Applicants must timely file a notice of foreign filing to avoid abandonment of a U.S. application if:

(A) applicant filed a nonpublication request in the U.S. application filed under 35 U.S.C. 111(a) (see MPEP § 1122);

(B) applicant subsequently filed a foreign or international application directed to the invention disclosed in the U.S. application in a foreign country, or under a multilateral international agreement, that requires publication of applications 18 months after filing (foreign filing or counterpart application); and

(C) applicant did not rescind the nonpublication request before filing the foreign or international application (see MPEP § 1123).

The notice of foreign filing must be filed not later than 45 days after the filing date of the counterpart application. The requirement for notice of foreign filing is set forth in 35 U.S.C. 122(b)(2)(B)(iii) which provides that an applicant who has made a nonpublication request under 35 U.S.C. 122(b)(2)(B)(i) in a U.S. application filed under 35 U.S.C. 111(a), but who subsequently files an application in a foreign country or under a multilateral international agreement that requires eighteen-month publication, must notify the USPTO of the foreign filing not later than forty-five days after the date of such foreign filing. Form PTO/SB/36 (revision April 2001 or later) may be used to both rescind a nonpublication request and provide notice of foreign filing. The form is reproduced in MPEP § 1135. 35 U.S.C. 122(b)(2)(B)(iii) further provides that failure of the applicant to provide the required notice within this forty-five (45) day period shall result in abandonment of the application. Accordingly, if at the time the foreign filing is made, the applicant still has an operative nonpublication request (i.e., the applicant has not rescinded the nonpublication request), a notice of foreign filing must be made within 45 days of the foreign filing or the U.S. application with the nonpublication request will become abandoned.

Since the notice of foreign filing is required by the statute, the benefit of a certificate of mailing or transmission under 37 CFR 1.8 will be given to a notice of foreign filing. See 37 CFR 1.8(a). Form PTO/SB/36 includes a certificate of mailing. If the end of the 45 day period falls on a Saturday, Sunday or Federal holiday within the District of Columbia, a notice of foreign filing filed on the next succeeding secular or business day is timely. See 35 U.S.C. 21(b).

After either a rescission of a nonpublication request or a notice of foreign filing is received by the Office, the Office will enter the rescission or notice of foreign filing into the Office Pre-Examination System to schedule the application for publication. A notice (e.g., a "Notice Regarding Rescission Of Nonpublication Request and Notice of Foreign Filing") should be sent to inform the applicant of the projected publication date. The application will be published promptly after the expiration of a period of 18 months from the

earliest filing date for which a benefit is sought under title 35, United States Code, or as soon as practicable after mailing this notice. See 35 U.S.C. 122(b)(2)(B)(iv).

ABANDONMENT FOR FAILURE TO PROVIDE TIMELY NOTICE

37 CFR 1.137. Revival of abandoned application, terminated reexamination proceeding, or lapsed patent

*****

(b) *Unintentional.* If the delay in reply by applicant or patent owner was unintentional, a petition may be filed pursuant to this paragraph to revive an abandoned application, a reexamination proceeding terminated under §§ 1.550(d) or 1.957(b) or (c), or a lapsed patent. A grantable petition pursuant to this paragraph must be accompanied by:

(c) *Reply*. In a nonprovisional application abandoned for failure to prosecute, the required reply may be met by the filing of a continuing application. In a nonprovisional utility or plant application filed on or after June 8, 1995, and abandoned for failure to prosecute, the required reply may also be met by the filing of a request for continued examination in compliance with § 1.114. In an application or patent, abandoned or lapsed for failure to pay the issue fee or any portion thereof, the required reply must include payment of the issue fee or any outstanding balance. In an application, abandoned for failure to pay the publication fee, the required reply must include payment of the publication fee.

*****

(f) *Abandonment for failure to notify the Office of a foreign filing*: A nonprovisional application abandoned pursuant to 35 U.S.C. 122(b)(2)(B)(iii) for failure to timely notify the Office of the filing of an application in a foreign country or under a multinational treaty that requires publication of applications eighteen months after filing, may be revived only pursuant to paragraph (b) of this section. The reply requirement of paragraph (c) of this section is met by the notification of such filing in a foreign country or under a multinational treaty, but the filing of a petition under this section will not operate to stay any period for reply that may be running against the application.

*****

35 U.S.C. 122(b)(2)(B)(iii) provides that failure of the applicant to provide the required notice of foreign filing within 45 days of the subsequent filing of a counterpart application shall result in abandonment of the application. When an application is abandoned by the operation of 35 U.S.C. 122(b)(2)(B)(iii), applicant's sole remedy to restore the application to pending status is by filing a petition under 37 CFR 1.137(b) to revive the abandoned application on the basis of unintentional delay, and not on the basis of unavoidable delay. See 37 CFR 1.137(f). By statute, such a petition to revive requires payment of the petition fee specified in 37 CFR 1.17(m) (35 U.S.C. 41(a)(7)), and that the delay in submitting the notice of foreign filing was unintentional. Form PTO/SB/64a may be used for such a petition to revive. See also MPEP § 711.03(c). In addition, if, after filing a counterpart application, an applicant merely rescinds a nonpublication request but does not file a notice of foreign filing within forty-five days of the subsequent filing of a counterpart application, applicant must file a petition under 37 CFR 1.137(b) to revive the abandoned U.S. application (37 CFR 1.137(f)).

Abandonment occurs by operation of the statute, and the Office is unlikely to recognize when applicant has filed a counterpart application in a foreign country or under a multilateral agreement contrary to their certification to the Office. The Office would not be able to change the status of the application from pending to abandoned in the PALM system and send applicant a notice of abandonment. As a result, if applicant failed to file a notice of foreign filing when it was required, prosecution of the application will continue and the application may issue as a patent, even though the application has become abandoned by operation of the statute. Applicants who determine that a required notice of foreign filing was not timely provided should promptly file a petition to revive under 37 CFR 1.137(b). See 37 CFR 1.137(f). The reply requirement of 37 CFR 1.137(c) is met by the notification of the filing in a foreign country or under a multinational treaty, but the filing of a petition to revive will not operate to stay any period for reply that may be running against the application.<

1125 Express Abandonment to Avoid Publication [R-5]

37 CFR 1.138. Express abandonment

*****

**>

(c) An applicant seeking to abandon an application to avoid publication of the application (see § 1.211(a)(1)) must submit a declaration of express abandonment by way of a petition under this paragraph including the fee set forth in § 1.17(h) in sufficient time to permit the appropriate officials to recognize the abandonment and remove the application from the publication process. Applicants should expect that the petition will not be granted and the application will be published in regular course unless such declaration of express abandonment and petition are received by

the appropriate officials more than four weeks prior to the projected date of publication.<

*****

Applicants seeking to abandon an application to avoid publication of the application are urged to do so by filing a petition under 37 CFR 1.138(c) and submitting a declaration of express abandonment and the fee set forth in 37 CFR 1.17(h) in sufficient time to permit the appropriate officials (Pre-Grant Publication Division) to recognize the abandonment and remove the application from the publication process. Applicants may use form PTO/SB/24A (see MPEP § 1135) and mail the petition to **Mail Stop Express Abandonment**, or transmit the petition via facsimile to Pre-Grant Publication Division at **(703) 305-8568** (see MPEP § 1730) to increase the chances of such petition being received by the appropriate officials in sufficient time to avoid publication of an application.

Any applicant seeking to abandon the application for the purpose of avoiding publication must take appropriate action well prior to the projected publication date. If the application is not *>recognized as< abandoned at least four weeks prior to the projected publication date, the Office will probably not be able to avoid publication of the application. This does not imply that a request to expressly abandon an application to avoid publication filed prior to this four-week time frame will ensure that the Office will be able to remove an application from publication. The Office simply cannot ensure that it can remove an application from publication or avoid publication of application information any time after the publication process for the application is initiated (about 4 months prior to the projected publication date).

The petition for express abandonment to avoid publication will be granted when it is recognized in sufficient time to avoid publication and will be denied when it is not recognized in sufficient time to avoid publication of the application. This will avert the situation in which an applicant files a letter of express abandonment to avoid publication, the letter of express abandonment is not recognized in sufficient time to avoid publication, upon publication the applicant wishes to rescind the letter of express abandonment, and the Office cannot revive the application (once the letter of express abandonment is recognized) because the application was expressly and intentionally abandoned by the applicant.

1126 Publication Fees [R-5]

37 CFR 1.211. Publication of applications.

*****

(e) The publication fee set forth in § 1.18(d) must be paid in each application published under this section before the patent will be granted. If an application is subject to publication under this section, the sum specified in the notice of allowance under § 1.311 will also include the publication fee which must be paid within three months from the date of mailing of the notice of allowance to avoid abandonment of the application. This three-month period is not extendable. If the application is not published under this section, the publication fee (if paid) will be refunded.

The publication fee set forth in 37 CFR 1.18(d) must be paid in each application published >(or scheduled to be published)< under 35 U.S.C. 122(b) before a patent will be granted on the application. The publication fee will be required with the Notice of Allowance and Fee(s) Due, unless the publication fee was previously paid. If an application becomes abandoned without being allowed, no publication fee is required. The small entity discount is not available for the publication fee. The sum specified in the Notice of Allowance and Fee(s) Due will also include the publication fee which must be paid within three months from the date of mailing of the Notice of Allowance and Fee(s) Due to avoid abandonment of the application. This three-month period is <u>not</u> extendable.

Applicant is required to pay the publication fee to avoid abandonment of the application even if the application has not yet been published at the time when the publication fee is due. The Office will continue with the pre-grant publication process until a patent actually issues. This is because there are many instances in which the Office mails a notice of allowance in an application but the application does not issue as a patent in regular course. Therefore, the Office will not discontinue the pre-grant publication process until a patent has actually issued. Since the Office cannot discontinue the pre-grant publication process during the last two to four weeks of the publication process, this will result in a few applications being issued as patents and subsequently being published as patent application publications. The Office will refund the publication fee (if paid) if the application is not published as a patent application publication, but will not refund the publication fee if the application is published as a patent application publication, even if it is published after the patent issues.

Accordingly, applicant may file a request for a refund of the publication fee after 4 weeks from the issue date of the patent >if the application did not publish.< A request for refund filed before 4 weeks from the issue date is premature and will be disregarded. Requests for a refund of the publication fee should be directed to the Pre-Grant Publication Division of the Office of Publications at Mail Stop PGPUB.

If applicant files a request for continued examination (RCE) under 37 CFR 1.114 after a Notice of Allowance and Fee(s) Due is mailed (but before the expiration of the three-month time period set forth in the Notice of Allowance and Fee(s) Due), the Office will suspend the due date for the publication fee until three months from the mail date of the new Notice of Allowance and Fee(s) Due for the application (if and when a new Notice is mailed). See *Time Period for Paying Publication Fee if a Request for Continued Examination is Filed After a Notice of Allowance is Mailed*, 1249 *Off. Gaz. Pat. Office* 81 (Aug. 21, 2001). For more information on RCE practice, see MPEP § 706.07(h).

1127 Notice of Publication [R-5]

Applicants will be informed of the projected publication date assigned to the application on the filing receipt. The Office will not mail a paper copy of the patent application publication to the applicant, but will mail a "Notice of Publication" to the applicant indicating that the application has been published when the application is published. Copies of patent application publications are available on the USPTO web site (www.uspto.gov).

A "Notice of New or Revised Publication Date" may be mailed if the publication date changes by more than six weeks due to processing delays, if a secrecy order is removed, or subsequent to the revival of an abandoned application. If applicant >timely< adds or deletes a benefit or priority claim **> and the Office recognizes the correction and changes the projected publication date before the technical preparations of the application have begun, the Office will mail< a notice (e.g., a corrected filing receipt), informing applicant of the newly assigned >projected< publication date.

>

1128 Availability of Published Applications [R-2]

37 CFR 1.14. Patent applications preserved in confidence.

(a) Confidentiality of patent application information. Patent applications that have not been published under 35 U.S.C. 122(b) are generally preserved in confidence pursuant to 35 U.S.C. 122(a). Information concerning the filing, pendency, or subject matter of an application for patent, including status information, and access to the application, will only be given to the public as set forth in § 1.11 or in this section.

(1) Records associated with patent applications (see paragraph (g) for international applications) may be available in the following situations:

*****

(iii) Published pending applications. A copy of the application-as-filed, the file contents of the application, or a specific document in the file of a pending application that has been published as a patent application publication may be provided to any person upon request, and payment of the appropriate fee set forth in § 1.19(b). If a redacted copy of the application was used for the patent application publication, the copy of the specification, drawings, and papers may be limited to a redacted copy. The Office will not provide access to the paper file of a pending application that has been published, except as provided in paragraph (c) or (h) of this section.

(iv) Unpublished abandoned applications (including provisional applications) that are identified or relied upon. The file contents of an unpublished, abandoned application may be made available to the public if the application is identified in a U.S. patent, a statutory invention registration, a U.S. patent application publication, or an international patent application publication of an international application that was published in accordance with PCT Article 21(2). An application is considered to have been identified in a document, such as a patent, when the application number or serial number and filing date, first named inventor, title and filing date or other application specific information are provided in the text of the patent, but not when the same identification is made in a paper in the file contents of the patent and is not included in the printed patent. Also, the file contents may be made available to the public, upon a written request, if benefit of the abandoned application is claimed under 35 U.S.C. 119(e), 120, 121, or 365 in an application that has issued as a U.S. patent, or has published as a statutory invention registration, a U.S. patent application publication, or an international patent application that was published in accordance with PCT Article 21(2). A copy of the application-as-filed, the file contents of the application, or a specific document in the file of the application may be provided to any person upon written request, and payment of the appropriate fee (§ 1.19(b)).

*****

I. ELECTRONIC ACCESS

Patent application publications are available electronically on the USPTO web site (www.uspto.gov). Any member of the public may obtain status information concerning any published application via the Office's Patent Application Information Retrieval (PAIR) system. See MPEP § 1730. Published applications that have been scanned into the Image File Wrapper (IFW) system may be available electronically via PAIR.

II. COPIES OF PUBLISHED APPLICATIONS

Any member of the public may submit a request under 37 CFR 1.14(a)(1)(ii) or (iii) and the fee set forth in 37 CFR 1.19(b) to the Office of Public Records or electronically on the USPTO web site (www.uspto.gov) for:

(A) a copy of the complete file wrapper and contents of, or a copy of a specific paper in, any published application, provided that no redacted copy was timely submitted for publication; or

(B) an appropriately redacted copy of the file wrapper and contents of, or a copy of a specific paper in, any published application for which a redacted copy was timely submitted for publication.

III. PHYSICAL ACCESS TO PUBLISHED APPLICATIONS

Any member of the public cannot obtain physical access to any **pending** published application because permitting physical inspection of pending published applications would interfere with the Office's ability to act on the applications. Any member of the public may, however, physically inspect (subject to the same conditions that apply to inspection of patented files) the file of any **abandoned** published application, provided that no redacted copy was timely submitted for publication, through the File Information Unit (FIU). See MPEP § 1730.

IV. STATUS INFORMATION

Any member of the public may obtain status information concerning any published application via the Office's PAIR system or contact the FIU. See MPEP § 1730. Status information is defined to include identification of whether the application has been published under 35 U.S.C. 122(b), as well as whether the application is pending, abandoned, or patented, and the application number. Status information may also be provided when the application is referred to by its application number in a U.S. patent application publication as well as a U.S. patent or a published international application. The public may obtain continuity data for applications that have been published as a U.S. patent application publication or as a U.S. patent. See also MPEP § 102.<

>

1129 Request for Early Publication [R-2]

37 CFR 1.219. Early publication.

Applications that will be published under § 1.211 may be published earlier than as set forth in § 1.211(a) at the request of the applicant. Any request for early publication must be accompanied by the publication fee set forth in § 1.18(d). If the applicant does not submit a copy of the application in compliance with the Office electronic filing system requirements pursuant to § 1.215(c), the Office will publish the application as provided in § 1.215(a). No consideration will be given to requests for publication on a certain date, and such requests will be treated as a request for publication as soon as possible.

If an applicant wishes to have an application published earlier than the date that is eighteen months after the earliest filing date for which benefit is claimed, applicant may submit a request in compliance with 37 CFR 1.219 and the publication fee set forth in 37 CFR 1.18(d). The Office will publish the application as soon as possible if the application is otherwise ready for publication. The publication process takes approximately 14 weeks and does not begin until the application is complete and ready for publication (e.g., an executed oath or declaration has been filed and the filing fee has been paid). See MPEP § 1120. The Office will not give any consideration to requests for publication on a certain date. Note that if early publication is requested, and the publication fee paid, applicant will not be required to pay the publication fee at allowance.<

1130 Republication and Correction of Patent Application Publications [R-5]

37 CFR 1.221. Voluntary publication or republication of patent application publication

(a) Any request for publication of an application filed before, but pending on, November 29, 2000, and any request for republication of an application previously published under

§ 1.211, must include a copy of the application in compliance with the Office electronic filing system requirements and be accompanied by the publication fee set forth in § 1.18(d) and the processing fee set forth in § 1.17(i). If the request does not comply with the requirements of this paragraph or the copy of the application does not comply with the Office electronic filing system requirements, the Office will not publish the application and will refund the publication fee.

(b) The Office will grant a request for a corrected or revised patent application publication other than as provided in paragraph (a) of this section only when the Office makes a material mistake which is apparent from Office records. Any request for a corrected or revised patent application publication other than as provided in paragraph (a) of this section must be filed within two months from the date of the patent application publication. This period is not extendable.

If an applicant wishes to correct errors in a patent application publication, or republish the application with an amended specification (including amended claims) and/or replacement drawings, applicant may file a request for republication pursuant to 37 CFR 1.221(a). The request for republication must include:

(A) a copy of the application in compliance with the Office Electronic Filing System (EFS) requirements (for more information on EFS see MPEP § 1730 and the USPTO web site, www.uspto.gov);

(B) the publication fee set forth in 37 CFR 1.18(d); and

(C) the processing fee set forth in 37 CFR 1.17(i).

If the applicant submits a request that does not meet the EFS requirements, the request will be dismissed. If the fees are not paid, the USPTO will send the applicant a letter requiring the fees and republication of the application will be delayed. While there is no set time limit for requesting republication, the application must still be pending.

If the application is **recognized** by the Office as abandoned, or has issued as a patent, the application may be removed from the publication process and not republished, even if the Office accepted the request.

CORRECTION OF MATERIAL MISTAKE MADE BY THE OFFICE

If the Office made a material mistake in a patent application publication that is apparent from the Office records and applicant wishes to correct the material mistake, applicant may file a request for corrected publication pursuant to 37 CFR 1.221(b). Prior to submitting a request for a corrected publication under 37 CFR 1.221(b), applicant must check applicant's records (or PAIR) to determine that the application papers submitted to the Office did not contain the alleged material error made by the Office. If applicant submitted a specification that includes illegible text, the Office will not grant a request for corrected publication under 37 CFR 1.221(b) based on errors arising from misinterpretation of such text.

The request for a corrected publication under 37 CFR 1.221(b) must:

(A) be filed within two months from the date of the patent application publication; and

(B) identify the Office's material mistake in the publication.

The two-month time period is not extendable. A request for corrected publication should include a listing of the alleged material errors made by the Office, marked up copies of the relevant pages of the publication and an indication of where in the specification as filed the relevant text appears. If the period has expired or the mistake is caused by the applicants, applicants may correct the mistakes by filing a request for republication under 37 CFR 1.221(a), and should not file a request for corrected publication under 37 CFR 1.221(b).

A. Material Mistake

The Office will grant a request for a corrected publication under 37 CFR 1.221(b) only when the Office makes a material mistake which is apparent from Office records. A material mistake means a mistake that affects the public's ability to appreciate the technical disclosure of the patent application publication or determine the scope of the provisional rights that an applicant may seek to enforce upon issuance of a patent. An error in the claims, the (effective) filing date of the application, or a serious error in the written description or drawings that is necessary to support the claims may be a material error. The following are examples of material mistake:

(A) The publication did not include claims that were included in the originally-filed specification and not canceled by a preliminary amendment.

(B) The publication did not include a part of the specification that provides support for the published claims.

(C) The publication did not include any of the drawings *>originally filed<.

(D) The publication did not include the benefit claim to a prior-filed nonprovisional application where the specific reference was timely submitted in the first sentence>(s)< of the specification or application data sheet (ADS).

B. Non-Material Mistake

Applicants should not file requests for corrected publication that include no material error made by the Office. Errors in the correspondence address, the assignment information or missing assignment information, minor typographical errors or missing section headings are not material mistakes. A failure to include an amendment is not an Office error. ** See MPEP § 1121. For example, applicants should not file a request for a corrected publication under 37 CFR 1.221(b) for the following situations:

(A) The publication did not include assignment information.

(B) The publication shows the wrong assignee or the name of the assignee is misspelled.

(C) The publication did not include a benefit or priority claim to a prior application. For example, where either the claim was not timely filed or the reference to the prior application under 37 CFR 1.78 was not properly submitted in the first sentence of the specification or in an application data sheet (ADS). See MPEP § 201.11.

(D) The publication did not include claims or changes submitted in an amendment.

(E) The publication includes typographical errors that do not affect the interpretation of the published claims.

A request for corrected publication under 37 CFR 1.221(b) may result in a patent term adjustment reduction where the Office made only non-material errors (especially those listed above).

>

1132 Requests for Redacted Publication [R-2]

35 U.S.C. 122. Confidential status of applications; publication of patent applications.

*****

(b) PUBLICATION.—

*****

(2) EXCEPTIONS.—

*****

(B)(v)If an applicant has filed applications in one or more foreign countries, directly or through a multilateral international agreement, and such foreign filed applications corresponding to an application filed in the Patent and Trademark Office or the description of the invention in such foreign filed applications is less extensive than the application or description of the invention in the application filed in the Patent and Trademark Office, the applicant may submit a redacted copy of the application filed in the Patent and Trademark Office eliminating any part or description of the invention in such application that is not also contained in any of the corresponding applications filed in a foreign country. The Director may only publish the redacted copy of the application unless the redacted copy of the application is not received within 16 months after the earliest effective filing date for which a benefit is sought under this title. The provisions of section 154(d) shall not apply to a claim if the description of the invention published in the redacted application filed under this clause with respect to the claim does not enable a person skilled in the art to make and use the subject matter of the claim.

*****

37 CFR 1.217. Publication of a redacted copy of an application

(a) If an applicant has filed applications in one or more foreign countries, directly or through a multilateral international agreement, and such foreign-filed applications or the description of the invention in such foreign-filed applications is less extensive than the application or description of the invention in the application filed in the Office, the applicant may submit a redacted copy of the application filed in the Office for publication, eliminating any part or description of the invention that is not also contained in any of the corresponding applications filed in a foreign country. The Office will publish the application as provided in § 1.215(a) unless the applicant files a redacted copy of the application in compliance with this section within sixteen months after the earliest filing date for which a benefit is sought under title 35, United States Code.

(b) The redacted copy of the application must be submitted in compliance with the Office electronic filing system requirements. The title of the invention in the redacted copy of the application must correspond to the title of the application at the time the redacted copy of the application is submitted to the Office. If the redacted copy of the application does not comply with the Office electronic filing system requirements, the Office will publish the application as provided in § 1.215(a).

(c) The applicant must also concurrently submit in paper (§ 1.52(a)) to be filed in the application:

(1) A certified copy of each foreign-filed application that corresponds to the application for which a redacted copy is submitted;

(2) A translation of each such foreign-filed application that is in a language other than English, and a statement that the translation is accurate;

(3) A marked-up copy of the application showing the redactions in brackets; and

(4) A certification that the redacted copy of the application eliminates only the part or description of the invention that is not contained in any application filed in a foreign country, directly or through a multilateral international agreement, that corresponds to the application filed in the Office.

(d) The Office will provide a copy of the complete file wrapper and contents of an application for which a redacted copy was submitted under this section to any person upon written request pursuant to § 1.14(c)(2), unless applicant complies with the requirements of paragraphs (d)(1), (d)(2), and (d)(3) of this section.

(1) Applicant must accompany the submission required by paragraph (c) of this section with the following:

(i) A copy of any Office correspondence previously received by applicant including any desired redactions, and a second copy of all Office correspondence previously received by applicant showing the redacted material in brackets; and

(ii) A copy of each submission previously filed by the applicant including any desired redactions, and a second copy of each submission previously filed by the applicant showing the redacted material in brackets.

(2) In addition to providing the submission required by paragraphs (c) and (d)(1) of this section, applicant must:

(i) Within one month of the date of mailing of any correspondence from the Office, file a copy of such Office correspondence including any desired redactions, and a second copy of such Office correspondence showing the redacted material in brackets; and

(ii) With each submission by the applicant, include a copy of such submission including any desired redactions, and a second copy of such submission showing the redacted material in brackets.

(3) Each submission under paragraph (d)(1) or (d)(2) of this paragraph must also be accompanied by the processing fee set forth in § 1.17(i) and a certification that the redactions are limited to the elimination of material that is relevant only to the part or description of the invention that was not contained in the redacted copy of the application submitted for publication.

(e) The provisions of § 1.8 do not apply to the time periods set forth in this section.

If an application filed in the USPTO and subject to publication under 35 U.S.C. 122 (b) includes description that is more extensive than any previously filed corresponding foreign applications, applicant may request for redacted publication under 37 CFR 1.217, eliminating any part or description of the invention that is not also contained in any of the corresponding applications filed in a foreign country. The Office will publish the redacted (less extensive) copy of the application instead of the full description of the invention disclosed in the U.S. application (as provided in 37 CFR 1.215(a)) if applicant timely files a request for redacted publication in compliance with 37 CFR 1.217 which requires the following:

(A) A redacted copy of the application in compliance with the Office electronic filing system (EFS) requirements within sixteen (16) months after the earliest filing date for which a benefit is sought under title 35, United States Code;

(B) A certified copy of each foreign-filed application that corresponds to the U.S. application for which a redacted copy is submitted;

(C) A translation of each such foreign-filed application that is in a language other than English, and a statement that the translation is accurate;

(D) A marked-up copy of the application showing the redactions in brackets; and

(E) A certification that the redacted copy of the application eliminates only the part or description of the invention that is not contained in any application filed in a foreign country, directly or through a multilateral international agreement, that corresponds to the application filed in the Office.

Items (B)– (E) above must be submitted in paper concurrently with the EFS submission of the redacted copy of the application.

The 16-month period is provided by statute (35 U.S.C. 122(b)(2)(B)(v)), and as such, requests for waiver of this 16-month period will be denied. The title of the invention in the redacted copy of the application must correspond to the title of the application at the time the redacted copy of the application is submitted to the Office. If the redacted copy of the application does not comply with the Office electronic filing system requirements, the Office will publish the full description of the invention disclosed in the U.S. application as provided in 37 CFR 1.215(a).

Once an application has been published, a member of the public may request a copy of the complete file wrapper and contents of, or a copy of a specific paper

in, the published application, provided that no redacted copy was timely submitted for publication. If a redacted copy of the application was used for publication, the copy of the specification, drawings, and papers may be limited to a redacted copy, provided that the applicant submits the following:

(A) A copy of any Office correspondence previously received by applicant including any desired redactions, and a second copy of all Office correspondence previously received by applicant showing the redacted material in brackets, at the time of filing the request for redacted publication;

(B) A copy of each submission previously filed by the applicant including any desired redactions, and a second copy of each submission previously filed by the applicant showing the redacted material in brackets, at the time of filing the request for redacted publication;

(C) Within one month of the date of mailing of any correspondence from the Office, a copy of such Office correspondence including any desired redactions, and a second copy of such Office correspondence showing the redacted material in brackets;

(D) With each submission by the applicant, a copy of such submission including any desired redactions, and a second copy of such submission showing the redacted material in brackets; and

(E) The processing fee set forth in 37 CFR 1.17(i), and a certification that the redactions are limited to the elimination of material that is relevant only to the part or description of the invention that was not contained in the redacted copy of the application submitted for publication for each submission in (A)-(D).

Papers submitted for redaction are not entitled to the benefit of the certificate of mailing practice under 37 CFR 1.8. If applicant fails to provide the required redacted and marked up copies of the correspondence in compliance with 37 CFR 1.217(d), the Office will provide a copy of the complete file wrapper and contents of the application to any person upon written request pursuant to 37 CFR 1.14.<

>

1133 Voluntary Publication [R-2]

37 CFR 1.221. Voluntary publication or republication of patent application publication.

(a) Any request for publication of an application filed before, but pending on, November 29, 2000, and any request for republication of an application previously published under § 1.211, must include a copy of the application in compliance with the Office electronic filing system requirements and be accompanied by the publication fee set forth in § 1.18(d) and the processing fee set forth in § 1.17(i). If the request does not comply with the requirements of this paragraph or the copy of the application does not comply with the Office electronic filing system requirements, the Office will not publish the application and will refund the publication fee.

*****

Utility and plant applications filed before November 29, 2000 will not be published under 35 U.S.C. 122(b). If an applicant wishes the Office to publish a utility or plant application filed before November 29, 2000 under 35 U.S.C. 122(b), applicant may file a request for voluntary publication under 37 CFR 1.221. The application must be pending and the request for voluntary publication must include:

(A) a copy of the application in compliance with the Office Electronic Filing System (EFS) requirements;

(B) the publication fee set forth in 37 CFR 1.18(d); and

(C) the processing fee set forth in 37 CFR 1.17(i).

If the applicant submits a request that does not meet the EFS requirements, the request will be dismissed. Since the Office does not intend to publish abandoned applications, applications that **are recognized** by the Office as abandoned will not be published. Thus, if applicant submits a request for a voluntary publication of an application, but the application is later abandoned before the application publishes, the application may not be published even if the Office has accepted the request.<

>

1134 Third Party Inquiries and Correspondence in a Published Application [R-2]

35 U.S.C. 122. Confidential status of applications; publication of patent applications.

*****

(c) PROTEST AND PRE-ISSUANCE OPPOSITION.—The Director shall establish appropriate procedures to ensure that no protest or other form of pre-issuance opposition to the grant of a patent on an application may be initiated after publication of the application without the express written consent of the applicant.

*****

35 U.S.C. 122(c) provides that the Office "shall establish appropriate procedures to ensure that no protest or other form of pre-issuance opposition to the grant of a patent on an application may be initiated after publication of the application without the express written consent of the applicant." Accordingly, the Office prohibits third parties from submitting any protests under 37 CFR 1.291 or initiating any public use proceedings under 37 CFR 1.292 (without the express written consent of the applicant) after publication of an application. These are the only forms of third party protest or pre-issuance opposition to a pending application permitted by the rules of practice. For more information on protest see MPEP § 1901; for public use proceedings see MPEP § 720. Third parties may submit patents or publications for consideration in a pending published application, with no further comment or explanation, pursuant to 37 CFR 1.99. See MPEP § 1134.01.

Despite the provisions of 35 U.S.C. 122(c), the Office occasionally receives third-party inquiries or submissions (other than under 37 CFR 1.99) regarding applications that have been published under the eighteen-month publication provisions of 35 U.S.C. 122(b). For example, third parties have inquired into the timing of future actions on an application, and some third parties have insisted that the Office withdraw an application from issue under 37 CFR 1.313 on the basis of unpatentability of a claim. The Office considers inappropriate any third-party inquiry, or submission that is not provided for in 37 CFR 1.99, in a published application in which the applicant has not provided an express written consent to protest or pre-issuance opposition. Any submission filed by a third party (e.g., a protest) in an application published under 35 U.S.C. 122(b) (without the express written consent of the applicant) that does not comply with the requirements of 37 CFR 1.99 will be disregarded and not entered into the application file. For example: a protest under 37 CFR 1.291 filed after publication of the application under 35 U.S.C. 122(b) (without the express written consent of the applicant) will be reviewed to determine if it is in compliance with 37 CFR 1.99 and, if it is not in compliance with 37 CFR 1.99, it will be discarded before the application is forwarded to the examiner. Petitions to institute public use proceedings under 37 CFR 1.292, including those that are filed after publication of an application under 35 U.S.C. 122(b), should be forwarded to the Office of Patent Legal Administration. See MPEP § 720.

Office personnel (including the Patent Examining Corps) are instructed to: (1) not reply to any third-party inquiry or other submission in a published pending application; (2) not act upon any third-party inquiry or other submission in a published application, except for written submissions that are provided for in 37 CFR 1.99 and written submissions in applications in which the applicant has provided an express written consent to protest or pre-issuance opposition; and (3) decline to accept oral or telephone comments or submissions about published applications from third parties. When refusing third-party telephone or oral discussions, examiners may call the party's attention to the statutory prohibition on initiating protests, or 37 CFR 1.2 (all Office business should be transacted in writing), as appropriate. See *Third Party Attempts to Protest or Otherwise Oppose the Grant of a Published Application*, 1269 *Off. Gaz. Pat. Office* 179 (April 22, 2003). The Office may also refer third-party inquiries, or submissions not provided for in 37 CFR 1.99, by registered practitioners in published applications in which the applicant has not provided an express written consent to protest, or pre-issuance opposition, to the Office of Enrollment and Discipline for appropriate action.

The provisions of 35 U.S.C. 122(c) and 37 CFR 1.99, 1.291, and 1.292 limit a third party's ability to protest, oppose the grant of, or have information entered and considered in an application pending before the Office. However, these provisions do not limit the Office's authority to independently re-open the prosecution of a pending application on the

Office's own initiative and consider information deemed relevant to the patentability of any claim in the application. See *Blacklight Power, Inc. v. Rogan*, 295 F.3d 1269, 63 USPQ2d 1534 (Fed. Cir. 2002).<

1134.01 Third Party Submissions Under 37 CFR 1.99 [R-5]

37 CFR 1.99. Third-party submission in published application.

(a) A submission by a member of the public of patents or publications relevant to a pending published application may be entered in the application file if the submission complies with the requirements of this section and the application is still pending when the submission and application file are brought before the examiner.

(b) A submission under this section must identify the application to which it is directed by application number and include:

(1) The fee set forth in § 1.17(p);

(2) A list of the patents or publications submitted for consideration by the Office, including the date of publication of each patent or publication;

(3) A copy of each listed patent or publication in written form or at least the pertinent portions; and

(4) An English language translation of all the necessary and pertinent parts of any non-English language patent or publication in written form relied upon.

(c) The submission under this section must be served upon the applicant in accordance with § 1.248.

(d) A submission under this section shall not include any explanation of the patents or publications, or any other information. The Office will not enter such explanation or information if included in a submission under this section. A submission under this section is also limited to ten total patents or publications.

(e) A submission under this section must be filed within two months from the date of publication of the application (§ 1.215(a)) or prior to the mailing of a notice of allowance (§ 1.311), whichever is earlier. Any submission under this section not filed within this period is permitted only when the patents or publications could not have been submitted to the Office earlier, and must also be accompanied by the processing fee set forth in § 1.17(i). A submission by a member of the public to a pending published application that does not comply with the requirements of this section will not be entered.

(f) A member of the public may include a self-addressed postcard with a submission to receive an acknowledgment by the Office that the submission has been received. A member of the public filing a submission under this section will not receive any communications from the Office relating to the submission other than the return of a self-addressed postcard. In the absence of a request by the Office, an applicant has no duty to, and need not, reply to a submission under this section.

To balance the mandate of 35 U.S.C. 122(c) and the Office's authority and responsibility under 35 U.S.C. 131 and 151 to issue a patent only if "it appears that the applicant is entitled to a patent under the law," the Office permits third parties to submit patents and publications (i.e., prior art documents that are public information and which the Office would discover on its own with an ideal prior art search) during a limited (2 month) period after publication of an application in compliance with 37 CFR 1.99. However, 37 CFR 1.99 prohibits third parties from submitting any explanation of the patents or publications, or submitting any other information.

Third parties may submit patents and publications relevant to the published application, with no further comment or explanation, pursuant to 37 CFR 1.99. The patents and publications may be entered in the application file if the submission complies with the requirements of 37 CFR 1.99 and the application is still pending when the submission and application file are brought before the examiner. For Image File Wrapper (IFW) processing, see IFW Manual, Section 2.1. The submission must be served upon the applicant in accordance with 37 CFR 1.248 prior to the filing of the submission in the Office.

To ensure that a third-party submission under 37 CFR 1.99 does not amount to a protest or pre-grant opposition without express consent of the applicant, the third party does not have the right to insist that the examiner consider any of the patents or publications submitted.

If the submission is not in compliance with 37 CFR 1.99, information filed in the submission may be removed prior to the examiner receiving the submission and application file. The Office will screen third-party submissions to determine whether they are limited to patents and publications, and to remove any explanations or information (other than patents and publications) from the submission before the submission is placed in the application file and forwarded to the examiner. For IFW processing, see IFW Manual, Section 2.1. If the explanations cannot be separated from the patents or publications, such patents or publications will be discarded. By the time the examiner receives the application file and submission, some or all patents or publications in the submission may have been discarded.

If the applicant wants to ensure that the information in a third-party submission is considered by the examiner, the applicant should submit such information in an IDS in compliance with 37 CFR 1.97 and 1.98. Since the third party is required to serve the applicant a copy of the submission, applicant may file the IDS prior to the Office receiving or acting on the submission. Furthermore, an individual who has a duty to disclose under 37 CFR 1.56 should submit any material information contained in a third-party submission to the Office in an IDS in compliance with 37 CFR 1.97 and 1.98 to ensure such material information is properly disclosed to the examiner, if the examiner has not indicated that the reference has been considered.

I. TIMELINESS REQUIREMENT

37 CFR 1.99(e) specifies that a submission under 37 CFR 1.99 must be filed within two months from the date of publication of the application (37 CFR 1.215(a)), or prior to the mailing of a notice of allowance (37 CFR 1.311), whichever is earlier. Republication of an application under 37 CFR 1.221 does not restart the two-month period specified in 37 CFR 1.99(e).

In determining the timeliness of a third-party submission, the publication date of an application filed under 35 U.S.C. 111(a) is the date that the application published under 35 U.S.C. 122(b). However, the publication date of an application which entered the national stage of an international application after compliance with 35 U.S.C. 371 is the publication date of the World Intellectual Property Organization (WIPO) publication, if the international application is filed on or after November 29, 2000. The WIPO publication of an international application designating the United States filed on or after November 29, 2000 under PCT Article 21(2) is deemed a publication under 35 U.S.C. 122(b) except as provided in 35 U.S.C. 102(e) and 154(d). See 35 U.S.C. 374.

Any submission not filed within the time period specified in 37 CFR 1.99(e) is permitted only when the patents or publications could not have been submitted to the Office earlier (e.g., an amendment submitted in the application after publication changes the scope of the claims to an extent that could not reasonably have been anticipated by a person reviewing the published application during the period specified in 37 CFR 1.99(e)). Submissions after the time period specified in 37 CFR 1.99(e) must be accompanied by (1) a **>satisfactory explanation why< the patents or publications being submitted in the submission could not have been submitted to the Office earlier, and (2) the processing fee as set forth in 37 CFR 1.17(i).

II. CONTENTS REQUIREMENTS FOR A THIRD-PARTY SUBMISSION

The submission should be clearly labeled as a third-party submission under 37 CFR 1.99 and not as a protest, an IDS or a pre-issuance opposition. Prior to filing a submission under 37 CFR 1.99, the patents or publications being submitted must be served upon the applicant pursuant to 37 CFR 1.248. A submission under 37 CFR 1.99 must identify the application to which it is directed by the application number and must include:

(A) the fee set forth in 37 CFR 1.17(p);

(B) a listing of the patents or publications submitted for consideration by the Office (including the date of publication of each patent or publication);

(C) a copy of each listed patent or publication in written form or at least the pertinent portions thereof;

(D) an English language translation of all pertinent parts of any non-English language patent or publication in written form; and

(E) a certification that the third party has served the information being submitted upon the applicant in compliance with 37 CFR 1.248(b).

Pursuant to 37 CFR 1.99(d), a submission **cannot** include any of the following:

(A) more than ten total references (patents or publications);

(B) explanations of the patents or publications;

(C) documents other than patents or publications (e.g., the submission cannot include any affidavits or declarations); or

(D) markings or highlights on the patents or publications.

The third party may, however, submit redacted versions of a patent or publication containing only the most relevant portions of the patent or publication. The Office will review submissions to determine whether they are limited to patents and publications and remove any explanations or documents other than

patents and publications from the submission before the submission is placed in the file of the application and forwarded to the examiner. The Office will dispose of such explanations or documents if included in a submission. Furthermore, if the explanation cannot be readily removed from the patents or publications (e.g., highlights), the patents or publications will be discarded.

III. NO THIRD-PARTY PARTICIPATION

The involvement of a third party in filing a submission under 37 CFR 1.99 ends with the filing of the submission. A third party may include a self-addressed postcard with a submission filed under 37 CFR 1.99 to receive an acknowledgment by the Office that the submission has been received. The third party filing the submission will not receive any communications from the Office relating to the submission other than the return of the self-addressed postcard. The third party should not contact the Office or submit any other inquiries. See MPEP § 1134.

IV. TREATMENT OF A THIRD-PARTY SUBMISSION

A. Procedures for Technical Support Staff

Technical support staff in the Technology Center (TC) will initially process third party submissions under 37 CFR 1.99. Once the technical support personnel recognizes a prior art submission as a third party submission under 37 CFR 1.99, he or she will enter the third party submission into PALM and into the application file. For Image File Wrapper (IFW) processing, see IFW Manual, Section 2.1. The technical support personnel will verify that the fee for a submission under 37 CFR 1.99 (i.e., the fee set forth in 37 CFR 1.17(p)) has been paid and, if appropriate, collect the fee(s) that may have been authorized in the third party submission. If the fee has not been paid (and there is no authorization to charge the fee contained in the third party submission), technical support personnel are **not** to charge applicant's deposit account for the requisite fee since the submission is being submitted by a third party and not the applicant. The technical support personnel will review the listing of patents and publications to verify that it is clearly identified as a submission under 37 CFR 1.99. If the listing is not identified as a submission under 37 CFR 1.99, the technical support personnel will write on the listing "Submission under 37 CFR 1.99" followed by his or her initials and the date of entry. The technical support personnel will then forward the submission and the application file to the Supervisory Patent Examiner (SPE) or Special Program Examiner (SPRE) responsible for screening submissions under 37 CFR 1.99. Occasionally, a third party may file a correspondence that is not properly labeled as a third party submission under 37 CFR 1.99 in a published application (e.g., the paper may be labeled as an IDS or a protest). Such paper should be processed as a third-party submission under 37 CFR 1.99 and the designated screener should review the paper as a submission under 37 CFR 1.99.

B. Procedures for Screeners

Once the third party submission and application file have been forwarded to the SPE or SPRE who is responsible for screening submissions under 37 CFR 1.99, the SPE or SPRE will screen the third party submission to determine whether the submission is in compliance with the timeliness requirements noted in subsection I. above and the content requirements noted in subsection II. above. Submissions under 37 CFR 1.99 that do not comply with the timeliness or content requirements will be discarded. Only those submissions that comply with 37 CFR 1.99 will be forwarded to the examiner along with the application file for consideration. For IFW processing, see IFW Manual, Section 2.1.

If the entire submission or parts of the submission need to be discarded, the screener should place the cover letter or the first page of the submission (transmittal) and parts of the submission that are in compliance with the requirements of 37 CFR 1.99 in the application file and discard the rest of the submission. The screener should write on the transmittal that 'the third party submission (or the list of items) has been discarded,' and include the reason(s) why the submission or the items have been discarded (e.g., the submission was not timely filed or copies of items 1, 2, & 3 are not provided). The screener should also include his or her initials, and the date of entry.

If a patent or publication has been discarded (e.g., because it contained highlighted portions), there is nothing to preclude the screener from separately obtaining a clean copy of the patent or publication.

After the submission has been reviewed for compliance with all the requirements of 37 CFR 1.99, the submission and the application file will be forwarded to the examiner for consideration.

C. Procedures for Examiners

Once the third-party submission and the application file have been forwarded to the examiner, the examiner should act on the submission immediately. If an Office action is outstanding, the examiner may treat the submission when preparing the Office action. If an Office action is not outstanding, the examiner should treat the submission immediately on a separate Office communication (i.e., a PTOL-90).

The examiner should not initial any patents or publications on the listing of patents or publications submitted in a third-party submission. The examiner may request applicant's comments on any patent or publication in the submission.

The examiner should notify applicant of the Office treatment of the third-party submission using form paragraph 6.56. If any patent or publication in the submission under 37 CFR 1.99 has been determined by the examiner to be relevant to the patentability of the claims in the published application, the examiner should list the patent or publication on form PTO-892 and provide an explanation of its relevance unless the patent or publication has been used in a rejection. If the examiner considers it desirable, or necessary, to obtain applicant's comments on the patents or publications submitted before further action, the examiner will offer applicant an opportunity to file comments. If the examiner has specific questions or requests for information from the applicant regarding any of the patents or publications, the examiner may make a requirement for information under 37 CFR 1.105. See MPEP § 704.

>

¶ *6.56 Notify Applicant of Office Treatment of a Third-Party Submission*

A third-party submission has been filed under 37 CFR 1.99 on **[1]** in the published application.

To ensure that a third-party submission does not amount to a protest or pre-grant opposition, 37 CFR 1.99 does not permit the third party to have the right to insist that the examiner consider any of the patents or publications submitted. Furthermore, if the submission or part of the submission is not in compliance with 37 CFR 1.99, that noncompliant submission or part thereof will not be entered in the application file. Therefore, unless the examiner clearly cites a patent or publication on form PTO-892, Notice of References Cited and such reference is used in a rejection or its relevance is actually discussed during prosecution, consideration by the examiner of any patent or publication submitted in a third-party submission cannot be presumed.

If the applicant wants to ensure that the information in a third-party submission is considered by the examiner, the applicant should submit the information in an IDS in compliance with 37 CFR 1.97 and 37 CFR 1.98. An individual who has a duty to disclose under 37 CFR 1.56 should also submit any material information contained in a third-party submission to the Office in an IDS in compliance with 37 CFR 1.97 and 37 CFR 1.98 to ensure such material information is properly disclosed to the examiner.

Examiner Note:

1. In bracket 1, insert the date that the Office received the submission.

1135 PGPub Forms [R-5]

The following PGPub forms are available on the USPTO web site (www.uspto.gov) and are reproduced at the end of this section:

Form PTO/SB/24A, "Petition for Express Abandonment to Avoid Publication Under 37 CFR 1.138(c)," may be used by applicant for filing a petition for express abandonment to avoid publication under 37 CFR 1.138(c). See MPEP § 1125. Form PTO/SB/35, "Nonpublication Request Under 35 U.S.C. 122(b)(2)(B)(i)," may be used by applicant for filing a request for nonpublication and the certification under 35 U.S.C. 122(b)(2)(B)(i) upon the filing of an application. See MPEP § 1122. Form PTO/SB/36 (revision April 2001 or later), "Rescission of Previous Nonpublication Request (35 U.S.C. 122(b)(2)(B)(ii)) and, if Applicable, Notice of Foreign Filing (35 U.S.C. 122(b)(2)(B)(iii))," may be used by applicant for filing a request for rescinding a previously filed nonpublication request and/or for filing a notice of foreign filing. The certificate of mailing or transmission only applies when applicant is filing a notice of foreign filing. See MPEP §§ 1123 and 1124. Form PTO/SB/64a, "Petition for Revival of an Application for Patent Abandoned for Failure to Notify the Office of a Foreign or International Filing (37 CFR 1.137(f)," may be used by applicant for filing a petition to revive an application abandoned for failure to notify the Office of a foreign filing. See MPEP § 1124.

Attorney Docket Number	

Petition for Express Abandonment to Avoid Publication under 37 CFR 1.138(c)

I hereby petition to expressly abandon the above-identified application to avoid publication.

Petition Fee – must be filed with petition to avoid delays in recognizing the petition.

a. ☐ The Director is hereby authorized to charge the petition fee under 37 CFR 1.17(h) to Deposit Account No. _____. I have enclosed a duplicate copy of this sheet.

b. ☐ Check in the amount of $ _____ is enclosed.

c. ☐ Payment by credit card (Form PTO-2038 is enclosed).

NOTE: A paper requesting express abandonment of an application is not effective unless and until an appropriate USPTO official recognizes and acts on the paper. See the Manual of Patent Examining Procedure (MPEP), section 711.01. In addition, the paper will not stop publication of the application unless a petition under 37 CFR 1.138(c) is recognized and acted on by the Pre-Grant Publication Division in sufficient time to avoid publication (e.g., more than four (4) weeks prior to the projected publication date).

TO REQUEST A REFUND OF SEARCH FEE AND EXCESS CLAIMS FEE (IF ELIGIBLE), PLEASE ALSO INCLUDE FORM PTO/SB/24B WITH THIS FORM.

I am the:

☐ applicant.

☐ assignee of record of the entire interest. See 37 CFR 3.71. Statement under 37 CFR 3.73(b) is enclosed. (Form PTO/SB/96)

☐ attorney or agent of record. Attorney or agent registration number is _____

☐ attorney or agent acting under 37 CFR 1.34, who is authorized under 37 CFR 1.138(b) because the application is expressly abandoned in favor of a continuing application. Attorney or agent registration number is _____.

_____ _____
Signature Date

_____ _____
Typed or printed name Telephone Number

Note: Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required. Submit multiple forms if more than one signature is required, see below.

☐ Total of _____ forms are submitted.

This collection of information is required by 37 CFR 1.138(c). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, **P.O. Box 1450**, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Mail Stop Express Abandonment, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO 9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

NONPUBLICATION REQUEST UNDER 35 U.S.C. 122(b)(2)(B)(i)	First Named Inventor	
	Title	
	Attorney Docket Number	

I hereby certify that the invention disclosed in the attached application **has not and will not be** the subject of an application filed in another country, or under a multilateral agreement, that requires publication at eighteen months after filing.

I hereby request that the attached application not be published under 35 U.S.C. 122(b).

_____ _____
Signature Date

_____ _____
Typed or printed name Registration Number, if applicable

_____
Telephone Number

This request must be signed in compliance with 37 CFR 1.33(b) and submitted with the application **upon filing.**

Applicant may rescind this nonpublication request at any time. If applicant rescinds a request that an application not be published under 35 U.S.C. 122(b), the application will be scheduled for publication at eighteen months from the earliest claimed filing date for which a benefit is claimed.

If applicant subsequently files an application directed to the invention disclosed in the attached application in another country, or under a multilateral international agreement, that requires publication of applications eighteen months after filing, the applicant **must** notify the United States Patent and Trademark Office of such filing within forty-five (45) days after the date of the filing of such foreign or international application. **Failure to do so will result in abandonment of this application (35 U.S.C. 122(b)(2)(B)(iii)).**

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

A request that the above-identified application not be published under 35 U.S.C. 122(b) (nonpublication request) was included with the above-identified application on filing pursuant to 35 U.S.C. 122(b)(2)(B)(i).
I hereby **rescind** the previous nonpublication request.

If a notice of foreign or international filing is or will be required by 35 U.S.C. 122(b)(2)(B)(iii) and 37 CFR 1.213(c), I hereby provide such notice. This notice is being provided no later than forty-five (**45**) days after the date of such foreign or international filing.

*If a notice of subsequent foreign or international filing required by 35 U.S.C. 122(b)(2)(B)(iii) and 37 CFR 1.213(c) was not filed within forty-five (**45**) days after the date of filing of the foreign or international application, the application is ABANDONED, and a petition to revive under 37 CFR 1.137(b) is required. See 37 CFR 1.137(f).*

This collection of information is required by 37 CFR 1.213(b). The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 6 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Mail Stop PG Pub, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

PETITION FOR REVIVAL OF AN APPLICATION FOR PATENT ABANDONED FOR FAILURE TO NOTIFY THE OFFICE OFA FOREIGN OR INTERNATIONAL FILING (37 CFR 1.137(f))	Docket Number (Optional)

First named inventor:

Application No.: Art Unit:

Filed: Examiner:

Title:

Attention: Office of Petitions
Mail Stop Petition
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450
FAX (571) 273-8300

NOTE: If information or assistance is needed in completing this form, please contact Petitions Information at (571) 272-3282.

The above-identified application became abandoned pursuant to 35 U.S.C. 122(b)(2)(B)(iii) for failure to timely notify the Office of the filing of an application in a foreign country or under a multinational international treaty that requires publication of applications eighteen months after filing. The date of abandonment is the day after the expiration date of the forty-five (45) day period set in 35 U.S.C. 122(b)(2)(B)(iii).

PURSUANT TO 37 CFR 1.137(f), APPLICANT HEREYBY PETITIONS FOR REVIVAL OF THIS APPLICATION UNDER 37 CFR 1.137(b)

1.Petition fee

☐ Small entity-fee $ _____ (37 CFR 1.17(m)). Applicant claims small entity status. See 37 CFR 1.27.

☐ Other than small entity – fee $ _____ (37 CFR 1.17(m))

2. Notice of Foreign or International Filing (35 U.S.C. 122(b)(2)(B)(iii) and 37 CFR 1.213(c))

Subsequent to the filing of the above-identified application, an application was filed in another country, or under a multinational international treaty (e.g., filed under the Patent Cooperation Treaty), that requires publication of applications eighteen months after the filing. The filing date of the subsequently filed foreign or international application is _____.

PTO/SB/64a (07-06)
Approved for use through 09/30/2006. OMB 0651-0031
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

STATEMENT: The entire delay in filing the required notice of a foreign or international filing from the due date for the required notice until the filing of a grantable petition under 37 CFR 1.137(b) was unintentional. [NOTE: The United States Patent and Trademark Office may require additional information there is a question as to whether either the abandonment or the delay in filing a petition under 37 CFR 1.137(b) was unintentional (MPEP 711.03(c), subsections (III)(C) and (D)).]

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

Chapter 1200 Appeal

1201 Introduction [R-3]

The United States Patent and Trademark Office (Office) in administering the Patent Laws makes many decisions of a *>substantive< nature which the applicant may feel deny him or her the patent protection to which he or she is entitled. The differences of opinion on such matters can be justly resolved only by prescribing and following judicial procedures. Where the differences of opinion concern the denial of patent claims because of prior art or **>other patentability issues<, the questions thereby raised are said to relate to the merits, and appeal procedure within the Office and to the courts has long been provided by statute >(35 U.S.C. 134)<.

The line of demarcation between appealable matters for the Board of Patent Appeals and Interferences (Board) and petitionable matters for the **>Director of the U.S. Patent and Trademark Office (Director)< should be carefully observed. The Board will not ordinarily hear a question **>that< should be decided by the *>Director on petition<, and the *>Director< will not ordinarily entertain a petition where the question presented is **>a matter appealable to the Board<. However, since 37 CFR 1.181(f) states that any petition not filed within 2 months from the action complained of may be dismissed as untimely and since 37 CFR 1.144 states that petitions from restriction requirements must be filed no later than appeal, petitionable matters will rarely be present in a case by the time it is before the Board for a decision. *In re Watkinson*, 900 F.2d 230, 14 USPQ2d 1407 (Fed. Cir. 1990).

>This chapter is primarily directed to *ex parte* appeals. For appeals in *inter partes* reexamination proceedings, see 37 CFR 41.60 to 41.81 and MPEP § 2674 to § 2683.<

*>

1202 < Composition of Board [R-3]

35 U.S.C. 6 provides for a Board of Patent Appeals and Interferences as follows:

35 U.S.C. 6. Board of Patent Appeals and Interferences.

**>

(a) ESTABLISHMENT AND COMPOSITION.— There shall be in the United States Patent and Trademark Office a Board of Patent Appeals and Interferences. The Director, the Deputy Commissioner, the Commissioner for Patents, the Commissioner for Trademarks, and the administrative patent judges shall constitute the Board. The administrative patent judges shall be persons of competent legal knowledge and scientific ability who are appointed by the Director.<

(b) DUTIES.— The Board of Patent Appeals and Interferences shall, on written appeal of an applicant, review adverse decisions of examiners upon applications for patents and shall determine priority and patentability of invention in interferences declared under section 135(a). Each appeal and interference shall be heard by at least three members of the Board, who shall be designated by the Director. Only the Board of Patent Appeals and Interferences may grant rehearings.

**>The Office interprets the amendment to 35 U.S.C. 6(a) in Pub. L. 107-273, sec. 13203(a), "Deputy Commissioner" to refer to the Deputy Director. As provided by 37 CFR 41.2, "Board" means the Board of Patent Appeals and Interferences and includes:

(A) For a final Board action:

(1) In an appeal or contested case, a panel of the Board;

(2) In a proceeding under 37 CFR 41.3, the Chief Administrative Patent Judge or another official acting under an express delegation from the Chief Administrative Patent Judge.

(B) For non-final actions, a Board member or employee acting with the authority of the Board.

"Board member" means the Under Secretary of Commerce for Intellectual Property and Director of the U.S. Patent and Trademark Office, the Deputy Under Secretary of Commerce for Intellectual Property and Deputy Director of the U.S. Patent and Trademark Office, the Commissioner for Patents, the Commissioner for Trademarks, and the administrative patent judges.<

*>

1203 < Administrative Handling [R-3]

Ex parte appeals to the Board, and * papers relating thereto >filed prior to a docketing notice from the Board<, are forwarded to the Technology Center (TC) for **>processing. Appeal< papers, such as the notice of appeal, appeal brief, and request for extension of time to file the brief, are processed by the appropriate TC.

**

If the brief is not filed within the time designated by 37 CFR *>41.37<, the applicant will be notified that the appeal stands dismissed.

>The Board's docketing procedure is designed to provide notification to the appellant within one month of receipt of an appealed application at the Board that (A) the appeal has been received at the Board and docketed, or (B) the appeal is being returned to the examiner for attention to unresolved matters.

When an application appearing to include an appeal under 35 U.S.C. 134 for decision by the Board is received from the patent examining corps, it will be reviewed for:

(A) gross formalities (including, but not limited to, matters such as the presence of (1) a notice of appeal, (2) appellant's brief, (3) examiner's answer, and (4) evidence of an appeal conference having been held);

(B) fine formalities (including, but not limited to, matters such as (1) unacknowledged Information Disclosure Statements or other papers, and (2) deficiencies in the brief or answer); and

(C) status matters (including, but not limited to, matters such as the presence of communications from appellant beyond the brief, such as a reply brief or a request for oral hearing).

If the appeal is ready for docketing (that is, if no return of the case to the examiner is required per the review) three events will occur:

(A) an appeal number will be assigned;

(B) the Board will issue a docketing notice, identifying the relevant appeal contents (brief, reply brief if any, request for oral hearing if any, and the filing date of each such item); and

(C) the appeal will be assigned to a master docket for subsequent reassignment to the docket of an individual Administrative Patent Judge (APJ), or directly to the docket of an individual APJ.

If the appeal cannot be docketed due to matters requiring further attention in the patent examining corps, the appeal will be administratively returned to the patent examining corps with an order indicating why the appeal cannot be docketed and notification of

that return, in the form of a copy of the order, will be mailed to the appellant. No appeal number will be assigned until the appeal is ready for docketing.

The docketing notice or order indicating why the appeal cannot be docketed will provide the appellant and the examiner with notification that the appeal is: (A) at the Board in condition for referral to a panel; or (B) that the appeal is being returned to the patent examining corps to resolve matters requiring attention prior to decision of the appeal. Thus, the appellant will know to which organization to look for the next communication in the appealed application.<

"SPECIAL CASE"

Subject alone to diligent prosecution by the applicant, an application for patent that once has been made special and advanced out of turn by the United States Patent and Trademark Office (Office) for examination will continue to be special throughout its entire course of prosecution in the Office, including appeal, if any, to the Board. See MPEP § 708.02.

A petition to make an application special after the appeal has been forwarded to the Board may be addressed to the Board. However, no such petition will be granted unless the brief has been filed and applicant has made the same type of showing required by the *>Director< under 37 CFR 1.102. Therefore, diligent prosecution is essential to a favorable decision on a petition to make special.

*>

1204 < Notice of Appeal [R-3]

35 U.S.C. 134. Appeal to the Board of Patent Appeals and Interferences.

**>

(a) PATENT APPLICANT.— An applicant for a patent, any of whose claims has been twice rejected, may appeal from the decision of the primary examiner to the Board of Patent Appeals and Interferences, having once paid the fee for such appeal.

(b) PATENT OWNER.— A patent owner in any reexamination proceeding may appeal from the final rejection of any claim by the primary examiner to the Board of Patent Appeals and Interferences, having once paid the fee for such appeal.

(c) THIRD-PARTY.— A third-party requester in an inter partes proceeding may appeal to the Board of Patent Appeals and Interferences from the final decision of the primary examiner favorable to the patentability of any original or proposed amended or new claim of a patent, having once paid the fee for such appeal.<

35 U.S.C. 41. Patent fees; patent and trademark search systems

(a) **>GENERAL FEES. — The Director shall charge the following fees:<

*****

**>

(6) APPEAL FEES. —

(A) On filing an appeal from the examiner to the Board of Patent Appeals and Interferences, $500.

(B) In addition, on filing a brief in support of the appeal, $500, and on requesting an oral hearing in the appeal before the Board of Patent Appeals and Interferences, $1,000.<

*****

**>

37 CFR 41.31. Appeal to Board.

(a) *Who may appeal and how to file an appeal.* (1) Every applicant, any of whose claims has been twice rejected, may appeal from the decision of the examiner to the Board by filing a notice of appeal accompanied by the fee set forth in § 41.20(b)(1) within the time period provided under § 1.134 of this title for reply.

(2) Every owner of a patent under *ex parte* reexamination filed under § 1.510 of this title before November 29, 1999, any of whose claims has been twice rejected, may appeal from the decision of the examiner to the Board by filing a notice of appeal accompanied by the fee set forth in § 41.20(b)(1) within the time period provided under § 1.134 of this title for reply.

(3) Every owner of a patent under *ex parte* reexamination filed under § 1.510 of this title on or after November 29, 1999, any of whose claims has been finally (§ 1.113 of this title) rejected, may appeal from the decision of the examiner to the Board by filing a notice of appeal accompanied by the fee set forth in § 41.20(b)(1) within the time period provided under § 1.134 of this title for reply.

(b) The signature requirement of § 1.33 of this title does not apply to a notice of appeal filed under this section.

(c) An appeal, when taken, must be taken from the rejection of all claims under rejection which the applicant or owner proposes to contest. Questions relating to matters not affecting the merits of the invention may be required to be settled before an appeal can be considered.

(d) The time periods set forth in paragraphs (a)(1) through (a)(3) of this section are extendable under the provisions of § 1.136 of this title for patent applications and § 1.550(c) of this title for ex parte reexamination proceedings.<

>

I. < APPEAL BY PATENT APPLICANT

Under 37 CFR *>41.31(a)(1)<, an applicant for a patent dissatisfied with the primary examiner's decision in the second ** rejection of his or her claims may appeal to the Board for review of the examiner's

rejection by filing a notice of appeal and the required fee set forth in 37 CFR *>41.20(b)(1)< within the time period provided under 37 CFR 1.134 and 1.136. A notice of appeal may be filed after any of the claims has been twice rejected, regardless of whether the claim(s) has/have been finally rejected. The limitation of "twice ** rejected" does not have to be related to a particular application.>*See Ex Parte Lemoine*, 46 USPQ2d 1420, 1423 (Bd. Pat. App. & Inter. 1994) ("so long as the applicant has twice been denied a patent, an appeal may be filed").< For example, if any claim was rejected in a parent application, and the claim is again rejected in a continuing application, then applicant **>can choose< to file an appeal in the continuing application, even if the claim was rejected only once in the continuing application. >Applicant cannot file an appeal in a continuing application, or after filing a request for continued examination (RCE) under 37 CFR 1.114, until the application is under a rejection. Accordingly, applicant cannot file a notice of appeal with an RCE regardless of whether the application has been twice rejected prior to the filing of the RCE.<

Although the rules **>do not< require that the notice of appeal identify the rejected claim(s) appealed, or be signed, applicants **>may< file notices of appeal which identify the appealed claims and are signed. ** It should be noted that the elimination of the requirement to sign a notice of appeal does not affect the requirements for other papers (such as an amendment under 37 CFR 1.116) submitted with the notice, or for other actions contained within the notice, e.g., an authorization to charge fees to a deposit account or to a credit card>, to be signed<. See MPEP § 509. Thus, failure to sign the notice of appeal may have unintended adverse consequences; for example, if an unsigned notice of appeal contains an (unsigned) authorization to charge the >notice of< appeal fee to a deposit account, the notice of appeal will be unacceptable because the >notice of< appeal fee is lacking.

The notice of appeal must be filed within the period for reply set in the last Office action, which is normally 3 months for applications. See MPEP § 714.13. *>For example, failure< to remove all grounds of rejection and otherwise place an application in condition for allowance or to file an appeal after final rejection will result in the application becoming abandoned, even if one or more claims have been allowed, except where claims suggested for interference have been copied. The notice of appeal and appropriate fee may be filed up to 6 months from the date of the **>Office action (e.g., a final rejection) from which the appeal was taken<, so long as an appropriate petition and fee for an extension of time >under 37 CFR 1.136(a)< is filed either prior to or with the notice of appeal.

>The use of a separate letter containing the notice of appeal is strongly recommended. Form PTO/SB/31 may be used for filing a notice of appeal. Appellant must file an appeal brief in compliance with 37 CFR 41.37 accompanied by the fee set forth in 37 CFR 41.20(b)(2) within two months from the date of filing the notice of appeal. See MPEP § 1205.<

>

II. < APPEAL BY PATENT OWNER

37 CFR *>41.31(a)(2) and (a)(3)< provides for appeal to the Board by the patent owner from any decision in an *ex parte* reexamination proceeding adverse to patentability, in accordance with 35 U.S.C. 306 and 35 U.S.C. 134. See also MPEP § 2273.

In an *ex parte* reexamination ** filed before November 29, 1999, the patent owner may appeal to the Board **after the second rejection of the claims.**

In an *ex parte* reexamination ** filed on or after November 29, 1999, the patent owner may appeal to the Board only after the final rejection of one or more claims in the particular reexamination proceeding for which appeal is sought. **

The fee for filing the notice of appeal by a patent owner is set forth in 37 CFR *>41.20(b)(1)<, and the time period to pay the fee is determined as provided in 37 CFR 1.134 and 37 CFR *>1.550(c)<.

Failure to file an appeal in an *ex parte* reexamination proceeding will result in issuance of the reexamination certificate under 37 CFR 1.570.

Appeals to the Board of Patent Appeals and Interferences in *inter partes* reexamination proceedings filed under 35 U.S.C. 311 are governed by 37 CFR *>41.60< through *>41.81<. 37 CFR *>41.30< through *>41.54< are not applicable to appeals in *inter partes* reexamination proceedings. >See MPEP § 2674 to § 2683 for appeals in *inter partes* reexamination proceedings.<

The use of a separate letter containing the notice of appeal is strongly recommended. Form PTO/SB/31 may be used for filing a notice of appeal.

Applicant hereby **appeals** to the Board of Patent Appeals and Interferences from the last decision of the examiner.

The fee for this Notice of Appeal is (37 CFR 41.20(b)(1)) $_____

☐ Applicant claims small entity status. See 37 CFR 1.27. Therefore, the fee shown above is reduced by half, and the resulting fee is: $_____

☐ A check in the amount of the fee is enclosed.

☐ Payment by credit card. Form PTO-2038 is attached.

☐ The Director has already been authorized to charge fees in this application to a Deposit Account. I have enclosed a duplicate copy of this sheet.

☐ The Director is hereby authorized to charge any fees which may be required, or credit any overpayment to Deposit Account No. _____ . I have enclosed a duplicate copy of this sheet.

☐ A petition for an extension of time under 37 CFR 1.136(a) (PTO/SB/22) is enclosed.

WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.

I am the

☐ applicant/inventor.

☐ assignee of record of the entire interest. See 37 CFR 3.71. Statement under 37 CFR 3.73(b) is enclosed. (Form PTO/SB/96)

☐ attorney or agent of record. Registration number _____

☐ attorney or agent acting under 37 CFR 1.34. Registration number if acting under 37 CFR 1.34. _____

_____ Signature

_____ Typed or printed name

_____ Telephone number

_____ Date

NOTE: Signatures of all the inventors or assignees of record of the entire interest or their representative(s) are required. Submit multiple forms if more than one signature is required, see below*.

☐ *Total of _____ forms are submitted.

This collection of information is required by 37 CFR 41.31. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11, 1.14 and 41.6. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

**>

III. ACKNOWLEDGEMENT<

The Office does not acknowledge receipt of a notice of appeal by separate letter. However, if a self-addressed postcard is included with the notice of appeal, it will be date stamped and mailed.

**>Appellant may also check the status of the application and the receipt date of the notice of appeal on the Office's Patent Application Information Retrieval (PAIR) system via the Internet.

IV. DEFECTIVE NOTICE OF APPEAL

If a notice of appeal is defective, the Office will notify the applicant of the non-compliance. A notice of appeal is not a proper reply to the last Office action if none of the claims in the application has been twice rejected. A notice of appeal is defective if it was not timely filed within the time period set forth in the last Office action, or the notice of appeal fee set forth in 37 CFR 41.20(b)(1) was not timely filed. Form PTOL-461 (Rev. 9-04 or later), Communication Re: Appeal, should be used to indicate defects in a notice of appeal.

When appellant files an appeal brief without filing a notice of appeal first, the Office should treat the appeal brief as a notice of appeal and an appeal brief. For this situation, appellant must file the brief within the time period for reply set forth in the last Office action and the fees under 37 CFR 41.20(b)(1) and (b)(2) for filing a notice of appeal and an appeal brief in compliance with 37 CFR 41.31 and 41.37.<

>

Communication Re: Appeal	**Application No.**	**Applicant(s)**	
	Examiner	**Art Unit**	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

1. ☐ The Notice of Appeal filed on _____ is not acceptable because:

   (a) ☐ it was not timely filed.

   (b) ☐ the statutory fee for filing the appeal was not submitted. See 37 CFR 41.20(b)(1).

   (c) ☐ the appeal fee received on _____ was not timely filed.

   (d) ☐ the submitted fee of $_____ is insufficient. The appeal fee required by 37 CFR 41.20(b)(1) is $_____.

   (e) ☐ the appeal is not in compliance with 37 CFR 41.31(a)(1) in that no claim has been twice rejected.

   (f) ☐ a Notice of Allowability, PTO-37, was mailed by the Office on _____.

2. ☐ The appeal brief filed on _____ is NOT acceptable for the reason(s) indicated below:

   (a) ☐ the brief and/or brief fee is untimely. See 37 CFR 41.37(a).

   (b) ☐ the statutory fee for filing the brief has not been submitted. See 37 CFR 41.20(b)(2).

   (c) ☐ the submitted brief fee of $_____ is insufficient. The brief fee required by 37 CFR 41.20(b)(2) is $_____.

The appeal in this application will be dismissed unless corrective action is taken to timely submit the brief and requisite fee. See 37 CFR 41.37(a)(1). Extensions of time may be obtained under 37 CFR 1.136(a). See 37 CFR 41.37(e).

3. ☐ The appeal in this application is DISMISSED because:

   (a) ☐ the statutory fee for filing the brief as required under 37 CFR 41.20(b)(2) was not timely submitted and the period for obtaining an extension of time to file the brief under 37 CFR 1.136(a) has expired.

   (b) ☐ the brief was not timely filed and the period for obtaining an extension of time to file the brief under 37 CFR 1.136(a) has expired.

   (c) ☐ a Request for Continued Examination (RCE) under 37 CFR 1.114 was filed on _____.

   (d) ☐ other: _____.

4. ☐ Because of the dismissal of the appeal, this application:

   (a) ☐ is abandoned because there are no allowed claims.

   (b) ☐ is before the examiner for final disposition because it contains allowed claims. Prosecution on the merits remains CLOSED.

   (c) ☐ is before the examiner for consideration.

1204.01 Reinstatement of Appeal [R-3]

If an appellant wishes to reinstate an appeal after prosecution is reopened, appellant must file a new notice of appeal in compliance with 37 CFR 41.31 and a complete new appeal brief in compliance with 37 CFR 41.37. Any previously paid appeal fees set forth in 37 CFR 41.20 for filing a notice of appeal, filing an appeal brief, and requesting an oral hearing (if applicable) will be applied to the new appeal on the same application as long as a final Board decision has not been made on the prior appeal. If, however, the appeal fees have increased since they were previously paid, then appellant must pay the difference between the current fee(s) and the amount previously paid. Appellant must file a complete new appeal brief in compliance with the format and content requirements of 37 CFR 41.37(c) within two months from the date of filing the new notice of appeal. See MPEP § 1205.<

*>

1205 < Appeal Brief [R-3]

**>

37 CFR 41.37. Appeal brief.

(a)(1)Appellant must file a brief under this section within two months from the date of filing the notice of appeal under § 41.31.

(2) The brief must be accompanied by the fee set forth in § 41.20(b)(2)

(b) On failure to file the brief, accompanied by the requisite fee, within the period specified in paragraph (a) of this section, the appeal will stand dismissed.

(c)(1)The brief shall contain the following items under appropriate headings and in the order indicated in paragraphs (c)(1)(i) through (c)(1)(x) of this section, except that a brief filed by an appellant who is not represented by a registered practitioner need only substantially comply with paragraphs (c)(1)(i) through (c)(1)(iv) and (c)(1)(vii) through (c)(1)(x) of this section:

(i) *Real party in interest*. A statement identifying by name the real party in interest.

(ii) *Related appeals and interferences*. A statement identifying by application, patent, appeal or interference number all other prior and pending appeals, interferences or judicial proceedings known to appellant, the appellant's legal representative, or assignee which may be related to, directly affect or be directly affected by or have a bearing on the Board's decision in the pending appeal. Copies of any decisions rendered by a court or the Board in any proceeding identified under this paragraph must be included in an appendix as required by paragraph (c)(1)(x) of this section.

(iii) *Status of claims*. A statement of the status of all the claims in the proceeding (*e.g.*, rejected, allowed or confirmed, withdrawn, objected to, canceled) and an identification of those claims that are being appealed.

(iv) *Status of amendments*. A statement of the status of any amendment filed subsequent to final rejection.

(v) *Summary of claimed subject matter*. A concise explanation of the subject matter defined in each of the independent claims involved in the appeal, which shall refer to the specification by page and line number, and to the drawing, if any, by reference characters. For each independent claim involved in the appeal and for each dependent claim argued separately under the provisions of paragraph (c)(1)(vii) of this section, every means plus function and step plus function as permitted by 35 U.S.C. 112, sixth paragraph, must be identified and the structure, material, or acts described in the specification as corresponding to each claimed function must be set forth with reference to the specification by page and line number, and to the drawing, if any, by reference characters.

(vi) *Grounds of rejection to be reviewed on appeal*. A concise statement of each ground of rejection presented for review.

(vii) *Argument*. The contentions of appellant with respect to each ground of rejection presented for review in paragraph (c)(1)(vi) of this section, and the basis therefor, with citations of the statutes, regulations, authorities, and parts of the record relied on. Any arguments or authorities not included in the brief or a reply brief filed pursuant to § 41.41 will be refused consideration by the Board, unless good cause is shown. Each ground of rejection must be treated under a separate heading. For each ground of rejection applying to two or more claims, the claims may be argued separately or as a group. When multiple claims subject to the same ground of rejection are argued as a group by appellant, the Board may select a single claim from the group of claims that are argued together to decide the appeal with respect to the group of claims as to the ground of rejection on the basis of the selected claim alone. Notwithstanding any other provision of this paragraph, the failure of appellant to separately argue claims which appellant has grouped together shall constitute a waiver of any argument that the Board must consider the patentability of any grouped claim separately. Any claim argued separately should be placed under a subheading identifying the claim by number. Claims argued as a group should be placed under a subheading identifying the claims by number. A statement which merely points out what a claim recites will not be considered an argument for separate patentability of the claim.

(viii) *Claims appendix*. An appendix containing a copy of the claims involved in the appeal.

(ix) *Evidence appendix*. An appendix containing copies of any evidence submitted pursuant to §§ 1.130, 1.131, or 1.132 of this title or of any other evidence entered by the examiner and relied upon by appellant in the appeal, along with a statement setting forth where in the record that evidence was entered in the record by the examiner. Reference to unentered evidence is not permitted in the brief. See § 41.33 for treatment of evidence sub-

mitted after appeal. This appendix may also include copies of the evidence relied upon by the examiner as to grounds of rejection to be reviewed on appeal.

(x) *Related proceedings appendix*. An appendix containing copies of decisions rendered by a court or the Board in any proceeding identified pursuant to paragraph (c)(1)(ii) of this section.

(2) A brief shall not include any new or non-admitted amendment, or any new or non-admitted affidavit or other evidence. See § 1.116 of this title for amendments, affidavits or other evidence filed after final action but before or on the same date of filing an appeal and § 41.33 for amendments, affidavits or other evidence filed after the date of filing the appeal.

(d) If a brief is filed which does not comply with all the requirements of paragraph (c) of this section, appellant will be notified of the reasons for non-compliance and given a time period within which to file an amended brief. If appellant does not file an amended brief within the set time period, or files an amended brief which does not overcome all the reasons for non-compliance stated in the notification, the appeal will stand dismissed.

(e) The time periods set forth in this section are extendable under the provisions of § 1.136 of this title for patent applications and § 1.550(c) of this title for ex parte reexamination proceedings.<

**>

1205.01 Time for Filing Appeal Brief< [R-3]

37 CFR *>41.37(a)< provides 2 months from the date of the notice of appeal for the appellant to file an appeal brief >and the appeal brief fee set forth in 37 CFR 41.20(b)(2)<. In an *ex parte* reexamination proceeding, the time period can be extended only under the provisions of 37 CFR 1.550(c). See also MPEP § 2274.

The usual period of time in which appellant must file his or her brief is 2 months from the date of appeal. The Office date of receipt of the notice of appeal (and not the date indicated on any Certificate of Mailing under 37 CFR 1.8) is the date from which this 2>-<month time period is measured. See MPEP § 512. **>If the notice of appeal is filed in accordance with 37 CFR 1.10 using the "Express Mail Post Office to Addressee" service of the United States Postal Service (USPS), the date of deposit with the USPS is the date from which this 2-month time period is measured because the date of deposit shown by the "date in" on the "Express Mail" label or other official USPS notation is considered to be the date of receipt. See MPEP § 513.

37 CFR 41.37(a) does not permit the brief to be filed within the time allowed for reply to the action from which the appeal was taken even if such time is later. Once appellant timely files a notice of appeal in compliance with 37 CFR 41.31, the time period for reply set forth in the last Office action is tolled and is no longer relevant for the time period for filing an appeal brief. For example, if appellant filed a notice of appeal within one month from the mailing of a final Office action which sets forth a 3-month shortened statutory period for reply, and then the appellant filed an appeal brief after 2 months from the filing date of the notice of appeal but within 3 months from the mailing of the final action, a petition for an extension of time for one month would be required. Similarly, if the appellant files an amendment or a request for continued examination (RCE) under 37 CFR 1.114, instead of an appeal brief, after 2 months from the filing date of the notice of appeal but within 3 months from the mailing of the final action, the petition for an extension of time would be required.

This 2-month time period for a patent application may be extended under 37 CFR 1.136(a), and if 37 CFR 1.136(a) is not available, under 37 CFR 1.136(b) for extraordinary circumstances.<

In the event that the appellant finds that he or she is unable to file a brief within the time period allotted by the *>rule<, he or she may file a petition, with fee, to the Technology Center (TC), requesting additional time under 37 CFR 1.136(a). Additional time in excess of 5 months will not be granted unless extraordinary circumstances are involved under 37 CFR 1.136(b). The time extended is added to the calendar day of the original period, as opposed to being added to the day it would have been due when said last day is a Saturday, Sunday, or Federal holiday.

**

When an application is revived after abandonment for failure on the part of the appellant to take appropriate action after final rejection, and the petition to revive was accompanied by a notice of appeal, appellant has 2 months, from the mailing date of the *>Director's< affirmative decision on the petition, in which to file the appeal brief. The time period for filing the appeal brief may be extended under 37 CFR 1.136.

>FAILURE TO TIMELY FILE AN APPEAL BRIEF<

With the exception of a declaration of an interference or suggestion of claims for an interference and timely copying of claims for an interference, the appeal ordinarily will be dismissed if the brief *>and the fee under 37 CFR 41.20(b)(2) are< not filed within the period provided by 37 CFR *>41.37(a)< or within such additional time as may be properly extended.

A brief must be filed to preserve appellant's right to the appealed claims, notwithstanding circumstances such as:

(A) the possibility or imminence of an interference involving the subject application, but not resulting in withdrawal of the final rejection prior to the brief's due date;

(B) the filing of a petition to invoke the supervisory authority of the *>Director< under 37 CFR 1.181;

(C) the filing of an amendment, even if it is one which the examiner previously has indicated may place one or more claims in condition for allowance, unless the examiner, in acting on the amendment, disposes of all issues on appeal;

(D) the receipt of a letter from the examiner stating that prosecution is suspended, without the examiner withdrawing the final rejection from which appeal has been taken or suggesting claims for an interference, and without an administrative patent judge declaring an interference with the subject application.

Although failure to file the brief >and the required appeal brief fee< within the permissible time will result in dismissal of the appeal, if any claims stand allowed, the application does not become abandoned by the dismissal, but is returned to the examiner for action on the allowed claims. See MPEP § 1215.04. If there are no allowed claims, the application is abandoned as of the date the brief was due. Claims which have been objected to as dependent from a rejected claim do not stand allowed. In a reexamination proceeding failure to file the brief will result in the issuance of the certificate under 37 CFR 1.570 >or 1.997<.

If the time for filing a brief has passed and the application has consequently become abandoned, the applicant may petition to revive the application >under 37 CFR 1.137<, as in other cases of abandonment **>. See MPEP § 711.03(c). If< the appeal is dismissed, but the application is not abandoned**>because there is at least one allowed claim, the applicant may file a petition< to reinstate the claims and the appeal, but a showing equivalent to that in a petition to revive under 37 CFR 1.137 is required. **>See MPEP § 711.03(c). In addition to the petition and petition fee, appellant must file:

(A) A request for continued examination (RCE) under 37 CFR 1.114 accompanied by a submission (i.e., a reply under 37 CFR 1.111) and the fee as set forth in 37 CFR 1.17(e) if the application is a utility or plant application filed on or after June 8, 1995, or a continuing application under 37 CFR 1.53(b) (or a CPA under 37 CFR 1.53(d) if the application is a design application); or

(B) An appeal brief and the appeal brief fee to reinstate the appeal. A proper brief and the required fee must be filed before the petition will be considered on its merits.<

Where the dismissal of the appeal is believed to be in error, filing a petition, pointing out the error, may be sufficient.

**>

1205.02 Appeal Brief Content [R-3]

Only one copy of the appeal brief is required. Any brief filed on or after September 13, 2004 must comply with the requirements set forth in 37 CFR 41.37 and accompanied by the fee under 37 CFR 41.20(b)(2), unless the brief has a certificate of mailing date before September 13, 2004. Any brief filed (or that has a certificate of mailing date) before September 13, 2004 must comply with either the former 37 CFR 1.192 or 37 CFR 41.37.< The brief, as well as every other paper relating to an appeal, should indicate the number of the Technology Center (TC) to which the application or patent under reexamination is assigned and the application or reexamination control number. **

An appellant's brief must be responsive to every ground of rejection stated by the examiner >that the appellant is presenting for review in the appeal. If a ground of rejection stated by the examiner is not

addressed in the appellant's brief, that ground of rejection will be summarily sustained by the Board<.

**Oral argument at a hearing will not remedy such deficiency of a brief. The fact that appellant may consider a ground to be clearly improper does not justify a failure to point out to the Board the reasons for that belief.

The mere filing of paper entitled as a brief will not necessarily be considered to be in compliance with 37 CFR *>41.37(c)<. The rule requires that the brief must set forth the authorities and arguments relied upon. **>It< is essential that the Board * be provided with a brief fully stating the position of the appellant with respect to each **>ground of rejection presented for review< in the appeal so that no search of the record is required in order to determine that position**>. Thus, the brief should not incorporate or reference previous responses. 37 CFR 41.37(c)(1) requires that the brief contain specific items, as discussed below. The brief must have all of the required items under appropriate headings in the order indicated in 37 CFR 41.37(c)(1). The headings are required even when an item is not applicable (e.g., if there is no evidence being relied upon by appellant in the appeal, the brief is still required to have the heading "Evidence appendix."). When there is no information related to the particular section heading of the brief, the word "none" should be used under the heading.<

An exception to the requirement that all the items specified in 37 CFR *>41.37(c)(1)< be included in the brief is made if the application or reexamination proceeding is being prosecuted by the appellant *pro se*, i.e., there is no attorney or agent of record, and the brief was neither prepared nor signed by a registered attorney or agent. The brief of a *pro se* appellant which does not contain all of the items, **>(i) to (x)<, specified in 37 CFR *>41.37(c)(1)< will be accepted as long as it substantially complies with the requirements of items **>(i) through (iv) and (vii) through (x).<

**

If in his or her brief, appellant relies on some reference, he or she is expected to provide the Board with **>a copy of it in the evidence appendix of the brief<.

The specific items required by 37 CFR *>41.37(c)(1)< are:

*>(i)< *Real party in interest*. A statement identifying >by name< the real party in interest *>even< if the party named in the caption of the brief is * the real party in interest. If appellant does not name *>the< real party in interest**>under this heading, the Office will notify appellant of the defect in the brief and give appellant a time period within which to file an amended brief. See 37 CFR 41.37(d). If the appellant fails to correct the defect in the real party in interest section of the brief within the time period set forth in the notice, the appeal will stand dismissed.<

The identification of the real party in interest **>allows< members of the Board to comply with ethics regulations associated with working in matters in which the member has a financial interest to avoid any potential conflict of interest. **>When an application is assigned to a subsidiary corporation, the real party in interest is both the assignee and either the parent corporation or corporations, in the case of joint ventures. One example of a statement identifying the real party in interest is: The real party in interest is XXXX corporation, the assignee of record, which is a subsidiary of a joint venture between YYYY corporation and ZZZZ corporation.<

*>(ii)< *Related appeals and interferences.* A statement identifying **>all prior and pending appeals, judicial proceedings or interferences known to the appellant which may be related to, directly affect or be directly affected by or have a bearing on the Board's decision in the pending appeal. Appellant includes the appellant, the appellant's legal representative and the assignee. Such related proceedings must be identified by application number, patent number, appeal number (if available) or interference number (if available).< The statement is not limited to copending applications. **>The requirement to identify related proceedings requires appellant to identify every related proceeding (e.g., commonly owned applications having common subject matter, claim to a common priority application) which may be related to, directly affect or be directly affected by or have a bearing on the Board's decision in the pending appeal. Copies of any decisions rendered by a court or the Board in any proceeding identified under this paragraph must be included in an appendix as required by 37 CFR 41.37(c)(1)(x). If appellant does not identify any other items under this section, it will be presumed that there are none.<

*>(iii)< *Status of Claims.* A statement of the status of all the claims in the application, or patent under reexamination, i.e., for each claim in the case, appellant must state whether it is cancelled, allowed >or confirmed<, rejected, >withdrawn, objected to,< etc. Each claim on appeal must be identified.

*>(iv)< *Status of Amendments.* A statement of the status of any amendment filed subsequent to final rejection, i.e., whether or not the amendment has been acted upon by the examiner, and if so, whether it was entered, >or< denied entry**. This statement should be of the status of the amendment as understood by the appellant. >Appellants are encouraged to check the Office's Patent Application Information Retrieval (PAIR) system for the status of any amendment or affidavit or other evidence filed after a final rejection or the filing of a notice of appeal.<

Items *>(iii)< and *>(iv)< are included in 37 CFR *>41.37(c)(1)< to avoid confusion as to which claims are on appeal, and the precise wording of those claims, particularly where the appellant has sought to amend claims after final rejection. The inclusion of items *>(iii)< and *>(iv)< in the brief will advise the examiner of what the appellant considers the status of the claims and post-final rejection amendments to be, allowing any disagreement on these questions to be resolved before the appeal is taken up for decision by the Board.

**>(v) *Summary of claimed subject matter.* A concise explanation of the subject matter defined in each of the independent claims involved in the appeal, which must refer to the specification by page and line number, and to the drawing, if any, by reference characters.< While reference to page and line number of the specification **>requires< somewhat more detail than simply summarizing the invention, it is considered important to enable the Board to more quickly determine where the claimed subject matter is described in the application. >For each independent claim involved in the appeal and for each dependent claim argued separately under the provisions of 37 CFR 41.37(c)(1)(vii), every means plus function and step plus function as permitted by 35 U.S.C. 112, sixth paragraph, must be identified and the structure, material, or acts described in the specification as corresponding to each claimed function must be set forth with reference to the specification by page and line number, and to the drawing, if any, by reference characters. If appellant does not provide a summary of the claimed subject matter as required by 37 CFR 41.37(c)(1)(v), the Office will notify appellant of the defect in the brief and give appellant a time period within which to file an amended brief. See 37 CFR 41.37(d).<

**>(vi) *Grounds of rejection to be reviewed on appeal.* A concise statement of each ground of rejection presented for review.< For example, the statement ** "Whether claims 1 and 2 are unpatentable" would not comply with **>the rule, while the statements< "Whether claims 1 and 2 are unpatentable under 35 U.S.C. 103 over Smith in view of Jones," *>and< "Whether claims 1 and 2 are unpatentable under 35 U.S.C. 112, first paragraph, as being based on a nonenabling disclosure" **>would comply with the rule. The statement cannot include any argument concerning the merits of the ground of rejection presented for review. Arguments should be included in the "Argument" section of the brief.<

**>(vii)< *Argument.* The appellant's contentions with respect to each **>ground of rejection< presented ** and the basis for those contentions, including citations of authorities, statutes, and parts of the record relied on, should be presented in this section. >A statement which merely points out what a claim recites will not be considered an argument for patentability of the claim.<

**>37 CFR 41.37(c)(1)(vii)< contains the following sentence:

> Any arguments or authorities not included in the brief >or reply brief filed pursuant to § 41.41< will be refused consideration by the Board **, unless good cause is shown.

This sentence emphasizes that all arguments and authorities which an appellant wishes the Board to consider should be included in the brief >or reply brief<. It should be noted that arguments not presented in the brief >or reply brief< and made for the first time at the oral hearing are not normally entitled to consideration. *In re Chiddix*, 209 USPQ 78 (Comm'r Pat. 1980); *Rosenblum v. Hiroshima*, 220 USPQ 383 (Comm'r Pat. 1983).

**>This sentence< is not intended to preclude the filing of a supplemental paper if new authority should become available or relevant after the brief >or reply brief< was filed. An example of such circumstances would be where a pertinent decision of a court or

other tribunal was not published until after the brief >or reply brief< was filed.

>Each ground of rejection must be treated under a separate heading. For each ground of rejection applying to two or more claims, the claims may be argued separately or as a group. When multiple claims subject to the same ground of rejection are argued as a group by appellant, the Board may select a single claim from the group of claims that are argued together to decide the appeal with respect to the group of claims as to the ground of rejection on the basis of the selected claim alone. The failure of appellant to separately argue claims which appellant has grouped together constitutes a waiver of any argument that the Board must consider the patentability of any grouped claim separately. See *In re McDaniel*, 293 F.3d 1379, 1384, 63 USPQ2d 1462, 1465-66 (Fed. Cir. 2002). Any claim argued separately should be placed under a subheading identifying the claim by number. Claims argued as a group should be placed under a subheading identifying the claims by number.

For example, if Claims 1 to 5 stand rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. Y and appellant is only going to argue the limitations of independent claim 1, and thereby group dependent claims 2 to 5 to stand or fall with independent claim 1, then one possible heading as required by this subsection could be "Rejection under 35 U.S.C. 102(b) over U.S. Patent No. Y" and the optional subheading would be "Claims 1 to 5." Another example is where claims 1 to 3 stand rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. Z and appellant wishes to argue separately the patentability of each claim, a possible heading as required by this subsection could be "Rejection under 35 U.S.C. 102 (b) over U.S. Patent No. Z," and the optional subheadings would be "Claim 1," "Claim 2" and "Claim 3." Under each subheading the appellant would present the argument for patentability of that claim. The best practice is to use a subheading for each claim for which separate consideration by the Board is desired.<

**>(viii) *Claims appendix*.< An appendix containing a copy of the claims involved in the appeal.

The copy of the claims ** should be a clean copy and should not include any markings such as brackets or underlining >except for claims in a reissue application<. See MPEP § 1454 for the presentation of the copy of the claims in a reissue application.

The copy of the claims should be double>-<spaced and the appendix should start on a new page.

**>(ix) *Evidence appendix*. An appendix containing copies of any evidence submitted pursuant to 37 CFR 1.130, 1.131, or 1.132 or of any other evidence entered by the examiner and relied upon by appellant in the appeal, along with a statement setting forth where in the record that evidence was entered in the record by the examiner. Reference to unentered evidence is not permitted in the brief. See 37 CFR 41.33 for treatment of evidence submitted after appeal. This appendix may also include copies of the evidence relied upon by the examiner as to grounds of rejection to be reviewed on appeal. The appendix should start on a new page. If there is no evidence being relied upon by appellant in the appeal, then an evidence appendix should be included with the indication "none."

(x) *Related proceedings appendix*. An appendix containing copies of decisions rendered by a court or the Board in any proceeding identified pursuant to 37 CFR 41.37(c)(1)(ii). The appendix should start on a new page. If there are no such copies of decisions being submitted in the appeal, then a related proceedings appendix should be included with the indication "none."

37 CFR 41.37(c)(1)< merely specifies the minimum requirements for a brief, and does not prohibit the inclusion of any other material which an appellant may consider necessary or desirable, for example, a list of references, table of contents, table of cases, etc. A brief is in compliance with 37 CFR *>41.37(c)(1)< as long as it includes items **>(i) to (x)< in the order set forth**>.

37 CFR 41.37(c)(2) prohibits the inclusion in a brief of any new or non-admitted amendment, affidavit or other evidence.

An example of a format and content for an appeal brief for a patent application is a brief containing the following items, with each item starting on a separate page:

(A) Identification page setting forth the applicant's name(s), the application number, the filing date of the application, the title of the invention, the name of the examiner, the art unit of the examiner and the title of the paper (i.e., Appeal Brief);

(B) Table of Contents page(s);
(C) Real party in interest page(s);
(D) Related appeals and interferences page(s);
(E) Status of claims page(s);
(F) Status of amendments page(s);
(G) Summary of claimed subject matter page(s);
(H) Grounds of rejection to be reviewed on appeal page(s);
(I) Argument page(s);
(J) Claims appendix page(s);
(K) Evidence appendix page(s);
(L) Related proceedings appendix page(s).

In accordance with the above, the brief must be directed to the claims and to the record of the case as they appeared at the time of the appeal, but it may, of course, withdraw from consideration on appeal any claims or issues as desired by appellant. Even if the appeal brief withdraws from consideration any claims or issues (i.e., appellant acquiesces to any rejection), the examiner must continue to make the rejection in the examiner's answer, unless an amendment obviating the rejection has been entered.

A timely filed brief will be referred to the examiner for consideration of its propriety as to the appeal issues and for preparation of an examiner's answer if the brief is proper and the application is not allowable. The examiner's answer may withdraw the rejection of claims, if appropriate. The examiner may also determine that it is necessary to reopen prosecution to enter a new ground of rejection. See MPEP § 1207.04.<

**>

1205.03 Non-Compliant Appeal Brief and Amended Brief< [R-3]

The question of whether a brief complies with the rule is a matter within the jurisdiction of the examiner **>and the Board. The examiner will review the brief to ensure that the required items of the brief are present. Both the Board and the examiner will review the brief for compliance with the content requirements of the brief (37 CFR 41.37(c)). 37 CFR 41.37(d)< provides that if a brief is filed which does not comply with all the requirements of paragraph (c), the appellant will be notified of the reasons for noncompliance. Appellant will be given ** 1 month or 30 days from the mailing of the notification of non-compliance, whichever is longer **>to file an amended brief.< Extensions of time may be granted under 37 CFR 1.136(a) or 1.136(b). The *>Office< may use the form paragraphs set forth below or form PTOL-462, "Notification of **>Non-Compliant Appeal Brief (37 CFR 41.37)<" to notify appellant that the appeal brief is defective. The appeal will be dismissed if the appellant does not timely file an amended brief, or files an amended brief which does not overcome all the reasons for noncompliance of which the appellant was notified.

Under 37 CFR *>41.37(d)<, the appellant may file an amended brief to correct *>the< deficiencies in the original brief. Moreover, if appellant disagrees with the * holding of noncompliance, a petition under 37 CFR 1.181 >or 41.3< may be filed. >Filing a petition will not toll the time period. Appellant must timely reply to the notice or the Office communication that requires an amended brief.

In response to the Notice of Non-Compliant Appeal Brief (37 CFR 41.37) or the Office communication that requires an amended brief, appellant is required to file an amended brief that is either a complete new brief with the required corrections or a replacement section(s) as noted below:

(A) When the Office holds the brief to be defective solely due to appellant's failure to name the real party in interest as required by 37 CFR 41.37(c)(1)(i), an entire new brief need not, and should not, be filed. Rather, a paper identifying by name the real party in interest will suffice. Failure to timely respond to the Office's requirement will result in dismissal of the appeal. See MPEP § 1215.04 and § 711.02(b).

(B) When the Office holds the brief to be defective solely due to appellant's failure to provide a summary of the claimed subject matter as required by 37 CFR 41.37(c)(1)(v), an entire new brief need not, and should not, be filed. Rather, a paper providing a summary of the claimed subject matter as required by 37 CFR 41.37(c)(1)(v) will suffice. Failure to timely respond to the Office's requirement will result in dismissal of the appeal. See MPEP § 1215.04 and § 711.02(b).

The examiner should not require a corrected brief for minor non-compliance in an appeal brief (e.g., the brief has a minor error in the title of a section heading). The following are a few other examples where

the examiner may accept a brief that has minor noncompliance:

(A) If the evidence appendix and related proceedings appendix are missing, but the record is clear that there is no evidence submitted and no related proceedings listed in the related appeals and interferences section, the examiner may accept the brief and state in the examiner's answer that it is assumed that the appellant meant to include both appendixes with a statement of "NONE."

(B) If appellant only presents arguments for a dependent claim but not for the independent claim in a group of claims that are subject to the same ground of rejection, the examiner may accept the brief and fully explain how the limitations of the independent claim are rejected and address the appellant's arguments regarding the dependent claim in the examiner's answer.

(C) If appellant fails to include a copy of the claims involved in the appeal in the claims appendix section of the brief, the examiner may either: (1) provide a copy of the claims in the examiner's answer, or (2) object to the appeal brief and require an amended brief.<

Once the brief has been filed, a petition to suspend proceedings may be considered on its merits, but will be granted only in exceptional cases, such as where the writing of the examiner's answer would be fruitless or the proceedings would work an unusual hardship on the appellant.

For a reply brief, see MPEP § *>1208<.

**>The following forms: Form PTOL-461, "Communication Re: Appeal" (Rev. 9-04 or later) – reproduced in MPEP § 1204.01, Form PTOL-462, "Notification of Non-Compliant Appeal Brief (37 CFR 41.37)" (Rev. 9-04 or later), or Form PTOL-462R, "Notification of Non-Compliant Appeal Brief (37 CFR 41.37) in *Ex Parte* Reexamination" (Rev. 9-04 or later) or the form paragraphs below may be used concerning defects in the appeal brief.<

>

Notification of Non-Compliant Appeal Brief (37 CFR 41.37)	**Application No.**	**Applicant(s)**	
	Examiner	**Art Unit**	

--The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

The Appeal Brief filed on _____ is defective for failure to comply with one or more provisions of 37 CFR 41.37.

To avoid dismissal of the appeal, applicant must file an amended brief or other appropriate correction (see MPEP 1205.03) within **ONE MONTH or THIRTY DAYS** from the mailing date of this Notification, whichever is longer. **EXTENSIONS OF THIS TIME PERIOD MAY BE GRANTED UNDER 37 CFR 1.136.**

1. ☐ The brief does not contain the items required under 37 CFR 41.37(c), or the items are not under the proper heading or in the proper order.

2. ☐ The brief does not contain a statement of the status of all claims, (e.g., rejected, allowed, withdrawn, objected to, canceled), or does not identify the appealed claims (37 CFR 41.37(c)(1)(iii)).

3. ☐ At least one amendment has been filed subsequent to the final rejection, and the brief does not contain a statement of the status of each such amendment (37 CFR 41.37(c)(1)(iv)).

4. ☐ (a) The brief does not contain a concise explanation of the subject matter defined in each of the independent claims involved in the appeal, referring to the specification by page and line number and to the drawings, if any, by reference characters; and/or (b) the brief fails to: (1) identify, for each independent claim involved in the appeal and for each dependent claim argued separately, every means plus function and step plus function under 35 U.S.C. 112, sixth paragraph, and/or (2) set forth the structure, material, or acts described in the specification as corresponding to each claimed function with reference to the specification by page and line number, and to the drawings, if any, by reference characters (37 CFR 41.37(c)(1)(v)).

5. ☐ The brief does not contain a concise statement of each ground of rejection presented for review (37 CFR 41.37(c)(1)(vi))

6. ☐ The brief does not present an argument under a separate heading for each ground of rejection on appeal (37 CFR 41.37(c)(1)(vii)).

7. ☐ The brief does not contain a correct copy of the appealed claims as an appendix thereto (37 CFR 41.37(c)(1)(viii)).

8. ☐ The brief does not contain copies of the evidence submitted under 37 CFR 1.130, 1.131, or 1.132 or of any other evidence entered by the examiner **and relied upon by appellant in the appeal**, along with a statement setting forth where in the record that evidence was entered by the examiner, as an appendix thereto (37 CFR 41.37(c)(1)(ix)).

9. ☐ The brief does not contain copies of the decisions rendered by a court or the Board in the proceeding identified in the Related Appeals and Interferences section of the brief as an appendix thereto (37 CFR 41.37(c)(1)(x)).

10. ☐ Other (including any explanation in support of the above items):

Notification of Non-Compliant Appeal Brief (37 CFR 41.37) in Ex Parte Reexamination	**Control No.**	**Patent Under Reexamination**	
	Examiner	**Art Unit**	

--The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

The Appeal Brief filed on _____ is defective for failure to comply with one or more provisions of 37 CFR 41.37(c).

Patent owner is given a TIME PERIOD of ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing date of this Notification for filing an amended brief or other appropriate correction of the Appeal brief (see MPEP 1205.03). If an amended brief or other appropriate correction (see MPEP 1205.03) is not timely submitted, the appeal will be dismissed as of the expiration of the period for reply to this Notification. Extensions of this time period may be obtained only under 37 CFR 1.550(c).

1. ☐ The brief does not contain the items required under 37 CFR 41.37(c), or the items are not under the proper heading or in the proper order.

2. ☐ The brief does not contain a statement of the status of all claims (e.g., rejected, allowed or confirmed, withdrawn, objected to, canceled), or does not identify the appealed claims (37 CFR 41.37(c)(1)(iii)).

3. ☐ At least one amendment has been filed subsequent to the final rejection, and the brief does not contain a statement of the status of each such amendment (37 CFR 41.37(c)(1)(iv)).

4. ☐ The brief does not comply with 37 CFR 41.37(c)(1)(v) it that it fails to (1) contain a concise explanation of the subject matter defined in each of the independent claims involved in the appeal, referring to the specification by page and line number and to the drawings, if any, by reference characters; (2) identify, for each independent claim involved in the appeal and for each dependent claim argued separately, every means plus function and step plus function under 35 U.S.C. 112, sixth paragraph, and/or (3) set forth the structure, material, or acts described in the specification as corresponding to each claimed function with reference to the specification by page and line number, and to the drawings, if any, by reference characters.

5. ☐ The brief does not contain a concise statement of each ground of rejection presented for review (37 CFR 41.37(c)(1)(vi)).

6. ☐ The brief does not present an argument under a separate heading for each ground of rejection on appeal (37 CFR 41.37(c)(1)(vii)).

7. ☐ The brief does not contain a correct copy of the appealed claims as an appendix thereto (37 CFR 41.37(c)(1)(viii)).

8. ☐ The brief does not contain, as an appendix thereto (37 CFR 41.37(c)(1)(ix)), copies of the evidence submitted under 37 CFR 1.130, 131, or 1.132 or of any other evidence entered by the examiner **and relied upon by appellant in the appeal**, along with a statement setting forth where in the record that evidence was entered by the examiner.

9. ☐ The brief does not contain, as an appendix thereto (37 CFR 41.37(c)(1)(x)), copies of the decisions rendered by a court or the Board in the proceeding identified in the Related Appeals and Interferences section of the brief.

10. ☐ Other (including any explanation in support of the above items):

¶ *12.109.01 Appeal Dismissed - Allowed Claims, Formal Matters Remaining*

In view of applicant's failure to file a brief within the time prescribed by 37 CFR 41.37(a)(1), the appeal stands dismissed and the proceedings as to the rejected claims are considered terminated. See 37 CFR 1.197(b).

This application will be passed to issue on allowed claim **[1]** provided the following formal matters are corrected. Prosecution is otherwise closed.

[2]

Applicant is required to make the necessary corrections within a shortened statutory period set to expire ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing date of this letter. Extensions of time may be granted under 37 CFR 1.136

Examiner Note:

1. This form paragraph should only be used if the formal matters cannot be handled by examiner's amendment. See MPEP § 1215.04.
2. In bracket 2, insert a description of the formal matters to be corrected.
3. Claims which have been indicated as containing allowable subject matter but are objected to as being dependent upon a rejected claim are to be considered as if they were rejected. See MPEP § 1215.04.

¶ *12.110 Extension To File Brief - Granted*

The request for an extension of time under 37 CFR 1.136(b) for filing the appeal brief under 37 CFR 41.37 filed on **[1]** has been **approved** for **[2]**.

Examiner Note:

1. In bracket 2, insert the amount of time the extension of time has been approved for.
2. This form paragraph should only be used when 37 CFR 1.136(a) is not available or has been exhausted, such as in litigation reissues or when appellant requests to reopen prosecution or file a reply brief as set forth in 37 CFR 41.39(b) and 41.50(a)(2).

¶ *12.111 Extension To File Brief - Denied*

The request for an extension of time under 37 CFR 1.136(b) for filing the appeal brief under 37 CFR 41.37 filed on **[1]** has been **disapproved** because no sufficient cause for the extension has been shown.

Examiner Note:

This form paragraph should only be used when 37 CFR 1.136(a) is not available or has been exhausted, such as in litigation reissues or when appellant requests to reopen prosecution or file a reply brief as set forth in 37 CFR 41.39(b) and 41.50(a)(2).

¶ *12.112 Brief Defective - Unsigned*

The appeal brief filed on **[1]** is defective because it is unsigned. 37 CFR 1.33. A ratification properly signed is required.

To avoid dismissal of the appeal, appellant must ratify the appeal brief within ONE MONTH or THIRTY DAYS from the mailing of this communication, whichever is longer. Extensions of time may be granted under 37 CFR 1.136.

¶ *12.116 Brief Unacceptable - Fee Unpaid*

The appeal brief filed on **[1]** is unacceptable because the fee required under 37 CFR 41.20(b)(2) was not timely filed within two months from the date of filing the notice of appeal as set forth in 37 CFR 41.37(a)(1).

The appeal will be dismissed unless appellant obtains an extension of time under 37 CFR 1.136(a) and files the required appeal brief fee. The date on which the brief, the fee for filing the brief, the petition under 37 CFR 1.136(a), and the extension fee under 37 CFR 1.17(a) are filed will be the date of the reply and also the date for determining the period of extension and the corresponding amount of the fee. In no case may an appellant obtain an extension for more than FIVE MONTHS under 37 CFR 1.136(a) beyond the TWO MONTH period for filing the appeal brief.

¶ *12.117 Brief Unacceptable - Not Timely Filed*

The appeal brief filed on **[1]** is unacceptable because it was not timely filed within two months from the date of filing the notice of appeal as set forth in 37 CFR 41.37(a)(1).

The appeal will be dismissed unless appellant obtains an extension of time under 37 CFR 1.136(a). The date on which the appeal brief, the fee for filing the brief, the petition under 37 CFR 1.136(a), and the extension fee under 37 CFR 1.17(a) are filed will be the date of the reply and also the date for determining the period of extension and the corresponding amount of the fee. In no case may an appellant obtain an extension for more than FIVE MONTHS under 37 CFR 1.136(a) beyond the TWO MONTH period for filing the appeal brief.

Examiner Note:

Use the 37 CFR 1.8 or 1.10 date, if applicable, instead of the 37 CFR 1.6 date of receipt to determine the date the appeal brief was filed with the Office.

<

Form paragraph *>12.169<, followed by one or more of *>form< paragraphs **>12.170-12.178< may be used for noting noncompliance with 37 CFR *>41.37(c)<.

**>

¶ *12.169 Heading for Notice Under 37 CFR 41.37(c)*

NOTIFICATION OF NON-COMPLIANCE WITH THE REQUIREMENTS OF 37 CFR 41.37(c)

Examiner Note:

Use form PTOL-90 and follow with one or more of form paragraphs 12.170 to 12.177 and conclude with form paragraph 12.178.

¶ *12.170 Missing Section Headings*

The brief does not contain the items of the brief required by 37 CFR 41.37(c)(1) under the appropriate headings and/or in the order indicated. **[1]**

Examiner Note:

In bracket 1, insert an indication of the missing headings or errors in the order of items.

¶ *12.170.01 Defect in Statement of Real Party in Interest*

The brief does not contain a statement under an appropriate heading identifying by name the real party in interest as required by 37 CFR 41.37(c)(1)(i).

Examiner Note:

A statement identifying by name the real party in interest is required, even if the party named in the caption of the brief is the real party in interest.

¶ *12.170.02 Defect in Statement of Related Appeals and Interferences*

The brief does not contain a section under an appropriate heading identifying the related appeals, interferences, and judicial proceedings which may be related to, directly affect or be directly affected by or have a bearing on the Board's decision in the pending appeal as required by 37 CFR 41.37 (c)(1)(ii).

¶ *12.171 Defect in Statement of Status of Claims*

The brief does not contain a statement of the status of all the claims, e.g., rejected, allowed or confirmed, withdrawn, objected to, or canceled, and identification of the claims being appealed as required by 37 CFR 41.37(c)(1)(iii). **[1]**

Examiner Note:

In bracket 1, insert an indication of the missing claim status information.

¶ *12.172 Defect in Statement of Status of Amendment Filed After Final Rejection*

The brief does not contain a statement of the status of an amendment filed subsequent to the final rejection as required by 37 CFR 41.37(c)(1)(iv). **[1]**

Examiner Note:

In bracket 1, insert an identification of the amendment for which the status is missing.

¶ *12.173 Defect in Summary of Claimed Subject Matter*

The brief does not contain a concise explanation of the subject matter defined in each of the independent claims involved in the appeal, referring to the specification by page and line number, and to the drawing, if any, by reference characters; and/or does not identify the structure, material, or acts described in the specification as corresponding to each claimed function for every means plus function and step plus function for each independent claim involved in the appeal and for each dependent claim argued separately by reference to the specification by page and line number, and to the drawing, if any, by reference characters, as required by 37 CFR 41.37(c)(1)(v).**[1]**

Examiner Note:

1. In bracket 1, insert an indication of the missing explanation.

2. An appellant who is not represented by a registered practitioner is not required to provide a concise explanation of the subject matter under 37 CFR 41.37(c)(1)(v). See the introductory paragraph of 37 CFR 41.37(c)(1).

¶ *12.174 Defect in Statement of the Grounds of Rejection to be Reviewed on Appeal*

The brief does not contain a concise statement of each ground of rejection presented for review as required by 37 CFR 41.37(c)(1)(vi). **[1]**

Examiner Note:

1. In bracket 1, insert an indication of the missing concise statement of the issues presented for review.

2. An appellant who is not represented by a registered practitioner is not required to provide a concise statement of each ground of rejection presented for review under 37 CFR 41.37(c)(1)(vi). See the introductory paragraph of 37 CFR 41.37(c)(1).

¶ *12.176 Defect in the Arguments of the Appellant*

The brief does not contain arguments of the appellant with respect to each ground of rejection presented for review, and the basis therefor, with citations of the statutes, regulations, authorities, and parts of the record relied on as required by 37 CFR 41.37(c)(1)(vii).

Examiner Note:

This form paragraph may be followed by form paragraph 12.176.01.

¶ *12.176.01 Separate Heading for Each Ground of Rejection*

Each ground of rejection must be treated under a separate heading. For each ground of rejection applying to two or more claims, the claims may be argued separately or as a group. Any claim argued separately should be placed under a subheading identifying the claim by number. A statement which merely points out what a claim recites will not be considered an argument for separate patentability of the claim. See 37 CFR 41.37(c)(1)(vii).

¶ *12.177 No Copy of Appealed Claims in Appendix*

The brief does not contain a copy of the claims involved in the appeal in an appendix.

¶ *12.178 Period For Reply Under 37 CFR 41.37(d)*

Appellant is required to comply with provisions of 37 CFR 41.37(c). To avoid dismissal of the appeal, Appellant must comply with the provisions of 37 CFR 41.37(c) within ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing of this communication. Extensions of time may be granted under 37 CFR 1.136.

Examiner Note:

1. This form paragraph should not be used in an *ex parte* reexamination proceeding. Use form PTOL-462R instead.

2. This form paragraph should appear at the end of a Notification of Non-Compliance with 37 CFR 41.37(c) drafted using form paragraphs 12.169-12.177.

3. The brief can no longer be filed within the time period for reply to the action from which the appeal was taken.

<

**>

1206 Amendments and Affidavits or Other Evidence< Filed With or After Appeal [R-3]

**>

37 CFR 41.33. Amendments and affidavits or other evidence after appeal.

(a) Amendments filed after the date of filing an appeal pursuant to § 41.31(a)(1) through (a)(3) and prior to the date a brief is filed pursuant to § 41.37 may be admitted as provided in § 1.116 of this title.

(b) Amendments filed on or after the date of filing a brief pursuant to § 41.37 may be admitted:

(1) To cancel claims, where such cancellation does not affect the scope of any other pending claim in the proceeding, or

(2) To rewrite dependent claims into independent form.

(c) All other amendments filed after the date of filing an appeal pursuant to § 41.31(a)(1) through (a)(3) will not be admitted except as permitted by §§ 41.39(b)(1), 41.50(a)(2)(i), 41.50(b)(1) and 41.50(c).

(d)(1) An affidavit or other evidence filed after the date of filing an appeal pursuant to § 41.31(a)(1) through (a)(3) and prior to the date of filing a brief pursuant to § 41.37 may be admitted if the examiner determines that the affidavit or other evidence overcomes all rejections under appeal and that a showing of good and sufficient reasons why the affidavit or other evidence is necessary and was not earlier presented has been made.

(2) All other affidavits or other evidence filed after the date of filing an appeal pursuant to § 41.31(a)(1) through (a)(3) will not be admitted except as permitted by §§ 41.39(b)(1), 41.50(a)(2)(i) and 41.50(b)(1).

I. AMENDMENTS

A new amendment must be submitted in a separate paper. Entry of a new amendment in an application on appeal is not a matter of right. The entry of an amendment (which may not include a new affidavit, declaration, exhibit or other evidence) submitted in an application on appeal is governed by 37 CFR 41.33, not 37 CFR 1.116.

Amendments filed after the filing of a notice of appeal, but prior to the date of filing a brief, may be admitted only to:

(A) cancel claims;

(B) comply with any requirement of form expressly set forth in a previous action;

(C) present rejected claims in better form for consideration on appeal; or

(D) amend the specification or claims upon a showing of good and sufficient reasons why the amendment is necessary and was not earlier presented. See 37 CFR 41.33(a).

If the examiner denies the entry of such an amendment, the examiner should use form PTOL-303, "Advisory Action Before the Filing of an Appeal Brief," to notify the applicant of the non-entry and the reason for non-entry.

Amendments filed **on or after** the date of filing a brief pursuant to 37 CFR 41.37 may be admitted only to:

(A) cancel claims, where such cancellation does not affect the scope of any other pending claim in the proceeding; or

(B) rewrite dependent claims into independent form.

Rewriting dependent claims into independent form as permitted under 37 CFR 41.33(a)(2) includes the following situations:

(A) rewriting a dependent claim in independent form by adding thereto the limitations of the parent claim(s); and

(B) rewriting an independent claim to incorporate therein all the subject matter of a dependent claim, canceling the dependent claim and in conjunction therewith changing the dependency of claims which had depended from the dependent claim being canceled to the amended independent claim that incorporates therein all the subject matter of the now canceled dependent claim.

If the examiner denies entry of an amendment filed on or after the date of filing a brief, the examiner should use form PTOL-304, "Advisory Action After the Filing of an Appeal Brief," to notify the applicant of the non-entry and the reason for non-entry.

Examiners must respond to all amendments filed after appeal has been taken and prior to termination of the appeal. If the examiner indicates (in the advisory action) that an amendment would be entered, it is imperative for the examiner to also state (in the same advisory action) how the individual rejection(s) set forth in the final Office action will be impacted by the entry of the amendment except where an amendment

merely cancels claims. If the examiner determines that an amendment clearly places the application in condition for allowance, the examiner may enter the amendment and allow the application. Except for amendments that meet the conditions set forth above, all other amendments submitted after the date of filing a notice of appeal will not be entered except as permitted by 37 CFR 41.39(b)(1), 41.50(a)(2)(i), 41.50(b)(1) and 41.50(c).

See MPEP 714.02, 714.12 and 714.13 for the treatment of amendments, affidavits and other evidence submitted after the mailing of a final rejection or a non-final rejection, but prior to the filing of a notice of appeal under 37 CFR 41.31(a)(1)-(a)(3). Any amendment, affidavit or other evidence filed after the mailing of a final Office action and on the same date as the notice of appeal will be treated by the Office as being filed prior to the notice of appeal and treated under 37 CFR 1.116. Any amendment, affidavit or other evidence filed after the mailing of a non-final Office action and on the same date as the notice of appeal will be treated by the Office as being filed prior to the notice of appeal and treated under 37 CFR 1.111.

II. AFFIDAVITS OR OTHER EVIDENCE

Affidavits or other evidence (e.g., declarations or exhibits) submitted after the date of filing a notice of appeal, but prior to the date of filing a brief pursuant to 37 CFR 41.37, may be admitted if the examiner determines that:

(A) the affidavits or other evidence overcomes all rejections under appeal; and

(B) a showing of good and sufficient reasons why the affidavit or other evidence is necessary and was not earlier presented has been made.

If the examiner denies the entry of such an affidavit or other evidence, the examiner should use form PTOL-303, "Advisory Action Before the Filing of an Appeal Brief," to notify the applicant of the non-entry and the reason for non-entry.

If the examiner determines that an affidavit or other evidence clearly places the application in condition for allowance, the examiner may enter the affidavit or other evidence and allow the application. Except as noted above, all other affidavits or other evidence filed after the date of filing a notice of appeal pursuant to 37 CFR 41.31(a)(1)-(a)(3) will not be admitted except as permitted by 37 CFR 41.39(b)(1), 41.50(a)(2)(i) and 41.50(b)(1).<

An amendment>, affidavit or other evidence< received after jurisdiction has passed to the Board should not be considered by the examiner unless remanded >or returned< by the Board for such purpose. See MPEP § 1210 and § *>1211.02<.

Note that 37 CFR *>41.37(c)(1)(iv)< requires a statement as to the status of any amendment filed subsequent to the final rejection. See also MPEP § *>1205<.

>

Advisory Action Before the Filing of an Appeal Brief	**Application No.**	**Applicant(s)**	
	Examiner	**Art Unit**	

--The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

THE REPLY FILED _____ FAILS TO PLACE THIS APPLICATION IN CONDITION FOR ALLOWANCE.

1. ☐ The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:
   a) ☐ The period for reply expires _____months from the mailing date of the final rejection.
   b) ☐ The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection.
   Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN TWO MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).

Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

NOTICE OF APPEAL

2. ☐ The Notice of Appeal was filed on _____. A brief in compliance with 37 CFR 41.37 must be filed within two months of the date of filing the Notice of Appeal (37 CFR 41.37(a)), or any extension thereof (37 CFR 41.37(e)), to avoid dismissal of the appeal. Since a Notice of Appeal has been filed, any reply must be filed within the time period set forth in 37 CFR 41.37(a).

AMENDMENTS

3. ☐ The proposed amendment(s) filed after a final rejection, but prior to the date of filing a brief, will not be entered because
   (a) ☐ They raise new issues that would require further consideration and/or search (see NOTE below);
   (b) ☐ They raise the issue of new matter (see NOTE below);
   (c) ☐ They are not deemed to place the application in better form for appeal by materially reducing or simplifying the issues for appeal; and/or
   (d) ☐ They present additional claims without canceling a corresponding number of finally rejected claims.
   NOTE: _____. (See 37 CFR 1.116 and 41.33(a)).
4. ☐ The amendments are not in compliance with 37 CFR 1.121. See attached Notice of Non-Compliant Amendment (PTOL-324).
5. ☐ Applicant's reply has overcome the following rejection(s): _____.
6. ☐ Newly proposed or amended claim(s) _____ would be allowable if submitted in a separate, timely filed amendment canceling the non-allowable claim(s).
7. ☐ For purposes of appeal, the proposed amendment(s): a) ☐ will not be entered, or b) ☐ will be entered and an explanation of how the new or amended claims would be rejected is provided below or appended.
   The status of the claim(s) is (or will be) as follows:
   Claim(s) allowed: _____.
   Claim(s) objected to: _____.
   Claim(s) rejected: _____.
   Claim(s) withdrawn from consideration: _____.

AFFIDAVIT OR OTHER EVIDENCE

8. ☐ The affidavit or other evidence filed after a final action, but before or on the date of filing a Notice of Appeal will not be entered because applicant failed to provide a showing of good and sufficient reasons why the affidavit or other evidence is necessary and was not earlier presented. See 37 CFR 1.116(e).
9. ☐ The affidavit or other evidence filed after the date of filing a Notice of Appeal, but prior to the date of filing a brief, will not be entered because the affidavit or other evidence failed to overcome all rejections under appeal and/or appellant fails to provide a showing a good and sufficient reasons why it is necessary and was not earlier presented. See 37 CFR 41.33(d)(1).
10. ☐ The affidavit or other evidence is entered. An explanation of the status of the claims after entry is below or attached.

REQUEST FOR RECONSIDERATION/OTHER

11. ☐ The request for reconsideration has been considered but does NOT place the application in condition for allowance because: _____.
12. ☐ Note the attached Information Disclosure Statement(s). (PTO/SB/08 or PTO-1449) Paper No(s). _____
13. ☐ Other: _____.

U.S. Patent and Trademark Office
PTOL-303 (Rev. 7-05) **Advisory Action Before the Filing of an Appeal Brief** Part of Paper No.

Advisory Action ***After the Filing of an Appeal Brief***	**Application No.**	**Applicant(s)**	
	Examiner	**Art Unit**	

--The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

The reply filed _____ is acknowledged.

1. ☐ The reply filed on or after the date of filing of an appeal brief, but prior to a final decision by the Board of Patent Appeals and Interferences, will not be entered because:

   a. ☐ The amendment is not limited to canceling claims (where the cancellation does not affect the scope of any other pending claims) or rewriting dependent claims into independent form (no limitation of a dependent claim can be excluded in rewriting that claim). See 37 CFR 41.33(b) and (c).

   b. ☐ The affidavit or other evidence is not timely filed before the filing of an appeal brief. See 37 CFR 41.33(d)(2).

2. ☐ The reply is not entered because it was not filed within the two month time period set forth in 37 CFR 41.39(b), 41.50(a)(2), or 41.50(b) (whichever is appropriate). Extensions of time under 37 CFR 1.136(a) are not available.

   Note: This paragraph is for a reply filed in response to one of the following: (a) an examiner's answer that includes a new ground of rejection (37 CFR 41.39(a)(2)); (b) a supplemental examiner's answer written in response to a remand by the Board of Patent Appeals and Interferences for further consideration of a rejection (37 CFR 41.50(a)(2)); or (c) a Board of Patent Appeals and Interferences decision that includes a new ground of rejection (37 CFR 41.50(b)).

3. ☐ The reply is entered. An explanation of the status of the claims after entry is below or attached.

4. ☐ Other: _____

1207 < Examiner's Answer [R-3]

**>

37 CFR 41.39. Examiner's answer.

(a)(1)The primary examiner may, within such time as may be directed by the Director, furnish a written answer to the appeal brief including such explanation of the invention claimed and of the references relied upon and grounds of rejection as may be necessary, supplying a copy to appellant. If the primary examiner determines that the appeal does not comply with the provisions of §§ 41.31 and 41.37 or does not relate to an appealable action, the primary examiner shall make such determination of record.

(2) An examiner's answer may include a new ground of rejection.

(b) If an examiner's answer contains a rejection designated as a new ground of rejection, appellant must within two months from the date of the examiner's answer exercise one of the following two options to avoid sua sponte dismissal of the appeal as to the claims subject to the new ground of rejection:

(1) *Reopen prosecution*. Request that prosecution be reopened before the primary examiner by filing a reply under § 1.111 of this title with or without amendment or submission of affidavits (§§ 1.130, 1.131 or 1.132 of this title) or other evidence. Any amendment or submission of affidavits or other evidence must be relevant to the new ground of rejection. A request that complies with this paragraph will be entered and the application or the patent under ex parte reexamination will be reconsidered by the examiner under the provisions of § 1.112 of this title. Any request that prosecution be reopened under this paragraph will be treated as a request to withdraw the appeal.

(2) *Maintain appeal*. Request that the appeal be maintained by filing a reply brief as set forth in § 41.41. Such a reply brief must address each new ground of rejection as set forth in § 41.37(c)(1)(vii) and should follow the other requirements of a brief as set forth in § 41.37(c). A reply brief may not be accompanied by any amendment, affidavit (§§ 1.130, 1.131 or 1.132 of this title) or other evidence. If a reply brief filed pursuant to this section is accompanied by any amendment, affidavit or other evidence, it shall be treated as a request that prosecution be reopened before the primary examiner under paragraph (b)(1) of this section.

(c) Extensions of time under § 1.136 (a) of this title for patent applications are not applicable to the time period set forth in this section. See § 1.136 (b) of this title for extensions of time to reply for patent applications and § 1.550 (c) of this title for extensions of time to reply for ex parte reexamination proceedings.<

>After an appeal brief under 37 CFR 41.37 has been filed and the examiner has considered the issues on appeal, the examiner may:

(A) reopen prosecution to enter a new ground of rejection with approval from the supervisory patent examiner (see MPEP § 1207.04);

(B) withdraw the final rejection and allow the application if the examiner determines that the rejections have been overcome and no new ground of rejection is appropriate; or

(C) maintain the appeal by conducting an appeal conference (MPEP § 1207.01) and draft an examiner's answer (MPEP § 1207.02). Any examiner's answer mailed on or after September 13, 2004 may include a new ground of rejection (MPEP § 1207.03).<

**>

1207.01 Appeal Conference< [R-3]

An appeal conference is mandatory in all cases in which an acceptable brief (MPEP § *>1205<) has been filed. However, if the examiner charged with the responsibility of preparing the examiner's answer reaches a conclusion that the appeal should not go forward and the supervisory patent examiner (SPE) approves, then no appeal conference is necessary. >In this case, the examiner may reopen prosecution and issue another Office action. See MPEP § 1207.04.<

The participants of the appeal conference should include (1) the examiner charged with preparation of the examiner's answer, (2) a supervisory patent examiner (SPE), and (3) another examiner, known as a conferee, having sufficient experience to be of assistance in the consideration of the merits of the issues on appeal. During the appeal conference, consideration should be given to the possibility of dropping cumulative art rejections and eliminating technical rejections of doubtful value.

The examiner responsible for preparing the examiner's answer should weigh the arguments of the other examiners presented during the appeal conference. If it is determined that the rejection(s) should be maintained, the examiner responsible for preparing the examiner's answer will prepare the examiner's answer.

On the examiner's answer, below the primary examiner's signature, the word "Conferees:" should be included, followed by the typed or printed names of the other two appeal conference participants. These two appeal conference participants must place their initials next to their name. This will make the record clear that an appeal conference has been held. >If the examiner's answer contains a new ground of rejection, it must give appellant a two-month time period

to reply to the new ground of rejection. The answer must also include the signature of a Technology Center (TC) Director or designee to indicate that he or she approves the new ground of rejection. See MPEP § 1207.03 and form paragraph 12.179.01.<

Upon receipt of the appeal case by the Board of Patent Appeals and Interferences (Board), the Board should review the application prior to assigning an appeal number to determine whether an appeal conference has been held. If the examiner's answer does not contain the appropriate indication that an appeal conference has been held (i.e., including the names of the conferees and identifying themselves as the conferees along with their initials), the Board should return the application directly to the appropriate **>TC< Director for corrective action. This return procedure by the Board should not be considered as a remand of the application. This procedure applies to all examiner's answers received by the Board on or after November 1, 2000.

Before preparing the answer, the examiner should make certain that all amendments approved for entry have in fact been * entered >in the file<. The ** Board will return to the TC any application in which approved amendments have not been entered.

*>

1207.02 Contents of Examiner's Answer< [R-3]

The examiner should furnish the appellant with a written statement in answer to the appellant's brief within 2 months after the receipt of the brief by the examiner.

The answer should contain a response to the allegations or arguments in the brief and should call attention to any errors in appellant's copy of the claims. If any rejection is withdrawn, the withdrawal should be clearly stated in the examiner's answer under *>subheading "Grounds of Rejection Withdrawn" in the section "Grounds of Rejection to be Reviewed on Appeal."< Grounds of rejection not *>specifically withdrawn by the examiner and not set forth< in the examiner's answer are usually treated >by the Board< as having been dropped, but may be considered by the Board if it desires to do so. The examiner should treat affidavits, declarations, or exhibits filed with ** the notice of appeal in accordance with 37 CFR *>1.116<. If an affidavit, declaration, or exhibit was refused entry under 37 CFR *>1.116 or prohibited by 37 CFR 41.33<, the examiner should not comment on it in the examiner's answer. Likewise, it would be improper for appellant to rely on an affidavit, declaration, or exhibit, which was **>not entered<, in an appeal brief. If appellant has grounds for challenging the non-entry of an affidavit, declaration, or exhibit, he or she should file a timely petition seeking supervisory review of the non-entry. Any affidavits or declarations in the file swearing behind a *>reference< should be clearly identified by the examiner as being considered under * 37 CFR 1.131 **.

**>If a document being relied upon by the examiner in support of a rejection is in a language other than English, a translation must be obtained so that the record is clear as to the precise facts the examiner is relying upon in support of the rejection. The translation should be obtained prior to the appeal conference so that the participants of the appeal conference can consider the translation. The examiner should reference the pertinent portions of the translation at least in the grounds of rejection section of the answer. See MPEP § 706.02 for reliance upon abstracts and foreign language documents in support of a rejection.

If the brief in compliance with 37 CFR 41.37 fails to address all grounds of rejection advanced by the examiner, the examiner should identify each ground of rejection not addressed by the brief in the examiner's answer under a subheading "Grounds of Rejection Not on Review" in the section "Grounds of Rejection to be Reviewed on Appeal."<

Because of the practice of the ** Office in entering amendments after final action under justifiable circumstances for purposes of appeal, many cases coming before the Board for consideration contain claims which are not the claims treated in the examiner's final rejection. They are either entirely new claims or amended versions of the finally rejected claims or both. Where an amendment under 37 CFR 1.116 >or 41.33< would be entered for appeal purposes, the examiner must identify (in an advisory action) how one or more individual rejections set forth in the final rejection would be used to reject the added or amended claim(s). **

If there is a complete and thorough development of the issues at the time of final rejection, it is possible to save time in preparing the examiner's answer required by 37 CFR **>41.39 by copying a rejection from a

prior Office action and then pasting the copied rejection into the answer. An examiner's answer should not refer, either directly or indirectly, to any prior Office action without fully restating the point relied on in the answer. Of course, if the examiner feels that some further explanation of the rejection is necessary, he or she should include it in the ground of rejection set forth in the answer. For example, if a rejected claim were amended after the final rejection by adding limitations, the examiner should address the added limitations in the ground of rejection set forth in the answer. The statement of the rejection in the answer must account for the claim as amended and the answer must also include any necessary rebuttal of arguments presented in the appellant's brief.<

**

The examiner should reevaluate his or her position in the light of the arguments presented in the brief, and should expressly withdraw any rejections not adhered to**>in the "Grounds of Rejection Withdrawn" subsection of the examiner's answer<. This should be done even though any rejection not repeated and discussed in the answer may be taken by the Board as having been withdrawn. *Ex parte Emm*, 118 USPQ 180 (Bd. App. 1957).

A new ground of rejection is ** permitted in an examiner's answer. **>See< MPEP § *>1207.03<. If **>reopening of prosecution is necessary, the< examiner must obtain approval from the supervisory patent examiner prior to reopening prosecution after an appeal. See MPEP § 1002.02(d) >and § 1207.04<.

All correspondence with the Board, whether by the examiner or the appellant, must be on the record. No unpublished decisions which are unavailable to the general public by reason of 35 U.S.C. 122(a) can be cited by the examiner or the appellant except that either the examiner or the appellant has the right to cite an unpublished decision in an application having common ownership with the application on appeal.

**

If an examiner's answer is believed to contain a new interpretation or application of the existing patent law, the examiner's answer, application file, and an explanatory memorandum should be forwarded to the TC Director for consideration. See MPEP § 1003. If approved by the TC Director, the examiner's answer should be forwarded to the Office of the Deputy Commissioner for Patent Examination Policy for final approval.

Briefs must comply with 37 CFR *>41.37<, and all examiner's answers filed in response to such briefs must comply with the guidelines set forth below.

(A) >CONTENT< REQUIREMENTS FOR EXAMINER'S ANSWER. The examiner's answer is required to include, under appropriate headings, in the order indicated, the following items:

(1) *Real Party in Interest.* A statement acknowledging **>that the brief has identified by name< the real party in * interest **.

(2) *Related Appeals and Interferences.* A statement **>identifying by application, patent, appeal or interference number all other prior and pending appeals, interferences or judicial proceedings known to the examiner which may be related to, directly affect or be directly affected by, or have a bearing on the Board's decision in the pending appeal. Copies of any decisions rendered by a court or the Board in any proceeding identified under this paragraph should be included in the *Related proceedings appendix* section.<

(3) *Status of Claims*. A statement of whether the examiner agrees or disagrees with the statement of the status of claims contained in the brief **>. If the examiner disagrees with the statement of the status of the claims contained in the brief, the examiner must set forth a correct statement of the status of all the claims in the proceeding.<

(4) *Status of Amendments >After Final<*. A statement of whether the examiner >agrees or< disagrees with the statement of the status of amendments contained in the brief and an explanation of any disagreement.

(5) *Summary of **>Claimed Subject Matter*. A statement of whether the examiner agrees or disagrees with the summary of claimed subject matter contained in the brief and an explanation of any disagreement.<

(6) **>*Grounds of Rejection to be Reviewed on Appeal*. A statement of whether the examiner agrees or disagrees with the statement of the grounds of rejection to be reviewed set forth in the brief and an explanation of any disagreement. Form paragraphs 12.154 and 12.154.01 or 12.154.02 may be used. In addition, the examiner must include the following subheadings (if appropriate):

(a) "Grounds of Rejection Withdrawn" - a listing of grounds of rejection under appeal that the examiner has withdrawn (form paragraph 12.154.05 may be used);

(b) "Grounds of Rejection Not On Review" - a listing of all grounds of rejection that have not been withdrawn and have not been presented by the appellant for review in the brief (form paragraph 12.154.011 may be used);

(c) "Non-Appealable Issues" - a listing of any non-appealable issues in the brief (form paragraph 12.154.03 may be used); and

(d) "New Grounds of Rejection" - a listing of any new grounds of rejection (prominently identified, e.g., a separate heading with all capitalized letters) that has been approved by the TC Director, or a designee. Form paragraph 12.154.04 may be used.<

*>

(7) < Claims *>*Appendix*<. A statement of whether the copy of the appealed claims contained in the appendix to the brief is correct and, if not, a correct copy of any incorrect claim.

**>

(8) *Evidence Relied Upon*<. A listing of the **>evidence< relied on >(e.g., patents, publications, admitted prior art)<, and, in the case of nonpatent references, the relevant page or pages.

*>

(9) < *Grounds of Rejection*. For each ground of rejection **>maintained by the examiner and each new ground of rejection (if any), an explanation of the ground of rejection.<

(a) For each rejection under 35 U.S.C. 112, first paragraph, the examiner's answer, **>must< explain how the first paragraph of 35 U.S.C. 112 is not complied with, including, as appropriate, how the specification and drawings, if any,

(i) do not describe the subject matter defined by each of the rejected claims,

(ii) would not enable any person skilled in the art to make and use the subject matter defined by each of the rejected claims without undue experimentation **>including a consideration of the undue experimentation factors set forth in MPEP § 2164.01(a), and

(iii) < do not set forth the best mode contemplated by the appellant of carrying out his or her invention.

(b) For each rejection under 35 U.S.C. 112, second paragraph, the examiner's answer **>must< explain how the claims do not particularly point out and distinctly claim the subject matter which applicant regards as the invention.

(c) For each rejection under 35 U.S.C. 102, the examiner's answer **>must< explain why the rejected claims are anticipated or not patentable under 35 U.S.C. 102, pointing out where all of the specific limitations recited in the rejected claims are found in the prior art relied upon in the rejection.

(d) For each rejection under 35 U.S.C. 103, the examiner's answer **>must<:

(i) state the ground of rejection and point out where each of the specific limitations recited in the rejected claims is found in the prior art relied on in the rejection,

(ii) identify **>the differences< between the rejected claims and the prior art relied on >(i.e., the primary reference)<, and

(iii) explain **>why it would have been obvious at the time the invention was made to a person of ordinary skill in the art to have modified the primary reference to arrive at the claimed subject matter.<

(e) For each rejection under 35 U.S.C. 102 or 103 where there are questions as to how limitations in the claims correspond to features in the prior art even after the examiner complies with the requirements of paragraphs (c) and (d) of this section, the examiner *>must< compare at least one of the rejected claims feature by feature with the prior art relied on in the rejection. The comparison *>must< align the language of the claim side-by-side with a reference to the specific page, line number, drawing reference number, and quotation from the prior art, as appropriate.

(f) For each rejection, other than those referred to in paragraphs (a) to (e) of this section, the examiner's answer **>must< specifically explain the basis for the particular rejection.

>

(g) The examiner must prominently identify (e.g., a separate heading with all capitalized letters) any new ground of rejection that has been approved by the TC Director or designee.<

*>

(10)< *Response to Argument*. A statement of whether the examiner disagrees with each of the contentions of appellant in the brief with respect to the issues presented and an explanation of the reasons for disagreement with any such contention. **>The examiner must use headings and subheadings paralleling the headings and subheadings utilized in the appellant's brief.

(11) *Related Proceedings Appendix*. Copies of any decisions rendered by a court or the Board in any proceeding identified by the examiner in the "Related Appeals and Interferences" section of the answer.<

(B) FORM PARAGRAPHS. A form suitable for the examiner's answer is as follows:

2. In bracket 1, insert the application number of the appealed application.
3. In bracket 2, insert the filing date of the appealed application.
4. In bracket 3, insert the name(s) of the appellant.
5. In bracket 4, insert the name of the registered representative of the appellant.
6. In bracket 5, indicate the date on which the brief was filed, and also indicate if any supplemental appeal brief was filed, as well as the date on which the supplemental appeal brief was filed.
7. In bracket 6, indicate the date on which the Office action being appealed was mailed.
8. Form paragraphs 12.149 to 12.179.01, as appropriate, should be used if the appeal brief was filed on or after September 13, 2004.

¶ *12.150.01 Real Party in Interest*

(1) Real Party in Interest

A statement identifying by name the real party in interest is contained in the brief.

Examiner Note:

A statement identifying by name the real party in interest is required even if the party named in the caption of the brief is the real party in interest. See 37 CFR 41.37(c)(1)(i). Form PTOL-462, PTOL-462R, or form paragraphs 12.169-12.178 may be used, as applicable, to require a corrected appeal brief if the appeal brief is not in compliance with 37 CFR 41.37.

¶ *12.150.04 Related Appeals and Interferences*

(2) Related Appeals and Interferences

Examiner Note:

Follow this form paragraph with form paragraph 12.150.05 or 12.150.06.

¶ *12.150.05 Identification of the Related Appeals and Interferences*

The following are the related appeals, interferences, and judicial proceedings known to the examiner which may be related to, directly affect or be directly affected by or have a bearing on the Board's decision in the pending appeal:

Examiner Note:

1. Follow this form paragraph with an identification by application, patent, appeal or interference number of all other prior and pending appeals, interferences or judicial proceedings known to the examiner which may be related to, directly affect or be directly affected by or have a bearing on the Board's decision in the pending appeal.
2. Include a copy of all court and Board decisions identified in this section in a related proceeding(s) appendix using form paragraphs 12.162 and 12.162.02.

¶ *12.150.06 No Related Appeals and Interferences Identified*

The examiner is not aware of any related appeals, interferences, or judicial proceedings which will directly affect or be directly affected by or have a bearing on the Board's decision in the pending appeal.

¶ *12.151 Status of Claims*

(3) Status of Claims

Examiner Note:

Follow this form paragraph with one or more of form paragraphs 12.151.01 to 12.151.10.

¶ *12.151.01 Agreement With Statement of Status of Claims*

The statement of the status of claims contained in the brief is correct.

¶ *12.151.02 Disagreement With Statement of Status of Claims*

The statement of the status of claims contained in the brief is incorrect. A correct statement of the status of the claims is as follows:.

Examiner Note:

1. Indicate the area of disagreement and the reasons for the disagreement.
2. One or more of form paragraphs 12.151.03 to 12.151.10 must follow this paragraph.

¶ *12.151.03 Claims on Appeal*

This appeal involves claim **[1]**.

Examiner Note:

1. In bracket 1, all the claims still on appeal should be specified. Do not list claims which are no longer rejected.
2. Also use form paragraphs 12.151.04 to 12.151.10 when appropriate to clarify the status of the claims on appeal that were incorrectly listed in the brief.

¶ *12.151.04 Status of Claims on Appeal - Substituted*

Claim**[1]** been substituted for the finally rejected claims.

Examiner Note:

All substituted claims on appeal must be identified if the brief incorrectly lists any substituted claims. In bracket 1, insert the claim number(s) corresponding to the substitute claims, followed by --has-- or --have--, as appropriate.

¶ *12.151.05 Status of Claims on Appeal - Amended*

Claim**[1]** been amended subsequent to the final rejection.

Examiner Note:

All claims amended after final rejection must be identified if the brief incorrectly lists any claims amended after final rejection. In bracket 1, identify the claim number(s) corresponding to the claim(s) which have been amended, followed by --has-- or --have--, as appropriate.

¶ *12.151.07 Claims Allowed*

Claim**[1]** allowed.

Examiner Note:

All allowed claims must be identified if the brief incorrectly lists any allowed claims.

¶ *12.151.08 Claims Objected To*

Claim**[1]** objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Examiner Note:

All objected to claims must be identified if the brief incorrectly lists any claims objected to.

¶ *12.151.09 Claims Withdrawn From Consideration*

Claim**[1]** withdrawn from consideration as not directed to the elected **[2]**.

Examiner Note:

All withdrawn claims must be identified if the brief incorrectly lists any withdrawn claims.

¶ *12.151.10 Claims Canceled*

Claim**[1]** been canceled.

Examiner Note:

All canceled claims must be identified if the brief incorrectly lists any canceled claims.

¶ *12.152 Status of Amendments After Final*

(4) Status of Amendments After Final

Examiner Note:

Identify status of all amendments submitted after final rejection. Use one or more of form paragraphs 12.152.01 to 12.152.05, if appropriate.

¶ *12.152.01 Agreement With Appellant's Statement of the Status of Amendments After Final*

The appellant's statement of the status of amendments after final rejection contained in the brief is correct.

¶ *12.152.02 Disagreement With Appellant's Statement of the Status of Amendments After Final*

The appellant's statement of the status of amendments after final rejection contained in the brief is incorrect.

Examiner Note:

One or more of form paragraphs 12.152.03 to 12.152.05 must follow this form paragraph to explain the reasons for disagreeing with appellant's statement of the status of the amendments.

¶ *12.152.03 Amendment After Final Entered*

The amendment after final rejection filed on **[1]** has been entered.

Examiner Note:

1. In bracket 1, insert the filing date of any entered after final amendment.
2. Use this form paragraph for each after final amendment which has been entered.

¶ *12.152.04 Amendment After Final Not Entered*

The amendment after final rejection filed on **[1]** has not been entered.

Examiner Note:

1. In bracket 1, insert the date of any after final amendment denied entry.
2. Use this form paragraph for each after final amendment which has been denied entry.

¶ *12.152.05 No Amendments After Final*

No amendment after final has been filed.

¶ *12.153 Summary of Claimed Subject Matter*

(5) Summary of Claimed Subject Matter

Examiner Note:

Follow this form paragraph with either of form paragraphs 12.153.01 or 12.153.02.

¶ *12.153.01 Agreement With the Summary of Claimed Subject Matter*

The summary of claimed subject matter contained in the brief is correct.

¶ *12.153.02 Disagreement With the Summary of Claimed Subject Matter*

The summary of claimed subject matter contained in the brief is deficient. 37 CFR 41.37(c)(1)(v) requires the summary of claimed subject matter to include: (1) a concise explanation of the subject matter defined in each of the independent claims involved in the appeal, referring to the specification by page and line number, and to the drawing, if any, by reference characters and (2) for each independent claim involved in the appeal and for each dependent claim argued separately, every means plus function and step plus function as permitted by 35 U.S.C. 112, sixth paragraph, must be identified and the structure, material, or acts described in the specification as corresponding to each claimed function must be set forth with reference to the specification by page and line number, and to the drawing, if any, by reference characters. The brief is deficient because **[1]**.

Examiner Note:

1. In bracket 1, explain the deficiency of the appellant's summary of the claimed subject matter. Include a correction if necessary for a clear understanding of the claimed invention.

2. Form PTOL-462, PTOL-462R, or form paragraphs 12.169-12.178 may be used, as applicable, to require a corrected appeal brief if the appeal brief is not in compliance with 37 CFR 41.37. Note that an appellant who is not represented by a registered practitioner is not required to provide a concise explanation of the subject matter under 37 CFR 41.37(c)(1)(v). See the introductory paragraph of 37 CFR 41.37(c)(1).

¶ *12.154 Grounds of Rejection to be Reviewed on Appeal*

(6) Grounds of Rejection to be Reviewed on Appeal

Examiner Note:

1. This form paragraph may be followed with one or more of form paragraphs 12.154.01 to 12.154.05.

2. Use form paragraph 12.154.04 to introduce any new grounds of rejection.

3. Form PTOL-462, PTOL-462R, or form paragraphs 12.169-12.178 may be used, as applicable, to require a corrected appeal brief if the appeal brief is not in compliance with 37 CFR 41.37. Note that an appellant who is not represented by a registered practitioner is not required to provide a concise explanation of the grounds of rejection to be reviewed on appeal under 37 CFR 41.37(c)(1)(vi). See the introductory paragraph of 37 CFR 41.37(c)(1).

¶ *12.154.01 Agreement With Appellant's Statement of the Grounds of Rejection*

The appellant's statement of the grounds of rejection to be reviewed on appeal is correct.

Examiner Note:

Follow this form paragraph with form paragraph 12.154.011 if there are grounds of rejection that have not been withdrawn and that have not been presented for review in appellant's brief.

¶ *12.154.02 Disagreement With Appellant's Statement of the Grounds of Rejection*

The appellant's statement of the grounds of rejection to be reviewed on appeal is substantially correct. The changes are as follows: **[1]**

Examiner Note:

In bracket 1, explain the changes with respect to the appellant's statement of the grounds of rejection in the brief including:

(i) an identification of any grounds of rejection that were stated incorrectly (e.g., using form paragraph 12.154.05);

(ii) an identification of any grounds of rejection which the examiner is withdrawing because they are no longer applicable (e.g., using form paragraph 12.154.05); and

(iii) any new grounds of rejection (e.g., using form paragraph 12.154.04).

¶ *12.154.03 Non-Appealable Issue in Brief*

Appellant's brief presents arguments relating to **[1]**. This issue relates to petitionable subject matter under 37 CFR 1.181 and not to appealable subject matter. See MPEP § 1002 and § 1201.

¶ *12.154.04 New Grounds of Rejection - Heading*

NEW GROUNDS OF REJECTION

[1]

Examiner Note:

1. Any new ground(s) of rejection in the examiner's answer must be prominently identified (e.g., using this form paragraph) in the following sections of the answer:

(6) Grounds of Rejection to be Reviewed on Appeal (form paragraph 12.154) – use this form paragraph in section *(6)* of the answer to provide a concise statement of each new ground of rejection presented for review in bracket 1; and

(9) Grounds of Rejection (form paragraph 12.159) – use this form paragraph in section *(9)* of the answer to set forth the new grounds of rejection.

2. Conclude an examiner's answer raising new grounds of rejection with form paragraph 12.179.01: (1) to notify applicant of the response period and options following the new grounds of rejection; and (2) to include the required approval of the TC Director or his/her designee.

¶ *12.154.05 Withdrawn Rejections*

WITHDRAWN REJECTIONS

The following grounds of rejection are not presented for review on appeal because they have been withdrawn by the examiner. **[1]**.

Examiner Note:

In bracket 1, insert the grounds of rejection that have been withdrawn.

¶ *12.154.011 Grounds of Rejection Not on Review*

GROUNDS OF REJECTION NOT ON REVIEW

The following grounds of rejection have not been withdrawn by the examiner, but they are not under review on appeal because they have not been presented for review in the appellant's brief. **[1]**.

Examiner Note:

In bracket 1, insert the grounds of rejection that have not been withdrawn by the examiner but were not presented for review in appellant's brief.

¶ *12.156 Claims Appendix*

(7) Claims Appendix

Examiner Note:

Follow this form paragraph with form paragraph 12.156.01, 12.156.02 or 12.156.03.

¶ *12.156.01 Copy of the Appealed Claims in Appendix Is Correct*

The copy of the appealed claims contained in the Appendix to the brief is correct.

¶ *12.156.02 Copy of the Appealed Claims in Appendix Is Substantially Correct*

A substantially correct copy of appealed claim **[1]** appears on page **[2]** of the Appendix to the appellant's brief. The minor errors are as follows: **[3]**

Examiner Note:

1. In bracket 1, indicate the claim or claims with small errors.

2. In bracket 3, indicate the nature of the errors.

¶ *12.156.03 Copy of the Appealed Claims in Appendix Contain Substantial Errors*

Claim **[1]** contain(s) substantial errors as presented in the Appendix to the brief. Accordingly, claim **[2]** correctly written in the Appendix to the Examiner's Answer.

Examiner Note:

1. Appellant should include a correct copy of all appealed claims in the Appendix to the brief. See 37 CFR 41.37(c)(1)(viii).

2. Attach a correct copy of any incorrect claims as an Appendix to the Examiner's Answer and if the application is still a paper file, draw a diagonal line in pencil through the incorrect claim in the Appendix of the appellant's appeal brief.

3. Rather than using this form paragraph, if the errors in the claim(s) are significant, appellant should be required to submit a corrected brief using form PTOL-462, PTOL-462R, or form paragraphs 12.169-12.178, as applicable. Where the brief includes arguments directed toward the errors, a corrected brief should always be required.

¶ *12.157 Evidence Relied Upon*

(8) Evidence Relied Upon

Examiner Note:

Follow this form paragraph with either form paragraph 12.157.01 or 12.157.02.

¶ *12.157.01 No Evidence Relied Upon*

No evidence is relied upon by the examiner in the rejection of the claims under appeal.

¶ *12.157.02 Listing of Evidence Relied Upon*

The following is a listing of the evidence (e.g., patents, publications, Official Notice, and admitted prior art) relied upon in the rejection of claims under appeal.

Examiner Note:

1. Use the following format for providing information on each reference cited:

Number Name Date

2. The following are example formats for listing reference citations:

2,717,847 VERAIN 9-1955

1,345,890 MUTHER (Fed. Rep. of Germany) 7-1963
(Figure 2 labeled as Prior Art in this document)

3. See MPEP § 707.05(e) for additional examples.

¶ *12.159 Grounds of Rejection*

(9) Grounds of Rejection

The following ground(s) of rejection are applicable to the appealed claims:

Examiner Note:

1. Explain each ground of rejection maintained by the examiner as provided below:

(i) For each rejection under 35 U.S.C. 112, first paragraph, the Examiner's Answer shall explain how the first paragraph of 35 U.S.C. 112 is not complied with, including, as appropriate, how the specification and drawings, if any, (a) do not describe the subject matter defined by each of the rejected claims, (b) would not enable any person skilled in the art to make and use the subject matter defined by each of the rejected claims, and (c) do not set forth the best mode contemplated by the appellant of carrying out his/her invention.

(ii) For each rejection under 35 U.S.C. 112, second paragraph, the Examiner's Answer shall explain how the claims do not particularly point out and distinctly claim the subject matter which appellant regards as the invention.

(iii) For each rejection under 35 U.S.C. 102, the Examiner's Answer shall explain why the rejected claims are anticipated or not patentable under 35 U.S.C. 102, pointing out where all of the specific limitations recited in the rejected claims are found in the prior art relied upon in the rejection.

(iv) For each rejection under 35 U.S.C. 103, the Examiner's Answer shall state the ground of rejection and point out where each of the specific limitations recited in the rejected claims is

found in the prior art relied upon in the rejection, shall identify the differences between the rejected claims and the prior art relied on (i.e., the primary reference) and shall explain why it would have been obvious at the time the invention was made to a person of ordinary skill in the art to have modified the primary reference to arrive at the claimed subject matter

(v) For each rejection under 35 U.S.C. 102 or 103 where there may be questions as to how limitations in the claims correspond to features in the prior art, the examiner, in addition to the requirements of (ii), (iii) and (iv) above, should compare at least one of the rejected claims feature by feature with the prior art relied on in the rejection. The comparison shall align the language of the claim side by side with a reference to the specific page, line number, drawing reference number and quotation from the prior art, as appropriate.

(vi) For each rejection, other than those referred to in paragraphs (i) to (v) for this section, the Examiner's Answer shall specifically explain the basis for the particular rejection.

2. If there are any new grounds of rejection, use form paragraph 12.154.04 to provide a prominent heading and use form paragraph 12.179.01 instead of form paragraph 12.179 to conclude the examiner's answer.

¶ *12.161 Response to Argument*

(10) Response to Argument

Examiner Note:

1. If an issue raised by appellant was fully responded to under the "Grounds of Rejection to be Reviewed on Appeal" portion, no additional response is required here.

2. If an issue has been raised by appellant that was not fully responded to under "Grounds of Rejection to be Reviewed on Appeal," a full response must be provided after this form paragraph.

¶ *12.162 Related Proceeding(s) Appendix*

(11) Related Proceeding(s) Appendix

Examiner Note:

Follow this form paragraph with either form paragraph 12.162.01 or 12.162.02.

¶ *12.162.01 No Related Proceeding Identified*

No decision rendered by a court or the Board is identified by the examiner in the Related Appeals and Interferences section of this examiner's answer.

¶ *12.162.02 Copies Related to Proceeding*

Copies of the court or Board decision(s) identified in the Related Appeals and Interferences section of this examiner's answer are provided herein.

¶ *12.179 Conclusion to Examiner's Answer, No New Grounds of Rejection*

For the above reasons, it is believed that the rejections should be sustained.

Respectfully submitted,

[1]

Conferees:

[2]

[3]

Examiner Note:

1. In bracket 1, insert initials of the examiner and the date.

2. In bracket 2, insert names of the conferees. The conferees must also place their initials next to their names.

3. In bracket 3, insert correspondence address of record.

4. If the examiner's answer includes a new ground of rejection, use form paragraph 12.179.01 instead of this form paragraph.

¶ *12.179.01 Conclusion to Examiner's Answer Raising New Grounds of Rejection*

For the above reasons, it is believed that the rejections should be sustained.

This examiner's answer contains a new ground of rejection set forth in section (9) above. Accordingly, appellant must within **TWO MONTHS** from the date of this answer exercise one of the following two options to avoid sua sponte dismissal of the appeal as to the claims subject to the new ground of rejection:

(1) **Reopen prosecution**. Request that prosecution be reopened before the primary examiner by filing a reply under 37 CFR 1.111 with or without amendment, affidavit or other evidence. Any amendment, affidavit or other evidence must be relevant to the new grounds of rejection. A request that complies with 37 CFR 41.39(b)(1) will be entered and considered. Any request that prosecution be reopened will be treated as a request to withdraw the appeal.

(2) **Maintain appeal**. Request that the appeal be maintained by filing a reply brief as set forth in 37 CFR 41.41. Such a reply brief must address each new ground of rejection as set forth in 37 CFR 41.37(c)(1)(vii) and should be in compliance with the other requirements of 37 CFR 41.37(c). If a reply brief filed pursuant to 37 CFR 41.39(b)(2) is accompanied by any amendment, affidavit or other evidence, it shall be treated as a request that prosecution be reopened before the primary examiner under 37 CFR 41.39(b)(1).

Extensions of time under 37 CFR 1.136(a) are not applicable to the TWO MONTH time period set forth above. See 37 CFR 1.136(b) for extensions of time to reply for patent applications and 37 CFR 1.550(c) for extensions of time to reply for ex parte reexamination proceedings.

Respectfully submitted,

[1]

A Technology Center Director or designee must personally approve the new ground(s) of rejection set forth in section (9) above by signing below:

[2]

Conferees:

[3]

[4]

Examiner Note:

1. In bracket 1, insert initials of the examiner and the date.

2. In bracket 2, insert TC Director's or designee's signature. All new grounds of rejection must be approved by a TC Director or designee.

3. In bracket 3, insert names of the conferees. The conferees must also place their initials next to their names.

4. In bracket 4, insert correspondence address of record.

<

**>

1207.03 < New Ground of Rejection in Examiner's Answer [R-3]

37 CFR **>41.39(a)(2) permits< the entry of a new ground of rejection in an examiner's answer >mailed on or after September 13, 2004. New grounds of rejection in an examiner's answer are envisioned to be rare, rather than a routine occurrence. For example, where appellant made a new argument for the first time in the appeal brief, the examiner may include a new ground of rejection in an examiner's answer to address the newly presented argument by adding a secondary reference from the prior art on the record. New grounds of rejection are not limited to only a rejection made in response to an argument presented for the first time in an appeal brief<. At the time of preparing the answer to an appeal brief, * the examiner may decide that he or she should apply a new ground of rejection against some or all of the appealed claims. In such an instance where a new ground of rejection is necessary, the examiner should **>either reopen prosecution or set forth the new ground of rejection in the answer<. The examiner must obtain supervisory approval in order to reopen prosecution after an appeal. See MPEP § 1002.02(d) *>and § 1207.04. A supplemental examiner's answer cannot include a new ground of rejection, except when a supplemental answer is written in response to a remand by the Board for further consideration of a rejection under 37 CFR 41.50(a). See MPEP § 1207.05.

I. REQUIREMENTS FOR A NEW GROUND OF REJECTION

Any new ground of rejection made by an examiner in an answer must be:

(A) approved by a Technology Center (TC) Director or designee; and

(B) prominently identified in the "Grounds of Rejection to be Reviewed on Appeal" section and the "Grounds of Rejection" section of the answer (see MPEP § 1207.02). The examiner may use form paragraph 12.154.04.

The examiner's answer must provide appellant a two-month time period for reply. The examiner may use form paragraph 12.179.01 to notify appellant of the period for reply and to include the approval of the TC Director or designee. In response to an examiner's answer that contains a new ground of rejection, appellant must either file:

(A) a reply in compliance with 37 CFR 1.111 to request that prosecution be reopened; or

(B) a reply brief that addresses each new ground of rejection in compliance with 37 CFR 41.37(c)(1)(vii) to maintain the appeal.

Appellant must file the reply or reply brief within two months from the date of the examiner's answer to avoid *sua sponte* dismissal of the appeal as to the claims subject to the new ground of rejection. See 37 CFR 41.39(b) and subsection "V. APPELLANT'S REPLY TO NEW GROUNDS OF REJECTION" below.

II. SITUATIONS WHERE NEW GROUNDS OF REJECTION ARE NOT PERMISSIBLE

A new ground of rejection would not be permitted to reject a previously allowed or objected to claim even if the new ground of rejection would rely upon evidence already of record. In this instance, rather than making a new ground of rejection in an examiner's answer, if the basis for the new ground of rejection was approved by a supervisory patent examiner as currently set forth in MPEP § 1207.04, the examiner would reopen prosecution. In addition, if an appellant has clearly set forth an argument in a previous reply during prosecution of the application and the examiner has failed to address that argument, the examiner would not be permitted to add a new ground of rejection in the examiner's answer to respond to that argument but would be permitted to reopen prosecution, if appropriate. New grounds of rejection cannot be made in a supplemental examiner's answer unless it is written in response to a remand by the Board for further consideration of a rejection under 37 CFR 41.50(a).

III. SITUATIONS THAT ARE NOT CONSIDERED AS NEW GROUNDS OF REJECTION<

There is no new ground of rejection when the basic thrust of the rejection remains the same such that an appellant has been given a fair opportunity to react to the rejection. See *In re Kronig*, 539 F.2d 1300, 1302-03, 190 USPQ 425, 426-27 (CCPA 1976). Where the statutory basis for the rejection remains the same, and the evidence relied upon in support of the rejection remains the same, a change in the discussion of, or rationale in support of, the rejection does not necessarily constitute a new ground of rejection. *Id.* at 1303, 190 USPQ at 427 (reliance upon fewer references in affirming a rejection under 35 U.S.C. 103 does not constitute a new ground of rejection).

>In addition, former< 37 CFR 1.193(a)(2) also *>provided< that if:

(A) an amendment under 37 CFR 1.116 >[or 41.33]< proposes to add or amend one or more claims;

(B) appellant was advised (through an advisory action) that the amendment would be entered for purposes of appeal; and

(C) the advisory action indicates which individual rejection(s) set forth in the action from which appeal has been taken would be used to reject the added or amended claims, then

(1) the appeal brief must address the rejection(s) of the added or amended claim(s) and

(2) the examiner's answer may include the rejection(s) of the added or amended claims. >Such rejection(s) made in the examiner's answer would not be considered as a new ground of rejection.<

The filing of such an amendment represents appellant's consent to proceed with the appeal process. For example, when an amendment under 37 CFR 1.116 >or 41.33< cancels a claim (the "canceled claim") and incorporates its limitations into the claim upon which it depends or rewrites the claim as a new independent claim (the "appealed claim"), the appealed claim contains the limitations of the canceled claim (i.e., the only difference between the appealed claim and the canceled claim is the claim number). In such situations, the appellant has been given a fair opportunity to react to the ground of rejection (albeit to a claim having a different claim number). Thus, such a rejection does not constitute a "new ground of rejection" within the meaning of 37 CFR *>41.39<.

The phrase "individual rejections" ** addresses situations such as the following: the action contains a rejection of claim 1 under 35 U.S.C. 102 on the basis of Reference A, a rejection of claim 2 (which depends upon claim 1) under 35 U.S.C. 103 on the basis of Reference A in view of Reference B and a rejection of claim 3 (which depends upon claim 1) under 35 U.S.C. 103 on the basis of Reference A in view of Reference C. In this situation, the action contains the following "individual rejections": (1) 35 U.S.C. 102 on the basis of Reference A; (2) 35 U.S.C. 103 on the basis of Reference A in view of Reference B; and (3) 35 U.S.C. 103 on the basis of Reference A in view of Reference C. The action, however, does not contain any rejection on the basis of A in view of B and C. If an amendment under 37 CFR 1.116 >or 41.33< proposes to combine the limitations of claims 1 and 2 together into **>amended claim 1 and cancels claim 2,< a rejection of ** amended claim 1* under 35 U.S.C. 103 on the basis of Reference A in view of Reference B >would be appropriate and would not be considered a new ground of rejection within the meaning of 37 CFR 41.39<, provided the applicant was advised that this rejection would be applied to **>amended claim 1 in an advisory action. Furthermore, since claim 3 (which depends upon claim 1) would include the limitations of the original claims 1, 2, and 3, a rejection of amended claim 3 (amended by the amendment to original claim 1) under 35 U.S.C. 103 on the basis of Reference A in view of Reference B and Reference C may be appropriate and would not be considered a new ground of rejection within the meaning of 37 CFR 41.39, provided applicant was advised that this rejection would be applied to amended claim 3 in the advisory action. Of course, as amended claim 3 includes the limitations of the original claims 1, 2, and 3, amended claim 3 is a newly proposed claim in the application raising a new issue (i.e., a new ground of rejection), and such an amendment under 37 CFR 1.116 or 41.33 may properly be refused entry as raising a new issue.<

It must be emphasized that * 37 CFR *>41.39(a)(2)< does not change the existing practice with respect to amendment after final rejection practice (37 CFR 1.116). The fact that 37 CFR *>41.39(a)(2)< would authorize the rejection in an

examiner's answer of a claim sought to be added or amended in an amendment under 37 CFR 1.116 >or 41.33< has no effect on whether the amendment under 37 CFR 1.116 >or 41.33< is entitled to entry. The provisions of 37 CFR 1.116 >or 41.33< control whether an amendment under 37 CFR 1.116 or >41.33< is entitled to entry; the provisions of 37 CFR **>41.39(a)(2) permits a new ground of rejection to be included in an answer against< a claim added or amended in an amendment under 37 CFR 1.116 **>or 41.33<.

A new prior art reference >applied or< cited for the first time in an examiner's answer generally will constitute a new ground of rejection. If the citation of a new prior art reference is necessary to support a rejection, it must be included in the statement of rejection, which would be considered to introduce a new ground of rejection. Even if the prior art reference is cited to support the rejection in a minor capacity, it should be positively included in the statement of rejection. *In re Hoch*, 428 F.2d 1341, 1342 n.3, 166 USPQ 406, 407 n. 3 (CCPA 1970). **>Where< a newly cited reference is added merely as evidence of the prior ** statement made by the examiner >as to what is "well-known" in the art which was challenged for the first time in the appeal brief<, the citation of the reference in the examiner's answer would not >ordinarily< constitute a new ground of rejection within the meaning of 37 CFR *>41.39(a)(2)<. See also MPEP § 2144.03. **>

IV. REQUEST FOR DESIGNATION AS NEW GROUND OF REJECTION

Appellant cannot request to reopen prosecution pursuant to 37 CFR 41.39(b) if the examiner's answer does not have a new ground of rejection under 37 CFR 41.39. If appellant believes that an examiner's answer contains a new ground of rejection not identified as such, appellant may file a petition under 37 CFR 1.181(a) within two months from the mailing of the examiner's answer requesting that a ground of rejection set forth in the answer be designated as a new ground of rejection. Any such petition must set forth a detailed explanation as to why the ground of rejection set forth in the answer constitutes a new ground of rejection. Any allegation that an examiner's answer contains a new ground of rejection not identified as such is waived if not timely raised (i.e., by filing the petition within two months of the answer) by way of a petition under 37 CFR 1.181(a). The filing of a petition under 37 CFR 1.181 does not toll any time period running. If appellant wishes to present arguments to address the rejection in the examiner's answer, appellant must file a reply brief to the examiner's answer within two months from the mailing date of the examiner's answer. If the TC Director or designee decides that the rejection is considered a new ground of rejection and approves the new ground of rejection, the examiner would be required to send a corrected examiner's answer that identifies the rejection as a new ground of rejection and includes the approval of the TC Director or designee. The appellant may then file either a request that prosecution be reopened by filing a reply under 37 CFR 1.111, or a request that the appeal be maintained by filing a reply brief or resubmitting the previously-filed reply brief, within two months from the mailing of the corrected answer. If the TC Director or designee agrees with the examiner that the rejection is not a new ground of rejection, the examiner would not be required to send a corrected examiner's answer.

V. APPELLANT'S REPLY TO NEW GROUNDS OF REJECTION

37 CFR 41.39(b) provides that:

> if an examiner's answer contains a new ground of rejection, appellant must within two months from the date of the examiner's answer exercise one of the following two options to avoid *sua sponte* dismissal of the appeal as to the claims subject to the new ground of rejection:

(1) Reopen prosecution. Request that prosecution be reopened before the primary examiner by filing a reply under § 1.111 of this title with or without amendment or submission of affidavits (§§ 1.130, 1.131 or 1.132 of this title) or other evidence. Any amendment or submission of affidavits or other evidence must be relevant to the new ground of rejection. A request that complies with this paragraph will be entered and the application or the patent under *ex parte* reexamination will be reconsidered by the examiner under the provisions of § 1.112 of this title. Any request that prosecution be reopened under this paragraph will be treated as a request to withdraw the appeal.

(2) Maintain appeal. Request that the appeal be maintained by filing a reply brief as set forth in

§ 41.41. Such a reply brief must address each new ground of rejection as set forth in § 41.37(c)(1)(vii) and should follow the other requirements of a brief as set forth in § 41.37(c). A reply brief may not be accompanied by any amendment, affidavit (§§ 1.130, 1.131 or 1.132 of this title) or other evidence. If a reply brief filed pursuant to this section is accompanied by any amendment, affidavit or other evidence, it shall be treated as a request that prosecution be reopened before the primary examiner under paragraph (b)(1) of this section.

The two month time period for reply is not extendable under 37 CFR 1.136(a), but is extendable under 37 CFR 1.136(b) for patent applications and 37 CFR 1.550(c) for *ex parte* reexamination proceedings. See 37 CFR 41.39(c).

A. Request That Prosecution Be Reopened by Filing a Reply

If appellant requests that prosecution be reopened, the appellant must file a reply that addresses each new ground of rejection set forth in the examiner's answer in compliance with 37 CFR 1.111 within two months from the mailing of the examiner's answer. The reply may also include amendments, evidence, and/or arguments directed to claims not subject to the new ground of rejection or other rejections. If there is an after-final amendment (or affidavit or other evidence) that was not entered, appellant may include such amendment in the reply to the examiner's answer.

If the reply is not fully responsive to the new ground of rejection, but the reply is *bona fide*, the examiner should provide a 30-day or 1 month time period, whichever is longer, for appellant to complete the reply pursuant to 37 CFR 1.135(c). See MPEP § 714.03. If the reply is not *bona fide* (e.g., does not address the new ground of rejection) and the two-month time period has expired, examiner must *sua sponte* dismiss the appeal as to the claims subject to the new ground of rejection. See subsection "C. Failure to Reply to a New Ground of Rejection" below.

Once appellant files a reply in compliance with 37 CFR 1.111 in response to an examiner's answer that contains a new ground of rejection, the examiner must reopen prosecution by entering and considering the reply. The examiner may make the next Office action final unless the examiner introduces a new ground of rejection that is neither necessitated by the applicant's amendment of the claims nor based on information submitted in an information disclosure statement filed during the period set forth in 37 CFR 1.97(c) with the fee set forth in 37 CFR 1.17(p). See MPEP § 706.07(a).

B. Request That the Appeal Be Maintained by Filing a Reply Brief

If appellant requests that the appeal be maintained, the appellant must file a reply brief that addresses each new ground of rejection set forth in the answer in compliance with 37 CFR 41.37(c)(1)(vii) within two months from the mailing of the answer. The reply brief should include the following items, with each item starting on a separate page, so as to follow the other requirements of a brief as set forth in 37 CFR 41.37(c):

(1) Identification page setting forth the appellant's name(s), the application number, the filing date of the application, the title of the invention, the name of the examiner, the art unit of the examiner and the title of the paper (i.e., Reply Brief);

(2) Status of claims page(s);

(3) Grounds of rejection to be reviewed on appeal page(s); and

(4) Argument page(s).

The reply brief can also be a substitute brief replacing the original brief by responding to both the new ground of rejection and all other grounds of rejection covered in the original brief. In such an instance, the reply brief must meet all the requirements of a brief as set forth in 37 CFR 41.37(c).

The reply brief must also be in compliance with requirements set forth in 37 CFR 41.41, e.g., it cannot include any new amendment or affidavit. If the reply brief is accompanied by any amendment or evidence, it would be treated as a request that prosecution be reopened under 37 CFR 41.39(b)(1).

The examiner may provide a supplemental examiner's answer (with TC Director or designee approval) to respond to any new issue raised in the reply brief. The supplemental examiner's answer responding to a reply brief cannot include any new grounds of rejection. See MPEP § 1207.05. In response to the supplemental examiner's answer, the appellant may file another reply brief under 37 CFR 41.41 within 2 months from the mailing of the supplemental exam-

iner's answer. The two month time period for reply is not extendable under 37 CFR 1.136(a), but is extendable under 37 CFR 1.136(b) for patent applications and 37 CFR 1.550(c) for *ex parte* reexamination proceedings. Appellant cannot request that prosecution be reopened pursuant to 37 CFR 41.39(b) at that time.

C. Failure To Reply to a New Ground of Rejection

If appellant fails to timely file a reply under 37 CFR 1.111 or a reply brief in response to an examiner's answer that contains a new ground of rejection, the appeal will be *sua sponte* dismissed as to the claims subject to the new ground of rejection. If all of the claims under appeal are subject to the new ground of rejection, the entire appeal will be dismissed. The examiner should follow the procedure set forth in MPEP § 1215 to dismiss the appeal. For example, if there is no allowed claim in the application, the application would be abandoned when the two-month time expired.

If only some of the claims under appeal are subject to the new ground of rejection, the dismissal of the appeal as to those claims operates as an authorization to cancel those claims and the appeal continues as to the remaining claims. The examiner must:

(1) Cancel the claims subject to the new ground of rejection; and

(2) Notify the appellant that the appeal as to the claims subject to the new ground of rejection is dismissed and those claims are canceled.

Examiner may use form paragraph 12.179.02 to dismiss the claims subject to the new ground of rejection.

¶ *12.179.02 Dismissal Following New Ground(s) of Rejection in Examiner's Answer*

Appellant failed to timely respond to the examiner's answer mailed on **[1]** that included a new ground of rejection mailed on **[1]**. Under 37 CFR 41.39(b), if an examiner's answer contains a rejection designated as a new ground of rejection, appellant must, within two months from the date of the examiner's answer, file either: (1) a request that prosecution be reopened by filing a reply under 37 CFR 1.111; or (2) a request that the appeal be maintained by filing a reply brief under 37 CFR 41.41, addressing each new ground of rejection, to avoid sua sponte dismissal of the appeal as to the claims subject to the new ground of rejection. In view of appellant's failure to file a reply under 37 CFR 1.111 or a reply brief within the time period required by 37 CFR 41.39, **the appeal as to claims [2] is dismissed, and these claims are canceled**.

Only claims **[3]** remain in the application. The appeal continues as to these remaining claims. The application will be forwarded to the Board after mailing of this communication.

Examiner Note:

1. In bracket 1, insert the mailing date of the examiner's answer.

2. In bracket 2, insert the claim numbers of the claims subject to the new ground of rejection.

3. In bracket 3, insert the claim numbers of the claims that are not subject to the new ground of rejection.

<

*>

1207.04 < Reopening of Prosecution After Appeal [R-3]

The examiner may, with approval from the supervisory patent examiner, reopen prosecution to enter a new ground of rejection after appellant's brief or reply brief has been filed. The Office action containing a new ground of rejection may be made final if the new ground of rejection was (A) necessitated by amendment, or (B) based on information presented in an information disclosure statement under 37 CFR 1.97(c) where no statement under 37 CFR 1.97(e) was filed. See MPEP § 706.07(a). >Any after final amendment or affidavit or other evidence that was not entered before must be entered and considered on the merits.<

Form paragraph *>12.187< may be used when reopening prosecution:

**>

¶ *12.187 Reopening of Prosecution After Appeal Brief or Reply Brief*

In view of the **[1]** filed on **[2]**, PROSECUTION IS HEREBY REOPENED. **[3]** set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

[4]

Examiner Note:

1. In bracket 1, insert --appeal brief--, --supplemental appeal brief--, --reply brief-- or --supplemental reply brief--.

2. In bracket 2, insert the date on which the brief was filed.

3. In bracket 3, insert --A new ground of rejection is-- or --New grounds of rejection are--.

4. In bracket 4, insert the SPE's signature. Approval of the SPE is required to reopen prosecution after an appeal. See MPEP §§ 1002.02(d) and 1208.02.

5. Use this form paragraph to reopen prosecution in order to make a new ground of rejection of claims. The Office action following a reopening of prosecution may be made final if all new grounds of rejection were either (A) necessitated by amendment or (B) based on information presented in an information disclosure statement under 37 CFR 1.97(c) where no statement under 37 CFR 1.97(e) was filed. See MPEP § 706.07(a).

<

After reopening of prosecution, appellant must exercise one of the following options to avoid abandonment of the application:

(A) file a reply under 37 CFR 1.111, if the Office action is non-final;

(B) file a reply under 37 CFR 1.113, if the Office action is final; or

(C) **>initiate a new appeal by filing a new notice of appeal under 37 CFR 41.31<.

**>If< appellant elects to continue prosecution **>and< prosecution was reopened prior to a decision on the merits by the Board of Patent Appeals and Interferences, the fee paid for the notice of appeal, appeal brief, and request for oral hearing (if applicable) will be applied to a later appeal on the same application. If>, however, the appeal fees set forth in 37 CFR 41.20 have increased since they were previously paid, applicant must pay the difference between the increased fees and the amount previously paid. If appellant elects to initiate a new appeal by filing a notice of appeal, appellant must file a complete new brief in compliance with the 37 CFR 41.37 within two months from the filing of the new notice of appeal. See MPEP § 1204.01 for more information on reinstatement of an appeal.<

**>

1207.05 Supplemental Examiner's Answer [R-3]

37 CFR 41.43. Examiner's response to reply brief.

(a)(1)After receipt of a reply brief in compliance with § 41.41, the primary examiner must acknowledge receipt and entry of the reply brief. In addition, the primary examiner may withdraw the final rejection and reopen prosecution or may furnish a supplemental examiner's answer responding to any new issue raised in the reply brief.

(2) A supplemental examiner's answer responding to a reply brief may not include a new ground of rejection.

(b) If a supplemental examiner's answer is furnished by the examiner, appellant may file another reply brief under § 41.41 to any supplemental examiner's answer within two months from the date of the supplemental examiner's answer.

*****

37 CFR 41.50. Decisions and other actions by the Board.

(a)(1)The Board, in its decision, may affirm or reverse the decision of the examiner in whole or in part on the grounds and on the claims specified by the examiner. The affirmance of the rejection of a claim on any of the grounds specified constitutes a general affirmance of the decision of the examiner on that claim, except as to any ground specifically reversed. The Board may also remand an application to the examiner.

(2) If a supplemental examiner's answer is written in response to a remand by the Board for further consideration of a rejection pursuant to paragraph (a)(1) of this section, the appellant must within two months from the date of the supplemental examiner's answer exercise one of the following two options to avoid sua sponte dismissal of the appeal as to the claims subject to the rejection for which the Board has remanded the proceeding:

(i) *Reopen prosecution*. Request that prosecution be reopened before the examiner by filing a reply under § 1.111 of this title with or without amendment or submission of affidavits (§§ 1.130, 1.131 or 1.132 of this title) or other evidence. Any amendment or submission of affidavits or other evidence must be relevant to the issues set forth in the remand or raised in the supplemental examiner's answer. A request that complies with this paragraph will be entered and the application or the patent under ex parte reexamination will be reconsidered by the examiner under the provisions of § 1.112 of this title. Any request that prosecution be reopened under this paragraph will be treated as a request to withdraw the appeal.

(ii) *Maintain appeal*. Request that the appeal be maintained by filing a reply brief as provided in § 41.41. If such a reply brief is accompanied by any amendment, affidavit or other evidence, it shall be treated as a request that prosecution be reopened before the examiner under paragraph (a)(2)(i) of this section.

*****

Every supplemental examiner's answer must be approved by a Technology Center (TC) Director or

designee. The examiner may furnish a supplemental examiner's answer in response to any one of the following:

(A) *A reply brief that raises new issues.* The examiner may NOT include a new ground of rejection in the supplemental examiner's answer responding to a reply brief. See 37 CFR 41.43(a)(2). Appellant may file another reply brief in response to the supplemental examiner's answer within two months from the mailing of the supplemental answer. See MPEP § 1208.

(B) *A remand by the Board for further consideration of a rejection under 37 CFR 41.50(a).* See MPEP § 1211.01. In response to a supplemental examiner's answer that is written in response to a remand by the Board for further consideration of a rejection, appellant must either file: (1) a reply under 37 CFR 1.111 to request that prosecution be reopened; or (2) a reply brief to request that the appeal be maintained, within two months from the mailing of the supplemental examiner's answer, to avoid *sua sponte* dismissal of the appeal as to the claims subject to the rejection for which the Board has remanded the proceeding. Examiner may include a new ground of rejection in the supplemental examiner's answer responding to a remand by the Board for further consideration of a rejection. See MPEP § 1207.03.

(C) *A remand by the Board for other purposes that are not for further consideration of a rejection under 37 CFR 41.50(a).* The examiner may NOT include a new ground of rejection in the supplemental examiner's answer responding to a remand by the Board, unless the remand is for further consideration of a rejection under 37 CFR *41.50*(a) (see item B above). Appellant may file a reply brief with two months from the mailing of the supplemental answer.

I. SUPPLEMENTAL EXAMINER'S ANSWER RESPONDING TO A REPLY BRIEF

In response to a reply brief filed in compliance with 37 CFR 41.41, the primary examiner may: (A) withdraw the final rejection and reopen prosecution (see MPEP § 1207.04); or (B) provide a supplemental examiner's answer responding to any new issue raised in the reply brief. The examiner cannot issue a supplemental examiner's answer if the reply brief raised no new issue. See MPEP § 1208 for more information on reply brief and examiner's response to reply brief. If the reply brief does raise new issues, providing a supplemental examiner's answer will avoid the need for the Board to remand the application or proceeding to the examiner to treat the new issues. Appellant does not have the option to request that prosecution be reopened in response to a supplemental examiner's answer responding to a reply brief unless appellant files a request for continued examination under 37 CFR 1.114 or a continuing application. The following are examples of new issues raised in a reply brief that would give the examiner the discretion to provide a supplemental examiner's answer:

Example 1: The rejection is under 35 U.S.C. 103 over A in view of B. The brief argues that element 4 of reference B cannot be combined with reference A as it would destroy the function performed by reference A. The reply brief argues that B is nonanalogous art and therefore the two references cannot be combined.

Example 2: Same rejection as in example 1. The brief argues only that the pump means of claim 1 is not taught in the applied prior art. The reply brief argues that the particular retaining means of claim 1 is not taught in the applied prior art.

37 CFR 41.43(a)(2) prohibits a supplemental examiner's answer responding to a reply brief from including a new ground of rejection. After the filing of a reply brief, any new ground of rejection responding to a reply brief must be by way of reopening of prosecution. See MPEP § 1207.04. The examiner's decision to withdraw the final rejection and reopen prosecution to enter a new ground of rejection requires approval from the supervisory patent examiner, which approval must be indicated in the Office action setting forth the new ground of rejection. See MPEP § 1207.04.

It should also be noted that an indication that certain rejections have been withdrawn as a result of the reply brief is not, by itself, a supplemental examiner's answer and is of course permitted. Such an indication of a change in status of claims would not give appellant the right to file another reply brief. The examiner may make the indication on form PTOL-90. An appellant who disagrees with an examiner's decision that a supplemental examiner's answer is permitted may petition for review of the decision under 37 CFR 1.181 within two months from the mailing of the supplemental examiner's answer.

The examiner may use form paragraph 12.184 in the supplemental examiner's answer to respond to a new issue raised in a reply brief.

¶ *12.184 Supplemental Examiner's Answer -No option to Reopen Prosecution*

Responsive to **[1]** on **[2]**, a supplemental Examiner's Answer is set forth below: **[3]**.

Appellant may file another reply brief in compliance with 37 CFR 41.41 within two months of the date of mailing of this supplemental examiner's answer. Extensions of time under 37 CFR 1.136(a) are not applicable to this two month time period. See 37 CFR 41.43(b)-(c).

A Technology Center Director or designee has approved this supplemental examiner's answer by signing below:

[4]

Examiner Note:

1. In bracket 1, insert the reason the supplemental examiner's answer is being prepared, e.g.," the remand under 37 CFR 41.50(a)(1) for reasons other than for further consideration of a rejection", or "the reply brief under 37 CFR 41.41 filed".

2. In bracket 2, insert the date of remand or the date the reply brief was filed.

3. In bracket 3, provide the supplemental examiner's answer (e.g., pursuant to 37 CFR 41.43(a), without raising any new grounds of rejection.

4. In bracket 4, insert the TC Director's or designee's signature. A TC Director or designee must approve every supplemental examiner' s answer.

II. SUPPLEMENTAL EXAMINER'S ANSWER RESPONDING TO A REMAND FOR FURTHER CONSIDERATION OF REJECTION

The examiner may provide a supplemental examiner's answer in response to a remand by the Board for further consideration of a rejection under 37 CFR 41.50(a). Appellant must respond to such supplemental examiner's answer and has the option to request that prosecution be reopened. A supplemental examiner's answer written in response to a remand by the Board for further consideration of a rejection pursuant to 37 CFR 41.50(a)(1) may set forth a new ground of rejection. Any new ground of rejection made in such a supplemental examiner's answer must comply with the requirements set forth in MPEP § 1207.03. The examiner may use form paragraph 12.185 in preparing the supplemental examiner's answer responding a remand by the Board for further consideration of a rejection.

¶ *12.185 Supplemental Examiner's Answer - On Remand FOR FURTHER CONSIDERATION OF A REJECTION*

Pursuant to the remand under 37 CFR 41.50(a)(1) by the Board of Patent Appeals and Interferences on **[1] for further consideration of a rejection**, a supplemental Examiner's Answer under 37 CFR 41.50(a)(2) is set forth below: **[2]**.

The appellant must within **TWO MONTHS** from the date of the supplemental examiner's answer exercise one of the following two options to avoid sua sponte dismissal of the appeal as to the claims subject to the rejection for which the Board has remanded the proceeding:

(1) **Reopen prosecution**. Request that prosecution be reopened before the examiner by filing a reply under 37 CFR 1.111 with or without amendment, affidavit, or other evidence. Any amendment, affidavit, or other evidence must be relevant to the issues set forth in the remand or raised in the supplemental examiner's answer. Any request that prosecution be reopened will be treated as a request to withdraw the appeal. See 37 CFR 41.50(a)(2)(i).

(2) **Maintain appeal**. Request that the appeal be maintained by filing a reply brief as set forth in 37 CFR 41.41. If such a reply brief is accompanied by any amendment, affidavit or other evidence, it shall be treated as a request that prosecution be reopened under 37 CFR 41.50(a)(2)(i). See 37 CFR 41.50(a)(2)(ii).

Extensions of time under 37 CFR 1.136(a) are not applicable to the **TWO MONTH** time period set forth above. See 37 CFR 1.136(b) for extensions of time to reply for patent applications and 37 CFR 1.550(c) for extensions of time to reply for ex parte reexamination proceedings.

A Technology Center Director or designee has approved this supplemental examiner's answer by signing below:

[3]

Examiner Note:

1. In bracket 1, insert the date of the remand.

2. In bracket 2, provide reasons supporting the rejections set forth in the supplemental Examiner's Answer.

3. In bracket 3, insert the TC Director's or designee's signature. A TC Director or designee must approve every supplemental examiner's answer.

A. Appellant's Reply

If a supplemental examiner's answer is written in response to a remand by the Board for further consideration of a rejection pursuant to 37 CFR 41.50(a)(1), the appellant must exercise one of the following two options to avoid *sua sponte* dismissal of the appeal as to the claims subject to the rejection for which the Board has remanded the proceeding:

(i) *Reopen prosecution.* Request that prosecution be reopened before the examiner by filing a reply under 37 CFR 1.111 with or without amendment or submission of affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence. Any amendment or submission of affidavits or other evidence must be relevant to

the issues set forth in the remand or raised in the supplemental examiner's answer. A request that complies with 37 CFR 41.50(a)(2)(i) will be entered and the application or the patent under *ex parte* reexamination will be reconsidered by the examiner under the provisions of 37 CFR 1.112. Any request that prosecution be reopened under 37 CFR 41.50(a)(2)(i) will be treated as a request to withdraw the appeal.

(ii) *Maintain appeal.* Request that the appeal be maintained by filing a reply brief as provided in 37 CFR 41.41. If such a reply brief is accompanied by any amendment, affidavit or other evidence, it shall be treated as a request that prosecution be reopened before the examiner under 37 CFR 41.50(a)(2)(i).

The two month time period for reply is not extendable under 37 CFR 1.136(a), but is extendable under 37 CFR 1.136(b) for patent applications and 37 CFR 1.550(c) for *ex parte* reexamination proceedings.

1. Request That Prosecution Be Reopened by Filing a Reply

If appellant requests that prosecution be reopened, the appellant must file a reply that addresses each ground of rejection set forth in the supplemental examiner's answer in compliance with 37 CFR 1.111 within two months from the mailing of the supplemental examiner's answer. The reply may also include amendments, evidence, and/or arguments directed to claims not subject to the ground of rejection set forth in the supplemental answer or other rejections. If there is after-final amendment (or affidavit or other evidence) that was not entered, appellant may include such amendment in the reply to the supplemental examiner's answer.

If the reply is not fully responsive to the ground of rejection set forth in the supplemental examiner's answer, but the reply is *bona fide*, the examiner should provide a 30-day or 1 month time period, whichever is longer, for appellant to complete the reply pursuant to 37 CFR 1.135(c). If the reply is not *bona fide* (e.g., does not address the ground of rejection) and the two-month time period has expired, the examiner must *sua sponte* dismiss the appeal as to the claims subject to the rejection for which the Board has remanded the case.

Once appellant files a reply in compliance with 37 CFR 1.111 in response to a supplemental examiner's answer responding to a remand by the Board for further consideration of a rejection under 37 CFR 41.50(a), the examiner must reopen prosecution by entering and considering the reply. Examiner may make the next Office action final unless the examiner introduces a new ground of rejection that is neither necessitated by the applicant's amendment of the claims nor based on information submitted in an information disclosure statement filed during the period set forth in 37 CFR 1.97(c) with the fee set forth in 37 CFR 1.17(p). See MPEP § 706.07(a).

2. Request That the Appeal Be Maintained by Filing a Reply Brief

If appellant requests that the appeal be maintained, the appellant must file a reply brief to address each grounds of rejection set forth in the supplemental examiner's answer in compliance with 37 CFR 41.37(c)(1)(vii) within two months from the mailing of the supplemental answer. The reply brief must also be in compliance with requirements set forth in 37 CFR 41.41 (e.g., it cannot include any new amendment or affidavit). If the reply brief is accompanied by an amendment, affidavit or other evidence, it will be treated as a request that prosecution be reopened before the examiner.

The examiner may provide another supplemental examiner's answer (with TC Director or designee approval) to respond to any new issue raised in the reply brief. The supplemental examiner's answer responding to a reply brief cannot include any new grounds of rejection. See MPEP § 1207.05. In response to the supplemental examiner's answer, the appellant may file another reply brief under 37 CFR 41.41 within 2 months from the mailing of the supplemental examiner's answer. The two month time period for reply is not extendable under 37 CFR 1.136(a), but is extendable under 37 CFR 1.136(b) for patent applications and 37 CFR 1.550(c) for *ex parte* reexamination proceedings. Appellant cannot request that prosecution be reopened pursuant to 37 CFR 41.50(a) at that time.

B. Failure To Reply to a Supplemental Examiner's Answer Under 37 CFR 41.50(a)

If appellant fails to timely file a reply under 37 CFR 1.111 or a reply brief in response to a supplemental examiner's answer that was written in response to a remand by the Board for further consideration of a

rejection under 37 CFR 41.50(a), the appeal will be *sua sponte* dismissed as to the claims subject to the rejection for which the Board has remanded the proceeding. If all of the claims under appeal are subject to the rejection, the entire appeal will be dismissed. The examiner should follow the procedure set forth in MPEP § 1215 to dismiss the appeal. For example, if there is no allowed claim in the application, the application would be abandoned when the two-month time period has expired.

If only some of the claims under appeal are subject to the rejection, the dismissal of the appeal as to those claims operates as an authorization to cancel those claims and the appeal continues as to the remaining claims. The examiner must:

(1) cancel the claims subject to the rejection; and

(2) notify the appellant that the appeal as to the claims subject to the rejection is dismissed and those claims are canceled.

Examiner may use form paragraph 12.186 to dismiss the appeal as to the claims subject to the rejection and cancel the claims.

¶ *12.186 Dismissal Following A Supplemental Examiner's Answer Written in Response to a Remand for Further Consideration of a Rejection*

Appellant failed to timely respond to the supplemental examiner's answer mailed on **[1]** that was written in response to a remand by the Board for further consideration of a rejection mailed on **[1]**. Under 37 CFR 41.50(a)(2), appellant must, within two months from the date of the supplemental examiner's answer, file either: (1) a request that prosecution be reopened by filing a reply under 37 CFR 1.111; or (2) a request that the appeal be maintained by filing a reply brief under 37 CFR 41.41, to avoid sua sponte dismissal of the appeal as to the claims subject to the rejection for which the Board has remanded the proceeding. In view of appellant's failure to file a reply under 37 CFR 1.111 or a reply brief within the time period required by 37 CFR 41.50(a)(2), **the appeal as to claims [2] is dismissed, and these claims are canceled**.

Only claims **[3]** remain in the application. The appeal continues as to these remaining claims. The application will be forwarded to the Board after mailing of this communication.

Examiner Note:

1. In bracket 1, insert the mailing date of the supplemental examiner's answer.

2. In bracket 2, insert the claim numbers of the claims subject to the rejection for which the Board has remanded the proceeding.

3. In bracket 3, insert the claim numbers of the claims that are not subject to the rejection.

III. SUPPLEMENTAL EXAMINER'S ANSWER RESPONDING TO A REMAND FOR OTHER PURPOSES THAT ARE NOT FOR FURTHER CONSIDERATION OF REJECTION

The Board may remand an application to the examiner for a reason that is not for further consideration of a rejection, such as to consider an information disclosure statement, a reply brief that raised new issues that were not considered by the examiner, an amendment, or an affidavit. See MPEP § 1211. The examiner may provide a supplemental examiner's answer in response to the remand by the Board. Appellant may respond by filing a reply brief within two months from the mailing of the supplemental answer. Appellant does not have the option to request that prosecution be reopened pursuant to 37 CFR 41.50(a) unless the remand by the Board is for further consideration of a rejection under 37 CFR 41.50(a).<

**>

1208 Reply Briefs and Examiner's Responses to Reply Brief< [R-3]

**>

37 CFR 41.41. Reply brief.

(a)(1)Appellant may file a reply brief to an examiner's answer within two months from the date of the examiner's answer.

(2) A reply brief shall not include any new or non-admitted amendment, or any new or non-admitted affidavit or other evidence. See § 1.116 of this title for amendments, affidavits or other evidence filed after final action but before or on the same date of filing an appeal and § 41.33 for amendments, affidavits or other evidence filed after the date of filing the appeal.

(b) A reply brief that is not in compliance with paragraph (a) of this section will not be considered. Appellant will be notified if a reply brief is not in compliance with paragraph (a) of this section.

(c) Extensions of time under § 1.136 (a) of this title for patent applications are not applicable to the time period set forth in this section. See § 1.136 (b) of this title for extensions of time to reply for patent applications and § 1.550 (c) of this title for extensions of time to reply for ex parte reexamination proceedings.

37 CFR 41.43. Examiner's response to reply brief.

(a)(1)After receipt of a reply brief in compliance with § 41.41, the primary examiner must acknowledge receipt and entry of the reply brief. In addition, the primary examiner may withdraw the final rejection and reopen prosecution or may furnish a supplemental examiner's answer responding to any new issue raised in the reply brief.

(2) A supplemental examiner's answer responding to a reply brief may not include a new ground of rejection.

(b) If a supplemental examiner's answer is furnished by the examiner, appellant may file another reply brief under § 41.41 to any supplemental examiner's answer within two months from the date of the supplemental examiner's answer.

(c) Extensions of time under § 1.136(a) of this title for patent applications are not applicable to the time period set forth in this section. See § 1.136(b) of this title for extensions of time to reply for patent applications and § 1.550(c) of this title for extensions of time to reply for ex parte reexamination proceedings.

I. REPLY BRIEF

Under 37 CFR 41.41(a)(1) and 41.43(b), appellant may file a reply brief as a matter of right within 2 months from the mailing date of the examiner's answer or supplemental examiner's answer. Extensions of time to file the reply brief may be granted pursuant to 37 CFR 1.136(b) (for patent applications) or 1.550(c) (for *ex parte* reexamination proceedings). Extensions of time under 37 CFR 1.136(a) are not permitted. The examiner may provide a supplemental examiner's answer to respond to any reply brief that raises new issues. See MPEP § 1207.05. Normally, appellant is not required to file a reply brief to respond to an examiner's answer or a supplemental examiner's answer, and if appellant does not file a reply brief within the two month period of time, the application will be forwarded to the Board for decision on the appeal. In response to the following, however, appellant is required to file either a reply brief to maintain the appeal or a reply under 37 CFR 1.111 to reopen prosecution:

(A) An examiner's answer that contains a new ground of rejection pursuant to 37 CFR 41.39 (see MPEP § 1207.03); or

(B) A supplemental examiner's answer responding to a remand by the Board for further consideration of a rejection pursuant to 37 CFR 41.50(a) (see MPEP § 1207.05). Such a supplemental examiner's answer may contain a new ground of rejection (also see MPEP § 1207.03).

If appellant requests that the appeal be maintained in response to a new ground of rejection made in an examiner's answer or a supplemental examiner's answer, the appellant must file a reply brief to address each new grounds of rejection set forth in the answer in compliance with 37 CFR 41.37(c)(1)(vii) within two months from the mailing of the answer. The reply brief should include the following items, with each item starting on a separate page, so as to follow the other requirements of a brief as set forth in 37 CFR 41.37(c):

(A) Identification page setting forth the appellant's name(s), the application number, the filing date of the application, the title of the invention, the name of the examiner, the art unit of the examiner and the title of the paper (i.e., Reply Brief);

(B) Status of claims page(s);

(C) Grounds of rejection to be reviewed on appeal page(s); and

(D) Argument page(s).

The reply brief can also be a substitute brief replacing the original brief by responding to both the new ground of rejection and all other grounds of rejection covered in the original brief. In such an instance, the reply brief must meet all the requirements of a brief as set forth in 37 CFR 41.37(c).

Any reply brief must also be in compliance with requirements set forth in 37 CFR 41.41. New or non-admitted affidavits, and/or other evidence are not permitted in a reply brief. Any new amendment must be submitted in papers separate from the reply brief, and the entry of such papers is subject to the provisions of 37 CFR 41.33. A paper that contains an amendment is not a reply brief within the meaning of 37 CFR 41.41. Such a paper will not be entitled to entry simply because it is characterized as a reply brief.

If a reply brief is filed in response to a supplemental examiner's answer under 37 CFR 41.50(a) that was written in response to a remand by the Board for further consideration of a rejection, any reply brief accompanied by an amendment, affidavit or other evidence will be treated as a request that prosecution be reopened before the examiner. If appellant fails to file a reply brief or a reply under 37 CFR 1.111 within two months from the mailing of the examiner's answer that contains a new ground of rejection, or a supplemental examiner's answer under 37 CFR 41.50(a), the examiner will dismiss the appeal as to the claims subject to the new ground of rejection or the rejection for which the Board has remanded the proceeding. See MPEP § 1207.03 and § 1207.05.

II. EXAMINER'S RESPONSE TO A REPLY BRIEF

If a reply brief is not in compliance with 37 CFR 41.41, the examiner must notify appellant that the reply brief has not been considered and the reason for non-compliance. The examiner may use form paragraph 12.182 on Form PTOL-90 to notify the appellant.

¶ *12.182 Reply Brief Not Considered*

The reply brief filed on **[1]** has not been considered because it is not in compliance with 37 CFR 41.41(a). The reply brief **[2]**.

Examiner Note:

1. In bracket 1, insert the date on which the reply brief was filed.

2. In bracket 2, insert the reasoning. For example, insert "was not filed within the non-extendable time period set in 37 CFR 41.41(a)(1)" or insert "included a new or non-admitted amendment or new or non-admitted affidavit or other evidence".

3. Use this form paragraph to notify the appellant under 37 CFR 41.41(b) that a reply brief is not being considered because it is not in compliance with 37 CFR 41.41(a).

If a reply brief is filed in compliance with 37 CFR 41.41, the primary examiner must acknowledge receipt and entry of the reply brief. The examiner may use form paragraph 12.181 on Form PTOL-90 to provide the acknowledgment.

¶ *12.181 Acknowledgment of Reply Brief*

The reply brief filed **[1]** has been entered and considered. The application has been forwarded to the Board of Patent Appeals and Interferences for decision on the appeal.

Examiner Note:

1. In bracket 1, insert the date on which the reply brief was filed.

2. Use this form paragraph to notify the appellant under 37 CFR 41.43(a)(1) that a reply brief has been received and entered.

3. This form paragraph is to be printed on a blank page for attachment to a PTOL-90 or PTO-90C.

4. Include form paragraph 12.184 after this paragraph to include a supplemental examiner's answer under 37 CFR 41.43(a)(1) responding to any new issue raised in the reply brief.

In addition, the examiner may:

(A) Withdraw the final rejection and reopen prosecution to respond to the reply brief (see MPEP § 1207.04); or

(B) Furnish a supplemental examiner's answer responding to any new issue raised in the reply brief (see MPEP § 1207.05).

Any supplemental examiner's answer responding to a new issue raised in a reply brief must be approved by the Technology Center (TC) Director or designee. 37 CFR 41.43(a)(2) prohibits a supplemental examiner's answer responding to a reply brief from including a new ground of rejection. After the filing of a reply brief, any new ground of rejection responding to a reply brief must be by way of reopening of prosecution. See MPEP § 1207.04. The examiner's decision to withdraw the final rejection and reopen prosecution to enter a new ground of rejection requires approval from the supervisory patent examiner, which approval must be indicated in the Office action setting forth the new ground of rejection. See MPEP § 1207.04.

In response to the supplemental examiner's answer, the appellant may file another reply brief under 37 CFR 41.41 within 2 months from the mailing of the supplemental examiner's answer. The two month time period for reply is not extendable under 37 CFR 1.136(a), but is extendable under 37 CFR 1.136(b) for patent applications and 37 CFR 1.550(c) for *ex parte* reexamination proceedings. Appellant cannot request that prosecution be reopened pursuant to 37 CFR 41.39(b) or 41.50(a) at that time.

The acknowledgment of receipt and entry of a reply brief under 37 CFR 41.41 is an indication by the examiner that no further response by the examiner is deemed necessary. It should also be noted that an indication that certain rejections have been withdrawn as a result of the reply brief is not, by itself, a supplemental examiner's answer and is permitted. Such an indication of a change in status of claims would not give appellant the right to file another reply brief. The examiner may make the indication on form PTOL-90.<

1209 Oral Hearing [R-3]

**>

37 CFR 41.47. Oral hearing.

(a) An oral hearing should be requested only in those circumstances in which appellant considers such a hearing necessary or desirable for a proper presentation of the appeal. An appeal decided on the briefs without an oral hearing will receive the same consideration by the Board as appeals decided after an oral hearing.

(b) If appellant desires an oral hearing, appellant must file, as a separate paper captioned "REQUEST FOR ORAL HEARING," a written request for such hearing accompanied by the fee

set forth in § 41.20(b)(3) within two months from the date of the examiner's answer or supplemental examiner's answer.

(c) If no request and fee for oral hearing have been timely filed by appellant as required by paragraph (b) of this section, the appeal will be assigned for consideration and decision on the briefs without an oral hearing.

(d) If appellant has complied with all the requirements of paragraph (b) of this section, a date for the oral hearing will be set, and due notice thereof given to appellant. If an oral hearing is held, an oral argument may be presented by, or on behalf of, the primary examiner if considered desirable by either the primary examiner or the Board. A hearing will be held as stated in the notice, and oral argument will ordinarily be limited to twenty minutes for appellant and fifteen minutes for the primary examiner unless otherwise ordered.

(e)(1)Appellant will argue first and may reserve time for rebuttal. At the oral hearing, appellant may only rely on evidence that has been previously entered and considered by the primary examiner and present argument that has been relied upon in the brief or reply brief except as permitted by paragraph (e)(2) of this section. The primary examiner may only rely on argument and evidence relied upon in an answer or a supplemental answer except as permitted by paragraph (e)(2) of this section.

(2) Upon a showing of good cause, appellant and/or the primary examiner may rely on a new argument based upon a recent relevant decision of either the Board or a Federal Court.

(f) Notwithstanding the submission of a request for oral hearing complying with this rule, if the Board decides that a hearing is not necessary, the Board will so notify appellant.

(g) Extensions of time under § 1.136(a) of this title for patent applications are not applicable to the time periods set forth in this section. See § 1.136(b) of this title for extensions of time to reply for patent applications and § 1.550(c) of this title for extensions of time to reply for ex parte reexamination proceedings.<

37 CFR *>41.47(b)< provides that an appellant who desires an oral hearing before the Board must request the hearing by filing, in a separate paper >captioned "REQUEST FOR ORAL HEARING,"< a written request therefor, accompanied by the appropriate fee set forth in 37 CFR *>41.20(b)(3)<, within 2 months after the date of the examiner's answer >or supplemental examiner's answer. Form PTO/SB/32 may be used to request an oral hearing<. This time period may only be extended by filing a request under either 37 CFR 1.136(b) or, if the appeal involves an *ex parte* reexamination proceeding, under 37 CFR 1.550(c).

>If the written request for an oral hearing is not filed in a separate paper captioned "REQUEST FOR ORAL HEARING," the request is improper and the appeal will be assigned for consideration and decision on the briefs without an oral hearing. Likewise, if the request is not timely filed or accompanied by the appropriate fee, the request is improper and the appeal will be assigned for consideration and decision on the briefs without an oral hearing.<

A notice of hearing, stating the date, the time, and the docket, is forwarded to the appellant in due course. If appellant fails to confirm >the hearing< within the time required in the notice of hearing >or the appellant waives the hearing<, the appeal will be removed from the hearing docket and assigned on brief in due course. No refund of the fee for requesting an oral hearing will be made. Similarly, after confirmation, if no appearance is made at the scheduled hearing, the appeal will be decided on brief. Since failure to notify the Board of waiver of hearing in advance of the assigned date results in a waste of the Board's resources, appellant should inform the Board of a change in plans at the earliest possible opportunity. If the Board determines that a hearing is not necessary (e.g., a remand to the examiner is necessary or it is clear that the rejection(s) cannot be sustained), appellant will be notified.

If appellant has any special request, such as for a particular date or day of the week, this will be taken into consideration in setting the hearing, if made known to the Board in advance, as long as such request does not unduly delay a decision in the case and does not place an undue administrative burden on the Board.

The appellant may also file a request, in a paper addressed to the Chief Clerk of the Board, to present his/her arguments via telephone. The appellant making the request will be required to bear the cost of the telephone call.

If the time set in the notice of hearing conflicts with prior commitments or if subsequent events make appearance impossible, the hearing may be rescheduled on written request>, in a paper addressed to the Chief Clerk of the Board<. However, in view of the administrative burden involved in rescheduling hearings and the potential delay which may result in the issuance of any patent based on the application on appeal, postponements are discouraged and will not be granted in the absence of convincing reasons in support of the requested change.

Normally, 20 minutes are allowed for appellant to explain his or her position. If appellant believes that additional time will be necessary, a request for such time should be made well in advance and will be

taken into consideration in assigning the hearing date. The final decision on whether additional time is to be granted rests within the discretion of the senior member of the panel hearing the case.

>At the oral hearing, appellant may only rely on evidence that has been previously entered and considered by the primary examiner and present arguments that have been relied upon in the brief or reply brief. Upon a showing of good cause, appellant and/or the primary examiner may rely on a new argument based upon a recent relevant decision of either the Board or a Federal Court.

Where the appeal involves reexamination proceedings, subject to the admittance procedures established by the Board, oral hearings are open to the public as observers unless the appellant (A) requests that the hearing not be open to the public, and (B) presents valid reasons for such a request. The Board's current public admittance procedure is to permit a third party observer to watch an oral hearing involving a reexamination proceeding provided the hearing has not been closed per the appellant's request and the third party observer has obtained prior written permission from the Board to observe the hearing.

37 CFR 41.47(f) provides that notwithstanding the submission of a request for oral hearing, if the Board decides that a hearing is not necessary, the Board will so notify appellant. Examples as to when it would be appropriate for the Board to decide that an oral hearing is not necessary include those where the Board has become convinced, prior to hearing, that an application must be remanded for further consideration prior to evaluating the merits of the appeal or that the examiner's position cannot be sustained.<

PARTICIPATION BY EXAMINER

If the appellant has requested an oral hearing and the primary examiner wishes to appear and present an oral argument before the Board, a request to present oral argument must be **>set forth in a separate letter on a form PTOL-90 using form paragraph 12.163.<

>

¶ *12.163 Request to Present Oral Arguments*

The examiner requests the opportunity to present arguments at the oral hearing.

Examiner Note:

1. Use this form paragraph only if an oral hearing has been requested by appellant and the primary examiner intends to present an oral argument.

2. This form paragraph must be included as a separate letter on a form PTOL-90.

<

In those appeals in which an oral hearing has been confirmed and either the primary examiner or the Board has indicated a desire for the examiner to participate in the oral argument, oral argument may be presented by the examiner whether or not appellant appears.

After the oral hearing has been confirmed and the date set as provided in 37 CFR *>41.47(d)<, the **>examiner and the examiner's supervisor should be notified via e-mail of the date and time< of the hearing. In those cases where the Board requests the presentation of an oral argument by or on behalf of the primary examiner, the Board's request may, where appropriate, indicate specific points or questions to which the argument should be particularly directed. **

At the hearing, after the appellant has made his or her presentation, the examiner will be allowed 15 minutes to reply as well as to present a statement which clearly sets forth his or her position with respect to the issues and rejections of record. >The primary examiner may only rely on argument and evidence relied upon in the examiner's answer or the supplemental examiner's answer.< Appellant may utilize any allotted time not used in the initial presentation for rebuttal.
**

1210 Actions Subsequent to Examiner's Answer but Before Board's Decision [R-3]

>

I. < JURISDICTION OF BOARD

>

37 CFR 41.35. Jurisdiction over appeal.

(a) Jurisdiction over the proceeding passes to the Board upon transmittal of the file, including all briefs and examiner's answers, to the Board.

(b) If, after receipt and review of the proceeding, the Board determines that the file is not complete or is not in compliance

with the requirements of this subpart, the Board may relinquish jurisdiction to the examiner or take other appropriate action to permit completion of the file.

(c) Prior to the entry of a decision on the appeal by the Board, the Director may sua sponte order the proceeding remanded to the examiner.<

The application file and jurisdiction of the application are normally transferred from the Technology Centers to the Board at one of the following times:

(A) After 2 months from the examiner's answer >or supplemental examiner's answer<, plus mail room time, if no reply brief has been timely filed.

(B) After ** the examiner has notified the appellant by written communication that the reply brief has been entered and considered and that the application will be forwarded to the Board (for example, by mailing a PTOL-90 with form paragraph *>12.181<, as described in MPEP § *>1208<).

Any amendment ** or other paper relating to the appeal filed thereafter but prior to the decision of the Board, may be considered by the examiner only in the event the case is remanded by the Board for that purpose.

>

II. < DIVIDED JURISDICTION

Where appeal is taken from the second or final rejection only of one or more claims presented for the purpose of provoking an interference, jurisdiction of the rest of the case remains with the examiner, and prosecution of the remaining claims may proceed as though the entire case was under his or her jurisdiction. Also, where the examiner certifies in writing that there is no conflict of subject matter and the administrative patent judge in charge of the interference approves, an appeal to the Board may proceed concurrently with an interference. See MPEP *>Chapter 2300<.

>

III. < ABANDONMENT OF APPEAL: APPLICATION REFILED OR ABANDONED

To avoid the rendering of decisions by the Board in applications which >appellants< have **>decided to abandon or to refile< as continuations, appellants should promptly inform the *>Chief Clerk< of the Board in writing as soon as they have positively decided to refile or to abandon an application containing an appeal awaiting a decision. Failure to exercise appropriate diligence in this matter may result in the Board's refusing an otherwise proper request to vacate its decision.

See MPEP § 1215.01 - § 1215.03 concerning the withdrawal of appeals.

**

1211 Remand by Board [R-3]

The Board has authority to remand a case to the examiner when it deems it necessary. For example, the Board may remand **>a case for further consideration of a rejection pursuant to 37 CFR 41.50(a)(1) such as< where the pertinence of the references is not clear, the Board may call upon the examiner for a further explanation. >See MPEP § 1211.01.< In the case of multiple rejections of a cumulative nature, the Board may also remand for selection of the preferred or best ground. The Board may also remand a case to the examiner for further search where it feels that the most pertinent art has not been cited, or to consider an amendment**. See MPEP * § 1211.02, * § 1211.03 >and § 1211.04<. Furthermore, the Board may remand an application to the examiner to prepare a supplemental examiner's answer in response to a reply brief **>which the examiner only acknowledged receipt and entry thereof (e.g., by using form paragraph 12.181 on form PTOL-90). See MPEP § 1207.05 for more information on supplemental examiner's answer<.

>

1211.01 Remand by Board for Further Consideration of Rejection [R-3]

A supplemental examiner's answer written in response to a remand by the Board for further consideration of a rejection pursuant to 37 CFR 41.50(a)(1) may set forth a new ground of rejection. See MPEP § 1207.03.

If a supplemental examiner's answer is written in response to a remand by the Board for further consideration of a rejection pursuant to 37 CFR 41.50(a)(1) (even when there is no new ground of rejection made in the supplemental examiner's answer), the appellant must exercise one of the following two options to avoid *sua sponte* dismissal of the appeal as to the claims subject to the rejection for which the Board has remanded the proceeding:

(A) *Reopen prosecution*. Request that prosecution be reopened before the examiner by filing a reply under 37 CFR 1.111 with or without amendment or submission of affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence. Any amendment or submission of affidavits or other evidence must be relevant to the issues set forth in the remand or raised in the supplemental examiner's answer. A request that complies with 37 CFR 41.50(a)(2)(i) will be entered and the application or the patent under *ex parte* reexamination will be reconsidered by the examiner under the provisions of 37 CFR 1.112. Any request that prosecution be reopened under 37 CFR 41.50(a)(2)(i)will be treated as a request to withdraw the appeal.

(B) *Maintain appeal*. Request that the appeal be maintained by filing a reply brief as provided in 37 CFR 41.41. If such a reply brief is accompanied by any amendment, affidavit or other evidence, it shall be treated as a request that prosecution be reopened before the examiner under 37 CFR 41.50(a)(2)(i).

See MPEP § 1207.03 for information on new ground of rejection.

See MPEP § 1207.05 for information on supplemental examiner's answer and appellant's response to a supplemental examiner's answer.

See MPEP § 1208 on reply briefs and examiner's responses to reply briefs.

The following are two examples of situations where there may be a remand by the Board for examiner action that is not for further consideration of a rejection:

(A) A remand to consider an Information Disclosure Statement; and

(B) A remand for the examiner to consider a reply brief.

37 CFR 41.50(a)(2) does not apply when the remand by the Board is not for further consideration of a rejection. The Board will normally indicate in the remand whether 37 CFR 41.50(a)(2)(i) applies. Appellant cannot request that prosecution be reopened under 37 CFR 41.50(a)(2)(i) and is not required to reply to a supplemental examiner's answer that is written in response to a remand that is not for further consideration of a rejection.

The following form paragraphs may be used in preparing the supplemental examiner's answer after a remand from the Board:

¶ *12.184 Supplemental Examiner's Answer -No option to Reopen Prosecution*

Responsive to **[1]** on **[2]**, a supplemental Examiner's Answer is set forth below: **[3]**.

Appellant may file another reply brief in compliance with 37 CFR 41.41 within two months of the date of mailing of this supplemental examiner's answer. Extensions of time under 37 CFR 1.136(a) are not applicable to this two month time period. See 37 CFR 41.43(b)-(c).

A Technology Center Director or designee has approved this supplemental examiner's answer by signing below:

[4]

Examiner Note:

1. In bracket 1, insert the reason the supplemental examiner's answer is being prepared, e.g.," the remand under 37 CFR 41.50(a)(1) for reasons other than for further consideration of a rejection", or "the reply brief under 37 CFR 41.41 filed".

2. In bracket 2, insert the date of remand or the date the reply brief was filed.

3. In bracket 3, provide the supplemental examiner's answer (e.g., pursuant to 37 CFR 41.43(a), without raising any new grounds of rejection.

4. In bracket 4, insert the TC Director's or designee's signature. A TC Director or designee must approve every supplemental examiner' s answer.

¶ *12.185 Supplemental Examiner's Answer - On Remand FOR FURTHER CONSIDERATION OF A REJECTION*

Pursuant to the remand under 37 CFR 41.50(a)(1) by the Board of Patent Appeals and Interferences on **[1] for further consideration of a rejection**, a supplemental Examiner's Answer under 37 CFR 41.50(a)(2) is set forth below: **[2]**.

The appellant must within **TWO MONTHS** from the date of the supplemental examiner's answer exercise one of the following two options to avoid sua sponte dismissal of the appeal as to the claims subject to the rejection for which the Board has remanded the proceeding:

(1) **Reopen prosecution**. Request that prosecution be reopened before the examiner by filing a reply under 37 CFR 1.111 with or without amendment, affidavit, or other evidence. Any amendment, affidavit, or other evidence must be relevant to the issues set forth in the remand or raised in the supplemental examiner's answer. Any request that prosecution be reopened will be treated as a request to withdraw the appeal. See 37 CFR 41.50(a)(2)(i).

(2) **Maintain appeal**. Request that the appeal be maintained by filing a reply brief as set forth in 37 CFR 41.41. If such a reply brief is accompanied by any amendment, affidavit or other evidence, it shall be treated as a request that prosecution be reopened under 37 CFR 41.50(a)(2)(i). See 37 CFR 41.50(a)(2)(ii).

Extensions of time under 37 CFR 1.136(a) are not applicable to the **TWO MONTH** time period set forth above. See 37 CFR 1.136(b) for extensions of time to reply for patent applications and

37 CFR 1.550(c) for extensions of time to reply for ex parte reexamination proceedings.

A Technology Center Director or designee has approved this supplemental examiner's answer by signing below:

[3]

Examiner Note:

1. In bracket 1, insert the date of the remand.

2. In bracket 2, provide reasons supporting the rejections set forth in the supplemental Examiner's Answer.

3. In bracket 3, insert the TC Director's or designee's signature. A TC Director or designee must approve every supplemental examiner's answer.

The supervisory patent examiner must approve any action in which a remanded application is withdrawn from appeal. See MPEP § 706.07(e) and § 1002.02(d). If the examiner decides to withdraw the final rejection and reopen prosecution to enter a new ground of rejection, approval from the supervisory patent examiner is required. See MPEP § 1207.04.<

*>

1211.02 < Remand by Board To Consider Amendment [R-3]

There is no obligation resting on the Board to consider new or amended claims submitted while it has jurisdiction of the appeal. *In re Sweet*, 136 F.2d 722, 58 USPQ 327 (CCPA 1943). However, a proposed amendment **>filed after the date of filing of a brief to either cancel claims, where such cancellation does not affect the scope of any other pending claim in the proceeding, or to rewrite dependent claims into independent form< may be remanded for * consideration *>by< the examiner**. See MPEP § *>1206<.

If the proposed amendment is in effect an abandonment of the appeal, e.g., by canceling the appealed claims, the amendment *>must< be entered and the *>Chief Clerk< of the Board notified in order that the case may be removed from the Board's docket.

*>

1211.03 < Remand by Board To Consider Affidavits or Declarations [R-3]

**

Affidavits or declarations filed with ** the filing of a notice of appeal but before jurisdiction passes to the Board (see MPEP § *>1206<) will be considered for entry only if the appellant makes the necessary showing under 37 CFR *>1.116(e)< as to why they >are necessary and< were not earlier presented. Authority from the Board is not necessary to consider such affidavits or declarations. Affidavits or declarations filed after a final rejection and prior to a notice of appeal are handled as provided in MPEP § 715.09, § 716, and § 716.01. >If such evidence has not been treated by the examiner, the Board may remand the proceeding to permit the examiner to consider such evidence.<

In the case of affidavits or declarations filed after the **>filing of a notice of appeal<, but before a decision thereon by the Board, the examiner is without authority to consider the same **>unless the examiner determines that the affidavit or other evidence overcomes all rejections under appeal and that a showing of good and sufficient reasons why the affidavit or other evidence is necessary and was not earlier presented have been made. See MPEP § 1206.<

It is not the custom of the Board to remand affidavits or declarations offered in connection with a request for rehearing of its decision where no rejection has been made under 37 CFR *>41.50(b)<. Affidavits or declarations submitted for this purpose, not remanded to the examiner, are considered only as arguments. *In re Martin*, 154 F.2d 126, 69 USPQ 75 (CCPA 1946).

For remand to the examiner to consider appellant's response relating to a 37 CFR *>41.50(b)< rejection, see MPEP § 1214.01.

*>

1211.04 < Remand by Board for Further Search [R-3]

It should be >extremely< rare for the Board to remand a case to the examiner for further search. A remand to the examiner extends the total pendency of an application and may necessitate an extension of the patent term under 35 U.S.C. 154(b). See MPEP § 2710. When such a remand is necessary, the Board should conduct a search (on-line or otherwise) of at least one subclass and cite art from that subclass to demonstrate the basis on which it concludes that a search of this area would be *>material<.The art cited need not be art upon which a rejection can be made.

1212 Board Requires Appellant to Address Matter [R-3]

**>

37 CFR 41.50. Decisions and other actions by the Board.

*****

(d) The Board may order appellant to additionally brief any matter that the Board considers to be of assistance in reaching a reasoned decision on the pending appeal. Appellant will be given a non-extendable time period within which to respond to such an order. Failure to timely comply with the order may result in the sua sponte dismissal of the appeal.<

*****

37 CFR *>41.50(d)< authorizes the Board to **>additionally brief< any matter deemed appropriate for a reasoned decision on the appeal. This may include, for example: (A) the applicability of particular case law that has not been previously identified as relevant to an issue in the appeal; or (B) the applicability of prior art that has not been made of record.

The rule further provides that the appellant will be given a non-extendable time period within which to respond to the requirement. Failure to respond within the time period set by the Board *>may< result in dismissal of the appeal.

The making of a requirement under 37 CFR *>41.50(d)< is discretionary with the Board. The authority granted in 37 CFR *>41.50(d)< does not affect the Board's authority to remand a case to the examiner in a situation where the Board considers action by the examiner in the first instance to be necessary or desirable. See MPEP § 1211. Also, after an appellant has replied to a requirement under 37 CFR *>41.50(d)<, a remand >by the Board< to the examiner may be ** appropriate >to permit the examiner to respond to the appellant's response to the Board's order<.

1213 Decision by Board [R-3]

**>

37 CFR 41.50. Decisions and other actions by the Board.

(a)(1) The Board, in its decision, may affirm or reverse the decision of the examiner in whole or in part on the grounds and on the claims specified by the examiner. The affirmance of the rejection of a claim on any of the grounds specified constitutes a general affirmance of the decision of the examiner on that claim, except as to any ground specifically reversed. The Board may also remand an application to the examiner.

(2) If a supplemental examiner's answer is written in response to a remand by the Board for further consideration of a rejection pursuant to paragraph (a)(1) of this section, the appellant must within two months from the date of the supplemental examiner's answer exercise one of the following two options to avoid sua sponte dismissal of the appeal as to the claims subject to the rejection for which the Board has remanded the proceeding:

(i) *Reopen prosecution*. Request that prosecution be reopened before the examiner by filing a reply under § 1.111 of this title with or without amendment or submission of affidavits (§§ 1.130, 1.131 or 1.132 of this title) or other evidence. Any amendment or submission of affidavits or other evidence must be relevant to the issues set forth in the remand or raised in the supplemental examiner's answer. A request that complies with this paragraph will be entered and the application or the patent under ex parte reexamination will be reconsidered by the examiner under the provisions of § 1.112 of this title. Any request that prosecution be reopened under this paragraph will be treated as a request to withdraw the appeal.

(ii) *Maintain appeal*. Request that the appeal be maintained by filing a reply brief as provided in § 41.41. If such a reply brief is accompanied by any amendment, affidavit or other evidence, it shall be treated as a request that prosecution be reopened before the examiner under paragraph (a)(2)(i) of this section.

(b) Should the Board have knowledge of any grounds not involved in the appeal for rejecting any pending claim, it may include in its opinion a statement to that effect with its reasons for so holding, which statement constitutes a new ground of rejection of the claim. A new ground of rejection pursuant to this paragraph shall not be considered final for judicial review. When the Board makes a new ground of rejection, the appellant, within two months from the date of the decision, must exercise one of the following two options with respect to the new ground of rejection to avoid termination of the appeal as to the rejected claims:

(1) *Reopen prosecution.* Submit an appropriate amendment of the claims so rejected or new evidence relating to the claims so rejected, or both, and have the matter reconsidered by the examiner, in which event the proceeding will be remanded to the examiner. The new ground of rejection is binding upon the examiner unless an amendment or new evidence not previously of record is made which, in the opinion of the examiner, overcomes the new ground of rejection stated in the decision. Should the examiner reject the claims, appellant may again appeal to the Board pursuant to this subpart.

(2) *Request rehearing*. Request that the proceeding be reheard under § 41.52 by the Board upon the same record. The request for rehearing must address any new ground of rejection and state with particularity the points believed to have been misapprehended or overlooked in entering the new ground of rejection and also state all other grounds upon which rehearing is sought.

(c) The opinion of the Board may include an explicit statement of how a claim on appeal may be amended to overcome a specific rejection. When the opinion of the Board includes such a statement, appellant has the right to amend in conformity therewith. An amendment in conformity with such statement will overcome the specific rejection. An examiner may reject a claim so-

amended, provided that the rejection constitutes a new ground of rejection.

(d) The Board may order appellant to additionally brief any matter that the Board considers to be of assistance in reaching a reasoned decision on the pending appeal. Appellant will be given a non-extendable time period within which to respond to such an order. Failure to timely comply with the order may result in the sua sponte dismissal of the appeal.

(e) Whenever a decision of the Board includes a remand, that decision shall not be considered final for judicial review. When appropriate, upon conclusion of proceedings on remand before the examiner, the Board may enter an order otherwise making its decision final for judicial review.

(f) Extensions of time under § 1.136(a) of this title for patent applications are not applicable to the time periods set forth in this section. See § 1.136(b) of this title for extensions of time to reply for patent applications and § 1.550(c) of this title for extensions of time to reply for ex parte reexamination proceedings.<

After consideration of the record including appellant's *>briefs< and the examiner's *>answers<, the Board writes its decision, affirming the examiner in whole or in part, or reversing the examiner's decision, sometimes also setting forth a new ground of rejection.

37 CFR *>41.50(e)< provides that a decision of the Board which includes a remand will not be considered **>final for judicial review<. The Board, following conclusion of the proceedings before the examiner, will either adopt its earlier decision as final >for judicial review< or will render a new decision based on all appealed claims, as it considers appropriate. In either case, final action by the Board will give rise to the alternatives available to an appellant following a decision by the Board.

On occasion, the Board has refused to consider an appeal until after the conclusion of a pending civil action or appeal to the Court of Appeals for the Federal Circuit involving issues identical with and/or similar to those presented in the later appeal. Such suspension of action, postponing consideration of the appeal until the Board has the benefit of a court decision which may be determinative of the issues involved, has been recognized as sound practice. An appellant is not entitled, after obtaining a final decision by the U.S. Patent and Trademark Office on an issue in a case, to utilize the prolonged pendency of a court proceeding as a means for avoiding *res judicata* while relitigating the same or substantially the same issue in another application.

An applicant may *>petition< that the decision be withheld to permit the refiling of the application at any time prior to the mailing of the decision. Up to 30 days may be granted, although the time is usually limited as much as possible. The Board will be more prone to entertain the applicant's *>petition< where the *>petition< is filed early, obviating the necessity for an oral hearing or even for the setting of the oral hearing date. If the case has already been set for oral hearing, the petition should include a request to vacate the hearing date, *not* to postpone it.

In a situation where a withdrawal of the appeal is filed on the same day that the decision is mailed, a petition to vacate the decision will be denied.

See MPEP § 1214.01 concerning the procedure following a new ground of rejection by the Board under 37 CFR *>41.50(b)<.

1213.01 Statement **>by Board of How an Appealed Claim May Be Amended To Overcome a Specific Rejection< [R-3]

**>

37 CFR 41.50. Decisions and other actions by the Board.

*****

(c) The opinion of the Board may include an explicit statement of how a claim on appeal may be amended to overcome a specific rejection. When the opinion of the Board includes such a statement, appellant has the right to amend in conformity therewith. An amendment in conformity with such statement will overcome the specific rejection. An examiner may reject a claim so-amended, provided that the rejection constitutes a new ground of rejection.<

*****

If the Board's decision includes an explicit statement **>how a claim on appeal may be amended to overcome a specific rejection<, appellant may amend the claim in conformity with the statement **. The examiner should make certain that the amendment does in fact conform to the statement in the Board's decision.

The making of a statement under 37 CFR *>41.50(c)< is discretionary with the Board. In the absence of an express statement, a remark by the Board that a certain feature does not appear in a claim is not to be taken as a statement that the claim may be allowed if the feature is supplied by amendment. *Ex parte Norlund,* 1913 C.D. 161, 192 O.G. 989

(Comm'r Pat. 1913). >A remark by the Board shall not be construed by appellant to give appellant authority to amend the claim.<

Appellant's right to amend in conformity with the statement under 37 CFR *>41.50(c)< may only be exercised within the period allowed for seeking court review under 37 CFR 1.304. See MPEP § 1216.

>An explicit statement by the Board on how a claim on appeal may be amended to overcome a specific rejection is not a statement that a claim so-amended is allowable. The examiner may reject a claim so-amended, provided that the rejection constitutes a new ground of rejection. Any new ground of rejection made by an examiner following the Board's decision must be approved by a Technology Center Director and must be prominently identified as such in the action setting forth the new ground of rejection.<

1213.02 New Grounds of Rejection by Board [R-3]

**>

37 CFR 41.50. Decisions and other actions by the Board.

*****

(b) Should the Board have knowledge of any grounds not involved in the appeal for rejecting any pending claim, it may include in its opinion a statement to that effect with its reasons for so holding, which statement constitutes a new ground of rejection of the claim. A new ground of rejection pursuant to this paragraph shall not be considered final for judicial review. When the Board makes a new ground of rejection, the appellant, within two months from the date of the decision, must exercise one of the following two options with respect to the new ground of rejection to avoid termination of the appeal as to the rejected claims:

(1) *Reopen prosecution*. Submit an appropriate amendment of the claims so rejected or new evidence relating to the claims so rejected, or both, and have the matter reconsidered by the examiner, in which event the proceeding will be remanded to the examiner. The new ground of rejection is binding upon the examiner unless an amendment or new evidence not previously of record is made which, in the opinion of the examiner, overcomes the new ground of rejection stated in the decision. Should the examiner reject the claims, appellant may again appeal to the Board pursuant to this subpart.

(2) *Request rehearing*. Request that the proceeding be reheard under § 41.52 by the Board upon the same record. The request for rehearing must address any new ground of rejection and state with particularity the points believed to have been misapprehended or overlooked in entering the new ground of rejection and also state all other grounds upon which rehearing is sought.<

*****

**>

(f) Extensions of time under § 1.136(a) of this title for patent applications are not applicable to the time periods set forth in this section. See § 1.136(b) of this title for extensions of time to reply for patent applications and § 1.550(c) of this title for extensions of time to reply for ex parte reexamination proceedings.<

Under 37 CFR *>41.50(b)<, the Board may, in its decision, make a new rejection of one or more of any of the claims pending in the case, including claims which have been allowed by the examiner.

While ** the Board >is authorized< to reject allowed claims, this authorization is not intended as an instruction to the Board to examine every allowed claim in every appealed application. It is, rather, intended to give the Board express authority to act when it becomes apparent, during the consideration of rejected claims, that one or more allowed claims may be subject to rejection on either the same or on different grounds from those applied against the rejected claims. Since the exercise of authority under 37 CFR *>41.50(b)< is discretionary, no inference should be drawn from a failure to exercise that discretion.

See MPEP § 1214.01 for the procedure following a new ground of rejection under 37 CFR *>41.50(b)<.

1213.03 Publication of >and Public Access to< Board Decision [R-3]

>

37 CFR 41.6. Public availability of Board records.

(a) *Publication.* (1) *Generally.* Any Board action is available for public inspection without a party's permission if rendered in a file open to the public pursuant to § 1.11 of this title or in an application that has been published in accordance with §§ 1.211 to 1.221 of this title. The Office may independently publish any Board action that is available for public inspection.

(2) *Determination of special circumstances*. Any Board action not publishable under paragraph (a)(1) of this section may be published or made available for public inspection if the Director believes that special circumstances warrant publication and a party does not, within two months after being notified of the intention to make the action public, object in writing on the ground that the action discloses the objecting party's trade secret or other confidential information and states with specificity that such information is not otherwise publicly available. If the action discloses such information, the party shall identify the deletions in the text of the action considered necessary to protect the information. If the affected party considers that the entire action must be withheld from the public to protect such information, the party must explain why. The party will be given time, not less than twenty days, to request reconsideration and seek court review

before any contested portion of the action is made public over its objection.

(b) *Record of proceeding*. (1) The record of a Board proceeding is available to the public unless a patent application not otherwise available to the public is involved.

(2) Notwithstanding paragraph (b)(1) of this section, after a final Board action in or judgment in a Board proceeding, the record of the Board proceeding will be made available to the public if any involved file is or becomes open to the public under § 1.11 of this title or an involved application is or becomes published under §§ 1.211 to 1.221 of this title.<

**>Any Board decision is available for public inspection without a party's permission if rendered in a file open to the public pursuant to 37 CFR 1.11 or in an application that has been published in accordance with 37 CFR 1.211 through 1.221. The Office may independently publish any Board action that is available for public inspection.<

Decisions of the Board which are open to the public are available in electronic form on the USPTO website (http://www.uspto.gov).

>Any Board decision rendered in a file not open to the public pursuant to 37 CFR 1.11 or in an application that has not been published in accordance with 37 CFR 1.211 through 1.221 may be published or made available for public inspection under 37 CFR 41.6(a)(2) if the Director believes that special circumstances warrant publication.<

1214 Procedure Following Decision by Board [R-3]

**>

37 CFR 41.54. Action following decision.

After decision by the Board, the proceeding will be returned to the examiner, subject to appellant's right of appeal or other review, for such further action by appellant or by the examiner, as the condition of the proceeding may require, to carry into effect the decision.<

After an appeal to the Board has been decided, a copy of the decision is mailed to the appellant and the original placed in the file. The ** Board notes the decision *>in< the file * and in the record of appeals, and then forwards the file to the examiner through the office of the Technology Center Director immediately if all rejections are reversed, and after about 10 weeks if any rejection is affirmed or after a decision on a request for rehearing is rendered.

1214.01 Procedure Following New Ground of Rejection by Board [R-3]

When the Board makes a new rejection under 37 CFR *>41.50(b)<, the appellant, as to each claim so rejected, has the option of:

(A) >reopening prosecution before the examiner by< submitting an appropriate amendment and/or **>new evidence (37 CFR 41.50(b)(1))<; or

(B) requesting rehearing **>before the Board (37 CFR 41.50(b)(2))<.

The amendment and/or **>new evidence< under 37 CFR *>41.50(b)(1)<, or the request for rehearing under 37 CFR *>41.50(b)(2)<, must be filed within 2 months from the date of the Board's decision. In accordance with 37 CFR 1.196(f), this 2-month time period may not be extended by the filing of a petition and fee under 37 CFR 1.136(a), but only under the provisions of 37 CFR 1.136(b), or under 37 CFR 1.550(c) if the appeal involves an *ex parte* reexamination proceeding.

If an appellant files an appropriate amendment or **>new evidence< (see paragraph I below) as to less than all of the claims rejected by the Board under 37 CFR *>41.50(b)<, and a request for rehearing (see paragraph II below) as to the remainder of the claims so rejected, the examiner will not consider the claims for which rehearing was requested. The request for rehearing will be considered by the Board after prosecution before the examiner with respect to the first group of claims is terminated. Argument as to any of the claims rejected by the Board which is not accompanied by an appropriate amendment or **>new evidence< as to those claims will be treated as a request for rehearing as to those claims.

I. SUBMISSION OF AMENDMENT OR **>NEW EVIDENCE<

37 CFR *>41.50(b)(1)< provides that the application will be remanded to the examiner for reconsideration if the appellant submits "an appropriate amendment" of the claims rejected by the Board, "or **>new evidence< relating to the claims so rejected, or both." An amendment is "appropriate" under the rule if it amends one or more of the claims rejected, or substitutes new claims to avoid the art or reasons

adduced by the Board. *Ex parte Burrowes*, 110 O.G. 599, 1904 C.D. 155 (Comm'r Pat. 1904). Such amended or new claims must be directed to the same subject matter as the appealed claims. *Ex parte Comstock,* 317 O.G. 4,1923 C.D. 82 (Comm'r Pat. 1923). An amendment which adds new claims without either amending the rejected claims, or substituting new claims for the rejected claims, is not appropriate. The new claims will not be entered, and the examiner should return the application file to the Board for consideration of the amendment as a request for rehearing under 37 CFR *>41.50(b)(2)<, if it contains any argument concerning the Board's rejection. The "**>new evidence<" under the rule may be a showing under 37 CFR 1.130, 1.131 or 1.132, as may be appropriate.

If the appellant submits an argument without either an appropriate amendment or **>new evidence< as to any of the claims rejected by the Board, it will be treated as a request for rehearing under 37 CFR *>41.50(b)(2)<.

The new ground of rejection raised by the Board does not reopen * prosecution except as to that subject matter to which the new rejection was applied. If the Board's decision in which the rejection under 37 CFR *>41.50(b)< was made includes an affirmance of the examiner's rejection, the basis of the affirmed rejection is not open to further prosecution. If the appellant elects to proceed before the examiner with regard to the new rejection, the Board's affirmance of the examiner's rejection will be treated as nonfinal for purposes of seeking judicial review, and no request for reconsideration of the affirmance need be filed at that time. Prosecution before the examiner of the 37 CFR *>41.50(b)< rejection can incidentally result in overcoming the affirmed rejection even though the affirmed rejection is not open to further prosecution. Therefore, it is possible for the application to be allowed as a result of the limited prosecution before the examiner of the 37 CFR *>41.50(b)< rejection. If the application becomes allowed, the application should not be returned to the Board. Likewise, if the application is abandoned for any reason, the application should not be returned to the Board. If the rejection under 37 CFR *>41.50(b)< is not overcome, the applicant can file a second appeal (as discussed below). Such appeal must be limited to the 37 CFR *>41.50(b)< rejection and may not include the affirmed rejection. If the application does not become allowed or abandoned as discussed above, once prosecution of the claims which were rejected under 37 CFR *>41.50(b)< is terminated before the examiner, the application file must be returned to the Board so that a decision making the original affirmance final can be entered.

The time for filing a request for rehearing on the affirmance or seeking court review runs from the date of the decision by the Board making the original affirmance final. See MPEP § 1214.03 and § 1216.

If the examiner does not consider that the amendment and/or **>new evidence< overcomes the rejection, he or she will again reject the claims. If appropriate, the rejection will be made final.

An applicant in whose application such a final rejection has been made by the examiner may mistakenly believe that he or she is entitled to review by the Board of the rejection by virtue of the previous appeal, but under the provisions of 37 CFR *>41.50(b)(1)<, after such a final rejection, an applicant who desires further review of the matter must file a new appeal to the Board. Such an appeal from the subsequent rejection by the examiner will be an entirely new appeal involving a different ground and will require a new notice of appeal, appeal brief, and the payment of the appropriate fees.

II. REQUEST FOR REHEARING

Instead of filing an amendment and/or **>new evidence< under 37 CFR *>41.50(b)(1)<, an appellant may elect to proceed under 37 CFR *>41.50(b)(2< and file a request for rehearing of the Board's new rejection. The rule requires that the request for rehearing "must address the new ground of rejection and state with particularity the points believed to have been misapprehended or overlooked in rendering the decision and also state all other grounds upon which rehearing is sought." By proceeding in this manner, the appellant waives his or her right to further prosecution before the examiner. *In re Greenfield*, 40 F.2d 775, 5 USPQ 474 (CCPA 1930). A request for rehearing accompanied by an appropriate amendment of the claims rejected by the Board, and/or by **>new evidence<, does not constitute a proper request for rehearing under 37 CFR *>41.50(b)(2)<, and will be treated as a submission under 37 CFR *>41.50(b)(1)<.

If the Board's decision also includes an affirmance of the examiner's rejection, a request for rehearing of the affirmance (see MPEP § 1214.03 and MPEP § 1214.06, paragraph IV) should be filed in a separate paper to facilitate consideration.

1214.03 Rehearing [R-3]

**>

37 CFR 41.52. Rehearing.

(a)(1)Appellant may file a single request for rehearing within two months of the date of the original decision of the Board. No request for rehearing from a decision on rehearing will be permitted, unless the rehearing decision so modified the original decision as to become, in effect, a new decision, and the Board states that a second request for rehearing would be permitted. The request for rehearing must state with particularity the points believed to have been misapprehended or overlooked by the Board. Arguments not raised in the briefs before the Board and evidence not previously relied upon in the brief and any reply brief(s) are not permitted in the request for rehearing except as permitted by paragraphs (a)(2) and (a)(3) of this section. When a request for rehearing is made, the Board shall render a decision on the request for rehearing. The decision on the request for rehearing is deemed to incorporate the earlier opinion reflecting its decision for appeal, except for those portions specifically withdrawn on rehearing, and is final for the purpose of judicial review, except when noted otherwise in the decision on rehearing.

(2) Upon a showing of good cause, appellant may present a new argument based upon a recent relevant decision of either the Board or a Federal Court.

(3) New arguments responding to a new ground of rejection made pursuant to § 41.50(b) are permitted.

(b) Extensions of time under § 1.136(a) of this title for patent applications are not applicable to the time period set forth in this section. See § 1.136(b) of this title for extensions of time to reply for patent applications and § 1.550(c) of this title for extensions of time to reply for ex parte reexamination proceedings.<

The term "rehearing" is used in 37 CFR *>41.52< for consistency with the language of 35 U.S.C. 6(b). It should not be interpreted as meaning that an appellant is entitled to an oral hearing on the request for rehearing, but only to a rehearing on the written record. It is not the normal practice of the Board to grant rehearings in the sense of another oral hearing. *Ex parte Argoudelis*, 157 USPQ 437, 441 (Bd. App. 1967), *rev'd. on other grounds*, 434 F.2d 1390, 168 USPQ 99 (CCPA 1970).

37 CFR *>41.52< provides that any request for rehearing must specifically state the points believed to have been misapprehended or overlooked in the Board's decision. Experience has shown that many requests for rehearing are nothing more than reargument of appellant's position on appeal. In response, the rule was revised to limit requests to the points of law or fact which appellant feels were overlooked or misapprehended by the Board. >Arguments not raised in the briefs before the Board and evidence not previously relied upon in the brief and any reply brief(s) are not permitted in the request for rehearing except (A) upon a showing of good cause, appellant may present a new argument based upon a recent relevant decision of either the Board or a Federal Court, and (B) new arguments responding to a new ground of rejection made pursuant to 37 CFR 41.50(b). If appellant establishes good cause for a new argument based upon a recent relevant decision of either the Board or a Federal Court, a remand by the Board to the examiner to respond to that new argument may be appropriate.<

The 2-month period provided by 37 CFR *>41.52(a)< for filing a request for rehearing can only be extended under the provisions of 37 CFR 1.136(b) or under 37 CFR 1.550(c) if the appeal involves an *ex parte* reexamination proceeding.

**

For extension of time to appeal to the Court of Appeals for the Federal Circuit or commence a civil action under 37 CFR 1.304(a), see MPEP § 1216 and § 1002.02(o).

For requests for reconsideration by the examiner, see MPEP § 1214.04.

>Should an Administrative Patent Judge (APJ) retire or otherwise become unavailable to reconsider a decision, normally another APJ will be designated as a substitute for the unavailable APJ.<

1214.04 Examiner Reversed [R-3]

A complete reversal of the examiner's rejection brings the case up for immediate action by the examiner. If the reversal does not place an application in condition for immediate allowance (e.g., the Board has entered a new ground of rejection under 37 CFR *>41.50(b)<), the examiner should refer to the situations outlined in MPEP § 1214.06 for appropriate guidance.

The examiner should never regard such a reversal as a challenge to make a new search to uncover other and better references. This is particularly so where the application or *ex parte* reexamination proceeding has meanwhile been transferred or assigned to an exam-

iner other than the one who rejected the claims leading to the appeal. The second examiner should give full faith and credit to the prior examiner's search.

If the examiner has specific knowledge of the existence of a particular reference or references which indicate nonpatentability of any of the appealed claims as to which the examiner was reversed, he or she should submit the matter to the Technology Center (TC) Director for authorization to reopen prosecution under 37 CFR 1.198 for the purpose of entering the new rejection. See MPEP § 1002.02(c) and MPEP § 1214.07. The TC Director's approval is placed on the action reopening prosecution.

The examiner may request rehearing of the Board decision. Such a request should normally be made within 2 months of the receipt of the Board decision in the TC. The TC Director's secretary should therefore date stamp all Board decisions upon receipt in the TC.

All requests by the examiner to the Board for rehearing of a decision must be approved by the TC Director and must also be forwarded to the Office of the Deputy Commissioner for Patent Examination Policy for approval before mailing.

>The request for rehearing must state with particularity the points believed to have been misapprehended or overlooked by the Board. Arguments not raised in the answers before the Board and evidence not previously relied upon in the answers are not permitted in the request for rehearing except upon a showing of good cause, the examiner may present a new argument based upon a recent relevant decision of either the Board or a Federal Court.<

The request should set a period of **>2 months< for the appellant to file a reply.

If **>the request for rehearing is approved by< the Office of the Deputy Commissioner for Patent Examination Policy>, the TC< will mail a copy of the request for rehearing to the appellant. After the period set for appellant to file a reply (plus mailing time) has expired, the application file will be forwarded to the Board.

1214.05 Cancellation of Withdrawn Claims [R-3]

Where an appellant withdraws some of the appealed claims >(i.e., claims subject to a ground of rejection that the appellant did not present for review in the brief)<, and the Board reverses the examiner on the remaining appealed claims, the withdrawal is treated as an authorization to cancel the withdrawn claims. It is *necessary >for the examiner< to notify the appellant of the cancellation of the withdrawn claims. >See MPEP § 1215.03.<

1214.06 Examiner Sustained in Whole or in Part [R-3]

**>

37 CFR 1.197. Return of jurisdiction from the Board of Patent Appeals and Interferences; termination of proceedings.

(a) *Return of jurisdiction from the Board of Patent Appeals and Interferences.* Jurisdiction over an application or patent under ex parte reexamination proceeding passes to the examiner after a decision by the Board of Patent Appeals and Interferences upon transmittal of the file to the examiner, subject to appellant's right of appeal or other review, for such further action by appellant or by the examiner, as the condition of the application or patent under ex parte reexamination proceeding may require, to carry into effect the decision of the Board of Patent Appeals and Interferences.

(b) *Termination of proceedings.*

(1) Proceedings on an application are considered terminated by the dismissal of an appeal or the failure to timely file an appeal to the court or a civil action (§ 1.304) except:

(i) Where claims stand allowed in an application; or

(ii) Where the nature of the decision requires further action by the examiner.

(2) The date of termination of proceedings on an application is the date on which the appeal is dismissed or the date on which the time for appeal to the U.S. Court of Appeals for the Federal Circuit or review by civil action (§ 1.304) expires in the absence of further appeal or review. If an appeal to the U.S. Court of Appeals for the Federal Circuit or a civil action has been filed, proceedings on an application are considered terminated when the appeal or civil action is terminated. A civil action is terminated when the time to appeal the judgment expires. An appeal to the U.S. Court of Appeals for the Federal Circuit, whether from a decision of the Board or a judgment in a civil action, is terminated when the mandate is issued by the Court.<

>The practice under the situations identified in paragraphs I-III below is similar to the practice after a decision of the court outlined in MPEP § 1216.01. Examiners must be very careful that case files that come back from the Board are not overlooked because every case, except applications in which all claims stand rejected after the Board's decision, is up for action by the examiner in the event no court review has been sought. See MPEP § 1216.01 and § 1216.02 for procedure where court review is sought.<

The time for seeking review of a decision of the Board by the Court of Appeals for the Federal Circuit or the U.S. District Court for the District of Columbia is the same for both tribunals, that is, 2 months, or 2 months with the extension provided by 37 CFR 1.304 in the event a request for rehearing is timely filed before the Board, or as extended by the *>Director<. See MPEP § 1216. When the time for seeking court review (plus 2 weeks to allow for information as to the filing of an appeal or civil action, if any, to reach the examiner) has passed without such review being sought, the examiner must take up the application for consideration. The situations which can arise will involve one or more of the following circumstances:

I. NO CLAIMS STAND ALLOWED

The proceedings in an application or *ex parte* reexamination proceeding are terminated as of the date of the expiration of the time for filing court action. The application is no longer considered as pending. It is to be stamped abandoned and sent to abandoned files. In an *ex parte* reexamination proceeding, a reexamination certificate should be issued under 37 CFR 1.570.

Claims indicated as allowable prior to appeal except for their dependency from rejected claims will be treated as if they were rejected. The following examples illustrate the appropriate approach to be taken by the examiner in various situations:

(A) If claims 1-2 are pending, and the Board affirms a rejection of claim 1 and claim 2 was objected to prior to appeal as being allowable except for its dependency from claim 1, the examiner should hold the application abandoned.

(B) If the Board or court affirms a rejection against an independent claim and reverses all rejections against a claim dependent thereon, ** after expiration of the period for further appeal, >the examiner< should proceed in one of two ways:

(1) Convert the dependent claim into independent form by examiner's amendment, cancel all claims in which the rejection was affirmed, and issue the application; or

(2) Set a 1-month time limit in which appellant may rewrite the dependent claim(s) in independent form. Extensions of time under 37 CFR 1.136(a) will not be permitted. If no timely reply is received, the examiner will cancel all rejected and objected to claims and issue the application with the allowed claims only.

The following *>form paragraph< may be used where appropriate:

**>

¶ *12.119.01 Examiner Sustained in Part - Requirement of Rewriting Dependent Claims (No Allowed Claim)*

The Board of Patent Appeals and Interferences affirmed the rejection(s) against independent claim(s) **[1]**, but reversed all rejections against claim(s) **[2]** dependent thereon. There are no allowed claims in the application. The independent claim(s) is/are cancelled by the examiner in accordance with MPEP § 1214.06. Applicant is given a ONE MONTH TIME PERIOD from the mailing date of this letter in which to present the dependent claim(s) in independent form to avoid ABANDONMENT of the application. NO EXTENSIONS OF TIME UNDER 37 CFR 1.136(a) WILL BE GRANTED. Prosecution is otherwise closed.

Examiner Note:

1. In bracket 1, enter the independent claim number(s) for which the Board affirmed the rejection(s).
2. In bracket 2, enter the dependent claim number(s) for which the Board reversed the rejection(s).

<

II. CLAIMS STAND ALLOWED

The appellant is not required to file a reply. The examiner issues the application or *ex parte* reexamination certificate on the claims which stand allowed. *>For paper files, a< red-ink line should be drawn through the refused claims and the notion "Board Decision" written in the margin in red ink.

If the Board affirms a rejection of claim 1, claim 2 was objected to prior to appeal as being allowable except for its dependency from claim 1 and independent claim 3 is allowed, the examiner should cancel claims 1 and 2 and issue the application or *ex parte* reexamination certificate with claim 3 only.

>If the Board affirms a rejection against independent claim 1, reverses all rejections against dependent claim 2 and claim 3 is allowed, after expiration of the period for further appeal, the examiner should either:

(A) Convert dependent claim 2 into independent form by examiner's amendment, cancel claim 1 in which the rejection was affirmed, and issue the application with claims 2 and 3; or

(B) Set a 1-month time limit in which appellant may rewrite dependent claim 2 in independent form.

Extensions of time under 37 CFR 1.136(a) will not be permitted. If no timely reply is received, the examiner will cancel claims 1 and 2 and issue the application with allowed claim 3 only.

The following form paragraph may be used where appropriate:<

>

¶ *12.119.02 Examiner Sustained in Part - Requirement of Rewriting Dependent Claims (At Least One Allowed Claim)*

The Board of Patent Appeals and Interferences affirmed the rejection(s) against independent claim(s) **[1]**, but reversed all rejections against claim(s) **[2]** dependent thereon. The independent claim(s) is/are cancelled by the examiner in accordance with MPEP § 1214.06. Applicant is given a ONE MONTH TIME PERIOD from the mailing date of this letter in which to present the dependent claim(s) in independent form. NO EXTENSIONS OF TIME UNDER 37 CFR 1.136(a) WILL BE GRANTED. Failure to comply will result in cancellation of the dependent claims and the application will be allowed with claim(s) **[3**]. Prosecution is otherwise closed.

Examiner Note:

1. In bracket 1, enter the independent claim number(s) for which the Board affirmed the rejection(s).
2. In bracket 2, enter the dependent claim number(s) for which the Board reversed the rejection(s).
3. In bracket 3, enter the claim number(s) of the allowed claims.

<

If uncorrected matters of form which cannot be handled without written correspondence remain in the application, the examiner should take appropriate action but prosecution is otherwise closed. ** A letter such as that set forth in form paragraph *>12.120< is suggested:

**>

¶ *12.120 Period For Seeking Court Review Has Lapsed*

The period under 37 CFR 1.304 for seeking court review of the decision by the Board of Patent Appeals and Interferences rendered **[1]** has expired and no further action has been taken by appellant. The proceedings as to the rejected claims are considered terminated; see 37 CFR 1.197(b).

The application will be passed to issue on allowed claim **[2]** provided the following formal matters are promptly corrected: **[3]**. Prosecution is otherwise closed.

Applicant is required to make the necessary corrections addressing the outstanding formal matters within a shortened statutory period set to expire ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing date of this letter. Extensions of time may be granted under 37 CFR 1.136.

Examiner Note:

1. In bracket 1, enter the date of the decision.
2. In bracket 2, identify the allowed claims.
3. In bracket 3, identify the formal matters that need correction.

<

III. CLAIMS REQUIRE ACTION

If the decision of the Board is an affirmance in part and includes a reversal of a rejection that brings certain claims up for action on the merits, such as a decision reversing the rejection of generic claims in an application or *ex parte* reexamination proceeding containing claims to nonelected species not previously acted upon, the examiner will take up the application or reexamination proceeding for appropriate action on the matters thus brought up. However, the application or reexamination proceeding is not considered open to further prosecution except as to such matters.

IV. 37 CFR *>41.50(b)< REJECTION

Where the Board makes a new rejection under 37 CFR *>41.50(b)< and no action is taken with reference thereto by appellant within 2 months, the examiner should proceed in the manner indicated in paragraphs I-III of this section as appropriate. See MPEP § 1214.01.

If the Board affirms the examiner's rejection, but also enters a new ground of rejection under 37 CFR *>41.50(b)<, the subsequent procedure depends upon the action taken by the appellant with respect to the 37 CFR *>41.50(b)< rejection.

(A) If the appellant elects to proceed before the examiner with regard to the new rejection (see MPEP § 1214.01, paragraph I) the Board's affirmance will be treated as nonfinal, and no request for rehearing of the affirmance need be filed at that time. Prosecution before the examiner of the 37 CFR *>41.50(b)< rejection can incidentally result in overcoming the affirmed rejection even though the affirmed rejection is not open to further prosecution. Therefore, it is possible for the application to be allowed as a result of the limited prosecution before the examiner of the 37 CFR *>41.50(b)< rejection. If an application becomes allowed, it should not be returned to the Board. Likewise, if an application is abandoned for any reason, it should not be returned to the Board. If the rejection under 37 CFR *>41.50(b)< is not overcome, the

applicant (or patent owner in an *ex parte* reexamination proceeding) can file a second appeal (as discussed below). Such appeal must be limited to the 37 CFR *>41.50(b)< rejection and may not include the affirmed rejection. If an application does not become allowed or abandoned as discussed above, once prosecution of the claims which were rejected under 37 CFR *>41.50(b)< is terminated before the examiner, the application file must be returned to the Board so that a decision making the original affirmance final can be entered. Similarly, the file of any *ex parte* reexamination proceeding including rejections affirmed by the Board but made nonfinal for purposes of judicial review must be returned to the Board so that the affirmance can be made final by the Board. The time for filing a request for rehearing on the affirmance or seeking court review runs from the date of the decision by the Board making the original affirmance final. See MPEP § 1214.03 and § 1216.

(B) If the appellant elects to request rehearing of the new rejection (see MPEP § 1214.01, paragraph II), the request for rehearing of the new rejection and of the affirmance must be filed within 2 months from the date of the Board's decision.

**

1214.07 Reopening of Prosecution [R-3]

**>

37 CFR 1.198. Reopening after a final decision of the Board of Patent Appeals and Interferences.

When a decision by the Board of Patent Appeals and Interferences on appeal has become final for judicial review, prosecution of the proceeding before the primary examiner will not be reopened or reconsidered by the primary examiner except under the provisions of § 1.114 or § 41.50 of this title without the written authority of the Director, and then only for the consideration of matters not already adjudicated, sufficient cause being shown.<

Sometimes an amendment is filed after the Board's decision which does not carry into effect any recommendation made by the Board and which presents a new or amended claim or claims. In view of the fact that * prosecution is closed, the appellant is not entitled to have such amendment entered as a matter of right. However, if the amendment is submitted with a request for continued examination (RCE) under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e), * prosecution of the application will be reopened and the amendment will be entered. See MPEP § 706.07(h), paragraph XI. Note that the RCE practice under 37 CFR 1.114 does not apply to utility or plant patent applications filed before June 8, 1995 or to design applications. See 37 CFR 1.114(d) and MPEP § 706.07(h), paragraph I. If the amendment obviously places an application in condition for allowance, regardless of whether the amendment is filed with an RCE, the primary examiner should recommend that the amendment be *>entered<, and with the concurrence of the supervisory patent examiner, the amendment will be entered. Note MPEP § 1002.02(d).

Where the amendment cannot be entered, the examiner should write to the appellant indicating that the amendment cannot be entered and stating the reason why. The refusal may not be arbitrary or capricious.

Form paragraph *>12.119< should be used:

**>

¶ *12.119 Amendment After Board Decision, Entry Refused*

The amendment filed **[1]** after a decision by the Board of Patent Appeals and Interferences is not entered because prosecution is closed and the proposed amendment was not suggested in an explicit statement by the Board under 37 CFR 41.50(c). As provided in 37 CFR 1.198, prosecution of the proceeding before the primary examiner will not be reopened or reconsidered by the primary examiner after a final decision of the Board except under the provisions of 37 CFR 1.114 (request for continued examination) or 37 CFR 41.50 without the written authority of the Director, and then only for the consideration of matters not already adjudicated, sufficient cause being shown.

Examiner Note:

1. In bracket 1, insert the date the amendment was filed.
2. This form paragraph is not to be used where a 37 CFR 41.50(b) rejection has been made by the Board of Patent Appeals and Interferences.

<

In the event that claims stand allowed in the application under the conditions set forth in MPEP § 1214.06, paragraph II, the application should be passed to issue.

Petitions under 37 CFR 1.198 to reopen or reconsider prosecution of a case after decision by the Board, where no court action has been filed, are decided by the Technology Center Director, MPEP § 1002.02(c).

The *>Director of the USPTO< also entertains petitions under 37 CFR 1.198 to reopen certain cases in which an appellant has sought review under 35 U.S.C. 141 or 145. This procedure is restricted to cases which

have been decided by the Board and which are amenable to settlement without the need for going forward with the court proceeding. Such petitions will ordinarily be granted only in the following categories of cases:

(A) When the decision of the Board asserts that the rejection of the claims is proper because the claims do not include a disclosed limitation or because they suffer from some other curable defect, and the decision reasonably is suggestive that claims including the limitation or devoid of the defect will be allowable;

(B) When the decision of the Board asserts that the rejection of the claims is proper because the record does not include evidence of a specified character, and is reasonably suggestive that if such evidence were presented, the appealed claims would be allowable, and it is demonstrated that such evidence presently exists and can be offered; or

(C) When the decision of the Board is based on a practice, rule, law, or judicial precedent which, since the Board's decision, has been rescinded, repealed, or overruled.

Such petitions will not be ordinarily entertained after the filing of the *>Director's< brief in cases in which review has been sought under 35 U.S.C. 141, or after trial in a 35 U.S.C. 145 case.

In the case of an appeal under 35 U.S.C. 141, if the petition is granted, steps will be taken to request the court to remand the case to the U. S. Patent and Trademark Office. If so remanded, the proposed amendments, evidence, and arguments will be entered of record in the application file for consideration, and further action will be taken by the Board in the first instance or by the examiner as may be appropriate. In the case of civil action under 35 U.S.C. 145, steps will be taken for obtaining dismissal of the action without prejudice to consideration of the proposals.

1215 Withdrawal or Dismissal of Appeal

1215.01 Withdrawal of Appeal [R-3]

Except in those instances where a withdrawal of an appeal would result in abandonment of an application, an attorney not of record in an application or reexamination proceeding may file a paper under 37 CFR 1.34* withdrawing an appeal. In instances where no allowable claims appear in an application, the withdrawal of an appeal is in fact an express abandonment that does not comply with 37 CFR 1.138 except where a continuing application is being filed on the same date.

Where, after an appeal has been filed and before decision by the Board, an applicant withdraws the appeal after the period for reply to the final rejection has expired, the application is to be considered abandoned as of the date on which the appeal was withdrawn unless there are allowed claims in the case.

Where a letter abandoning the application is filed in accordance with 37 CFR 1.138, the effective date of abandonment is the date of recognition of the letter by an appropriate official of the Office or a different date, if so specified in the letter itself. See MPEP § 711.01.

If a brief has been filed within the time permitted by 37 CFR *>41.37< (or any extension thereof) and an answer mailed and appellant withdraws the appeal, the application is returned to the examiner.

Prior to a decision by the Board, if an applicant wishes to withdraw an application from appeal and to reopen * prosecution of the application, applicant can file a request for continued examination (RCE) under 37 CFR 1.114, accompanied by a submission (i.e., a reply responsive within the meaning of 37 CFR 1.111 to the last outstanding Office action) and the RCE fee set forth under 37 CFR 1.17(e). Note that the RCE practice under 37 CFR 1.114 does not apply to utility or plant patent applications filed before June 8, 1995, design applications, or reexamination proceedings. See 37 CFR 1.114(d) and MPEP § 706.07(h), paragraph X, for more details. An appeal brief or reply brief (or related papers) is not a submission under 37 CFR 1.114, unless the transmittal letter of the RCE contains a statement that incorporates by reference the arguments in a previously filed appeal brief or reply brief. See MPEP § 706.07(h), paragraph II. The filing of an RCE will be treated as a withdrawal of the appeal by the applicant, regardless of whether the RCE includes the appropriate fee or a submission. Therefore, when an RCE is filed without the appropriate fee or a submission in an application that has no allowed claims, the application will be considered abandoned. To avoid abandonment, the RCE should be filed in compliance with 37 CFR 1.114. See MPEP § 706.07(h), paragraphs I-II.

>Once appellant has filed a notice of appeal, appellant also may request that prosecution be reopened for the following situations:

(A) In response to a new ground of rejection made in an examiner's answer, appellant may file a reply in compliance with 37 CFR 1.111 that addresses the new ground of rejection within two months from the mailing of the examiner's answer (see MPEP § 1207.03).

(B) In response to a supplemental examiner's answer that is written in response to a remand by the Board for further consideration of a rejection under 37 CFR 41.50(a), appellant may file a reply in compliance with 37 CFR 1.111 that addresses the rejection in the supplemental answer within two months from the mailing of the supplemental answer (see MPEP § 1207.05).<

To avoid the rendering of decisions by the Board in applications which have already been refiled as continuations, applicants should promptly inform the *>Chief Clerk< of the Board in writing as soon as they have positively decided to refile or to abandon an application containing an appeal awaiting a decision. Applicants also should advise the Board when an RCE is filed in an application containing an appeal awaiting decision. Failure to exercise appropriate diligence in this matter may result in the Board refusing an otherwise proper request to vacate its decision.

*>Upon the withdrawal of an appeal, an application< having no allowed claims will be abandoned. Claims which are allowable except for their dependency from rejected claims will be treated as if they were rejected. The following examples illustrate the appropriate approach to be taken by the examiner in various situations:

(A) Claim 1 is allowed; claims 2 and 3 are rejected. The examiner should cancel claims 2 and 3 and issue the application with claim 1 only.

(B) Claims 1 - 3 are rejected. The examiner should hold the application abandoned.

(C) Claim 1 is rejected and claim 2 is objected to as being allowable except for its dependency from claim 1. The examiner should hold the application abandoned.

(D) Claim 1 is rejected and claim 2 is objected to as being allowable except for its dependency from claim 1; independent claim 3 is allowed. The examiner should cancel claims 1 and 2 and issue the application with claim 3 only.

In an *ex parte* reexamination proceeding, an *ex parte* reexamination certificate should be issued under 37 CFR 1.570.

1215.02 Claims Standing Allowed

If an application contains allowed claims, as well as claims on appeal, the withdrawal of the appeal does not operate as an abandonment of the application, but is considered a withdrawal of the appeal as to those claims and authority to the examiner to cancel the same. An amendment canceling the appealed claims is equivalent to a withdrawal of the appeal.

1215.03 Partial Withdrawal [R-3]

A withdrawal of the appeal as to some of the claims on appeal operates as an authorization to cancel those claims from the application or reexamination proceeding and the appeal continues as to the remaining claims. The withdrawn claims will be canceled from an application by direction of the examiner at the **>time of the withdrawal of the appeal as to those claims. Examiner may use the following form paragraph to cancel the claims that are withdrawn from appeal at the time of the withdrawal:

¶ *12.121 Withdrawal of Appeal as to Some of the Claims on Appeal*

The withdrawal of the appeal as to claims **[1]** operates as an authorization to cancel these claims from the application or reexamination proceeding. See MPEP § 1215.03. Accordingly, these claims are canceled.

Examiner Note:

1. In bracket 1, insert the claim numbers of the claims that were withdrawn from appeal.

If appellant fails to respond to a new ground of rejection made in an examiner's answer by either filing a reply brief or a reply under 37 CFR 1.111 within 2 months from the mailing of the examiner's answer, the appeal is *sua sponte* dismissed as to the claims subject to the new ground of rejection. See MPEP § 1207.03. The examiner should use form paragraph 12.179.02 to notify the appellant of the dismissal and cancel those claims.

¶ *12.179.02 Dismissal Following New Ground(s) of Rejection in Examiner's Answer*

Appellant failed to timely respond to the examiner's answer mailed on **[1]** that included a new ground of rejection mailed on **[1]**. Under 37 CFR 41.39(b), if an examiner's answer contains a rejection designated as a new ground of rejection, appellant must, within two months from the date of the examiner's answer, file either: (1) a request that prosecution be reopened by filing a reply under 37 CFR 1.111; or (2) a request that the appeal be maintained by filing a reply brief under 37 CFR 41.41, addressing each new ground of rejection, to avoid sua sponte dismissal of the appeal as to the claims subject to the new ground of rejection. In view of appellant's failure to file a reply under 37 CFR 1.111 or a reply brief within the time period required by 37 CFR 41.39, **the appeal as to claims [2] is dismissed, and these claims are canceled**.

Only claims **[3]** remain in the application. The appeal continues as to these remaining claims. The application will be forwarded to the Board after mailing of this communication.

Examiner Note:

1. In bracket 1, insert the mailing date of the examiner's answer.

2. In bracket 2, insert the claim numbers of the claims subject to the new ground of rejection.

3. In bracket 3, insert the claim numbers of the claims that are not subject to the new ground of rejection.

Similarly, if appellant fails to respond to a supplemental examiner's answer that is written in response to a remand by the Board for further consideration of a rejection under 37 CFR 41.50(a) by either filing a reply brief or a reply under 37 CFR 1.111 within 2 months from the mailing of the supplemental answer, the appeal is *sua sponte* dismissed as to the claims subject to the rejection for which the Board has remanded the proceeding. See MPEP § 1207.05. Such supplemental examiner's answer may also include a new ground of rejection. The examiner should use form paragraph 12.186 to notify the appellant of the dismissal and cancel those claims.

¶ *12.186 Dismissal Following A Supplemental Examiner's Answer Written in Response to a Remand for Further Consideration of a Rejection*

Appellant failed to timely respond to the supplemental examiner's answer mailed on **[1]** that was written in response to a remand by the Board for further consideration of a rejection mailed on **[1]**. Under 37 CFR 41.50(a)(2), appellant must, within two months from the date of the supplemental examiner's answer, file either: (1) a request that prosecution be reopened by filing a reply under 37 CFR 1.111; or (2) a request that the appeal be maintained by filing a reply brief under 37 CFR 41.41, to avoid sua sponte dismissal of the appeal as to the claims subject to the rejection for which the Board has remanded the proceeding. In view of appellant's failure to file a reply under 37 CFR 1.111 or a reply brief within the time period required by 37 CFR 41.50(a)(2), **the appeal as to claims [2] is dismissed, and these claims are canceled**.

Only claims **[3]** remain in the application. The appeal continues as to these remaining claims. The application will be forwarded to the Board after mailing of this communication.

Examiner Note:

1. In bracket 1, insert the mailing date of the supplemental examiner's answer.

2. In bracket 2, insert the claim numbers of the claims subject to the rejection for which the Board has remanded the proceeding.

3. In bracket 3, insert the claim numbers of the claims that are not subject to the rejection.

<

1215.04 Dismissal of Appeal [R-3]

If no brief is filed within the time prescribed by 37 CFR *>41.37<, the appeal stands dismissed by operation of the rule. Form PTOL-461 ** or form paragraph *>12.117< notifying the appellant that the appeal stands dismissed is not an action in the case and does not start any period for reply. If no claims stand allowed, an application is considered as abandoned on the date the brief was due. If claims stand allowed in an application, the failure to file a brief and consequent dismissal of the appeal is to be treated as a withdrawal of the appeal and of any claim not standing allowed. The application should be passed to issue forthwith. Unless appellant specifically withdraws the appeal as to rejected claims, the appeal should not be dismissed until the extended period (5 months >of extension are available< under 37 CFR 1.136(a)) to file the brief has expired.

Applications having no allowed claims will be abandoned. Claims which are allowable except for their dependency from rejected claims will be treated as if they were rejected. The following examples illustrate the appropriate approach to be taken by the examiner in various situations:

(A) Claim 1 is allowed; claims 2 and 3 are rejected. The examiner should cancel claims 2 and 3 and issue the application with claim 1 only.

(B) Claims 1 - 3 are rejected. The examiner should hold the application abandoned.

(C) Claim 1 is rejected and claim 2 is objected to as being allowable except for its dependency from claim 1. The examiner should hold the application abandoned.

(D) Claim 1 is rejected and claim 2 is objected to as being allowable except for its dependency from claim 1; independent claim 3 is allowed. The examiner should cancel claims 1 and 2 and issue the application with claim 3 only.

However, if formal matters remain to be attended to, the examiner should take appropriate action on such matters, setting a shortened period for reply, but the application or reexamination proceeding is to be considered closed to further prosecution except as to such matters. Form paragraph *>12.109.01< may be used for this purpose. **

An appeal will also be dismissed if an applicant fails to timely and fully reply to a notice of noncompliance with 37 CFR *>41.37(d)<. See MPEP § *>1205.03< and 37 CFR *>41.37(d)<. As in examples (B)-(C) above, if no allowed claims remain in an application, the application is abandoned as of the date the reply to the notice was due. The applicant may petition to revive the application as in other cases of abandonment, and to reinstate the appeal. If the appeal is dismissed, but allowed claims remain in the application, as in examples (A) and (D) above, the application is not abandoned; to reinstate the claims cancelled by the examiner because of the dismissal, the applicant must petition to reinstate the claims and the appeal, but a showing equivalent to a petition to revive under 37 CFR 1.137 is required. In either event, a proper reply to the notice of noncompliance must be filed before the petition will be considered on its merits.

1216 Judicial Review [R-3]

35 U.S.C. 141. Appeal to the Court of Appeals for the Federal Circuit.

**>An applicant dissatisfied with the decision in an appeal to the Board of Patent Appeals and Interferences under section 134 of this title may appeal the decision to the United States Court of Appeals for the Federal Circuit. By filing such an appeal the applicant waives his or her right to proceed under section 145 of this title. A patent owner, or a third-party requester in an inter partes reexamination proceeding, who is in any reexamination proceeding dissatisfied with the final decision in an appeal to the Board of Patent Appeals and Interferences under section 134 may appeal the decision only to the United States Court of Appeals for the Federal Circuit. A party to an interference dissatisfied with the decision of the Board of Patent Appeals and Interferences on the interference may appeal the decision to the United States Court of Appeals for the Federal Circuit, but such appeal shall be dismissed if any adverse party to such interference, within twenty days after the appellant has filed notice of appeal in accordance with section 142 of this title, files notice with the Director that the party elects to have all further proceedings conducted as provided in section 146 of this title. If the appellant does not, within thirty days after filing of such notice by the adverse party, file a civil action under section 146, the decision appealed from shall govern the further proceedings in the case.<

35 U.S.C. 145. Civil action to obtain patent.

An applicant dissatisfied with the decision of the Board of Patent Appeals and Interferences in an appeal under section 134(a) of this title may, unless appeal has been taken to the United States Court of Appeals for the Federal Circuit, have remedy by civil action against the Director in the United States District Court for the District of Columbia if commenced within such time after such decision, not less than sixty days, as the Director appoints. The court may adjudge that such applicant is entitled to receive a patent for his invention, as specified in any of his claims involved in the decision of the Board of Patent Appeals and Interferences, as the facts in the case may appear, and such adjudication shall authorize the Director to issue such patent on compliance with the requirements of law. All the expenses of the proceedings shall be paid by the applicant.

**

35 U.S.C. 306. Appeal.

The patent owner involved in a reexamination proceeding under this chapter may appeal under the provisions of section 134 of this title, and may seek court review under the provisions of sections 141 to 145 of this title, with respect to any decision adverse to the patentability of any original or proposed amended or new claim of the patent.

**>

37 CFR 1.301. Appeal to U.S. Court of Appeals for the Federal Circuit.

Any applicant, or any owner of a patent involved in any *ex parte* reexamination proceeding filed under § 1.510, dissatisfied with the decision of the Board of Patent Appeals and Interferences, and any party to an interference dissatisfied with the decision of the Board of Patent Appeals and Interferences, may appeal to the U.S. Court of Appeals for the Federal Circuit. The appellant must take the following steps in such an appeal: In the U. S. Patent and Trademark Office, file a written notice of appeal directed to the Director (§§ 1.302 and 1.304); and in the Court, file a copy of the notice of appeal and pay the fee for appeal as provided by the rules of the Court. For appeals by patent owners and third party requesters in *inter partes* reexamination proceedings filed under § 1.913, § 1.983 is controlling.<

37 CFR 1.303. Civil action under 35 U.S.C. 145, 146, 306.

**>

(a) Any applicant, or any owner of a patent involved in an *ex parte* reexamination proceeding filed before November 29, 1999, dissatisfied with the decision of the Board of Patent Appeals and Interferences, and any party to an interference dissatisfied with the decision of the Board of Patent Appeals and Interferences may,

instead of appealing to the U.S. Court of Appeals for the Federal Circuit (§ 1.301), have remedy by civil action under 35 U.S.C. 145 or 146, as appropriate. Such civil action must be commenced within the time specified in § 1.304.

(b) If an applicant in an *ex parte* case, or an owner of a patent involved in an *ex parte* reexamination proceeding filed before November 29, 1999, has taken an appeal to the U.S. Court of Appeals for the Federal Circuit, he or she thereby waives his or her right to proceed under 35 U.S.C. 145.

(c) A notice of election under 35 U.S.C. 141 to have all further proceedings on review conducted as provided in 35 U.S.C. 146 must be filed with the Office of the Solicitor and served as provided in § 41.106(e) of this title.

(d) For an *ex parte* reexamination proceeding filed on or after November 29, 1999, and for any *inter partes* reexamination proceeding, no remedy by civil action under 35 U.S.C. 145 is available.<

37 CFR 1.304. Time for appeal or civil action.

**>

(a)(1)The time for filing the notice of appeal to the U.S. Court of Appeals for the Federal Circuit (§ 1.302) or for commencing a civil action (§ 1.303) is two months from the date of the decision of the Board of Patent Appeals and Interferences. If a request for rehearing or reconsideration of the decision is filed within the time period provided under § 41.52(a), § 41.79(a), or § 41.127(d) of this title, the time for filing an appeal or commencing a civil action shall expire two months after action on the request. In contested cases before the Board of Patent Appeals and Interferences, the time for filing a cross-appeal or cross-action expires:

(i) Fourteen days after service of the notice of appeal or the summons and complaint; or

(ii)Two months after the date of decision of the Board of Patent Appeals and Interferences, whichever is later.

(2) The time periods set forth in this section are not subject to the provisions of § 1.136, § 1.550(c), or § 1.956, or of § 41.4 of this title.

(3) The Director may extend the time for filing an appeal or commencing a civil action:<

(i) For good cause shown if requested in writing before the expiration of the period for filing an appeal or commencing a civil action, or

(ii) Upon written request after the expiration of the period for filing an appeal or commencing a civil action upon a showing that the failure to act was the result of excusable neglect.

(b) The times specified in this section in days are calendar days. The time specified herein in months are calendar months except that one day shall be added to any two-month period which includes February 28. If the last day of the time specified for appeal or commencing a civil action falls on a Saturday, Sunday or Federal holiday in the District of Columbia, the time is extended to the next day which is neither a Saturday, Sunday nor a Federal holiday.

(c) If a defeated party to an interference has taken an appeal to the U.S. Court of Appeals for the Federal Circuit and an adverse party has filed notice under 35 U.S.C. 141 electing to have all further proceedings conducted under 35 U.S.C. 146 (§ 1.303(c)), the time for filing a civil action thereafter is specified in 35 U.S.C. 141. The time for filing a cross-action expires 14 days after service of the summons and complaint.

>

I. < JUDICIAL REVIEW OF PATENT APPLICATIONS

An applicant for a patent who is dissatisfied with a decision of the Board may seek judicial review either by an appeal to the U.S. Court of Appeals for the Federal Circuit (35 U.S.C. 141 and 37 CFR 1.301) or by a civil action in the U.S. District Court for the District of Columbia (35 U.S.C. 145 and 37 CFR 1.303(a)). By filing an appeal to the Federal Circuit, the applicant waives the right to seek judicial review by a civil action under 35 U.S.C. 145. See 35 U.S.C. 141 and 37 CFR 1.303(b).

>

II. < JUDICIAL REVIEW OF *EX PARTE* REEXAMINATION PROCEEDINGS

A patent owner involved in an *ex parte* reexamination proceeding filed under 35 U.S.C. 302 for a patent that issued from an original application filed in the United States before November 29, 1999 (or from an international application designating the United States filed before November 29, 1999) who is dissatisfied with a decision of the Board may seek judicial review either by an appeal to the U.S. Court of Appeals for the Federal Circuit or by a civil action in the U.S. District Court for the District of Columbia.

Public Law 106-113, enacted on November 29, 1999, amended 35 U.S.C. 141 and 35 U.S.C>.< 145 to read as they have been reproduced above. However, former versions of 35 U.S.C. 141 and 145 remain applicable in the case of an *ex parte* reexamination proceeding for a patent that issued from an original application filed before November 29, 1999. The former statutes provided for appeal to the Court of Appeals for the Federal Circuit (35 U.S.C. 141), or alternatively, for a civil action against the *>Director< in the United States District Court for the District of Columbia (35 U.S.C. 145). Former 35 U.S.C. 141 further provided that by filing an appeal to the Court of Appeals for the Federal Circuit under 35 U.S.C. 141, a patent owner waived his >or< her right to proceed to

file a civil action under 35 U.S.C. 145. See 37 CFR 1.303(a)-(b).

The amended versions of 35 U.S.C. 141 and 145 that went into effect on November 29, 1999 provide that a patent owner may appeal only to the United States Court of Appeals for the Federal Circuit. Accordingly, a patent owner involved in the *ex parte* reexamination of a patent that issued from an original application filed in the United States on or after November 29, 1999 (or from an international application designating the United States filed on or after November 29, 1999) may seek judicial review only in the United States Court of Appeals for the Federal Circuit. See 37 CFR 1.303(d).

For judicial review of an *inter partes* reexamination proceeding, see 35 U.S.C. 315. Because *inter partes* reexamination procedures are found in Chapter 31 (and not in Chapter 30) of Title 35 of the United States Code, 35 U.S.C. 306 does not apply to an *inter partes* reexamination proceeding.
**>

III. < TIME FOR FILING NOTICE OF APPEAL OR COMMENCING CIVIL ACTION

The time for filing a notice of a 35 U.S.C. 141 appeal to the Federal Circuit or for commencing a civil action under 35 U.S.C. 145 ** is within 2 months of the Board's decision. 37 CFR 1.304(a). However, if a request for rehearing or reconsideration of the Board's decision is filed within the time provided under 37 CFR *>41.52< (*ex parte* appeals) or 37 CFR *>41.79< *(inter partes* appeals), the time for filing a notice of appeal to the Federal Circuit or for commencing a civil action expires 2 months after a decision on a request for rehearing or reconsideration (37 CFR 1.304(a)).

These 2-month periods meet the 60-day requirement of 35 U.S.C. 142 >and< 145 ** except for time periods which include February 28. In order to comply with the 60-day requirement, 37 CFR 1.304(b) provides that an additional day shall be added to any 2-month period for initiating review which includes February 28. Appeals will always be timely if the judicial review is initiated within 2 months of the final decision.

The times specified in 37 CFR 1.304 are calendar days. If the last day of the time specified for appeal or commencing a civil action falls on a Saturday, Sunday, or a Federal holiday in the District of Columbia, the time is extended to the next day which is neither a Saturday, Sunday, nor a Federal holiday (37 CFR 1.304(b)).
>

IV. < TIME FOR FILING CROSS-APPEAL OR CROSS-ACTION

37 CFR 1.304(a) specifies that the time for filing a cross-appeal or a cross-action expires (A) 14 days after service of the notice of appeal or the summons and complaint or (B) 2 months after the decision to be reviewed, whichever is later.

37 CFR 1.304(a) provides that the time for filing a cross-action expires 14 days after service of the summons and complaint. The district court will determine whether any cross-action was timely filed since neither the complaint nor cross-action is filed in the U.S. Patent and Trademark Office.
>

V. < EXTENSION OF TIME TO SEEK JUDICIAL REVIEW

In 37 CFR 1.304(a), the Office has adopted a standard which is similar to the standard used in the Federal courts for granting extensions. Under the rule, the *>Director< may extend the time (A) for good cause if requested before the expiration of the time provided for initiating judicial review or (B) upon a showing of excusable neglect in failing to initiate judicial review if requested after the expiration of the time period. This standard is applicable once the "last" decision has been entered, i.e., either the decision (in circumstances where no timely rehearing or reconsideration is sought), the decision on rehearing of the Board in an *ex parte* appeal, or the decision on reconsideration of the Board in an interference. Extensions of time under 37 CFR 1.136(b) and 1.550(c) and fee extensions under 37 CFR 1.136(a) are not available to extend the time for the purpose of judicial review once a decision or a decision on rehearing or reconsideration has been entered. 37 CFR 1.304(a)(2) states that the provisions of 37 CFR 1.136 and 1.550(c) are not available to extend the time to initiate judicial review.

Requests for extension of time to seek judicial review under 37 CFR 1.304 should be addressed as follows:

**>Mail Stop 8
Director of the U.S. Patent and Trademark Office
P.O. Box 1450
Alexandria, VA 22313-1450<

Requests may also be hand-carried to the Office of the Solicitor.
>

VI. < APPLICATION UNDER JUDICIAL REVIEW

The administrative file of an application under judicial review, even though carried to a court, will not be opened to the public by the U.S. Patent and Trademark Office, unless it is otherwise available to the public under 37 CFR 1.11.

During judicial review, the involved application or reexamination is not under the jurisdiction of the examiner or the Board, unless remanded to the U.S. Patent and Trademark Office by the court. Any amendment ** can be admitted only under the provisions of 37 CFR 1.198. See MPEP § 1214.07.
>

VII. < SERVICE OF COURT PAPERS ON THE *>DIRECTOR<

Rule 5(b) of the Federal Rules of Civil Procedure provides in pertinent part:

> Whenever under these rules service is required or permitted to be made upon a party represented by an attorney the service shall be made upon the attorney unless service upon the party is ordered by the court. Service upon the attorney . . . shall be made by delivering a copy to the attorney or party or by mailing it to the attorney or party at the attorney's or party's last known address . . . .

Similarly, Rule 25(b) of the Federal Rules of Appellate Procedure provides that "[s]ervice on a party represented by counsel must be made on the party's counsel."

Accordingly, all service copies of papers filed in court proceedings in which the **>Director< is a party must be served on the Solicitor of the Patent and Trademark Office. Service on the Solicitor may be effected in either of the following ways:

(A) By hand between 8:30 A.M. and 5:00 P.M. EST *>to< the Office of the Solicitor >at 600 Dulany Street, Madison West Building, Room 8C43, Alexandria, VA 22314.<

(B) By mail in an envelope addressed as follows:

Office of the Solicitor
P.O. Box 15667
Arlington, VA 22215

While the above mail service address may be supplemented to include the name of the particular attorney assigned to the court case, it must not be supplemented to refer to either the **>Director< or the U.S. Patent and Trademark Office.

Any court papers mailed to an address other than the above mail service address or delivered by hand to the U.S. Patent and Trademark Office are deemed to have been served on the *>Director< when actually received in the Office of the Solicitor.

The above mail service address should not be used for filing a notice of appeal to the Federal Circuit. See MPEP § 1216.01. Nor should the above mail service address be used for noncourt papers, i.e., papers which are intended to be filed in the U.S. Patent and Trademark Office in connection with an application or other proceeding pending in the U.S. Patent and Trademark Office. ANY NONCOURT PAPERS WHICH ARE MAILED TO THE ABOVE MAIL SERVICE ADDRESS WILL BE RETURNED TO THE SENDER. NO EXCEPTIONS WILL BE MADE TO THIS POLICY.

1216.01 Appeals to the Federal Circuit [R-3]

35 U.S.C. 142. Notice of appeal.

When an appeal is taken to the United States Court of Appeals for the Federal Circuit, the appellant shall file in the Patent and Trademark Office a written notice of appeal directed to the Director, within such time after the date of the decision from which the appeal is taken as the Director prescribes, but in no case less than 60 days after that date.

35 U.S.C. 143. Proceedings on appeal.

**>With respect to an appeal described in section 142 of this title, the Director shall transmit to the United States Court of Appeals for the Federal Circuit a certified list of the documents comprising the record in the Patent and Trademark Office. The court may request that the Director forward the original or certified copies of such documents during the pendency of the appeal. In an ex parte case or any reexamination case, the Director shall

submit to the court in writing the grounds for the decision of the Patent and Trademark Office, addressing all the issues involved in the appeal. The court shall, before hearing an appeal, give notice of the time and place of the hearing to the Director and the parties in the appeal.<

35 U.S.C. 144. Decision on appeal.

The United States Court of Appeals for the Federal Circuit shall review the decision from which an appeal is taken on the record before the Patent and Trademark Office. Upon its determination the court shall issue to the Director its mandate and opinion, which shall be entered of record in the Patent and Trademark Office and shall govern the further proceedings in the case.

37 CFR 1.302. Notice of appeal.

**>

(a) When an appeal is taken to the U.S. Court of Appeals for the Federal Circuit, the appellant shall give notice thereof to the Director within the time specified in § 1.304.

(b) In interferences, the notice must be served as provided in § 41.106(e) of this title.

(c) In *ex parte* reexamination proceedings, the notice must be served as provided in § 1.550(f).

(d) In *inter partes* reexamination proceedings, the notice must be served as provided in § 1.903.

(e) Notices of appeal directed to the Director shall be mailed to or served by hand on the General Counsel as provided in § 104.2.<

Filing an appeal to the Federal Circuit requires that the applicant, the owner of a patent involved in a reexamination proceeding, or a party to an interference proceeding: (A) file in the U.S. Patent and Trademark Office a written notice of appeal (35 U.S.C. 142) directed to the *>Director< and (B) file with the Clerk of the Federal Circuit a copy of the notice of appeal and pay the docket fee for the appeal, as provided by Federal Circuit Rule 52. 37 CFR 1.301.

For a notice of appeal to be considered timely filed in the U.S. Patent and Trademark Office, it must: (A) actually reach the U.S. Patent and Trademark Office within the time specified in 37 CFR 1.304 (including any extensions) or (B) be mailed within the time specified in 37 CFR 1.304 (including any extensions) by "Express Mail" in accordance with 37 CFR 1.10.

A Notice of Appeal to the Federal Circuit should not be mailed to the *>Director<, the Board or the examiner. Nor should it be mailed to the Solicitor's mail service address for court papers given in MPEP § 1216. Instead, it should be filed in the U.S. Patent and Trademark Office in any one of the following ways:

(A) By mail addressed as follows, in which case the notice of appeal must actually reach the U.S. Patent and Trademark Office by the due date:

**>Mail Stop 8
Director of the U.S. Patent and Trademark Office
P.O. Box 1450
Alexandria, VA 22313-1450<

(B) By "Express Mail" (U.S. Postal Service only) under 37 CFR 1.10 addressed as follows, in which case the notice of appeal is deemed filed on the "date-in" on the "Express Mail" mailing label:

**>Mail Stop 8
Director of the U.S. Patent and Trademark Office
P.O. Box 1450
Alexandria, VA 22313-1450<

(C) By hand to the Office of the Solicitor, **>at 600 Dulany Street, Madison West Building, Room 8C43, Alexandria, VA 22314<.

A copy of the notice of appeal and the docket fee should be filed with the Clerk of the Federal Circuit, whose mailing and actual address is:

U.S. Court of Appeals for the Federal Circuit
717 Madison Place, N.W.
Washington, DC 20439

The Solicitor, prior to a decision by the Federal Circuit, may request that the case be remanded to the U.S. Patent and Trademark Office and prosecution reopened. See MPEP § 1214.07.
**
>

I. < OFFICE PROCEDURE FOLLOWING DECISION BY THE FEDERAL CIRCUIT

After the Federal Circuit has heard and decided the appeal, an uncertified copy of the decision is sent to the U.S. Patent and Trademark Office and to the appellant and appellee (if any).

In due course, the Clerk of the Federal Circuit forwards to the U.S. Patent and Trademark Office a certified copy of the court's decision. This certified copy is known as the "mandate." The mandate is entered in the file of the application, reexamination or interference which was the subject of the appeal. The date **

the mandate **>was issued by the Federal Circuit< marks the conclusion of the appeal, i.e., the termination of proceedings as that term is used in 35 U.S.C. 120. See 37 CFR 1.197(*>b<), or "termination of the interference" as that term is used in 35 U.S.C. 135(c).

The Federal Circuit's opinion may or may not be precedential. Whether or not the opinion is precedential, the U.S. Patent and Trademark Office will not give the public access to the administrative record of an involved application, or to the file of an interference, unless it is otherwise available to the public under 37 CFR 1.11. However, since the court record in a 35 U.S.C. 141 appeal generally includes a copy of at least part of the application, such may be inspected at the Federal Circuit. *In re Mosher*, 248 F.2d 956, 115 USPQ 140 (CCPA 1957).

In an *ex parte* appeal, after the mandate is **>issued,< the application or reexamination file ** is then returned to the appropriate U.S. Patent and Trademark Office official for further proceedings consistent with the mandate. See MPEP § 1214.06 for handling of claims dependent on rejected claims.

A. All Claims Rejected

If all claims in the case stand rejected, proceedings in the case are considered terminated on the >issue< date ** of the Federal Circuit's mandate. Because the case is no longer considered pending, it is ordinarily not open to subsequent amendment and prosecution by the applicant. *Continental Can Company v. Schuyler*, 326 F. Supp. 283, 168 USPQ 625 (D.D.C. 1970). However, exceptions may occur where the mandate clearly indicates that further action in the U.S. Patent and Trademark Office is to be taken in accordance with the Federal Circuit's opinion.

B. Some Claims Allowed

Where the case includes one or more allowed claims, including claims allowed by the examiner prior to appeal and claims whose rejections were reversed by either the Board or the court, the proceedings are considered terminated only as to any claims which still stand rejected. It is not necessary for the applicant or patent owner to cancel the rejected claims, since they may be canceled by the examiner in an examiner's amendment **. Thus, if no formal matters remain to be attended to, the examiner will pass the application to issue forthwith on the allowed claims or, in the case of a reexamination, will issue a "Notice of Intent to Issue a Reexamination Certificate and/or Examiner's Amendment." See MPEP § 2287. The examiner should set forth the reasons for allowance, referring to and incorporating a copy of the appellate brief and the court decision. See MPEP § 1302.14.

If formal matters remain to be attended to, the examiner promptly should take appropriate action on such matters, such as by an examiner's amendment or by an Office action setting a 1-month (but not less than 30-day) shortened statutory period for reply. However, the application or reexamination proceeding is considered closed to further prosecution except as to such matters.

C. Remand

Where the decision of the court brings up for action on the merits claims which were not previously considered on the merits (such as a decision reversing a rejection of generic claims in an application containing claims to nonelected species), the examiner will take the case up for appropriate action on the matters thus brought up.

D. Reopening of Prosecution

In rare situations it may be necessary to reopen prosecution of an application after a decision by the Federal Circuit. Any Office action proposing to reopen prosecution after a decision by the Federal Circuit must be forwarded to the Office of the Deputy Commissioner for Patent Examination Policy for written approval, which will be indicated on the Office action.
>

II. < DISMISSAL OF APPEAL

After an appeal is docketed in the Federal Circuit, failure to prosecute the appeal, such as by appellant's failure to file a brief, may result in dismissal of the appeal by the court. Under particular circumstances, the appeal also may be dismissed by the court on motion of the appellant and/or the *>Director<.

The court proceedings are considered terminated as of the date of the mandate. After dismissal, the action taken by the examiner will be the same as set forth above under the heading "Office Procedure Following Decision by the Federal Circuit."

In the event of a dismissal for a reason other than failure to prosecute the appeal, the status of the application, reexamination proceeding or interference must be determined according to the circumstances leading to the dismissal.

1216.02 Civil Suits Under 35 U.S.C. 145 [R-3]

A 35 U.S.C. 145 civil action is commenced by filing a complaint in the U.S. District Court for the District of Columbia within the time specified in 37 CFR 1.304 (see MPEP § 1216). Furthermore, copies of the complaint and summons must be served in a timely manner on the Solicitor, the U.S. Attorney for the District of Columbia, and the Attorney General in the manner set forth in Rule 4(i) of the Federal Rules of Civil Procedure. Regarding timely service, see *Walsdorf v. Comm'r*, 229 USPQ 559 (D.D.C. 1986) and *Hodge v. Rostker*, 501 F. Supp. 332 (D.D.C. 1980). When a 35 U.S.C. 145 civil action is filed, a notice thereof is placed in the application or reexamination file, which ordinarily will be kept in the Solicitor's Office pending termination of the civil action. >All the expenses of the proceedings shall be paid by the applicant (see 35 U.S.C. 145).<

In an action under 35 U.S.C. 145, the plaintiff may introduce evidence not previously presented to the U.S. Patent and Trademark Office. However, plaintiff will be precluded from presenting new issues, at least in the absence of some reason of justice put forward for failure to present the issue to the U.S. Patent and Trademark Office. *DeSeversky v. Brenner*, 424 F.2d 857, 858, 164 USPQ 495, 496 (D.C. Cir. 1970); *MacKay v. Quigg*, 641 F. Supp. 567, 570, 231 USPQ 907, 908 (D.D.C. 1986). Furthermore, new evidence is not admissible in district court where it was available to the parties but was withheld from the U.S. Patent and Trademark Office as a result of fraud, bad faith, or gross negligence. *DeSeversky*, 424 F.2d at 858 n.5, 164 USPQ at 496 n.5; *California Research Corp. v. Ladd*, 356 F.2d 813, 821 n.18, 148 USPQ 404, 473 n.18 (D.C. Cir. 1966); *MacKay*, 641 F. Supp. at 570, 231 USPQ at 908; *Monsanto Company v. Kamp*, 269 F. Supp. 818, 822, 154 USPQ 259, 260 (D.D.C. 1967); *Killian v. Watson*, 121 USPQ 507, 507 (D.D.C. 1958).

Upon termination of the civil action, a statement of the court's final disposition of the case is placed in the application or reexamination file, which is then returned to the examiner for action in accordance with the same procedures as follow termination of a 35 U.S.C. 141 appeal. See MPEP § 1216.01. 37 CFR 1.197(*>b<) provides that a civil action is terminated when the time to appeal the judgment expires. Where the exact date when the civil action was terminated is material, the date may be ascertained from the Solicitor's Office.

The procedures to be followed in the U.S. Patent and Trademark Office after a decision, remand, or dismissal of the case by the district court are the same as the procedures followed with respect to 35 U.S.C. 141 appeals. See MPEP § 1216.01.

Where a civil action involving an application has been dismissed before coming to trial, the application will not be opened to the public unless it is otherwise available to the public under 37 CFR 1.11. However, the complaint and any other court papers not under a protective order are open to the public and may be inspected at the Office of the Clerk for the U.S. District Court for the District of Columbia, located in the U.S. Courthouse, 333 Constitution Avenue, N.W., Washington, DC 20001. The court papers in the Office of the Solicitor are not generally made available for public inspection.

Any subpoena by the district court for an application or reexamination file should be hand-carried to the Office of the Solicitor.

Chapter 1300 Allowance and Issue

1301 Substantially Allowable Application, Special

When an application is in condition for allowance, except as to matters of form, the application will be considered special and prompt action taken to require correction of formal matters. See MPEP § 710.02(b).

1302 Final Review and Preparation for Issue

1302.01 General Review of Disclosure [R-5]

When an application is apparently ready for allowance, it should be reviewed by the examiner to make certain that the whole application meets all formal and substantive (i.e., statutory) requirements and that the language of the claims is enabled by, and finds adequate descriptive support in, the application disclosure as originally filed. Neglect to give due attention to these matters may lead to confusion as to the scope of the patent.

Frequently, the invention as originally described and claimed was of much greater scope than that defined in the claims as allowed. Some or much of the subject matter disclosed may be entirely outside the bounds of the claims accepted by the applicant. In such case, the examiner should require the applicant to modify the brief summary of the invention and restrict the descriptive matter so as to be in harmony with the claims. However valuable for reference purposes the examiner may consider the matter which is extraneous to the claimed invention, patents should be confined in their disclosures to the respective inventions patented (see 37 CFR 1.71 and 1.73). Of course, enough background should be included to make the invention clearly understandable. See MPEP § 608.01(c) and § 608.01(d). Form paragraphs 13.07 and 13.08 may be used.

¶ *13.07 Disclosure To Be Limited to Claimed Invention*

Applicant is required to modify the brief summary of the invention and to restrict the descriptive matter so that they are confined to and in harmony with the invention to which the allowed claims are directed. See MPEP § 1302.01. For example, **[1]**.

Examiner Note:

An example should be given as to the specific sheets or drawing figures and portions of the specification which should be cancelled. If drawing figures are to be cancelled, applicant should be reminded that subsequent figures must be renumbered.

¶ *13.08 Disclosed Subject Matter Outside the Bounds of the Claims*

The application contains disclosure entirely outside the bounds of the allowed claims. Applicant is required to modify the brief summary of the invention and restrict the descriptive matter so as to be in harmony with the claims (MPEP § 1302.01).

There should be clear support or antecedent basis in the specification for the terminology used in the claims. Usually, the original claims follow the nomenclature of the specification; but sometimes in amending the claims or in adding new claims, applicant employs terms that do not appear in the specification. This may result in uncertainty as to the interpretation to be given such terms. See MPEP § 608.01(o). It should be noted, however, that exact terms need not be used *in haec verba* to satisfy the written description requirement of the first paragraph of 35 U.S.C. 112. *Eiselstein v. Frank*, 52 F.3d 1035, 1038, 34 USPQ2d 1467, 1470 (Fed. Cir. 1995); *In re Wertheim*, 541 F.2d 257, 265, 191 USPQ 90, 98 (CCPA 1976). See also 37 CFR 1.121(e) which merely requires *substantial* correspondence between the language of the claims and the language of the specification.

The claims should be renumbered as required by 37 CFR 1.126, and particular attention should be given to claims dependent on previous claims to see that the numbering is consistent. An examiner's amendment should be prepared if the order of the claims is changed. See MPEP § 608.01(j), § 608.01(n), and § 1302.04(g).

The abstract should be checked for an adequate and clear statement of the disclosed invention. See MPEP § 608.01(b). The length of the abstract should be limited to 150 words. For changes to the abstract by examiner's amendment, see MPEP § 1302.04.

The title should also be checked. It should be as short and specific as possible. However, the title should be descriptive of the invention claimed, even though a longer title may result. If a satisfactory title is not supplied by the applicant, the examiner may change the title on or after allowance. See MPEP § 606 and § 606.01.

No pencil notes should be made in the application file >(that is maintained in paper)< by the examiner. Any notes in the file must be erased when the application is passed to issue.

All amendments should be reviewed to assure that they were timely filed.

1302.02 Requirement for a Rewritten Specification

Whenever interlineations or cancellations have been made in the specification or amendments which would lead to confusion and mistake, the examiner should require the entire portion of specification affected to be rewritten before passing the application to issue. See 37 CFR 1.125 and MPEP § 608.01(q).

Form paragraph 13.01 should be used when making such a requirement.

¶ *13.01 Requirement for Rewritten Specification*

The interlineations or cancellations made in the specification or amendments to the claims could lead to confusion and mistake during the issue and printing processes. Accordingly, the portion of the specification or claims as identified below is required to be rewritten before passing the case to issue. See 37 CFR 1.125 and MPEP § 608.01(q).

Examiner Note:

1. Specific discussion of the sections of the specification or claims required to be rewritten must be set forth.

2. See form paragraph 6.28.01 for a substitute specification.

1302.03 Notice of Allowability [R-5]

A Notice of Allowability form PTOL-37 is used whenever an application has been placed in condition for allowance. The date of any communication and/or interview which resulted in the allowance should be included in the notice.

In *all* instances, both before and after final rejection, in which an application is placed in condition for allowance, applicant should be notified promptly of allowability of the claims by a Notice of Allowability PTOL-37. ** Prompt notice to applicant is important because it may avoid an unnecessary appeal and act as a safeguard against a holding of abandonment.

Notice of Allowability	**Application No.**	**Applicant(s)**	
	Examiner	**Art Unit**	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☐ This communication is responsive to _____.

2. ☐ The allowed claim(s) is/are _____.

3. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
   a) ☐ All b) ☐ Some* c) ☐ None of the:
      1. ☐ Certified copies of the priority documents have been received.
      2. ☐ Certified copies of the priority documents have been received in Application No. _____ .
      3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

   * Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

4. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.

5. ☐ CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
   (a) ☐ including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
      1) ☐ hereto or 2) ☐ to Paper No./Mail Date _____.
   (b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.

   Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).

6. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

1. ☐ Notice of References Cited (PTO-892)
2. ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
3. ☐ Information Disclosure Statements (PTO-1449 or PTO/SB/08), Paper No./Mail Date _____
4. ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material
5. ☐ Notice of Informal Patent Application (PTO-152)
6. ☐ Interview Summary (PTO-413), Paper No./Mail Date _____ .
7. ☐ Examiner's Amendment/Comment
8. ☐ Examiner's Statement of Reasons for Allowance
9. ☐ Other _____.

U.S. Patent and Trademark Office
PTOL-37 (Rev. 07-05) **Notice of Allowability** Part of Paper No./Mail Date

1302.04 Examiner's Amendments and Changes [R-3]

Except by formal examiner's amendment duly signed or as hereinafter provided, no corrections, erasures, or interlineations may be made in the body of written portions of the specification or any other paper filed in the application for patent. (See 37 CFR 1.121.)

If the application file is a paper file, an informal examiner's amendment may be used for the correction of the following obvious errors and omissions only in the body of the written portions of the specification and may only be made with pen by the examiner of the application who will then initial in the margin and assume full responsibility for the change:

(A) Misspelled words.

(B) Disagreement of a noun with its verb.

(C) Inconsistent "case" of a pronoun.

(D) Disagreement between a reference character as used in the description and on the drawing. The character may be corrected in the description but only when the examiner is certain of the propriety of the change.

**

>

(E) < Correction of reversed figure numbers. *Garrett v. Cox,* 233 F.2d 343, 345, 110 USPQ 52, 54 (CCPA 1956).

**

>

(F) < Other obvious minor grammatical errors such as misplaced or omitted commas, improper parentheses, quotation marks, etc.

*>

(G) < Obvious informalities in the application, other than the ones noted above, or of purely grammatical nature.

Informal examiner's amendments are not permitted if the application is an Image File Wrapper (IFW) application. Any amendment of an IFW application must be by way of a formal examiner's amendment or be an amendment made by the applicant.

For continuing applications filed under 37 CFR 1.53(b), where a reference to the parent application has been inadvertently omitted by the applicant, an examiner should not add a reference to the prior application without the approval of the applicant and a formal examiner's amendment since applicant may decide to delete the priority claim in the application filed under 37 CFR 1.53(b). Furthermore, a petition under 37 CFR 1.78 to accept an unintentionally delayed benefit claim may be required if the application is a utility or plant application filed on or after November 29, 2000. See MPEP § 201.11.

When correcting *originally filed* papers *>in< applications with a paper application file wrapper, clean red ink *must* be used (not blue or black ink).

A formal examiner's amendment may be used to correct all other informalities in the body of the written portions of the specification as well as all errors and omissions in the claims**>. The< formal examiner's amendment* >must be< signed by the primary examiner, placed in the file and a copy sent to applicant. The changes specified in the amendment are entered by the technical support staff in the regular way. A formal examiner's amendment should include form paragraph 13.02 and form paragraph 13.02.01. Form paragraph 13.02.02 should be used if an extension of time is required.

¶ *13.02 Formal Examiner's Amendment*

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Examiner Note:

This form paragraph is NOT to be used in a reexamination proceeding (use form paragraph 22.06 instead).

¶ *13.02.01 Examiner's Amendment Authorized*

Authorization for this examiner's amendment was given in a telephone interview with **[1]** on **[2]**.

**>

¶ *13.02.02 Extension of Time and Examiner's Amendment Authorized by Telephone*

An extension of time under 37 CFR 1.136(a) is required in order to make an examiner's amendment which places this application in condition for allowance. During a telephone conversation conducted on **[1]**, **[2]** requested an extension of time for **[3]** MONTH(S) and authorized the Director to charge Deposit Account No. **[4]** the required fee of $ **[5]** for this extension and authorized the following examiner's amendment. Should the

changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Examiner Note:

See MPEP § 706.07(f) which explains when an extension of time is needed in order to make amendments to place the application in condition for allowance.

<

Although 37 CFR 1.121 has been amended to require amendments to the specification/claims to be made in compliance with 37 CFR 1.121(b)(1), (b)(2), or (c), where appropriate, 37 CFR 1.121(g) permits the Office to make amendments to the specification, including the claims, by examiner's amendments without the need to comply with the requirements of 37 CFR 1.121(b)(1), (b)(2), or (c) in the interest of expediting prosecution and reducing cycle time. Examiners may continue to make additions or deletions of subject matter in the specification, including the claims, in examiner's amendments by instructions to make the change at a precise location in the specification and/or the claims. >Examiners may use an examiner's amendment to correct a non-compliant amendment filed by the applicant if the amendment would otherwise place the application in condition for allowance (e.g., a reply to a non-final Office action or an after-final amendment includes an incorrect status identifier). See MPEP § 714, subsection II.E. Examiner's Amendments.<

As an alternative, the examiner's amendment utilizing paragraph/claim replacement can be created by the examiner with authorization from the applicant. The examiner's amendment can also be created from a facsimile transmission or e-mailed amendment received by the examiner and referenced in the examiner's amendment and attached thereto. Any subject matter, in clean version form (containing no brackets or underlining), to be added to the specification/claims should be set forth separately by applicant in the e-mail or facsimile submission apart from the remainder of the submission. A clean version of a paragraph/claim, or portion of a paragraph/claim, submitted by applicant in a fax or e-mail, should be printed and attached to the examiner's amendment and may be relied on as part of the examiner's amendment. The examiner should mark "requested" on the entire attachment to indicate that the fax or e-mail was requested by the examiner, so as to not lead to a reduction in patent term adjustment (37 CFR 1.704(c)(8)). As the attachment is made part of the examiner's amendment, it does not get a separate PALM code and will not trigger any reduction in patent term adjustment. A paper copy of the entire e-mail or facsimile submission should be entered in the application file. Examiners are not required to electronically save any e-mails once any e-mails or attachments thereto are printed and become part of an application file record. The e-mail practice that is an exception for examiner's amendments is restricted to e-mails to the examiner from the applicant and should not be generated by the examiner to the applicant unless such e-mails are in compliance with all of the requirements set out in MPEP § 502.03.

The amendment or cancellation of claims by formal examiner's amendment is permitted when passing an application to issue where these changes have been authorized by applicant (or his/her attorney or agent) in a telephone or personal interview. The examiner's amendment should indicate that the changes were authorized, the date and type (personal or telephone) of interview, and with whom it was held.

The examiner's amendment practice may be used to make charges against deposit accounts or credit cards under special conditions.

An examiner's amendment can be used to make a charge against a deposit account, provided prior approval is obtained from the applicant, attorney or agent, in order to expedite the issuance of a patent on an application otherwise ready for allowance. When such an examiner's amendment is prepared, the prior approval is indicated by identification of the name of the authorizing party, the date and type (personal or telephone) of authorization, the purpose for which the charge is made (additional claims, etc.), and the deposit account number.

Charges can also be made against a credit card in an examiner's amendment. Once the examiner has informed applicant of the required charges, applicant must submit by facsimile, a properly completed and signed PTO-2038, authorizing the necessary charges. After completion of processing in the Office of Finance, form PTO-2038 will be removed from the record. Office employees may not accept oral (telephonic) instructions to complete the Credit Card Payment Form or otherwise charge a patent process or

trademark process fee (as opposed to information product or service fees) to a credit card. Further identifying data, if deemed necessary and requested by the applicant, should also be included in the examiner's amendment.

Form paragraph 13.06 may be used to charge an extension of time fee in an examiner's amendment.

¶ *13.06 Extension of Time by Examiner's Amendment*

An extension of time under 37 CFR 1.136(a) is required to place this application in condition for allowance. During a telephone conversation conducted on **[1]**, **[2]** requested an extension of time for **[3]** MONTH(S) and authorized the Director to charge Deposit Account No. **[4]** the required fee of $ **[5]** for this extension.

Examiner Note:

1. See MPEP § 706.07(f), item J which explains when an extension of time is needed in order to make amendments to place the application in condition for allowance.
2. When an examiner's amendment is also authorized, use form paragraph 13.02.02 instead.

At the time of allowance, substantive changes made by the examiner to the abstract must be done by a formal examiner's amendment after first obtaining approval from the applicant. As noted by the court in recent decisions, the abstract may be used to determine the meaning of claims. See *Pandrol USA, LP v. Airboss Railway Products, Inc.*, 320 F.3d 1354, 1363 n.1, 65 USPQ2d 1985, 1996 n.1 (Fed. Cir. 2003), *Hill-Rom Co. v. Kinetic Concepts, Inc.*, 209 F.3d 1337, 1341 n.1, 54 USPQ2d 1437, 1443 n.1 (Fed. Cir. 2000). Since the abstract may be relied upon to determine the scope of the claimed invention, examiners should review the abstract for compliance with 37 CFR 1.72(b) and point out defects noted to the applicant in the first Office action, or at the earliest point in the prosecution that the defect is noted, so that applicant may make the necessary changes to the abstract.

No examiner's amendment, whether formal or informal, may make substantive changes to the written portions of the specification, including the abstract, without first obtaining applicant's approval.

The fact that applicant is entitled to an earlier U.S. effective filing date under 35 U.S.C. 120, 121, or 365(c) or 35 U.S.C. 119(e) is sometimes overlooked. To minimize this possibility, and for the claim to the benefit of the earlier filing date to be proper, the statement that, "This is a division (continuation, continuation-in-part) of Application Number -/---, filed ---" should appear as the first sentence>(s)< of the specification, or in an application data sheet of applications other than CPAs claiming priority under 35 U.S.C. 120, except in the case of design applications where it should appear as set forth in MPEP § 1504.20. The request for a CPA (note that effective July 14, 2003, CPA practice has been eliminated as to utility and plant applications) filed under 37 CFR 1.53(d) is itself the specific reference, as required by 35 U.S.C. 120 and 37 CFR 1.78(a)(2), to every application assigned the same application number identified in the request. In the case of an application filed under 37 CFR 1.53(b) as a division, continuation or continuation-in-part of a CPA, there would be only one reference to the series of applications assigned the same application number with the filing date cited being that of the original non-continued application. In applications claiming priority under 35 U.S.C. 119(e), a statement such as "This application claims the benefit of U.S. Provisional Application No. 60/ - --, filed - --" should appear as the first sentence>(s)< of the specification or in an application data sheet. In addition, for an application which is claiming the benefit under 35 U.S.C. 120 of a prior application which in turn claims the benefit of a provisional application under 35 U.S.C. 119(e), a suitable reference would read, "This application is a continuation of U.S. Application No. 08/ - --, filed - --, now abandoned, which claims the benefit of U.S. Provisional Application No. 60/ - --, filed - --." ** Any such statements appearing elsewhere in the specification should be relocated or made in an application data sheet.

References cited as being of interest by examiners when passing an application to issue will not be supplied to applicant>, but foreign patent documents and non-patent literature will be scanned and added to the IFW for viewing and downloading by the applicant, if desired<. The references will be cited as usual on form PTO-892, a copy of which will be attached to the Notice of Allowability, form PTOL-37.

Where an application is ready for issue except for a slight defect in the drawing not involving a change in structure, the examiner will prepare a letter indicating the change to be made and, if necessary, including a marked-up copy of the drawing showing the addition or alteration to be made. See MPEP § 608.02(w).

No other changes may be made by any person in any record of the U.S. Patent and Trademark office without the written approval of the Director of the United States Patent and Trademark Office.

In reviewing the application, all errors should be carefully noted. It is not necessary that the language be the best; it is, however, essential that it be clear in meaning, and free from errors in syntax. Any necessary examiner's amendment is usually made at the time an application is being prepared for issue by the examiner and a copy of any formal examiner's amendment is sent to the applicant as an attachment to the Notice of Allowability, PTOL-37.

Examiners will not cancel claims on the basis of an amendment which argues for certain claims and, alternatively, purports to authorize their cancellation by the examiner if other claims are allowed. See generally *In re Willingham*, 282 F.2d 353, 356, 127 USPQ 211, 215 (CCPA 1960).

In all instances, both before and after final rejection, in which an application is placed in condition for allowance as by an interview or amendment, applicant should be notified promptly of this fact by means of a Notice of Allowability (PTOL-37). See MPEP § 714.13 and § 1302.03.

If after reviewing, screening, or surveying an allowed application in the Office of Patent Quality Assurance, an error or omission of the type noted in items (A) through *>(G)< under the second paragraph of this section is noted, the error or omission may be corrected by the Review Quality Assurance Specialist in the same manner as set forth in the second paragraph. Since all other obvious informalities may only be corrected by a formal examiner's amendment, if the Office of Patent Quality Assurance discovers any such informality, the Review Quality Assurance Specialist will return the application to the Technology Center (TC) personnel via the TC Director suggesting, as appropriate, specific changes for approval and correction by the examiner through the use of an examiner's amendment.

1302.04(a) Title of Invention

Where the title of the invention is not specific to the invention as claimed, see MPEP § 606.01.

1302.04(b) Cancellation of Nonstatutory Claim

When a case is otherwise in condition for allowance the examiner may cancel an obviously nonstatutory claim such as one to "A device substantially as shown and described." Applicant should be notified of the cancellation of the claim by an examiner's amendment.

1302.04(c) Cancellation of Claims to Nonelected Invention

See MPEP § 821.01 and § 821.02.

1302.04(d) Cancellation of Claim Lost in Interference [R-3]

See MPEP *>Chapter 2300<.

1302.04(e) Cancellation of Rejected Claims Following Appeal

See MPEP § 1214.06, § 1215.03, and § 1215.04.

**

1302.04(g) Identification of Claims

To identify a claim, a formal examiner's amendment should refer to it by the original number and, if renumbered in the allowed application, also by the new number.

>

1302.04(h) Rejoinder of Claims [R-3]

Any previously withdrawn claims that are being rejoined and allowed must be listed in the index of claims and on the Notice of Allowability to avoid a printer query. The examiner should notify the applicant of the rejoinder. See MPEP § 821.04.<

1302.05 Correction of Drawing [R-3]

Where an application otherwise ready for issue requires correction of the drawing, the application is processed for allowance in the Technology Center and then forwarded to the Publishing Division. Any papers subsequently filed by the applicant, including *>replacement< drawings, are forwarded to the Publishing Division in order to be matched with the application file. If the drawings that are received are still

not acceptable for publishing, the Publishing Division will mail a "Notice to File Corrected Application Papers," giving the applicant a non-extendable period in which to file the corrected drawings.

1302.05(a) Original Drawings Cannot Be Located [R-3]

When the original drawings cannot be located and the application is otherwise in condition for allowance, no "Official Search" need be undertaken. A replacement drawing should be obtained from the Office of Initial Patent Examination's records of the application as originally filed. If the reproduced drawings are not acceptable for publishing, applicant should be required to submit corrected drawings. An attachment to the Notice of Allowability should explain the problem and require the corrected drawings. If such an attachment is not included with the Notice of Allowability, the Publishing Division will mail a "Notice **>Regarding Drawings<," giving the applicant a non-extendable period in which to file the corrected drawings.

1302.06 Prior Foreign Application

See MPEP § 201.14(c) and § 202.03.

**

1302.08 Interference Search [R-3]

**

>When an application is in condition for allowance, an interference search must be made by performing a text search of the "US-PGPUB" database in EAST or WEST directed to the comprehensive inventive features in the broadest claim. If the application contains a claim directed to a nucleotide or peptide sequence, the examiner must submit a request to STIC to perform an interference search of the sequence. The text search may make use of the ".CLM." search symbol in order to limit the text search to the claims of the database references. If the search results identify any potential interfering subject matter, the examiner will review the application(s) with the potential interfering subject matter to determine whether interfering subject matter exists. If interfering subject matter does exist, the examiner will follow the guidance set forth in MPEP Chapter 2300. If there is no interfering subject matter then the examiner should prepare the application for issuance. A printout of only the database(s) searched, the query(ies) used in the interference search, and the date the interference search was performed must be made of record in the application file. The results of the interference search must not be placed in the application file. Completion of the interference search should be recorded in the "Interference Searched" section of the OACS "Search Notes" page with notation such as "PGPUB text search – March 1, 2005, see interference search printout" coupled with the examiner's initials.<

An interference search may be required in TC Working Group 3640. Inspection of pertinent prints, drawings, brief cards, and applications in TC Working Group 3640 will be done on request by an examiner in TC Working Group 3640.

1302.09 Classification, Print Figure, and Other Notations [R-3]

The examiner preparing the application for issue **>completes< the Issue Classification sheet**.

U.S. Patent and Trademark Office Part of Paper No.

**Examiners must review the data regarding prior U.S. applications to make sure that the information is correct when preparing the application for issue. If any claim to domestic priority under 35 U.S.C. 119(e), 120, 121, or 365(c) is added, deleted, and/or modified during prosecution of the application and such addition, deletion, and/or modification has been approved, the examiner must make sure that the information ** in the PALM database *>is< current and up to date. If the PALM system has not been updated, the application must be forwarded ** to the Technology Center (TC) Legal Instrument Examiner, with an explanation of the correction to be made **. Examiners should also review the data regarding prior provisional and foreign applications for accuracy.

**

See MPEP § 202.02 for notation as to parent or prior U.S. application, including provisional application, to be placed *>in the< file *>history<.

See MPEP § 202.03 for notation as to foreign patent application to be placed *>in the< file *>history<.

See MPEP § 1302.13 for name of examiner.

Examiners, when preparing **>an< application for issue, are to record the number of the claim selected for printing in the *Official Gazette* in the box labeled "PRINT CLAIM"** on the Issue Classification Sheet.

The claim or claims should be selected in accordance with the following instructions:

(A) The broadest claim should be selected.

(B) Examiners should ordinarily designate but one claim on each invention, although when a plurality of inventions are claimed in an application, additional claims up to a maximum of five may be designated for publication.

(C) A dependent claim should not be selected unless the independent claim on which it depends is also printed. In the case where a multiple dependent claim is selected, the entire chain of claims for one embodiment should be listed.

(D) In reissue applications, the broadest claim with changes or the broadest additional reissue claim should be selected for printing.

When recording this information in the box provided, the following items should be kept in mind:

(A) Write the claim number clearly in black ink.

(B) If multiple claims are selected, the claim numbers should be separated by commas.

(C) The claim designated must be referred to by using the renumbered patent claim number rather than the original application claim number

Examiners, when preparing **>an< application for issue, are to record the figure selected for printing in the *Official Gazette* in the box labeled "**Print Fig**." ** on the Issue Classification sheet. It is no longer necessary for drawings to be stamped approved or for the examiner to write this information in the space provided by the Draftsperson's stamp on the margin of the sheet of drawing.

Ordinarily a single figure is selected for printing. This figure should be consistent with the claim to be printed in the *Official Gazette*. The figure to be printed in the *Official Gazette* must not be one that is labeled "prior art." If there is no figure illustrative of or helpful in understanding the claimed invention, no figure need be selected. "None" may be written in the box labeled "**Print Fig**."**on the Issue Classification Sheet.

1302.10 Issue Classification Notations [R-3]

See MPEP § 903.07, § 903.07(b) and § 903.09 for notations to be applied ** on the Issue Classification sheet.

In all reissue applications, the number of the original patent which is being reissued should be placed in the box provided therefor below the box for the applicant's name.

1302.11 Reference to Assignment Division

The practice of referring certain applications to the Assignment Division when passing them to issue is no longer followed. See MPEP § 303.

1302.12 Listing of References [R-5]

All references which have been cited by the examiner during the prosecution, including those appearing in Board of Patent Appeals and Interferences decisions or listed in the reissue oath, must be listed on either a form PTO-892 or on an Information Disclosure Statement (PTO/SB/08 **) and initialed. All such reference citations will be printed in the patent. References listed by a patent examiner on a "Notice of References Cited," form PTO-892, will be indicated with an asterisk in the "References Cited" section of the front page of a patent document. An example of how the "References Cited" section of the patent will appear is as follows:

[56] **References Cited**

U.S. PATENT DOCUMENTS

2,234,192 ***** 7/1955 Greene..... 75/507
4,991,048 8/1990 Larkin.....206/207
5,000,186 12/1991 Amis.....267/340
5,000,993 ***** 12/1991 Thomas et al.....75/507

Hill, "Ferrous Precipitation," *Journal of the American Defenestration Association*, Jan. 1989, Pages 34–46.***** Clymerhill-Irons, "Ferrous Ascension for the Eighties," *Proceedings of the International Ferrous Ascension Society*, Jan.– Mar. 1979, Pages 1111–1163.

***** cited by examiner

Indication of whether a reference was listed by the examiner will be helpful in compiling statistical data related to prior art submissions so that the USPTO can better consider whether changes are required to the rules governing prior art statements.

Indication of a reference with an asterisk should not be considered to reflect any significance other than that the reference was listed on a "Notice of References Cited," form PTO-892. When an examiner lists references on a form PTO-892, the examiner lists references that are relied upon in a prior art rejection or mentioned as pertinent. See MPEP § 707.05(c). The examiner does not list references which were previously cited by the applicant (and initialed by an examiner) on an Information Disclosure Statement, for example, on a PTO/SB/08. See MPEP § 609 and § 707.05(b), (c) and (d). No distinction will be made in the "References Cited" section for other sources of references. Thus, references cited in a protest, by an attorney or agent not acting in a representative capacity but on behalf of a single inventor, and by the applicant will not be distinguished.

At time of allowance, the examiner may cite pertinent art in an examiner's amendment or statement of reasons for allowance. Such pertinent art should be listed as usual on form PTO-892, a copy of which is attached to the Notice of Allowability form PTOL-37. Such pertinent art is not sent to the applicant, but foreign patent documents and non-patent literature will be scanned and added to the Image File Wrapper (IFW) for viewing and downloading by the applicant, if desired. Such citation of art is important in the case of continuing applications where significant prior art is often of record in the parent case. In the rare instance where no art is cited in a continuation application, all the references cited during the prosecution of the parent application will be listed at allowance for printing in the patent. See MPEP § 707.05 and § 707.05(a).

When preparing an application for allowance, the technical support staff will verify that there is at least one list of references (PTO-892 or PTO/SB/08 **) in the application. The technical support staff will also verify that each reference on the Information Disclosure Statement has either been initialed by the examiner or lined-through by the examiner. All lists of references are maintained in the application file.

In the first action after termination of an interference, the examiner should make of record in each application all references not already of record which were pertinent to any preliminary motions and which were discussed in the decision on motion.

In any application, otherwise ready for issue, in which an erroneous citation has not been formally corrected in an official paper, the examiner is directed to correct the citation by an examiner's amendment. See MPEP § 707.05(g).

Any new reference cited when the application is in issue, under the practice of MPEP § 1308.01, should be added by way of a PTO-892 or PTO/SB/08.

All copies of references placed in the file wrapper during prosecution should be retained therein when the allowed application is forwarded to the Publishing Division.

1302.13 Signing [R-3]

The primary examiner and the assistant examiner involved in the allowance of an application will ** type their names on the Issue Classification sheet. The assistant examiner shall place his or her initials after his or her typed ** name. The primary examiner will place his or her signature in the appropriate box ** on the Issue Classification sheet so that the typed ** name can still be easily read. A primary examiner who prepares an application for issue types ** his or her name and signs the file wrapper *only* in the "Primary Examiner" box ** on the Issue Classification sheet. A line should be drawn through the "Assistant Examiner" box to make it clear that the absence of a name in the box was not an oversight.

Only the names of the primary examiner and the assistant examiner appearing on ** the Issue Classification Sheet will be listed in the printed patent.

1302.14 Reasons for Allowance [R-5]

37 CFR 1.104. Nature of examination.

*****

(e) *Reasons for allowance*. If the examiner believes that the record of the prosecution as a whole does not make clear his or her reasons for allowing a claim or claims, the examiner may set forth such reasoning. The reasons shall be incorporated into an Office action rejecting other claims of the application or patent under reexamination or be the subject of a separate communication to the applicant or patent owner. The applicant or patent owner may file a statement commenting on the reasons for allowance within such time as may be specified by the examiner. Failure by the examiner to respond to any statement commenting on reasons for allowance does not give rise to any implication.

>

I. < REASONS FOR ALLOWANCE

One of the primary purposes of 37 CFR 1.104(e) is to improve the quality and reliability of issued patents by providing a complete file history which should clearly reflect, as much as is reasonably possible, the reasons why the application was allowed. Such information facilitates evaluation of the scope and strength of a patent by the patentee and the public and may help avoid or simplify litigation of a patent.

The practice of stating the reasons for allowance is not new, and the rule merely formalizes the examiner's existing authority to do so and provides applicants or patent owners an opportunity to comment upon any such statement of the examiner.

It should be noted that the setting forth of reasons for allowance is not mandatory on the examiner's part. However, in meeting the need for the application file history to speak for itself, it is incumbent upon the examiner in exercising his or her responsibility to the public, to see that the file history is as complete as is reasonably possible.

When an application is finally acted upon and allowed, the examiner is expected to determine, at the same time, whether the reasons why the application is being allowed are evident from the record.

Prior to allowance, the examiner may also specify allowable subject matter and provide reasons for indicating such allowable subject matter in an Office communication.

In determining whether reasons for allowance should be recorded, the primary consideration lies in the first sentence of 37 CFR 1.104(e) which states:

> If the examiner believes that the record of the prosecution *as a whole* does not make clear his or her reasons for allowing a claim or claims, the examiner may set forth such reasoning. (Emphasis added).

In most cases, the examiner's actions and the applicant's replies make evident the reasons for allowance, satisfying the "record as a whole" proviso of the rule. This is particularly true when applicant fully complies with 37 CFR 1.111 (b) and (c) and 37 CFR 1.133(b). Thus, where the examiner's actions clearly point out the reasons for rejection and the applicant's reply explicitly presents reasons why claims are patentable over the reference, the reasons for allowance are in all probability evident from the record and **no** statement should be necessary. Conversely, where the record is not explicit as to reasons, but allowance is in order, then a logical extension of 37 CFR 1.111 and 1.133 would dictate that the examiner should make reasons of record and such reasons should be specific.

Where specific reasons are recorded by the examiner, care must be taken to ensure that statements of reasons for allowance (or indication of allowable subject matter) are accurate, precise, and do not place unwarranted interpretations, whether broad or narrow, upon the claims. The examiner should keep in mind the possible misinterpretations of his or her statement that may be made and its possible effects. Each statement should include at least (1) the major difference

in the claims not found in the prior art of record, and (2) the reasons why that difference is considered to define patentably over the prior art if either of these reasons for allowance is not clear in the record. The statement is not intended to necessarily state all the reasons for allowance or all the details why claims are allowed and should not be written to specifically or impliedly state that all the reasons for allowance are set forth. Where the examiner has a large number of reasons for allowing a claim, it may suffice to state only the major or important reasons, being careful to so couch the statement. For example, a statement might start: "The primary reason for the allowance of the claims is the inclusion of the limitation__in all the claims which is not found in the prior art references," with further amplification as necessary.

Stock paragraphs with meaningless or uninformative statements of the reasons for the allowance should not be used. It is improper to use a statement of reasons for allowance to attempt to narrow a claim by providing a special definition to a claim limitation which is argued by applicant, but not supported by a special definition in the description in cases where the ordinary meaning of the term in the prior art demonstrates that the claim remains unpatentable for the reasons of record, and where such claim narrowing is only tangential to patentability. Cf. *Festo Corp. v. Shoketsu Kinzoku Kogyo Kabushiki Co*., 535 U.S. 722, 741, 62 USPQ2d 1705, 1714 (2002). The statement of reasons for allowance by the examiner is intended to provide information equivalent to that contained in a file in which the examiner's Office actions and the applicant's replies make evident the examiner's reasons for allowing claims.

Examiners are urged to carefully carry out their responsibilities to see that the application file contains a complete and accurate picture of the Office's consideration of the patentability of the application.

Under the rule, the examiner must make a judgment of the individual record to determine whether or not reasons for allowance should be set out in that record. These guidelines, then, are intended to aid the examiner in making that judgment. They comprise illustrative examples as to applicability and appropriate content. They are not intended to be exhaustive.

>

II. < EXAMPLES OF WHEN IT IS LIKELY THAT A STATEMENT SHOULD BE ADDED TO THE RECORD

(A) Claims are allowed on the basis of one (or some) of a number of arguments and/or affidavits presented, and a statement is necessary to identify which of these were persuasive, for example:

(1) When the arguments are presented in an appeal brief.

(2) When the arguments are presented in an ordinary reply, with or without amendment of claims.

(3) When both an affidavit under 37 CFR 1.131 and arguments concerning rejections under 35 U.S.C. 102 and 103 are presented.

(B) First action issue:

(1) Of a noncontinuing application, wherein the claims are very close to the cited prior art and the differences have not been discussed elsewhere.

(2) Of a continuing application, wherein reasons for allowance are not apparent from the record in the parent case or clear from preliminary filed matters.

(C) Withdrawal of a rejection for reasons not suggested by applicant, for example:

(1) As a result of an appeal conference.

(2) When applicant's arguments have been misdirected or are not persuasive alone and the examiner comes to realize that a more cogent argument is available.

(3) When claims are amended to avoid a rejection under 35 U.S.C. 102, but arguments (if any) fail to address the question of obviousness.

(D) Allowance after remand from the Board of Patent Appeals and Interferences.

(E) Allowance coincident with the citation of newly found references that are very close to the claims, but claims are considered patentable thereover:

(1) When reference is found and cited (but not argued) by applicant.

(2) When reference is found and cited by examiner.

(F) Where the reasons for allowance *are* of record but, in the examiner's judgment, are unclear (e.g., spread throughout the file history) so that an unreasonable effort would be required to collect them.

(G) Allowance based on a claim interpretation which might not be readily apparent, for example:

(1) Article claims in which method limitations impart patentability.

(2) Method claims in which article limitations impart patentability.

(3) Claim is so drafted that "nonanalogous" art is not applicable.

(4) Preamble or functional language "breathes life" into claim.

(H) Allowance following decision by the United States Court of Appeals for the Federal Circuit or District Court of the District of Columbia.

The reasons for allowance should refer to and incorporate the briefs and the court decision.

(I) Where the claims are considered patentable over the X and/or Y references cited in a search report of a corresponding PCT application and the reasons for allowance are not apparent from the record.

>

III. < EXAMPLES OF STATEMENTS OF SUITABLE CONTENT

(A) The primary reason for allowance of the claims is the inclusion of .03 to .05 percent nickel in all of the claims. Applicant's second affidavit in example 5 shows unexpected results from this restricted range.

(B) During two telephonic interviews with applicant's attorney, Mr..... on 5/6 and 5/10/77, the examiner stated that applicant's remarks about the placement of the primary teaching's grid member were persuasive, but he pointed out that applicant did not claim the member as being within the reactor. Thus, an amendment doing such was agreed to.

(C) The claims in the application are deemed to be directed to an nonobvious improvement over the invention patented in Pat. No. 3,953,224. The claims comprise baffle means 12 whose effective length in the extraction tower may be varied so as to optimize and to control the extraction process.

(D) Upon reconsideration, this application has been awarded the effective filing date of application number -/---. Thus the rejection under 35 U.S.C. 102(d) and 103 over Belgium Patent No. 757,246 is withdrawn.

(E) The specific limitation as to the pressure used during compression was agreed to during the telephone interview with applicants' attorney. During said interview, it was noted that applicants contended in their amendment that a process of the combined applied teachings could not result in a successful article within a particular pressure range (see page 3, bottom, of applicant's amendment). The examiner agreed and allowed the application after incorporating the pressure range into the claim.

(F) In the examiner's opinion, it would not have been obvious to a person of ordinary skill in the art first to eliminate one of top members 4, second to eliminate plate 3, third to attach remaining member 4 directly to tube 2 and finally to substitute this modified handle for the handle 20 of Nania (see Fig. 1) especially in view of applicant's use of term "consisting."

(G) The application is allowable for the reasons set forth on page -- of the decision of the Court of Appeals for the Federal Circuit, which is hereby incorporated by reference. As noted therein, and as argued on page -- of Appellant's brief, the claimed invention requires a one piece tubular member whereas the closest prior art requires a multiple piece assembly which does not teach or suggest the claimed invention.

>

IV. < EXAMPLES OF STATEMENTS THAT ARE NOT SUITABLE AS TO CONTENT

(A) The 3-roll press couple has an upper roll 36 which is swingably adjustable to vary the pressure selectively against either of the two lower rolls. (NOTE: The significance of this statement may not be clear if no further explanation is given.)

(B) The main reasons for allowance of these claims are applicant's remarks in the appeal brief and an agreement reached in the appeal conference.

(C) The instant composition is a precursor in the manufacture of melamine resins. A thorough search of the prior art did not bring forth any composition which corresponds to the instant composition. The examiner in the art also did not know of any art which could be used against the instant composition.

(D) Claims 1-6 have been allowed because they are believed to be both novel and nonobvious.

The examiner should *not* include in his or her statement any matter which does not relate directly to the reasons for allowance. For example:

(E) Claims 1 and 2 are allowed because they are patentable over the prior art. If applicants are aware of better art than that which has been cited, they are required to call such to the attention of the examiner.

(F) The reference Jones discloses and claims an invention similar to applicant's. However, a comparison of the claims, as set forth below, demonstrates the conclusion that the inventions are noninterfering.

Most instances when the examiner finds a need to place in the file a statement of the reasons for allowing a claim or claims will come at the time of allowance. In such cases, the examiner should (a) check the appropriate box on the form PTOL-37 and (b) attach thereto a paper containing the examiner's statement of reasons for allowance. Such a statement should be typewritten. The paper should identify the application number and be clearly labeled "Statement of Reasons for Allowance." It should also specify that comments may be filed by the applicant on the statement and should preferably be submitted with the payment of the issue fee so as not to delay processing of the application and in any event no later than payment of the issue fee.

Form paragraph 13.03 may be used for this purpose.

¶ *13.03 Reasons for Allowance*

The following is an examiner's statement of reasons for allowance: **[1]**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Examiner Note:

1. Do not use this form paragraph in reexamination proceedings, see form paragraph 22.16.

2. In bracket 1, provide a detailed statement of the reason(s) certain claim(s) have been indicated as being allowable or as containing allowable subject matter.

A statement may be sent to applicant with other communications, where appropriate, but should be clearly labeled as a "Statement of Reasons for Allowance" and contain the data indicated above.

Form paragraph 13.13.01 may be used to specify the reasons for indicating allowable subject matter in a communication prior to allowance.

¶ *13.03.01 Reasons for Indication of Allowable Subject Matter*

The following is a statement of reasons for the indication of allowable subject matter: **[1]**

Examiner Note:

1. This form paragraph is for use in an Office action prior to allowance of the application. Use form paragraph 13.03 in the Notice of Allowability.

2. In bracket 1, provide a detailed statement of the reason(s) certain claim(s) have been indicated as being allowable or as containing allowable subject matter.

>

V. < APPLICANT'S COMMENTS ON THE REASONS FOR ALLOWANCE

The examiner's statement of reasons for allowance is an important source of prosecution file history. See *Zenith Labs., Inc. v. Bristol-Myers Squibb Co.*, 19 F.3d 1418, 30 USPQ2d 1285 (Fed. Cir. 1996). The examiner's statement of reasons for allowance is the personal opinion of the examiner as to why the claims are allowable. The examiner's statement should not create an *estoppel*. Only applicant's statements should create an *estoppel*. The failure of applicant to comment on the examiner's statement of reasons for allowance should not be treated as acquiescence to the examiner's statement. >See *Salazar v. Procter & Gamble Co*., 414 F.3d 1342, 1347, 75 USPQ2d 1369, 1373 (Fed. Cir. 2005).< Any inferences or presumption are to be determined on a case-by-case basis by a court reviewing the patent, the USPTO examining the patent in a reissue application or a reexamination proceeding, the Board of Patent Appeals and Interferences reviewing the patent in an interference proceeding, etc. Applicant may set forth his or her position if he or she disagrees with the examiner's reasons for allowance.

Comments filed by the applicant on the examiner's statement of reasons for allowance, should preferably be submitted no later than the payment of the issue fee, to avoid processing delays. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance." Comments will be entered in the application file by the Office of Publication

with an appropriate notation on the "Contents" list on the file wrapper.

The application file generally will not be returned to the examiner after the entry of such comments made by applicant on the examiner's statement of reasons for allowance. Therefore, the absence of an examiner's response to applicant's comments does not mean that the examiner agrees with or acquiesces in the reasoning of such comments. See 37 CFR 1.104(e). While the examiner may review and comment upon such a submission, the examiner has no obligation to do so.

1303 Notice of Allowance [R-5]

37 CFR 1.311. Notice of Allowance.

(a) If, on examination, it appears that the applicant is entitled to a patent under the law, a notice of allowance will be sent to the applicant at the correspondence address indicated in § 1.33. The notice of allowance shall specify a sum constituting the issue fee which must be paid within three months from the date of mailing of the notice of allowance to avoid abandonment of the application. The sum specified in the notice of allowance may also include the publication fee, in which case the issue fee and publication fee (§ 1.211(e)) must both be paid within three months from the date of mailing of the notice of allowance to avoid abandonment of the application. This three-month period is not extendable.

(b) An authorization to charge the issue fee or other post-allowance fees set forth in § 1.18 to a deposit account may be filed in an individual application only after mailing of the notice of allowance. The submission of either of the following after the mailing of a notice of allowance will operate as a request to charge the correct issue fee or any publication fee due to any deposit account identified in a previously filed authorization to charge such fees:

(1) An incorrect issue fee or publication fee; or

(2) A fee transmittal form (or letter) for payment of issue fee or publication fee.

A Notice of Allowance is prepared and mailed, and the mailing date appearing thereon is recorded on the paper or image file wrapper table of contents.

If an application is subject to publication under 37 CFR 1.211, the Notice of Allowance will require both the issue fee and the publication fee. See 37 CFR 1.211(e). The Notice of Allowance and Issue Fee Due form (PTOL-85) has been revised and the revised form is entitled "Notice of Allowance and Fee(s) Due." Revision of the form was necessary to include the amount of any required publication fee, as provided in 37 CFR 1.211(e) and 1.311, and to more clearly communicate the amount of any patent term extension or adjustment earned under 35 U.S.C. 154(b). As revised, the PTOL-85 form is three pages long, with all three pages being mailed to the applicant and a duplicate being retained in the application file. The first two pages of the revised form include an indication that the publication fee is due, if the application was subject to publication and the publication fee has not already been paid. Part B of the revised form (PTOL-85B) *>must< be returned to the Office with the payment of the issue fee. ** Applicants are reminded to transmit an extra copy of the PTOL-85B when payment of the issue fee is by way of authorization to debit a Deposit Account. See MPEP § 509.01.

There are *>different< versions of page three of the revised PTOL-85 form, depending upon the filing date of the application >and the application type<:

(A) For applications filed before June 8, 1995, page three will state that "This application was filed prior to June 8, 1995, thus no Patent Term Extension or Adjustment applies." Utility and plant applications filed before June 8, 1995 are eligible for a 17 year term and thus are not eligible for patent term extension or adjustment under 35 U.S.C. 154(b).

(B) For applications filed on or after June 8, 1995 and before May 29, 2000, page three will state that "The Patent Term Extension is _ *>day(s)<. Any patent to issue from the above identified application will include an indication of the _ extension on the front page. If a Continued Prosecution Application (CPA) was filed in the above identified application, the filing date that determines Patent Term Extension is the filing date of the most recent CPA." Utility and plant applications filed on or after June 8, 1995 and before May 29, 2000 may be eligible for patent term extension. See 35 U.S.C. 154(b), effective June 8, 1995, and 37 CFR 1.701.

(C) For applications filed on or after May 29, 2000, page three will state that "The Patent Term Adjustment to date is _ *>day(s)<. If the issue fee is paid on a date that is three months after the mailing date of this notice, and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the **>Patent Term Adjustment< will be _ *>day(s)<. If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term *>Adjustment< is the filing date of the most recent CPA." Utility and plant appli-

cations filed on or after May 29, 2000 may be eligible for patent term adjustment. See 35 U.S.C. 154(b), effective May 29, 2000, and 37 CFR 1.702 - 1.705, especially 37 CFR 1.705(a).

>

(D) For reissue applications, page three will state that "A reissue patent is for 'the unexpired part of the term of the original patent.' See 35 U.S.C. 251. Accordingly, the above-identified reissue application is not eligible for Patent Term Extension or Adjustment under 35 U.S.C. 154(b)."

(E) For design applications, page three will state that "Design patents have a term measured from the issue date of the patent and the term remains the same length regardless of the time that the application for the design patent was pending. Since the above-identified application is an application for a design patent, the patent is not eligible for Patent Term Extension or Adjustment under 35 U.S.C. 154(b)."<

For more information about eighteen month publication, publication fees, and patent term adjustment, visit the USPTO Internet web site at www.uspto.gov.

NOTICE OF ALLOWANCE AND FEE(S) DUE

EXAMINER	
ART UNIT	PAPER NUMBER
DATE MAILED:	

APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.

TITLE OF INVENTION:

APPLN. TYPE	SMALL ENTITY	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PTOL-85 (Rev. 07/06) Approved for use through 04/30/2007.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail **Mail Stop ISSUE FEE**
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Certificate of Mailing or Transmission
I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

This collection of information is required by 37 CFR 1.311. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, Virginia 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

DATE MAILED:

Determination of Patent Term Extension under 35 U.S.C. 154 (b)
(application filed after June 7, 1995 but prior to May 29, 2000)

The Patent Term Extension is day(s). Any patent to issue from the above-identified application will include an indication of the day extension on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Extension is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Determination of Patent Term Extension or Adjustment under 35 U.S.C. 154 (b)

Design patents have a term measured from the issue date of the patent and the term remains the same length regardless of the time that the application for the design patent was pending. Since the above-identified application is an application for a design patent, the patent is not eligible for Patent Term Extension or Adjustment under 35 U.S.C. 154(b).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

PTOL-85 (Rev. 07/06) Approved for use through 04/30/2007.

<

1303.01 Amendment Received After Allowance [R-3]

If the amendment is filed under 37 CFR 1.312, see MPEP § 714.15 to § 714.16(e). If the amendment contains claims copied from a patent, see MPEP *>Chapter 2300<. >Any submissions of replacement drawings filed after allowance should be forwarded to the Office of Patent Publication.<

Reference to an Issue Batch Number is no longer necessary because the Office no longer stores and tracks applications according to issue batches.

Any paper filed after receiving the Issue Notification should include the indicated patent number, unless the application has been withdrawn from issue.

1303.02 Undelivered [R-2]

In case a Notice of Allowance is returned, and a new notice is sent (see MPEP § 707.13), the date of sending the notice must be changed in the file to agree with the date of such remailing. >If the application is an Image File Wrapper (IFW) application, the original document, a copy of the returned document with any markings, and the remailed document should be retained in the application so that the file history is clear.<

1303.03 Not Withheld Due to Death of Inventor

The Notice of Allowance will not be withheld due to death of the inventor if the executor or administrator has not intervened. See MPEP § 409.01(f).

1304 Amendments After D-10 Notice

For amendments received after D-10 Notice, see MPEP § 130.

1304.01 Withholding From Issue of "Secrecy Order" Applications

"Secrecy Order" applications are not sent to issue even when all of the claims have been allowed. Instead of mailing a Notice of Allowance, a D-10 Notice is sent. See MPEP § 130.

If the "Secrecy Order" in an application is withdrawn after the D-10 notice is mailed, the application should then be treated like an ordinary application in condition for allowance.

1305 Jurisdiction [R-2]

Jurisdiction of the application remains with the primary examiner until the Notice of Allowance is mailed. However, the examiner may make examiner's amendments correcting obvious errors, as when brought to the attention of the examiner by the printer, and also may admit amendments under 37 CFR 1.312 which are confined to matters of form in the specification or claims, or to the cancellation of a claim or claims. The examiner's action on other amendments under 37 CFR 1.312 consists of a recommendation to the *>Director<.

To regain jurisdiction over the application, the examiner must write a letter to the *>Director< requesting it. See MPEP § 1308 and § 1308.02.

Once the patent has been granted, the U.S. Patent and Trademark Office can take no action concerning it, except as provided in 35 U.S.C. 135, 35 U.S.C. 251 through 256, 35 U.S.C. 302 through 307 and 35 U.S.C. 311 through 316.

1306 Issue Fee [R-5]

The issue fee and any required publication fee are due 3 months from the date of the Notice of Allowance. The amount of the issue fee and any required publication fee are shown on the Notice of Allowance**>. The Notice of Allowance will also< reflect any issue fee previously paid in the application. >The issue fee due does not reflect a credit for any previously paid issue fee in the application. If an issue fee has previously been paid in the application as reflected in the Notice of Allowance, the return of Part B (Fee(s) Transmittal form) will be considered a request to reapply the previously paid issue fee toward the issue fee that is now due.< For example, if the application was allowed and the issue fee paid, but applicant withdrew the application from issue and filed a Request for Continued Examination (RCE) and the application was later allowed, the Notice of Allowance will reflect an issue fee amount that is due ** and the issue fee that was previously paid. Had applicant filed a Continued Prosecution Application (CPA) instead of an RCE, the **>Notice of Allowance< would not reflect any issue fee paid before the CPA was filed because the issue fee was paid in a prior application. Note that because the amount of the fees(s) due is determined by the fees set forth in 37

CFR 1.18 which are in effect as of the date of submission of payment of the fees(s), the amount due at the time the fee(s) are paid may differ from the amount indicated on the Notice of Allowance. Accordingly, applicants are encouraged, at the time of submitting payment of the fees(s), to determine whether the amount of the issue fee due or any required publication fee has changed to avoid the patent lapsing for failure to pay the balance of the issue fee due (37 CFR 1.317) or becoming abandoned for failure to pay the publication fee. The amounts due under 35 U.S.C. 41(a) (i.e., the issue fee, but not the publication fee) are reduced by 50 per centum for small entities.

Applicants and their attorneys or agents are urged to use the Fee(s) Transmittal form (PTOL-85B) provided with the Notice of Allowance when submitting their payments. Unless otherwise directed, all post allowance correspondence should be addressed "Mail Stop Issue Fee."

Where it is clear that an applicant actually intends to pay the issue fee and required publication fee, but the proper fee payment is not made, for example, an incorrect issue fee amount is supplied, or a PTOL-85B Fee(s) Transmittal form is filed without payment of the issue fee, a general authorization to pay fees or a specific authorization to pay the issue fee, submitted prior to the mailing of a notice of allowance, will be allowed to act as payment of the correct issue fee. 37 CFR 1.311(b). In addition, where the deposit account information is added to the Fee(s) Transmittal form (PTOL-85B), but the check box authorizing that the deposit account be charged the issue fee is not checked, the deposit account will still be charged the required issue fee and any required publication fee.

Technology Center personnel should forward all post allowance correspondence to the Office of Initial Patent Examination (OIPE). The papers received by the OIPE will be scanned and matched with the appropriate application and the entire application will be forwarded to the appropriate Technology Center for processing.

The payment of the issue fee due may be simplified by using a U.S. Patent and Trademark Office Deposit Account or a credit card payment with form PTO-2038 for such a fee. See MPEP § 509. However, any such payment must be specifically authorized by reference to the "issue fee" or "fees due under 37 CFR 1.18."

The fee(s) due will be accepted from the applicant, assignee, or a registered attorney or agent, either of record or under 37 CFR 1.34*.

The Director has no authority to extend the time for paying the issue fee. Intentional failure to pay the issue fee within the 3 months permitted by 35 U.S.C. 151 does not amount to unavoidable or unintentional delay in making payment.

1306.01 Deferring Issuance of a Patent [R-5]

37 CFR 1.314. Issuance of patent.

If applicant timely pays the issue fee, the Office will issue the patent in regular course unless the application is withdrawn from issue (§ 1.313) or the Office defers issuance of the patent. To request that the Office defer issuance of a patent, applicant must file a petition under this section including the fee set forth in § 1.17(h) and a showing of good and sufficient reasons why it is necessary to defer issuance of the patent.

There is a public policy that the patent will issue in regular course once the issue fee is timely paid. 37 CFR 1.314. It has been the policy of the U.S. Patent and Trademark Office to defer issuance of a patent, upon request, for a period of up to 1 month only, in the absence of extraordinary circumstances or requirement of the regulations (e.g., 37 CFR 1.177) which would dictate a longer period. Situations like negotiation of licenses, time for filing in foreign countries, collection of data for filing a continuation-in-part application, or a desire for simultaneous issuance of related applications are not considered to amount to extraordinary circumstances.

A petition to defer issuance of a patent is not appropriate until the issue fee is paid. Issuance of a patent cannot be deferred after an allowed application receives a patent number and issue date unless the application is withdrawn from issue under 37 CFR 1.313(b) or (c). The petition to defer is considered at the time the petition is correlated with the application file before the appropriate deciding official (MPEP § 1002.02(b)). In order to facilitate consideration of a petition for deferment of issue, the petition should be firmly attached to the **>Fee(s)< Transmittal form (PTOL-85B) and clearly labeled as a Petition to Defer Issue; Attention: Office of Petitions.

1306.02 Simultaneous Issuance of Patents [R-2]

Where applications have been allowed and a Notice of Allowance and **>Fee(s)< Due (PTOL-85) has been mailed in each application, a request for simultaneous issuance will be granted. Unless all the applications have reached this stage of processing, or a specific requirement of the regulations is involved (e.g., 37 CFR 1.177), a request for simultaneous issuance generally will not be granted.

Applicants and their attorneys who desire the simultaneous issue of allowed applications must submit the request to: **>Mail Stop Issue Fee, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450<, Attention: Office of Patent Publication.

The request must contain the following information about *each* allowed application for which simultaneous issue is requested:

(A) Application number,
(B) Filing date,
(C) Name(s) of inventor(s),
(D) Title of invention, and
(E) Date of allowance.

Separate copies of the request must accompany *each* **>Fee(s)< Transmittal (PTOL-85B).

1306.03 Practice After Payment of Issue Fee; Receipt of Issue Notification [R-5]

Under the current publication process, utility and reissue patents are issued within about four weeks after the issue fee and any required publication fee are received in the Office. A patent number and issue date will be assigned to an application and an Issue Notification will be mailed after the issue fee has been paid and processed by the USPTO. Because the Issue Notification may be mailed less than two weeks before the application is expected to issue as a patent, applicants are advised to file any continuing application before receiving the Issue Notification to avoid loss of copendency.

Since the Office cannot ensure that any paper filed after payment of the issue fee will reach the appropriate USPTO official before the date the application issues as a patent, applicants are also encouraged to file any necessary amendments, assignments, petitions, information disclosure statements, or other papers prior to the date of issue fee payment, preferably within one month after the Notice of Allowance has been mailed. See MPEP § 502 for post allowance correspondence.

In order to minimize disruptions and delays in the printing process, the application is **not** available after the Notice of Allowance has been mailed unless necessary for "Query Printer Waiting", amendments submitted under 37 CFR 1.312, information disclosure statements, and petitions. Corrected filing receipts will not be mailed after the date of mailing of the Notice of Allowance unless special circumstances exist. Duplicate filing of papers is not recommended (and may be treated as a failure to engage in reasonable efforts to conclude prosecution pursuant to 37 CFR 1.704(c)(10)). The same correspondence should not be mailed and faxed to the Office unless the duplication has been specifically required by the Office. See MPEP § 719.01(a).

ORDERING OF ALLOWED APPLICATIONS >MAINTAINED IN PAPER<

Examining corps personnel must submit a request to the Office of Patent Publications Image Assistance Center when ordering an allowed application file >that is maintained in paper<.

1307 Change in Classification of Cases Which Are in Issue

See MPEP § 903.07.

1308 Withdrawal From Issue [R-5]

37 CFR 1.313. Withdrawal from issue.

(a) Applications may be withdrawn from issue for further action at the initiative of the Office or upon petition by the applicant. To request that the Office withdraw an application from issue, applicant must file a petition under this section including the fee set forth in § 1.17(h) and a showing of good and sufficient reasons why withdrawal of the application from issue is necessary. A petition under this section is not required if a request for continued examination under § 1.114 is filed prior to payment of the issue fee. If the Office withdraws the application from issue, the Office will issue a new notice of allowance if the Office again allows the application.

(b) Once the issue fee has been paid, the Office will not withdraw the application from issue at its own initiative for any reason except:

(1) A mistake on the part of the Office;
(2) A violation of § 1.56 or illegality in the application;

(3) Unpatentability of one or more claims; or

(4) For interference.

(c) Once the issue fee has been paid, the application will not be withdrawn from issue upon petition by the applicant for any reason except:

(1) Unpatentability of one of more claims, which petition must be accompanied by an unequivocal statement that one or more claims are unpatentable, an amendment to such claim or claims, and an explanation as to how the amendment causes such claim or claims to be patentable;

(2) Consideration of a request for continued examination in compliance with § 1.114; or

(3) Express abandonment of the application. Such express abandonment may be in favor of a continuing application.

(d) A petition under this section will not be effective to withdraw the application from issue unless it is actually received and granted by the appropriate officials before the date of issue. Withdrawal of an application from issue after payment of the issue fee may not be effective to avoid publication of application information.

I. WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE APPLICANT

A. Prior to the Payment of Issue Fee

If the applicant wishes to have an application withdrawn from issue, he or she must petition the Director under 37 CFR 1.313(a) or file a request for continued examination (RCE) under 37 CFR 1.114 with a submission and the fee set forth in 37 CFR 1.17(e). A submission may be an information disclosure statement (37 CFR 1.97 and 1.98) or an amendment. The RCE practice does not apply to utility or plant applications filed before June 8, 1995 and design applications. See MPEP § 706.07(h), subsections I, II and IX. If an applicant files a RCE (with the fee and a submission), the applicant need not pay the issue fee to avoid abandonment of the application. Applicants are cautioned against filing a RCE prior to payment of the issue fee and subsequently paying the issue fee (before the Office acts on the RCE) because doing so may result in issuance of a patent without consideration of the RCE (if the RCE is not matched with the application before the application is processed into a patent).

Petitions under 37 CFR 1.313(a) to have an application withdrawn from issue should be directed to the Technology Center (TC) Director to which the application is assigned (see MPEP § 1002.02(c)). Unless applicant receives a written communication from the Office that the application has been withdrawn from issue, the issue fee must be timely submitted to avoid abandonment.

Applicant may also file a continuing application on or before the day the issue fee is due and permit the parent application to become abandoned for failure to pay the issue fee (35 U.S.C. 151).

B. After the Payment of Issue Fee

Once the issue fee is paid, withdrawal is permitted only for the reasons stated in 37 CFR 1.313(c). The status of the application at the time the petition is filed is determinative of whether the petition is considered under 37 CFR 1.313(a) or 37 CFR 1.313(c). Petitions under 37 CFR 1.313(c) to have an application withdrawn after payment of the issue fee should be directed to the Office of Petitions (see MPEP § 1002.02(b)).

In addition to the specific reasons identified in 37 CFR 1.313(c)(1)-(3) applicant should identify some specific and significant defect in the allowed application before the application will be withdrawn from issue. A petition under 37 CFR 1.313(c) based on the reason specified in 37 CFR 1.313(c)(2) can only be filed in utility or plant applications filed on or after June 8, 1995 because the request for continued examination (RCE) practice does not apply to these types of applications filed before June 8, 1995 and design applications. See MPEP § 706.07(h), subsections I and IX. Such a petition along with the petition fee set forth in 37 CFR 1.17(h) must include a request for continued examination in compliance with 37 CFR 1.114 (e.g., a submission and the fee set forth in 37 CFR 1.17(e)). The continued prosecution application (CPA) practice under 37 CFR 1.53(d) only applies to design applications. See MPEP § 201.06(d). To withdraw from issue a utility or plant application, an applicant may wish to file a petition under 37 CFR 1.313(c)(2) with a RCE or under 37 CFR 1.313(c)(3) for the express abandonment of the application in favor of a continuing application under 37 CFR 1.53(b), but not a CPA under 37 CFR 1.53(d).

Any petition filed under 37 CFR 1.313(c) to withdraw an application from issue after payment of the issue fee should be clearly marked “Petition under 37 CFR 1.313(c).” Petitions to withdraw an application from issue under 37 CFR 1.313(c) may be:

(A) mailed to "Mail Stop Petition, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450";

(B) transmitted by facsimile to (571) 273-0025; or

(C) hand-carried to the Office of Petitions (see MPEP § 1730 for the location).

Applicants are strongly advised to transmit by facsimile or hand-carry the petition to the Office of Petitions to allow sufficient time to process the petition and if the petition can be granted, withdraw the application from issue. While a petition to withdraw an application from issue may be granted as late as one day prior to the patent issue date, to avoid publication and dissemination, the petition decision must be granted at least 3 weeks prior to the issue date.

The Office cannot ensure that any petition under 37 CFR 1.313(c) will be acted upon prior to the date of patent grant. See *Filing of Continuing Applications, Amendments, or Petitions after Payment of Issue Fee*, Notice, 1221 *Off. Gaz. Pat. Office* 14 (April 6, 1999). Since a RCE (unlike a CPA under 37 CFR 1.53(d)) is not any type of new application filing, the Office cannot grant a petition to convert an untimely RCE to a continuing application under 37 CFR 1.53(b). Therefore, applicants are strongly cautioned to file any desired RCE prior to payment of issue fee. In addition, applicants considering filing a RCE after payment of the issue fee are strongly cautioned to call the Office of Petitions to determine whether sufficient time remains before the patent issue date to consider (and grant) a petition under 37 CFR 1.313(c) and what steps are needed to ensure that a grantable petition under 37 CFR 1.313(c) is before an appropriate official in the Office of Petitions in sufficient time to grant the petition before the patent is issued.

>If an application has been withdrawn from issue after the payment of the issue fee and the application is again found allowable, see MPEP § 1306 regarding request to reapply a previously paid issue fee toward the issue fee that is now due in the same application.<

II. WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE

The Director may withdraw an application from issue under 37 CFR 1.313 on his or her own initiative. See >*BlackLight Power Inc. v. Rogan*, 295 F.3d 1269, 1273, 63 USPQ2d 1534, 1537 (Fed. Cir. 2002) (USPTO may withdraw a patent application from issuance after the issue fee has been paid.) and< *Harley v. Lehman*, 981 F. Supp. 9, 12, 44 USPQ2d 1699, 1702 (D.D.C. 1997) (adoption of 37 CFR 1.313(b) permitting applications to be withdrawn from issue under certain narrow circumstances not directly covered by the statute was not unreasonable). 35 U.S.C. 151 provides that upon payment of the issue fee, "the patent shall issue." Thus, an application cannot be withdrawn from issue after payment of the issue fee consistent with 35 U.S.C. 151 unless there has been a determination that at least one of the conditions specified at 37 CFR 1.313(b)(1) through (4) exist such that the applicant is no longer "entitled to a patent under the law" as provided in 35 U.S.C. 151. See >*BlackLight Power Inc. v. Rogan*, 295 F.3d at 1273, 63 USPQ2d at 1537 (Fed. Cir. 2002) (USPTO is not required to make final determination of unpatentability before withdrawing an application from issue pursuant to 37 CFR 1.313(b)(3), which permits the Office to withdraw an application after payment of the issue fee on ground of "unpatentability of one or more claims.");< *Harley v. Lehman*, 981 F. Supp. at 11-12, 44 USPQ2d at 1701-02 (D.D.C. 1997)(Commissioner may adopt rules permitting applications to be withdrawn from issue after payment of the issue fee in situations in which the applicant is not entitled to a patent under the law); and see *Sampson v. Dann*, 466 F. Supp. 965, 973-74, 201 USPQ 15, 22 (D.D.C. 1978)(Commissioner not authorized to withdraw an application from issue after payment of the issue fee on an *ad hoc* basis, but only in situations which meet the conditions of 37 CFR 1.313(b)).

The authority to withdraw an application from issue at the initiative of the USPTO after payment of the issue fee under 37 CFR 1.313(b) has been delegated to TC Directors (see MPEP § 1002.02(c)). The Office of Petitions has also been delegated the authority to withdraw an application from issue after payment of the issue fee in those situations in which the request for withdrawal from issue is at the initiative of the USPTO by someone other than a TC Director (see MPEP § 1002.02(b)).

35 U.S.C. 151 and 37 CFR 1.313(b) do not authorize the USPTO to withdraw an application from issue after payment of the issue fee for any reason **except**:

(1) a mistake on the part of the Office:

(2) a violation of 37 CFR 1.56 or illegality in the application;

(3) unpatentability of one or more claims; or

(4) for interference.

See 37 CFR 1.313(b).

Examples of reasons that do **not** warrant withdrawing an application from issue after payment of the issue fee at the initiative of the Office are:

(A) to permit the examiner to consider an information disclosure statement;

(B) to permit the examiner to consider whether one or more claims are unpatentable; or

(C) to permit the applicant to file a continuing application (including a CPA).

An application may be removed from the Office of Patent Publication, without it being withdrawn from issue under 37 CFR 1.313(b), to permit the examiner to consider an information disclosure statement or whether one or more claims are unpatentable. Only if such consideration results in a determination that one or more claims are unpatentable does 37 CFR 1.313(b) authorize the application to be withdrawn from issue. If uncertainty exists as to whether prosecution will in fact be re-opened, the uncertainty must be resolved before the application is withdrawn from issue. If there is a question whether an application must be withdrawn from issue and no TC Director is available to decide whether withdrawal from issue is appropriate and to sign the withdrawal Notice, the application should be hand-carried to the Office of Petitions for decision on whether withdrawal from issue is appropriate and to effect the withdrawal.

Any notice withdrawing an application from issue after payment of the issue fee must specify which of the conditions set forth in 37 CFR 1.313(b)(1) through (4) exists and thus warrants withdrawal of the application from issue. Any petition under 37 CFR 1.181 to review the decision of a TC Director to withdraw an application from issue after payment of the issue fee will be decided by the Deputy Commissioner for Patent Examination Policy.

>If an application has been withdrawn from issue after the payment of the issue fee and the application is again found allowable, see MPEP § 1306 regarding request to reapply a previously paid issue fee toward the issue fee that is now due in the same application.<

Procedure to be followed when an application is withdrawn from issue

The procedure set forth below is to be followed when a TC Director withdraws an application from issue. This processing is to be done in the Technology Center without the need to send the application to the Office of Patent Publication.

First, determine (via PALM) whether the issue fee has been paid, and whether the application has been assigned a patent number and issue date.

1. Withdrawal From Issue Before Payment of Issue Fee

If the issue fee **has not** been paid and the deadline for payment has not expired:

(A) Prepare, date stamp, and mail a "Withdrawal from Issue" letter signed by the TC Director to the applicant to effectuate the withdrawal from issue, using form paragraph 10.01. A copy of the "Withdrawal from Issue" letter should be sent to the Office of Patent Publication.

(B) Change the status of the application to status code 066 (Previous Action Withdrawn - Awaiting Further Action). Enter the Withdrawal from Issue letter in the application file and make it of record on the application file contents.

(C) Stick an Issue Information Label (Form 2016) on the file wrapper over the filled-in boxes on the file wrapper that contain issue information. If the application is an Image File Wrapper (IFW) application, this step is not done; instead a new Issue Classification sheet will be completed if the application is subsequently allowed.

(D) Forward the application to the examiner for **prompt** appropriate action (*e.g.*, reopen prosecution, initiate interference proceedings).

¶ *10.01 Withdrawal From Issue, Fee Not Paid*

In re Application of	**[1]**	:
Appl. No.: **[2]**:		: **WITHDRAWAL FROM ISSUE**
Filed: **[3]**		: *37 CFR 1.313*
For: **[4]**		:

The purpose of this communication is to inform you that the above identified application is being withdrawn from issue pursuant to 37 CFR 1.313.

The application is being withdrawn to permit reopening of prosecution. The reasons therefor will be communicated to you by the examiner.

U.S. Patent and Trademark Office records reveal that the issue fee and the publication fee have not been paid. If the issue fee and the publication fee have been submitted, the applicant may request a refund, or may request that the fee be credited to a deposit account. However, applicant may wait until the application is either again found allowable or held abandoned. If the application is allowed, upon receipt of a new Notice of Allowance and Fee(s) Due, applicant may request that the previously submitted issue fee and publication fee be applied toward payment of the issue fee and publication fee in the amount identified on the new Notice of Allowance and Fee(s) Due. If the application is abandoned, applicant may request either a refund or a credit to a specified Deposit Account.

The application is being forwarded to the examiner for action.

_____

[5]
Director,
Technology Center **[6]**
[7]

Examiner Note:

1. This letter is printed with the USPTO letterhead and must be signed by the TC Director.
2. DO NOT use this form letter if the issue fee and publication fee have been paid.
3. In bracket 7, insert the correspondence address of record.

2. Withdrawal From Issue After Payment of Issue Fee

If the issue fee **has** been paid:

(A) Prepare, sign, date stamp, and mail a "Notice of Withdrawal From Issue under 37 CFR 1.313(b)" to the applicant indicating that the application has been withdrawn from issue (using one of the form letters WDR-TCB1, WDR-TCB2, WDR-TCB3, or WDR-TCB4).

(B) If the application has been assigned a patent number and issue date:

(1) Prepare a "Withdrawal from Issue of" memorandum using the form memorandum WDR-MEMO. E-mail the memorandum to the Director of the Office of Patent Publication and the persons copied on the memorandum to inform them that the application has been withdrawn from issue.

(2) The "Notice of Withdrawal From Issue under 37 CFR 1.313(b)" letter to applicant must be signed, date stamped, and mailed no later than the Monday before the issue date to be effective to withdraw the application from issue.

(3) Remove the patent number from the file wrapper.

(C) Change the status of the application to status code 066 (Previous Action Withdrawn - Awaiting Further Action) by using PALM transaction code 1040. Enter the "Notice of Withdrawal From Issue under 37 CFR 1.313(b)" and the "Withdrawal from Issue of" memorandum, if applicable, in the application file and make it of record on the application file contents.

(D) Stick an Issue Information Label (Form 2016) on the file wrapper over the filled-in boxes on the file wrapper that contain issue information. If the application is an IFW application, this step is not done; instead a new Issue Classification sheet will be completed if the application is subsequently allowed.

(E) Forward the application to the examiner for prompt appropriate action (*e.g.*, reopen prosecution, initiate interference proceedings).

1308.01 Rejection After Allowance [R-5]

A claim noted as allowable shall thereafter be rejected only with the approval of the primary examiner. Great care should be exercised in authorizing such rejection. See MPEP § 706.04.

When a new reference is discovered, which obviously is applicable to one or more of the allowed claims in an application in issue, a memorandum is addressed to the Technology Center (TC) Director, requesting that the application be withdrawn from issue for the purpose of applying the new reference. This memorandum should cite the reference, and, if need be, briefly state its application. The memorandum should be submitted with the reference and the file wrapper, if the application file is in paper. If the examiner's proposed action is not approved, the memorandum requesting withdrawal from issue should not be placed in the file.

If the request to withdraw from issue is approved, the TC Director should withdraw the application from issue as explained in MPEP § 1308. After the TC Director has withdrawn the application from issue, the examiner will prepare an Office action stating that the application has been withdrawn from issue, citing the new reference, and rejecting the claims met thereby.

The action is given a paper number and placed in the file. For Image File Wrapper (IFW) processing, see IFW Manual.

If the issue fee has already been paid and prosecution is reopened, the applicant may request a refund or

request that the fee be credited to a deposit account. However, applicant may wait until the application is either found allowable or held abandoned. If allowed, upon receipt of a new Notice of Allowance, applicant may request that the previously submitted issue fee be applied (the Notice of Allowance will reflect an issue fee amount that is due ** and the issue fee that was previously paid). >See MPEP § 1306 regarding request to reapply a previously paid issue fee toward the issue fee that is now due in the same application.< If abandoned, applicant may request refund or credit to a deposit account.

1308.02 For Interference Purposes [R-3]

It may be necessary to withdraw a case from issue for reasons connected with an interference. For the procedure to be followed, see MPEP **>Chapter 2300<.

1308.03 Quality Review Program for Examined Patent Applications [R-2]

The Office of Patent Quality *>Assurance< administers a program for reviewing the quality of the examination of patent applications. The general purpose of the program is to improve patent quality and increase the likelihood of patents being found to be valid.

The quality review is conducted by **>Review Quality Assurance Specialists< on a randomly selected sample of allowed applications from each **>examiner<. The sample is computer generated under the office-wide computer system (PALM), which selects a predetermined number of allowed applications from each **>examiner< per year for review **>. A subsample of the selected allowed applications are both reviewed and independently searched by the reviewers.< The only applications excluded from the sample are those in which there has been a decision by the Board of Patent Appeals and Interferences, or by a court.

The **>Review Quality Assurance Specialist< independently reviews each sampled application assigned to his or her docket to determine whether any claims may be unpatentable. The **>Review Quality Assurance Specialist< may consult with, discuss, or review an application with any other reviewer or professional in the examining corps, except the professional who acted on the application. The review will, with or without additional search, provide the examining corps personnel with information which will assist in improving the quality of issued applications. The program shall be used as an educational tool to aid in identifying problem areas in the examining Technology Centers (TCs).

Reviewed applications may be returned to the examining TCs for consideration of the reviewer's question(s) as to adequacy of the search and/or patentability of a claim(s).

If, during the quality review process, it is determined that one or more claims of a reviewed application are unpatentable, the prosecution of the application will be reopened. The Office action should contain, as an opening, form paragraph 13.04.

¶ *13.04 Reopen Prosecution - After Notice of Allowance*

Prosecution on the merits of this application is reopened on claim **[1]** considered unpatentable for the reasons indicated below:

[2]

Examiner Note:

1. This paragraph should be used when a rejection is made on any previously allowed claim(s) which for one reason or another is considered unpatentable after the Notice of Allowance (PTOL-85) has been mailed.
2. Make appropriate rejection(s) as in any other action.
3. In bracket 1, identify claim(s) that are considered unpatentable.
4. In bracket 2, state all appropriate rejections for each claim considered unpatentable.

If the issue fee has already been paid in the application, the application must be withdrawn from issue by the Office of Patent Publication, and the action should contain not only the above quoted paragraph, but also form paragraph 13.05.

¶ *13.05 Reopen Prosecution - Vacate Notice of Allowance*

Applicant is advised that the Notice of Allowance mailed **[1]** is vacated. If the issue fee has already been paid, applicant may request a refund or request that the fee be credited to a deposit account. However, applicant may wait until the application is either found allowable or held abandoned. If allowed, upon receipt of a new Notice of Allowance, applicant may request that the previously submitted issue fee be applied. If abandoned, applicant may request refund or credit to a specified Deposit Account.

Examiner Note:

1. This form paragraph must be used when the prosecution is reopened after the mailing of the Notice of Allowance.
2. In bracket 1, insert date of the Notice of Allowance.

Quality *>Assurance< forms and papers are *not* to be included with Office actions, nor should such forms or papers be retained in the file of any reviewed application whether or not prosecution is to be reopened. The application record should *not* indicate that a review has been conducted by Quality *>Assurance<.

Whenever an application has been returned to the TC under the Quality *>Assurance< Program, the TC should promptly decide what action is to be taken in the application and inform the Office of Patent Quality *>Assurance< of the nature of that action by use of the appropriate form. If prosecution is to be reopened or other corrective action taken, only the forms should be returned to the Office of Patent Quality *>Assurance< initially, with the application being returned to the Office of Patent Quality *>Assurance< when action is completed. In all other instances, both the application and the forms should be returned to the Office of Patent Quality *>Assurance<.

1309 Issue of Patent [R-5]

Under the current publication process, electronic capture of most of the information to be printed in a patent will begin as soon as an allowed application is received in the Office of Patent Publication, immediately after the Notice of Allowance has been mailed. The Office of Patent Publication forwards the allowed applications to the printer for Initial Data Capture (IDC). This IDC process takes approximately five weeks to accomplish and during this time the application, if in a paper file, is **not** available to examiners or for purposes of making copies of the application (copies of the application files that have been published may be ordered from the Office of Public Records, upon payment of the fee, but the applications will not be removed from the publication process for purposes of making copies). After IDC is completed, the application is returned to the Office of Patent Publication, and the file will be available to examiners and the Office of Public Records.

When the issue fee is paid and all other requirements have been met (e.g., drawings) within the time allowed by law, the application is forwarded to the printer for Final Data Capture (FDC) and final issue preparation. At this point, the application can only be retrieved if it is withdrawn from issue. The application is assigned a patent number and issue date about ten days before the application issues as a patent, and an Issue Notification is mailed to inform the applicant of the patent number and issue date. A bond paper copy of the patent grant is ribboned, sealed, and mailed by the Office of Patent Publication.

All allowed applications ready for printing will be selected by chronological sequence based on the date the issue fee was paid. Special handling will be given to the following applications in these categories:

(A) Allowed cases which were made special by the Director**.

(B) Allowed cases that have a U.S. effective filing date more than 5 years old.

(C) Allowed reissue applications.

(D) Allowed applications having an effective filing date earlier than that required for declaring an interference with a copending application claiming the same subject matter.

(E) Allowed application of a party involved in a terminated interference.

To ensure that any application falling within the scope of the categories outlined above and identified by (A) to (E) receives special treatment, the examiner should **>notify, via e-mail, the Manager of the Publishing Division, Kim Terrell in the Office of Publication that a particular application (identify the application number) should be given special treatment.< The examiner should state the special treatment category outlined above.

35 U.S.C. 2. Powers and duties.

*****

(b) SPECIFIC POWERS.— The Office—

(1) shall adopt and use a seal of the Office, which shall be judicially noticed and with which letters patent, certificates of trademark registrations, and papers issued by the Office shall be authenticated;

*****

35 U.S.C. 153. How issued.

Patents shall be issued in the name of the United States of America, under the seal of the Patent and Trademark Office, and shall be signed by the Director or have his signature placed thereon and shall be recorded in the Patent and Trademark Office.

I. PRINTING NAMES OF PRACTITIONERS AND FIRM ON PATENTS

The Fee(s) Transmittal form >(PTOL-85B)< provides a space (item 2) for the person submitting the base issue fee to indicate, for printing, (1) the names of up to three registered patent attorneys or agents or, alternatively, (2) the name of a single firm, which has as a member at least one registered patent attorney or agent, and the names of up to two registered patent attorneys or agents. If the person submitting the issue fee desires that no name of practitioner or firm be printed on the patent, the space on the Fee(s) Transmittal form should be left blank. If no name is listed on the form, no name will be printed on the patent.

II. ASSIGNMENT PRINTED ON PATENT

The Fee(s) Transmittal form * (PTOL -85B) ** provides a space (item 3) for assignment data which should be completed in order to comply with 37 CFR 3.81. Unless an assignee's name and address are identified in item 3 of the Fee(s) Transmittal form PTOL-85B, the patent will issue to the applicant. Assignment data printed on the patent will be based solely on the information so supplied. See MPEP § 307. Recording of the assignment, or submission of the assignment for recordation as set forth in 37 CFR 3.11 is required for a Patent to issue to an assignee. See 37 CFR 3.81(a).

III. ASSIGNEE NAMES

Only the first appearing name of an assignee will be printed on the patent where multiple names for the *same* party are identified on the Fee(s) Transmittal form, PTOL-85B. Such multiple names may occur when both a legal name and an "also known as" or "doing business as" name is also included. This printing practice will not, however, affect the practice of recording assignments with the Office in the Assignment Division. The assignee entry on form PTOL-85B should still be completed to indicate the assignment data as recorded in the Office. For example, the assignment filed in the Office and therefore the PTOL-85B assignee entry might read "Smith Company doing business as (d.b.a.) Jones Company." The assignee entry on the printed patent will read "Smith Company."

1309.02 "Query/Printer Waiting" Cases [R-2]

When the printer finds an apparent error in an application, the file is returned to the Office with an attached "Query/Printer Waiting" slip noting the supposed error.

The Publishing Division forwards such "query/printer waiting" applications to the Technology Center (TC) Director's secretary. The secretary acts as a control center in each TC and forwards the applications to the examiner by the appropriate route. The application should be taken up and acted on immediately and returned to the TC Director's secretary within 72 hours (excluding weekends and holidays). Either necessary corrective action should be taken or an indication should be made that the application is considered to be correct as it stands. >A copy of the query form is entered into the application file, and the response from the examiner should be clear from the record.<

If the examiner concurs in the criticisms, the errors should, if possible, be corrected in clean red ink and initialed or be corrected by examiner's amendment >(note that in an Image File Wrapper (IFW) application, an examiner's amendment must be made by way of a formal examiner's amendment)<. See MPEP § 1302.04.

Delays in making corrections may sometimes be avoided if the applicant or his or her representative is telephoned immediately, and the error is corrected by amendment under 37 CFR 1.312, where appropriate.

**>Applications with a paper file wrapper< are picked up from the *>TC Director's< office by the messenger and returned to the Publishing Division for forwarding to the printer.

THESE APPLICATIONS SHOULD NOT BE MAILED TO THE PUBLISHING DIVISION.

>A similar process exists for IFW applications, with the query form being placed into the IFW, and the response from the examiner also made part of the record. For IFW processing, see IFW Manual.<

●●●●●●●●●●●●●●●●●●●●●●●●●●●●

Chapter 1400 Correction of Patents

1400.01 Introduction [R-2]

A patent may be corrected or amended in four ways, namely:

(A) by reissue,

(B) by the issuance of a certificate of correction which becomes a part of the patent,

(C) by disclaimer, and

(D) by reexamination.

The first three ways are discussed in this chapter while the fourth way (reexamination) is discussed in MPEP Chapter 2200 >for *ex parte* reexamination and MPEP Chapter 2600 for *inter partes* reexamination<.

1401 Reissue [R-3]

35 U.S.C. 251. Reissue of defective patents.

Whenever any patent is, through error without any deceptive intention, deemed wholly or partly inoperative or invalid, by reason of a defective specification or drawing, or by reason of the patentee claiming more or less than he had a right to claim in the

patent, the Director shall, on the surrender of such patent and the payment of the fee required by law, reissue the patent for the invention disclosed in the original patent, and in accordance with a new and amended application, for the unexpired part of the term of the original patent. No new matter shall be introduced into the application for reissue.

The Director may issue several reissued patents for distinct and separate parts of the thing patented, upon demand of the applicant, and upon payment of the required fee for a reissue for each of such reissued patents.

The provisions of this title relating to applications for patent shall be applicable to applications for reissue of a patent, except that application for reissue may be made and sworn to by the assignee of the entire interest if the application does not seek to enlarge the scope of the claims of the original patent.

No reissued patent shall be granted enlarging the scope of the claims of the original patent unless applied for within two years from the grant of the original patent.

The provisions of 35 U.S.C. 251 permit the reissue of a patent to correct an error in the patent made without any deceptive intention and provide criteria for the reissue. 37 CFR 1.171 through *>1.178< are rules directed to reissue.

1402 Grounds for Filing [R-7]

A reissue application is filed to correct an error in the patent which was made without any deceptive intention, where, as a result of the error, the patent is deemed wholly or partly inoperative or invalid. An error in the patent arises out of an error in conduct which was made in the preparation and/or prosecution of the application which became the patent.

There must be at least one error in the patent to provide grounds for reissue of the patent. If there is no error in the patent, the patent will not be reissued. The present section provides a discussion of what may be considered an error in the patent upon which to base a reissue application.

In accordance with 35 U.S.C. 251, the error upon which a reissue is based must be one which causes the patent to be "deemed wholly or partly inoperative or invalid, by reason of a defective specification or drawing, or by reason of the patentee claiming more or less than he had a right to claim in the patent." Thus, an error under 35 U.S.C. 251 *has not been presented* where the correction to the patent is one of spelling, or grammar, or a typographical, editorial or clerical error which does not cause the patent to be deemed wholly or partly inoperative or invalid for the reasons specified in 35 U.S.C. 251. These corrections to a patent do not provide a basis for reissue (although these corrections may also be included in a reissue application, where a 35 U.S.C. 251 error is already present).

These corrections may be made via a certificate of correction; see MPEP § 1481.

The most common bases for filing a reissue application are:

(A) the claims are too narrow or too broad;

(B) the disclosure contains inaccuracies;

(C) applicant failed to or incorrectly claimed foreign priority; and

(D) applicant failed to make reference to or incorrectly made reference to prior copending applications.

>An error under 35 U.S.C. 251 *has not been presented* where a reissue application only adds one or more claims that is/are narrower than one or more broader existing patent claims without either narrowing the broader patent claim by amendment or canceling the broader patent claim. A reissue application in which the only error specified to support reissue is the failure to include one or more claims that is/are narrower than at least one of the existing patent claim(s) without an allegation that one or more of the broader patent claim(s) is/are too broad together with an amendment to such claim(s), does not meet the requirements of 35 U.S.C. 251. Such a reissue application should not be allowed. Absent a statement that the patent for which reissue is sought is wholly or partly inoperative or invalid in that one or more patent claims is/are too broad, or a statement specifying and correcting some other (proper) 35 U.S.C. 251 error that renders the patent wholly or partly inoperative or invalid, such reissue applications do not recite an error within the meaning of 35 U.S.C. 251. Retaining the original broader patent claim(s) in the reissue application without amendment or cancellation of such claim(s), is an indication that the broader claim(s) is/are not in any way inoperative to cover the disclosed invention, or invalid as being too broad.

The reissue statute does not provide a basis for reissuing a patent when the patentee states (in the oath or declaration) only that certain claims could have been claimed, without indicating that in the absence of these claims, (1) the patent is wholly or partly inoperative (because the patent claims were too narrow to protect the disclosed invention), or (2) that the patent

is wholly or partly invalid because one or more patent claims is too broad. Absent a statement by the patentee that the patent claims are too broad or too narrow, or are, otherwise, defective (e.g., not enabled, indefinite, etc.), the patent claims are not defective such that they render the patent wholly or partly inoperative or invalid under 35 U.S.C. 251. Claims added to a reissue application must correct one or more presently existing errors in the scope (breadth) of coverage provided by the patent claims, or must correct another claim defect that would render the claim(s) inoperative or invalid, unless another reissuable error under 35 U.S.C. 251 is identified and is being corrected in the reissue application. This is reflected in 37 CFR 1.175(a), which requires that the reissue oath or declaration include a statement that the applicant for reissue believes the original patent to be wholly or partly inoperative or invalid, and to identify at least one error that is relied upon as the basis for that belief. Thus, the reissue oath or declaration must allege, and the reissue application must provide correction of, an error of the type that will justify reissue in order to invoke 35 U.S.C. 251, that is, an error that renders the original patent wholly or partly inoperative or invalid.

Although a reissue applicant may regard the absence of certain narrower claims to be "an error," the original patent is simply not wholly or partly inoperative to protect the invention due to the absence of a narrow claim when the invention to which that narrow claim is directed is covered by one or more broader existing patent claims that the reissue applicant does not propose to either narrow or cancel. The original patent is also not wholly or partly invalid by reason of one or more claims being too broad if the reissue applicant does not propose to either narrow such claims by amendment or cancel them. The allegation that the patent is defective for "claiming less than patentee had a right to claim" does not mean that there are too few claims, but rather that the patent claims are not broad enough to protect the invention (and the patent is thereby inoperative to protect the disclosed invention). Therefore, where no broadening claims are presented, such an allegation does not correctly set forth a 35 U.S.C. 251 error.

All claims pending in a reissue application in which (1) the reissue applicant presents one or more claims that are all narrower than the broadest patent claims(s), and (2) the only error that is alleged to support the reissue is that the additional claims "could have been claimed" or that the patentee was claiming "less than" patentee had a right to claim ("less than" being used to mean "too few" claims), are to be rejected as failing to state an error under 35 U.S.C. 251. The rejection must be maintained unless (1) the reissue application is thereafter amended to include a reissue oath/declaration that specifies a different "error," i.e., an error that renders the patent wholly or partly inoperative or invalid in accordance with 35 U.S.C. 251, and (2) includes a corresponding correction of that 35 U.S.C. 251 error.

Where the only error that a reissue applicant desires to correct in a reissue application is to be corrected by the presentation of claims that are all narrower than one or more broader patent claims, examiners must require that (1) the error relied upon by the reissue applicant be described in the reissue oath or declaration as correcting the error of claiming "more than" the patentee had a right to claim, and (2) that the correction of such error include cancellation and/or amendment of one or more patent claims, (as is appropriate to the presentation of the narrow claims), that the patentee regards as being too broad. All claims presented in a reissue application that does not comply with these requirements are to be rejected as failing to state an error under 35 U.S.C. 251.

A reissue applicant's failure to timely file a divisional application covering the non-elected invention(s) following a restriction requirement is not considered to be error causing a patent granted on elected claims to be partially inoperative by reason of claiming less than the applicant had a right to claim. Thus, such applicant's error is not correctable by reissue of the original patent under 35 U.S.C. 251. See MPEP § 1412.01.<

An attorney's failure to appreciate the full scope of the invention was held to be an error correctable through reissue in the decision of *In re Wilder*, 736 F.2d 1516, 222 USPQ 369 (Fed. Cir. 1984). The correction of misjoinder of inventors in divisional reissues has been held to be a ground for reissue. See *Ex parte Scudder*, 169 USPQ 814 (Bd. App. 1971). The Board of Appeals held in *Ex parte Scudder*, 169 USPQ at 815, that 35 U.S.C. 251 authorizes reissue *>applications< to correct misjoinder of inventors where 35 U.S.C. 256 is inadequate.

Reissue may no longer be necessary under the facts in *Ex parte Scudder, supra*, in view of 35 U.S.C. 116 which provides, *inter alia*, that:

> "Inventors may apply for a patent jointly even though . . . (3) each did not make a contribution to the subject matter of every claim in the patent."

See also 37 CFR 1.45(b)(3).

If the only change being made in the patent is correction of the inventorship, this can be accomplished by filing a request for a certificate of correction under the provisions of 35 U.S.C. 256 and 37 CFR 1.324. See MPEP § 1412.04 and § 1481. A Certificate of Correction will be issued if all parties are in agreement and the inventorship issue is not contested. >However, if applicant chooses to file a reissue application to correct the inventorship (as opposed to choosing the Certificate of Correction route), applicant may do so because misjoinder of inventors is an error that is correctable by reissue under 35 U.S.C. 251.<

A reissue was granted in *Brenner v. State of Israel*, 400 F.2d 789, 158 USPQ 584 (D.C. Cir. 1968), where the only ground urged was failure to file a certified copy of the original foreign application to obtain the right of foreign priority under 35 U.S.C. 119(a)-(d) before the patent was granted.

In *Brenner*, the claim for priority had been made in the prosecution of the original patent, and it was only necessary to submit a certified copy of the priority document in the reissue application to perfect priority. Reissue is also available to convert the "error" in failing to take any steps to obtain the right of foreign priority under 35 U.S.C. 119(a)-(d) before the patent was granted. See *Fontijn v. Okamoto*, 518 F.2d 610, 622, 186 USPQ 97, 106 (CCPA 1975) ("a patent may be reissued for the purpose of establishing a claim to priority which was not asserted, or which was not perfected during the prosecution of the original application"). In a situation where it is necessary to submit for the first time both the claim for priority and the certified copy of the priority document in the reissue application, and the patent to be reissued resulted from a utility or plant application which became the patent to be reissued was filed on or after November 29, 2000, the reissue applicant must (where it is necessary to submit for the first time the claim for priority) also file a petition for an unintentionally delayed priority claim under 37 CFR 1.55(c) in addition to filing a reissue application. See MPEP § 201.14(a).

The courts have not addressed the question of correction of the failure to adequately claim benefit under 35 U.S.C. 119(e) in the application (which became the patent to be reissued) via reissue. If the application which became the patent to be reissued was filed **>before< November 29, 2000, correction as to benefit under 35 U.S.C. 119(e) would be permitted in a manner somewhat analogous to that of the priority correction discussed above. Where the application, which became the patent to be reissued, was filed on or after November 29, 2000, reissue may be employed to correct an applicant's mistake by adding or correcting a benefit claim under 35 U.S.C. 119(e). A petition under 37 CFR 1.78(a)(6) for an unintentionally delayed claim under 35 U.S.C. 119(e) would not be required in addition to filing a reissue application..

Section 4503 of the American Inventors Protection Act of 1999 (AIPA) amended 35 U.S.C. 119(e)(1) to state that:

> No application shall be entitled to the benefit of an earlier filed provisional application under this subsection unless an amendment containing the specific reference to the earlier filed provisional application is submitted at such time during the pendency of the application as required by the Director. The Director may consider the failure to submit such an amendment within that time period as a waiver of any benefit under this subsection. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed submission of an amendment under this section ***during the pendency of the application***. (Emphasis added.)

The court in *Fontijn* held that 35 U.S.C. 251 was sufficiently broad to correct a patent where the applicant failed to assert or failed to perfect a claim for foreign priority during the prosecution of the original application even though 35 U.S.C. 119(b) at that time required a claim and a certified copy of the foreign application to be filed *before the patent is granted*. Similarly, the Office may grant a reissue for adding or correcting a benefit claim under 35 U.S.C.119(e) that requires the benefit claim to a provisional application be submitted *during the pendency of the application*.

Correction of failure to adequately claim benefit under 35 U.S.C. 120 in an earlier filed copending U.S. patent application was held a proper ground for reissue. *Sampson v. Comm'r Pat.*, 195 USPQ 136, 137

(D.D.C. 1976). If the utility or plant application which became the patent to be reissued was filed on or after November 29, 2000, the reissue applicant must file a petition for an unintentionally delayed priority claim under 37 CFR 1.78(a)(3) in addition to filing a reissue application. See MPEP § 201.11. For treatment of an error involving disclaimer of a benefit claim under 35 U.S.C. 120, see MPEP 1405. If the utility or plant application which became the patent to be reissued was filed **>before< November 29, 2000 and therefore, not subject to the eighteen-month publication (e.g., one of the categories set forth in 37 CFR 1.78(a)(2)(ii)(A) – (C)), a petition for an unintentionally delayed benefit claim under 37 CFR 1.78(a)(3) would not be required to add/correct the benefit claim in the reissue application. This is so, even if the reissue application was filed on or after November 29, 2000. On the other hand, if applicant fails to file an amendment to add a claim for benefit of a prior-filed reissue application in a later-filed reissue application within the time period set forth in 37 CFR 1.78(a)(2), then a petition for an unintentionally delayed benefit claim under 37 CFR 1.78(a)(3) along with the surcharge set forth in 37 CFR 1.17(t) would be required if the later-filed reissue application is a utility or plant application filed on or after November 29, 2000 irrespective of whether the original application which became the original patent was filed **>before< November 29, 2000. This is because the benefit claim is between the later-filed reissue application and the prior-filed reissue application and the benefit claim is not being added to make a correction as to a benefit of the original patent.

**

A reissue may be based on a drawing correction that is substantive in nature, because such a correction qualifies as correcting an "error" under 35 U.S.C. 251 that may properly be deemed to render the patent wholly or partly inoperative. A reissue application cannot be based on a non-substantive drawing change, such as a reference numeral correction or addition, the addition of shading, or even the addition of an additional figure merely to "clarify" the disclosure. Non-substantive drawing changes may, however, be included in a reissue application that corrects at least one substantive "error " under 35 U.S.C. 251.

1403 Diligence in Filing [R-3]

When a reissue application is filed within 2 years from the date of the original patent, a rejection on the grounds of lack of diligence or delay in filing the reissue should not normally be made. *Ex parte Lafferty*, 190 USPQ 202 (Bd. App. 1975); but see *Rohm & Haas Co. v. Roberts Chemical Inc.*, 142 F. Supp. 499, 110 USPQ 93 (S.W. Va. 1956), *rev'd on other grounds*, 245 F.2d 693, 113 USPQ 423 (4th Cir. 1957).

The fourth paragraph of 35 U.S.C. 251 states:

> "No reissued patent shall be granted enlarging the scope of the claims of the original patent unless applied for within two years from the grant of the original patent."

Where any broadening reissue application is filed within two years from the date of the original patent, 35 U.S.C. 251 presumes diligence, and the examiner should not inquire why applicant failed to file the reissue application earlier within the two year period.

See MPEP § 1412.03 for broadening reissue practice. See also *In re Graff*, 111 F.3rd 874, 42 USPQ2d 1471 (Fed. Cir. 1997); *In re Bennett*, 766 F.2d 524, 528, 226 USPQ 413, 416 (Fed. Cir. 1985); *In re Fotland*, 779 F.2d 31, 228 USPQ 193 (Fed. Cir. 1985).

A reissue application that is filed on the 2-year anniversary date of the patent grant is considered as being filed within 2 years. See *Switzer v. Sockman*, 333 F.2d 935, 142 USPQ 226 (CCPA 1964) (a similar rule in interferences).

A reissue application can be granted a filing date without an oath or declaration, or without the >basic< filing fee>, search fee, or examination fee< being present. See 37 CFR 1.53(f). Applicant will be given a period of time to provide the missing parts and to pay the surcharge under 37 CFR 1.16(*>f<). See MPEP § 1410.01.

1404 Submission of Papers Where Reissue Patent Is in Litigation [R-7]

Marking of envelope: Applicants and protestors (see MPEP § 1901.03) submitting papers for entry in reissue applications of patents involved in litigation are requested to mark the outside envelope and the top right-hand portion of the papers with the words "REISSUE LITIGATION" and with the art unit or other area of the United States Patent and Trademark

Office in which the reissue application is located, e.g., Commissioner for Patents, Board of Patent Appeals and Interferences, Office of Patent Legal Administration, Technology Center, Office of Patent Publication, etc. Marking of papers: Any "Reissue Litigation" papers mailed to the Office should be so marked. The markings preferably should be written in a bright color with a felt point marker. Papers marked "REISSUE LITIGATION" will be given special attention and expedited handling. ** See MPEP § 1442.01 through § 1442.04 for examination of litigation-related reissue applications. Protestor's participation, including the submission of papers, is limited in accordance with 37 CFR 1.291(c).

>

1405 Reissue and Patent Term [R-2]

35 U.S.C. 251 prescribes the effect of reissue on the patent term by stating that "the Director shall… reissue the patent… for the unexpired term of the original patent."

The maximum term of the original patent is fixed at the time the patent is granted. While the term may be subsequently shortened, e.g., through the filing of a terminal disclaimer, it cannot be extended through the filing of a reissue. Accordingly, a deletion in a reissue application of an earlier-obtained benefit claim under 35 U.S.C. 120 will not operate to lengthen the term of the patent to be reissued.

When a reissue application has been filed in an attempt to delete an earlier-obtained benefit claim under 35 U.S.C. 120, it should be treated as follows:

(A) More than one "error" (as defined by 35 U.S.C. 251) is described in a reissue declaration, and one of the errors identified is the failure to delete a 35 U.S.C. 120 benefit claim in the original patent, or the erroneous making of a claim for 35 U.S.C. 120 benefit.

If one of the errors identified is the presence of the claim for 35 U.S.C. 120 benefit in the patent, and patentee (1) states a belief that this error renders the original patent wholly or partly inoperative or invalid, and (2) is seeking to eliminate this error via the reissue proceeding, the Office will permit entry of an accompanying amendment deleting the benefit claim in the continuity data, and will not object to or reject the reissue declaration. Assuming the reissue declaration appropriately identifies or describes at least one other error being corrected, the reissue declaration would not be objected to for failure to comply with the requirements of 37 CFR 1.175.

Where the reissue declaration states that the patentee is making this correction in order to extend the term of the original patent, the examiner's Office action will merely refer to the statement in the declaration and then point out with respect to such statement that 35 U.S.C. 251 only permits reissue "... for the unexpired part of the term of the original patent."

(B) Only one "error" (as defined by 35 U.S.C. 251) is described in a reissue declaration, and that error is the failure to delete a 35 U.S.C. 120 benefit claim in the original patent, or the erroneous making of a claim for 35 U.S.C. 120 benefit.

(1) If the only error identified in the reissue declaration is stated to be the correction or adjustment of the patent term by deleting the 35 U.S.C. 120 benefit claim, a rejection under 35 U.S.C. 251 should be made, based on the lack of an appropriate error for reissue and failure to comply with 37 CFR 1.175.

(2) If the only error identified in the reissue declaration is the need to delete a 35 U.S.C. 120 benefit claim, which the patentee seeks to now delete in the reissue application, (and no reference is made as to increasing the term of the patent), the examiner should not make a rejection under 35 U.S.C. 251 based on lack of an appropriate error for reissue and failure to comply with 37 CFR 1.175. The examiner should examine the reissue application in accordance with 37 CFR 1.176 (MPEP § 1440). A statement should, however, be made in an Office action pointing out the lack of effect (of the change in the patent) on the patent term because 35 U.S.C. 251 only permits reissue "... for the unexpired part of the term of the original patent."<

1406 Citation and Consideration of References Cited in Original Patent [R-7]

In a reissue application, the examiner should consider and list on a PTO-892 form all references that have been cited during the original prosecution of the patent. See MPEP § 1455. An exception to this practice might be where the references cited in the original patent may no longer be relevant, e.g., in view of a narrowing of the claim scope in the reissue application.

Should applicants wish to ensure that all of the references which were cited in the original patent are considered and cited in the reissue application, an information disclosure statement (IDS) in compliance with 37 CFR 1.97 and 1.98 should be filed in the reissue application. See MPEP § 609. The requirement for a copy of each U.S. patent or U.S. patent application publication listed in an IDS has been eliminated, unless required by the Office. 37 CFR 1.98(a)(2) requires >a legible copy of:<

(A) **each foreign patent*>;<

(B) each publication or that portion which caused it to be listed, >other than U.S. patents and U.S. patent application publications unless required by the Office;<

(C) **>for each cited pending unpublished U.S. application, the application specification including the claims, and any drawing of the application, or that portion of the application which caused it to be listed including any claims directed to that portion; and<

(D) all other information or that portion which caused it to be listed.

See MPEP § 609.04(a). The Office imposes no responsibility on a reissue applicant to resubmit, in a reissue application, all the "References Cited" in the patent for which reissue is sought. Rather, applicant has a continuing duty under 37 CFR 1.56 to timely apprise the Office of any information which is material to the patentability of the claims under consideration in the reissue application. See MPEP § 1418.

Where a copy of a reference other than a U.S. patent or U.S. patent application publication >that was cited in the original patent< is not available and cannot be obtained through any source other than the reissue applicant (who has not submitted the copy), the examiner will not **>consider that reference and therefore, will not list that reference on the PTO-892. If that reference was listed by the reissue applicant on a PTO/SB/08 form but a copy has not been provided, the examiner will line-through the reference to indicate that the reference has not been considered<.

1410 Content of Reissue Application [R-7]

37 CFR 1.171. Application for reissue.

An application for reissue must contain the same parts required for an application for an original patent, complying with all the rules relating thereto except as otherwise provided, and in addition, must comply with the requirements of the rules relating to reissue applications.

37 CFR 1.173. Reissue specification, drawings, and amendments.

(a) *Contents of a reissue application.* An application for reissue must contain the entire specification, including the claims, and the drawings of the patent. No new matter shall be introduced into the application. No reissue patent shall be granted enlarging the scope of the claims of the original patent unless applied for within two years from the grant of the original patent, pursuant to 35 U.S.C. 251.

(1) *Specification, including claims.* The entire specification, including the claims, of the patent for which reissue is requested must be furnished in the form of a copy of the printed patent, in double column format, each page on only one side of a single sheet of paper. If an amendment of the reissue application is to be included, it must be made pursuant to paragraph (b) of this section. The formal requirements for papers making up the reissue application other than those set forth in this section are set out in § 1.52. Additionally, a copy of any disclaimer (§ 1.321), certificate of correction (§§ 1.322 through 1.324), or reexamination certificate (§ 1.570) issued in the patent must be included. (See also § 1.178).

(2) *Drawings.* Applicant must submit a clean copy of each drawing sheet of the printed patent at the time the reissue application is filed. If such copy complies with § 1.84, no further drawings will be required. Where a drawing of the reissue application is to include any changes relative to the patent being reissued, the changes to the drawing must be made in accordance with paragraph (b)(3) of this section. The Office will not transfer the drawings from the patent file to the reissue application.

*****

The specification (including the claims and any drawings) of the reissue application is the copy of the printed patent for which reissue is requested that is submitted by applicant as part of the initial application papers. The copy of the printed patent must be submitted in double column format, each page of double column format being on only one side of the piece of paper. It should be noted that a re-typed specification is not acceptable in a reissue application; the full copy of the printed patent must be used. In addition, an applicant for reissue is required to file a reissue oath or declaration which, in addition to complying with 37 CFR 1.63, must comply with 37 CFR 1.175. Where the patent has been assigned, the reissue applicant must also provide a consent of assignee to the reissue and evidence of ownership. Where the patent has not been assigned, the reissue applicant should affirmatively state that the patent is not assigned.

An amendment may be submitted at the time of filing of a reissue application. The amendment may be made either by:

(A) physically incorporating the changes within the specification by cutting the column of the printed patent and inserting the added material and rejoining the remainder of the column and then joining the resulting modified column to the other column of the printed patent. Markings pursuant to 37 CFR 1.173(d) must be used to show the changes. The columnar structure of the printed patent must be preserved, and the physically modified page must comply with 37 CFR 1.52(a)(1). As to compliance with 37 CFR 1.52(a)(1)(iv), the "written either by a typewriter or machine printer in permanent dark ink or its equivalent" requirement is deemed to be satisfied where a caret and line are drawn from a position within the text to a newly added phrase, clause, sentence, etc. typed legibly in the margin; or

(B) providing a separate amendment paper with the reissue application.

In either case, the amendment must be made pursuant to 37 CFR 1.173(b) and must comply with all the provisions of 37 CFR 1.173(b)– (e) and (g).

If the changes to be made to the patent are so extensive that reading and understanding the specification is extremely difficult and error-prone, a clean, typed copy of the specification may be submitted if accompanied by a grantable petition under 37 CFR 1.183 for waiver of 37 CFR 1.125(d) and 37 CFR 1.173(a)(1).

Pursuant to 37 CFR 1.173(a)(1), applicant is required to include a copy of any disclaimer (37 CFR 1.321), certificate of correction (37 CFR 1.322 – 1.324), or reexamination certificate (37 CFR 1.520) issued in the patent for which reissue is requested. It should also be noted that 37 CFR 1.178(b) requires reissue applicants to call to the attention of the Office any prior or concurrent proceedings in which the patent (for which reissue is requested) is or was involved, such as interferences, reissues, reexaminations, or litigation (litigation covers any papers filed in the court or issued by the court, such as, for example, motions, pleadings, and court decisions including court orders) and the results of such proceedings. This duty **is a continuing duty, and runs from the time the reissue application is filed until the reissue application is abandoned or issues as a reissue patent.

It is no longer required that the reissue applicant physically surrender the original patent, see MPEP § 1416.

Where appropriate, the reissue applicant may provide a claim for priority>/<benefit under 35 U.S.C. 119 or 120, and may also file an Information Disclosure Statement.

The initial contents of a reissue application are discussed in detail in MPEP § 1410.01 through § 1418.

For expedited processing, new and continuing reissue application filings under 37 CFR 1.53(b) may be addressed to: Mail Stop REISSUE, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450. Mail Stop REISSUE should only be used for the initial filing of reissue applications, and should not be used for any subsequently filed correspondence in reissue applications. >Effective July 9, 2007, the Office began accepting reissue applications and "follow-on" papers (i.e., subsequent correspondence in reissue applications) submitted via the Office's Web-based electronic filing system (EFS-Web). See the "Legal Framework for EFS-Web" which may be accessed at: http://www.uspto.gov/ebc/portal/efs/legal.htm.< All new reissue filings should include a copy of a completed Reissue Patent Application Transmittal Form (PTO/SB/50) to ensure that the filing of the new application will be recognized as ** a reissue application.

The oath or declaration, any matters ancillary thereto (such as the consent of assignee), and the basic filing fee, search fee, and examination fee may be submitted after the filing date pursuant to 37 CFR 1.53(f).

The requirement for the assignee to consent to filing a reissue no longer includes a requirement for applicant to order a title report with the filing of the reissue application. Rather, the assignee entity is established by a statement on behalf of all the assignees under 37 CFR 1.172(a) and 37 CFR 3.73(b). See MPEP § 1410.01.

Form PTO/SB/50, Reissue Patent Application Transmittal, may be used for filing reissue applications.

PTO/SB/50 (09-07)
Approved for use through 08/31/2010. OMB 0651-0033
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

REISSUE PATENT APPLICATION TRANSMITTAL

Address to: **Mail Stop Reissue Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450**	Attorney Docket No.	
	First Named Inventor	
	Original Patent Number	
	Original Patent Issue Date (Month/Day/Year)	
	Express Mail Label No.	

APPLICATION FOR REISSUE OF: (***Check applicable box***) ☐ Utility Patent ☐ Design Patent ☐ Plant Patent

APPLICATION ELEMENTS (37 CFR 1.173)	**ACCOMPANYING APPLICATION PARTS**
1. ☐ Fee Transmittal Form (PTO/SB/56) (Submit a duplicate copy) 2. ☐ Applicant claims small entity status. See 37 CFR 1.27. 3. ☐ Specification and Claims in double column copy of patent format *(amended, if appropriate)* 4. ☐ Drawing(s) *(proposed amendments, if appropriate)* 5. ☐ Reissue Oath/Declaration (original or copy) (37 C.F.R. 1.175) (PTO/SB/51 or 52) 6. ☐ Power of Attorney 7. ☐ Original U.S. Patent currently assigned? ☐ Yes ☐ No *(If Yes, check applicable box(es))* ☐ Written Consent of all Assignees (PTO/SB/53) ☐ 37 CFR 3.73(b) Statement (PTO/SB/96) 8. ☐ CD-ROM or CD-R in duplicate, Computer Program (Appendix) or large table ☐ Landscape Table on CD 9. Nucleotide and/or Amino Acid Sequence Submission *(if applicable, items a. – c. are required))* a. ☐ Computer Readable Form (CRF) b. Specification Sequence Listing on: i ☐ CD-ROM (2 copies) or CD-R (2 copies); **or** ii ☐ paper c. ☐ Statements verifying identity of above copies	10. ☐ Statement of status and support for all changes to the claims. See 37 CFR 1.173(c). 11. ☐ Foreign Priority Claim (35 U.S.C. 119) *(if applicable)* 12. ☐ Information Disclosure Statement (IDS) PTO/SB/08 or PTO-1449 ☐ Copies of foreign patent documents, publications & other information 13. ☐ English Translation of Reissue Oath/Declaration *(if applicable)* 14. ☐ Preliminary Amendment 15. ☐ Return Receipt Postcard (MPEP 503) (Should be specifically itemized) 16. ☐ Other:

This collection of information is required by 37 CFR 1.173. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Mail Stop Reissue, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

1410.01 Reissue Applicant, Oath or Declaration, and Consent of all Assignees [R-7]

37 CFR 1.172. Applicants, assignees.

(a) A reissue oath must be signed and sworn to or declaration made by the inventor or inventors except as otherwise provided (see §§ 1.42, 1.43, 1.47), and must be accompanied by the written consent of all assignees, if any, owning an undivided interest in the patent, but a reissue oath may be made and sworn to or declaration made by the assignee of the entire interest if the application does not seek to enlarge the scope of the claims of the original patent. All assignees consenting to the reissue must establish their ownership interest in the patent by filing in the reissue application a submission in accordance with the provisions of § 3.73(b) of this chapter.

(b) A reissue will be granted to the original patentee, his legal representatives or assigns as the interest may appear.

37 CFR 3.73. Establishing right of assignee to take action.

*****

(b)(1) In order to request or take action in a patent or trademark matter, the assignee must establish its ownership of the patent or trademark property of paragraph (a) of this section to the satisfaction of the Director. The establishment of ownership by the assignee may be combined with the paper that requests or takes the action. Ownership is established by submitting to the Office a signed statement identifying the assignee, accompanied by either:

(i) Documentary evidence of a chain of title from the original owner to the assignee (*e.g.*, copy of an executed assignment). For trademark matters only, the documents submitted to establish ownership may be required to be recorded pursuant to § 3.11 in the assignment records of the Office as a condition to permitting the assignee to take action in a matter pending before the Office. For patent matters only, the submission of the documentary evidence must be accompanied by a statement affirming that the documentary evidence of the chain of title from the original owner to the assignee was or concurrently is being submitted for recordation pursuant to § 3.11; or

(ii) A statement specifying where documentary evidence of a chain of title from the original owner to the assignee is recorded in the assignment records of the Office (*e.g.*, reel and frame number).

(2) The submission establishing ownership must show that the person signing the submission is a person authorized to act on behalf of the assignee by:

(i) Including a statement that the person signing the submission is authorized to act on behalf of the assignee; or

(ii) Being signed by a person having apparent authority to sign on behalf of the assignee, *e.g.*, an officer of the assignee.

(c) For patent matters only:

(1) Establishment of ownership by the assignee must be submitted prior to, or at the same time as, the paper requesting or taking action is submitted.

(2) If the submission under this section is by an assignee of less than the entire right, title and interest, such assignee must indicate the extent (by percentage) of its ownership interest, or the Office may refuse to accept the submission as an establishment of ownership.

The reissue oath must be signed and sworn to by all the inventors, or declaration made by all the inventors, except as otherwise provided in 37 CFR 1.42, 1.43, and 1.47 (see MPEP § 409). Pursuant to 37 CFR 1.172, where the reissue application does *not* seek to enlarge the scope of any of the claims of the original patent, the reissue oath may be made and sworn to, or declaration made, by the assignee of the entire interest. Depending on the circumstances, either Form PTO/SB/51, Reissue Application Declaration by the Inventor, or Form PTO/SB/52, Reissue Application Declaration by the Assignee, may be used to prepare a declaration in a reissue application. These forms are reproduced in MPEP § 1414.

If an inventor is to be added in a reissue application, a proper reissue oath or declaration including the signatures of all of the inventors is required. If one or more inventors are being deleted in a reissue application, an oath or declaration must be supplied over the signatures of the remaining inventors. Note that although an inventor being deleted in a reissue application need not sign the oath or declaration, if that inventor to be deleted has any ownership interest in the patent (e.g., that inventor did not assign away his/her rights to the patent), the signature of that inventor must be supplied in *>a< consent to >the< filing >of< the reissue application. See MPEP § 1412.04 as to correction of inventorship via reissue.

I. CONSENT TO THE REISSUE

Where no assignee exists, applicant should affirmatively state that fact. This can be done by simply checking the "NO" box of item 7 of Form PTO/SB/50 (which form may be signed by the inventors, or by a registered practitioner). If the file record is silent as to the existence of an assignee, it will be presumed that *an assignee does exist*. This presumption should be set forth by the examiner in the first Office action alerting applicant to the requirement. It should be noted that the mere filing of a written assertion of small entity status in no way relieves applicant of the

requirement to affirmatively state that no assignee exists.

Where a written assertion of small entity status, or other paper in file indicates that the application/patent is assigned, and there is no consent by the assignee named in the written assertion of small entity, the examiner should make inquiry into the matter in an Office action, even if the record otherwise indicates that the application/patent is not assigned.

The reissue oath or declaration must be accompanied by *>a< written consent of all assignees. 35 U.S.C. 111(a) and 37 CFR 1.53(b) provide, however, for according an application a filing date if filed with a specification, including claim(s), and any required drawings. Thus, where an application is filed without an oath or declaration, or without the consent of all assignees, if the application otherwise complies with 37 CFR 1.53(b) and the reissue rules, the Office of *Patent **>Application Processing (OPAP)< will accord a filing date and send out a notice of missing parts setting a period of time for filing the missing part and for payment of any surcharge required under 37 CFR 1.53(f) and 1.16(f). If the reissue oath or declaration is filed but the assignee consent is lacking, the surcharge is required because, until the consent is filed, the reissue oath or declaration is defective, since it is not apparent that the signatures thereon are proper absent an indication that the assignees have consented to the filing.

The consent of assignee must be signed by a party authorized to act on behalf of the assignee. See MPEP § 324 for a discussion of parties authorized to act on behalf of the assignee. The consent to the reissue application may use language such as:

> The XYZ Corporation, assignee of U.S. Patent No. 9,999,999, consents to the filing of reissue application No. 09/999,999 (or the present application, if filed with the initial application papers) for the reissue of U.S. Patent No. 9,999,999.
>
> _____
>
> Lilly M. Schor
>
> Vice President,
>
> XYZ Corporation

Where the written consent of all the assignees to the filing of the reissue application cannot be obtained, applicant may under appropriate circumstances petition to the Office of Petitions (MPEP § 1002.02(b)) for a waiver under 37 CFR 1.183 of the requirement of 37 CFR 1.172, to permit the acceptance of the filing of the reissue application. The petition fee under 37 CFR 1.17(f) must be included with the petition.

The reissue application can then be examined, but will not be allowed or issued without the consent of all the assignees as required by 37 CFR 1.172. See *Baker Hughes Inc. v. Kirk*, 921 F.Supp. 801, 809, 38 USPQ2d 1885, 1892 (D.D.C. 1995), N. B. Fassett, 1877 C.D. 32, 11 O.G. 420 (Comm'r Pat. 1877); *James D. Wright*, 1876 C.D. 217, 10 O.G. 587 (Comm'r Pat. 1876).

Where a **continuation** reissue application is filed with a copy of the assignee consent from the parent reissue application, and the parent reissue application is not to be abandoned, the copy of the consent should not be accepted. Where a **divisional** reissue application is filed with a copy of the assignee consent from the parent reissue application, regardless of whether or not the parent reissue application is to be abandoned, the copy of the consent should not be accepted. The copy of the consent from the parent does not indicate that the assignee has consented to the addition of the new invention of the divisional reissue application to the original patent, or to the addition of the new error correction of the continuation reissue application. (Presumably, a new correction has been added via the continuation, *>because< the parent is still pending.) >If, however, a divisional reissue application is being filed in response to a restriction requirement made in the parent reissue application, the assignee need not file a consent to the divided out invention now being submitted in the divisional application because consent has already been provided in the parent reissue application.< As noted above, *>OPAP< will accord a filing date and send out a notice of missing parts stating that there is no proper consent and setting a period of time for filing the missing part and for payment of any surcharge required under 37 CFR 1.53(f) and 1.16(f)>.<

Where a continuation reissue application is filed with a copy of the assignee consent from the parent reissue application, and the parent reissue application is, or will be abandoned, the copy of the consent should be accepted by the Office.

Form paragraph 14.15 may be used to indicate that the consent of the assignee is lacking.

¶ *14.15 Consent of Assignee to Reissue Lacking*

This application is objected to under 37 CFR 1.172(a) as lacking the written consent of all assignees owning an undivided interest in the patent. The consent of the assignee must be in compliance with 37 CFR 1.172. See MPEP § 1410.01.

A proper assent of the assignee in compliance with 37 CFR 1.172 and 3.73 is required in reply to this Office action.

Examiner Note:

1. This form paragraph may be used in an Office action which rejects any of the claims on other grounds.
2. If a consent document/statement has been submitted but is insufficient (e.g., not by all the assignees) or is otherwise ineffective (e.g., a conditional consent, or a copy of the consent from the parent reissue application was filed in this continuation reissue application and the parent reissue application is not being abandoned), an explanation of such is to be included following this form paragraph.
3. If the case is otherwise ready for allowance, this form paragraph should be followed by form paragraph 7.51 (insert the phrase --See above-- in bracket 1 of form paragraph 7.51).

II. PROOF OF OWNERSHIP OF ASSIGNEE

The assignee that consents to the filing of the reissue application (as discussed above) must also establish that it is the assignee, *i.e.*, the owner, of the patent. See 37 CFR 1.172. *Accordingly, a 37 CFR 3.73(b) paper establishing the ownership of the assignee should be submitted at the time of filing the reissue application, in order to support the consent of the assignee.* The assignee must establish its ownership in accordance with 37 CFR 3.73(b) by:

(A) filing in the reissue application documentary evidence of a chain of title from the original owner to the assignee; or

(B) specifying in the record of the reissue application where such evidence is recorded in the Office (e.g., reel and frame number, etc.).

Compliance with 37 CFR 3.73(b) may be provided as part of the same paper in which the consent by assignee is provided.

In connection with option (A) above, the submission of the documentary evidence to establish ownership must be accompanied by a statement affirming that the documentary evidence of the chain of title from the original owners to the assignee was, or concurrently is, submitted for recordation pursuant to 37 CFR 3.11. Thus, when filing a 37 CFR 3.73(b) statement to establish ownership, an applicant or patent owner must also submit the relied-upon assignment document(s) to the Office for recordation, unless such a submission has already been previously made. If the 37 CFR 3.73(b) statement is not accompanied by a statement affirming that the documentary evidence was, or concurrently is, submitted for recordation pursuant to 37 CFR 3.11, then the 37 CFR 3.73(b) statement will **not** be accepted, and the assignee(s) will not have established the right to take action in the patent application or the patent for which the 37 CFR 3.73(b) statement was submitted. This could result, for example, in an incomplete response, where a party stated to be the "assignee" signs a consent to the reissue to obviate a requirement for submission of assignee consent made in an Office action.

Upon initial receipt of a reissue application, the examiner should inspect the application to determine whether the submission under 37 CFR 1.172 and 37 CFR 3.73(b) establishing the ownership of the assignee is present and sufficient.

If an assignment document is attached with the 37 CFR 3.73(b) submission, the assignment should be reviewed to ensure that the named assignee is the same for the assignment document and the 37 CFR 3.73(b) statement, and that the assignment document is an assignment of the patent to be reissued to the assignee. If an assignment document is not attached with the 37 CFR 3.73(b) statement, but rather the reel and frame number where the assignment document is recorded in the USPTO is referenced in the 37 CFR 3.73(b) statement, it will be presumed that the assignment recorded in the USPTO supports the statement identifying the assignee. It will not be necessary for the examiner to obtain a copy of the recorded assignment document. If the submission under 37 CFR 1.172 and 37 CFR 3.73(b) is not present, form paragraph 14.16 may be used to indicate that the assignee has not provided evidence of ownership.

¶ *14.16 Failure of Assignee To Establish Ownership*

This application is objected to under 37 CFR 1.172(a) as the assignee has not established its ownership interest in the patent for which reissue is being requested. An assignee must establish its ownership interest *in order to support the consent to a reissue application required by 37 CFR 1.172(a)*. The assignee's ownership interest is established by:

(a) filing in the reissue application evidence of a chain of title from the original owner to the assignee, or

(b) specifying in the record of the reissue application where such evidence is recorded in the Office (e.g., reel and frame number, etc.).

The submission with respect to (a) and (b) to establish ownership must be signed by a party authorized to act on behalf of the assignee. See MPEP § 1410.01.

An appropriate paper satisfying the requirements of 37 CFR 3.73 must be submitted in reply to this Office action.

Examiner Note:

1. This form paragraph may be used in an Office action which rejects any of the claims on other grounds.
2. If otherwise ready for allowance, this form paragraph should be followed by form paragraph 7.51 (insert the phrase --See above-- in bracket 1 of form paragraph 7.51).

Just as the consent of assignee must be signed by a party authorized to act on behalf of the assignee, the submission with respect to 37 CFR 3.73(b) to establish ownership must be signed by a party authorized to act on behalf of the assignee. The signature of an attorney or agent registered to practice before the Office is not sufficient, unless that attorney or agent is authorized to act on behalf of the assignee.

If the submission under 37 CFR 3.73(b) to establish ownership is not signed by a party authorized to act on behalf of the assignee, the appropriate paragraphs of form paragraphs 14.16.01 through 14.16.06 may be used.

¶ *14.16.01 Establishment of Ownership Not Signed by Appropriate Party*

This application is objected to under 37 CFR 1.172(a) as the assignee has not established its ownership interest in the patent for which reissue is being requested. An assignee must establish its ownership interest *in order to support the consent to a reissue application required by 37 CFR 1.*172(a). The submission establishing the ownership interest of the assignee is informal. There is no indication of record that the party who signed the submission is an appropriate party to sign on behalf of the assignee. 37 CFR 3.73(b)

A proper submission establishing ownership interest in the patent, pursuant to 37 CFR 1.172(a), is required in response to this action.

Examiner Note:

1. This form paragraph should be followed: by one of form paragraphs 14.16.02 through 14.16.04, and then optionally by form paragraph 14.16.06.
2. See MPEP § 1410.01.

¶ *14.16.02 Failure To State Capacity To Sign*

The person who signed the submission establishing ownership interest has failed to state his/her capacity to sign for the corporation or other business entity, and he/she has not been established as being authorized to act on behalf of the assignee. See MPEP § 324.

Examiner Note:

1. This form paragraph is to be used when the person signing the submission establishing ownership interest does not state his/her capacity (e.g., as a recognized officer) to sign for the assignee, and is not established as being authorized to act on behalf of the assignee.
2. Use form paragraph 14.16.06 to explain how an official, other than a recognized officer, may properly sign a submission establishing ownership interest.

¶ *14.16.03 Lack of Capacity To Sign*

The person who signed the submission establishing ownership interest is not recognized as an officer of the assignee, and he/she has not been established as being authorized to act on behalf of the assignee. See MPEP § 324.

¶ *14.16.04 Attorney/Agent of Record Signs*

The submission establishing ownership interest was signed by applicant's **[1]**. An attorney or agent of record is not authorized to sign a submission establishing ownership interest, unless he/she has been established as being authorized to act on behalf of the assignee. See MPEP § 324.

Examiner Note:

1. This form paragraph is to be used when the person signing the submission establishing ownership interest is an attorney or agent of record who is not an authorized officer as defined in MPEP § 324 and has not been established as being authorized to act on behalf of the assignee.
2. Use form paragraph 14.16.06 to explain how an official, other than a recognized officer, may properly sign a submission establishing ownership interest.
3. In bracket 1, insert either --attorney-- or --agent--.

¶ *14.16.06 Criteria To Accept When Signed by a Non-Recognized Officer*

It would be acceptable for a person, other than a recognized officer, to sign a submission establishing ownership interest, provided the record for the application includes a duly signed statement that the person is empowered to sign a submission establishing ownership interest and/or act on behalf of the assignee.

Accordingly, a new submission establishing ownership interest which includes such a statement above, will be considered to be signed by an appropriate official of the assignee. A separately filed paper referencing the previously filed submission establishing ownership interest and containing a proper empowerment statement would also be acceptable.

Examiner Note:

1. This form paragraph MUST be preceded by form paragraphs 14.16.02, 14.16.03 or 14.16.04.
2. When one of form paragraphs 14.16.02, 14.16.03 or 14.16.04 is used to indicate that a submission establishing ownership interest is not proper because it was not signed by a recognized officer,

this form paragraph should be used to point out one way to correct the problem.

3. While an indication of the person's title is desirable, its inclusion is not mandatory when this option is employed.

Where the submission establishes the assignee's ownership as to the patent, ownership as to the reissue application will be presumed. Accordingly, a submission as to the ownership of the patent will be construed to satisfy the 37 CFR1.172 (and 37 CFR 3.73(b)) requirements for establishing ownership of the application. Thus, a terminal disclaimer can be filed in a reissue application where ownership of the patent has been established, without the need for a separate submission under 37 CFR 3.73(b) showing ownership of the reissue application.

Even if the submission states that it is establishing ownership of the reissue application (rather than the patent), the submission should be accepted by the examiner as also establishing ownership in the patent. The documentation in the submission establishing ownership of the reissue application must, of necessity, include chain of title as to the patent.

III. COMPARISON OF ASSIGNEE THAT CONSENTS TO ASSIGNEE SET FORTH IN SUBMISSION ESTABLISHING OWNERSHIP INTEREST

The examiner must inspect both the consent and documentary evidence of ownership to determine whether the requirements of 37 CFR 1.172 have been met. The assignee identified by the documentary evidence must be the same assignee which signed the consent. Also, the person who signs the consent for the assignee and the person who signs the submission of evidence of ownership for the assignee must both be persons having authority to do so. See also MPEP § 324.

The reissue patent will be granted to the original patentee, his or her legal representatives or assigns as the interest may appear.

1411 Form of Specification [R-7]

37 CFR 1.173. Reissue specification, drawings, and amendments.

(a) *Contents of a reissue application.* An application for reissue must contain the entire specification, including the claims, and the drawings of the patent. No new matter shall be introduced into the application. No reissue patent shall be granted enlarging the scope of the claims of the original patent unless applied for within two years from the grant of the original patent, pursuant to 35 U.S.C. 251.

(1) *Specification, including claims.* The entire specification, including the claims, of the patent for which reissue is requested must be furnished in the form of a copy of the printed patent, in double column format, each page on only one side of a single sheet of paper. If an amendment of the reissue application is to be included, it must be made pursuant to paragraph (b) of this section. The formal requirements for papers making up the reissue application other than those set forth in this section are set out in § 1.52. Additionally, a copy of any disclaimer (§ 1.321), certificate of correction (§§ 1.322 through 1.324), or reexamination certificate (§ 1.570) issued in the patent must be included. (See also § 1.178).

(2) *Drawings.* Applicant must submit a clean copy of each drawing sheet of the printed patent at the time the reissue application is filed. If such copy complies with § 1.84, no further drawings will be required. Where a drawing of the reissue application is to include any changes relative to the patent being reissued, the changes to the drawing must be made in accordance with paragraph (b)(3) of this section. The Office will not transfer the drawings from the patent file to the reissue application.

*****

The file wrappers of all /08 and earlier series reissue applications are stamped "REISSUE" above the application number on the front of the file. "Reissue" also appears below the application number on the printed label on the file wrapper of the application with 08/ and earlier series.

Reissue applications filed after July of 1998 (09/ series and later) are placed in an orange and white striped file wrapper and can be easily identified as reissue applications. (For IFW Processing, see IFW Manual.)

Reissue applications filed **>before< November 7, 2000 should be furnished in the form of cut-up soft copies of the original patent, with only a single column of the printed patent securely mounted on a separate sheet of paper.

For reissue applications filed on or after November 7, 2000, 37 CFR 1.173(a)(1) requires that the application specification, including the claims, must be furnished in the form of a copy of the printed patent in double column format (so that the patent can be simply copied without cutting). Applicants are required to submit a clean copy of each drawing sheet of the printed patent at the time the reissue application is filed (37 CFR 1.173(a)(2)). Any changes to the drawings must be made in accordance with 37 CFR 1.173(b)(3). Thus, a full copy of the printed patent (including the front page) is used to provide the

abstract, drawings, specification, and claims of the patent for the reissue application. Each page of the patent must appear on only one side of each individual page of the specification of the reissue application; a two-sided copy of the patent is not proper. It should be noted that a re-typed specification is not acceptable in a reissue application; the full copy of the printed patent must be used. If, however, the changes to be made to the patent are so extensive/numerous that reading and understanding the specification is extremely difficult and error-prone, a clean copy of the specification may be submitted if accompanied by a grantable petition under 37 CFR 1.183 for waiver of 37 CFR 1.125(d) and 37 CFR 1.173(a)(1).

Pursuant to 37 CFR 1.173(b), amendments may be made **at the time of filing** of a reissue application. The amendment may be made either by:

(A) physically incorporating the changes within the specification by cutting the column of the printed patent and inserting the added material and rejoining the remainder of the column and then joining the resulting modified column to the other column of the printed patent. Markings pursuant to 37 CFR 1.173(d) must be used to show the changes. The columnar structure of the printed patent must be preserved, and the physically modified page must comply with 37 CFR 1.52(a)(1). As to compliance with 37 CFR 1.52(a)(1)(iv), the "written either by a typewriter or machine printer in permanent dark ink or its equivalent" requirement is deemed to be satisfied where a caret and line are drawn from a position within the text to a newly added phrase, clause, sentence, etc. typed legibly in the margin; or

(B) providing a preliminary amendment (a separate amendment paper) directing that specified changes be made to the copy of the printed patent.

The presentation of the insertions or deletions as part of the original reissue specification is an amendment under 37 CFR 1.173(b). An amendment of the reissue application made at the time of filing of the reissue application must be made in accordance with 37 CFR 1.173(b)-(e) and (g); see MPEP § 1453. Thus, as required by 37 CFR 1.173(c), an amendment of the claims made at the time of filing of a reissue application must include a separate paper setting forth the status of all claims (i.e., pending or canceled), and an explanation of the support in the disclosure of the patent for the changes made to the claims.

If a chart, table, or chemical formula is amended and it spans two columns of the patent, it should not be split. Rather, the chart, table, or chemical formula should be provided in its entirety *as part of the column of the patent to which it pertains,* in order to provide a continuity of the description. When doing so, the chart, table, or chemical formula may extend beyond the width of the column. Change in only a part of a word or chemical formula is not permitted. Entire words or chemical formulas must be shown as being changed. Deletion of a chemical formula should be shown by brackets which are substantially larger and darker than any in the formula.

Where a terminal disclaimer was filed in the application for the patent to be reissued, a copy of that terminal disclaimer is not needed in the reissue application file. **>To identify this information, the "Final SPRE Review" form will be filled in at the appropriate point and scanned into the file for the reissue application that is maintained in IFW.<

Twice reissued patent:

Examples of the form for a twice-reissued patent are found in Re. 23,558 and Re. 28,488. Double underlining and double bracketing are used in the second reissue application, while **bold**-faced type and double bracketing appear in the printed patent (the second reissue patent) to indicate further insertions and deletions, respectively, in the second reissue patent.

When a copy of a first reissue patent is used as the specification of a second reissue application (filed as a reissue of a reissue), additions made by the first reissue will already be printed in italics, and should remain in such format. Thus, applicants need only present additions to the specification/claims in the second reissue application as double underlined text. Subject matter to be deleted from the first reissue patent should be presented in the second reissue application within sets of double brackets.

1411.01 Certificate of Correction or Disclaimer in Original Patent [R-7]

The applicant should include any changes, additions, or deletions that were made by a Certificate of Correction to the original patent grant in the reissue application without underlining or bracketing. >This

includes changes made by a Certification of Correction dated before the filing of the reissue application or dated during the pendency of the reissue application.< The examiner should make certain that all Certificate of Correction changes in the patent have been properly incorporated into the reissue application.

Certificate of Correction changes and disclaimer of claim(s) under 37 CFR 1.321(a) should be made without using underlining or brackets. *>Because< these are >retroactively a< part of the original patent and *>are< made before the reissue **>application will issue as a patent, they must< show up in the printed reissue patent document as part of the original patent, i.e., not in italics or bracketed. >If the changes are submitted improperly with underlining and brackets, the examiner will require correction by the applicant in the form of a replacement paragraph (or paragraphs) without such markings.< If the changes are extensive**, a clean copy of the specification with the Certificate of Correction changes in it may be *>required< by the examiner >after consulting with his/her supervisor<. **>For< the clean copy >of the specification< to be entered as a substitute specification, the reissue applicant must file a grantable petition under 37 CFR 1.183 for waiver of 37 CFR 1.125(d) and 37 CFR 1.173(a)(1). The examiner's *>requirement< for the clean copy will generally serve as sufficient basis for granting the petition.

1411.02 New Matter

New matter, that is, matter not present in the patent sought to be reissued, is excluded from a reissue application in accordance with 35 U.S.C. 251.

The claims in the reissue application must be for subject matter which the applicant had the right to claim in the original patent. *Any* change in the patent made via the reissue application should be checked to ensure that it does not introduce new matter. Note that new matter may exist by virtue of the omission of a feature or of a step in a method. See *United States Industrial Chemicals, Inc. v. Carbide & Carbon Chemicals Corp.*, 315 U.S. 668, 53 USPQ 6 (1942).

Form paragraph 14.22.01 may be used where new matter has been added anywhere in "the application for reissue" as prohibited by 35 U.S.C. 251.

¶ *14.22.01 Rejection, 35 U.S.C. 251, New Matter*

Claim **[1]** rejected under 35 U.S.C. 251 as being based upon new matter added to the patent for which reissue is sought. The added material which is not supported by the prior patent is as follows: **[2]**

Examiner Note:

1. In bracket 2, fill in the applicable page and line numbers and provide an explanation of your position, as appropriate.
2. A rejection under 35 U.S.C. 112, first paragraph, should also be made if the new matter is added to the claims or is added to the specification and affects the claims. If new matter is added to the specification and does not affect the claims, an objection should be made based upon 35 U.S.C. 132 using form paragraph 7.28.

1412 Content of Claims

The content of claims in a reissue application is somewhat limited, as is indicated in MPEP § 1412.01 through MPEP § 1412.03.

1412.01 Reissue Claims Must Be for Same General Invention [R-7]

The reissue claims must be for the same invention as that **disclosed** as being the invention in the original patent, as required by 35 U.S.C. 251. **The entire disclosure, not just the claim(s), is considered in determining what the patentee objectively intended as his or her invention. The proper test as to whether reissue claims are for the same invention as that disclosed as being the invention in the original patent is "an essentially factual inquiry confined to the objective intent manifested by the **original patent**." *In re Amos*, 953 F.2d 613, 618, 21 USPQ2d 1271, 1274 (Fed. Cir. 1991) (quoting *In re Rowand*, 526 F.2d 558, 560, 187 USPQ 487, 489 (CCPA 1975)) (emphasis added). See also *In re Mead*, 581 F.2d 257, 198 USPQ 412 (CCPA 1978). The "original patent" requirement of 35 U.S.C. 251 must be understood in light of *In re Amos, supra*, where the Court of Appeals for the Federal Circuit stated:

> We conclude that, under both *Mead* and *Rowand*, a claim submitted in reissue may be rejected under the "original patent" clause if the original specification demonstrates, to one skilled in the art, an absence of disclosure sufficient to indicate that a patentee could have claimed the subject matter. Merely finding that the subject matter was "not originally claimed, not an object of the original patent, and not depicted in the drawing," does not answer the essential inquiry under the "original patent" clause of § 251, which is whether one skilled in the art, reading the specification, would identify the subject matter of the new claims as invented and disclosed by the patentees. In short, the absence of an "intent," even if objectively evident from the earlier claims, the drawings, or the original

> objects of the invention is simply not enough to establish that the new claims are not drawn to the invention disclosed in the original patent.

953 F.2d at 618-19, 21 USPQ2d at 1275. Claims presented in a reissue application are considered to satisfy the requirement of 35 U.S.C. 251 that the claims be "for the invention disclosed in the original patent" where:

(A) the claims presented in the reissue application are described in the original patent specification and enabled by the original patent specification such that 35 U.S.C. 112 first paragraph is satisfied; and

(B) nothing in the original patent specification indicates an intent not to claim the subject matter of the claims presented in the reissue application.

The presence of some disclosure (description and enablement) in the original patent should evidence that applicant intended to claim or that applicant considered the material now claimed to be his or her invention.

The original patent specification would indicate an intent not to claim the subject matter of the claims presented in the reissue application in a situation analogous to the following:

The original patent specification discloses that composition X is not suitable (or not satisfactory) for molding an item because composition X fails to provide quick drying. >The patent issues with claims directed only to composition Y.< After the patent issues, it is found that composition X would be desirable for the molding in spite of the failure to provide quick drying, because of some other newly recognized benefit from composition X. *>The addition of a< claim to composition X or a method of use thereof would not be permitted in a reissue application, because the original patent specification contained an explicit statement of intent *not* to claim composition X or a method of use thereof.

>One should understand<, however, >that< the mere failure to claim a disclosed embodiment in the original patent (absent an explicit statement in the original patent specification of unsuitability of the embodiment) would **not be grounds for prohibiting a claim to that embodiment in the reissue.

FAILURE TO TIMELY FILE A DIVISIONAL APPLICATION PRIOR TO ISSUANCE OF ORIGINAL PATENT

Where a restriction >(or an election of species)< requirement was made in an application and applicant permitted the elected invention to issue as a patent without * filing * a divisional application on the non-elected invention(s), the non-elected invention(s) cannot be recovered by filing a reissue application. A reissue applicant's failure to timely file a divisional application covering the non-elected invention(s) in response to a restriction >(or an election of species)< requirement is not considered to be error causing a patent granted on the elected claims to be partially inoperative by reason of claiming less than the applicant had a right to claim. Accordingly, **>this< is not correctable by reissue of the original patent under 35 U.S.C. 251. *In re Watkinson*, 900 F.2d 230, 14 USPQ2d 1407 (Fed. Cir. 1990); *In re Orita*, 550 F.2d 1277, 1280, 193 USPQ 145, 148 (CCPA 1977). See also *In re Mead*, 581 F.2d 251, 198 USPQ 412 (CCPA 1978). In this situation, the reissue claims should be rejected under 35 U.S.C. 251 for lack of defect in the original patent and lack of error in obtaining the original patent. Compare with *In re Doyle*, 293 F.3d 1355, 63 USPQ2d 1161 (Fed. Cir. 2002) where the court permitted the patentee to file a reissue application to present a so-called linking claim, a claim broad enough to read on or link the invention elected (and patented) together with the invention not elected. The non-elected invention(s) were inadvertently not filed as a divisional application.

1412.02 Recapture of Canceled Subject Matter [R-7]

A reissue will not be granted to "recapture" claimed subject matter which was surrendered in an application to obtain the original patent. *North American Container, Inc. v. Plastipak Packaging, Inc.*, 415 F.3d 1335, 75 USPQ2d 1545 (Fed. Cir. 2005), *Pannu v. Storz Instruments Inc.*, 258 F.3d 1366, 59 USPQ2d 1597 (Fed. Cir. 2001); *Hester Industries, Inc. v. Stein, Inc.*, 142 F.3d 1472, 46 USPQ2d 1641 (Fed. Cir. 1998); *In re Clement*, 131 F.3d 1464, 45 USPQ2d 1161 (Fed. Cir. 1997); *Ball Corp. v. United States*, 729 F.2d 1429, 1436, 221 USPQ 289, 295 (Fed. Cir. 1984); *In re Wadlinger*, 496 F.2d 1200, 181 USPQ

826 (CCPA 1974); *In re Richman*, 409 F.2d 269, 276, 161 USPQ 359, 363-364 (CCPA 1969); *In re Willingham*, 282 F.2d 353, 127 USPQ 211 (CCPA 1960).

I. THREE STEP TEST FOR RECAPTURE:

In *Clement*, 131 F.3d at 1468-70, 45 USPQ2d at 1164-65, the Court of Appeals for the Federal Circuit set forth a three step test for recapture analysis. In **>*North American Container*, 415 F.3d at 1349, 75 USPQ2d at 1556, the court restated this test as follows:

> We apply the recapture rule as a three-step process:
>
> (1) first, we determine whether, and in what respect, the reissue claims are broader in scope than the original patent claims;
>
> (2) next, we determine whether the broader aspects of the reissue claims relate to subject matter surrendered in the original prosecution; and
>
> (3) finally, we determine whether the reissue claims were materially narrowed in other respects, so that the claims may not have been enlarged, and hence avoid the recapture rule.

In *North American Container*, the court cited *Pannu*, 258 F.3d at 1371, 59 USPQ2d at 1600; *Hester*, 142 F.3d at 1482-83, 46 USPQ2d at 1649-50; and *Clement*, 131 F.3d at 1468, 45 USPQ2d at 1164-65 as cases that lead to, and explain the language in, the *North American Container* recapture test.<

A. The First Step - Was There Broadening?

In every reissue application, the examiner must first review each claim for the presence of broadening, as compared with the scope of the claims of the patent to be reissued. A reissue claim is broadened where some limitation of the patent claims is no longer required in the reissue claim; see MPEP § 1412.03 for guidance as to the nature of a "broadening claim." If the reissue claim is not broadened in any respect as compared to the patent claims, the analysis ends; there is no recapture.

B. The Second Step - Does Any Broadening Aspect of the Reissued Claim Relate to Surrendered Subject Matter?

Where a claim in a reissue application is broadened in some respect as compared to the patent claims, the examiner must next determine whether the broadening aspect(s) of that reissue claim relate(s) to subject matter that applicant previously surrendered during the prosecution of the original application (which became the patent to be reissued). Each limitation of the patent claims, which is omitted or broadened in the reissue claim, must be reviewed for this determination. This involves two sub-steps:

1. The Two Sub-Steps:

(A) **>One must first determine whether applicant surrendered any< subject matter * in the prosecution of the original application *>that< became the patent to be reissued.

If an original patent claim limitation now being omitted or broadened in the present reissue application was originally relied upon by applicant in the original application to make the claims allowable over the art, the omitted limitation relates to subject matter previously surrendered by applicant. The reliance by applicant to define the original patent claims over the art can be by ** presentation of new/amended claims to define over the art, or an argument/statement by applicant that a limitation of the claim(s) defines over the art. To determine whether such reliance occurred, the examiner must review the prosecution history of the original application file (of the patent to be reissued) for recapture. The prosecution history includes the rejections and applicant's arguments made therein.

If **>applicant did not< surrender *>any< subject matter * in the prosecution of the original application, again the analysis ends and there is no recapture.

(B) If **>applicant did< surrender * subject matter in the original application prosecution, *>the examiner< must then **>determine< whether any of the broadening of the reissue claims is in the area of the surrendered subject matter. *>The examiner must analyze all< of the broadening aspects of reissue claims ** to determine if any of the omitted/broadened limitation(s) are directed to limitations relied upon by applicant in the original application to make the claims allowable over the art.

2. Examples of the * Second Step Analysis:

(A) Example (1) - Argument without amendment:

In *Hester*, *supra*, the Federal Circuit held that the surrender *>that< forms the basis for impermissible recapture "can occur through arguments alone".

142 F.3d at 1482, 46 USPQ2d at 1649. For example, assume that limitation A of the patent claims is omitted in the reissue claims. This omission provides a broadening aspect in the reissue claims, as compared to the claims of the patent. If the omitted limitation A was argued in the original application to make the application claims allowable over the art in the application, then the omitted limitation relates to subject matter previously surrendered in the original application, and recapture will exist. Accordingly, where claims are broadened in a reissue application, the examiner should review the prosecution history of the original patent file for recapture, even where the claims were never amended during the prosecution of the application which resulted in the patent.

Note: The argument that the claim limitation defined over the rejection must have been specific as to the limitation relied upon, rather than a general statement regarding the claims as a whole. A general "boiler plate" sentence in the original application will not, by itself, be sufficient to establish surrender and recapture.

An example of a general "boiler plate" sentence of argument is:

> In closing, it is argued that the limitations of claims 1-7 distinguish the claims from the teachings of the prior art, and claims 1-7 are thus patentable.

An argument that merely states that all the limitations of the claims define over the prior art will also not, by itself, be sufficient to establish surrender and recapture. An example is:

> Claims 1-5 set forth a power-train apparatus which comprises the combination of A+B+C+D+E. The prior art of record does not disclose or **>otherwise teach, providing< a material-transfer apparatus as defined by the limitations of claim 1, including an A member and a B member, both connected to a C member, with all three being aligned with the D and E members.

This statement is simply a restatement of the entirety of claim 1 as allowed. No measure of surrender could be gleaned from such a statement of reasons for allowance. See *Ex parte Yamaguchi*, 61 USPQ2d 1043 (Bd. Pat. App. & Inter. 2001)(reported but unpublished, precedential).

In both of the above examples, the argument does not provide an indication of what specific limitations, e.g., specific element or step of the claims, cooperative effect, or other aspect of the claims, are being relied upon for patentability. Thus, applicant has not surrendered anything.

(B) Example (2) - Amendment of the claims without argument:

The limitation omitted in the reissue claim(s) was added in the original application claims for the purpose of making the application claims allowable over a rejection or objection made in the application. Even though applicant made no argument on the record that the limitation was added to obviate the rejection, the nature of the addition to the claim can show that the limitation was added in direct reply to the rejection. This too will establish the omitted limitation as relating to subject matter previously surrendered. To illustrate this, note the following example:

> The original application claims recite limitations A+B+C, and the Office action rejection combines two references to show A+B+C. In the amendment replying to the Office action, applicant adds limitation D to A+B+C in the claims, but makes no argument as to that addition. The examiner then allows the claims. Even though there is no argument as to the addition of limitation D, it must be presumed that the D limitation was added to obviate the rejection. The subsequent deletion of (omission of) limitation D in the reissue claims would be presumed to be a broadening in an aspect of the reissue claims related to surrendered subject matter. Accordingly, the reissued claims would be barred by the recapture doctrine.

The above result would be the same whether the addition of limitation D in the original application was by way of applicant's amendment or by way of an examiner's amendment with authorization by applicant.

(C) Example (3) - Who can make the surrendering argument?

Assume that the limitation A omitted in the reissue claims was present in the claims of the original application. The examiner's reasons for allowance in the original application stated that it was that limitation A which distinguished over a potential combination of references X and Y. Applicant did not present on the record a counter statement or comment as to the examiner's reasons for allowance, and permitted the claims to issue.

Ex parte Yamaguchi, supra, held that a surrender of claimed subject matter cannot be based solely upon an applicant's failure to respond to, or failure to chal-

lenge, an examiner's statement made during the prosecution of an application. Applicant is bound only by applicant's revision of the application claims or a positive argument/statement by *applicant*. An applicant's failure to present on the record a counter statement or comment as to an examiner's reasons for allowance does not give rise to any implication that applicant agreed with or acquiesced in the examiner's reasoning for allowance. Thus, the failure to present a counter statement or comment as to the examiner's statement of reasons for allowance does not give rise to any finding of surrender. **The examiner's statement of reasons for allowance in the original application cannot, *by itself*, provide the basis for establishing surrender and recapture**.

It is only in the situation where applicant does file comments on the statement of reasons for allowance, that surrender may have occurred. Note the following two scenarios in which an applicant files comments:

> *Scenario 1- There is Surrender*: The examiner's statement of reasons for allowance in the original application stated that it was limitation C (of the combination of ABC) which distinguished over a potential combining of references X and Y, in that limitation C provided increased speed to the process. Applicant filed comments on the examiner's statement of reasons for allowance essentially supporting the examiner' s reasons. The limitation C is thus established as relating to subject matter previously surrendered.

> *Scenario 2- There is No Surrender*: On the other hand, if applicant's comments on the examiner's statement of reasons for allowance contain a counter statement that it is limitation B (of the combination of ABC), rather than C, which distinguishes the claims over the art, then limitation B would constitute surrendered subject matter, and limitation C has not been surrendered.

*C. The Third Step - Were the reissued claims materially narrowed in other respects **>, so that the claims may not have been enlarged, and hence< avoid the recapture rule?*

As pointed out above, the third prong of the recapture determination set forth in *>*North American Container*< is directed to analysis of the broadening and narrowing effected *>by< the reissue claims, and of the significance of the claim limitations added and deleted, using the prosecution history of the patent (to be reissued), to determine whether the reissue claims should be barred as recapture.

The following discussion addresses analyzing the reissue claims, and *which claims* are to be compared to the reissue claims in determining the issue of surrender (for reissue recapture).

When analyzing a reissue claim for the possibility of impermissible recapture, there are two different types of analysis that must be performed. If the reissue claim "fails" either analysis, recapture exists.

First, the reissue claim must be compared to any claims canceled or amended during prosecution of the original application. It is impermissible recapture for a reissue claim to be as broad or broader in scope than any claim that was canceled or amended in the original prosecution to define over the art. Claim scope that was canceled or amended is deemed surrendered and therefore barred from reissue. *In re Clement, supra.*

Second, it must be determined whether the reissue claim * omits >or broadens< any limitation that was added/argued during the original prosecution to overcome an art rejection. Such an omission in a reissue claim, even if it includes other limitations making the reissue claim narrower than the patent claim in other aspects, is impermissible recapture. *Pannu* **>, 258 F.3d at 1371-72, 59 USPQ2d at 1600. In any broadening reissue application, the examiner will determine, on a claim-by-claim basis, whether the broadening in the reissue application relates to subject matter that was surrendered during the examination of the patent that is the subject of the reissue application because such subject matter was added and/or argued to overcome a rejection. If surrendered subject matter has been entirely eliminated from a claim in the reissue application, or has been in any way broadened in a reissue application claim, then a recapture rejection under 35 U.S.C. 251 is proper and must be made for that claim.

If, however, the reissue claim(s) are really claiming additional inventions/embodiments/species not originally claimed (i.e., overlooked aspects of the disclosed invention), then recapture will not be present. Note the following examples:

Assume that, in the original prosecution of the patent, applicant claimed a method of making a glass lens, where the ion implantation step used a molten bath to diffuse ions into the lens, and that step had to be amended to recite a pressure of 50-60 PSI and temperature between 150-200 degrees C - to define over

the art. That pressure and temperature range-set is "frozen" in place for any molten bath ion implantation claim, and it cannot be deleted or broadened by reissue. However, if in the original application, applicant had failed to claim a disclosed embodiment to plasma ion implantation (i.e., using a plasma stream rather than a molten bath to provide the ions), that is a proper 35 U.S.C. 251 error, which can be corrected by reissue. Applicant can, in a reissue application, add a set of claims to plasma ion implantation, without including the "50-60 PSI and temperature between 150-200 degrees C" limitation. The "50-60 PSI - 150-200 degrees C limitation" is totally irrelevant to plasma implantation and is clearly wrong for the plasma species/embodiment, as opposed to being right for the molten bath species/embodiment. Also, if in the original application, applicant failed to claim the method of placing two lenses made by the invention in a specified series to modulate a laser for cutting chocolate, that too is a proper 35 U.S.C. 251 error, which can be corrected by reissue. In this lens placement method, it does not matter how the specific lens having the implanted ion gradient was made, and the "50-60 PSI and temperature between 150-200 degrees C" limitation is again not relevant. *Hester Industries, Inc. v. Stein, Inc., supra,* addressed this concept of overlooked aspects, stating:

> [T]his principle [i.e., avoidance of the recapture rule], in appropriate cases, may operate to overcome the recapture rule when the reissue claims are materially narrower in other **overlooked aspects** of the invention. The purpose of this exception to the recapture rule is to allow the patentee to obtain through reissue a scope of protection to which he is rightfully entitled for such overlooked aspects. [*Hester*, 142 F.3d at 1482-83, 46 USPQ2d at 1649-50.][Emphasis added]

See also *B.E. Meyers & Co. v. United States*, 56 USPQ2d 1110 (US CtFedCls 2000), where the Court of Federal Claims permitted the complete removal of a limitation that was added to obtain the patent, where the replacement limitation provided a separate invention.<

The following discussion is provided for analyzing the reissue claims.

1. **>Comparing< Reissue Claims Narrowed/ Broadened *Vis-à-vis* the Canceled Claims

*>DEFINITIONS<:

"Canceled claims," in the context of recapture case law, are claims canceled from the original application to obtain the patent for which reissue is now being sought. The claims

(A) can simply be canceled and not replaced by others, or

(B) can be canceled and replaced by other claims which are more specific than the canceled claims in at least one aspect (to thereby define over the art of record). The "replacement claims" can be new claims which are narrower than the canceled claims, or can be the same claims amended to be narrower than the canceled version of the claims.

>"Surrender-generating limitation" – The "limitation" presented, argued, or stated to make the claims patentable over the art (in the application) "generates" the surrender of claimed subject matter. For the sake of simplification, this limitation will be referred to throughout this section as the *surrender-generating limitation*.<

(a) Reissue Claims Are Same or Broader in Scope Than Canceled Claims in All Aspects:

The recapture rule bars the patentee from acquiring, through reissue, claims that are in all aspects (A) of the same scope as, or (B) broader in scope than, those claims canceled from the original application to obtain a patent. ** *Ball Corp. v. United States*, 729 F.2d at 1436, 221 USPQ at 295.

(b) Reissue Claims are Narrower in Scope Than Canceled Claims in at Least One Aspect:

If the reissue claims are equal in scope to, or narrower than, the claims of the original patent (as opposed to the claims "canceled from the application") in all aspects, then there can never be recapture. The discussion that follows is not directed to that situation. It is rather directed to the situation where the *reissue claims are narrower than the claims 'canceled' from the application in some aspect, but are broader than the claims of the original patent in some other aspect*.

If the reissue claims are narrower in scope than the claims canceled from the original application by inclusion of *the >entirety of the< limitation added to define the original application claims over the art*, there will be no recapture, even if the reissue claims are broader than the canceled claims in some other aspect (i.e., an aspect not related to the surrender made in the original application).

Assume combination AB was originally presented in the application, and was amended in response to an art rejection to add element C and thus provide ABC (after which the patent issued). The reissue claims are then directed to combination $AB_{broadened}C$. The $AB_{broadened}C$ claims are *narrower* in scope when compared with the canceled claim subject matter AB *in respect to the addition of C* (which was added in the application to overcome the art), and >they retain surrender-generating limitation C; thus,< there is no recapture.

As another example, assume combination ABZ was originally presented in the application, and was amended in response to an art rejection to add element C and thus provide ABZC (after which the patent issued). The reissue claims are then directed to combination ABC (i.e., element Z is deleted from the canceled claims, while element C remains present). The ABC claims of the reissue are *narrower* in scope as compared to the canceled-from-the-original-application claim subject matter ABZ *in respect to the addition of C* (which was added in the application to overcome the art), and **>they retain surrender-generating limitation C; thus, there is< no recapture.

2. **>Comparing< *Reissue* Claims Narrowed/ Broadened *>*Vis*<-*à*-*vis* the Patent Claims

The "patent claims," in the context of recapture case law, are claims *>that< issued in the original patent for which reissue is now being sought. As pointed out above, where the reissue claims are narrower than the claims of the original patent in all aspects, then there can never be recapture. If reissue claims are equal in scope to the patent claims, there is no recapture as to those reissue claims. Where, however, reissue claims are both broadened and narrowed as compared with the original patent claims, the nature of the broadening and narrowing must be examined to determine whether the reissue claims are barred as being recapture of surrendered subject matter. If the claims are "broader than they are narrower in a manner directly pertinent to the subject matter... surrendered during prosecution" (*Clement*, 131 F.3d at 1471, 45 USPQ2d at 1166), then recapture will bar the claims. This narrowing/broadening *vis-à-vis* the patent is broken down into four possibilities that will now be addressed.

** If a claim is presented in a reissue application that omits, in its entirety, the surrender-generating limitation, that claim impermissibly recaptures what was previously surrendered, and that claim is barred under 35 U.S.C. 251. This terminology will be used in the discussion of the four categories of narrowing/ broadening *vis-à-vis* the **patent** that follows.

(a) Reissue Claims are Narrower in Scope Than Patent Claims, in Area Not Directed to Amendment/Argument Made to Overcome Art Rejection in Original Prosecution; are Broader in Scope by Omitting Limitation(s) Added/Argued To Overcome Art Rejection in Original Prosecution:

In this case, there is recapture.

This situation is where the patent claims are directed to combination ABC and the reissue claims are directed to ABD. Element C was either a limitation added to AB to obtain allowance of the original patent, or was argued by applicant to define over the art (or both). Thus, addition of C (and/or argument as to C) has resulted in the surrender of any combination of A & B that does not include C; this is the surrendered subject matter. Element D, on the other hand, is not related to the surrendered subject matter. Thus, the reissue claim, which no longer contains C, is broadened in an area related to the surrender, and the narrowing *>by< the addition of D does not save the claim from recapture *>because< D is not related to the surrendered subject matter.

Reissue claims that are broader than the original patent claims by not including the surrender-generating limitation (element C, in the example given) will be barred by the recapture rule even though there is narrowing of the claims not related to the surrender-generating limitation. As stated in the decision of *In re Clement*, 131 F.3d at 1470, 45 USPQ2d at 1165, if the reissue claim is broader in an aspect germane to a prior art rejection, but narrower in another aspect completely unrelated to the rejection, the recapture

rule bars the claim. *Pannu v. Storz Instruments Inc.*, *supra*, then brings home the point by providing an actual fact situation in which this scenario was held to be recapture.

(b) Reissue Claims are Narrower or Equal in Scope, in Area Directed to Amendment/ Argument Made to Overcome Art Rejection in Original Prosecution; are Broader in Scope in Area Not Directed to Amendment/ Argument:

In this case, there is no recapture.

This situation is where the patent claims are directed to combination ABCDE and the reissue claims are directed to ABDE (element C is omitted). Assume that the combination of ABCD was present in the original application as it was filed, and element E was later added to define over that art. No argument was ever presented as to elements A-C defining over the art.

In this situation, the ABCDE combination of the patent can be broadened (in the reissue application) to omit element C, and thereby claim the combination of ABDE, where element E (the surrender generating limitation) is not omitted. There would be no recapture in this instance. (If an argument had been presented as to element C defining over the art, in addition to the addition of element E, then the ABCDE combination could not be broadened to omit element C and thereby claim combination of ABDE. This would be recapture; see the above discussion as to surrender and recapture based upon argument.)

Additionally, the reissue claims are certainly permitted to recite combination $ABDE_{specific}$ (where surrender-generating element E is narrowed). The patent claims have been broadened in an area not directed to the surrender (by omitting element C) and narrowed in the area of surrender (by narrowing element E to $E_{specific}$). This is clearly permitted.

As another example, assume limitation C was added to application claims AB to obtain the patent to ABC, and now the reissue application presents claims to AC or $AB_{broad}C$. Such reissue claims avoid the effect of the recapture rule because they are broader in a way that does not attempt to reclaim what was surrendered earlier. *Mentor Corp. v. Coloplast, Inc.*, 998 F.2d 992, 994, 27 USPQ2d 1521, 1525 (Fed. Cir. 1993). Such claims are considered to be broader in an aspect not "germane to a prior art rejection," and thus are not barred by recapture. Note *In re Clement*, 131 F.3d at 1470, 45 USPQ2d at 1165.

Reissue claims that are broader than the original patent claims by deletion of a limitation or claim requirement other than the "surrender-generating limitation" will avoid the effect of the recapture rule, regardless of the nature of the narrowing in the claims, and even if the claims are not narrowed at all from the scope of the patent claims.

(c) Reissue Claims are Narrower in Scope in Area Not Directed to Amendment/Argument Made to Overcome Art Rejection in Original Prosecution; are Broader in Scope in Area Not Directed to the Amendment/Argument:

In this instance, there is clearly no recapture. In the reissue application, there has been no change in the claims related to the matter surrendered in the original application for the patent.

In this instance, element C was added to the AB combination to provide ABC and define over the art, and the patent was issued. The reissue omits element B and adds element Z, to thus claim ACZ. There is no recapture *>because< the surrender generating element C has not been modified in any way. (Note, however, that if, when element C was added to AB, applicant argued that the association of newly added C with B provides a synergistic (unexpected) result to thus define over the art, then neither >element< B nor >element< C could be omitted in the reissue application.)

(d) Reissue Claims Broader in Scope in Area Directed to Amendment/Argument Made to Overcome Art Rejection in Original Prosecution; but Reissue Claims Retain, in Broadened Form, the Limitation(s) Argued/ Added to Overcome Art Rejection in Original Prosecution:

>In this case, there is recapture.<

Assume the combination AB was originally claimed in the application, and was amended in reply to an art rejection to add element C and thus provide the combination ABC (after which the patent issued). A reissue application is then filed, and the reissue application claims are directed to the combination $ABC_{broadened}$. The $ABC_{broadened}$ claims are narrowed

in scope when compared with the canceled claim subject matter AB, because of the addition of $C_{broadened}$. Thus, the claims retain, in broadened form, the limitation argued/added to overcome art rejection in original prosecution. **>In this instance, a recapture rejection would be made even though< $ABC_{broadened}$ is narrower than canceled claim subject matter AB >, because the surrender-generating limitation C has been broadened, i.e., there is broadening< in an area related to the surrender. **

II. REISSUE TO TAKE ADVANTAGE OF 35 U.S.C. 103(b):

A patentee may file a reissue application to permit consideration of process claims which qualify for 35 U.S.C. 103(b) treatment if a patent is granted on an application entitled to the benefit of 35 U.S.C. 103(b), without an election having been made as a result of error without deceptive intent. See MPEP § 706.02(n). **This is not to be considered a recapture.** The addition of process claims, however, will generally be considered to be a *broadening* of the invention (*Ex parte Wikdahl*, 10 USPQ2d 1546 (Bd. Pat. App. & Inter. 1989)), and such addition must be applied for within two years of the grant of the original patent. See also MPEP § 1412.03 as to broadened claims.

III. REISSUE FOR ARTICLE CLAIMS WHICH ARE FUNCTIONAL DESCRIPTIVE MATERIAL STORED ON A COMPUTER-READABLE MEDIUM:

A patentee may file a reissue application to permit consideration of article of manufacture claims >(not presented in the patent to be reissued)< which are functional descriptive material stored on a computer-readable medium, where these article claims correspond to the process or machine claims which have been patented. The error in not presenting claims to this statutory category of invention (the "article" claims) must have been made as a result of error without deceptive intent. The addition of these "article" claims will generally be considered to be a *broadening* of the invention (*Ex parte Wikdahl*, 10 USPQ2d 1546 (Bd. Pat. App. & Inter. 1989)), and such addition must be applied for within two years of the grant of the original patent. See also MPEP § 1412.03 as to broadened claims.

IV. REJECTION BASED UPON RECAPTURE:

Reissue claims which recapture surrendered subject matter should be rejected using form paragraph 14.17.

¶ *14.17 Rejection, 35 U.S.C. 251, Recapture*

Claim**[1]** rejected under 35 U.S.C. 251 as being an improper recapture of broadened claimed subject matter surrendered in the application for the patent upon which the present reissue is based. *See Pannu v. Storz Instruments Inc.*, 258 F.3d 1366, 59 USPQ2d 1597 (Fed. Cir. 2001); *Hester Industries, Inc. v. Stein, Inc.*, 142 F.3d 1472, 46 USPQ2d 1641 (Fed. Cir. 1998); *In re Clement*, 131 F.3d 1464, 45 USPQ2d 1161 (Fed. Cir. 1997); *Ball Corp. v. United States*, 729 F.2d 1429, 1436, 221 USPQ 289, 295 (Fed. Cir. 1984). A broadening aspect is present in the reissue which was not present in the application for patent. The record of the application for the patent shows that the broadening aspect (in the reissue) relates to claim subject matter that applicant previously surrendered during the prosecution of the application. Accordingly, the narrow scope of the claims in the patent was not an error within the meaning of 35 U.S.C. 251, and the broader scope of claim subject matter surrendered in the application for the patent cannot be recaptured by the filing of the present reissue application.

[2]

Examiner Note:

In bracket 2, the examiner should explain the specifics of why recapture exists, including an identification of the omitted/broadened claim limitations in the reissue which provide the "broadening aspect" to the claim(s), and where in the original application the narrowed claim scope was presented/argued to obviate a rejection/objection. See MPEP § 1412.02.

>

V. REBUTTAL BY THE REISSUE APPLICANT

The reissue applicant may rebut a recapture rejection by demonstrating that a claim rejected for recapture includes one or more claim limitations that "materially narrow" the reissue claims. A limitation is said to "materially narrow" the reissue claims if the narrowing limitation is directed to one or more "overlooked aspects" of the invention. *Hester*, 142 F.3d at 1482-83, 46 USPQ2d at 1649-50. The inclusion of such a limitation in a claim rejected for recapture will overcome the recapture rejection. A limitation that had been prosecuted in the original patent application is not directed to "overlooked aspects" of the disclosed invention and will not overcome the recapture rejection.

Examples of reissue application claims that are to be rejected for recapture under 35 U.S.C. 251 include:

Assume that the original application claim ABCD was amended during prosecution and results in a patent claim ABCD**E**.

1. ABCD → Eliminates **E**, the surrender generating limitation (SGL).
2. ABCD**F** → Eliminates **E**, the SGL, adds narrowing limitation **F**.
3. ABCD$\mathbf{E}_{\text{BROADER}}$ → Broadens **E**, the SGL.
4. ABCD$\mathbf{E}_{\text{BROADER}}$**F** → Broadens **E**, the SGL, adds narrowing limitation **F**.

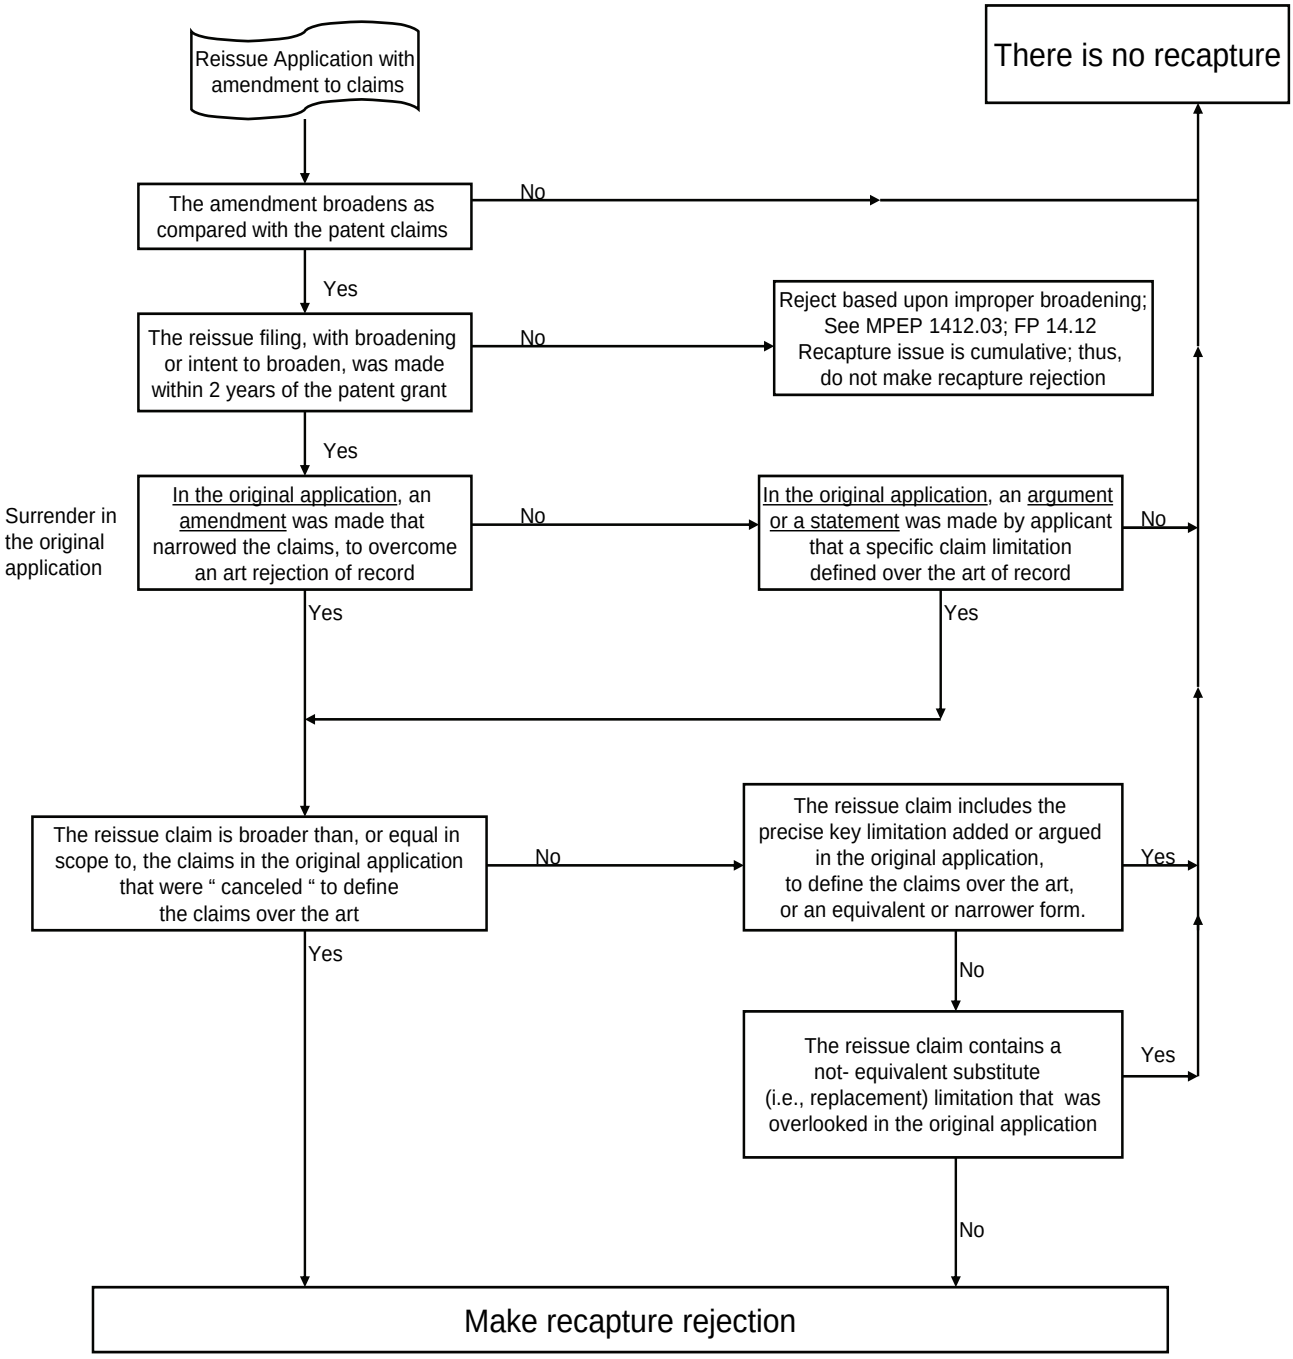
In these four examples, a recapture rejection would be made. Applicant may try to rebut the recapture rejections of examples 2 and 4 by showing that limitation **F** "materially narrows" the reissue claims, if **F** is directed to an "overlooked aspect" of the disclosed invention, as discussed above. The examiner will then determine whether **F**, or a limitation "similar to" **F**, had been prosecuted in the application for the original patent. If so, the recapture rejection will not be overcome. Of course, if the examiner is aware of the fact that **F** is directed to an "overlooked aspect" of the disclosed invention as discussed above, the examiner would so explain in the next Office action, and would then not make the recapture rejection in the first place.

VI. FLOWCHART<

See the recapture-analysis flow chart which follows for assistance in determining whether recapture is present, consistent with the case law discussed above.

>

Reissue Recapture - Determining its presence or absence



<

1412.03 Broadening Reissue Claims [R-7]

35 U.S.C. 251 prescribes a 2-year limit for filing applications for broadening reissues:

> No reissue patent shall be granted enlarging the scope of the original patent unless applied for within two years from the grant of the original patent.

I. MEANING OF "BROADENED REISSUE CLAIM"

A broadened reissue claim is a claim which enlarges the scope of the claims of the patent, *i.e.*, a claim which is greater in scope than each and every claim of the original patent. If a disclaimer is filed in the patent prior to the filing of a reissue application, the disclaimed claims are not part of the "original patent" under 35 U.S.C. 251. The Court in *Vectra Fitness Inc. v. TNWK Corp.*, 49 USPQ2d 1144, 1147, 162 F.3d 1379, 1383 (Fed. Cir. 1998) held that a reissue application violated the statutory prohibition under 35 U.S.C. 251 against broadening the scope of the patent more than 2 years after its grant because the reissue claims are broader than the claims that remain after the disclaimer, even though the reissue claims are narrower than the claims that were disclaimed by the patentee before reissue. The reissue application was bounded by the claims remaining in the patent after a disclaimer is filed. A claim of a reissue application enlarges the scope of the claims of the patent if it is broader in *at least one* respect, even though it may be narrower in other respects.

A claim in the reissue which includes subject matter not covered by the patent claims enlarges the scope of the patent claims. For example, if any amended or newly added claim in the reissue contains within its scope any conceivable product or process which would not have infringed the patent, then that reissue claim would be broader than the patent claims. *Tillotson, Ltd. v. Walbro Corp.*, 831 F.2d 1033, 1037 n.2, 4 USPQ2d 1450, 1453 n.2 (Fed. Cir. 1987); *In re Ruth*, 278 F.2d 729, 730, 126 USPQ 155, 156 (CCPA 1960); *In re Rogoff*, 261 F.2d 601, 603, 120 USPQ 185, 186 (CCPA 1958). A claim which **>covers< something *>that< the original claims do not is a broadened claim. A claim would be considered a broadening claim if the patent owner would be able to sue any party for infringement who previously could not have been sued for infringement. Thus, where the original patent claims only the process, and the reissue application >newly< adds ** product claims, the scope of the claims has been broadened *>because< a party could not >necessarily< be sued for infringement of the product based on the claims of the original patent >(if it were made by a different process)<.

The addition of combination claims in a reissue application where only subcombination claims were present in the original patent could be a broadening of the invention. The question which must be resolved in this case is whether the combination claims added in the reissue would be for "the invention as claimed" in the original patent. See *Ex parte Wikdahl*, 10 USPQ2d at 1549. The newly added combination claims should be analyzed to determine whether they contain every limitation of the subcombination of any claim of the original patent. If the combination claims (added in the reissue) contain every limitation of the subcombination (which was claimed in the original application), then infringement of the combination must also result in infringement of the subcombination. Accordingly, the patent owner **could not**, if a reissue patent issues with the combination claims, **sue any new party** for infringement who could not have been sued for infringement of the original patent. Therefore, **broadening does not exist**, in spite of the addition of the combination. >However, filing a reissue application to merely add combination claim(s) that require all the limitations of a subcombination claim, which subcombination claim was present in the original patent, would not provide an error that is correctable by reissue as defined by 35 U.S.C. 251; see the discussion in MPEP § 1402.<

II. SCOPE OF DEPENDENT CLAIM ENLARGED - NOT BROADENING

As pointed out above, a claim will be considered a broadened reissue claim when it is greater in scope than **each and every** claim of the patent to be reissued. A corollary of this is that a claim which has been *broadened in a reissue as compared to its scope in the patent* is not a broadened reissue claim if it is narrower than, or equal in scope to, any other claim which appears in the patent. A common example of this is where dependent claim 2 is broadened via the reissue (other than the addition of a process step to convert an intermediate to a final product**), but independent claim 1 on which it is based is not broad-

ened. *>Because< a dependent claim is construed to contain all the limitations of the claim upon which it depends, claim 2 must be at least as narrow as claim 1 and is thus not a broadened reissue claim.

III. NEW CATEGORY OF INVENTION ADDED IN REISSUE - GENERALLY IS BROADENING

The addition of process claims as a new category of invention to be claimed in the patent (*i.e.*, where there were no method claims present in the original patent) is generally considered as being a broadening of the invention. See *Ex parte Wikdahl*, 10 USPQ2d 1546 (Bd. Pat. App. & Inter. 1989). A situation may arise, however, where the reissue application adds a limitation (or limitations) to process A of making the product A claimed in the original patent claims. For example:

(1) a process of using the product A (made by the process of the original patent) to make a product B, disclosed but not claimed in the original patent; or

(2) a process of using the product A to carry out a process B disclosed but not claimed in the original patent.

Although this amendment of the claims adds a method of making product B or adds a method of using product A, this is not broadening (i.e., this is not an enlargement of the scope of the original patent) because the "newly claimed invention" contains all the limitations of the original patent claim(s).

IV. WHEN A BROADENED CLAIM CAN BE PRESENTED

A broadened claim can be presented within two years from the grant of the original patent in a reissue application. In addition, a broadened claim can be presented *after* two years from the grant of the original patent in a broadening reissue application which was filed *within* two years from the grant. Where any intent to broaden is >unequivocally< indicated in the reissue application within the two years from the patent grant, a broadened claim can subsequently be presented in the reissue after the two year period. >(Note: A statement that "the patent is wholly or partly inoperative by reason of claiming more or less than applicant had a right to claim" is NOT an unequivocal statement of an intent to broaden.)< Thus, a broadened claim may be presented in a reissue application after the two years, even though the broadened claim presented after the two years is different than the broadened claim presented within the two years. Finally, if intent to broaden is indicated in a parent reissue application within the two years, a broadened claim can be presented in a continuing (continuation or divisional) reissue application after the two year period. In any other situation, a broadened claim cannot be presented, and the examiner should check carefully for the improper presentation of broadened claims.

A reissue application filed on the 2-year anniversary date from the patent grant is considered to be filed within 2 years of the patent grant. See *Switzer v. Sockman*, 333 F.2d 935, 142 USPQ 226 (CCPA 1964) for a similar rule in interferences.

See also the following cases which pertain to broadened reissues:

In re Graff, 111 F.3d 874, 877, 42 USPQ2d 1471, 1473-74 (Fed. Cir. 1997) (Broadened claims in a continuing reissue application were properly rejected under 35 U.S.C. 251 because the proposal for broadened claims was not made (in the parent reissue application) within two years from the grant of the original patent and the public was not notified that broadened claims were being sought until after the two-year period elapsed.);

In re Fotland, 779 F.2d 31, 228 USPQ 193 (Fed. Cir. 1985), *cert. denied*, 476 U.S. 1183 (1986) (The failure by an applicant to include *an oath or declaration indicating a desire to seek broadened claims* within two years of the patent grant will bar a subsequent attempt to broaden the claims after the two year limit. Under the former version of 37 CFR 1.175 (the former 37 CFR 1.175(a)(4)), applicant timely sought a "no-defect" reissue, but the Court did not permit an attempt made beyond the two-year limit to convert the reissue into a broadening reissue. In this case, applicant did not indicate any intent to broaden within the two years. >There was no broadening amendment or statement of record in *Fotland* that would have shown an intent to broaden, even without a statement of broadening in the reissue oath or declaration.<);

In re Bennett, 766 F.2d 524, 528, 226 USPQ 413, 416 (Fed. Cir. 1985) *(en banc)* (A reissue application with broadened claims was filed within two years of the patent grant; however, the declaration was exe-

cuted by the assignee rather than the inventor. The Federal Circuit permitted correction of the improperly executed declaration to be made more than two years after the patent grant.);

In re Doll, 419 F.2d 925, 928, 164 USPQ 218, 220 (CCPA 1970) (If the reissue application is timely filed within two years of the original patent grant and the applicant indicates in the oath or declaration that the claims will be broadened, then applicant may subsequently broaden the claims in the pending reissue prosecution even if the additional broadening occurs beyond the two year limit.).

Form paragraphs 14.12 and 14.13 may be used in rejections based on improper broadened reissue claims.

¶ *14.12 Rejection, 35 U.S.C. 251, Broadened Claims After Two Years*

Claim **[1]** rejected under 35 U.S.C. 251 as being broadened in a reissue application filed outside the two year statutory period. **[2]** A claim is broader in scope than the original claims if it contains within its scope any conceivable product or process which would not have infringed the original patent. A claim is broadened if it is broader in any one respect even though it may be narrower in other respects.

Examiner Note:

The claim limitations that broaden the scope should be identified and explained in bracket 2. See MPEP §§ 706.03(x) and 1412.03.

¶ *14.13 Rejection, 35 U.S.C. 251, Broadened Claims Filed by Assignee*

Claim **[1]** rejected under 35 U.S.C. 251 as being improperly broadened in a reissue application made and sworn to by the assignee and not the patentee. **[2]**A claim is broader in scope than the original claims if it contains within its scope any conceivable product or process which would not have infringed the original patent. A claim is broadened if it is broader in any one respect even though it may be narrower in other respects.

Examiner Note:

The claim limitations that broaden the scope should be identified and explained in bracket 2. See MPEP §§ 706.03(x) and 1412.03.

V. BROADENING REISSUE - OATH/DECLARATION REQUIREMENTS

A broadening reissue application must be applied for by all of the inventors (patentees), that is, the original reissue oath or declaration must be signed by all of the inventors. See also MPEP § 1414. If a supplemental oath or declaration in a broadening reissue application is needed in the application in order to fulfill the requirements of 37 CFR 1.175, the supplemental reissue oath or declaration must be signed by all of the inventors. See *In re Hayes*, 53 USPQ2d 1222 (Comm'r Pat. 1999) and MPEP § 1414.01.

1412.04 Correction of Inventorship [R-7]

The correction of misjoinder of inventors has been held to be a ground for reissue. See *Ex parte Scudder*, 169 USPQ 814, 815 (Bd. App. 1971) wherein the Board held that 35 U.S.C. 251 authorizes reissue applications to correct misjoinder of inventors where 35 U.S.C. 256 is inadequate. See also *A.F. Stoddard & Co. v. Dann*, 564 F.2d 556, 567 n.16, 195 USPQ 97, 106 n.16 (D.C. Cir. 1977) wherein correction of inventorship from sole inventor A to sole inventor B was permitted in a reissue application. The court noted that reissue by itself is a vehicle for correcting inventorship in a patent.

I. CERTIFICATE OF CORRECTION AS A VEHICLE FOR CORRECTING INVENTORSHIP

While reissue is a vehicle for correcting inventorship in a patent, correction of inventorship should be effected under the provisions of 35 U.S.C. 256 and 37 CFR 1.324 by filing a request for a Certificate of Correction if:

(A) the only change being made in the patent is to correct the inventorship; and

(B) all parties are in agreement and the inventorship issue is not contested.

See MPEP § 1481 for the procedure to be followed to obtain a Certificate of Correction for correction of inventorship.

II. REISSUE AS A VEHICLE FOR CORRECTING INVENTORSHIP

Where the provisions of 35 U.S.C. 256 and 37 CFR 1.324 do not apply, a reissue application is the appropriate vehicle to correct inventorship. The failure to name the correct inventive entity is an error in the patent which is correctable under 35 U.S.C. 251. The reissue oath or declaration pursuant to 37 CFR 1.175 must state that the applicant believes the original patent to be wholly or partly inoperative or invalid through error of a person being incorrectly named in an issued patent as the inventor, or through

error of an inventor incorrectly not named in an issued patent, and that such error arose without any deceptive intention on the part of the applicant. The reissue oath or declaration must, as stated in 37 CFR 1.175, also comply with 37 CFR 1.63.

The correction of inventorship does not enlarge the scope of the patent claims. Where a reissue application does not seek to enlarge the scope of the claims of the original patent, the reissue oath may be made and sworn to, or the declaration made, by the assignee of the entire interest under 37 CFR 1.172. An assignee of part interest may not file a reissue application to correct inventorship where the other co-owner did not join in the reissue application and has not consented to the reissue proceeding. See *Baker Hughes Inc. v. Kirk*, 921 F. Supp. 801, 809, 38 USPQ2d 1885, 1892 (D.D.C. 1995). See 35 U.S.C. 251, third paragraph. Thus, the signatures of the inventors are not needed on the reissue oath or declaration where the assignee of the entire interest signs the reissue oath/declaration. Accordingly, an assignee of the entire interest can add or delete the name of an inventor by reissue (*e.g.*, correct inventorship from inventor A to inventors A and B) without the original inventor's consent. See also 37 CFR 3.71(a) ("One or more assignees as defined in paragraph (b) of this section may, after becoming of record pursuant to paragraph (c) of this section, conduct prosecution of a national patent application or reexamination proceeding **to the exclusion of** either **the inventive entity**, or the assignee(s) previously entitled to conduct prosecution." Emphasis added). Thus, the assignee of the entire interest can file a reissue to change the inventorship to one which the assignee believes to be correct, even though an inventor might disagree. The protection of the assignee's property rights in the application and patent are statutorily based in 35 U.S.C. 118.

Where the name of an inventor X is to be deleted in a reissue application to correct inventorship in a patent, and inventor X has not assigned his/her rights to the patent, inventor X has an ownership interest in the patent. Inventor X must consent to the reissue (37 CFR 1.172(a)), even though inventor X's name is being deleted as an inventor and need not sign the reissue oath or declaration. If inventor X has assigned his/her rights to the patent, then inventor X's assignee must consent. In addition to providing the consent, even though inventor X does not sign the reissue oath or declaration as an inventor (*>because< the correction of inventorship does not enlarge the scope of the patent claims), the assignee of the entire interest must sign the reissue oath or declaration as assignee (37 CFR 1.172(a)). Thus, if inventor X has not assigned his/her patent rights, inventor X's signature must be included in the reissue oath or declaration as the assignee. If inventor X has assigned his/her patent rights, inventor X's assignee must sign the reissue oath or declaration as the assignee. For example, a patent to inventors X and Y has no assignee. A reissue application is filed by inventor Y to delete the name of inventor X as an inventor. 37 CFR 1.172(a) provides that a reissue oath or declaration may be made by the assignee/owners of the entire interest, rather than by the inventors, where the scope of the claims is not to be enlarged. However, *>because< inventor X has not assigned his/her patent rights, inventor X must sign the reissue oath or declaration as one of the owners, and consent to the filing of the reissue application by inventor Y. See MPEP § 1410.01.

Where a reissue to correct inventorship also changes the claims to enlarge the scope of the patent claims, the signature of all the inventors *is needed*. However, if an inventor refuses to sign the reissue oath or declaration because he or she believes the change in inventorship (to be effected) is not correct, the reissue application can still be filed with a petition under 37 CFR 1.47 without that inventor's signature>,< provided the written consent of all owners/assignees as required by 37 CFR 1.172(a) is also submitted. *>Compare, however,< the situation where a patent to inventors X and Y has no assignee and a reissue application is filed by inventor Y to delete the name of inventor X as an inventor and to broaden the patent. Inventor X refuses to sign the reissue oath or declaration and refuses to provide the consent as required by 37 CFR 1.172(a). In this instance, a 37 CFR 1.47 petition would not be appropriate to permit the filing of the reissue application *>because< the consent requirement of 37 CFR 1.172(a) for each owner/assignee is not met. Resort to the courts would be required to delete the name of inventor X as an inventor where X will not consent to the filing of a reissue application. As stated in the second paragraph of 35 U.S.C. 256, "[t]he court before which such matter is called in question may order correction of the

patent on notice and hearing of all parties concerned and the Director shall issue a certificate accordingly."

The reissue application with its reissue oath or declaration under 37 CFR 1.175 provides a complete mechanism to correct inventorship. See *A.F. Stoddard & Co. v. Dann*, 564 F.2d at 567, 195 USPQ at 106. A request under 37 CFR 1.48 or a petition under 37 CFR 1.324 cannot be used to correct the inventorship of a reissue application >(though a petition under 37 CFR 1.324 can be used to correct the inventorship of the patent, where appropriate)<. If a request under 37 CFR 1.48 or a petition under 37 CFR 1.324 is filed in a reissue application, the request or petition should be dismissed and the processing or petition fee refunded. The material submitted with the request or petition should then be considered to determine if it complies with 37 CFR 1.175. If the material submitted with the request or petition does comply with the requirements of 37 CFR 1.175 (and the reissue application is otherwise in order), the correction of inventorship will be permitted as a correction of an error in the patent under 35 U.S.C. 251.

Where a reissue application seeks to correct inventorship in the patent and the inventors are required to sign the reissue oath or declaration (rather than an assignee of the entire interest under 37 CFR 1.172) due to a broadening of any claims of the original patent, the correct inventive entity must sign the reissue oath or declaration. Where an inventor **is being added** in a reissue application to correct inventorship in a patent, the inventor being added must sign the reissue oath or declaration together with the inventors previously designated on the patent. For example, a reissue application is filed to correct the inventorship from inventors A and B (listed as inventors on the patent) to inventors A, B, and C. Inventor C is the inventor being added. In such a case, A, B, and C are the correct inventors, and accordingly, each of A, B, and C must sign the reissue oath or declaration. Where an inventor **is being deleted** in a reissue application to correct inventorship in a patent and the inventors are required to sign the oath or declaration due to a broadening of any claims of the original patent, the inventor being deleted need not sign the reissue oath or declaration. The reissue oath or declaration must be signed by the correct inventive entity. For example, a reissue application is filed to correct inventorship from inventors A, B, and C (listed as inventors on the patent) to inventors A and B. Inventor C is being deleted as a named inventor. In such a case, A and B are the correct inventors, and accordingly, inventors A and B must sign the reissue oath or declaration but inventor C need not sign the reissue oath or declaration.

1413 Drawings [R-7]

37 CFR 1.173. Reissue specification, drawings, and amendments.

*****

(a)(2) Drawings. Applicant must submit a clean copy of each drawing sheet of the printed patent at the time the reissue application is filed. If such copy complies with § 1.84, no further drawings will be required. Where a drawing of the reissue application is to include any changes relative to the patent being reissued, the changes to the drawing must be made in accordance with paragraph (b)(3) of this section. The Office will not transfer the drawings from the patent file to the reissue application.

*****

A clean copy (e.g., good quality photocopies free of any extraneous markings) of each drawing sheet of the printed patent must be supplied by the applicant at the time of filing of the reissue application. If the copies meet the requirements of 37 CFR 1.84, no further formal drawings will be required. New drawing sheets are not to be submitted, unless some change is made in the original patent drawings. Such changes must be made in accordance with 37 CFR 1.173(b)(3).

The prior reissue practice of transferring drawings from the patent file has been eliminated, *>because< clean photocopies of the printed patent drawings are acceptable for use in the printing of the reissue patent.

AMENDMENT OF DRAWINGS

37 CFR 1.173. Reissue specification, drawings, and amendments.

*****

(b)(3) *Drawings.* One or more patent drawings shall be amended in the following manner: Any changes to a patent drawing must be submitted as a replacement sheet of drawings which shall be an attachment to the amendment document. Any replacement sheet of drawings must be in compliance with § 1.84 and shall include all of the figures appearing on the original version of the sheet, even if only one figure is amended. Amended figures must be identified as "Amended," and any added figure must be identified as "New." In the event that a figure is canceled, the figure must be surrounded by brackets and identified as "Canceled." All changes to the drawing(s) shall be explained, in detail,

beginning on a separate sheet accompanying the papers including the amendment to the drawings.

*****

The provisions of 37 CFR 1.173(b)(3) govern the manner of making amendments (changes) to the drawings in a reissue application. The following guidance is provided as to the procedure for amending drawings:

(A) Amending the original or printed patent drawing sheets by physically changing or altering them is not permitted. Any request to do so should be denied.

(B) Where a change to the drawings is desired, applicant must submit a replacement sheet for each sheet of drawings containing a Figure to be revised. Any replacement sheet must comply with 37 CFR 1.84 and include all of the figures appearing on the original version of the sheet, even if only one figure is being amended. Each figure that is amended must be identified by placing the word "Amended" at the bottom of that figure. Any added figure must be identified as "New." In the event that a figure is canceled, the figure must be identified as "Canceled" and also surrounded by brackets. All changes to the figure(s) must be explained, in detail, beginning on a separate sheet which accompanies the papers including the amendment to the drawings.

(C) If desired, applicant may include a marked-up copy of any amended drawing figure, including annotations indicating the changes made. Such a marked-up copy must be clearly labeled as "Annotated Marked-up Drawings", and it must be presented in the amendment or remarks section that explains the change to the drawings.

In addition, the examiner may desire a marked-up copy of any amended drawing figure, and so state in an Office action. A marked-up copy of any amended drawing figure, including annotations indicating the changes made, must be provided when required by the examiner.

(D) For each proper new drawing sheet being added, the new sheet should be inserted after the existing drawing sheets. For each proper drawing sheet being added which replaces an existing drawing sheet, the existing sheet should be canceled by placing the sheet face down in the file and placing a large "X" on the back of the sheet. The new sheet should be inserted in place of the turned over existing sheet.

(E) If any drawing change is not approved, or if any submitted sheet of formal drawings is not entered, the examiner will so inform the reissue applicant in the next Office action, and the examiner will set forth the reasons for same.

1414 Content of Reissue Oath/Declaration [R-7]

37 CFR 1.175. Reissue oath or declaration.

(a) The reissue oath or declaration in addition to complying with the requirements of § 1.63, must also state that:

(1) The applicant believes the original patent to be wholly or partly inoperative or invalid by reason of a defective specification or drawing, or by reason of the patentee claiming more or less than the patentee had the right to claim in the patent, stating at least one error being relied upon as the basis for reissue; and

(2) All errors being corrected in the reissue application up to the time of filing of the oath or declaration under this paragraph arose without any deceptive intention on the part of the applicant.

(b)(1) For any error corrected, which is not covered by the oath or declaration submitted under paragraph (a) of this section, applicant must submit a supplemental oath or declaration stating that every such error arose without any deceptive intention on the part of the applicant. Any supplemental oath or declaration required by this paragraph must be submitted before allowance and may be submitted:

(i) With any amendment prior to allowance; or

(ii) In order to overcome a rejection under 35 U.S.C. 251 made by the examiner where it is indicated that the submission of a supplemental oath or declaration as required by this paragraph will overcome the rejection.

(2) For any error sought to be corrected after allowance, a supplemental oath or declaration must accompany the requested correction stating that the error(s) to be corrected arose without any deceptive intention on the part of the applicant.

(c) Having once stated an error upon which the reissue is based, as set forth in paragraph (a)(1), unless all errors previously stated in the oath or declaration are no longer being corrected, a subsequent oath or declaration under paragraph (b) of this section need not specifically identify any other error or errors being corrected.

(d) The oath or declaration required by paragraph (a) of this section may be submitted under the provisions of § 1.53(f).

(e) The filing of any continuing reissue application which does not replace its parent reissue application must include an oath or declaration which, pursuant to paragraph (a)(1) of this section, identifies at least one error in the original patent which has not been corrected by the parent reissue application or an earlier reissue application. All other requirements relating to oaths or declarations must also be met.

The reissue oath/declaration is an essential part of a reissue application and must be filed with the application, or within the time period set under 37 CFR

1.53(f) along with the required surcharge as set forth in 37 CFR 1.16(f) in order to avoid abandonment.

The question of the sufficiency of the reissue oath/declaration filed under 37 CFR 1.175 must in each case be reviewed and decided personally by the primary examiner.

Reissue oaths or declarations must contain the following:

(A) A statement that the applicant believes the original patent to be wholly or partly inoperative or invalid—

(1) by reason of a defective specification or drawing, or

(2) by reason of the patentee claiming more or less than patentee had the right to claim in the patent;

(B) A statement of at least one error which is relied upon to support the reissue application, *i.e.*, as the basis for the reissue;

(C) A statement that all errors which are being corrected in the reissue application up to the time of filing of the oath/declaration arose without any deceptive intention on the part of the applicant; and

(D) The information required by 37 CFR 1.63.

These elements will now be discussed:

I. A STATEMENT THAT THE APPLICANT BELIEVES THE ORIGINAL PATENT TO BE WHOLLY OR PARTLY INOPERATIVE OR INVALID BY REASON OF A DEFECTIVE SPECIFICATION OR DRAWING, OR BY REASON OF THE PATENTEE CLAIMING MORE OR LESS THAN PATENTEE HAD THE RIGHT TO CLAIM IN THE PATENT.

In order to satisfy this requirement, a declaration can state as for example:

1. "Applicant believes the original patent to be partly inoperative or invalid by reason of a defective specification or drawing."

2. "Applicant believes the original patent to be partly inoperative or invalid by reason of the patentee claiming more than patentee had a right to claim in the patent."

3. "Applicant believes the original patent to be partly inoperative or invalid by reason of the patentee claiming less than patentee had a right to claim in the patent."

Where the specification or drawing is defective and patentee claimed both more and less than patentee had the right to claim in the patent, then *all three* statements should be included in the reissue oath/declaration. A statement that the original patent is "**wholly or partly** inoperative or invalid" (emphasis added) by reason of the patentee "claiming **more or less** than the patentee had the right to claim in the patent" (emphasis added) is improper *>because< a claim cannot claim "more **or** less" at the same time. Where, however, a given independent claim is considered to be overly broad, and another independent claim is considered to be overly narrow, patentee has claimed both more **and** less than he or she had a right to claim. In such an instance, both the second and third above-quoted statements would be used. See MPEP § 1412.04 for an exemplary declaration statement when the error being corrected is an error in inventorship.

The above examples will be sufficient to satisfy this requirement without any further statement.

It should be noted that the reissue oath/declaration must also satisfy the requirement for a statement of at least one error being relied upon as the basis for reissue, in the manner set forth in subsection II. below.

Form paragraph 14.01 may be used where the reissue oath/declaration does not provide the required statement as to applicant's belief that the original patent is wholly or partly inoperative or invalid.

¶ *14.01 Defective Reissue Oath/Declaration, 37 CFR 1.175(a)(1) - No Statement of Defect in the Patent*

The reissue oath/declaration filed with this application is defective because it fails to contain the statement required under 37 CFR 1.175(a)(1) as to applicant's belief that the original patent is wholly or partly inoperative or invalid. See 37 CFR 1.175(a)(1) and see MPEP § 1414. **[1]**

Examiner Note:

1. Use this form paragraph when applicant: (a) fails to allege that the original patent is inoperative or invalid and/or (b) fails to state the reason of a defective specification or drawing, or of patentee claiming more or less than patentee had the right to claim in the patent . In bracket 1, point out the specific defect to applicant by using the language of (a) and/or (b), as it is appropriate.

2. Form paragraph 14.14 must follow this form paragraph.

II. A STATEMENT OF AT LEAST ONE ERROR WHICH IS RELIED UPON TO SUPPORT THE REISSUE APPLICATION (I.E., THE BASIS FOR THE REISSUE).

(A) A reissue applicant must acknowledge the existence of an error in the specification, drawings, or claims, which error causes the original patent to be defective. *In re Wilder*, 736 F.2d 1516, 222 USPQ 369 (Fed. Cir. 1984). A change or departure from the original specification or claims represents an "error" in the original patent under 35 U.S.C. 251. See MPEP § 1402 for a discussion of grounds for filing a reissue that may constitute the "error" required by 35 U.S.C. 251. Not all changes with respect to the patent constitute the "error" required by 35 U.S.C. 251.

(B) Applicant need only specify in the reissue oath/declaration one of the errors upon which reissue is based. Where applicant specifies one such error, this requirement of a reissue oath/declaration is satisfied. Applicant may specify more than one error.

Where more than one error is specified in the oath/declaration and some of the designated "errors" are found to not be "errors" under 35 U.S.C. 251, any remaining error which is an error under 35 U.S.C. 251 will still support the reissue.

The "at least one error" which is relied upon to support the reissue application must be set forth in the oath/declaration. It is not necessary, however, to point out how (or when) the error arose or occurred. Further, it is not necessary to point out how (or when) the error was discovered. If an applicant chooses to point out these matters, the statements directed to these matters will not be reviewed by the examiner, and the applicant should be so informed in the next Office action. All that is needed for the oath/declaration statement as to error is the identification of "at least one error" relied upon.

In identifying the error, it is sufficient that the reissue oath/declaration identify a single word, phrase, or expression in the specification or in an original claim, and how it renders the original patent wholly or partly inoperative or invalid. The corresponding corrective action which has been taken to correct the original patent need not be identified in the oath/declaration. If the initial reissue oath/declaration "states at least one error" in the original patent, and, *in addition*, recites the specific corrective action taken in the reissue application, the oath/declaration would be considered acceptable, even though the corrective action statement is not required.

(C) It is not sufficient for an oath/declaration to merely state "this application is being filed to correct errors in the patent which may be noted from the changes made in the disclosure." Rather, the oath/declaration must specifically identify an error. In addition, it is not sufficient to merely reproduce the claims with brackets and underlining and state that such will identify the error. See *In re Constant*, 827 F.2d 728, 729, 3 USPQ2d 1479 (Fed. Cir.), *cert. denied*, 484 U.S. 894 (1987). Any error in the claims must be identified by reference to the specific claim(s) and the specific claim language wherein lies the error.

A statement of "…failure to include a claim directed to…" and then presenting a newly added claim, would not be considered a sufficient "error" statement *>because< applicant has not pointed out what the other claims lacked that the newly added claim has, or vice versa. Such a statement would be no better than saying in the reissue oath or declaration that "this application is being filed to correct errors in the patent which may be noted from the change made by adding new claim 10." In both cases, the error has not been identified.

>Likewise, a statement of the error as "…the inclusion of claims 3-5 which were unduly broad…" and then canceling claims 3-5, would not be considered a sufficient "error" statement because applicant has not pointed out what the canceled claims lacked that the remaining claims contain. The statement of what the remaining claims contain need not identify specific limitations, but rather may provide a general identification, such as "Claims 3-5 did not provide for any of the tracking mechanisms of claims 6-12, nor did they provide an attachment mechanism such as those in claims 1-2 and 9-16."<

(D) Where a continuation reissue application is filed with a copy of the reissue oath/declaration from the parent reissue application, and the parent reissue application is not to be abandoned, the reissue oath/declaration should be accepted by the Office of Initial Patent Examination without further evaluation, *>because< it is an oath/declaration, albeit improper under 35 U.S.C. 251. The examiner should, however, reject the claims of the continuation reissue application under 35 U.S.C. 251 as being based on an oath/declaration that does not identify an error being

corrected by the continuation reissue application, and should require a new oath/declaration. 37 CFR 1.175(e) states that "the filing of any continuing reissue application which does not replace its parent reissue application must include an oath or declaration, which pursuant to [37 CFR 1.175(a)(1)], identifies at least one error in the original patent which has not been corrected by the parent reissue application or an earlier reissue application." One of form paragraphs 14.01.01 through 14.01.03 may be used.

Where a continuation reissue application is filed with a copy of the reissue oath/declaration from the parent reissue application, and the parent reissue application is, or will be abandoned, the copy of the reissue oath/declaration should be accepted by *>the Office of Patent Application Processing (OPAP)<, and the examiner should check to ensure that the oath/declaration identifies an error which is still being corrected in the continuation application. If a preliminary amendment was filed with the continuation reissue application, the examiner should check for the need of a supplemental reissue oath/declaration. Pursuant to 37 CFR 1.175 (b)(1), for any error corrected via the preliminary amendment which is not covered by the oath or declaration submitted in the parent reissue application, applicant must submit a supplemental oath/declaration stating that such error arose without any deceptive intention on the part of the applicant. See MPEP § 1414.01.

Where a divisional reissue application is filed with a copy of the reissue oath/declaration from the parent reissue application, the reissue oath/declaration should be accepted by *>OPAP<, *>because< it is an oath/declaration, though it may be improper under 35 U.S.C. 251. The examiner should check the copy of the oath/declaration to ensure that it identifies an error being corrected by the divisional reissue application. The copy of the oath/declaration from the parent reissue application may or may not cover an error being corrected by the divisional reissue application *>because< the divisional reissue application is (by definition) directed to a new invention. If it does not, the examiner should reject the claims of the divisional reissue application under 35 U.S.C. 251 as being based on an oath/declaration that does not identify an error being corrected by the divisional reissue application, and require a new oath/declaration. If the copy of the reissue oath/declaration from the parent reissue application does in fact cover an error being corrected in the divisional reissue application, no such rejection should be made. However, *>because< a new invention is being added by the filing of the divisional reissue application, a supplemental reissue oath/declaration pursuant to 37 CFR 1.175 (b)(1) will be required. See MPEP § 1414.01.

Form paragraph 14.01.01 may be used where the reissue oath/declaration does not identify an error.

¶ *14.01.01 Defective Reissue Oath/Declaration, 37 CFR 1.175(a)(1) - No Statement of a Specific Error*

The reissue oath/declaration filed with this application is defective because it fails to identify at least one error which is relied upon to support the reissue application. See 37 CFR 1.175(a)(1) and MPEP § 1414.

Examiner Note:

1. Use this form paragraph when the reissue oath or declaration does not contain any statement of an error which is relied upon to support the reissue application.

2. This form paragraph can be used where the reissue oath or declaration does not even mention error. It can also can be used where the reissue oath or declaration contains some discussion of the concept of error but never in fact identifies a specific error to be relied upon. For example, it is not sufficient for an oath or declaration to merely state "this application is being filed to correct errors in the patent which may be noted from the changes made in the disclosure."

3. Form paragraph 14.14 must follow this form paragraph.

Where the reissue oath/declaration does identify an error or errors, the oath/declaration must be checked carefully to ensure that at least one of the errors identified is indeed an "error" which will support the filing of a reissue, i.e., an "error" that will provide grounds for reissue of the patent. See MPEP § 1402. If the error identified in the oath/declaration is not an appropriate error upon which a reissue can be based, then the oath/declaration must be indicated to be defective in the examiner's Office action.

Form paragraphs 14.01.02 and 14.01.03 may be used where the reissue oath/declaration fails to provide at least one error upon which a reissue can be based.

¶ *14.01.02 Defective Reissue Oath/Declaration, 37 CFR 1.175(a)(1)-The Identified "Error" Is Not Appropriate Error*

The reissue oath/declaration filed with this application is defective because the error which is relied upon to support the reissue application is not an error upon which a reissue can be based. See 37 CFR 1.175(a)(1) and MPEP § 1414.

Examiner Note:

1. Use this form paragraph when the reissue oath/declaration identifies only one error which is relied upon to support the reissue application, and that one error is not an appropriate error upon which a reissue can be based.
2. Form paragraph 14.14 must follow this form paragraph.

¶ *14.01.03 Defective Reissue Oath/Declaration, 37 CFR 1.175(a)(1) - Multiple Identified "Errors" Not Appropriate Errors*

The reissue oath/declaration filed with this application is defective because none of the errors which are relied upon to support the reissue application are errors upon which a reissue can be based. See 37 CFR 1.175(a)(1) and MPEP § 1414.

Examiner Note:

1. Use this form paragraph when the reissue oath/declaration identifies more than one error relied upon to support the reissue application, and none of the errors are appropriate errors upon which a reissue can be based.
2. Note that if the reissue oath/declaration identifies more than one error relied upon, and at least one of the errors is an error upon which reissue can be based, this form paragraph should not be used, despite the additional reliance by applicant on "errors" which do not support the reissue. Only one appropriate error is needed to support a reissue.
3. Form paragraph 14.14 must follow this form paragraph.

III. A STATEMENT THAT ALL ERRORS WHICH ARE BEING CORRECTED IN THE REISSUE APPLICATION UP TO THE TIME OF SIGNING OF THE OATH/ DECLARATION AROSE WITHOUT ANY DECEPTIVE INTENTION ON THE PART OF THE APPLICANT.

In order to satisfy this requirement, the following statement may be included in an oath or declaration:

> "All errors in the present reissue application up to the time of signing of this oath/declaration, or errors which are being corrected by a paper filed concurrently with this oath/declaration which correction of errors I/we have reviewed, arose without any deceptive intention on the part of the applicant."

Nothing more is required. The examiner will determine only whether the reissue oath/declaration contains the required averment; the examiner will not make any comment as to whether it appears that there was in fact deceptive intention (see MPEP § 2022.05). It is noted that a reissue oath/declaration will not be effective for any errors which are corrected by a filing made after the execution of the reissue oath/declaration, unless it is clear from the record that the parties executing the document were aware of the nature of the correction when they executed the document. Further, a reissue oath/declaration with an early date of execution cannot be filed after a correction made later in time, to cover the correction made after the execution date. This is so, even if the reissue oath/declaration states that *all errors up to the filing of the oath/ declaration* arose without any deceptive intention on the part of the applicant.

Form paragraph 14.01.04 may be used where the reissue oath/declaration does not provide the required statement as to "without any deceptive intention on the part of the applicant."

¶ *14.01.04 Defective Reissue Oath/Declaration, 37 CFR 1.175- Lack of Statement of "Without Any Deceptive Intention"*

The reissue oath/declaration filed with this application is defective because it fails to contain a statement that all errors which are being corrected in the reissue application up to the time of filing of the oath/declaration arose without any deceptive intention on the part of the applicant. See 37 CFR 1.175 and MPEP § 1414.

Examiner Note:

1. Use this form paragraph when the reissue oath/declaration does not contain the statement required by 37 CFR 1.175 that all errors being corrected in the reissue application arose without any deceptive intention on the part of the applicant.
2. This form paragraph is appropriate to use for a failure by applicant to comply with the requirement, as to any of 37 CFR 1.175(a)(2), 37 CFR 1.175(b)(1), or 37 CFR 1.175(b)(2).
3. Form paragraph 14.14 must follow.

IV. THE REISSUE OATH/DECLARATION MUST COMPLY WITH 37 CFR 1.63.

The reissue oath/declaration must include the averments required by 37 CFR 1.63(a) and (b), *e.g.*, that applicants for reissue

(A) have reviewed and understand the contents of the specification, including the claims, as amended by any amendment specifically referred to in the oath/ declaration;

(B) believe the named inventor or inventors to be the original and the first inventor or inventors of the subject matter which is claimed and for which a patent is sought; and

(C) acknowledge the duty to disclose to the Office all information known to the person to be material to patentability as defined in 37 CFR 1.56.

See also the discussion regarding the requirements of an oath/declaration beginning at MPEP § 602.

The examiner should check carefully to ensure that all the requirements of 37 CFR 1.63 are met. Form paragraph 14.01.05 should be used in conjunction with the content of form paragraphs 6.05 through 6.05.20 as appropriate, where the reissue oath/declaration fails to comply with the requirements of 37 CFR 1.63.

¶ *14.01.05 Defective Reissue Oath/Declaration, 37 CFR 1.175 - General*

The reissue oath/declaration filed with this application is defective (see 37 CFR 1.175 and MPEP § 1414) because of the following:

Examiner Note:

1. Use this form paragraph when the reissue oath/declaration does not comply with 37 CFR 1.175, and none of form paragraphs 14.01 - 14.01.04 or 14.05.02 apply.
2. This form paragraph must be followed by an explanation of why the reissue oath/declaration is defective.
3. Form paragraph 14.14 must follow the explanation of the defect.

See MPEP § 1414.01 for a discussion of the requirements for a supplemental reissue oath/declaration.

Depending on the circumstances, either form PTO/SB/51, Reissue Application Declaration By The Inventor, or form PTO/SB/52, Reissue Application Declaration By The Assignee may be used to prepare a declaration in a reissue application.

U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE

REISSUE APPLICATION DECLARATION BY THE INVENTOR	Docket Number (Optional)

I hereby declare that:
Each inventor's residence, mailing address and citizenship are stated below next to their name.
I believe the inventors named below to be the original and first inventor(s) of the subject matter which is described and claimed in patent number _____, granted _____ and for which a reissue patent is sought on the invention entitled _____,

_____,

the application of which

☐ is attached hereto.

☐ was filed on _____ as reissue application number _____

and was amended on _____ .
(If applicable)

I have reviewed and understand the contents of the above-identified application, including the claims, as amended by any amendment referred to above.
I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56.

☐ I hereby claim foreign priority benefits under 35 U.S.C. 119(a)-(d) or (f), or 365(b). Attached is form PTO/SB/02B (or equivalent) listing the foreign applications.

I verily believe the original patent to be wholly or partly inoperative or invalid, for the reasons described below. (Check all boxes that apply.)

☐ by reason of a defective specification or drawing.

☐ by reason of the patentee claiming more or less than he had the right to claim in the patent.

☐ by reason of other errors.

At least one error upon which reissue is based is described below. If the reissue is a broadening reissue, such must be stated with an explanation as to the nature of the broadening:

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine and imprisonment, or both, under 18 U.S.C. 1001, and that such willful false statements may jeopardize the validity of the application, any patent issuing thereon, or any patent to which this declaration is directed.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

REISSUE APPLICATION DECLARATION BY THE ASSIGNEE	Docket Number (optional)

I hereby declare that:

The residence, mailing address and citizenship of the inventors are stated below.

I am authorized to act on behalf of the following assignee: _____

and the title of my position with said assignee is: _____

The entire title to the patent identified below is vested in said assignee.

Inventor	Citizenship
Residence/Mailing Address	
Inventor	Citizenship
Residence/Mailing Address	

☐ Additional Inventors are named on separately numbered sheets attached hereto.

Patent Number	Date of Patent Issued

I believe said inventor(s) to be the original and first inventor(s) of the subject matter which is described and claimed in said patent, for which a reissue patent is sought on the invention entitled:

the application of which

☐ is attached hereto.

☐ was filed on _____ as reissue application number _____ / _____

and was amended on _____
(If applicable)

I have reviewed and understand the contents of the above identified application, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56.

☐ I hereby claim foreign priority benefits under 35 U.S.C. 119(a)-(d) or (f), or 365(b). Attached is form PTO/SB/02B (or equivalent) listing the foreign applications.

I verily believe the original patent to be wholly or partly inoperative or invalid, for the reasons described below. (Check all boxes that apply.)

☐ by reason of a defective specification or drawing.

☐ by reason of the patentee claiming more or less than he had the right to claim in the patent.

☐ by reason of other errors.

[Page 1 of 2]

This collection of information is required by 37 CFR 1.175. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 30 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Telephone		Email			

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001, and that such willful false statements may jeopardize the validity of the application, any patent issuing thereon, or any patent to which this declaration is directed.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

1414.01 Supplemental Reissue Oath/ Declaration [R-7]

If additional defects or errors are corrected in the reissue after the filing of the application and the original reissue oath or declaration, a supplemental reissue oath/declaration must be filed, unless all additional errors corrected are spelling, grammar, typographical, editorial or clerical errors which are not errors under 35 U.S.C. 251 (see MPEP § 1402). In other words, a supplemental oath/declaration is required where any "error" under 35 U.S.C. 251 has been corrected and the error was not identified in the original reissue oath/declaration.

The supplemental reissue oath/declaration must state that every error which was corrected in the reissue application not covered by the prior oath(s)/declaration(s) submitted in the application arose without any deceptive intention on the part of the applicant.

An example of acceptable language is as follows:

> "Every error in the patent which was corrected in the present reissue application, and is not covered by the prior declaration submitted in this application, arose without any deceptive intention on the part of the applicant."

A supplemental reissue oath/declaration will not be effective for any errors which are corrected by a filing made after the execution of the supplemental reissue oath/declaration, unless it is clear from the record that the parties executing the document were aware of the nature of the correction when they executed the document. Further, a supplemental reissue oath/declaration with an early date of execution cannot be filed after a correction made later in time, to cover the correction made after the execution date. This is so, even if the supplemental reissue oath/declaration states that *all errors up to the filing of the supplemental reissue oath/declaration oath or declaration* arose without any deceptive intention on the part of the applicant.

Form PTO/SB/51S, "Supplemental Declaration For Reissue Patent Application To Correct 'Errors' Statement (37 CFR 1.175)," may be used to prepare a supplemental reissue declaration. Form PTO/SB/51S serves to indicate that every error in the patent that was corrected in the reissue application, but was not covered by a prior reissue oath/declaration submitted in the reissue application, arose without any deceptive intention on the part of the applicant.

In the event that the applicant for a reissue applicant is required to file a supplemental reissue oath/declaration that also includes a specific statement of the error being corrected by reissue in accordance with 37 CFR 1.175(c), as discussed in subsection I. below, applicant must also include in the supplemental declaration language equivalent to the "Every error …" language in the example of acceptable language set forth above. Therefore, if either form PTO/SB/51, "Reissue Application Declaration By The Inventor," or form PTO/SB/52, "Declaration By The Assignee" (see MPEP § 1414) is used for the purpose of filing such supplemental reissue oath/declaration, the form must be completed so that it is clear that the supplemental reissue oath/declaration addresses all errors corrected subsequent to the date upon which the last previously reissue oath/declaration (whether original or supplemental) was filed. For example, the form could be completed by specifying the date upon which the reissue application was originally filed, the reissue application number, and the date(s) of every amendment filed subsequent to the date upon which the last reissue oath/declaration (whether original or supplemental) was filed. Any manner of completing the form so that affiant/declarant unambiguously states that every error corrected subsequent to the filing of the last filed reissue oath/declaration (whether original or supplemental) arose without deceptive intent will be acceptable. It will not be acceptable for the new ("catch-up") oath/declaration to simply refer to the reissue application as filed, even though the new oath/declaration may be submitted after an amendment.

I. WHEN AN ERROR MUST BE STATED IN THE SUPPLEMENTAL OATH/DECLARATION

In the supplemental reissue oath/declaration, there is **no need to state an error** which is relied upon to support the reissue application **if**:

(A) an error to support a reissue has been previously and properly stated in a reissue oath/declaration in the application; and

(B) that error is still being corrected in the reissue application.

If applicant chooses to state any further error at this point (even though such is not needed), the examiner should not review the statement of the further error.

The supplemental reissue oath/declaration must state an error which is relied upon to support the reissue application only where one of the following is true:

(A) the prior reissue oath/declaration failed to state an error;

(B) the prior reissue oath/declaration attempted to state an error but did not do so properly; or

(C) all errors under 35 U.S.C. 251 stated in the prior reissue oath(s)/declaration(s) are no longer being corrected in the reissue application.

II. WHEN A SUPPLEMENTAL OATH/DECLARATION MUST BE SUBMITTED

The supplemental oath/declaration in accordance with 37 CFR 1.175(b)(1) must be submitted before allowance. See MPEP § 1444 for a discussion of the action to be taken by the examiner to obtain the supplemental oath/declaration in accordance with 37 CFR 1.175(b)(1), where such is needed.

Where applicant seeks to correct an error after allowance of the reissue application, a supplemental reissue oath/declaration must accompany the requested correction stating that the error(s) to be corrected arose without any deceptive intention on the part of the applicant. The supplemental reissue oath/declaration submitted after allowance will be directed to the error applicant seeks to correct after allowance. This supplemental oath/declaration need not cover any earlier errors, *>because< all earlier errors should have been covered by a reissue oath/declaration submitted **>before< allowance.

III. SUPPLEMENTAL OATH/DECLARATION IN BROADENING REISSUE

A broadening reissue application must be applied for by all of the inventors (patentees), that is, the original reissue oath/declaration must be signed by all of the inventors. See MPEP § 1414. If a supplemental oath/declaration in a broadening reissue application is subsequently needed in the application in order to fulfill the requirements of 37 CFR 1.175, the supplemental reissue oath/declaration must be signed by all of the inventors. *In re Hayes*, 53 USPQ2d 1222, 1224 (Comm'r Pat. 1999) ("37 CFR 1.175(b)(1), taken in conjunction with Section 1.172, requires a supplemental declaration be signed by all of the inventors. This is because all oaths or declarations necessary to fulfill the rule requirements in a reissue application are taken together collectively as a single oath or declaration. Thus, each oath and declaration must bear the appropriate signatures of all the inventors.").

If a joint inventor refuses or cannot be found or reached to sign a supplemental oath/declaration, a supplemental oath/declaration listing all the inventors, and signed by all the available inventors may be filed provided it is accompanied by a petition under 37 CFR 1.183 along with the petition fee, requesting waiver of the signature requirement of the nonsigning inventor.

SUPPLEMENTAL DECLARATION FOR REISSUE PATENT APPLICATION TO CORRECT "ERRORS" STATEMENT (37 CFR 1.175)

Attorney Docket Number	
First Named Inventor	
COMPLETE if known	
Application Number	
Filing Date	
Art Unit	
Examiner Name	

I/We hereby declare that:

Every error in the patent which was corrected in the present reissue application, and which is not covered by the prior oath(s) and/or declaration(s) submitted in this application, arose without any deceptive intention on the part of the applicant.

WARNING:

Petitioner/applicant is cautioned to avoid submitting personal information in documents filed in a patent application that may contribute to identity theft. Personal information such as social security numbers, bank account numbers, or credit card numbers (other than a check or credit card authorization form PTO-2038 submitted for payment purposes) is never required by the USPTO to support a petition or an application. If this type of personal information is included in documents submitted to the USPTO, petitioners/applicants should consider redacting such personal information from the documents before submitting them to the USPTO. Petitioner/applicant is advised that the record of a patent application is available to the public after publication of the application (unless a non-publication request in compliance with 37 CFR 1.213(a) is made in the application) or issuance of a patent. Furthermore, the record from an abandoned application may also be available to the public if the application is referenced in a published application or an issued patent (see 37 CFR 1.14). Checks and credit card authorization forms PTO-2038 submitted for payment purposes are not retained in the application file and therefore are not publicly available.

I/We hereby declare that all statements made herein of my/our own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under 18 U.S.C. 1001 and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

1415 Reissue Application and Issue Fees [R-7]

I. BASIC REISSUE APPLICATION FILING, SEARCH, AND EXAMINATION FEES

The Consolidated Appropriations Act, 2005 (Consolidated Appropriations Act), effective December 8, 2004, provides for a separate reissue application filing fee, search fee, and examination fee during fiscal years 2005 and 2006. For reissue applications filed on or after December 8, 2004, the following fees are required: basic filing fee as set forth in 37 CFR 1.16(e)(1); search fee as set forth in 37 CFR 1.16(n); examination fee as set forth in 37 CFR 1.16(r); application size fee, if applicable (see subsection II. below); and excess claims fees, if applicable (see subsection III. below).

For reissue applications **>before< to December 8, 2004, the following fees are required: basic filing fee as set forth in 37 CFR 1.16(e)(2); and excess claims fees, if applicable (see subsection III below). No search and examination fees are required for reissue applications filed before December 8, 2004.

The basic filing, search and examination fees are due on filing of the reissue application. These fees may be paid on a date later than the filing date of the reissue application provided they are paid within the time period set forth in 37 CFR 1.53(f) and include the surcharge set forth in 37 CFR 1.16(f). For reissue applications filed on or after December 8, 2004 but **>before< July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(b), if the search and/or examination fees are paid on a date later than the filing date of the reissue application, the surcharge under 37 CFR 1.16(f) is not required. For reissue applications filed on or after July 1, 2005, which have been accorded a filing date under 37 CFR 1.53(b), if any of the basic filing fee, the search fee, or the examination fee are paid on a date later than the filing date of the reissue application, the surcharge under 37 CFR 1.16(f) is required.

For reissue applications filed on or after December 8, 2004, in which a petition under 37 CFR 1.138(d) to expressly abandon the application was filed on or after March 10, 2006, applicant may file a request for refund of the search fee and excess claims fee paid in the application. See MPEP § 711.01.

II. APPLICATION SIZE FEE

The Consolidated Appropriations Act also provides for an application size fee. 37 CFR 1.16(s) sets forth the application size fee for reissue applications filed on or after December 8, 2004, the specification and drawings of which, excluding a sequence listing or computer program listing filed in an electronic medium in compliance with the rules (see 37 CFR 1.52(f)), exceed 100 sheets of paper. The application size fee does not apply to reissue applications filed before December 8, 2004. The application size fee applies for each additional 50 sheets or fraction thereof over 100 sheets of paper. Any sequence listing in an electronic medium in compliance with 37 CFR 1.52(e) and 37 CFR 1.821(c) or (e), and any computer program listing filed in an electronic medium in compliance with 37 CFR 1.52(e) and 1.96, will be excluded when determining the application size fee required by 37 CFR 1.16(s). See also MPEP § 607.

III. EXCESS CLAIMS FEES

37 CFR 1.16(h) sets forth the excess claims fee for each independent claim in excess of three. 37 CFR 1.16(i) sets forth the excess claims fee for each claim (whether independent or dependent) in excess of twenty. The *>excess< claims fees specified in 37 CFR 1.16(h) and (i) apply to all reissue applications pending on or after December 8, 2004. The excess claims fees specified in 37 CFR 1.16(h) and (i) apply to any excess claims fee paid on or after December 8, 2004, regardless of the filing date of the reissue application and regardless of the date on which the claim necessitating the excess claims fee payment was added to the reissue application.

For reissue applications filed on or after December 8, 2004, in which a petition under 37 CFR 1.138(d) to expressly abandon the application was filed on or after March 10, 2006, applicant may file a request for refund of the search fee and excess claims fee paid in the application. See MPEP § 711.01.

Under 35 U.S.C. 41(a)(2) as amended by the Consolidated Appropriations Act, the >number of< claims in the original patent ** >is not relevant< in determining the excess claims fee for a reissue application.

Example 1:

Applicant filed a reissue application before December 8, 2004, with the same number of

claims as in the patent. The patent has more than 3 independent claims and more than 20 total claims. If applicant added one more independent claim in the reissue application by filing an amendment before December 8, 2004, but did not pay for the excess claims fees **>before< December 8, 2004, on or after December 8, 2004, applicant will have to pay for one additional independent claim per the fee set forth in 37 CFR 1.16(h) and one additional total claim per the fee set forth in 37 CFR 1.16(i).

Example 2:

Applicant filed a reissue application on or after December 8, 2004, with the same number of claims as in the patent. The patent has 4 independent claims and 21 total claims. Excess claims fees for the 4th independent claim (one additional independent claim per the fee set forth in 37 CFR 1.16(h)) and the 21st claim (one additional total claim per the fee set forth in 37 CFR 1.16(i)) are required. Under 35 U.S.C. 41(a)(2) as amended by the Consolidated Appropriations Act, the >number of< claims in the original patent ** >is not relevant< in determining the excess claims fees for a reissue application.

The excess claims fees, if any, due with an amendment are required **>before< any consideration of the amendment by the examiner. Upon submission of an amendment (whether entered or not) affecting the claims, payment of fees for those claims in excess of the number previously paid for is required. The additional fees, if any, due with an amendment are calculated on the basis of the claims (total and independent) which would be present, if the amendment were entered. If an amendment is limited to revising the existing claims and it does not result in the addition of any new claim, there is no excess claim fee. Excess claims fees apply only to the addition of claims. It is to be noted that where excess claims fees have been previously paid, a later amendment affecting the claims cannot serve as the basis for granting any refund. See 37 CFR 1.26(a).

Amendments filed before a first Office action, or otherwise not filed in reply to an Office action, presenting additional claims in excess of the number already paid for, not accompanied by the full additional claims fee due, will not be entered in whole or in part and applicant will be so notified. Such amendments filed in reply to an Office action will be regarded as being non-responsive to the Office action and the practice set forth in MPEP § 714.03 will be followed.

An amendment canceling claims accompanying the papers constituting the reissue application will be effective to diminish the number of claims to be considered in calculating the filing fees to be paid. A preliminary amendment filed concurrently with a reply to a Notice To File Missing Parts of Application that required the filing fees, which preliminary amendment cancels or adds claims, will be taken into account in determining the appropriate filing fees due in response to the Notice To File Missing Parts of Application. However, no refund will be made for claims being canceled in the reply that have already been paid for.

After a requirement for restriction, non-elected claims will be included in determining the fees due in connection with a subsequent amendment unless such claims are canceled.

IV. ISSUE FEE

The issue fee for issuing each reissue patent is set forth in 37 CFR 1.18(a).

V. REISSUE APPLICATION FEE TRANSMITTAL FORM

The Office has prepared Form PTO/SB/56, Reissue Application Fee Transmittal Form which is designed to assist in the correct calculation of reissue filing fees.

**>

PTO/SB/56 (10-07)
Approved for use through 08/31/2010. OMB 0651-0033
U.S. Patent and Trademark Office; U.S. DEPARTMENT OF COMMERCE
Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

REISSUE APPLICATION FEE TRANSMITTAL FORM

Docket Number (Optional)

Application as Filed – Part 1

	(1) Claims in Patent	(2) Claims Filed in Reissue Application	(3) Number Extra	Small Entity Rate ($)	Small Entity Fee ($)		Other than a Small Entity Rate ($)	Other than a Small Entity Fee ($)
Total Claims (37 CFR 1.16(i))	(A)	(B)	**** =	x =			x =	
Independent Claims (37 CFR 1.16(h))	(C)	(D)	* =	x =			x =	
Application Size Fee (37 CFR 1.16(s))	If the specification and drawings exceed 100 sheets of paper, the application size fee due is $260 ($130 for small entity) for each additional 50 sheets or fraction thereof. See 35 U.S.C. 41(a)(1)(G) and 37 CFR 1.16(s).					or		
			Filing Fee (37 CFR 1.16(e))					
			Search Fee (37 CFR 1.16(n))					
			Examination Fee (37 CFR 1.16(r))					
			Total Filing Fee					

Application as Amended – Part 2

	(1) Claims Remaining After Amendment		(2) Highest Number Previously Paid For	(3) Extra Claims Present	Small Entity Rate ($)	Small Entity Fee ($)		Other than a Small Entity Rate ($)	Other than a Small Entity Fee ($)
Total Claims (37 CFR 1.16(i))	***	MINUS	**	=	X =			x =	
Independent Claims (37 CFR 1.16(h))	***	MINUS	*****	=	x =		or	x =	
Application Size Fee (37 CFR 1.16(s))	If the specification and drawings exceed 100 sheets of paper, the application size fee due is $260 ($130 for small entity) for each additional 50 sheets or fraction thereof. See 35 U.S.C. 41(a)(1)(G) and 37 CFR 1.16(s).								
				Total Additional Fee					

* If (D) is less than (C), enter "0" in column 3. For reissues filed on or after Dec. 8, 2004, enter (D) minus 3 or "0" if (D) is less than 3.
** If the "Highest Number of Total Claims Previously Paid For" is less than 20, enter "20" in this space.
*** After any cancellation of claims.
**** If (A) is greater than 20, enter (B) – (A); if (A) is 20 or less, enter (B) – 20. For reissues filed on or after Dec. 8, 2004, enter (B) - 20.
***** For amendments filed on or after Dec. 8, 2004, enter the "Highest Number of Independent Claims Previously Paid For."
For amendments filed prior to Dec. 8, 2004, enter the higher of the Number Previously Paid or Number of Independent Claims in Patent.

☐ Applicant claims small entity status. See 37 CFR 1.27.

☐ Please charge Deposit Account No. _____ in the amount of _____.
A duplicate copy of this sheet is enclosed.

☐ The Director is hereby authorized to charge any additional fees under 37 CFR 1.16 or 1.17 which may be required, or credit any overpayment to Deposit Account No. _____. A duplicate copy of this sheet is enclosed.

☐ A check in the amount of $ _____ to cover the filing/additional fee is enclosed.

☐ Payment by credit card. Form PTO-2038 is attached. WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.

_____ Typed or printed name

_____ Registration Number, if applicable

_____ Telephone Number

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

1415.01 Maintenance Fees on the Original Patent [R-7]

The filing of a reissue application does not alter the schedule of payments of maintenance fees on the original patent. If maintenance fees have not been paid on the original patent as required by 35 U.S.C. 41(b) and 37 CFR 1.20, and the patent has expired, no reissue patent can be granted. 35 U.S.C. 251, first paragraph, only authorizes the granting of a reissue patent for the unexpired term of the original patent. Once a patent has expired, the Director of the USPTO no longer has the authority under 35 U.S.C. 251 to reissue the patent. See *In re Morgan,* 990 F.2d 1230, 26 USPQ2d 1392 (Fed. Cir. 1993).

The examiner should determine whether all required maintenance fees have been paid **>*before*< *conducting an examination* of a reissue application. In addition, during the process of preparing the reissue application for issue, the examiner should again determine whether all * maintenance fees >required to date< have been paid **.

The history of maintenance fees is determined by the following, all of which should be used (to provide a check on the search made):

(A) Go to the USPTO Intranet (http://ptoweb/ptointranet/index.htm) and select the PALM screen, then the "General Information" screen, type in the patent number and then select the "Fees" screen.

(B) Go to the USPTO Intranet and then the "Revenue Accounting and Management" screen, then the "File History" screen. Then type in the patent number.

(C) Go to the USPTO Internet Site (http://www.uspto.gov) and select "eBusiness," **>under the "Patents"< column select "Status & View Documents," type in the patent number and select the **>"Fees"< screen.

If the window for the maintenance fee due has closed (maintenance fees are due by the day of the 4th, 8th and 12th year anniversary of the grant of the patent), but the maintenance fee has not been paid, the Office of Patent Legal Administration (OPLA) should be contacted by the Technology Center (TC) Special Program Examiner (SPRE) >or appropriate Quality Assurance Specialist (TC QAS)< for instructions as to what appropriate action to take.

PAYMENT OF MAINTENANCE FEES WHERE THE PATENT HAS BEEN REISSUED

Pursuant to 37 CFR 1.362(b), maintenance fees are not required for a reissue patent if the original patent that was reissued did not require maintenance fees.

Where the original patent that was reissued did require maintenance fees, the schedule of payments of maintenance fees on the original patent will continue for the reissue patent. 37 CFR 1.362(h). Once an original patent reissues, maintenance fees are no longer due in the original patent, but rather the maintenance fees are due in the reissue patent. This is because upon the issuance of the reissue patent, the original patent is surrendered and ceases to exist.

In some instances, more than one reissue *>patent< will be granted to replace a single original patent. The issuance of more than one reissue patent does not alter the schedule of payments of maintenance fees on the original patent. The existence of multiple reissue patents for one original patent can arise where multiple divisional reissue applications are filed for the same patent, and the multiple applications issue as reissue patents (all to replace the same original patent). In addition, a divisional application or continuation application of an existing reissue application may be filed, and both may then issue as reissue patents. In such instances, 35 U.S.C. 41 does not provide for the charging of more than one maintenance fee for the multiple reissues. Thus, **>only one maintenance fee is required for all the multiple reissue patents that replaced the single original patent.< The maintenance fee must be directed to the *>latest< reissue patent that has issued. **

See MPEP Chapter 2500 for additional information pertaining to maintenance fees.

1416 No Physical Surrender of Original Patent [R-7]

37 CFR 1.178. Original patent; continuing duty of applicant.

(a) The application for reissue of a patent shall constitute an offer to surrender that patent, and the surrender shall take effect upon reissue of the patent. Until a reissue application is granted, the original patent shall remain in effect.

*****

37 CFR 1.178(a) was amended, effective October 21, 2004, to eliminate the requirement for physical surrender of the original letters patent (i.e., the "ribbon copy" of the original patent) in a reissue application, and to make surrender of the original patent automatic upon the grant of the reissue patent.

Amended 37 CFR 1.178(a) applies retroactively to all pending applications. For those applications with an outstanding requirement for the physical surrender of the original letters patent, a reissue applicant must timely reply that the requirement is moot in view of the implementation of the amended rule. Such a reply will be considered a complete reply to any requirement directed toward the surrender of the original letters patent. It is to be noted that the Office will not conduct a search to withdraw Office actions where the only outstanding requirement is compliance with the physical surrender of the original letters patent.

Example 1:

An Office action issues **>before< the effective date of the amendment to 37 CFR 1.178 with only a requirement for a return of the original letters patent to the Office. A two-month period for reply is set in the Office action. Applicant fails to timely reply to the Office action, relying on the amendment to 37 CFR 1.178 as mooting the requirement for physical surrender of the original letters patent. The six-month full statutory period for reply expires. In this instance, the reissue application would be abandoned (as of the day after the last day of the two-month period set in the Office action) for failure to timely reply to the Office action, because no reply was timely filed.

Example 2:

An Office action issues **>before< the effective date of the amendment to 37 CFR 1.178 with the only requirement for a return of the original letters patent to the Office. Applicant fails to reply to the Office action within the two-month period set in the Office action, relying on the amendment to 37 CFR 1.178 as mooting the requirement for physical surrender of the original letters patent. In reviewing the reissue application in connection with a related application, the examiner notes the omission **>before< the expiration of the six-month full statutory period for reply. In this instance, the examiner may telephone the applicant, and remind the applicant of the need to file a timely reply.

Example 3:

An Office action issues **>before< the effective date of the amendment to 37 CFR 1.178 with the only requirement being a return of the original letters patent to the Office. Applicant timely replies to the Office that it should vacate/withdraw the requirement, or otherwise indicates that return of the original letters patent is now unnecessary. In this instance, a complete reply would have been filed, and the requirement would be withdrawn and the application passed to issue.

Example 4:

An Office action issues **>before< the effective date of the amendment to 37 CFR 1.178 with both (a) a requirement to return the original letters patent to the Office, and (b) a rejection of the claims under 35 U.S.C. 103. Applicant timely replies to the Office action addressing only the rejection under 35 U.S.C. 103 (but not the need for physical surrender of the original letters patent). In this instance, the reply would be accepted as complete, and the Office would withdraw the requirement for physical surrender of the original letters patent. (The requirement was proper when made, so the Office would not vacate the action in regard to submission of the original letters patent.).

Where the patentee has submitted the original letters patent in a reissue application subject to 37 CFR 1.178 as it is now amended, the Office may, in response to a timely request, return the original letters patent, when it can be readily retrieved from where it is stored, namely, the paper application file, or the artifact storage area for an Image File Wrapper (IFW) file. Any request for return of the letters patent which is submitted after the issue fee has been paid will require a petition pursuant to 37 CFR 1.59(b) to expunge from the file and return the original letters patent. Where the original letters patent cannot be readily retrieved, or in the rare instance that it has been subsequently misplaced, the Office will not be able to return the original letters patent and will not create a new one.

Example 5:

In an application filed after the effective date of the amendment to 37 CFR 1.178, applicant has mistakenly submitted the original letters patent and later seeks its return. In this instance, provided applicant timely requests the return of the original letters patent, the Office would return the patent, *provided it can be readily retrieved*.

Example 6:

A reissue application was pending at the time of the effective date of the amendment to 37 CFR 1.178, and an original letters patent was submitted. Applicant requests return of the original letters patent, although the application is abandoned at the time the request for return is made. In this instance, the Office would return the original letters patent if *it is readily retrievable*. Even where the reissue application was already abandoned at the time of the effective date of the amendment to 37 CFR 1.178, the Office would also return the original letters patent.

Example 7:

A reissue application is pending at the time of the effective date of the amendment to 37 CFR 1.178. An original letters patent was submitted, and the issue fee has been paid for the reissue application at the time the request for return of the original letters patent is made. In this instance, the Office may similarly return the original letters patent, but only if the request is accompanied by a grantable petition under 37 CFR 1.59(b).

Example 8:

A reissue application was pending at the time of the effective date of the amendment to 37 CFR 1.178. An original letters patent was submitted, and the reissue application then issued as a reissue patent. After the reissue patent issues, the request for return of the original letters patent is made. Once again, the Office may return the original letters patent, but only if the request is accompanied by a grantable petition under 37 CFR 1.59(b).

Example 9:

A reissue application issued as a reissue patent **>before< the effective date of the amendment to 37 CFR 1.178. The reissue applicant, now the patentee, requests return of the original letters patent that was submitted in the reissue application. In this instance, the Office will not return the original letters patent. The original letters patent was submitted in reply to a requirement that was in effect throughout the pendency of the reissue application.

1417 Claim for Benefit Under 35 U.S.C. 119(a)-(d) [R-5]

PRIORITY UNDER 35 U.S.C. 119(a)-(d) WAS PERFECTED IN THE ORIGINAL PATENT

A "claim" for the benefit of an earlier filing date in a foreign country under 35 U.S.C. 119(a)-(d) must be made in a reissue application, even though such a claim was previously made in the application for the original patent to be reissued. However, no additional certified copy of the foreign application is necessary. The procedure is similar to that for "Continuing Applications" in MPEP § 201.14(b).

In addition, 37 CFR 1.63 requires that in *any* application in which a claim for foreign priority is made pursuant to 37 CFR 1.55, the oath or declaration must identify the foreign application for patent or inventors' certificate on which priority is claimed unless supplied on an application data sheet (37 CFR 1.76), and any foreign applications having a filing date before that of the application on which priority is claimed, by specifying:

(A) the application number of the foreign application;

(B) the foreign country or intellectual property authority; and

(C) the day, month, and year of the filing of the foreign application.

The examiner should note that the heading on printed copies of the patent will not be carried forward to the reissue from the original patent. Therefore, it is important that the bibliographic data sheet (or the front face of the reissue file wrapper for series 08/ and earlier paper applications) be endorsed by the examiner under "FOREIGN APPLICATIONS." For an IFW reissue file, a copy of the bibliographic data sheet should be printed from the IFW file history. The printed copy should be annotated by the examiner and then the annotated copy should be scanned into the IFW.

PRIORITY UNDER 35 U.S.C. 119(a)-(d) IS NEWLY PERFECTED IN THE REISSUE APPLICATION

A reissue was granted in *Brenner v. State of Israel*, 400 F.2d 789, 158 USPQ 584 (D.C. Cir. 1968), where the only ground urged was failure to file a certified copy of the original foreign application to obtain the right of foreign priority under 35 U.S.C. 119(a)-(d) before the patent was granted. In *Brenner*, the claim for priority had been made in the prosecution of the original patent, and it was only necessary to submit a certified copy of the priority document in the reissue application to perfect priority (the claim for priority must be repeated in the reissue application). Reissue is also available to correct the "error" in failing to take any steps to obtain the right of foreign priority under 35 U.S.C. 119(a)-(d) before the original patent was granted. >See *Fontijn v. Okamoto*, 518 F.2d 610, 622, 186 USPQ 97, 106 (CCPA 1975) ("a patent may be reissued for the purpose of establishing a claim to priority which was not asserted, or which was not perfected during the prosecution of the original application")< In a situation where it is necessary to submit for the first time both the claim for priority and the certified copy of the priority document in the reissue application and the patent to be reissued resulted from a utility or plant application filed on or after November 29, 2000, the reissue applicant will have to file a petition for an unintentionally delayed priority claim under 37 CFR 1.55(c) in addition to filing a reissue application. See MPEP § 201.14(a).

1418 Notification of Prior/Concurrent Proceedings and Decisions Thereon, and of Information Known To Be Material to Patentability [R-3]

37 CFR 1.178. Original patent; continuing duty of applicant.

*****

(b) In any reissue application before the Office, the applicant must call to the attention of the Office any prior or concurrent proceedings in which the patent (for which reissue is requested) is or was involved, such as interferences, reissues, reexaminations, or litigations and the results of such proceedings (see also § 1.173(a)(1)).

37 CFR 1.178(b) requires reissue applicants to call to the attention of the Office any prior or concurrent proceeding in which the patent (for which reissue is requested) is or was involved and the results of such proceedings. These proceedings would include interferences, reissues, reexaminations, and litigations. Litigation would encompass any papers filed in the court or issued by the court, which may include, for example, motions, pleadings, and court decisions. This duty to submit information is continuing, and runs from the time the reissue application is filed until the reissue application is abandoned or issues as a reissue patent.

In addition, a reissue application is subject to the same duty of disclosure requirements as is any other nonprovisional application. The provisions of 37 CFR 1.63 require acknowledgment in the reissue oath or declaration of the "duty to disclose to the Office all information known to the [applicants] to be material to patentability as defined in § 1.56." Note that the Office imposes no responsibility on a reissue applicant to resubmit, in a reissue application, all the "References Cited" in the patent for which reissue is sought. Rather, applicant has a continuing duty under 37 CFR 1.56 to timely apprise the Office of any information which is material to the patentability of the claims under consideration in the reissue application.

37 CFR 1.97 and 37 CFR 1.98 provide a mechanism to submit information known to applicants to be material to patentability. Information submitted in compliance with 37 CFR 1.97 and 37 CFR 1.98 will be considered by the Office. See MPEP § 609. Although a reissue applicant may utilize 37 CFR 1.97 and 37 CFR 1.98 to comply with the duty of disclosure required by 37 CFR 1.56, this does not relieve applicant of the duties under 37 CFR 1.175 of, for example, stating "at least one error being relied upon."

While 37 CFR 1.97(b) provides for the filing of an information disclosure statement within 3 months of the filing of an application or before the mailing date of a first Office action, reissue applicants are encouraged to file information disclosure statements at the time of filing of the reissue application so that such statements will be available to the public during the 2-month period provided in MPEP § 1441. Form paragraph 14.11.01 may be used to remind applicant of the **>duties to timely make the Office aware of (A) any prior or concurrent proceeding (e.g., litigation or Office proceedings) in which the patent to be reissued

is or was involved, and (B) any information which is material to patentability of the claims in the reissue application<.

¶ *14.11.01 Reminder of Duties Imposed by 37 CFR 1.178(b) and 37 CFR 1.56*

Applicant is reminded of the continuing obligation under 37 CFR 1.178(b), to timely apprise the Office of any prior or concurrent proceeding in which Patent No. **[1]** is or was involved. These proceedings would include interferences, reissues, reexaminations, and litigation.

Applicant is further reminded of the continuing obligation under 37 CFR 1.56, to timely apprise the Office of any information which is material to patentability of the claims under consideration in this reissue application.

These obligations rest with each individual associated with the filing and prosecution of this application for reissue. See also MPEP §§ 1404, 1442.01 and 1442.04.

Examiner Note:

1. This form paragraph is to be used in the first action in a reissue application.
2. In bracket [1], insert the patent number of the original patent for which reissue is requested.

1430 Reissue Files Open to the Public and, Notice of Filing Reissue Announced in, *Official Gazette* [R-7]

37 CFR 1.11. Files open to the public.

*****

(b) All reissue applications, all applications in which the Office has accepted a request to open the complete application to inspection by the public, and related papers in the application file, are open to inspection by the public, and copies may be furnished upon paying the fee therefor. The filing of reissue applications, other than continued prosecution applications under § 1.53(d) of reissue applications, will be announced in the *Official Gazette*. The announcement shall include at least the filing date, reissue application and original patent numbers, title, class and subclass, name of the inventor, name of the owner of record, name of the attorney or agent of record, and examining group to which the reissue application is assigned.

*****

Under 37 CFR 1.11(b) all reissue applications filed after March 1, 1977, are open to inspection by the general public, and copies may be furnished upon paying the fee therefor. The filing of reissue applications (except for continued prosecution applications (CPA's) filed under 37 CFR 1.53(d)) will be announced in the *Official Gazette*. The announcement gives interested members of the public an opportunity to submit to the examiner information pertinent to the patentability of the reissue application. The announcement includes the filing date, reissue application and original patent numbers, title, class and subclass, name of the *>inventor(s)<, name of the owner of record, name of the attorney or agent of record, and the Technology Center (TC) to which the reissue application is initially assigned. **>Where a reissue application seeks to change the inventorship of a patent, the names of the inventors of record of the patent file are set forth in the announcement, not the filing receipt, which sets forth the names of the inventors that the reissue application is seeking to make of record upon reissue of the patent.<

IFW reissue application files are open to inspection by the general public by way of Public PAIR via the USPTO Internet site. In viewing the images of the files, members of the public will be able to view the entire content of the reissue application file history. To access Public PAIR, a member of the public would (A) go to the USPTO web site at http://www.uspto.gov, (B) click on **>"eBusiness,"< (C) **>click on "Status & View Documents,"< and (D) enter the reissue application number.

**>Where a "Notice to File Missing Parts of Reissue Application – Filing Date Granted" has been mailed by the Office for a reissue application, the reissue application will not necessarily be announced in the *Official Gazette* until all elements of the Notice to File Missing Parts have been complied with. This is because the information required by 37 CFR 1.11(b) for the *Official Gazette* announcement may be missing as indicated in the Notice to File Missing Parts.< A notice of a reissue application in the *Official Gazette* should be published **>before< any examination of the application. If an inadvertent failure to publish notice of the filing of the reissue application in the *Official Gazette* is recognized later in the examination, action should be taken to have the notice published as quickly as possible, and action on the application may be delayed until two months after the publication, allowing for any protests to be filed. For a discussion of protests, see MPEP Chapter 1900.

The filing of a continued prosecution application (CPA) under 37 CFR 1.53(d) of a reissue application will not be announced in the *Official Gazette.*

Although the filing of a CPA of a reissue application constitutes the filing of a reissue application, the announcement of the filing of such CPA would be redundant in view of the announcement of the filing of the prior reissue application in the *Official Gazette* and the fact that the same application number and file will continue to be used for the CPA.

If applicant files a Request for Continued Examination (RCE) of the reissue application under 37 CFR 1.114 (which can be filed on or after May 29, 2000 for a reissue application filed on or after June 8, 1995), such filing will not be announced in the *Official Gazette*. An RCE continues prosecution of the existing reissue application and is not a filing of a new application.

The filing of all reissue applications, except for CPAs filed under 37 CFR 1.53(d), (note that effective July 14, 2003, CPA practice has been eliminated as to utility and plant application) will be announced in the *Official Gazette* and will include certain identifying data as specified in 37 CFR 1.11(b). **

1440 Examination of Reissue Application [R-3]

37 CFR 1.176. Examination of reissue.

(a) A reissue application will be examined in the same manner as a non-reissue, non-provisional application, and will be subject to all the requirements of the rules related to non-reissue applications. Applications for reissue will be acted on by the examiner in advance of other applications.

(b) Restriction between subject matter of the original patent claims and previously unclaimed subject matter may be required (restriction involving only subject matter of the original patent claims will not be required). If restriction is required, the subject matter of the original patent claims will be held to be constructively elected unless a disclaimer of all the patent claims is filed in the reissue application, which disclaimer cannot be withdrawn by applicant.

37 CFR 1.176 provides that an original claim, if represented in a reissue application, will be fully examined in the same manner, and subject to the same rules as if being presented for the first time in an original non-reissue, nonprovisional application, except that division will not be required by the examiner. See MPEP § 1450 and § 1451. Reissue applications are normally examined by the same examiner who issued the patent for which reissue is requested. In addition, the application will be examined with respect to compliance with 37 CFR 1.171-*>1.178< relating specifically to reissue applications, for example, the reissue oath or declaration will be carefully reviewed for compliance with 37 CFR 1.175. See MPEP § 1444 for handling applications in which the oath or declaration lacks compliance with 37 CFR 1.175. Reissue applications with related litigation will be acted on by the examiner before any other special applications, and will be acted on immediately by the examiner, subject only to a 2-month delay after publication for examining reissue applications; see MPEP § 1441.

The original patent file wrapper /file history should always be obtained and reviewed when examining a reissue application thereof.

1441 Two-Month Delay Period [R-7]

37 CFR 1.176 provides that reissue applications will be acted on by the examiner in advance of other applications, i.e., "special." Generally, a reissue application will not be acted on sooner than 2 months after announcement of the filing of the reissue has appeared in the *Official Gazette*. The 2-month delay is provided in order that members of the public may have time to review the reissue application and submit pertinent information to the Office before the examiner's action. The pertinent information is submitted in the form of a protest under 37 CFR 1.291(a). For a discussion as to protests under 37 CFR 1.291(a) in reissue applications, see MPEP § 1441.01. As set forth in MPEP § 1901.04, the public should be aware that such submissions should be made as early as possible, **>because< under certain circumstances, the 2-month delay period will not be employed. For example, the Office may act on a continuation or a divisional reissue application **>before< the expiration of the 2-month period after announcement. Additionally, the Office will entertain a petition under 37 CFR 1.182 which is accompanied by the required petition fee (37 CFR 1.17(f)) to act on a reissue application without delaying for 2 months. Accordingly, protestors to reissue applications (see MPEP § 1441.01) cannot automatically assume that a full 2-month delay period will always be available. Appropriate reasons for requesting that the 2-month delay period not be employed include that litigation involving a patent has been stayed to permit the filing of an application for the reissue of the patent. Where the basis for the petition is ongoing litigation, the petition must clearly identify the litigation, and detail the spe-

cifics of the litigation that call for prompt action on the reissue application **>before< the expiration of the 2-month delay period. Such petitions are decided by the Office of Patent Legal Administration.

1441.01 Protest in Reissue Applications [R-7]

A protest pursuant to 37 CFR 1.291 may be filed throughout the pendency of a reissue application, **>before< the date of mailing of a notice of allowance, subject to the timing constraints of the examination, as set forth in MPEP § 1901.04. While a reissue application is not published under 37 CFR 1.211, the reissue application is published pursuant to 35 U.S.C. 122(b)(1)(A) via an announcement in the *Official Gazette* (and public availability of the file content) per 37 CFR 1.11(b). Such a publication does not preclude the filing of a protest. 35 U.S.C. 122(c) states:

> "(c) PROTEST AND PRE-ISSUANCE OPPOSITION- The Director shall establish appropriate procedures to ensure that **no protest or other form of pre-issuance opposition** to the grant of a patent on an application may be initiated after publication of the application without the express written consent of the applicant." [Emphasis added.]

A protest is precluded after publication for an application for an original patent, as a "form of pre-issuance opposition." A reissue application is a post-issuance proceeding. A protest filed in a reissue application is not a "form of pre-issuance opposition to the grant of a patent" *>because< the patent to be reissued has already been granted. Thus, the prohibition against the filing of a protest after publication of an application under 35 U.S.C. 122(c) is not applicable to a reissue application and a protest is permitted after publication of the reissue application.

A protest with regard to a reissue application should be filed within the 2-month period following the announcement of the filing of the reissue application in the *Official Gazette*. If the protest of a reissue application cannot be filed within the 2-month delay period, the protest can be submitted at a later time. Where the protest is submitted after the 2-month period, no petition for entry of the protest under 37 CFR 1.182 is needed with respect to the protest being submitted after the 2 months, unless a final rejection has been issued or prosecution on the merits has been otherwise closed for the reissue application.

A potential protestor should be aware that reissue applications are taken up "special" and a protest filed outside the 2-month delay period may be received after action by the examiner. Once the first Office action is mailed (after the 2-month period), a member of the public may still submit pertinent information in the form of a protest under 37 CFR 1.291, and the examiner will consider the information submitted in the next Office action, to the extent that such consideration is appropriate. Where a final rejection has been issued or the prosecution on the merits has been otherwise closed, a petition under 37 CFR 1.182 along with the required petition fee (37 CFR 1.17(f)) for entry of the protest are required. The petition must include an explanation as to why the additional time was necessary and the nature of the protest intended. A copy of the petition must be served upon the applicant in accordance with 37 CFR 1.248. The petition should be directed to the Office of Petitions.

If the protest of a reissue application cannot be filed within the 2-month delay period, the protestor may petition to request (A) an extension of the 2-month period following the announcement in the *Official Gazette*, and (B) a delay of the examination until the extended period expires. Such a request will be considered only if filed in the form of a petition under 37 CFR 1.182 and accompanied by the petition fee set forth in 37 CFR 1.17(f). The petition under 37 CFR 1.182 and the petition fee must be filed **>before< the expiration of the 2-month period following the announcement of the filing of the reissue application in the *Official Gazette*. The petition must explain why the additional time is necessary and the nature of the protest intended. A copy of the petition must be served upon applicant in accordance with 37 CFR 1.248. The petition should be directed to the appropriate Technology Center (TC) which will forward the petition to the Office of Patent Legal Administration.

If the protest is a "REISSUE LITIGATION" protest, it is particularly important that it be filed early if protestor wishes it considered at the time the Office first acts on the reissue application. Protestors should be aware that the Office will entertain petitions from the reissue applicants under 37 CFR 1.182 to waive the 2-month delay period in appropriate circumstances. Accordingly, protestors to reissue applications cannot automatically assume that the full 2-month delay period will always be available.

The Technology Center (TC) to which the reissue application is assigned is listed in the *Official Gazette* notice of filing of the reissue application. Accordingly, the indicated TC should retain jurisdiction over the reissue application file for 2 months after the date of the *Official Gazette* notice before transferring the reissue application under the procedure set forth in MPEP § 903.08(d).

The publication of a notice of a reissue application in the *Official Gazette* should be done **>before< to any examination of the reissue application. If an inadvertent failure to publish notice of the filing of the reissue application in the *Official Gazette* is recognized later in the examination, action should be taken to have the notice published as quickly as possible, and action on the reissue application may be delayed until 2 months after the publication, allowing for any protests to be filed.

See MPEP § 1901.06 for general procedures on examiner treatment of protests in reissue applications.

1442 Special Status [R-7]

All reissue applications are taken up "special," and remain "special" even *>if< applicant does not respond promptly.

All reissue applications, except those under suspension because of litigation, will be taken up for action ahead of other "special" applications; this means that all issues not deferred will be treated and responded to immediately. Furthermore, reissue applications involved in litigation will be taken up for action in advance of other reissue applications.

1442.01 Litigation-Related Reissues [R-7]

During initial review, the examiner should determine whether the patent for which the reissue has been filed is involved in litigation, and if so, the status of that litigation. If the examiner becomes aware of litigation involving the patent sought to be reissued during examination of the reissue application, and applicant has not made the details regarding that litigation of record in the reissue application, the examiner, in the next Office action, will inquire regarding the specific details of the litigation.

Form paragraph 14.06 may be used for such an inquiry.

¶ *14.06 Litigation-Related Reissue*

The patent sought to be reissued by this application [1] involved in litigation. Any documents and/or materials which would be material to patentability of this reissue application are required to be made of record in response to this action.

Due to the related litigation status of this application, EXTENSIONS OF TIME UNDER THE PROVISIONS OF 37 CFR 1.136(a) WILL NOT BE PERMITTED DURING THE PROSECUTION OF THIS APPLICATION.

Examiner Note:

In bracket 1, insert either —is— or —has been—.

If additional details of the litigation appear to be material to examination of the reissue application, the examiner may make such additional inquiries as necessary and appropriate.

**For reissue application files that are maintained in the Image File Wrapper (IFW) system, if the existence of litigation has not already been noted, the examiner should print out a copy of the bibliographic data sheet from the IFW file history and annotate the printed bibliographic data sheet such that adequate notice is provided of the existence of the litigation. The examiner should place the annotation in a prominent place. The annotated sheet should be scanned into IFW.

Applicants will normally be given 1 month to reply to Office actions in all reissue applications *>that< are being examined during litigation, or after litigation had been stayed, dismissed, etc., to allow for consideration of the reissue by the Office. This 1-month period may be extended only upon a showing of *clear justification* **>under< 37 CFR 1.136(b). The Office action will inform applicant that the provisions of 37 CFR 1.136(a) are not available. Of course, up to 3 months may be >initially< set for reply if the examiner>, consultating with his/her supervisor,< determines such a period is clearly justified.

1442.02 Concurrent Litigation [R-7]

**>To< avoid **>duplicating< effort, action in reissue applications in which there is an indication of concurrent litigation will be suspended *>*sua sponte*< unless and until it is evident to the examiner, or the applicant indicates, that any one of the following applies:

(A) a stay of the litigation is in effect;

(B) the litigation has been terminated;

(C) there are no significant overlapping issues between the application and the litigation; or

(D) it is applicant's desire that the application be examined at that time.

Where any of (A) - (D) above apply, form paragraphs 14.08-14.10 may be used to deny a suspension of action in the reissue, i.e., to deny a stay of the reissue proceeding.

¶ *14.08 Action in Reissue Not Stayed — Related Litigation Terminated*

Since the litigation related to this reissue application is terminated and final, action in this reissue application will NOT be stayed. Due to the related litigation status of this reissue application, EXTENSIONS OF TIME UNDER THE PROVISIONS OF 37 CFR 1.136(a) WILL NOT BE PERMITTED.

¶ *14.09 Action in Reissue Not Stayed — Related Litigation Not Overlapping*

While there is concurrent litigation related to this reissue application, action in this reissue application will NOT be stayed because there are no significant overlapping issues between the application and that litigation. Due to the related litigation status of this reissue application, EXTENSIONS OF TIME UNDER THE PROVISIONS OF 37 CFR 1.136(a) WILL NOT BE PERMITTED.

¶ *14.10 Action in Reissue Not Stayed — Applicant's Request*

While there is concurrent litigation related to this reissue application, action in this reissue application will NOT be stayed because of applicant's request that the application be examined at this time. Due to the related litigation status of this reissue application, EXTENSIONS OF TIME UNDER THE PROVISIONS OF 37 CFR 1.136(a) WILL NOT BE PERMITTED.

Where none of (A) through (D) above apply, action in the reissue application in which there is an indication of concurrent litigation will be suspended by the examiner. The examiner should consult with the Technology Center Special Program Examiner >(SPRE) or appropriate Quality Assurance Specialist (QAS)< **>before< suspending action in the reissue *>application<. Form paragraph 14.11 may be used to suspend action, i.e., stay action, in a reissue application with concurrent litigation.

¶ *14.11 Action in Reissue Stayed - Related Litigation*

In view of concurrent litigation, and in order to avoid duplication of effort between the two proceedings, action in this reissue application is STAYED until such time as it is evident to the examiner that (1) a stay of the litigation is in effect, (2) the litigation has been terminated, (3) there are no significant overlapping issues between the application and the litigation, or (4) applicant requests that the application be examined.

An *ex parte* reexamination proceeding will **not** be stayed where there is litigation. See *Ethicon v. Quigg*, 849 F.2d 1422, 7 USPQ2d 1152 (Fed. Cir. 1988). Thus, where a reissue application has been merged with an *ex parte* reexamination proceeding, the merged proceeding will **not** be stayed where there is litigation. In a merged *ex parte* reexamination/reissue proceeding, the *ex parte* reexamination will control because of the *statutory* (35 U.S.C. 305) requirement that *ex parte* reexamination proceedings be conducted with special dispatch. See MPEP § 2285 and § 2286. As to a stay or suspension where reissue proceedings are merged with *inter partes* reexamination proceedings, see 37 CFR 1.937 and MPEP § 2686.

1442.03 Litigation Stayed [R-7]

All reissue applications, except those under suspension because of litigation, will be taken up for action ahead of other "special" applications; this means that all issues not deferred will be treated and responded to *immediately*. Furthermore, reissue applications involved in "stayed litigation" will be taken up for action in advance of other reissue applications. Great emphasis is placed on the expedited processing of such reissue applications. The courts are especially interested in expedited processing in the Office where litigation is stayed.

In reissue applications with "stayed litigation," the Office will entertain petitions under 37 CFR 1.182, which are accompanied by the fee under 37 CFR 1.17(f), to not apply the 2-month delay period stated in MPEP § 1441. Such petitions are decided by the Office of Patent Legal Administration.

Time-monitoring systems have been put into effect which will closely monitor the time used by applicants, protestors, and examiners in processing reissue applications of patents involved in litigation in which the court has stayed further action. Monthly reports on the status of reissue applications with related litigation are required from each Technology Center (TC). Delays in reissue processing are to be followed up. The TC Special Program Examiner >(SPRE) or appropriate Quality Assurance Specialist (QAS)< is responsible for oversight of reissue applications with related litigation.

The purpose of these procedures and those deferring consideration of certain issues, until all other issues are resolved or the application is otherwise

ready for consideration by the Board of Patent Appeals and Interferences (note MPEP § 1448), is to reduce the time between filing of the reissue application and final action thereon, while still giving all parties sufficient time to be heard.

Requests for stays or suspension of action in reissues where litigation has been stayed may be answered with form paragraph 14.07.

¶ *14.07 Action in Reissue Not Stayed or Suspended — Related Litigation Stayed*

While there is a stay of the concurrent litigation related to this reissue application, action in this reissue application will NOT be stayed or suspended because a stay of that litigation is in effect for the purpose of awaiting the outcome of these reissue proceedings. Due to the related litigation status of this reissue application, EXTENSIONS OF TIME UNDER THE PROVISIONS OF 37 CFR 1.136(a) WILL NOT BE PERMITTED.

1442.04 Litigation Involving Patent [R-7]

37 CFR 1.178. Original patent; continuing duty of applicant.

*****

(b) In any reissue application before the Office, the applicant must call to the attention of the Office any prior or concurrent proceedings in which the patent (for which reissue is requested) is or was involved, such as interferences, reissues, reexaminations, or litigations and the results of such proceedings (see also § 1.173(a)(1)).

Where the patent for which reissue is being sought is, or has been, involved in litigation, the applicant should bring the existence of such litigation to the attention of the Office. 37 CFR 1.178(b). This should be done at the time of, or shortly after, the applicant files the application, either in the reissue oath or declaration, or in a separate paper, preferably accompanying the application as filed. Litigation begun after filing of the reissue application also should be promptly brought to the attention of the Office.

Litigation encompasses any papers filed in the court or issued by the court. This may include, for example, motions, pleadings, and court decisions, as well as the results of such proceedings. When applicant notifies the Office of the existence of the litigation, enough information should be submitted so that the Office can reasonably evaluate the need for asking for further materials in the litigation. Note that the existence of supporting materials which may substantiate allegations of invalidity should, at least, be fully described, and preferably submitted. The Office is not interested in receiving voluminous litigation materials which are not relevant to the Office's consideration of the reissue application. The status of the litigation should be updated in the reissue application as soon as significant events happen in the litigation.

When a reissue application is filed, the examiner should determine whether the original patent has been adjudicated by a court. The decision(s) of the court, and also other papers in the suit, may provide information essential to the examination of the reissue. Examiners should inform the applicant of the duty to supply information as to litigation involving the patent. Form paragraph 14.11.01 may be used for this purpose. See MPEP § 1418.

Additionally, the patented file will contain notices of the filing and termination of infringement suits on the patent. Such notices are required by law to be filed by the clerks of the Federal District Courts. These notices do not indicate if there was an opinion by the court, nor whether a decision was published. *Shepard's Federal Citations* and the cumulative digests of the *United States Patents Quarterly*, both of which are in the Lutrelle F. Parker, Sr., Memorial Law Library, contain tables of patent numbers giving the citation of published decisions concerning the patent.

A litigation computer search by the Scientific and Technical Information Center (STIC) should be requested by the examiner to determine whether the patent has been, or is, involved in litigation. ** For IFW reissue application files, the "Search Notes" box on the OACS "Search Notes" page is annotated to indicate that the review was conducted, and the OACS "Search Notes" page is then scanned into the reissue application file history.

Additional information or guidance as to making a litigation search may be obtained from the library of the Office of the Solicitor. Where papers are not otherwise conveniently obtainable, the applicant may be requested to supply copies of papers and records in suits, or the Office of the Solicitor may be requested to obtain them from the court. The information thus obtained should be carefully considered for its bearing on the proposed claims of the reissue, particularly when the reissue application was filed in view of the holding of a court.

If the examiner becomes aware of litigation involving the patent sought to be reissued during examination of the reissue application, and applicant has not

made the details regarding that litigation of record in the reissue application, the examiner, in the next Office action, should inquire regarding the same. Form paragraph 14.06 may be used for such an inquiry. See MPEP § 1442.01.

If the additional details of the litigation appear to be material to patentability of the reissue application, the examiner may make such additional inquiries as necessary and appropriate.

1442.05 Court Ordered Filing of Reissue Application [R-3]

In most instances, the reissue-examination procedure is instituted by a patent owner who voluntarily files a reissue application as a consequence of related patent litigation. Some >Federal< district courts in earlier decisions have required a patentee-litigant to file a reissue application as a consequence of the patent litigation. However, the Court of Appeals for the Federal Circuit held in *Green v. The Rich Iron Co.*, 944 F.2d 852, 853, 20 USPQ2d 1075, 1076 (Fed. Cir. 1991) that a >Federal< district court in an infringement case could not compel a patentee to seek reissue by the USPTO.

It is to be noted that only a patentee or his or her assignee may file a reissue patent application. An order by a court for a different party to file a reissue will not be binding on the Office.

1443 Initial Examiner Review [R-7]

As part of an examiner's preparation for the examination of a reissue application, the Examiner Reissue Guide and Checklist should be consulted for basic guidance and suggestions for handling the prosecution. The Technology Center (TC) Special Program Examiners (SPREs) >or appropriate Quality Assurance Specialists (QASs)< should make the Guide and Checklist available at the time a reissue application is docketed to an examiner.

On initial receipt of a reissue application, the examiner should inspect the submission under 37 CFR 1.172 as to documentary evidence of a chain of title from the original owner to the assignee to determine whether the consent requirement of 37 CFR 1.172 has been met. The examiner will compare the consent and documentary evidence of ownership; the assignee indicated by the documentary evidence must be the same assignee which signed the consent. Also, the person who signs the consent for the assignee and the person who signs the submission of evidence of ownership for the assignee must both be persons having authority to do so. See also MPEP § 324.

Where the application is assigned, and there is no submission under 37 CFR 1.172 as to documentary evidence in the application, the examiner should require the submission using form paragraph 14.16. Once the submission under 37 CFR 1.172 as to documentary evidence is received, it must be compared with the consent to determine whether the assignee indicated by the documentary evidence is the same assignee which signed the consent. See MPEP § 1410.01 for further discussion as to the required consent and documentary evidence.

Where there is a statement of record that the application is **not** assigned, there should be no submission under 37 CFR 1.172 as to documentary evidence of ownership in the application, and none should be required by the examiner.

The filing of all reissue applications, except for continued prosecution applications (CPAs) filed under 37 CFR 1.53(d), must be announced in the *Official Gazette*. Accordingly, for any reissue application other than a CPA, the examiner should determine if the filing of the reissue application has been announced in the *Official Gazette* as provided in 37 CFR 1.11(b). The contents entry on the PALM Intranet Contents screen should be checked for the presence of "NRE" and "NOTICE OF REISSUE PUBLISHED IN *OFFICIAL GAZETTE*" entries in the contents, and the date of publication. ** If the filing of the reissue application has not been announced in the *Official Gazette*, >jurisdiction over< the reissue application should be returned to the Office of **>Patent Application Processing< (Special Processing) to handle the announcement. The examiner should not further act on the reissue until 2 months after announcement of the filing of the reissue has appeared in the *Official Gazette*. See MPEP § 1440.

The examiner should determine if there is concurrent litigation, and if so, the status thereof (MPEP § 1442.01), and whether the reissue ** file history (for IFW reissue applications) has been appropriately marked. Note MPEP § 1404.

The examiner should determine if a protest has been filed, and if so, it should be handled as set forth in MPEP § 1901.06. For a discussion of protests

under 37 CFR 1.291 in reissue applications, see MPEP § 1441.01.

The examiner should determine whether the patent is involved in an interference, and if so, should refer to MPEP § 1449.01 before taking any action on the reissue application.

The examiner should verify that all Certificate of Correction changes have been properly incorporated into the reissue application. See MPEP § 1411.01.

The examiner should verify that the patent on which the reissue application is based has not expired, either because its term has run or because required maintenance fees have not been paid. Once a patent has expired, the Director of the USPTO no longer has the authority under 35 U.S.C. 251 to reissue the patent. See *In re Morgan*, 990 F.2d 1230, 26 USPQ2d 1392 (Fed. Cir. 1992). See also MPEP § 1415.01.

1444 Review of Reissue Oath/Declaration [R-7]

In accordance with 37 CFR 1.175, the following is required in the reissue oath/declaration:

(A) A statement that the applicant believes the original patent to be wholly or partly inoperative or invalid-

(1) by reason of a defective specification or drawing, or

(2) by reason of the patentee claiming more or less than patentee had the right to claim in the patent;

(B) A statement of at least one error which is relied upon to support the reissue application, i.e., which provides a basis for the reissue;

(C) A statement that all errors which are being corrected in the reissue application up to the time of filing of the oath/declaration arose without any deceptive intention on the part of the applicant; and

(D) The information required by 37 CFR 1.63.

MPEP § 1414 contains a discussion of each of the above elements (i.e., requirements of a reissue oath/declaration). The examiner should carefully review the reissue oath/declaration in conjunction with that discussion, in order to ensure that each element is provided in the oath/declaration. If the examiner's review of the oath/declaration reveals a lack of compliance with any of the requirements of 37 CFR 1.175, a rejection of all the claims under 35 U.S.C. 251 should be made on the basis that the reissue oath/declaration is insufficient.

In preparing an Office action, the examiner should use form paragraphs 14.01 through 14.01.04 to state the objection(s) to the oath/declaration, i.e., the defects in the oath/declaration. These form paragraphs are reproduced in MPEP § 1414. The examiner should then use form paragraph 14.14 to reject the claims under 35 U.S.C. 251, based upon the improper oath/declaration.

¶ *14.14 Rejection, Defective Reissue Oath or Declaration*

Claim **[1]** rejected as being based upon a defective reissue **[2]** under 35 U.S.C. 251 as set forth above. See 37 CFR 1.175.

The nature of the defect(s) in the **[3]** is set forth in the discussion above in this Office action.

Examiner Note:

1. In bracket 1, list all claims in the reissue application. See MPEP § 706.03(x).
2. This paragraph should be preceded by at least one of the paragraphs 14.01 to 14.01.04.
3. In brackets 2 and 3, insert either --oath-- or --declaration--.

A lack of signature on a reissue oath/declaration (except as otherwise provided in 37 CFR 1.42, 1.43, and 1.47 and in 37 CFR 1.172) would be considered a lack of compliance with 37 CFR 1.175(a) and result in a rejection, including final rejection, of all the claims on the basis that the reissue oath/declaration is insufficient. If the unsigned reissue oath/declaration is submitted as part of a reply which is otherwise properly signed and responsive to the outstanding Office action, the reply should be accepted by the examiner as proper and responsive, and the oath/declaration considered fully in the next Office action. The reply should not be treated as an unsigned or improperly signed amendment (see MPEP § 714.01(a)), nor do the holdings of *Ex parte Quayle* apply in this situation. The lack of signature, along with any other oath/declaration deficiencies, should be noted in the next Office action *rejecting* the claims as being based upon an insufficient reissue oath/declaration.

I. HANDLING OF THE REISSUE OATH/DECLARATION DURING THE REISSUE PROCEEDING

An initial reissue oath/declaration is submitted with the reissue application (or within the time period set for filing the oath/declaration in a Notice To File Missing Parts under 37 CFR 1.53(f)). Where the

reissue oath/declaration fails to comply with 37 CFR 1.175(a), the examiner will so notify the applicant in an Office action, rejecting the claims under 35 U.S.C. 251 as discussed above. In reply to the Office action, a supplemental reissue oath/declaration should be submitted dealing with the noted defects in the reissue oath/declaration.

Where the initial reissue oath/declaration (1) failed to provide *any* error statement, or (2) attempted to provide an error statement, but failed to identify any error under 35 U.S.C. 251 upon which reissue can be based (see MPEP § 1402), the examiner should reject all the claims as being based upon a defective reissue oath/declaration under 35 U.S.C. 251. To support the rejection, the examiner should specifically point out the failure of the initial oath/declaration to comply with 37 CFR 1.175 because an "error" under 35 U.S.C. 251 upon which reissue can be based was not identified therein. In reply to the rejection under 35 U.S.C. 251, a supplemental reissue oath/declaration must be submitted stating an error under 35 U.S.C. 251 which can be relied upon to support the reissue application. Submission of this supplemental reissue oath/declaration to obviate the rejection cannot be deferred by applicant until the application is otherwise in condition for allowance. In this instance, a proper statement of error *was never provided in the initial reissue oath/declaration*, thus a supplemental oath/declaration is required *in reply to the Office action* in order to properly establish grounds for reissue.

A different situation may arise where the initial reissue oath/declaration does properly identify one or more errors under 35 U.S.C. 251 as being the basis for reissue, however, because of changes or amendments made during prosecution, none of the identified errors are relied upon any more. A supplemental oath/declaration will be needed to identify at least one error *now* being relied upon as the basis for reissue, even though the prior oath/declaration was earlier found proper by the examiner. The supplemental oath/declaration need *not* also indicate that the error(s) identified in the prior oath(s)/declaration(s) is/are no longer being corrected. In this instance, applicant's submission of the supplemental reissue oath/declaration to obviate the rejection under 35 U.S.C. 251 can, at applicant's option, be deferred until the application is otherwise in condition for allowance. The submission can be deferred because a proper statement of error was provided in the initial reissue oath/declaration. Applicant need only request that submission of the supplemental reissue oath/declaration be deferred until allowance, and such a request will be considered a complete reply to the rejection.

II. SUPPLEMENTAL REISSUE OATH/DECLARATION UNDER 37 CFR 1.175(b)(1):

Once the reissue oath/declaration is found to comply with 37 CFR 1.175(a), it is not required, nor is it suggested, that a new reissue oath/declaration be submitted together with each new amendment and correction of error in the patent. During the prosecution of a reissue application, amendments are often made and additional errors in the patent are corrected. A supplemental oath/declaration need not be submitted with each amendment and additional correction. Rather, it is suggested that the reissue applicant wait until the case is in condition for allowance, and then submit a cumulative supplemental reissue oath/declaration pursuant to 37 CFR 1.175(b)(1).

See MPEP § 1414.01 for a discussion of the required content of a supplemental reissue oath/declaration under 37 CFR 1.175(b)(1).

A supplemental oath/declaration under 37 CFR 1.175(b)(1) must be submitted before allowance. It may be submitted with any reply **>before< allowance. It may be submitted to overcome a rejection under 35 U.S.C. 251 made by the examiner, where it is indicated that the submission of the supplemental oath/declaration will overcome the rejection.

A supplemental oath/declaration under 37 CFR 1.175(b)(1) will be required where:

(A) the application is otherwise (other than the need for this supplemental oath/declaration) in condition for allowance;

(B) amendments or other corrections of errors in the patent have been made subsequent to the last oath/declaration filed in the application; and

(C) at least one of the amendments or other corrections corrects an error under 35 U.S.C. 251.

When a supplemental oath/declaration under 37 CFR 1.175(b)(1) directed to the amendments or other corrections of error is required, the examiner is encouraged to telephone the applicant and request the submission of the supplemental oath/declaration by fax. If the circumstances do not permit making a telephone call, or if applicant declines or is unable to promptly submit the oath/declaration, the examiner should issue a final Office action (final rejection) and use form paragraph 14.05.02 where the action issued is a second or subsequent action on the merits.

¶ *14.05.02 Supplemental Oath or Declaration Required Prior to Allowance*

In accordance with 37 CFR 1.175(b)(1), a supplemental reissue oath/declaration under 37 CFR 1.175(b)(1) must be received before this reissue application can be allowed.

Claim **[1]** rejected as being based upon a defective reissue **[2]** under 35 U.S.C. 251. See 37 CFR 1.175. The nature of the defect is set forth above.

Receipt of an appropriate supplemental oath/declaration under 37 CFR 1.175(b)(1) will overcome this rejection under 35 U.S.C. 251. An example of acceptable language to be used in the supplemental oath/declaration is as follows:

> "Every error in the patent which was corrected in the present reissue application, and is not covered by a prior oath/declaration submitted in this application, arose without any deceptive intention on the part of the applicant."

See MPEP § 1414.01.

Examiner Note:

1. In bracket 1, list all claims in the reissue application.
2. In bracket 2, insert either --oath-- or --declaration--.
3. This form paragraph is used in an Office action to: (a) remind applicant of the requirement for submission of the supplemental reissue oath/declaration under 37 CFR 1.175(b)(1) before allowance and (b) at the same time, reject all the claims since the reissue application is defective until the supplemental oath/declaration is submitted.
4. Do not use this form paragraph if no amendments (or other corrections of the patent) have been made subsequent to the last oath/declaration filed in the case; instead allow the case.
5. This form paragraph cannot be used in an *Ex parte Quayle* action to require the supplemental oath/declaration, because the rejection under 35 U.S.C. 251 is more than a matter of form.
6. Do not use this form paragraph in an examiner's amendment. The supplemental oath/declaration must be filed prior to mailing of the Notice of Allowability.

As noted above, the examiner will issue a final Office action where the application is otherwise in condition for allowance, and amendments or other corrections of error in the patent have been made subsequent to the last oath/declaration filed in the application. The examiner will be introducing (via form paragraph 14.05.02) a rejection into the case for the first time in the prosecution, when the claims have been determined to be otherwise allowable. This introduction of a new ground of rejection under 35 U.S.C. 251 will not prevent the action from being made final on a second or subsequent action because of the following factors:

(A) The finding of the case in condition for allowance is the first opportunity that the examiner has to make the rejection;

(B) The rejection is being made in reply to, i.e., was caused by, an amendment of the application (to correct errors in the patent);

(C) All applicants are on notice that this rejection will be made upon finding of the case otherwise in condition for allowance where errors have been corrected subsequent to the last oath/declaration filed in the case, so that the rejection should have been expected by applicant; and

(D) The rejection will not prevent applicant from exercising any rights to cure the rejection, *>because< applicant need only submit a supplemental oath/declaration with the above-described language, and it will be entered to cure the rejection.

Where the application is in condition for allowance and **no amendments or other corrections of error in the patent have been made subsequent to the last oath/declaration** filed in the application, a supplemental reissue oath/declaration under 37 CFR 1.175(b)(1) **should not be required by the examiner**. Instead, the examiner should issue a Notice of Allowability indicating allowance of the claims.

III. AFTER ALLOWANCE

Where applicant seeks to correct an error after allowance of the application, any amendment of the patent correcting the error must be submitted in accordance with 37 CFR 1.312. As set forth in 37 CFR 1.312, no amendment may be made as a matter of right in an application after the mailing of the notice of allowance. An amendment filed under 37 CFR 1.312 must be filed before or with the payment of the issue fee and may be entered on the recommendation of the primary examiner, and approved by the supervisory patent examiner, without withdrawing the case from issue.

Because the amendment seeks to correct an error in the patent, the amendment will affect the disclosure, the scope of a claim, or add a claim. Thus, in accordance with MPEP § 714.16, the remarks accompanying the amendment must fully and clearly state:

(A) why the amendment is needed;

(B) why the proposed amended or new claims require no additional search or examination;

(C) why the claims are patentable; and

(D) why they were not presented earlier.

A supplemental reissue oath/declaration must accompany the amendment. The supplemental reissue oath/declaration must state that the error(s) to be corrected arose without any deceptive intention on the part of the applicant. The supplemental reissue oath/declaration submitted after allowance must be directed to the error(s) applicant seeks to correct after allowance. This oath/declaration need not cover any earlier errors, *>because< all earlier errors should have been covered by a reissue oath/declaration submitted **>before< allowance.

Occasionally correcting an error after allowance does not include an amendment of the specification or claims of the patent. For example, the correction of the error could be the filing of a certified copy of the original foreign application (**>before< the payment of the issue fee - see 37 CFR 1.55(a)(2)) to obtain the right of foreign priority under 35 U.S.C. 119 (see *Brenner v. State of Israel*, 400 F.2d 789, 158 USPQ 584 (D.C. Cir. 1968)) where the claim for foreign priority had been timely made in the application for the original patent. In such a case, the requirements of 37 CFR 1.312 must still be met. This is so, because the correction of the patent is an amendment of the patent, even though no amendment is physically entered into the case. Thus, for a reissue oath/declaration submitted after allowance to correct an additional error (or errors), the reissue applicant must comply with 37 CFR 1.312 in the manner discussed above.

1445 Reissue Application Examined in Same Manner as Original Application

As stated in 37 CFR 1.176, a reissue application, including all the claims therein, is subject to "be examined in the same manner as a non-reissue, non-provisional application." Accordingly, the claims in a reissue application are subject to any and all rejections which the examiner deems appropriate. It does not matter whether the claims are identical to those of the patent or changed from those in the patent. It also does not matter that a rejection was not made in the prosecution of the patent, or could have been made, or was in fact made and dropped during prosecution of the patent; the prior action in the prosecution of the patent does not prevent that rejection from being made in the reissue application. Claims in a reissue application enjoy no "presumption of validity." *In re Doyle*, 482 F.2d 1385, 1392, 179 USPQ 227, 232-233 (CCPA 1973); *In re Sneed*, 710 F.2d 1544, 1550 n.4, 218 USPQ 385, 389 n.4 (Fed. Cir. 1983). Likewise, the fact that during prosecution of the patent the examiner considered, may have considered, or should have considered information such as, for example, a specific prior art document, does not have any bearing on, or prevent, its use as prior art during prosecution of the reissue application.

1448 Fraud, Inequitable Conduct, or Duty of Disclosure Issues [R-7]

The Office no longer investigates *>or< rejects reissue applications under 37 CFR 1.56. The Office will not comment upon duty of disclosure issues which are brought to the attention of the Office in reissue applications except to note in the application, in appropriate circumstances, that such issues are no longer considered by the Office during its examination of patent applications. Examination as to the lack of deceptive intent requirement in reissue applications will continue but without any investigation of fraud, inequitable conduct, or duty of disclosure issues. Applicant's statement in the reissue oath or declaration of lack of deceptive intent will be accepted as dispositive except in special circumstances such as an admission or judicial determination of fraud, inequitable conduct, or violation of the duty of disclosure.

ADMISSION OR JUDICIAL DETERMINATION

An admission or judicial determination of fraud, inequitable conduct, or violation of the duty of disclosure is a special circumstance, because no investigation need be made. Accordingly, after consulting with the Technology Center (TC) Special Program Examiner (SPRE) >or appropriate Quality Assurance Specialist (QAS)<, a rejection should be made using the

appropriate one of form paragraphs 14.21.09 or 14.22 as reproduced below.

Any admission of fraud, inequitable conduct or violation of the duty of disclosure must be explicit, unequivocal, and not subject to other interpretation. Where a rejection is made based upon such an admission (see form paragraph 14.22 below) and applicant responds with any reasonable interpretation of the facts that would not lead to a conclusion of fraud, inequitable conduct or violation of the duty of disclosure, the rejection should be withdrawn. Alternatively, if applicant argues that the admission noted by the examiner was not in fact an admission, the rejection should also be withdrawn.

Form paragraph 14.21.09 should be used where the examiner becomes aware of a judicial determination of fraud, inequitable conduct or violation of the duty of disclosure on the part of the applicant **independently of the record of the case,** i.e., the examiner has external knowledge of the judicial determination.

Form paragraph 14.22 should be used where, **in the application record,** there is (a) an explicit, unequivocal admission by applicant of fraud, inequitable conduct or violation of the duty of disclosure which is not subject to other interpretation, or (b) information as to a judicial determination of fraud, inequitable conduct or violation of the duty of disclosure on the part of the applicant. External information which the examiner believes to be an *admission* by applicant should never be used by the examiner, and such external information should never be made of record in the reissue application.

¶ *14.21.09 Rejection, 35 U.S.C. 251, No Error Without Deceptive Intention - External Knowledge*

Claims **[1]** rejected under 35 U.S.C. 251 since error "without any deceptive intention" has not been established. In view of the judicial determination in **[2]** of **[3]** on the part of applicant, a conclusion that any error was "without deceptive intention" cannot be supported. **[4]**

Examiner Note:

1. In bracket 1, list all claims in the reissue application.

2. In bracket 2, list the Court or administrative body which made the determination of fraud or inequitable conduct on the part of applicant.

3. In bracket 3, insert --fraud--, --inequitable conduct-- and/or --violation of duty of disclosure--.

4. In bracket 4, point out where in the opinion (or holding) of the Court or administrative body the determination of fraud, inequitable conduct or violation of duty of disclosure is set forth. Page number, column number, and paragraph information should be given as to the opinion (or holding) of the Court or administrative body. The examiner may add explanatory comments.

¶ *14.22 Rejection, 35 U.S.C. 251, No Error Without Deceptive Intention-Evidence in the Application*

Claims **[1]** rejected under 35 U.S.C. 251 since error "without any deceptive intention" has not been established. In view of the reply filed on **[2]**, a conclusion that any error was "without deceptive intention" cannot be supported.

[3]

Examiner Note:

1. In bracket 1, list all claims in the reissue application.

2. In bracket 2, insert the filing date of the reply which provides an admission of fraud, inequitable conduct or violation of duty of disclosure, or that there was a judicial determination of same.

3. In bracket 3, insert a statement that there has been an admission or a judicial determination of fraud, inequitable conduct or violation of duty of disclosure which provide circumstances why applicant's statement in the oath or declaration of lack of deceptive intent should not be taken as dispositive. Any admission of fraud, inequitable conduct or violation of duty of disclosure must be explicit, unequivocal, and not subject to other interpretation.

See MPEP § 2012 for additional discussion as to fraud, inequitable conduct or violation of duty of disclosure in a reissue application.

1449 Protest Filed in Reissue Where Patent Is in Interference [R-3]

If a protest (see MPEP Chapter 1900) is filed in a reissue application related to a patent involved in a pending interference proceeding, the reissue application should be referred to the Office of Patent Legal Administration (OPLA) before considering the protest and acting on the reissue application.

The OPLA will check to see that:

(A) all parties to the interference are aware of the filing of the reissue; and

(B) the Office does not allow claims in the reissue which are unpatentable over the pending interference count(s), or found unpatentable in the interference proceeding. After the reissue application has been reviewed by the OPLA, the reissue application with the protest will be returned to the examiner. See MPEP § 1441.01 for a discussion as to protests under 37 CFR 1.291* in reissue applications.

1449.01 Concurrent Office Proceedings [R-7]

I. CONCURRENT REEXAMINATION PROCEEDINGS:

37 CFR 1.565(d) provides that if "a reissue application and an *ex parte* reexamination proceeding on which an order pursuant to 37 CFR 1.525 has been mailed are pending concurrently on a patent, a decision will *>usually< be made to merge the two proceedings or to suspend one of the two proceedings." 37 CFR 1.991 provides that if "a reissue application and an *inter partes* reexamination proceeding on which an order pursuant to 37 CFR 1.931 has been mailed are pending concurrently on a patent, a decision may be made to merge the two proceedings or to suspend one of the two proceedings." If an examiner becomes aware that a reissue application and an *ex parte* or *inter partes* reexamination proceeding are both pending for the same patent, he or she should immediately inform *>his or her< Technology Center (TC) or Central Reexamination Unit (CRU) Special Program Examiner (SPRE) >or appropriate Quality Assurance Specialist (QAS)<.

**>Under< 37 CFR 1.177, a patent owner may file more than one reissue application for the same patent. If an examiner becomes aware that multiple reissue applications are pending for the same patent, and an *ex parte* or *inter partes* reexamination proceeding is pending for the same patent, he or she should immediately inform **>his or her TC or CRU SPRE or appropriate TC QAS<.

Where a reissue application and a reexamination proceeding are pending concurrently on a patent, *and an order granting reexamination has been issued* for the reexamination proceeding, the Office of Patent Legal Administration (OPLA) must be notified >(by e-mail to the lead Senior Legal Advisor responsible for reexamination)< that the proceedings are ready for a decision as to whether to merge the reissue and the reexamination, or stay one of the two. See MPEP § 2285 for the procedure of notifying OPLA and general guidance, if a reissue application and an *ex parte* reexamination proceeding are both pending for the same patent, and an *inter partes* reexamination proceeding is not involved. See MPEP § 2686.03 where a reissue application and an *inter partes* reexamination proceeding are both pending for the same patent, regardless of whether an *ex parte* reexamination proceeding is also pending.

Where a reissue application and a reexamination proceeding are pending concurrently on a patent, the patent owner, i.e., the reissue applicant, has a responsibility to notify the Office of the concurrent proceeding. 37 CFR § 1.178(b), 37 CFR 1.565(a), and 37 CFR 1.985(a). The patent owner should file in the reissue application, as early as possible, a Notification of Concurrent Proceedings pursuant to 37 CFR 1.178(b) in order to alert the Office of the existence of the reexamination proceeding on the same patent. See MPEP § 1418. In addition, the patent owner should file in the reexamination proceeding, as early as possible, a Notification of Concurrent Proceedings pursuant to 37 CFR 1.565(a) or 1.985(a) (depending on whether the reexamination proceeding is an *ex parte* reexamination proceeding or an *inter partes* reexamination proceeding) to provide a notification to the Office in the reexamination proceeding of the existence of the two concurrent proceedings.

The patent owner may file a petition under 37 CFR 1.182 in a reissue application to merge the reissue application with the reexamination proceeding, or to stay one of the proceedings because of the other. This petition must be filed after ** the order to reexamine >is issued< (37 CFR 1.525, 37 CFR 1.931) in the reexamination proceeding. If the petition is filed **>before< the reexamination order, it will not be considered, and will be returned to the patent owner by the TC or CRU Director >,or expunged from the record, if entered into the Image File Wrapper (IFW) before discovery that the petition is an improper paper<. If the petition is filed after ** the order to reexamine >is issued<, the petition and >any other paper materials for< the files for the reissue application and the reexamination proceeding will be forwarded to OPLA for decision. >An e-mail will be sent to the lead Senior Legal Advisor of OPLA responsible for reexamination, providing notification that the petition is ready to be addressed.

Reexamination Certificate Is To Be Issued for a Patent, While a Reissue Application for the Patent Is Pending

The following provides guidance to address the situation where a reexamination certificate is to be issued for a patent, while a reissue application for the

patent is pending and will not be merged with the reexamination. This can occur, for example, where a reissue application prosecution is stayed or suspended, and the prosecution of a reexamination proceeding for the patent (for which reissue is requested) is permitted to proceed. It can also occur where a reissue application is filed after the reexamination proceeding has entered the publication process, such that it is too late to consider the question of stay or merger.

(A) The examiner will not act on the reissue application until the reexamination certificate issues and publishes.

(B) After the reexamination certificate issues and publishes--

At the time that the reexamination certificate is issued and published, the Office will resume examination of the reissue application--

(1) An Office action will be issued giving the patent owner (applicant) one month to submit an amendment of the reissue application claims, based upon the results of the concluded reexamination proceeding.

(2) The reissue application will then be examined. Any claim canceled by the reexamination certificate will be treated the same way as a claim lost in litigation, and stated in the next action to be deemed as canceled. The remaining claims will be examined. If the reissue application is subsequently allowed, the claims that were canceled by the reexamination certificate will be formally canceled in the reissue application by examiner's amendment (unless they have already been canceled by applicant).

It is to be noted that the patent owner/applicant will have been advised in any decision suspending the copending reissue application to bring to the attention of the Office the issuance of the reexamination certificate, request a resumption of examination of the reissue application, and to include an amendment of the reissue application claims at that time, if it is deemed appropriate based upon the results of the reexamination proceeding.

(3) Generally, further prosecution will be limited to claims narrower than those claims canceled by the reexamination certificate. Any claims added thereafter, which are equal in scope to claims canceled by the reexamination certificate, or are broader than the scope of the claims canceled by the reexamination certificate, will generally be deemed as surrendered based on the patent owner's failure to prosecute claims of equal scope, and to present claims of broader scope in the reexamination proceeding. Such claims will be rejected under 35 U.S.C. 251. Further, a rejection of such claims based on estoppel will be made, citing to MPEP § 2308.03 as to treatment of claims lost in a proceeding before the Office, and noting that a reexamination is a "proceeding."

An exception to the guidance stated in part (3) above: claims that are broader than the scope of the claims canceled by the reexamination certificate may be presented where:

(a) The broader claims in the reissue application can be patentable, despite the fact that the claims in the reexamination are not; and

(b) The broader claims in the reissue application could not have been presented in the reexamination proceeding.

Criterion (a) can occur if the broadened claims in the reissue application have an earlier effective date than those canceled by the reexamination certificate (as where the claims in the reissue application are supported by a parent application, and the reexamination claims are not). Criterion (a) can also occur if the subject matter of the broadened claims in the reissue application can be sworn behind, and the more specific subject matter of the reexamination claims cannot be sworn behind. Criterion (b) can occur if the claims in the reissue application are broader than all claims of the patent as it existed during reexamination (e.g., claims directed to a distinct invention).

(4) What happened in the concluded reexamination proceeding must be taken into account by the examiner as to any new claims presented by the reissue application. This is in addition to any other issue that may be addressed in any reissue application.

(5) If all of the patent claims were canceled by the reexamination certificate, action on the reissue application can still proceed, as will be discussed below; however, patent owner/applicant must first file a petition under 37 CFR 1.183 to waive 37 CFR 1.570 and/or 37 CFR 1.997(d), depending on whether the certificate was issued for an *ex parte* reexamination proceeding, an *inter partes* reexamination proceeding, or a merger of the two. The petition would be grantable where the patent owner/applicant shows that either:

(a) The reissue claims are narrower than those claims canceled by the reexamination certificate; or

(b) Criteria (a) and (b) of part (3) above are satisfied by the claims of the reissue application.

The claims satisfying this requirement may only be provided where a petition accompanies the amendment providing the claims

(C) The reissue application can still proceed even where all of the patent claims were canceled by the reexamination certificate, based on the following. Where the reexamination certificate issues and publishes to cancel all existing patent claims, the reissue application can continue in the Office to correct the 35 U.S.C. 251 "error" of presenting the existing claims, which were in-fact unpatentable. Of course, what happened in the concluded reexamination proceeding must be taken into account by the examiner, as to any new claims presented by the reissue application. See the discussion in part (B)(3)(b) above. If a reissue application is filed after a reexamination certificate issues and publishes to cancel all existing patent claims, then the matter should be forwarded to OPLA for resolution.<

II. CONCURRENT INTERFERENCE PROCEEDINGS

If the original patent is involved in an interference, the examiner must consult the administrative patent judge in charge of the interference before taking any action on the reissue application. It is particularly important that the reissue application not be granted without the administrative patent judge's approval. See MPEP Chapter 2300.

III. CONCURRENT REISSUE PROCEEDINGS

Where more than one reissue applications are pending concurrently on the same patent, see MPEP §§ 1450 and 1451.

1449.02 Interference in Reissue [R-7]

37 CFR 41.8. Mandatory notices.

(a) In an appeal brief (§§ 41.37, 41.67, or 41.68) or at the initiation of a contested case (§ 41.101), and within 20 days of any change during the proceeding, a party must identify:

(1) Its real party-in-interest, and

(2) Each judicial or administrative proceeding that could affect, or be affected by, the Board proceeding.

(b) For contested cases, a party seeking judicial review of a Board proceeding must file a notice with the Board of the judicial review within 20 days of the filing of the complaint or the notice of appeal. The notice to the Board must include a copy of the complaint or notice of appeal. See also §§ 1.301 to 1.304 of this title.

37 CFR 41.202. Suggesting an interference.

(a) *Applicant*. An applicant, including a reissue applicant, may suggest an interference with another application or a patent. The suggestion must:

(1) Provide sufficient information to identify the application or patent with which the applicant seeks an interference,

(2) Identify all claims the applicant believes interfere, propose one or more counts, and show how the claims correspond to one or more counts,

(3) For each count, provide a claim chart comparing at least one claim of each party corresponding to the count and show why the claims interfere within the meaning of § 41.203(a),

(4) Explain in detail why the applicant will prevail on priority,

(5) If a claim has been added or amended to provoke an interference, provide a claim chart showing the written description for each claim in the applicant's specification, and

(6) For each constructive reduction to practice for which the applicant wishes to be accorded benefit, provide a chart showing where the disclosure provides a constructive reduction to practice within the scope of the interfering subject matter.

*****

(c) *Examiner*. An examiner may require an applicant to add a claim to provoke an interference. Failure to satisfy the requirement within a period (not less than one month) the examiner sets will operate as a concession of priority for the subject matter of the claim. If the interference would be with a patent, the applicant must also comply with paragraphs (a)(2) through (a)(6) of this section. The claim the examiner proposes to have added must, apart from the question of priority under 35 U.S.C. 102 (g):

(1) Be patentable to the applicant, and

(2) Be drawn to patentable subject matter claimed by another applicant or patentee.

*****

In appropriate circumstances, a reissue application may be placed into interference with a patent or pending application. A patentee may provoke an interference with a patent or pending application by filing a reissue application, if the reissue application includes an appropriate reissue error as required by 35 U.S.C. 251. Reissue error must be based upon applicant error; a reissue cannot be based solely on the error of the Office for failing to declare an interference or to suggest copying claims for the purpose of establishing

an interference. See *In re Keil*, 808 F.2d 830, 1 USPQ2d 1427 (Fed. Cir. 1987); *In re Dien*, 680 F.2d 151, 214 USPQ 10 (CCPA 1982); *In re Bostwick*, 102 F.2d 886, 888, 41 USPQ 279, 281 (CCPA 1939); and *In re Guastavino*, 83 F.2d 913, 916, 29 USPQ 532, 535 (CCPA 1936). See also *Slip Track Systems, Inc. v. Metal Lite, Inc.*, 159 F.3d 1337, 48 USPQ2d 1055 (Fed. Cir. 1998) (Two patents issued claiming the same patentable subject matter, and the patentee with the earlier filing date requested reexamination of the patent with the later filing date (Slip Track's patent). A stay of litigation in a priority of invention suit under 35 U.S.C. 291, pending the outcome of the reexamination, was reversed. The suit under 35 U.S.C. 291 was the only option available to Slip Track to determine priority of invention. Slip Track could not file a reissue application solely to provoke an interference proceeding before the Office because it did not assert that there was any error as required by 35 U.S.C. 251 in the patent.). A reissue application can be employed to provoke an interference if the reissue application:

(A) adds copied claims which are not present in the original patent;

(B) amends claims to correspond to those of the patent or application with which an interference is sought; or

(C) contains at least one error (not directed to provoking an interference) appropriate for the reissue.

In the first two situations, the reissue oath/declaration must assert that applicant erred in failing to include claims of the proper scope to provoke an interference in the original patent application>, and must include an identification of the claims added to provoke the interference<. Note that in *In re Metz*, 173 F.3d 433 (Fed. Cir. 1998) (table), the Federal Circuit permitted a patentee to file a reissue application to copy claims from a patent in order to provoke an interference with that patent. Furthermore, the subject matter of the copied or amended claims in the reissue application must be supported by the disclosure of the original patent under 35 U.S.C. 112, first paragraph. See *In re Molins*, 368 F.2d 258, 261, 151 USPQ 570, 572 (CCPA 1966) and *In re Spencer*, 273 F.2d 181, 124 USPQ 175 (CCPA 1959).

A reissue applicant cannot present added or amended claims to provoke an interference, if the claims were deliberately omitted from the patent. If there is evidence that the claims were not inadvertently omitted from the original patent, e.g., the subject matter was described in the original patent as being undesirable, the reissue application may lack proper basis for the reissue. See *In re Bostwick*, 102 F.2d at 889, 41 USPQ at 282 (CCPA 1939)(reissue lacked a proper basis because the original patent pointed out the disadvantages of the embodiment that provided support for the copied claims).

The issue date of the patent, or the publication date of the application publication (whichever is applicable under 35 U.S.C. 135(b)), with which an interference is sought must be less than 1 year **>before< the presentation of the copied or amended claims in the reissue application. See 35 U.S.C. 135(b) and MPEP § 715.05 and MPEP Chapter 2300. If the reissue application includes broadened claims, the reissue application must be filed within two years from the issue date of the original patent. See 35 U.S.C. 251 and MPEP § 1412.03.

An examiner may, pursuant to 37 CFR 41.202(c), require a reissue applicant to add a claim to provoke an interference, unless the reissue applicant cannot present the added claim to provoke an interference based upon the provisions of the reissue statute and rules, e.g., if the claim was deliberately omitted from the patent, or if the claim enlarges the scope of the claims of the original patent and was not "applied for within two years from the grant of the original patent." Failure to satisfy the requirement within a period (not less than one month) the examiner sets will operate as a concession of priority for the subject matter of the claim. If the interference would be with a patent, the reissue applicant must also comply with 37 CFR 41.202(a)(2) through (a)(6). The claim the examiner proposes to have added must, apart from the question of priority under 35 U.S.C. 102(g), be patentable to the reissue applicant, and be drawn to patentable subject matter claimed by another applicant or patentee.

REISSUE APPLICATION FILED WHILE PATENT IS IN INTERFERENCE

If a reissue application is filed while the original patent is in an interference proceeding, the reissue applicant must promptly notify the Board of Patent Appeals and Interferences of the filing of the reissue

application within 20 days from the filing date. See 37 CFR 41.8 and MPEP Chapter 2300.

1450 Restriction and Election of Species Made in Reissue Application [R-7]

37 CFR 1.176. Examination of reissue.

(a) A reissue application will be examined in the same manner as a non-reissue, non-provisional application, and will be subject to all the requirements of the rules related to non-reissue applications. Applications for reissue will be acted on by the examiner in advance of other applications.

(b) Restriction between subject matter of the original patent claims and previously unclaimed subject matter may be required (restriction involving only subject matter of the original patent claims will not be required). If restriction is required, the subject matter of the original patent claims will be held to be constructively elected unless a disclaimer of all the patent claims is filed in the reissue application, which disclaimer cannot be withdrawn by applicant.

37 CFR 1.176(b) permits the examiner to require restriction in a reissue application between claims newly added in a reissue application and the original patent claims, where the added claims are directed to an invention which is separate and distinct from the invention(s) defined by the original patent claims. The criteria for making a restriction requirement in a reissue application between the newly added claims and the original claims are the same as that applied in a non-reissue application. See MPEP §§ 806 through 806.05(i). The authority to make a "restriction" requirement under 37 CFR 1.176(b) extends to and includes the authority to make an election of species. >For reissue applications of patents issued from a U.S. national stage application submitted under 35 U.S.C. 371, the "restriction" requirement should not be made under the PCT unity of invention standard as set forth in MPEP Chapter 1800, because a reissue application is filed under 35 U.S.C. 251, and not under 35 U.S.C. 371.<

Where a restriction requirement is made by the examiner, the original patent claims will be held to be constructively elected (except for the limited situation where a disclaimer is filed as discussed in the next paragraph). Thus, the examiner will issue an Office action in the reissue application (1) providing notification of the restriction requirement, (2) holding the added claims to be constructively non-elected and withdrawn from consideration, (3) treating the original patent claims on the merits, and (4) informing applicant that if the original claims are found allowable, and a divisional application has been filed for the non-elected claims, further action in the application will be suspended, pending resolution of the divisional application.

If a disclaimer of all the original patent claims is filed in the reissue application containing newly added claims that are separate and distinct from the original patent claims, only the newly added claims will be present for examination. In this situation, the examiner's Office action will treat the newly added claims in the reissue application on the merits. The disclaimer of all the original patent claims must be filed in the reissue application **>before< the issuance of the examiner's Office action containing the restriction requirement, in order for the newly added claims to be treated on the merits. Once the examiner has issued the Office action providing notification of the restriction requirement and treating the patent claims on the merits, it is too late to obtain an examination on the added claims in the reissue application by filing a disclaimer of all the original patent claims. If reissue applicant wishes to have the newly added claims be treated on the merits, a divisional reissue application must be filed to obtain examination of the added claims. Reissue applicants should carefully note that once a disclaimer of the patent claims is filed, it cannot be withdrawn. It does not matter whether the reissue application is still pending, or whether the reissue application has been abandoned or issued as a reissue patent. For all these situations, 37 CFR 1.176(b) states that the disclaimer cannot be withdrawn; the disclaimer will be given effect.

Claims elected pursuant to a restriction requirement will receive a complete examination on the merits, while the non-elected claims (to any added invention(s)) will be held in abeyance in a withdrawn status, and will only be examined if filed in a divisional reissue application. If the reissue application containing only original unamended claims becomes allowable first (and no "error" under 35 U.S.C. 251 exists), further action in that reissue application will be suspended to await examination in the divisional reissue application(s) containing the added claims. Multiple suspensions (usually six-month periods) may be necessary. The Office will not permit claims to issue in a reissue application which application does not correct any error in the original patent. Once a

divisional reissue application containing the added claims is examined and becomes allowable, the examiner will issue a requirement under 37 CFR 1.177(c) for applicant to merge the claims of the suspended first reissue application with the allowable claims of the divisional reissue application into a single application, by placing all of the claims in one of the applications and expressly abandoning the other. The Office action making this requirement will set a two-month period for compliance with the requirement. If applicant fails to timely respond to the Office action, or otherwise refuses to comply with the requirement made, then the divisional reissue application (claiming the invention which was non-elected in the now-suspended first reissue application) will be passed to issue alone, since the claims of the divisional reissue application, by themselves, do correct an error in the original patent. Prosecution will be reopened in the suspended first reissue application, and a rejection based on a lack of error under 35 U.S.C. 251 will then be made. This rejection may be made final, *>because< applicant is on notice of the consequences of not complying with the merger requirement.

>If no divisional reissue application was filed for the non-elected claims and the original unamended (elected) claims become allowable (and no "error" under 35 U.S.C. 251 exists), further action in that reissue application will be suspended, and a non-extendable three-month opportunity will be given (by way of a 3-month Notification) to the patent owner/applicant to file divisional reissue application(s) containing the non-elected claims. If a divisional reissue application is timely filed (i.e., within the three months), further suspensions (usually six-month periods) will be granted, as needed, to await examination in the divisional reissue application containing the added claims. If no such divisional reissue application is filed within the three-month period set in the Office communication suspending action in the reissue application, then a rejection based on a lack of error under 35 U.S.C. 251 will then be made in the sole reissue application. Because no error in the original patent is being corrected in the first reissue application, no reissue patent will issue. If a divisional reissue application is subsequently filed, it must be accompanied by a grantable petition (filed in the application having the elected claims) to waive the 37 CFR 1.103 provision that the Office will not suspend action if a reply by applicant to an Office action is outstanding.<

If the divisional reissue application becomes abandoned, prosecution will be reopened in the suspended first reissue application, and a rejection based on a lack of error under 35 U.S.C. 251 will then be made in the first reissue application. *>Because< no error in the original patent is being corrected in the first reissue application, no reissue patent will issue.

As stated in 37 CFR 1.176(b), **the examiner is not permitted to require restriction among original claims of the patent** (i.e., among claims that were in the patent **>before< filing the reissue application). Even where the original patent contains claims to different inventions which the examiner considers independent or distinct, and the reissue application claims the same inventions, a restriction requirement would be improper. If such a restriction requirement is made, it must be withdrawn.

Restriction between multiple inventions recited **in the newly added claims** will be permitted provided the added claims are drawn to several separate and distinct inventions. In such a situation, the original patent claims would be examined in the first reissue application, and applicant is permitted to file a divisional reissue application for each of the several separate and distinct inventions identified in the examiner's restriction requirement.

A situation will sometimes arise where the examiner makes an election of species requirement between the species claimed in the original patent claims and a species of claims added in the reissue application. >(The filing of a reissue application to only add species claims that require all the limitations of an issued generic claim would not meet the requirements of 35 U.S.C. 251 – see MPEP § 1402; however, this situation can occur where there is another change to the patent being made, which does correct a 35 U.S.C. 251 "error.")< In such a situation, if (1) the non-elected claims to the added species depend from (or otherwise include all limitations of) a generic claim which embraces all species claims, and (2) the generic claim is found allowable, then the non-elected claims of the added species must be rejoined with the elected claims of the original patent. See MPEP § 821.04(a).

1451 Divisional Reissue Applications; Continuation Reissue Applications Where the Parent is Pending [R-7]

35 U.S.C. 251. Reissue of defective patents.

*****

The Director may issue several reissued patents for distinct and separate parts of the thing patented, upon demand of the applicant, and upon payment of the required fee for a reissue for each of such reissued patents.

*****

37 CFR 1.177. Issuance of multiple reissue patents.

(a) The Office may reissue a patent as multiple reissue patents. If applicant files more than one application for the reissue of a single patent, each such application must contain or be amended to contain in the first sentence of the specification a notice stating that more than one reissue application has been filed and identifying each of the reissue applications by relationship, application number and filing date. The Office may correct by certificate of correction under § 1.322 any reissue patent resulting from an application to which this paragraph applies that does not contain the required notice.

(b) If applicant files more than one application for the reissue of a single patent, each claim of the patent being reissued must be presented in each of the reissue applications as an amended, unamended, or canceled (shown in brackets) claim, with each such claim bearing the same number as in the patent being reissued. The same claim of the patent being reissued may not be presented in its original unamended form for examination in more than one of such multiple reissue applications. The numbering of any added claims in any of the multiple reissue applications must follow the number of the highest numbered original patent claim.

(c) If any one of the several reissue applications by itself fails to correct an error in the original patent as required by 35 U.S.C. 251 but is otherwise in condition for allowance, the Office may suspend action in the allowable application until all issues are resolved as to at least one of the remaining reissue applications. The Office may also merge two or more of the multiple reissue applications into a single reissue application. No reissue application containing only unamended patent claims and not correcting an error in the original patent will be passed to issue by itself.

The court in *In re Graff*, 111 F.3d 874, 876-77, 42 USPQ2d 1471, 1473 (Fed. Cir. 1997) stated that "[t]he statute does not prohibit divisional or continuation reissue applications, and does not place stricter limitations on such applications when they are presented by reissue, provided of course that the statutory requirements specific to reissue applications are met." Following the decision in *Graff*, the Office has adopted a policy of treating continuations and divisionals of reissue applications, to the extent possible, in the same manner as continuations and divisionals of non-reissue applications.

>Nonetheless, the mere fact that the application purports to be a continuation or divisional of a parent reissue application does not make it a reissue application itself, since it is possible to file a 35 U.S.C. 111(a) continuing application of a reissue application. *In re Bauman*, 683 F.2d 405, 214 USPQ 585 (CCPA 1982). There must be an identification, on filing, that the application is a continuation reissue application, as opposed to a continuation of a reissue application (i.e., a *Bauman* type continuation application). Likewise, there must be an identification, on filing, that the application is a divisional reissue application, as opposed to a divisional of a reissue application. Thus, the specification must be amended to state that the application is a "continuation reissue application" or "divisional reissue application" of its parent reissue application. If the specification is amended to state that the application is a "continuation" or "divisional" of its parent reissue application, the application may very well be treated as a *Bauman* type continuation or divisional application.<

Questions relating to the propriety of divisional reissue applications and continuation reissue applications should be referred via the Technology Center (TC) Special Program Examiner >(SPRE) or appropriate Quality Assurance Specialist (QAS)< to the Office of Patent Legal Administration.

I. DIVISIONAL REISSUE APPLICATIONS

37 CFR 1.176(b) permits the examiner to require restriction in a reissue application between the original claims of the patent and any newly added claims which are directed to a separate and distinct invention(s). See also MPEP § 1450. As a result of such a restriction requirement, divisional >reissue< applications may be filed for each of the inventions identified in the restriction requirement.

In addition, applicant may initiate a division of the claims by filing more than one reissue application in accordance with 37 CFR 1.177. The multiple reissue applications which are filed may contain different groups of claims from among the original patent claims, or some of the reissue applications may contain newly added groups (not present in the original patent). There is no requirement that the claims of the

multiple reissue applications be independent and distinct from one another; if they are not independent and distinct from one another, the examiner must apply the appropriate double patenting rejections.

There is no requirement that a family of divisional reissue applications issue at the same time; however, it is required that they contain a cross reference to each other in the specification. 37 CFR 1.177(a) requires that all multiple reissue applications resulting from a single patent must include as the first sentence of their respective specifications a cross reference to the other reissue application(s). Accordingly, the first sentence of each reissue specification must provide notice stating that more than one reissue application has been filed, and it must identify each of the reissue applications and their relationship within the family of reissue applications, and to the original patent. An example of the suggested language to be inserted is as follows:

Notice: More than one reissue application has been filed for the reissue of Patent No. 9,999,999. The reissue applications are application numbers 09/999,994 (the present application), 09/999,995, and 09/999,998, all of which are divisional reissues of Patent No. 9,999,999.

The examiner should object to the specification and require an appropriate amendment if applicant fails to include such a cross reference to the other reissue applications in the first sentence of the specification of each of the reissue applications.

Where one of the divisional >reissue< applications of the family has issued without the required cross reference to the other reissue application(s), the examiner will refer the matter to his/her Supervisory Patent Examiner (SPE). The SPE will initiate a certificate of correction under 37 CFR 1.322 to include the appropriate cross reference in the already issued first reissue patent before passing the pending reissue application to issue. Form paragraph 10.19 may be used for such purpose. After the SPE prepares the memorandum as per form paragraph 10.19, the patent file with the memorandum should be forwarded to the Certificates of Correction Branch for issuance of a certificate. The examiner should make a reference in the pending divisional reissue application to the fact that an actual request for a Certificate of Correction has been initiated in the first reissue patent pursuant to 37 CFR 1.177(a), e.g., by an entry in the search notes or in an examiner's amendment.

¶ *10.19 Memorandum - Certificate of Correction (Cross-Reference to Other Reissues in Family)*

DATE: **[1]**
TO: Certificates of Correction Branch
FROM: **[2]**, SPE, Art Unit **[3]**
SUBJECT: Request for Certificate of Correction

Please issue a Certificate of Correction in U. S. Letters Patent No. **[4]** as specified on the attached Certificate.

_____

[5], SPE
Art Unit **[6]**

UNITED STATES PATENT AND TRADEMARK OFFICE CERTIFICATE

Patent No. **[7]**
Patented: **[8]**

The present reissue patent issued from an application that is one of a family of divisional reissue applications resulting from Patent No. **[9].** The present reissue patent has issued without the cross reference to the other reissue application(s) of the family which is required pursuant to 37 CFR 1.177(a). Accordingly, insert in the first sentence of the specification as follows:

Notice: More than one reissue application has been filed for the reissue of patent **[9].** The reissue applications are **[10]**.

_____

[11], Supervisory Patent Examiner
Art Unit **[12]**

Examiner Note:

1 In bracket 9, insert the patent number of the patent for which multiple reissue divisional applications have been filed.

2 This is an internal memo and must <u>not</u> be mailed to the applicant. This memo should accompany the patented file to the Certificates of Correction Branch as noted in form paragraphs 10.13 and 10.14.

3. In brackets 5 and 11, insert the name of SPE and provide the signature of the SPE above each line.

4. In brackets 6 and 12, insert the Art Unit number.

5. Two separate pages of USPTO letterhead will be printed when using this form paragraph.

6. In bracket 10, identify each of the reissue applications (including the present application) and their relationship within the family of reissue applications, and to the original patent.

In addition to the amendment to the first sentence of the specification, the reissue application cross references will also be reflected in the file. For an IFW reissue application file, a copy of the bibliographic data sheet from the IFW file history should be printed and the examiner should annotate the printed sheet such that adequate notice is provided that more than one reissue application has been filed for a single

original patent. The annotated sheet should be scanned into IFW. **

Pursuant to 37 CFR 1.177(b) all of the claims of the patent to be reissued must be presented in each reissue application in some form, i.e., as amended, as unamended or as canceled. Further, any added claims must be numbered beginning with the next highest number following the last patent claim. It is noted that the same claim of the patent cannot be presented for examination in more than one of the divisional reissue applications, as a pending claim, in either its original or amended versions. >If a patent claim is presented in one of the divisional reissue applications of a reissue application "family," as a pending claim, then that patent claim must be presented as a canceled claim in all the other reissue applications of that family.< Once a claim in the patent has been reissued, it does not exist in the original patent; thus, it cannot be reissued from the original patent in another reissue application. If the same claim of the patent, e.g., patent claim 1 is presented for examination in more than one of the reissue applications, in different amended versions, the following rejections should be made in the reissue applications with that patent claim:

A rejection under 35 U.S.C. 251, in that the reissue application is not correcting an error in the original patent, because original claim 1 would be superseded by the reissuance of claim 1 in the other reissue application.

A rejection under 35 U.S.C. 112, in that claim 1 is indefinite because the invention of claim 1 is not particularly pointed out and distinctly claimed. Claim 1 presents one coverage in divisional reissue application X and another in the present reissue application. This is inconsistent.

The reissue applicant should then be advised to follow a procedure similar to the following example:

If there are patent claims 1 – 10 in two divisional reissue applications and an applicant wishes to revise claim 1, which is directed to AB (for example) to ABC in one divisional reissue application, and to ABD in a second divisional reissue application, applicant should do the following: Claim 1 in the first divisional reissue application can be revised to recite ABC. Claim 1 in the second divisional reissue application would be canceled, and new claim 11 would be added to recite ABD. The physical cancellation of claim 1 in the second divisional reissue application will not prejudice applicant's rights in the amended version of claim 1 *>because< those rights are retained via the first reissue application. Claim 1 continues to exist in the first reissue application, and both the first and second reissue applications taken together make up the totality of the correction of the original patent.

If the same or similar claims are presented in more than one of the multiple reissue applications, the possibility of statutory double patenting (35 U.S.C. 101) or non-statutory (judicially created doctrine) double patenting should be considered by the examiner during examination, and the appropriate rejections made. A terminal disclaimer may be filed to overcome an obviousness type double patenting rejection. The terminal disclaimer is necessary in order to ensure common ownership of the reissue patents throughout the remainder of the unexpired term of the original patent. Whenever a divisional reissue application is filed with a copy of the oath/declaration and assignee consent from the parent reissue application, the copy of the assignee consent from the parent reissue application should not be accepted. *The copy of the consent from the parent reissue application does not indicate that the assignee has consented to the addition of the new invention of the divisional reissue application to the original patent.* The Office of * Patent **>Application Processing (OPAP)< should accord a filing date and send out a notice of missing parts stating that there is no proper consent and setting a period of time for filing the missing part and for payment of any surcharge required under 37 CFR 1.53(f) and 1.16(f). See MPEP § 1410.01. The copy of the reissue oath/declaration should be accepted by *>OPAP<, *>because< it is an oath/declaration, even though it may be improper under 35 U.S.C. 251. The examiner should check the copy of the oath/declaration to ensure that it identifies an error being corrected by the divisional reissue application. The copy of the oath/declaration from the parent reissue application may or may not cover the error being corrected by the divisional reissue application *>because< the divisional reissue application is (by definition) directed to a new invention. If it does not, the examiner should reject the claims of the divisional reissue application under 35 U.S.C. 251 as being based on an oath/declaration that does not identify an error being corrected by the divisional reissue application, and require a new

oath/declaration. See MPEP § 1414. If the copy of the reissue oath/declaration from the parent reissue application does in fact cover an error being corrected in the divisional reissue application, no such rejection should be made. However, *>because< a new invention is being added by the filing of the divisional reissue application, a supplemental reissue oath/declaration pursuant to 37 CFR 1.175 (b)(1) will be required. See MPEP § 1414.01. >If, however, a divisional reissue application is being filed in response to a restriction requirement made in the parent reissue application, the assignee need not file a consent to the divided-out invention now being provided in the divisional reissue application, because consent has already been provided in the parent reissue application.<

Situations yielding divisional reissues occur infrequently and usually involve only two such files. It should be noted, however, that in rare instances in the past, there have been more than two (and as many as five) divisional reissues of a patent. For treatment of a plurality of divisional reissue applications resulting from a requirement to restrict to distinct inventions or a requirement to elect species, see MPEP § 1450.

II. CONTINUATION REISSUE APPLICATIONS

A continuation >reissue application< of a >parent< reissue >application< is not ordinarily filed "for distinct and separate parts of the thing patented" as called for in the second paragraph of 35 U.S.C. 251. The decision of *In re Graff*, 111 F.3d 874, 42 USPQ2d 1471 (Fed. Cir. 1997) interprets 35 U.S.C. 251 to permit multiple reissue patents to issue even where the multiple reissue patents are not for "distinct and separate parts of the thing patented." The court stated:

> Section 251[2] is plainly intended as enabling, not as limiting. Section 251[2] has the effect of assuring that a different burden is not placed on divisional or continuation reissue applications, compared with divisions and continuations of original applications, by codifying the Supreme Court decision which recognized that more than one patent can result from a reissue proceeding. Thus § 251[2] places no greater burden on Mr. Graff's continuation reissue application than upon a continuation of an original application; § 251[2] neither overrides, enlarges, nor limits the statement in § 251[3] that the provisions of Title 5 apply to reissues.

111 F.3d at 877, 42 USPQ2d at 1473. Accordingly, prosecution of a continuation >reissue application< of a >parent< reissue application will be permitted (despite the existence of the pending parent reissue application) where the continuation >reissue application< complies with the rules for reissue.

The parent and the continuation reissue applications should be examined together if possible. In order that the parent-continuation relationship of the reissue applications be specifically identified and notice be provided of both reissue applications for *both the parent and the continuation reissue applications*, the following is done:

(A) An appropriate amendment to the continuing data entries must be made to the first sentence of the specification, (see the discussion above under the heading "Divisional Reissue Applications").

(B) For an IFW reissue application file, a copy of the bibliographic data sheet from the IFW file history should be printed and the examiner should annotate the printed sheet such that adequate notice is provided that more than one reissue application has been filed for a single original patent. The annotated sheet should be scanned into IFW. **

As is true for the case of multiple divisional reissue applications, all of the claims of the patent to be reissued must be presented in both the parent reissue application and the continuation reissue application in some form, i.e., as amended, as unamended, or as canceled. The same claim of the patent cannot, however be presented for examination in both the parent reissue application and the continuation reissue application, as a pending claim, in either its original or amended versions. See the discussion in subsection I. above for treatment of this situation. Further, any added claims must be numbered beginning with the next highest number following the past patent claims.

Where the parent reissue application issues **>before< the examination of the continuation >reissue application<, the claims of the continuation >reissue application< should be carefully reviewed for double patenting over the claims of the parent >reissue application<. Where the parent and the continuation reissue applications are examined together, a provisional double patenting rejection should be made in both cases as to any overlapping claims. See MPEP § 804 - § 804.04 as to double patenting rejections.

Any terminal disclaimer filed to obviate an obviousness-type double patenting rejection ensures common ownership of the reissue patents throughout the remainder of the unexpired term of the original patent.

If the parent reissue application issues without any cross reference to the continuation >reissue application<, amendment of the parent reissue patent to include a cross-reference to the continuation >reissue application< must be effected at the time of allowance of the continuation >reissue< application by Certificate of Correction. See the discussion above under the heading "Divisional Reissue Applications" as to how the Certificate of Correction is to be provided.

Again, the examiner should make reference in the pending *>continuation< reissue application to the fact that an actual request for a Certificate of Correction has been generated in the first reissue patent pursuant to 37 CFR 1.177(a), e.g., by an entry in the search notes or in an examiner's amendment.

Where a continuation reissue application is filed with a copy of the oath/declaration and assignee consent from the parent reissue application, and the parent reissue application is not to be abandoned, the copy of the consent of the parent reissue application should not be accepted. *The copy of the consent of the parent reissue application does not indicate that the assignee has consented to the addition of the new error correction of the continuation reissue application to the original patent. Presumably, a new correction has been added, *>because< the parent reissue application is still pending.* *>OPAP< should accord a filing date and send out a notice of missing parts stating that there is no proper consent and setting a period of time for filing the missing part and for payment of any surcharge required under 37 CFR 1.53(f) and 1.16(f). See MPEP § 1410.01. The copy of the reissue oath/declaration should be accepted by *>OPAP<, *>because< it is a oath/declaration, albeit improper under 35 U.S.C. 251. The examiner should reject the claims of the continuation reissue application under 35 U.S.C. 251 as being based on an oath/declaration that does not identify an error being corrected by the continuation reissue application, and should require a new oath/declaration. See 37 CFR 1.175(e). One of form paragraphs 14.01.01 through 14.01.03 may be used. See MPEP § 1414.

Where a continuation reissue application is filed with a copy of the oath/declaration and assignee consent from the parent reissue application, and the parent reissue application is, or will be abandoned, the copy of the consent should be accepted by both *>OPAP< and the examiner. The reissue oath/declaration should be accepted by *>OPAP<, and the examiner should check to ensure that the oath/declaration identifies an error that is being corrected in the continuation reissue application. See MPEP § 1414. If a preliminary amendment was filed with the continuation reissue application, the examiner should check for the need of a supplemental reissue oath/declaration. Pursuant to 37 CFR 1.175(b)(1), for any error corrected via the preliminary amendment which is not covered by the oath or declaration submitted in the parent reissue application, applicant must submit a supplemental oath/declaration stating that every such error arose without any deceptive intention on the part of the applicant. See MPEP § 1414 and § 1414.01.

1452 Request for Continued Examination of Reissue Application [R-7]

A request for continued examination (RCE) under 37 CFR 1.114 is available for a reissue application. Effective May 29, 2000, an applicant in a reissue application may file a request for continued examination of the reissue application, if the reissue application was filed on or after June 8, 1995. This applies even where the application, which resulted in the original patent, was filed **>before< June 8, 1995.

An RCE continues the prosecution of the existing reissue application and is not a filing of a new reissue application. Thus, the filing of an RCE will not be announced in the *Official Gazette*. Additionally, if a reissue application is merged with a reexamination proceeding (see MPEP § 1449.01), the filing of an RCE will not dissolve the merger, *>because< the reissue application does not become abandoned. >The Office, however, may choose to dissolve the merger based on the individual facts and circumstances of the case, e.g., to promote the statutorily mandated requirement for special dispatch in reexamination.<

1453 Amendments to Reissue Applications [R-7]

37 CFR 1.121. Manner of making amendments in application.

*****

(i) *Amendments in reissue applications.* Any amendment to the description and claims in reissue applications must be made in accordance with § 1.173.

*****

37 CFR 1.173. Reissue specification, drawings, and amendments.

*****

(b) *Making amendments in a reissue application*. An amendment in a reissue application is made either by physically incorporating the changes into the specification when the application is filed, or by a separate amendment paper. If amendment is made by incorporation, markings pursuant to paragraph (d) of this section must be used. If amendment is made by an amendment paper, the paper must direct that specified changes be made, as follows:

(1) Specification other than the claims. Changes to the specification, other than to the claims, must be made by submission of the entire text of an added or rewritten paragraph, including markings pursuant to paragraph (d) of this section, except that an entire paragraph may be deleted by a statement deleting the paragraph without presentation of the text of the paragraph. The precise point in the specification must be identified where any added or rewritten paragraph is located. This paragraph applies whether the amendment is submitted on paper or compact disc (see §§ 1.52(e)(1) and 1.821(c), but not for discs submitted under § 1.821(e)).

(2) *Claims*. An amendment paper must include the entire text of each claim being changed by such amendment paper and of each claim being added by such amendment paper. For any claim changed by the amendment paper, a parenthetical expression "amended," "twice amended," *etc.*, should follow the claim number. Each changed patent claim and each added claim must include markings pursuant to paragraph (d) of this section, except that a patent claim or added claim should be canceled by a statement canceling the claim without presentation of the text of the claim.

(3) *Drawings.* One or more patent drawings shall be amended in the following manner: Any changes to a patent drawing must be submitted as a replacement sheet of drawings which shall be an attachment to the amendment document. Any replacement sheet of drawings must be in compliance with § 1.84 and shall include all of the figures appearing on the original version of the sheet, even if only one figure is amended. Amended figures must be identified as "Amended," and any added figure must be identified as "New." In the event that a figure is canceled, the figure must be surrounded by brackets and identified as "Canceled." All changes to the drawing(s) shall be explained, in detail, beginning on a separate sheet accompanying the papers including the amendment to the drawings.

(i) A marked-up copy of any amended drawing figure, including annotations indicating the changes made, may be included. The marked-up copy must be clearly labeled as "Annotated Marked-up Drawings" and must be presented in the amendment or remarks section that explains the change to the drawings.

(ii) A marked-up copy of any amended drawing figure, including annotations indicating the changes made, must be provided when required by the examiner.

(c) *Status of claims and support for claim changes*. Whenever there is an amendment to the claims pursuant to paragraph (b) of this section, there must also be supplied, on pages separate from the pages containing the changes, the status (*i.e.*, pending or canceled), as of the date of the amendment, of all patent claims and of all added claims, and an explanation of the support in the disclosure of the patent for the changes made to the claims.

(d) *Changes shown by markings*. Any changes relative to the patent being reissued which are made to the specification, including the claims, upon filing, or by an amendment paper in the reissue application, must include the following markings:

(1) The matter to be omitted by reissue must be enclosed in brackets; and

(2) The matter to be added by reissue must be underlined, except for amendments submitted on compact discs (§§ 1.96 and 1.821(c)). Matter added by reissue on compact discs must be preceded with "<U>" and end with "</U>" to properly identify the material being added.

(e) *Numbering of patent claims preserved.* Patent claims may not be renumbered. The numbering of any claim added in the reissue application must follow the number of the highest numbered patent claim.

(f) *Amendment of disclosure may be required*. The disclosure must be amended, when required by the Office, to correct inaccuracies of description and definition, and to secure substantial correspondence between the claims, the remainder of the specification, and the drawings.

(g) *Amendments made relative to the patent.* All amendments must be made relative to the patent specification, including the claims, and drawings, which are in effect as of the date of filing of the reissue application.

The provisions of 37 CFR 1.173(b)-(g) and those of 37 CFR 1.121(i) apply to amendments in reissue applications. Any amendments submitted in a reissue application **must** comply with 37 CFR 1.173(b).

Amendments submitted in a reissue application, including preliminary amendments (i.e., amendments filed as a separate paper to accompany the filing of a reissue application), must comply with the practice outlined below in this section; however, for examiner's amendments to the specification and claims, 37 CFR 1.121(g) provides certain exceptions to that practice in the interest of expediting prosecution. The

exceptions set forth in 37 CFR 1.121(g) also apply in reissue applications.

Pursuant to 37 CFR 1.173(a), no amendment in a reissue application may enlarge the scope of the claims, unless "applied for within two years from the grant of the original patent." Further, the amendment may not introduce new matter. See MPEP § 1412.03 for further discussion as to the time limitation on enlarging the scope of the patent claims in a reissue application.

All amendment changes must be made relative to the patent to be reissued. Pursuant to 37 CFR 1.173(d), any such changes which are made to the specification, including the claims, must be shown by employing the following "**markings**:"

(A) The matter to be omitted by reissue must be enclosed in brackets; and

(B) The matter to be added by reissue must be underlined, except for amendments submitted on compact discs (pursuant to 37 CFR 1.96 for computer printouts or programs, and 37 CFR 1.825 for sequence listings). Matter added by reissue on compact discs must be preceded with "<U>" and end with "</U>" to properly identify the material being added.

I. THE SPECIFICATION

37 CFR 1.173(b)(1) relates to the manner of making amendments to the specification other than the claims. It is not to be used for making amendments to the claims or the drawings.

All amendments which include any deletions or additions must be made by submission of the entire text of each added or rewritten paragraph with markings (as defined above), except that an entire paragraph of specification text may be deleted by a statement deleting the paragraph without presentation of the text of the paragraph. Applicant must indicate the precise point where each amendment is made. All bracketing and underlining is made in comparison to the original patent, not in comparison to any prior amendment in the reissue application. Thus, all paragraphs which are newly *added* to the specification of the original patent must be submitted as completely underlined each time they are re-submitted in the reissue application.

II. THE CLAIMS

37 CFR 1.173(b)(2) relates to the manner of making amendments to the claims in reissue applications. It is not to be used for making amendments to the remainder of the specification or to the drawings. 37 CFR 1.173(b)(2) requires that:

(A) For each claim that is being amended *by the amendment being submitted* (the current amendment), the entire text of the claim must be presented with markings as defined above;

(B) For each new claim added to the reissue *by the amendment being submitted* (the current amendment), the entire text of the added claim must be presented completely underlined;

(C) A patent claim should be canceled by a direction to cancel that claim, there is no need to present the patent claim surrounded by brackets; and

(D) A new claim (previously added in the reissue) should be canceled by a direction to cancel that claim.

Original patent claims are never to be renumbered; see 37 CFR 1.173(e). A patent claim retains its number even if it is canceled in the reissue proceeding, and the numbering of any added claims must begin after the last original patent claim.

Pursuant to 37 CFR 1.173(c), each amendment submitted must set forth the status of all patent claims and all added claims as of the date of the submission. The status to be set forth is whether the claim is pending or canceled. The failure to submit the claim status will generally result in a notification to applicant that the amendment **>*before*< *final rejection* is not completely responsive (see 37 CFR 1.135(c)). Such an amendment *after final rejection* will not be entered.

Also pursuant to 37 CFR 1.173(c), each claim amendment must be accompanied by an explanation of the support in the disclosure of the patent for the amendment (i.e., support for all changes made in the claim(s), whether insertions or deletions). The failure to submit an explanation will generally result in a notification to applicant that the amendment **>*before*< *final rejection* is not completely responsive (see 37 CFR 1.135(c)). Such an amendment *after final rejection* will not be entered.

III. THE DRAWINGS

37 CFR 1.173(a)(2) states that amendments to the original patent drawings are not permitted, and that

any change to the drawings must be by way of 37 CFR 1.173(b)(3). See MPEP § 1413 for the manner of making amendments to the drawings in a reissue application.

Form paragraph 14.20.01 may be used to advise applicant of the proper manner of making amendments in a reissue application.

¶ *14.20.01 Amendments To Reissue-37 CFR 1.173(b)*

Applicant is notified that any subsequent amendment to the specification and/or claims must comply with 37 CFR 1.173(b). In addition, when any substantive amendment is filed in the reissue application, which amendment otherwise places the reissue application in condition for allowance, a supplemental oath/declaration will be required. See MPEP § 1414.01.

Examiner Note:

This form paragraph may be used in the first Office action to advise applicant of the proper manner of making amendments, and to notify applicant of the need to file a supplemental oath/declaration before the application can be allowed.

Form paragraph 14.21.01 may be used to notify applicant that proposed amendments **filed **>before< final rejection** in the reissue application do not comply with 37 CFR 1.173(b).

¶ *14.21.01 Improper Amendment To Reissue - 37 CFR 1.173(b)*

The amendment filed **[1]** proposes amendments to **[2]** that do not comply with 37 CFR 1.173(b), which sets forth the manner of making amendments in reissue applications. A supplemental paper correctly amending the reissue application is required.

A shortened statutory period for reply to this letter is set to expire ONE MONTH or THIRTY DAYS, whichever is longer, from the mailing date of this letter.

Examiner Note:

1. This form paragraph may be used for any 37 CFR 1.173(b) informality as to an amendment submitted in a reissue application prior to final rejection. After final rejection, applicant should be informed that the amendment will not be entered by way of an Advisory Office action.

2. In bracket 2, specify the proposed amendments that are not in compliance.

Note that if an informal amendment is submitted **after final rejection,** form paragraph 14.21.01 should not be used. Rather, an advisory Office action should be issued using Form PTO-303 indicating that the amendment was not entered because it does not comply with 37 CFR 1.173(b), which sets forth the manner of making amendments in reissue applications.

IV. ALL CHANGES ARE MADE *VIS-À-VIS* THE PATENT TO BE REISSUED

When a reissue patent is printed, all underlined matter is printed in *italics* and all brackets are printed as inserted in the application, in order to show exactly which additions and deletions have been made to the patent being reissued. Therefore, all underlining and bracketing in the reissue application should be made relative to the text of the patent, as follows. In accordance with 37 CFR 1.173(g), all amendments in the reissue application must be made relative to (i.e., *vis-à-vis*) the patent specification in effect as of the date of the filing of the reissue application. The patent specification includes the claims and drawings. If there was a prior change to the patent (made via a prior concluded reexamination certificate, reissue of the patent, certificate of correction, etc.), the first amendment of the subject reissue application must be made relative to the patent specification as changed by the prior proceeding or other mechanism for changing the patent. All amendments subsequent to the first amendment must also be made relative to the patent specification in effect as of the date of the filing of the reissue application, and **not** relative to the prior amendment.

The Subject Patent Already Has Underlining or Bracketing

If the original (or previously changed) patent includes a formula or equation already having underlining or bracketing therein as part of the formula or equation, any amendment of such formula or equation should be made by bracketing the entire formula and rewriting and totally underlining the amended formula in the re-presented paragraph of the specification or rewritten claim in which the changed formula or equation appears. Amendments of segments of a formula or equation should not be made. If the original patent includes bracketing and underlining from an earlier reexamination or reissue, double brackets and double underlining should be used in the subject reissue application to identify and distinguish the present changes being made. The subject reissue, when printed, would include double brackets (indicating deletions made in the subject reissue) and boldface type (indicating material added in the subject reissue).

V. EXAMPLES OF PROPER AMENDMENTS

A substantial number of problems arise in the Office because of improper submission of amendments in reissue applications. The following examples are provided to assist in preparation of proper amendments to reissue applications.

A. Original Patent Description or Patent Claim Amended

Example (1)

If it is desired to change the specification at column 4 line 23, to replace "is" with --are--, submit a copy of the entire paragraph of specification of the patent being amended with underlining and bracketing, and point out where the paragraph is located, e.g.,

Replace the paragraph beginning at column 4, line 23 with the following:

Scanning [is] <u>are</u> controlled by clocks which are, in turn, controlled from the display tube line synchronization. The signals resulting from scanning the scope of the character are delivered in parallel, then converted into serial mode through a shift register wherein the shift signal frequency is controlled by a clock that is, in turn, controlled from the display tube line synchronization.

Example (2)

For changes to the claims, one must submit a copy of the entire patent claim with the amendments shown by underlining and bracketing, e.g.,

Amend claim 6 as follows:

Claim 6 (Amended). The apparatus of claim [5] <u>1</u> wherein the [first] <u>second</u> piezoelectric element is parallel to the [second] <u>third</u> piezoelectric element.

If the dependency of any original patent claim is to be changed by amendment, it is proper to make that original patent claim dependent upon a later filed higher numbered claim.

B. Cancellation of Claim(s)

Example (3)

To cancel an original patent claim, in writing, direct cancellation of the patent claim, e.g.,

Cancel claim 6.

Example (4)

To cancel a new claim (previously added in the reissue), in writing, direct cancellation of the new claim, e.g.,

Cancel claim 15.

C. Presentation of New Claims

Example (5)

Each new claim (i.e., a claim not found in the patent, that is newly presented in the reissue application) should be presented with underlining throughout the claim, e.g.,

Add claim 7 as follows:

<u>Claim 7. The apparatus of claim 5 further comprising electrodes attaching to said opposite faces of the first and second piezoelectric elements.</u>

Even though original claims may have been canceled, the numbering of the original claims does not change. Accordingly, any added claims are numbered beginning with the number next higher than the number of claims in the original patent. If new claims have been added to the reissue application which are later canceled **>before< issuance of the reissue patent, the examiner will renumber any remaining new claims in numerical order to follow the number of claims in the original patent.

D. Amendment of New Claims

An amendment of a "new claim" (i.e., a claim not found in the patent, that was previously presented in the reissue application) must be done by presenting the amended "new claim" containing the amendatory material, and completely underlining the claim. The presentation cannot contain any bracketing or other indication of what was in the previous version of the claim. This is because all changes in the reissue are made *vis-à-vis* the original patent, and not in comparison to the prior amendment. Although the presentation of the amended claim does not contain any indication of what is changed from the previous version of the claim, applicant must point out what is changed in the "Remarks" portion of the amendment. Also, per 37 CFR 1.173(c), each change made in the claim must be accompanied by an explanation of the support in the disclosure of the patent for the change.

E. Amendment of Original Patent Claims More Than Once

The following illustrates proper claim amendment of original patent claims in reissue applications:

A. Patent claim.

Claim 1. A cutting means having a handle portion and a blade portion.

B. Proper first amendment format.

Claim 1 (Amended). A [cutting means] knife having a bone handle portion and a notched blade portion.

C. Proper second amendment format.

Claim 1 (Twice Amended). A [cutting means] knife having a handle portion and a serrated blade portion.

Note that the second amendment must include the changes previously presented in the first amendment, i.e., [cutting means] knife, as well as the new changes presented in the second amendment, i.e., serrated.

The word bone was presented in the first amendment and is now to be deleted in the second amendment. The word "bone" is NOT to be shown in brackets in the second amendment. Rather, the word "bone" is simply omitted from the claim, *>because< "bone" never appeared in the patent. An explanation of the deletion should appear in the remarks.

The word notched which was presented in the first amendment is replaced by the word serrated in the second amendment. The word notched is being deleted in the second amendment and did not appear in the patent; accordingly, "notched" is not shown in any form in the claim. The word serrated is being added in the second amendment, and accordingly "serrated" is added to the claim and is underlined.

In the second amendment, the deletions of "notched" and "bone" are not changes from the original patent claim text and therefore are not shown in brackets in the second amendment. In both the first and the second amendments, the entire claim is presented only with the changes from the original patent text.

VI. ADDITIONAL EXAMPLES

(A) For a reissue application, where the patent was previously reissued:

As per MPEP § 1411, double underlining and double bracketing are used in the second reissue application to show amendments made relative to the first reissued patent

(B) For a reissue application, where the patent was previously reexamined and a reexamination certificate has issued for the patent:

An amendment in the reissue application must be presented as if the changes made to the original patent text via the reexamination certificate are a part of the original patent. Thus, all italicized text of the reexamination certificate is presented in the amendment (made in the reissue application) without italics. Further, any text found in brackets in the reexamination certificate is omitted in the amendment (made in the reissue application).

(C) For a reissue application, where a certificate of correction has issued for the patent:

An amendment in the reissue application must be presented as if the changes made to the original patent text via the certificate of correction are a part of the original patent. Thus, all text added by certificate of correction is presented in the amendment (made in the reissue application) without italics. Further, any text deleted by certificate of correction is entirely omitted in the amendment (made in the reissue application).

(D) For a reissue application, where a statutory disclaimer has issued for the patent:

Any claim statutorily disclaimed is no longer in the patent, and such a claim cannot be amended. The statutorily disclaimed claim(s) should be lined through, and not surrounded by brackets.

1454 Appeal Brief [R-3]

The requirements for an appeal brief are set forth in 37 CFR *>41.37< and MPEP § 1206, and they apply to a reissue application in the same manner that they apply to a non-reissue application. There is, however, a difference in practice as to presentation of the copy of the claims in the appeal brief for a reissue application. The claims on appeal presented in an appeal brief for a reissue application should include all underlining and bracketing necessary to reflect the changes made to the patent claims during the prosecution of the reissue application. In addition, any new claims added in the reissue application should be completely underlined.

1455 Allowance and Issue [R-7]

I. ISSUE CLASSIFICATION SHEET

For IFW reissue applications:

The examiner completes the Issue Classification sheet in the same manner as for a non-reissue application. In addition, a copy of the "Final SPRE Review" form must also be completed.

**

II. CHANGES TO THE ORIGINAL PATENT

The specifications of reissue patents will be printed in such a manner as to show the changes over the original patent text by enclosing any material omitted by the reissue in heavy brackets [ ] and printing material added by the reissue in *italics*. 37 CFR 1.173 (see MPEP § 1411) requires the specification of a reissue application to be presented in a specified form, specifically designed to facilitate this different manner of printing, as well as for other reasons.

The printed reissue patent specification will carry the following heading, which will be added by the Publishing Division of the Office of Patent Publication:

> "Matter enclosed in heavy brackets [ ] appears in the original patent but forms no part of this reissue specification; matter printed in italics indicates the additions made by reissue."

The examiners should see that the specification is in proper form for printing. Examiners should carefully check the entry of all amendments to ensure that the changes directed by applicant will be accurately printed in any reissue patent that may ultimately issue. Matter appearing in the original patent which is omitted by reissue should be enclosed in brackets, while matter added by reissue should be underlined.

Any material added by amendment in the reissue application (as underlined text) which is later canceled should be crossed through, *and not bracketed*. Material *>canceled< from the original patent should be enclosed in brackets, *and not lined through.*

All the claims of the original patent should appear in the reissue patent, with canceled patent claims being enclosed in brackets.

III. CLAIM NUMBERING

No renumbering of the original patent claims is permitted, even if the dependency of a dependent patent claim is changed by reissue so that it is to be dependent on a subsequent higher numbered claim.

When a dependent claim in a reissue application depends upon a claim which has been canceled, and the dependent claim is not thereafter made dependent upon a pending claim, such a dependent claim must be rewritten in independent form.

New claims added during the prosecution of the reissue application should follow the number of the highest numbered patent claim and should be completely underlined to indicate they are to be printed in italics on the printed patent. Often, as a result of the prosecution and examination, some new claims are canceled while other new claims remain. When the reissue application is allowed, any claims remaining which are additional to the patent claims (i.e., claims added via the reissue application) should be renumbered in sequence starting with the number next higher than the number of the last claim in the original patent (the printed patent). Therefore, the number of claims allowed will not necessarily correspond to the number of the last claim in the reissue application, as allowed. The number of claims appearing in the "Total Claims Allowed" box on the Issue Classification sheet ** at the time of allowance should be consistent with the number of claims indicated as allowable on the Notice of Allowability (Form PTOL-37).

IV. CLAIM DESIGNATED FOR PRINTING

At least one claim of an allowable reissue application must be designated for printing in the *Official Gazette*. Whenever at least one claim has been amended or added in the reissue, the claim (claims) designated for printing must be (or include) a claim which has been changed or added by the reissue. A canceled claim is not to be designated as the claim for the *Official Gazette.*

If there is no change in the claims of the allowable reissue application (i.e., when they are the same as the claims of the original patent) or, if the only change in the claims is the cancellation of claims, then the most representative pending *allowed* claim is designated for printing in the *Official Gazette.*

V. PROVIDING PROPER FORMAT

Where a reissue application has not been prepared in the above-indicated manner, the examiner may obtain from the applicant a clean copy of the reissue specification prepared in the indicated form, or a proper submission of a previously improperly submitted amendment. However, if the deletions from the original patent are small, the reissue application can be prepared for issue by putting the bracketed inserts at the appropriate places and suitably numbering the added claims.

When applicant submits a clean copy of the reissue specification, or a proper submission of a previous improper amendment, a supplemental reissue declaration should **not** be provided to address this submission, because the correction of format does not correct a 35 U.S.C. 251 error in the patent.

VI. PARENT APPLICATION DATA

All parent application data on the bibliographic data sheet of the original patent file (or front face of the original patent file wrapper if the original patent is a paper file) should be present on the bibliographic data sheet of the reissue application.

It sometimes happens that the reissue is a continuation >reissue application< of another reissue application, and there is also original-patent parent application data. The examiner should ensure that the parent application data on the original patent is properly combined with the parent application data of the reissue, in the text of the specification and on the bibliographic data sheet**. The combined statement as to parent application data should be checked carefully for proper bracketing and underlining.

VII. REFERENCES CITED AND PRINTED

The list of references to be printed in the reissue patent includes all the references cited during the prosecution of the reissue application. It is noted that the Office will not print in the reissue patent "References Cited" section any reference cited in the patent but not again cited in the reissue application. A patent cannot be reissued solely for the purpose of adding citations of additional prior art.

VIII. EXAMINER'S AMENDMENT AND SUPPLEMENTAL DECLARATION

When it is necessary to amend the reissue application in order to place the application in condition for allowance, the examiner may:

(A) request that applicant provide the amendments (e.g., by facsimile transmission or by hand-carry); or

(B) make the amendments, with the applicant's approval, by a formal examiner's amendment.

If the changes are made by a formal examiner's amendment, the *entire* paragraph(s) or claim(s) being amended need not be presented in rewritten form for any deletions or additions. Changes to the specification including the claims of an application made by the Office in an examiner's amendment may be made by specific instructions to insert or delete subject matter set forth in the examiner's amendment by identifying the precise point in the specification or the claim(s) where the insertion or deletion is to be made. 37 CFR 1.121(g).

If it is necessary to amend a claim or the specification in order to correct an "error" under 35 U.S.C. 251 and thereby place the application in condition for allowance, then a supplemental oath or declaration will be required. See MPEP § 1444. The examiner should telephone applicant and request the supplemental oath or declaration, which must be filed before the application can be counted as an allowance.

IX. FINAL REVIEW OF THE REISSUE APPLICATION BY THE EXAMINER

**>Before< forwarding a reissue application to the Technology Center (TC) Special Program Examiner (SPRE) >or appropriate Quality Assurance Specialist (QAS)< for final review, the examiner should complete and initial an Examiner Reissue Checklist. A copy of the checklist should be available from the *>SPRE/QAS< or from the Paralegal Specialist of the TC.

1456 Reissue Review [R-7]

All reissue applications are monitored and reviewed in the Technology Centers (TCs) by the Office of TC Special Program Examiners >or appropriate Quality Asurance Specialist (QAS)< (which

includes TC >SPREs/QASs<, paralegals or other technical support who might be assigned as backup) at several stages during the prosecution. The review by the Office of the TC *>SPREs/QASs< is made to check that practice and procedure unique to reissue has been carried out for the reissue application. In addition **, a patentability review is made in a sample of reissue applications by the TC **>QAS< in the manner previously carried out by the former Office of Patent Quality Review. In order to ensure that *>SPREs/QASs< are aware of the reissue applications in their TCs, a pair of terminal-specific PALM flags have been created which must be set by the *>SPRE/QAS< before certain PALM transactions can be completed. First, when a new reissue application enters the TC, a *>SPRE/QAS< must set a PALM "flag" by entering the reissue application number in an Office-wide computer grouping before a docketing transaction will be accepted. By having to set this first flag, the *>SPRE/QAS< is made aware of the assignment of the reissue application to the TC and can take steps, as may be appropriate, to instruct the examiner on reissue-specific procedures before the examination process begins, as well as throughout the **>examination of< the reissue application. Second, the *>SPRE/QAS< must remove the above-described PALM "flag" before a Notice of Allowance can be generated or the PALM transaction for an issue revision can be entered, thereby ensuring that the *>SPRE/QAS< is made aware of when the reissue application is being allowed so that the SPRE may be able to conduct a final review of the reissue application, if appropriate.

When the reissue application has been reviewed and is ready to be released to issue, the TC *>SPRE/QAS< should do the following:

For IFW reissue applications:

The *>SPRE/QAS< should complete the "Final SPRE Review" form. The *>SPRE/QAS< will discard any informal papers that were forwarded to the *>SPRE/QAS<, such as the informal Reissue Check List that was filled out by the examiner. The *>SPRE/QAS< will then forward (message) the reissue file to the Office of Patent Legal Administration (OPLA). The file for any original paper patent should be forwarded to OPLA.

**

After leaving the TC, all reissue applications go through a screening process which is currently performed in OPLA. The screening process which includes review of the reissue oath or declaration for compliance with 37 CFR 1.175, review of the presentation and entry of reissue amendments for compliance with 37 CFR 1.173(b), and review of other matters to ensure adherence to current reissue practices. The above-identified review processes are appropriate vehicles for correcting errors, identifying problem areas*>,< recognizing trends, providing information on the uniformity of practice, and providing feedback to the TC personnel responsible for processing and examining reissue applications.

1457 Design Reissue Applications and Patents [R-7]

A reissue application can be filed for a design patent in the same manner that a reissue application is filed for a utility patent. There are, however, a few aspects of a design reissue application that are addressed as follows:

I. EXPEDITED EXAMINATION PROCEDURE

Design reissue applications requesting expedited examination and complying with the requirements of 37 CFR 1.155 are examined with priority and undergo expedited processing throughout the entire course of prosecution in the Office, including appeal, if any, to the Board of Patent Appeals and Interferences. All processing is expedited from the date the request is granted.

Design reissue applicants seeking expedited examination may file a design reissue application in the Office together with a corresponding request under 37 CFR 1.155 pursuant to the guidelines set forth in MPEP § 1504.30.

The design reissue application and the request are processed by the Office of * Patent **>Application Processing (OPAP). OPAP< enters the appropriate information into PALM specifying when notice of the design reissue application will be published in the *Official Gazette* (see MPEP § 1441). After processing in *>OPAP<, the design reissue application and the request are forwarded to the Design TC Director's Office. Upon a decision by the Design TC Director to grant the request for expedited examination, fees are

immediately processed, and the application papers are promptly assigned an application number. The design reissue application file is then forwarded to the Office of Patent Legal Administration (OPLA) for a decision under 37 CFR 1.182 to *sua sponte* waive the requirement for delaying action in the application until 2 months after announcement of the design reissue application filing is published in the *Official Gazette* (see MPEP § 1441). Once the decision under 37 CFR 1.182 is mailed, the design reissue application file will be returned to the Design TC Director's Office. In accordance with the waiver, the Design Group will begin expedited examination of the application under 37 CFR 1.155 promptly after the return of the design reissue application file from OPLA, rather than delay examination until after 2 months from the date the announcement is published in the *Official Gazette* and the applicant will be notified that examination is being expedited. The decision under 37 CFR 1.182 will require that no Notice of Allowance be mailed in the design reissue application until after 2 months from the date the announcement is published in the *Official Gazette*. For example, if the design reissue application is allowed on the first Office action, then jurisdiction over the reissue application will be retained in the TC, and the Notice of Allowance will not be mailed until the expiration of 2 months after publication of the filing of the design reissue application in the *Official Gazette* (plus time for matching any protest filed with the application). (For IFW processing, see IFW Manual.) The examiner will check the PALM contents to ascertain when publication actually occurred. The delay in the mailing of the Notice of Allowance is to ensure that any potential protests complying with 37 CFR 1.291 submitted within the 2-month delay period will be considered by the Office. (see MPEP § 1441.01).

The expedited examination procedure under 37 CFR 1.155 occurs through initial examination processing and throughout the entire prosecution in the Office. Once a request for expedited examination is granted, prosecution of the design reissue application will proceed according to the procedure under 37 CFR 1.155, and there is no provision for "withdrawal" from expedited examination procedure.

II. DESIGN REISSUE FEE

The design reissue application fee is set forth for in 37 CFR 1.16(e). For design reissue applications filed on or after December 8, 2004, a search fee (37 CFR 1.16(n)) and an examination fee (37 CFR 1.16(r)) are also required. The additional fees in 37 CFR 1.16(h) and 37 CFR 1.16(i) do not apply for a design reissue application *>because< more than one claim in not permitted in a design application pursuant to the last sentence of 37 CFR 1.153(a).

The fee for issuing a design reissue patent is set forth in 37 CFR 1.18(a).

III. MULTIPLE DESIGN REISSUE APPLICATIONS

The design reissue application can be filed based on the "error" of failing to include a design for a patentably distinct segregable part of the design claimed in the original patent or a patentably distinct subcombination of the claimed design. A reissue design application claiming both the entire article and the patentably distinct subcombination or segregable part would be proper under 35 U.S.C. 251, if such a reissue application is filed within two years of the issuance of the design patent, *>because< it is considered a broadening of the scope of the patent claim. Restriction will be required under 37 CFR 1.176(b) in such a reissue design application, and the added design to the segregable part or subcombination will be held to be constructively non-elected and withdrawn from consideration. See MPEP § 1450. In the Office action containing the restriction requirement, the examiner should suggest to the applicant that a divisional design reissue application directed to the constructively non-elected segregable part or subcombination subject matter may be filed. The claim to the patented design for the entire article will then be examined and, if found allowable without change from the patent, a rejection will be made under 35 U.S.C. 251 based on the fact that there is no "error" in the non-amended original patent claim. In the Office action making this rejection, applicant should be advised that a proper response to the rejection must include (A) a request to suspend action in this original reissue application pending completion of examination of a divisional reissue application directed to the constructively non-elected segregable part or subcombination subject matter, (B) the filing of the divisional

reissue application, or a statement that one has already been filed (identifying it at least by application number), and (C) an argument that a complete response to the rejection has been made based upon the filing of the divisional reissue application and the request for suspension. Action in the original design reissue application will then be suspended, and the divisional will be examined.

If, after examination, the divisional design reissue application is also determined to be allowable, a requirement must be made in the divisional design reissue application to submit a petition under 37 CFR 1.183 requesting waiver of 37 CFR 1.153 in order to permit the rejoining of the designs to the entire article (of the original application) and the segregable part or subcombination (of the divisional) under a single claim into a single design reissue application for issuance, the single application being the first design reissue application.

It should be noted that the filing of a design reissue application would not be proper if applicant did in fact include the design for a segregable part or subcombination thereof in the original design patent application, a restriction was thus made, and then applicant failed to file a divisional reissue application for a non-elected invention that was canceled in view of a restriction requirement (**>before< issue of the original application. See *In re Watkinson*, 900 F.2d 230, 14 USPQ2d 1407 (Fed. Cir. 1990); *In re Orita*, 550 F.2d 1277, 1280, 193 USPQ 145, 148 (CCPA 1977).

IV. CONVERSION TO UTILITY PATENT

A design patent cannot be converted to a utility patent via reissue.

Converting a design patent to a utility patent will, in most instances, involve the introduction of new matter into the patent. The disclosure of a design patent is not directed to how the invention is made and used, and the introduction of new matter is required to bridge this gap and provide support for the utility patent. Accordingly, the examiner should consider rejections based on the introduction of new matter under 35 U.S.C. 251, first paragraph, and lack of enablement and/or description under 35 U.S.C. 112, first paragraph, when a reissue application is filed to convert a design patent to a utility patent.

Further, the term of a design patent may not be extended by reissue. *Ex parte Lawrence*, 70 USPQ 326 (Comm'r Pat. 1946). Thus, any reissue application filed to convert a design patent to a utility patent, which conversion would thereby extend the term of the patent, should be rejected as failing to comply with 35 U.S.C. 251, first paragraph, which permits reissue only "for the unexpired part of the term of the original patent." The statute requires that the reissued patent shall not extend the term of the original patent.

1460 Effect of Reissue [R-2]

35 U.S.C. 252. Effect of reissue.

The surrender of the original patent shall take effect upon the issue of the reissued patent, and every reissued patent shall have the same effect and operation in law, on the trial of actions for causes thereafter arising, as if the same had been originally granted in such amended form, but in so far as the claims of the original and reissued patents are substantially identical, such surrender shall not affect any action then pending nor abate any cause of action then existing, and the reissued patent, to the extent that its claims are substantially identical with the original patent, shall constitute a continuation thereof and have effect continuously from the date of the original patent.

A reissued patent shall not abridge or affect the right of any person or that person's successors in business who, prior to the grant of a reissue, made, purchased, offered to sell, or used within the United States, or imported into the United States, anything patented by the reissued patent, to continue the use of, to offer to sell, or to sell to others to be used, offered for sale, or sold, the specific thing so made, purchased, offered for sale, used, or imported unless the making, using, offering for sale, or selling of such thing infringes a valid claim of the reissued patent which was in the original patent. The court before which such matter is in question may provide for the continued manufacture, use, offer for sale, or sale of the thing made, purchased, offered for sale, used, or imported as specified, or for the manufacture, use, offer for sale, or sale in the United States of which substantial preparation was made before the grant of the reissue, and the court may also provide for the continued practice of any process patented by the reissue that is practiced, or for the practice of which substantial preparation was made, before the grant of the reissue, to the extent and under such terms as the court deems equitable for the protection of investments made or business commenced before the grant of the reissue.

The effect of the reissue of a patent is stated in 35 U.S.C. 252. With respect to the Office treatment of the reissued patent, the reissued patent will be viewed as if the original patent had been originally granted in the amended form provided by the reissue. >With respect to intervening rights resulting from the reissue of an original patent, the second paragraph of 35 U.S.C. 252 provides for two separate and distinct

defenses to patent infringement under the doctrine of intervening rights:

"Absolute" intervening rights are available for a party that "prior to the grant of a reissue, made, purchased, offered to sell, or used within the United States, or imported into the United States, anything patented by the reissued patent," and "equitable" intervening rights may be provided where "substantial preparation was made before the grant of the reissue." See *BIC Leisure Prods., Inc., v. Windsurfing Int'l, Inc.*, 1 F.3d 1214, 1220, 27 USPQ2d 1671, 1676 (Fed. Cir. 1993).<

1470 Public Access of Reissue Applications [R-7]

37 CFR 1.11(b) opens all reissue applications filed after March 1, 1977, to inspection by the general public. 37 CFR 1.11(b) also provides for announcement of the filings of reissue applications in the *Official Gazette* (except for continued prosecution applications filed under 37 CFR 1.53(d)). This announcement will give interested members of the public an opportunity to submit to the examiner information pertinent to patentability of the reissue application.

The filing of a continued prosecution application under 37 CFR 1.53(d) of a reissue application will not be announced in the *Official Gazette*. Although the filing of a continued prosecution application of a reissue application constitutes the filing of a reissue application, the announcement of the filing of such continued prosecution application would be redundant in view of the announcement of the filing of the prior reissue application in the *Official Gazette*.

37 CFR 1.11(b) is applicable to all reissue applications filed on or after March 1, 1977. Those reissue applications previously on file will not be automatically open to inspection but a liberal policy will be followed in granting petitions for access to such applications.

IFW reissue application files are open to inspection by the general public by way of Public PAIR via the USPTO Internet site. In viewing the images of the files, members of the public will be able to view the entire content of the reissue application file history. To access Public PAIR, a member of the public would (A) go to the USPTO web site at http://www.uspto.gov, (B) click on **">eBusiness,"< (C) **>click on "Status & View Documents,"< and (D) ** enter the reissue application number.

**

1480 Certificates of Correction — Office Mistake [R-3]

35 U.S.C. 254. Certificate of correction of Patent and Trademark Office mistake.

Whenever a mistake in a patent, incurred through the fault of the Patent and Trademark Office, is clearly disclosed by the records of the Office, the Director may issue a certificate of correction stating the fact and nature of such mistake, under seal, without charge, to be recorded in the records of patents. A printed copy thereof shall be attached to each printed copy of the patent, and such certificate shall be considered as part of the original patent. Every such patent, together with such certificate, shall have the same effect and operation in law on the trial of actions for causes thereafter arising as if the same had been originally issued in such corrected form. The Director may issue a corrected patent without charge in lieu of and with like effect as a certificate of correction.

37 CFR 1.322. Certificate of correction of Office mistake.

(a)(1) The Director may issue a certificate of correction pursuant to 35 U.S.C. 254 to correct a mistake in a patent, incurred through the fault of the Office, which mistake is clearly disclosed in the records of the Office:

(i) At the request of the patentee or the patentee's assignee;

(ii) Acting *sua sponte* for mistakes that the Office discovers; or

(iii) Acting on information about a mistake supplied by a third party.

(2)(i) There is no obligation on the Office to act on or respond to a submission of information or request to issue a certificate of correction by a third party under paragraph (a)(1)(iii) of this section.

(ii) Papers submitted by a third party under this section will not be made of record in the file that they relate to nor be retained by the Office.

(3) **>If the request relates to a patent involved in an interference, the request must comply with the requirements of this section and be accompanied by a motion under § 41.121(a)(2) or § 41.121(a)(3) of this title.<

(4) The Office will not issue a certificate of correction under this section without first notifying the patentee (including any assignee of record) at the correspondence address of record as specified in § 1.33(a) and affording the patentee or an assignee an opportunity to be heard.

(b) If the nature of the mistake on the part of the Office is such that a certificate of correction is deemed inappropriate in form, the Director may issue a corrected patent in lieu thereof as a more appropriate form for certificate of correction, without expense to the patentee.

Mistakes incurred through the fault of the Office may be the subject of Certificates of Correction under 37 CFR 1.322. The Office, however, has discretion under 35 U.S.C. 254 to decline to issue a Certificate of Correction even though an Office mistake exists. If Office mistakes are of such a nature that the meaning intended is obvious from the context, the Office may decline to issue a certificate and merely place the correspondence in the patented file, where it serves to call attention to the matter in case any question as to it subsequently arises. Such is the case, even where a correction is requested by the patentee or patentee's assignee.

In order to expedite all proper requests, a Certificate of Correction should be requested only for errors of consequence. Instead of a request for a Certificate of Correction, letters making errors of record should be utilized whenever possible. Thus, where errors are of a minor typographical nature, or are readily apparent to one skilled in the art, a letter making the error(s) of record can be submitted in lieu of a request for a Certificate of Correction. There is no fee for the submission of such a letter.

It is strongly advised that the text of the correction requested be submitted on a Certificate of Correction form, PTO/SB/44 (also referred to as PTO 1050). Submission of this form in duplicate is not necessary. The location of the error in the printed patent should be identified on form PTO/SB/44 by column and line number or claim and line number. See MPEP § 1485 for a discussion of the preparation and submission of a request for a Certificate of Correction.

A request for a Certificate of Correction should be addressed to:

ATTN: Certificate of Correction Branch
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

>

I. < THIRD PARTY INFORMATION ON MISTAKES IN PATENT

Third parties do not have standing to demand that the Office issue, or refuse to issue, a Certificate of Correction. *See Hallmark Cards, Inc. v. Lehman,* 959 F. Supp. 539, 543-44, 42 USPQ2d 1134, 1138 (D.D.C. 1997). 37 CFR 1.322(a)(2) makes it clear that third parties do not have standing to demand that the Office act on, respond to, issue, or refuse to issue a Certificate of Correction. The Office is, however, cognizant of the need for the public to have correct information about published patents and may therefore accept information about mistakes in patents from third parties. 37 CFR 1.322(a)(1)(iii). Where appropriate, the Office may issue certificates of correction based on information supplied by third parties, whether or not such information is accompanied by a specific request for issuance of a Certificate of Correction.

While third parties are permitted to submit information about mistakes in patents which information will be reviewed, the Office need not act on that information nor deny any accompanying request for issuance of a Certificate of Correction. Accordingly, a fee for submission of the information by a third party has not been imposed. The Office may, however, choose to issue a Certificate of Correction on its own initiative based on the information supplied by a third party, if it desires to do so. Regardless of whether the third party information is acted upon, the information will not be made of record in the file that it relates to, nor be retained by the Office. 37 CFR 1.322(a)(2)(ii).

When such third party information (about mistakes in patents) is received by the Office, the Office will not correspond with third parties about the information they submitted either (1) to inform the third parties of whether it intends to issue a Certificate of Correction, or (2) to issue a denial of any request for issuance of a Certificate of Correction that may accompany the information. The Office will confirm to the party submitting such information that the Office has in fact received the information if a stamped, self-addressed post card has been submitted. See MPEP § 503.

>

II. < PUBLICATION IN THE *OFFICIAL GAZETTE*

Each issue of the *Official Gazette* (patents section) numerically lists all United States patents having Certificates of Correction. The list appears under the heading "Certificates of Correction for the week of (date)."

>

1480.01 Expedited Issuance of Certificates of Correction - Error Attributable to Office [R-2]

In an effort to reduce the overall time required in processing and granting Certificate of Correction requests, the Office will expedite processing and granting of patentee requests where such requests are accompanied by evidence to show that the error is attributable solely to the Office (i.e., requests filed pursuant to 37 CFR 1.322 only).

The following requirements must be met for consideration of expedited issuance of Certificates of Correction:

The text of the correction requested should be submitted on a Certificate of Correction form, PTO/SB/44 (also referred to as PTO 1050). Submission of this form in duplicate is not necessary. The location of the error in the printed patent should be identified on form PTO/SB/44 by column and line number or claim and line number. See also MPEP § 1485.

Where the correction requested was incurred through the fault of the Office, and the matter is clearly disclosed in the records of the Office, and is accompanied by documentation that unequivocally supports the patentee's assertion(s), a Certificate of Correction will be expeditiously issued. Such supporting documentation can consist of relevant photocopied receipts, manuscript pages, correspondence dated and received by the Office, photocopies of Examiners' responses regarding entry of amendments, or any other validation that supports the patentee's request so that the request can be processed without the patent file.

Where only part of a request can be approved, the appropriate modifications will be made on the form PTO/SB/44 and the patentee then notified by mail. Further consideration will be given to initially rejected requests upon a request for reconsideration. In this instance, however, or in the case where it is determined that the Office was not responsible for the error(s) cited by the patentee, accelerated issuance of Certificates of Correction cannot be anticipated (although the Office will make every effort to process the request expeditiously).

As in the case of a request for a Certificate of Correction, a Request for Expedited Issuance of Certificate of Correction should be addressed to:

ATTN: Certificate of Correction Branch
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450<

1481 Certificates of Correction - Applicant's Mistake [R-3]

35 U.S.C. 255. Certificate of correction of applicant's mistake.

Whenever a mistake of a clerical or typographical nature, or of minor character, which was not the fault of the Patent and Trademark Office, appears in a patent and a showing has been made that such mistake occurred in good faith, the Director may, upon payment of the required fee, issue a certificate of correction, if the correction does not involve such changes in the patent as would constitute new matter or would require reexamination. Such patent, together with the certificate, shall have the same effect and operation in law on the trial of actions for causes thereafter arising as if the same had been originally issued in such corrected form.

37 CFR 1.323. Certificate of correction of applicant's mistake.

**>The Office may issue a certificate of correction under the conditions specified in 35 U.S.C. 255 at the request of the patentee or the patentee's assignee, upon payment of the fee set forth in § 1.20(a). If the request relates to a patent involved in an interference, the request must comply with the requirements of this section and be accompanied by a motion under § 41.121(a)(2) or § 41.121(a)(3) of this title.<

37 CFR 1.323 relates to the issuance of Certificates of Correction for the correction of errors which were not the fault of the Office. Mistakes in a patent which are not correctable by Certificate of Correction may be correctable via filing a reissue application (see MPEP § 1401 - § 1460). See *Novo Industries, L.P. v. Micro Molds Corporation*, 350 F.3d 1348, 69 USPQ2d 1128 (Fed. Cir. 2003) (The Federal Circuit stated that when Congress in 1952 defined USPTO authority to make corrections with prospective effect, it did not deny correction authority to the district courts. A court, however, can correct only if "(1) the correction is not subject to reasonable debate based on consideration of the claim language and the specification and (2) the prosecution history does not suggest a different interpretation...").

In re Arnott, 19 USPQ2d 1049, 1052 (Comm'r Pat. 1991) specifies the criteria of 35 U.S.C. 255 (for a Certificate of Correction) as follows:

> Two separate statutory requirements must be met before a Certificate of Correction for an applicant's mistake may issue. The first statutory requirement concerns the nature, i.e., type, of the mistake for which a correction is sought. The mistake must be:
>
> (1) of a clerical nature,
>
> (2) of a typographical nature, or
>
> (3) a mistake of minor character.
>
> The second statutory requirement concerns the nature of the proposed correction. The correction must not involve changes which would:
>
> (1) constitute new matter or
>
> (2) require reexamination.

If the above criteria are not satisfied, then a Certificate of Correction for an applicant's mistake will not issue, and reissue must be employed as the vehicle to "correct" the patent. Usually, any mistake affecting claim scope must be corrected by reissue.

A mistake is not considered to be of the "minor" character required for the issuance of a Certificate of Correction if the requested change would materially affect the scope or meaning of the patent. See also MPEP § 1412.04 as to correction of inventorship via certificate of correction or reissue.

The fee for providing a correction of applicant's mistake, other than inventorship, is set forth in 37 CFR 1.20(a). The fee for correction of inventorship in a patent is set forth in 37 CFR 1.20(b).

**>

1481.01 Correction of Assignees' Names [R-3]

<

The **>Fee(s)< Transmittal Form portion (PTOL-85B) of the Notice of Allowance provides a space (item 3) for assignment data which should be completed in order to comply with 37 CFR 3.81. Unless an assignee's name and address are identified in the appropriate space for specifying the assignee, (i.e., item 3 of the **>Fee(s)< Transmittal Form PTOL-85B), the patent will issue to the applicant. Assignment data printed on the patent will be based solely on the information so supplied.

**>Any request for the issuance of an application in the name of the assignee submitted after the date of payment of the issue fee, and any request for a patent to be corrected to state the name of the assignee must:

(A) state that the assignment was submitted for recordation as set forth in 37 CFR 3.11 before issuance of the patent;

(B) include a request for a certificate of correction under 37 CFR 1.323 along with the fee set forth in 37 CFR 1.20(a); and

(C) include the processing fee set forth in 37 CFR 1.17(i).

See 37 CFR 3.81(b).<

1481.02 Correction of Inventors' Names [R-7]

35 U.S.C. 256. Correction of named inventor.

Whenever through error a person is named in an issued patent as the inventor, or through error an inventor is not named in an issued patent and such error arose without any deceptive intention on his part, the Director may, on application of all the parties and assignees, with proof of the facts and such other requirements as may be imposed, issue a certificate correcting such error.

The error of omitting inventors or naming persons who are not inventors shall not invalidate the patent in which such error occurred if it can be corrected as provided in this section. The court before which such matter is called in question may order correction of the patent on notice and hearing of all parties concerned and the Director shall issue a certificate accordingly.

In requesting the Office to effectuate a court order correcting inventorship in a patent pursuant to 35 U.S.C. 256, a copy of the court order and a Certificate of Correction under 37 CFR 1.323 should be submitted to the Certificates of Corrections Branch.

37 CFR 1.324. Correction of inventorship in patent, pursuant to 35 U.S.C. 256.

(a) Whenever through error a person is named in an issued patent as the inventor, or through error an inventor is not named in an issued patent and such error arose without any deceptive intention on his or her part, the Director, pursuant to 35 U.S.C. 256, may, on application of all the parties and assignees, or on order of a court before which such matter is called in question, issue a certificate naming only the actual inventor or inventors. A petition to correct inventorship of a patent involved in an interference must comply with the requirements of this section and must be accompanied by a motion under § 41.121(a)(2) or § 41.121(a)(3) of this title.

(b) Any request to correct inventorship of a patent pursuant to paragraph (a) of this section must be accompanied by:

(1) Where one or more persons are being added, a statement from each person who is being added as an inventor that the

inventorship error occurred without any deceptive intention on his or her part;

(2) A statement from the current named inventors who have not submitted a statement under paragraph (b)(1) of this section either agreeing to the change of inventorship or stating that they have no disagreement in regard to the requested change;

(3) A statement from all assignees of the parties submitting a statement under paragraphs (b)(1) and (b)(2) of this section agreeing to the change of inventorship in the patent, which statement must comply with the requirements of § 3.73(b) of this chapter; and

(4) The fee set forth in § 1.20(b).

(c) For correction of inventorship in an application, see §§ 1.48 and 1.497.

(d) In a contested case before the Board of Patent Appeals and Interferences under part 41, subpart D, of this title, a request for correction of a patent must be in the form of a motion under § 41.121(a)(2) or § 41.121(a)(3) of this title.

The petition to correct inventorship under 37 CFR 1.324 must include the statements and fee required by 37 CFR 1.324(b).

Under 37 CFR 1.324(b)(1), a statement is required from each person who is being added as an inventor that the inventorship error occurred without any deceptive intention on their part. In order to satisfy this, a statement such as the following is sufficient:

> "The inventorship error of failing to include John Smith as an inventor of the patent occurred without any deceptive intention on the part of John Smith."

Nothing more is required. The examiner will determine only whether the statement contains the required language; the examiner will not make any comment as to whether or not it appears that there was in fact deceptive intention (see MPEP § 2022.05).

Under 37 CFR 1.324(b)(2), all current inventors who did not submit a statement under 37 CFR 1.324(b)(1) must submit a statement either agreeing to the change of inventorship, or stating that they have no disagreement with regard to the requested change. "Current inventors" include the inventor(s) being retained as such and the inventor(s) to be deleted. These current inventors need not make a statement as to whether the inventorship error occurred without deceptive intention.

If an inventor is not available, or refuses, to submit a statement, the assignee of the patent may wish to consider filing a reissue application to correct inventorship, *>because< the inventor's statement is not required for a non-broadening reissue application to correct inventorship. See MPEP § 1412.04.

Under 37 CFR 1.324(b)(3), a statement is required from the assignee(s) of the patent agreeing to the change of inventorship in the patent. The assignee statement agreeing to the change of inventorship must be accompanied by a proper statement under 37 CFR 3.73(b) establishing ownership, unless a proper 37 CFR 3.73(b) statement is already in the file. See MPEP § 324 as to the requirements of a statement under 37 CFR 3.73(b).

While a request under 37 CFR 1.48 is appropriate to correct inventorship in a nonprovisional *application*, a petition under 37 CFR 1.324 is the appropriate vehicle to correct inventorship in a *patent*. If a request under 37 CFR 1.48(a), (b), or (c) is inadvertently filed in a patent, the request may be treated as a petition under 37 CFR 1.324, and if it is grantable, form paragraph 10.14 set forth below should be used.

Similarly, if a request under 37 CFR 1.48(a), (b), or (c) is filed in a pending application but not acted upon until after the application becomes a patent, the request may be treated as a petition under 37 CFR 1.324, and if it is grantable, form paragraph 10.14 set forth below should be used.

The statutory basis for correction of inventorship in a patent under 37 CFR 1.324 is 35 U.S.C. 256. It is important to recognize that 35 U.S.C. 256 is stricter than 35 U.S.C. 116, the statutory basis for corrections of inventorship in applications under 37 CFR 1.48. 35 U.S.C. 256 requires "on application of all the parties and assignees," while 35 U.S.C. 116 does not have the same requirement. Under 35 U.S.C. 116 and 37 CFR 1.48, waiver requests under 37 CFR 1.183 may be submitted (see, e.g., MPEP § 201.03, under the heading "Statement of Lack of Deceptive Intention"). This is not possible under 35 U.S.C. 256 and 37 CFR 1.324. In correction of inventorship in a nonprovisional application under 37 CFR 1.48(a), the requirement for a statement by each originally named inventor may be waived pursuant to 37 CFR 1.183; however, correction of inventorship in a patent under 37 CFR 1.324 requires petition of all the parties, i.e., originally named inventors and assignees, in accordance with statute (35 U.S.C. 256) and thus the requirement cannot be waived. Correction of inventorship requests under 37 CFR 1.324 should be directed to the Supervisory Patent Examiner whose unit handles the subject matter of the patent. Form paragraphs 10.13 through 10.18 may be used.

¶ *10.13 Petition Under 37 CFR 1.324, Granted*

In re Patent No. **[1]**	:
Issue Date: **[2]**	: **DECISION**
Appl. No.: **[3]**	: **GRANTING**
Filed: **[4]**	: **PETITION**
For: **[5]**	: 37 CFR 1.324

This is a decision on the petition filed **[6]** to correct inventorship under 37 CFR 1.324.

The petition is granted.

The patented file is being forwarded to Certificate of Corrections Branch for issuance of a certificate naming only the actual inventor or inventors.

Supervisory Patent Examiner,
Art Unit **[8]**,
Technology Center **[9]**
[10]

Examiner Note:

1. Petitions to correct inventorship of an issued patent are decided by the Supervisory Patent Examiner, as set forth in the Commissioner's memorandum dated June 2, 1989.
2. In bracket 10, insert the correspondence address of record.
3. This form paragraph is printed with the USPTO letterhead.
4. Prepare Certificate using form paragraph 10.15.

¶ *10.14 Treatment of Request Under 37 CFR 1.48 Petition Under 37 CFR 1.324, Petition Granted*

In re Patent No. **[1]**	:
Issue Date: **[2]**	: **DECISION**
Appl. No.: **[3]**	: **GRANTING**
Filed: **[4]**	: **PETITION**
For: **[5]**	: 37 CFR 1.324

This is a decision on the request under 37 CFR 1.48, filed **[6]**. In view of the fact that the patent has already issued, the request under 37 CFR 1.48 has been treated as a petition to correct inventorship under 37 CFR 1.324.

The petition is granted.

The patented file is being forwarded to Certificate of Corrections Branch for issuance of a certificate naming only the actual inventor or inventors.

4. In bracket 10, insert the correspondence address of record.

¶ *10.15 Memorandum - Certificate of Correction (Inventorship)*

DATE: **[1]**
TO: Certificates of Correction Branch
FROM: **[2]**, SPE, Art Unit **[3]**
SUBJECT: Request for Certificate of Correction

Please issue a Certificate of Correction in U. S. Letters Patent No. **[4]** as specified on the attached Certificate.

_____

[5], SPE
Art Unit **[6]**

UNITED STATES PATENT AND TRADEMARK OFFICE CERTIFICATE

Patent No. **[7]**
Patented: **[8]**

On petition requesting issuance of a certificate for correction of inventorship pursuant to 35 U.S.C. 256, it has been found that the above identified patent, through error and without deceptive intent, improperly sets forth the inventorship. Accordingly, it is hereby certified that the correct inventorship of this patent is:
[9]

_____

[10], Supervisory Patent Examiner
Art Unit **[11]**

Examiner Note:

1. In bracket 9, insert the full name and residence (City, State) of each actual inventor.
2. This is an internal memo, not to be mailed to applicant, which accompanies the patented file to Certificates of Correction Branch as noted in form paragraphs 10.13 and 10.14.
3. In brackets 5 and 10, insert name of SPE; in brackets 6 and 11 the Art Unit and sign above each line.
4. Two separate pages of USPTO letterhead will be printed when using this form paragraph.

¶ *10.16 Petition Under 37 CFR 1.324, Dismissed*

In re Patent No. **[1]**	:
Issue Date: **[2]**	: **DECISION**
Appl. No.: **[3]**	: **DISMISSING**
Filed: **[4]**	: **PETITION**
For: **[5]**	: 37 CFR 1.324

This is a decision on the petition filed **[6]** to correct inventorship under 37 CFR 1.324.

The petition is dismissed.

A petition to correct inventorship as provided by 37 CFR 1.324 requires (1) a statement from each person who is being added as an inventor that the inventorship error occurred without any deceptive intention on their part, (2) a statement from the current named inventors (including any "inventor" being deleted) who have not submitted a statement as per "(1)" either agreeing to the change of inventorship or stating that they have no disagreement in regard to the requested change, (3) a statement from all assignees of the parties submitting a statement under "(1)" and "(2)"

agreeing to the change of inventorship in the patent; such statement must comply with the requirements of 37 CFR 3.73(b); and (4) the fee set forth in 37 CFR 1.20(b).This petition lacks item(s) **[7]**.

_____

[8]
Supervisory Patent Examiner,
Art Unit **[9]**,
Technology Center **[10]**
[11]

Examiner Note:

1. If each of the four specified items has been submitted but one or more is insufficient, the petition should be denied. See paragraph 10.17. However, if the above noted deficiency can be cured by the submission of a renewed petition, a dismissal would be appropriate.
2. If the petition includes a request for suspension of the rules (37 CFR 1.183) of one or more provisions of 37 CFR 1.324 that are required by the statute (35 U.S.C. 256), form paragraph 10.18 should follow this form paragraph.
3. In bracket 7, pluralize as necessary and insert the item number(s) which are missing.
4. In bracket 11, insert correspondence address of record.
5. This form paragraph is printed with the USPTO letterhead.

¶ *10.17 Petition Under 37 CFR 1.324, Denied*

In re Patent No. **[1]**	:
Issue Date: **[2]**	:**DECISION DENYING PETITION**
Appl. No.: **[3]**	:*37 CFR 1.324*
Filed: **[4]**	:
For: **[5]**	:

This is a decision on the petition filed **[6]** to correct inventorship under 37 CFR 1.324.

The petition is denied.

[7]

_____

[8]
Supervisory Patent Examiner,
Art Unit **[9]**,
Technology Center **[10]**
[11]

Examiner Note:

1. In bracket 7, a full explanation of the deficiency must be provided.
2. If the petition lacks one or more of the required parts set forth in 37 CFR 1.324, it should be dismissed using form paragraph 10.14 or 10.20, rather than being denied.
3. In bracket 11, insert correspondence address of record.
4. This form paragraph is printed with the USPTO letterhead.

¶ *10.18 Waiver of Requirements of 37 CFR 1.324 Under 37 CFR 1.183, Dismissed*

Suspension of the rules under 37 CFR 1.183 may be granted for any requirement of the regulations which is not a requirement of the statutes. In this instance, 35 U.S.C. 256 requires **[1]**. Accordingly, the petition under 37 CFR 1.183 is dismissed as moot.

Examiner Note:

1. This form paragraph should follow form paragraph 10.16 whenever the petition requests waiver of one or more of the provisions of 37 CFR 1.324 that are also requirements of 35 U.S.C. 256.

2. If the petition requests waiver of requirements of 37 CFR 1.324 that are not specific requirements of the statute (i.e., the fee or the oath or declaration by all inventors), the application must be forwarded to a petitions attorney in the Office of the Deputy Commissioner for Patent Examination Policy for decision.

1481.03 Correction of 35 U.S.C. 119 and 35 U.S.C. 120 Benefits [R-7]

I. CORRECTION TO PERFECT CLAIM FOR 35 U.S.C. 119 (a)-(d) AND (f) BENEFITS

See MPEP § 201.16 for a discussion of when 35 U.S.C. 119 (a)-(d) and (f) benefits can be perfected by certificate of correction.

II. CORRECTION AS TO 35 U.S.C. 120 AND 35 U.S.C. 119(e) BENEFITS

*A. For Applications Filed **>Before< November 29, 2000*

For applications filed **>before< November 29, 2000, it is the version of 37 CFR 1.78, which was in effect as of November 29, 2000, that applies. The pre-November 29, 2000 version reads as follows:

37 CFR 1.78. Claiming benefit of earlier filing date and cross-references to other applications.

(a)(1) A nonprovisional application may claim an invention disclosed in one or more prior filed copending nonprovisional applications or copending international applications designating the United States of America. In order for a nonprovisional application to claim the benefit of a prior filed copending nonprovisional application or copending international application designating the United States of America, each prior application must name as an inventor at least one inventor named in the later filed nonprovisional application and disclose the named inventor's invention claimed in at least one claim of the later filed nonprovisional application in the manner provided by the first paragraph of 35 U.S.C. 112. In addition, each prior application must be:

(i) An international application entitled to a filing date in accordance with PCT Article 11 and designating the United States of America; or

(ii) Complete as set forth in § 1.51(b); or

(iii) Entitled to a filing date as set forth in § 1.53(b) or § 1.53(d) and include the basic filing fee set forth in § 1.16; or

(iv) Entitled to a filing date as set forth in § 1.53(b) and have paid therein the processing and retention fee set forth in § 1.21(l) within the time period set forth in § 1.53(f).

(2) Except for a continued prosecution application filed under § 1.53(d), any nonprovisional application claiming the benefit of one or more prior filed copending nonprovisional applications or international applications designating the United States of America must contain a reference to each such prior application, identifying it by application number (consisting of the series code and serial number) or international application number and international filing date and indicating the relationship of the applications. Unless the reference required by this paragraph is included in an application data sheet (§ 1.76), the specification must contain or be amended to contain such reference in the first sentence following any title. The request for a continued prosecution application under § 1.53(d) is the specific reference required by 35 U.S.C. 120 to the prior application. The identification of an application by application number under this section is the specific reference required by 35 U.S.C. 120 to every application assigned that application number. Cross-references to other related applications may be made when appropriate (see § 1.14(a)).

(3) A nonprovisional application other than for a design patent may claim an invention disclosed in one or more prior filed copending provisional applications. In order for a nonprovisional application to claim the benefit of one or more prior filed copending provisional applications, each prior provisional application must name as an inventor at least one inventor named in the later filed nonprovisional application and disclose the named inventor's invention claimed in at least one claim of the later filed nonprovisional application in the manner provided by the first paragraph of 35 U.S.C. 112. In addition, each prior provisional application must be entitled to a filing date as set forth in § 1.53(c), have any required English-language translation filed therein within the time period set forth in § 1.52(d), and have paid therein the basic filing fee set forth in § 1.16(k) within the time period set forth in § 1.53(g).

(4) Any nonprovisional application claiming the benefit of one or more prior filed copending provisional applications must contain a reference to each such prior provisional application, identifying it as a provisional application, and including the provisional application number (consisting of series code and serial number). Unless the reference required by this paragraph is included in an application data sheet (§ 1.76), the specification must contain or be amended to contain such reference in the first sentence following any title.

*****

Under certain conditions specified below, a Certificate of Correction can be used, with respect to 35 U.S.C. 120 and 119(e) priority, to correct:

(A) the failure to make reference to a prior copending application pursuant to 37 CFR 1.78(a)(2) and (a)(4); or

(B) an incorrect reference to a prior copending application pursuant to 37 CFR 1.78(a)(2) and (a)(4).

For all situations other than where priority is based upon 35 U.S.C. 365(c), the conditions are as follows:

(A) for 35 U.S.C. 120 priority, all requirements set forth in 37 CFR 1.78(a)(1) must have been met in the application which became the patent to be corrected;

(B) for 35 U.S.C. 119(e) priority, all requirements set forth in 37 CFR 1.78(a)(3) must have been met in the application which became the patent to be corrected; and

(C) it must be clear from the record of the patent and the parent application(s) that priority is appropriate. See MPEP § 201.1l for requirements under 35 U.S.C. 119(e) and 120.

Where 35 U.S.C. 120 and 365(c) priority based on an international application is to be asserted or corrected in a patent via a Certificate of Correction, the following conditions must be satisfied:

(A) all requirements set forth in 37 CFR 1.78(a)(1) must have been met in the application which became the patent to be corrected;

(B) it must be clear from the record of the patent and the parent application(s) that priority is appropriate (see MPEP § 201.11); and

(C) the patentee must submit with the request for the certificate copies of documentation showing designation of states and any other information needed to make it clear from the record that the 35 U.S.C. 120 priority is appropriate. See MPEP § 201.13(b) as to the requirements for 35 U.S.C. 120 priority based on an international application.

If all the above-stated conditions are satisfied, a Certificate of Correction can be used to amend the patent to make reference to a prior copending application, or to correct an incorrect reference to the prior copending application. Note *In re Schuurs*, 218 USPQ 443 (Comm'r Pat. 1983) which suggests that a Certificate of Correction is an appropriate remedy for correcting, in a patent, reference to a prior copending application. Also, note *In re Lambrech*, 202 USPQ

620 (Comm'r Pat. 1976), citing *In re Van Esdonk*, 187 USPQ 671 (Comm'r Pat. 1975).

If any of the above-stated conditions is not satisfied, the filing of a reissue application (see MPEP § 1401 - § 1460) would be appropriate to pursue the desired correction of the patent.

B. For Applications Filed on or After November 29, 2000

For applications filed on or after November 29, 2000, the version of 37 CFR 1.78 reproduced below applies (note that amendments to 37 CFR 1.78 took effect on November 29, 2000, December 28, 2001, May 1, 2003, January 21, 2004, September 21, 2004, December 8, 2004, * July 1, 2005>, and November 25, 2005<).

37 CFR 1.78. Claiming benefit of earlier filing date and cross-references to other applications.

(a)(1) A nonprovisional application or international application designating the United States of America may claim an invention disclosed in one or more prior-filed copending nonprovisional applications or international applications designating the United States of America. In order for an application to claim the benefit of a prior-filed copending nonprovisional application or international application designating the United States of America, each prior-filed application must name as an inventor at least one inventor named in the later-filed application and disclose the named inventor's invention claimed in at least one claim of the later-filed application in the manner provided by the first paragraph of 35 U.S.C. 112. In addition, each prior-filed application must be:

(i) An international application entitled to a filing date in accordance with PCT Article 11 and designating the United States of America; or

(ii) Entitled to a filing date as set forth in § 1.53(b) or § 1.53(d) and have paid therein the basic filing fee set forth in § 1.16 within the pendency of the application.

(2)(i) Except for a continued prosecution application filed under § 1.53(d), any nonprovisional application or international application designating the United States of America claiming the benefit of one or more prior-filed copending nonprovisional applications or international applications designating the United States of America must contain or be amended to contain a reference to each such prior-filed application, identifying it by application number (consisting of the series code and serial number) or international application number and international filing date and indicating the relationship of the applications. Cross references to other related applications may be made when appropriate (see § 1.14).

(ii) This reference must be submitted during the pendency of the later-filed application. If the later-filed application is an application filed under 35 U.S.C. 111(a), this reference must also be submitted within the later of four months from the actual filing date of the later-filed application or sixteen months from the filing date of the prior-filed application. If the later-filed application is a nonprovisional application which entered the national stage from an international application after compliance with 35 U.S.C. 371, this reference must also be submitted within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371 (b) or (f) in the later-filed international application or sixteen months from the filing date of the prior-filed application. These time periods are not extendable. Except as provided in paragraph (a)(3) of this section, the failure to timely submit the reference required by 35 U.S.C. 120 and paragraph (a)(2)(i) of this section is considered a waiver of any benefit under 35 U.S.C. 120, 121, or 365(c) to such prior-filed application. The time periods in this paragraph do not apply if the later-filed application is:

(A) An application for a design patent;

(B) An application filed under 35 U.S.C. 111 (a) before November 29, 2000; or

(C) A nonprovisional application which entered the national stage after compliance with 35 U.S.C. 371 from an international application filed under 35 U.S.C. 363 before November 29, 2000.

(iii) If the later-filed application is a nonprovisional application, the reference required by this paragraph must be included in an application data sheet (§ 1.76), or the specification must contain or be amended to contain such reference in the first sentence(s) following the title.

(iv) The request for a continued prosecution application under § 1.53(d) is the specific reference required by 35 U.S.C. 120 to the prior-filed application. The identification of an application by application number under this section is the identification of every application assigned that application number necessary for a specific reference required by 35 U.S.C. 120 to every such application assigned that application number.

(3) If the reference required by 35 U.S.C. 120 and paragraph (a)(2) of this section is presented after the time period provided by paragraph (a)(2)(ii) of this section, the claim under 35 U.S.C. 120, 121, or 365(c) for the benefit of a prior-filed copending nonprovisional application or international application designating the United States of America may be accepted if the reference identifying the prior-filed application by application number or international application number and international filing date was unintentionally delayed. A petition to accept an unintentionally delayed claim under 35 U.S.C. 120, 121, or 365(c) for the benefit of a prior-filed application must be accompanied by:

(i) The reference required by 35 U.S.C. 120 and paragraph (a)(2) of this section to the prior-filed application, unless previously submitted;

(ii) The surcharge set forth in § 1.17(t); and

(iii) A statement that the entire delay between the date the claim was due under paragraph (a)(2)(ii) of this section and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional.

(4) A nonprovisional application, other than for a design patent, or an international application designating the United States of America may claim an invention disclosed in one or

more prior-filed provisional applications. In order for an application to claim the benefit of one or more prior-filed provisional applications, each prior-filed provisional application must name as an inventor at least one inventor named in the later-filed application and disclose the named inventor's invention claimed in at least one claim of the later-filed application in the manner provided by the first paragraph of 35 U.S.C. 112. In addition, each prior-filed provisional application must be entitled to a filing date as set forth in § 1.53(c), and the basic filing fee set forth in § 1.16(d) must be paid within the time period set forth in § 1.53(g).

(5)(i) Any nonprovisional application or international application designating the United States of America claiming the benefit of one or more prior-filed provisional applications must contain or be amended to contain a reference to each such prior-filed provisional application, identifying it by the provisional application number (consisting of series code and serial number).

(ii) This reference must be submitted during the pendency of the later-filed application. If the later-filed application is an application filed under 35 U.S.C. 111(a), this reference must also be submitted within the later of four months from the actual filing date of the later-filed application or sixteen months from the filing date of the prior-filed provisional application. If the later-filed application is a nonprovisional application which entered the national stage from an international application after compliance with 35 U.S.C. 371, this reference must also be submitted within the later of four months from the date on which the national stage commenced under 35 U.S.C. 371(b) or (f) in the later-filed international application or sixteen months from the filing date of the prior-filed provisional application. These time periods are not extendable. Except as provided in paragraph(a)(6) of this section, the failure to timely submit the reference is considered a waiver of any benefit under 35 U.S.C. 119(e) to such prior-filed provisional application. The time periods in this paragraph do not apply if the later-filed application is:

(A) An application filed under 35 U.S.C. 111(a) before November 29, 2000; or

(B) A nonprovisional application which entered the national stage after compliance with 35 U.S.C. 371 from an international application filed under 35 U.S.C. 363 before November 29, 2000.

(iii) If the later-filed application is a nonprovisional application, the reference required by this paragraph must be included in an application data sheet (§ 1.76), or the specification must contain or be amended to contain such reference in the first sentence(s) following the title.

(iv) If the prior-filed provisional application was filed in a language other than English and both an English-language translation of the prior-filed provisional application and a statement that the translation is accurate were not previously filed in the prior-filed provisional application, applicant will be notified and given a period of time within which to file, in the prior-filed provisional application, the translation and the statement. If the notice is mailed in a pending nonprovisional application, a timely reply to such a notice must include the filing in the nonprovisional application of either a confirmation that the translation and statement were filed in the provisional application, or an amendment or Supplemental Application Data Sheet withdrawing the benefit claim, or the nonprovisional application will be abandoned. The translation and statement may be filed in the provisional application, even if the provisional application has become abandoned.

(6) If the reference required by 35 U.S.C. 119(e) and paragraph (a)(5) of this section is presented in a nonprovisional application after the time period provided by paragraph (a)(5)(ii) of this section, the claim under 35 U.S.C. 119(e) for the benefit of a prior filed provisional application may be accepted during the pendency of the later-filed application if the reference identifying the prior-filed application by provisional application number was unintentionally delayed. A petition to accept an unintentionally delayed claim under 35 U.S.C. 119(e) for the benefit of a prior filed provisional application must be accompanied by:

(i) The reference required by 35 U.S.C. 119(e) and paragraph (a)(5) of this section to the prior-filed provisional application, unless previously submitted;

(ii) The surcharge set forth in § 1.17(t); and

(iii) A statement that the entire delay between the date the claim was due under paragraph (a)(5)(ii) of this section and the date the claim was filed was unintentional. The Director may require additional information where there is a question whether the delay was unintentional.

(b) Where two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application.

(c) If an application or a patent under reexamination and at least one other application naming different inventors are owned by the same person and contain conflicting claims, and there is no statement of record indicating that the claimed inventions were commonly owned or subject to an obligation of assignment to the same person at the time the later invention was made, the Office may require the assignee to state whether the claimed inventions were commonly owned or subject to an obligation of assignment to the same person at the time the later invention was made, and if not, indicate which named inventor is the prior inventor. Even if the claimed inventions were commonly owned, or subject to an obligation of assignment to the same person, at the time the later invention was made, the conflicting claims may be rejected under the doctrine of double patenting in view of such commonly owned or assigned applications or patents under reexamination.

Under no circumstances can a Certificate of Correction be employed to correct an applicant's mistake by adding or correcting a priority claim under 35 U.S.C. 119(e) for an application filed on or after November 29, 2000.

Section 4503 of the American Inventors Protection Act of 1999 (AIPA) amended 35 U.S.C. 119(e)(1) to state that:

> No application shall be entitled to the benefit of an earlier filed provisional application under this subsection unless an amendment containing the specific reference to the earlier filed provisional application is submitted at such

> time during the pendency of the application as required by the Director. The Director may consider the failure to submit such an amendment within that time period as a waiver of any benefit under this subsection. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed submission of an amendment under this section ***during the pendency of the application***. (emphasis added)

A Certificate of Correction is NOT a valid mechanism for adding or correcting a priority claim under 35 U.S.C. 119(e) after a patent has been granted on an application filed on or after November 29, 2000.

Under certain conditions as specified below, however, a Certificate of Correction can still be used, with respect to 35 U.S.C. 120 priority, to correct:

(A) the failure to make reference to a prior copending application pursuant to 37 CFR 1.78(a)(2); or

(B) an incorrect reference to a prior copending application pursuant to 37 CFR 1.78(a)(2).

Where priority is based upon 35 U.S.C. 120 to **a national application**, the following conditions must be satisfied:

(A) all requirements set forth in 37 CFR 1.78(a)(1) must have been met in the application which became the patent to be corrected;

(B) it must be clear from the record of the patent and the parent application(s) that priority is appropriate (see MPEP § 201.11); and

(C) a grantable petition to accept an unintentionally delayed claim for the benefit of a prior application must be filed, including a surcharge as set forth in 37 CFR 1.17(t), as required by 37 CFR 1.78(a)(3).

Where 35 U.S.C. 120 and 365(c) priority based on **an international application** is to be asserted or corrected in a patent via a Certificate of Correction, the following conditions must be satisfied:

(A) all requirements set forth in 37 CFR 1.78(a)(1) must have been met in the application which became the patent to be corrected;

(B) it must be clear from the record of the patent and the parent application(s) that priority is appropriate (see MPEP § 201.11);

(C) the patentee must submit together with the request for the certificate, copies of documentation showing designation of states and any other information needed to make it clear from the record that the 35 U.S.C. 120 priority is appropriate (see MPEP § 201.13(b) as to the requirements for 35 U.S.C. 120 priority based on an international application; and

(D) a grantable petition to accept an unintentionally delayed claim for the benefit of a prior application must be filed, including a surcharge as set forth in 37 CFR 1.17(t), as required by 37 CFR 1.78(a)(3).

If all the above-stated conditions are satisfied, a Certificate of Correction can be used to amend the patent to make reference to a prior copending application, or to correct an incorrect reference to the prior copending application, for benefit claims under 35 U.S.C. 120 and 365(c).

If any of the above-stated conditions is not satisfied, the filing of a reissue application (see MPEP § 1401 - § 1460) may be appropriate to pursue the desired correction of the patent for benefit claims under 35 U.S.C. 120 and 365(c).

1485 Handling of Request for Certificates of Correction [R-7]

A request for a Certificate of Correction should be addressed to:

Commissioner for Patents
Office of Patent Publication
ATTN: Certificate of Correction Branch
P.O. Box 1450
Alexandria, VA 22313-1450

Requests for Certificates of Correction will be forwarded to the Certificate of Correction Branch of the Office of Patent Publication, where they will be listed in a permanent record book.

If the patent is involved in an interference, a Certificate of Correction under 37 CFR 1.324 will not be issued unless a corresponding motion under 37 CFR 41.121(a)(2) or 41.121(a)(3) has been granted by the administrative patent judge. Otherwise, determination as to whether an error has been made, the responsibility for the error, if any, and whether the error is of such a nature as to justify the issuance of a Certificate of Correction will be made by the Certificate of Correction Branch. If a report is necessary in making such determination, the case will be forwarded to the appropriate group with a request that the report be furnished. If no certificate is to issue, the party making

the request is so notified and the request, report, if any, and copy of the communication to the person making the request are placed in the file wrapper (for a paper file) or entered into the file history (for an IFW file), and entered into the "Contents" for the file by the Certificate of Correction Branch. The case is then returned to the patented files. If a certificate is to issue, it will be prepared and forwarded to the person making the request by the Office of Patent Publication. In that case, the request, the report, if any, and a copy of the letter transmitting the Certificate of Correction to the person making the request will be placed in the file wrapper (for a paper file) or entered into the file history (for an IFW file), and entered into the "Contents" for the file.

Applicants, or their attorneys or agents, are urged to submit the text of the correction on a special Certificate of Correction form, PTO/SB/44 (also referred to as Form PTO-1050), which can serve as the camera copy for use in direct offset printing of the Certificate of Correction.

Where only a part of a request can be approved, or where the Office discovers and includes additional corrections, the appropriate alterations are made on the form PTO/SB/44 by the Office. The patentee is notified of the changes on the Notification of Approval-in-part form PTOL-404. The certificate is issued approximately 6 weeks thereafter.

Form PTO/SB/44 should be used exclusively regardless of the length or complexity of the subject matter. Intricate chemical formulas or page of specification or drawings may be reproduced and mounted on a blank copy of PTO/SB/44. Failure to use the form has frequently delayed issuance *>because< the text must be retyped by the Office onto a PTO/SB/44.

The exact page and line number where the errors occur in the application file should be identified on the request. However, on form PTO/SB/44, only the column and line number in the printed patent should be used.

The patent grant should be retained by the patentee. The Office does not attach the Certificate of Correction to patentee's copy of the patent. The patent grant will be returned to the patentee if submitted.

Below is a sample form illustrating a variety of corrections and the suggested manner of setting out the format. Particular attention is directed to:

(A) Identification of the exact point of error by reference to column and line number of the printed patent for changes in the specification or to claim number and line where a claim is involved.

(B) Conservation of space on the form by typing single space, beginning two lines down from the printed message.

(C) Starting the correction to each separate column as a sentence, and using semicolons to separate corrections within the same column, where possible.

(D) Leaving a two-inch space blank at bottom of the last sheet for the signature of the attesting officer.

(E) Using quotation marks to enclose the exact subject matter to be deleted or corrected; using double hyphens (-- --) to enclose subject matter to be added, except for formulas.

(F) Where a formula is involved, setting out only that portion thereof which is to be corrected or, if necessary, pasting a photocopy onto form PTO/SB/44.

UNITED STATES PATENT AND TRADEMARK OFFICE CERTIFICATE OF CORRECTION

Patent No. :9,999,999
Application No. :10/999,999
Issue Date :May 1, 2002
Inventor(s) :Eli Y. Rosenthal

It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

In the drawings, Sheet 3, Fig. 3, the reference numeral 225 should be applied to the plate element attached to the support member 207:

Column 2, line 68 and column 3, lines 3, 8 and 13, for the claim reference numeral '2', each occurrence, should read -1-.

Column 7, lines 45 to 49, the left-hand formula should appear as follows:

$-R_3$ -CHF

Column 8, Formula XVII, that portion of the formula reading "-CHClCH-" should read --$CHFCH_2$ --; line 5, "chlorine" should be changed to --fluorine--.

Column 10, line 29, cancel the text beginning with "12. A sensor device" to and ending "active strips." in column 11, line 10, and insert the following claim:

12. A control circuit of the character set forth in claim 4 and for an automobile having a convertible top, and including; means for moving the top between a raised and lowered retracted position; and control means responsive to a sensor relay for energizing the top moving means for

moving said top from a retracted position to a raised position.

ELECTRONIC PUBLICATION OF CERTIFICATES OF CORRECTION WITH LATER LISTING IN THE *OFFICIAL GAZETTE*

Effective August 2001, the U.S. Patent and Trademark Office (USPTO) publishes on the USPTO web site at http://www.uspto.gov/web/patents/certofcorrect a listing by patent number of the patents for which certificates of correction are being issued.

The USPTO is now automating the publication process for certificates of correction. This new process will result in certificates of correction being published quicker electronically on the USPTO's web site as compared to their paper publication and the listing of the certificates of correction in the *Official Gazette*. Under the newly automated process, each issue of certificates of correction will be electronically published on the USPTO web site at http://www.uspto.gov/web/patents/certofcorrect, and will also subsequently be listed in the *Official Gazette* (and in the *Official Gazette Notices* posted at http://www.uspto.gov/web/offices/com/sol/og) approximately three weeks thereafter. The listing of certificates of correction in the *Official Gazette* will include the certificate's date of issuance.

On the date on which the listing of certificates of correction is electronically published on the USPTO web site: (A) the certificate of correction will be entered into the file wrapper of a paper-file patent, or entered into the file history of an IFW-file patent and will be available to the public; (B) a printed copy of the certificate of correction will be mailed to the patentee or the patent's assignee; and (C) an image of the printed certificate of correction will be added to the image of the patent on the patent database at **>http://www.uspto.gov/patft<. Dissemination of all other paper copies of the certificate of correction will occur shortly thereafter.

The date on which the USPTO makes the certificate of correction available to the public (e.g., by adding the certificate of correction to the file wrapper/file history) will be regarded as the date of issuance of the certificate of correction, not the date of the certificate of correction appearing in the *Official Gazette*. (For IFW processing, see IFW Manual.) Certificates of correction published in the above-described manner will provide the public with prompt notice and access, and this is consistent with the legislative intent behind the American Inventors Protection Act of 1999. See 35 U.S.C. 10(a) (authorizing the USPTO to publish in electronic form).

The listing of certificates of correction can be electronically accessed on the day of issuance at http://www.uspto.gov/web/patents/certofcorrect. The electronic image of the printed certificate of correction can be accessed on the patent database at http://www.uspto.gov/patft and the listing of the certificates of correction, as published in the *Official Gazette* three weeks later, will be electronically accessible at http://www.uspto.gov/web/offices/com/sol/og.

PATENT NO. :

APPLICATION NO.:

ISSUE DATE :

INVENTOR(S) :

It is certified that an error appears or errors appear in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

MAILING ADDRESS OF SENDER (Please do not use customer number below):

This collection of information is required by 37 CFR 1.322, 1.323, and 1.324. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1.0 hour to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Attention Certificate of Corrections Branch, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

1490 Disclaimers [R-7]

35 U.S.C. 253. Disclaimer.

Whenever, without any deceptive intention, a claim of a patent is invalid the remaining claims shall not thereby be rendered invalid. A patentee, whether of the whole or any sectional interest therein, may, on payment of the fee required by law, make disclaimer of any complete claim, stating therein the extent of his interest in such patent. Such disclaimer shall be in writing, and recorded in the Patent and Trademark Office; and it shall thereafter be considered as part of the original patent to the extent of the interest possessed by the disclaimant and by those claiming under him.

In like manner any patentee or applicant may disclaim or dedicate to the public the entire term, or any terminal part of the term, of the patent granted or to be granted.

37 CFR 1.321. Statutory disclaimers, including terminal disclaimers.

(a) A patentee owning the whole or any sectional interest in a patent may disclaim any complete claim or claims in a patent. In like manner any patentee may disclaim or dedicate to the public the entire term, or any terminal part of the term, of the patent granted. Such disclaimer is binding upon the grantee and its successors or assigns. A notice of the disclaimer is published in the *Official Gazette* and attached to the printed copies of the specification. The disclaimer, to be recorded in the Patent and Trademark Office, must:

(1) be signed by the patentee, or an attorney or agent of record;

(2) identify the patent and complete claim or claims, or term being disclaimed. A disclaimer which is not a disclaimer of a complete claim or claims, or term, will be refused recordation;

(3) state the present extent of patentee's ownership interest in the patent; and

(4) be accompanied by the fee set forth in § 1.20(d).

(b) An applicant or assignee may disclaim or dedicate to the public the entire term, or any terminal part of the term, of a patent to be granted. Such terminal disclaimer is binding upon the grantee and its successors or assigns. The terminal disclaimer, to be recorded in the Patent and Trademark Office, must:

(1) be signed:

(i) by the applicant, or

(ii) if there is an assignee of record of an undivided part interest, by the applicant and such assignee, or

(iii) if there is an assignee of record of the entire interest, by such assignee, or

(iv) by an attorney or agent of record;

(2) specify the portion of the term of the patent being disclaimed;

(3) state the present extent of applicant's or assignee's ownership interest in the patent to be granted; and

(4) be accompanied by the fee set forth in § 1.20(d).

(c) A terminal disclaimer, when filed to obviate judicially created double patenting in a patent application or in a reexamination proceeding except as provided for in paragraph (d) of this section, must:

(1) Comply with the provisions of paragraphs (b)(2) through (b)(4) of this section;

(2) Be signed in accordance with paragraph (b)(1) of this section if filed in a patent application or in accordance with paragraph (a)(1) of this section if filed in a reexamination proceeding; and

(3) Include a provision that any patent granted on that application or any patent subject to the reexamination proceeding shall be enforceable only for and during such period that said patent is commonly owned with the application or patent which formed the basis for the judicially created double patenting.

(d) A terminal disclaimer, when filed in a patent application or in a reexamination proceeding to obviate double patenting based upon a patent or application that is not commonly owned but was disqualified under 35 U.S.C. 103(c) as resulting from activities undertaken within the scope of a joint research agreement, must:

(1) Comply with the provisions of paragraphs (b)(2) through (b)(4) of this section;

(2) Be signed in accordance with paragraph (b)(1) of this section if filed in a patent application or be signed in accordance with paragraph (a)(1) of this section if filed in a reexamination proceeding;

(3) Include a provision waiving the right to separately enforce any patent granted on that application or any patent subject to the reexamination proceeding and the patent or any patent granted on the application which formed the basis for the double patenting, and that any patent granted on that application or any patent subject to the reexamination proceeding shall be enforceable only for and during such period that said patent and the patent, or any patent granted on the application, which formed the basis for the double patenting are not separately enforced.

A disclaimer is a statement filed by an owner (in part or in entirety) of a patent or of a patent to be granted (i.e., an application), in which said owner relinquishes certain legal rights to the patent. There are two types of disclaimers: a statutory disclaimer and a terminal disclaimer. The owner of a patent or an application is the original inventor(s) or the assignee of the original inventor(s). The patent or application is assigned by one assignment or by multiple assignments which establish a chain of title from the inventor(s) to the assignee(s). The owner of the patent or application can sign a disclaimer, and a person empowered by the owner to sign the disclaimer can also sign it. Per 37 CFR 1.321(b)(1)(iv), an attorney or agent of record is permitted to sign the disclaimer.

A registered practitioner acting in a representative capacity under 37 CFR 1.34 is not permitted to sign the disclaimer. For a disclaimer to be accepted, it must be signed by the proper party as follows:

(A) A disclaimer filed in an application must be signed by

(1) the applicant where the application has not been assigned,

(2) the applicant and the assignee where each owns a part interest in the application,

(3) the assignee where assignee owns the entire interest in the application, or

(4) an attorney or agent of record.

(B) A disclaimer filed in a patent or a reexamination proceeding must be signed by either

(1) the patentee (the assignee, the inventor(s) if the patent is not assigned, or the assignee and the inventors if the patent is assigned-in-part), or

(2) an attorney or agent of record.

(C) Where the assignee (of an application or of a patent being reexamined or to be reissued) signs the disclaimer, there is a requirement to comply with 37 CFR 3.73(b) in order to satisfy 37 CFR 1.321, unless an attorney or agent of record signs the disclaimer. In order to comply with 37 CFR 3.73(b), the assignee's ownership interest must be established by:

(1) filing in the application or patent evidence of a chain of title from the original owner to the assignee and a statement affirming that the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11, or

(2) specifying in the record of the application or patent where such evidence is recorded in the Office (e.g., reel and frame number, etc.).

The submission with respect to 37 CFR 3.73(b) to establish ownership must be signed by a party authorized to act on behalf of the assignee. See also MPEP § 324 as to compliance with 37 CFR 3.73(b). A copy of the "Statement Under 37 CFR 3.73 (b)," which is reproduced in MPEP § 324, may be sent by the examiner to applicant to provide an acceptable way to comply with the requirements of 37 CFR 3.73 (b).

(D) Where the attorney or agent of record signs the disclaimer, **there is no need** to comply with 37 CFR 3.73(b).

(E) The signature on the disclaimer need not be an original signature. Pursuant to 37 CFR 1.4(d)(1)(ii), the submitted disclaimer can be a copy, such as a photocopy or facsimile transmission of an original disclaimer.

I. STATUTORY DISCLAIMERS

Under 37 CFR 1.321(a) the owner of a patent may disclaim a complete claim or claims of his or her patent. This may result from a lawsuit or because he or she has reason to believe that the claim or claims are too broad or otherwise invalid. If the patent is involved in an interference, see 37 CFR 41.121(a).

As noted above, a statutory disclaimer is a statement in which a patent owner relinquishes legal rights to one or more claims of a patent. A statutory disclaimer is not, however, a vehicle for adding or amending claims, *>because< there is no provision for such in the statute (35 U.S.C. 253) nor the rules (37 CFR 1.321). Thus, claims of a patent cannot be disclaimed in favor of new claims to be added to the patent or an amendment to existing claims.

II. TERMINAL DISCLAIMERS

37 CFR 1.321(a) also provides for the filing by an applicant or patentee of a terminal disclaimer which disclaims or dedicates to the public the entire term or any portion of the term of a patent or patent to be granted.

37 CFR 1.321(c) specifically provides for the filing of a terminal disclaimer in an application or a reexamination proceeding for the purpose of overcoming a nonstatutory double patenting rejection. See MPEP § 804.02.

37 CFR 1.321(d) specifically provides for the filing of a terminal disclaimer in an application or a reexamination proceeding for the purpose of overcoming a nonstatutory double patenting rejection based on a U.S. patent or application that is not commonly owned but was disqualified under 35 U.S.C. 103(c).

III. PROCESSING

Certificate of Correction Branch

The Certificate of Correction Branch is responsible for the handling of all statutory disclaimers filed under the first paragraph of 35 U.S.C. 253, whether the case is pending or patented, and all terminal disclaimers (filed under the second paragraph of 35 U.S.C. 253) except for those filed in an application or reexamination proceeding pending in a Technology Center (TC). This involves:

(A) Determining the compliance of the disclaimer with 35 U.S.C. 253 and 37 CFR 1.321 and 3.73;

(B) Notifying applicant or patentee when the disclaimer is informal and thus not acceptable;

(C) Recording the disclaimers in the record of the application file; and

(D) Providing the disclaimer data for printing in the *Official Gazette*.

IV. TERMINAL DISCLAIMER IN PENDING APPLICATION PRACTICE IN THE TECHNOLOGY CENTERS

Where a terminal disclaimer is filed in an application pending in a TC, it will be processed by the paralegal of the Office of the Special Program Examiner >or appropriate Quality Assurance Specialist (QAS)< of the TC having responsibility for the application. The paralegal will:

(A) Determine compliance with 35 U.S.C. 253 and 37 CFR 1.321 and 3.73, and ensure that the appropriate terminal disclaimer fee set forth in 37 CFR 1.20(d) is/was applied;

(B) Notify the examiner having charge of the application whether the terminal disclaimer is acceptable or not;

(C) Where the terminal disclaimer is not acceptable, indicate the nature of the informalities so that the examiner can inform applicant in the next Office action. For an IFW application, complete the IFW terminal disclaimer form by checking the "Disapproved" box and have the form scanned into IFW;

(D) Where the terminal disclaimer is acceptable, record the terminal disclaimer in the record of the application as set forth below.

The paralegal will record an acceptable terminal disclaimer as being present in an application by:

For IFW applications:

(A) Completing the IFW terminal disclaimer form by checking the "Approved" box and having the form scanned into IFW; and

(B) Entering the terminal disclaimer into PALM for the application.

**

The paralegal completes a Terminal Disclaimer Informal Memo to notify the examiner of the nature of any informalities in the terminal disclaimer. The examiner should notify the applicant of the informalities in the next Office action, or by interview with applicant if such will expedite prosecution of the application. Further, the examiner should initial and date the Terminal Disclaimer Informal Memo and return it to the paralegal to indicate that the examiner has appropriately notified applicant about the terminal disclaimer. The paralegal will then discard the Terminal Disclaimer Informal Memo.

V. OTHER MATTERS DIRECTED TO TERMINAL DISCLAIMERS

A. Requirements of Terminal Disclaimers

A proper terminal disclaimer must disclaim the terminal part of the statutory term of any patent granted on the application being examined which would extend beyond the expiration date of the full statutory term, shortened by any terminal disclaimer, of the patent (or of any patent granted on the application) to which the disclaimer is directed. Note the exculpatory language in the second paragraph of the sample terminal disclaimer forms, PTO/SB/25 and PTO/SB/26, provided at the end of this Chapter. That language ("In making the above disclaimer, the owner does not disclaim...") is permissible in a terminal disclaimer.

A terminal disclaimer filed to obviate a nonstatutory double patenting rejection based on a commonly owned patent or application must comply with the requirements of 37 CFR 1.321(c). The terminal disclaimer must state that any patent granted on the application being examined will be enforceable only for and during the period that it and the patent to which the disclaimer is directed or the patent granted on the application to which the disclaimer is directed

are commonly owned. See MPEP § 706.02(1)(2) for examples of common ownership, or lack thereof.

A terminal disclaimer filed to obviate a nonstatutory double patenting rejection based on a non-commonly owned patent or application disqualified under 35 U.S.C. 103(c) as a result of activities undertaken within the scope of a joint research agreement under 35 U.S.C. 103(c)(2) and (3) must comply with 37 CFR 1.321(d), which sets forth signature, waiver rights and enforceability requirements.

The terminal disclaimer must include a provision:

(1) waiving the right to separately enforce (a) any patent granted on that application or the patent being reexamined and (b) the reference patent, or any patent granted on the reference application which formed the basis for the double patenting; and

(2) agreeing that any patent granted on that application or patent being reexamined shall be enforceable only for and during such period that said patent and the reference patent, or any patent granted on the reference application, which formed the basis for the double patenting are not separately enforced.

A terminal disclaimer must state that the agreement is to run with any patent granted on the application being examined and is to be binding upon the grantee, its successors, or assigns.

A statement of assignee interest in a terminal disclaimer that "A and B are the owners of 100% of the instant application..." is sufficient to satisfy the 37 CFR 1.321(b)(3) requirement that a terminal disclaimer "state the present extent of applicant's or assignee's ownership interest in the patent to be granted." Although the quoted statement does not identify what specific percentage is owned by A and what specific percentage is owned by B, the statement does provide consent to the terminal disclaimer by the entirety of the ownership of the application (A and B own all of the invention, regardless of the individual percentages they own).

The appropriate one of form paragraphs 14.27.04 to 14.27.08 (reproduced below) may be used to provide applicant or patent owner with an example of acceptable terminal disclaimer language. Additionally, copies of forms PTO/SB/25 and PTO/SB/26 (provided at the end of this Chapter) may be attached to the Office action to provide sample terminal disclaimers.

Pursuant to the last sentence of 35 U.S.C. 253, "any patentee or applicant may disclaim or dedicate to the public... any terminal part of the term, of the patent granted or to be granted". Accordingly, the disclaimer must be of a terminal portion of the term of the entire patent to be granted. A disclaimer of a terminal portion of the term of an individual claim, or individual claims will not be accepted. **>A< disclaimer of the term of individual claims would not be appropriate *>because< the claims of a pending application or proceeding are subject to *>cancellation<, amendment, or renumbering. *>It is further noted that the< statute does not provide for conditional disclaimers >(whether they are terminal disclaimers or statutory disclaimers)< and accordingly, a proposed disclaimer *>that< is made contingent on the allowance of certain claims >or the granting of a petition, is improper and< cannot be accepted. The disclaimer should identify the disclaimant and his or her interest in the application and should specify the date when the disclaimer is to become effective.

B. Effect of Disclaimers in Continuing Applications and in Reissues

A terminal disclaimer filed to obviate a *>nonstatutory< double patenting rejection is effective only with respect to the application identified in the disclaimer unless by its terms it extends to continuing applications. For example, a terminal disclaimer filed in a parent application normally has no effect on a continuing application claiming filing date benefits of the parent application under 35 U.S.C. 120. A terminal disclaimer filed in a parent application to obviate a >nonstatutory< double patenting rejection *does, however, carry over* to a continued prosecution application (CPA) filed under 37 CFR 1.53(d) (effective July 14, 2003, CPAs are only available in design applications). The terminal disclaimer filed in the parent application carries over because the CPA retains the *same application number* as the parent application, i.e., the application number to which the previously filed terminal disclaimer is directed. If applicant does not want the terminal disclaimer to carry over to the CPA, applicant must file a petition under 37 CFR 1.182, along with the required petition fee, requesting the terminal disclaimer filed in the parent application not be carried over to the CPA; see below "Withdrawing a Terminal Disclaimer" (paragraph "A. Before

Issuance of Patent"). If applicant files a Request for Continued Examination (RCE) of an application under 37 CFR 1.114 (which can be filed on or after May 29, 2000 for an application filed on or after June 8, 1995), any terminal disclaimer present will continue to operate, *>because< a new application has not been filed, but rather prosecution has been continued in the existing application. A petition under 37 CFR 1.182, along with the required petition fee, may be filed, if withdrawal of the terminal disclaimer is to be requested.

Reissue applications: Where a terminal disclaimer was filed in an original application, a copy of that terminal disclaimer is not required be filed by applicant in the reissue.

**

For IFW reissue applications:

The "Final SPRE Review" form will be filled in to indicate that a terminal disclaimer has been filed for the patent (and will be effective for the patent as it will be reissued). Further, a copy of the terminal disclaimer should be scanned into the reissue application file history by the Technology Center.

C. Disclaimer Identifies the Wrong Target Application or Patent

In some instances a terminal disclaimer filed to obviate **>a nonstatutory< double patenting rejection will identify the wrong target application or patent (i.e., an application or patent which is not the basis for the double patenting rejection). In these instances, a replacement terminal disclaimer identifying the correct target application or patent would be required by the examiner. Once a correct replacement terminal disclaimer is received, the next Office action should make it clear that "the second terminal disclaimer replaces the first terminal disclaimer, and the first terminal disclaimer is thus void." A second terminal disclaimer fee should not be assessed/charged, *>because< the first fee is applied to the second terminal disclaimer.

D. Two or More Copending Applications

If two (or more) pending applications are filed, in *each* of which a rejection of one claimed invention over the other on the ground of provisional **>nonstatutory< double patenting (ODP) is proper, the >provisional< ODP rejection will be made in each application. If the >provisional< ODP rejection is the only rejection remaining in the earlier-filed of the two pending applications, (but the later-filed application is rejectable on other grounds), the examiner should then withdraw *>the provisional ODP< rejection and permit the earlier-filed application to issue as a patent without a terminal disclaimer. If the >provisional< ODP rejection is the only rejection remaining in the later-filed application, (while the earlier-filed application is rejectable on other grounds), a terminal disclaimer must be required in the later-filed application, before the >provisional< ODP rejection can be withdrawn.

If the >provisional< ODP rejections in both applications are the only rejections remaining in those applications, the examiner should then withdraw the >provisional< ODP rejection in the earlier-filed application thereby permitting that application to issue without need of a terminal disclaimer. A terminal disclaimer must be required in the later-filed application before the >provisional< ODP rejection can be withdrawn and the application be permitted to issue.

>The phrase "earlier-filed" is to be interpreted as follows:

(A) Where there is no benefit claim in the two applications, the "earlier-filed" application is the one having the earlier actual filing date;

(B) Where at least one of the two applications is entitled to the benefit of a U.S. nonprovisional application under 35 U.S.C. 120, 121, or 365(c), the "earlier-filed" application is the one having the earlier effective U.S. filing date, when taking into account each of the benefit claims under 35 U.S.C. 120, 121, and 365(c). Entitlement to the benefit claims under 35 U.S.C. 120, 121 and 365(c) assumes appropriate support in the relied-upon earlier-filed application's disclosure (and any intermediate application(s)) for the conflicting claims of the two (or more) applications;

(C) A 35 U.S.C. 119(e) benefit is NOT taken into account in determining which is the "earlier-filed" application;

(D) A foreign priority claim under 35 U.S.C. 119(a) is NOT taken into account in determining which is the "earlier-filed" application.<

If both applications are filed on the same day, **>the provisional ODP rejection made in each of the applications should be maintained until applicant overcomes the rejections by either filing a reply showing that the claims subject to the provisional ODP rejections are patentably distinct or filing a terminal disclaimer in each of the pending applications.<

Where there are three applications containing claims that conflict such that *>a provisional< ODP rejection is made in each application based upon the other two, it is not sufficient to file a terminal disclaimer in only one of the applications addressing the other two applications. Rather, an appropriate terminal disclaimer must be filed in at least two of the applications to link all three together. This is because a terminal disclaimer filed to obviate a *>nonstatutory< double patenting rejection is effective only with respect to the application in which the terminal disclaimer is filed; it is not effective to link the other two applications to each other.

VI. FORM PARAGRAPHS

The following form paragraphs may be used to inform the applicant (or patent owner) of the status of a submitted terminal disclaimer.

¶ *14.23 Terminal Disclaimer Proper*

The terminal disclaimer filed on **[1]** disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of **[2]** has been reviewed and is accepted. The terminal disclaimer has been recorded.

Examiner Note:

1. In bracket 1, insert the date the terminal disclaimer was filed.
2. In bracket 2, list the Patent Number and/or Application Number (including series code and serial no.). Where an Application Number is listed, it must be preceded by the phrase --any patent granted on Application Number--.
3. If an assignment is submitted to support the terminal disclaimer, also use form paragraph 14.34 to suggest that the assignment be separately submitted for recording in the Office.
4. See MPEP § 1490 for discussion of requirements for a proper terminal disclaimer.
5. Use form paragraph 14.23.01 for reexamination proceedings.
6. For improper terminal disclaimers, see form paragraphs14.24 *et seq*.

¶ *14.23.01 Terminal Disclaimer Proper (Reexamination Only)*

The terminal disclaimer filed on **[1]** disclaiming the terminal portion of the patent being reexamined which would extend beyond the expiration date of **[2]** has been reviewed and is accepted. The terminal disclaimer has been recorded.

Examiner Note:

1. In bracket 1, insert the date the terminal disclaimer was filed.
2. In bracket 2, list the Patent Number and/or Application Number (including series code and serial no.). Where an Application Number is listed, it must be preceded by the phrase --any patent granted on Application Number--.
3. If an assignment is submitted to support the terminal disclaimer, also use 14.34 to suggest that the assignment be separately submitted for recording in the Office.
4. See MPEP § 1490 for discussion of requirements for a proper terminal disclaimer.
5. For improper terminal disclaimers, see the form paragraphs which follow.

¶ *14.24 Terminal Disclaimer Not Proper - Introductory Paragraph*

The terminal disclaimer filed on **[1]** disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of **[2]** has been reviewed and is NOT accepted.

Examiner Note:

1. In bracket 1, insert the date the terminal disclaimer was filed.
2. In bracket 2, list the Patent Number and/or Application Number (including series code and serial no.). Where an Application Number is listed, it must be preceded by the phrase --any patent granted on Application Number--.
3. One or more of the appropriate form paragraphs 14.26 to 14.32 MUST follow this form paragraph to indicate why the terminal disclaimer is not accepted.
4. Form paragraph 14.33 includes the full text of 37 CFR 3.73 and may be included in the Office action when deemed appropriate.
5. Form paragraph 14.35 may be used to inform applicant that an additional disclaimer fee will not be required for the submission of a replacement or supplemental terminal disclaimer.
6. Do not use in reexamination proceedings, use form paragraph 14.25 instead.

¶ *14.25 Terminal Disclaimer Not Proper - Introductory Paragraph (Reexamination Only)*

The terminal disclaimer filed on **[1]** disclaiming the terminal portion of the patent being reexamined which would extend beyond the expiration date of **[2]** has been reviewed and is NOT accepted.

Examiner Note:

1. In bracket 1, insert the date the terminal disclaimer was filed.
2. In bracket 2, list the Patent Number and/or the Application Number (including series code and serial no.). Where an Application Number is listed, it must be preceded by the phrase --any patent granted on Application Number--.
3. One or more of the appropriate form paragraphs 14.26 to 14.32 MUST follow this form paragraph to indicate why the terminal disclaimer is not accepted.

4. Form paragraph 14.33 includes the full text of 37 CFR 3.73 and may be included in the Office action when deemed appropriate.
5. Form paragraph 14.35 may be used to inform applicant that an additional disclaimer fee will not be required for the submission of a replacement or supplemental terminal disclaimer.

¶ *14.26 Does Not Comply With 37 CFR 1.321(b) and/or (c) "Sub-Heading" Only*

The terminal disclaimer does not comply with 37 CFR 1.321(b) and/or (c) because:

Examiner Note:

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 and followed by one or more of the appropriate form paragraphs 14.26.01 to 14.27.03.

¶ *14.26.01 Extent of Interest Not Stated*

The person who has signed the disclaimer has not stated the extent of his/her interest, or the business entity's interest, in the application/patent. See 37 CFR 1.321(b)(3).

Examiner Note:

This form paragraph MUST be preceded by form paragraph 14.24 or 14.25 AND 14.26.

¶ *14.26.02 Directed to Particular Claim(s)*

It is directed to a particular claim or claims, which is not acceptable, since "the disclaimer must be of a terminal portion of the term of the entire [patent or] patent to be granted." See MPEP § 1490.

Examiner Note:

This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.

¶ *14.26.03 Not Signed*

The terminal disclaimer was not signed.

Examiner Note:

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.

¶ *14.26.04 Application/Patent Not Identified*

The application/patent being disclaimed has not been identified.

Examiner Note:

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.

¶ *14.26.05 Application/Patent Improperly Identified*

The application/patent being disclaimed has been improperly identified since the number used to identify the **[1]** being disclaimed is incorrect. The correct number is **[2]**.

Examiner Note:

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.
2. In bracket 1, insert --application-- or --patent--.
3. In bracket 2, insert the correct Application Number (including series code and serial no.) or the correct Patent Number being disclaimed.
4. A terminal disclaimer is acceptable if it includes the correct Patent Number or the correct Application Number or the serial number together with the proper filing date or the proper series code.

¶ *14.26.06 Not Signed by All Owners*

It was not signed by all owners and, therefore, supplemental terminal disclaimers are required from the remaining owners.

Examiner Note:

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.

¶ *14.26.07 No Disclaimer Fee Submitted*

The disclaimer fee of $ **[1]** in accordance with 37 CFR 1.20(d) has not been submitted, nor is there any authorization in the application file to charge a specified Deposit Account or credit card.

Examiner Note:

1. In bracket 1, insert the fee for a disclaimer.
2. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26. If the disclaimer fee was paid for a terminal disclaimer which was not accepted, applicant does not have to pay another disclaimer fee when submitting a replacement or supplemental terminal disclaimer, and this form paragraph should not be used.

¶ *14.27.01 Lacks Clause of Enforceable Only During Period of Common Ownership*

It does not include a recitation that any patent granted shall be enforceable only for and during such period that said patent is commonly owned with the application(s) or patent(s) which formed the basis for the double patenting rejection. See 37 CFR 1.321(c)(3).

Examiner Note:

This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26.

¶ *14.27.011 Lacks 37 CFR 1.321(d) statement for joint research agreement under 35 U.S.C. 103(c)(2)&(3)*

It does not include the waiver and enforceability provisions of 37 CFR 1.321(d). The terminal disclaimer must include a provision:

(1) waiving the right to separately enforce (a) any patent granted on that application or the patent being reexamined and (b) the reference patent, or any patent granted on the reference application which formed the basis of the double patenting; and

(2) agreeing that any patent granted on that application or patent being reexamined shall be enforceable only for and during such period that said patent and the reference patent, or any patent granted on the reference application, which formed the basis for the double patenting are not separately enforced.

See 37 CFR 1.321(d)(3).

Examiner Note:

This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.26, and this paragraph should be followed by either form paragraph 14.27.07 or form paragraph 14.27.08.

¶ *14.27.02 Fails To Disclaim Terminal Portion of Any Patent Granted On Subject Application*

It fails to disclaim the terminal portion of any patent granted on the subject application.

Examiner Note:

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25 AND 14.26.
2. Use this form paragraph when the period disclaimed is not the correct period or when no period is specified at all.
3. When using this form paragraph, give an example of proper terminal disclaimer language using form paragraph 14.27.04 following this or the series of statements concerning the defective terminal disclaimer.

¶ *14.27.03 Fails To Disclaim Terminal Portion of Subject Patent*

It fails to disclaim the terminal portion of the subject patent.

Examiner Note:

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25 AND 14.26.
2. Use this form paragraph in a reissue application or reexamination proceeding when the period disclaimed is not the correct period or when no period is specified at all.

¶ *14.27.04 Examples of Acceptable Terminal Disclaimer Language in Patent To Be Granted*

Examples of acceptable language for making the disclaimer of the terminal portion of any patent granted on the subject application follow:

I. If a Provisional Obviousness-Type Double Patenting Rejection Over A Pending Application was made, use:

The owner, _____, of _____ percent interest in the instant application hereby disclaims the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term of any patent granted on pending **reference** Application Number _____, filed on _____, as such term is defined in 35 U.S.C. 154 and 173, and as the term of any patent granted on said **reference** application may be shortened by any terminal disclaimer filed prior to the grant of any patent on the pending **reference** application. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and any patent granted on the **reference** application are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

II. If an Obviousness-Type Double Patenting Rejection Over A Prior Patent was made, use:

The owner, _____, of _____ percent interest in the instant application hereby disclaims the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term of **reference patent** No. _____ as the term of said prior patent is defined in 35 U.S.C. 154 and 173 , and as the term of said **reference patent** is presently shortened by any terminal disclaimer. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and the **reference patent** are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

Alternatively, Form PTO/SB/25 may be used for situation I, and Form PTO/SB/26 may be used for situation II; a copy of each form may be found at the end of MPEP § 1490.

Examiner Note:

1. To provide examples of acceptable terminal disclaimer language in a patent (e.g., for a reexamination situation), other than for a terminal disclaimer based on activities undertaken within the scope of a joint research agreement, use form paragraph 14.27.06.
2. To provide examples of acceptable terminal disclaimer language for a terminal disclaimer based on activities undertaken within the scope of a joint research agreement, (a) use form paragraph 14.27.07 for making the disclaimer of the terminal portion of a patent to be granted on an application (generally, an application being examined), and (b) use form paragraph 14.27.08 for making the disclaimer of the terminal portion of an existing patent (e.g., for a reexamination situation).

¶ *14.27.06 Examples of Acceptable Terminal Disclaimer Language in Patent (Reexamination Situation)*

Examples of acceptable language for making the disclaimer of the terminal portion of the patent being reexamined (or otherwise for an existing patent) follow:

I. If a Provisional Obviousness-Type Double Patenting Rejection Over A Pending Application was made, or is otherwise believed to be applicable to the patent, use:

The patent owner hereby disclaims the terminal part of the instant patent, which would extend beyond the expiration date of the full statutory term of any patent granted on pending Application Number _____, filed on _____, as such term is defined in 35 U.S.C. 154 and 173, and as the term of any patent granted on said application may be shortened by any terminal disclaimer filed prior to the grant of any patent on the pending application. The patent owner hereby agrees that the instant patent shall be enforceable only for and during such period that the instant patent and any patent granted on the above-listed pending application are commonly owned. This agreement is binding upon the patent owner, its successors, or assigns.

II. If an Obviousness-Type Double Patenting Rejection Over A Prior Patent was made, or is otherwise believed to be applicable to the patent, use:

The patent owner hereby disclaims the terminal part of the instant patent, which would extend beyond the expiration date of the full statutory term of reference patent No. _____ as the term of said reference patent is defined in 35 U.S.C. 154 and 173, and as the term of said reference patent is presently shortened by any terminal disclaimer. The patent owner hereby agrees that the instant patent shall be enforceable only for and during such period that the instant patent and the reference patent are commonly owned. This agreement is binding upon the patent owner, its successors, or assign.

Examiner Note:

1. To provide examples of acceptable terminal disclaimer language in a patent to be granted on an application (generally, an application being examined), other than for a terminal disclaimer based on activities undertaken within the scope of a joint research agreement, use form paragraph 14.27.04.

2. To provide examples of acceptable terminal disclaimer language for a terminal disclaimer based on activities undertaken within the scope of a joint research agreement, (a) use form paragraph 14.27.07 for making the disclaimer of the terminal portion of a patent to be granted on an application (generally, an application being examined), and (b) use form paragraph 14.27.08 for making the disclaimer of the terminal portion of an existing patent (e.g., for a reexamination situation).

¶ *14.27.07 Examples of Acceptable Terminal Disclaimer Language in Patent To Be Granted (activities undertaken within the scope of a joint research agreement)*

Examples of acceptable language for making the disclaimer of the terminal portion of any patent granted on the subject application follow:

I. If a Provisional Obviousness-Type Double Patenting Rejection Over A Pending Application was made, use:

The owner, _____, of _____ percent interest in the instant application hereby disclaims the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term of any patent granted on pending **reference** Application Number _____, filed on _____, as such term is defined in 35 U.S.C. 154 and 173, and as the term of any patent granted on said **reference** application may be shortened by any terminal disclaimer filed prior to the grant of any patent on the pending **reference** application.

The owner of the instant application waives the right to separately enforce any patent granted on the instant application and any patent granted on the **reference** application. The owner of the instant application hereby agrees that any patent granted on the instant application and any patent granted on the **reference** application shall be enforceable only for and during such period that the instant application and the **reference** application are not separately enforced. The waiver, and this agreement, run with any patent granted on the instant application and any patent granted on the **reference** application, and are binding upon the owner of the instant application, its successors, or assigns.

Owner, or attorney/agent of record, of the instant application:

Signature:_____

Printed/Typed name:_____

II. If an Obviousness-Type Double Patenting Rejection Over A Prior Patent was made, use:

The owner, _____, of _____ percent interest in the instant application hereby disclaims the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term of **reference patent** No. _____, as the term of said prior patent is defined in 35 U.S.C. 154 and 173, and as the term of said **reference patent** is presently shortened by any terminal disclaimer.

The owner of the instant application waives the right to separately enforce the **reference patent** and any patent granted on the instant application. The owner of the instant application hereby agrees that the **reference patent** and any patent granted on the instant application shall be enforceable only for and during such period that the **reference patent** and any patent granted on the instant application are not separately enforced. The waiver, and this agreement, run with any patent granted on the instant application and are binding upon the owner of the instant application, its successors, or assigns.

Owner, or attorney/agent of record, of the instant application:

Signature:_____

Printed/Typed name:_____

Examiner Note:

1. To provide examples of acceptable terminal disclaimer language in a patent (e.g., for a reexamination situation) for a terminal disclaimer based on activities undertaken within the scope of a joint research agreement, use form paragraph 14.27.08.

2. To provide examples of acceptable terminal disclaimer language for a terminal disclaimer in a situation other than one based on activities undertaken within the scope of a joint research agreement, (a) use form paragraph 14.27.04 for making the disclaimer of the terminal portion of a patent to be granted on an application (generally, an application being examined), and (b) use form paragraph 14.27.06 for making the disclaimer of the terminal portion of an existing patent (e.g., for a reexamination situation).

¶ *14.27.08 Examples of Acceptable Terminal Disclaimer Language in Patent (Reexamination Situation; activities undertaken within the scope of a joint research agreement)*

Examples of acceptable language for making the disclaimer of the terminal portion of the patent being reexamined (or otherwise for an existing patent) follow:

I. If a provisional obviousness-type double patenting rejection over a Pending Application was made, or is otherwise believed to be applicable to the patent, use:

The patent owner hereby disclaims the terminal part of the instant patent, which would extend beyond the expiration date of the full statutory term of any patent granted on pending Application Number _____, filed on _____, as such term is defined in 35 U.S.C. 154 and 173, and as the term of any patent granted on said application may be shortened by any terminal disclaimer filed prior to the grant of any patent on the pending application.

The patent owner waives the right to separately enforce the instant patent and the above-listed pending application. The patent owner agrees that the instant patent and any patent granted on the above-listed pending application shall be enforceable only for and during such period that the instant patent and the patent granted on the above-listed pending application are not separately enforced. The waiver, and this agreement, run with any patent granted on the above-listed pending application, and are binding upon the patent owner, its successors, or assigns.

Patent Owner, or attorney/agent of record:
Signature:_____
Printed/Typed name:_____

II. If an obviousness-type double patenting rejection over a Reference Patent was made, or is otherwise believed to be applicable to the patent, use:

The patent owner hereby disclaims the terminal part of the instant patent, which would extend beyond the expiration date of the full statutory term of **reference patent** No. _____, as the term of said **reference patent** is defined in 35 U.S.C. 154 and 173, and as the term of said **reference patent** is presently shortened by any terminal disclaimer.

The patent owner waives the right to separately enforce the instant patent and the **reference** patent. The patent owner agrees that the instant patent and the **reference patent** shall be enforceable only for and during such period that the instant patent and the **reference patent** are not separately enforced. The waiver, and this agreement, are binding upon the patent owner, its successors, or assigns.

Patent Owner, or attorney/agent of record:
Signature:_____
Printed/Typed name:_____

Examiner Note:

1. To provide examples of acceptable terminal disclaimer language in a patent to be granted on an application (generally, an application being examined) for a terminal disclaimer based on activities undertaken within the scope of a joint research agreement, use form paragraph 14.27.07.
2. To provide examples of acceptable terminal disclaimer language for a terminal disclaimer in a situation other than one based on activities undertaken within the scope of a joint research agreement, (a) use form paragraph 14.27.04 for making the disclaimer of the terminal portion of a patent to be granted on an application (generally, an application being examined), and (b) use form paragraph 14.27.06 for making the disclaimer of the terminal portion of an existing patent (e.g., for a reexamination situation).

¶ *14.28 Failure To State Capacity To Sign*

The person who signed the terminal disclaimer has failed to state his/her capacity to sign for the corporation, or other business entity or organization, and he/she has not been established as being authorized to act on behalf of the assignee.

Examiner Note:

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25 AND 14.26.

¶ *14.29 Not Recognized as Officer of Assignee - "Sub-Heading" Only*

The person who signed the terminal disclaimer is not recognized as an officer of the assignee, and he/she has not been established as being authorized to act on behalf of the assignee. See MPEP § 324.

Examiner Note:

1. This form paragraph is to be used when the person signing the terminal disclaimer is not an authorized officer as defined in MPEP § 324.
2. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 and followed by form paragraphs 14.29.01 and/or 14.29.02 when appropriate. An attorney or agent of record is always authorized to sign the terminal disclaimer, even though there is no indication that he or she is an officer of the assignee.
3. Use form paragraph 14.29.02 to explain how an official, other than a recognized officer, may properly sign a terminal disclaimer.

¶ *14.29.01 Attorney/Agent Not of Record*

An attorney or agent, not of record, is not authorized to sign a terminal disclaimer in the capacity as an attorney or agent acting in a representative capacity as provided by 37 CFR 1.34 (a). See 37 CFR 1.321(b) and/or (c).

Examiner Note:

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.29.
2. An attorney or agent, however, may sign a terminal disclaimer provided he/she is an attorney or agent of record or is established as an appropriate official of the assignee. To suggest to the attorney or agent, not of record, how he/she may establish status as an appropriate official of the assignee to sign a terminal disclaimer, use form paragraph 14.29.02.

¶ *14.29.02 Criteria To Accept Terminal Disclaimer When Signed by a Non-Recognized Officer*

It would be acceptable for a person, other than a recognized officer, to sign a terminal disclaimer, provided the record for the application includes a statement that the person is empowered to sign terminal disclaimers and/or act on behalf of the assignee.

Accordingly, a new terminal disclaimer which includes the above empowerment statement will be considered to be signed by an appropriate official of the assignee. A separately filed paper referencing the previously filed terminal disclaimer and containing a proper empowerment statement would also be acceptable.

Examiner Note:

1. This form paragraph MUST be preceded by form paragraphs 14.24 or 14.25 AND 14.29.
2. When form paragraph 14.29 is used to indicate that a terminal disclaimer is denied because it was not signed by a recognized officer nor by an attorney or agent of record, this form paragraph should be used to point out one way to correct the problem.
3. While an indication of the person's title is desirable, its inclusion is not mandatory when this option is employed.
4. A sample terminal disclaimer should be sent with the Office action.

¶ *14.30 No Evidence of Chain of Title to Assignee - Application*

The assignee has not established its ownership interest in the application, in order to support the terminal disclaimer. There is no submission in the record establishing the ownership interest by either (a) providing documentary evidence of a chain of title from the original inventor(s) to the assignee and a statement affirming that the documentary evidence of the chain of title form the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11, or (b) specifying (by reel and frame number) where such documentary evidence is recorded in the Office (37 CFR 3.73(b)).

Examiner Note:

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25.
2. Where an attorney or agent of record signs a terminal disclaimer, there is no need to provide a statement under 37 CFR 3.73(b). Thus, this form paragraph should not be used.
3. It should be noted that the documentary evidence or the specifying of reel and frame number may be found in the terminal disclaimer itself or in a separate paper.

¶ *14.30.01 No Evidence of Chain of Title to Assignee - Patent*

The assignee has not established its ownership interest in the patent, in order to support the terminal disclaimer. There is no submission in the record establishing the ownership interest by either (a) providing documentary evidence of a chain of title from the original inventor(s) to the assignee and a statement affirming that the documentary evidence of the chain of title form the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11, or (b) specifying (by reel and frame number) where such documentary evidence is recorded in the Office (37 CFR 3.73(b)).

Examiner Note:

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25.
2. Where an attorney or agent of record signs a terminal disclaimer, there is no need to provide a statement under 37 CFR 3.73(b). Thus, this form paragraph should not be used.
3. It should be noted that the documentary evidence or the specifying of reel and frame number may be found in the terminal disclaimer itself or in a separate paper in the application.

¶ *14.30.02 Evidence of Chain of Title to Assignee - Submission Not Signed by Appropriate Party - Terminal Disclaimer Is Thus Not Entered*

The submission establishing the ownership interest of the assignee is informal. There is no indication of record that the party who signed the submission establishing the ownership interest is authorized to sign the submission (37 CFR 3.73(b)).

Examiner Note:

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25.
2. Where an attorney or agent of record signs a terminal disclaimer, there is no need to provide any statement under 37 CFR 3.73(b). Thus, this form paragraph should not be used.
3. This form paragraph should be followed by one of form paragraphs 14.16.02 or 14.16.03. In rare situations where BOTH form paragraphs 14.16.02 and 14.16.03 do not apply and thus cannot be used, the examiner should instead follow this form paragraph with a detailed statement of why the there is no authorization to sign.
4. Use form paragraph 14.16.06 to point out one way to correct the problem.

¶ *14.32 Application/Patent Which Forms Basis for Rejection Not Identified*

The application/patent which forms the basis for the double patenting rejection is not identified in the terminal disclaimer.

Examiner Note:

1. This form paragraph MUST be preceded by form paragraph 14.24 or 14.25.
2. Use this form paragraph when no information is presented. If incorrect information is contained in the terminal disclaimer, use form paragraphs 14.26 and 14.26.05.

¶ *14.33 37 CFR 3.73 - Establishing Right of Assignee To Take Action*

The following is a statement of 37 CFR 3.73:

> 37 CFR 3.73 Establishing right of assignee to take action.
>
> (a) The inventor is presumed to be the owner of a patent application, and any patent that may issue therefrom, unless there is an assignment. The original applicant is presumed to be the owner of a trademark application or registration, unless there is an assignment.
>
> (b)(1) In order to request or take action in a patent or trademark matter, the assignee must establish its ownership of

the patent or trademark property of paragraph (a) of this section to the satisfaction of the Director. The establishment of ownership by the assignee may be combined with the paper that requests or takes the action. Ownership is established by submitting to the Office a signed statement identifying the assignee, accompanied by either:

(i) Documentary evidence of a chain of title from the original owner to the assignee (*e.g.*, copy of an executed assignment). For trademark matters only, the documents submitted to establish ownership may be required to be recorded pursuant to § 3.11 in the assignment records of the Office as a condition to permitting the assignee to take action in a matter pending before the Office. For patent matters only, the submission of the documentary evidence must be accompanied by a statement affirming that the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to § 3.11; or

(ii) A statement specifying where documentary evidence of a chain of title from the original owner to the assignee is recorded in the assignment records of the Office (*e.g.*, reel and frame number).

(2) The submission establishing ownership must show that the person signing the submission is a person authorized to act on behalf of the assignee by:

(i) Including a statement that the person signing the submission is authorized to act on behalf of the assignee; or

(ii) Being signed by a person having apparent authority to sign on behalf of the assignee, *e.g.*, an officer of the assignee.

(c) For patent matters only:

(1) Establishment of ownership by the assignee must be submitted prior to, or at the same time as, the paper requesting or taking action is submitted.

(2) If the submission under this section is by an assignee of less than the entire right, title and interest, such assignee must indicate the extent (by percentage) of its ownership interest, or the Office may refuse to accept the submission as an establishment of ownership.

¶ *14.34 Requirement for Statement To Record Assignment Submitted With Terminal Disclaimer*

The assignment document filed on **[1]** is **not** acceptable as the documentary evidence required by 37 CFR 3.73. The submission of the documentary evidence was not accompanied by a statement affirming that the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11. See 37 CFR 3.11 and MPEP § 302.

Examiner Note:

1. In bracket 1, insert the date the assignment document was filed.

2. This form paragraph should be used when an assignment document (an original, facsimile, or copy) is submitted to satisfy 37 CFR 3.73(b) was not accompanied by a statement affirming that the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation, and the documentary evidence has not been recorded among the assignment records of the Office.

¶ *14.35 Disclaimer Fee Not Required Twice - Applicant*

It should be noted that applicant is not required to pay another disclaimer fee as set forth in 37 CFR 1.20(d) when submitting a replacement or supplemental terminal disclaimer.

Examiner Note:

1. This form paragraph can be used to notify an applicant that another disclaimer fee will not be required when a replacement or supplemental terminal disclaimer is submitted.

2. Use form paragraph 14.35.01 for providing notification to patent owner, rather than an applicant.

¶ *14.35.01 Disclaimer Fee Not Required Twice - Patent Owner*

It should be noted that patent owner is not required to pay another disclaimer fee as set forth in 37 CFR 1.20(d) when submitting a replacement or supplemental terminal disclaimer.

Examiner Note:

This form paragraph can be used to notify a patent owner that another disclaimer fee will not be required when a replacement or supplemental terminal disclaimer is submitted.

¶ *14.36 Suggestion That "Applicant" Request a Refund*

Since the required fee for the terminal disclaimer was previously paid, applicant's payment of an additional terminal disclaimer fee is not required. Applicant may request a refund of this additional terminal disclaimer fee by submitting a written request for a refund and a copy of this Office action to: Mail Stop 16, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Examiner Note:

1. This form paragraph should be used to notify applicant that a refund can be obtained if another terminal disclaimer fee was paid when a replacement or supplemental terminal disclaimer was submitted.

2. Note - If applicant has authorized or requested a fee refund to be credited to a specific Deposit Account or credit card, then an appropriate credit should be made to that Deposit Account or credit card and this paragraph should NOT be used.

3. Use form paragraph 14.36.01 for providing notification to patent owner, rather than an applicant.

¶ *14.36.01 Suggestion That "Patent Owner" Request a Refund*

Since the required fee for the terminal disclaimer was previously paid, patent owner's payment of an additional terminal disclaimer fee is not required. Patent owner may request a refund of this additional terminal disclaimer fee by submitting a written request for a refund and a copy of this Office action to: Mail Stop

16, Director of the United States Patent and Trademark Office, P.O. Box 1450, Alexandria, Virginia 22313-1450.

Examiner Note:

1. This form paragraph should be used to notify patent owner that a refund can be obtained if another terminal disclaimer fee was paid when a replacement or supplemental terminal disclaimer was submitted.

2. Note - If patent owner has authorized or requested a fee refund to be credited to a specific Deposit Account or credit card, then an appropriate credit should be made to that Deposit Account or credit card and this form paragraph should NOT be used.

¶ *14.37 Samples of a Terminal Disclaimer Over a Pending Application and Assignee Statement Enclosed*

Enclosed with this Office action is a sample terminal disclaimer which is effective to overcome a provisional obviousness-type double patenting rejection over a pending application (37 CFR 1.321(b) and (c)).

Also enclosed is a sample Statement Under 37 CFR 3.73(b) (Form PTO/SB/96) which an assignee may use in order to ensure compliance with the rule. Part A of the Statement is used when there is a single assignment from the inventor(s). Part B of the Statement is used when there is a chain of title. The "Copies of assignments..." box should be checked when the assignment document(s) (set forth in part A or part B) is/are not recorded in the Office, and a copy of the assignment document(s) is/are attached. When the "Copies of assignments..." box is checked, either the part A box or the part B box, as appropriate, must be checked, and the "Reel_____, Frame_____" entries should be left blank. If the part B box is checked, and copies of assignments are not included, the "From:_____ To:_____" blank(s) must be filled in. This statement should be used the first time an assignee seeks to take action in an application under 37 CFR 3.73(b), e.g., when signing a terminal disclaimer or a power of attorney.

Examiner Note:

1. This form paragraph can be used to provide applicant samples of a terminal disclaimer which contains the necessary clauses to overcome a provisional obviousness-type double patenting rejection over a pending application and a Statement to be signed by an assignee to ensure compliance with 37 CFR 3.73(b).

2. Note that the requirements for compliance with 37 CFR 3.73 (b) have been made more liberal, such that certain specifics of the sample statement are no longer required. At present, in order to comply with 37 CFR 3.73(b), the assignee's ownership interest must be established by (a) filing in the application or patent evidence of a chain of title from the original owner to the assignee and a statement affirming that the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11, or (b) specifying in the record of the application or patent where such evidence is recorded in the Office (e.g., reel and frame number, etc.). The submission with respect to (a) and (b) to establish ownership must be signed by a party authorized to act on behalf of the assignee.

(See your Technology Center Paralegal or Special Program Examiner for copies of the sample terminal disclaimer and Statement Under 37 CFR 3.73(b) to enclose with the Office action. Alternatively, it is permissible to copy the sample terminal disclaimer found after MPEP § 1490 and the Sample Statement Under 37 CFR 3.73(b) found after MPEP § 324.)

¶ *14.38 Samples of a Terminal Disclaimer Over a Prior Patent and Assignee Statement Enclosed*

Enclosed with this Office action is a sample terminal disclaimer which is effective to overcome an obviousness-type double patenting rejection over a prior patent (37 CFR 1.321(b) and (c)).

Also enclosed is a sample Statement Under 37 CFR 3.73(b) (Form PTO/SB/96) which an assignee may use in order to ensure compliance with the rule. Part A of the Statement is used when there is a single assignment from the inventor(s). Part B of the Statement is used when there is a chain of title. The "Copies of assignments..." box should be checked when the assignment document(s) (set forth in part A or part B) is/are not recorded in the Office, and a copy of the assignment document(s) is/are attached. When the "Copies of assignments..." box is checked, either the part A box or the part B box, as appropriate, must be checked, and the "Reel_____, Frame_____" entries should be left blank. If the part B box is checked, and copies of assignments are not included, the "From:_____ To:_____" blank(s) must be filled in. This statement should be used the first time an assignee seeks to take action in an application under 37 CFR 3.73(b), e.g., when signing a terminal disclaimer or a power of attorney.

Examiner Note:

1. This form paragraph can be used to provide applicant samples of a terminal disclaimer which contains the necessary clauses to overcome an obviousness-type double patenting rejection over a prior patent and a Statement to be signed by an assignee to ensure compliance with 37 CFR 3.73(b).

2. Note that the requirements for compliance with 37 CFR 3.73 (b) have been made more liberal, such that certain specifics of the sample statement are no longer required. At present, in order to comply with 37 CFR 3.73(b), the assignee's ownership interest must be established by (a) filing in the application or patent evidence of a chain of title from the original owner to the assignee and a statement affirming that the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11, or (b) specifying in the record of the application or patent where such evidence is recorded in the Office (e.g., reel and frame number, etc.). The submission with respect to (a) and (b) to establish ownership must be signed by a party authorized to act on behalf of the assignee.

(See your Technology Center Paralegal or Special Program Examiner for copies of the sample terminal disclaimer and Statement Under 37 CFR 3.73(b) to enclose with the Office action. Alternatively, it is permissible to copy the sample terminal disclaimer found after MPEP § 1490 and the Sample Statement Under 37 CFR 3.73(b) found after MPEP § 324.)

¶ *14.39 Sample Assignee Statement Under 37 CFR 3.73(b) Enclosed*

Enclosed with this Office action is a sample Statement under 37 CFR 3.73(b) which an assignee may use in order to ensure

compliance with the Rule. Part A of the Statement is used when there is a single assignment from the inventor(s). Part B of the Statement is used when there is a chain of title. The "Copies of assignments..." box should be checked when the assignment document(s) (set forth in part A or part B) is/are not recorded in the Office, and a copy of the assignment document(s) is/are attached. When the "Copies of assignments..." box is checked, either the part A box or the part B box, as appropriate, must be checked, and the "Reel_____, Frame_____" entries should be left blank. If the part B box is checked, and copies of assignments are not included, the "From:_____ To:_____" blank(s) must be filled in. This statement should be used the first time an assignee seeks to take action in an application under 37 CFR 3.73(b).

Examiner Note:

1. This form paragraph can be used to provide applicant a sample of a Statement to be signed by an assignee to ensure compliance with 37 CFR 3.73(b).

2. Note that the requirements for compliance with 37 CFR 3.73 (b) have been made more liberal, such that certain specifics of the sample statement are no longer required. At present, in order to comply with 37 CFR 3.73(b), the assignee's ownership interest must be established by (a) filing in the application or patent evidence of a chain of title from the original owner to the assignee and a statement affirming that the documentary evidence of the chain of title from the original owner to the assignee was, or concurrently is being, submitted for recordation pursuant to 37 CFR 3.11, or (b) specifying in the record of the application or patent where such evidence is recorded in the Office (e.g., reel and frame number, etc.). The submission with respect to (a) and (b) to establish ownership must be signed by a party authorized to act on behalf of the assignee.

(See your Technology Center Paralegal or Special Program Examiner for a copy of the sample Statement Under 37 CFR 3.73(b) to enclose with the Office action. Alternatively, it is permissible to copy the sample Statement Under 37 CFR 3.73(b) found after MPEP § 324.)

VII. WITHDRAWING A RECORDED TERMINAL DISCLAIMER

If timely requested, a recorded terminal disclaimer may be withdrawn before the application in which it is filed issues as a patent, or in a reexamination proceeding, before the reexamination certificate issues. After a patent or reexamination certificate issues, it is unlikely that a recorded terminal disclaimer will be nullified.

A. Before Issuance Of Patent

While the filing and recordation of an unnecessary terminal disclaimer has been characterized as an "unhappy circumstance" in *In re Jentoft*, 392 F.2d 633, 157 USPQ 363 (CCPA 1968), there is no statutory prohibition against nullifying or otherwise canceling the effect of a recorded terminal disclaimer which was erroneously filed before the patent issues. *>Because< the terminal disclaimer would not take effect until the patent is granted, and the public has not had the opportunity to rely on the terminal disclaimer, relief from this unhappy circumstance may be available by way of petition or by refiling the application (other than by refiling it as a CPA).

Under appropriate circumstances, consistent with the orderly administration of the examination process, the nullification of a recorded terminal disclaimer may be addressed by filing a petition under 37 CFR 1.182 requesting withdrawal of the recorded terminal disclaimer. Petitions seeking to reopen the question of the propriety of the double patenting rejection that prompted the filing of the terminal disclaimer have not been favorably considered. The filing of a continuing application other than a CPA, while abandoning the application in which the terminal disclaimer has been filed, will typically nullify the effect of a terminal disclaimer. The filing of a Request for Continued Examination (RCE) of an application under 37 CFR 1.114 will not nullify the effect of a terminal disclaimer, *>because< a new application has not been filed, but rather prosecution has been continued in the existing application.

B. After Issuance Of Patent

The mechanisms to correct a patent — Certificate of Correction (35 U.S.C. 255), reissue (35 U.S.C. 251), and reexamination (35 U.S.C. 305) — are not available to withdraw or otherwise nullify the effect of a recorded terminal disclaimer. As a general principle, public policy does not favor the restoration to the patent owner of something that has been freely dedicated to the public, particularly where the public interest is not protected in some manner — e.g., intervening rights in the case of a reissue patent. See, e.g., *Altoona Publix Theatres v. American Tri-Ergon Corp.*, 294 U.S. 477, 24 USPQ 308 (1935).

Certificates of Correction (35 U.S.C. 255) are available for the correction of an applicant's mistake. The scope of this remedial provision is limited in two ways — by the nature of the mistake for which correction is sought and the nature of the proposed correction. *In re Arnott*, 19 USPQ2d 1049 (Comm'r

Pat. 1991). The nature of the mistake for which correction is sought is limited to those mistakes that are:

(A) of a clerical nature;
(B) of a typographical nature; or
(C) of a minor character.

The nature of the proposed correction is limited to those situations where the correction does not involve changes which would:

(A) constitute new matter, or
(B) require reexamination.

A mistake in filing a terminal disclaimer does not fall within any of the categories of mistake for which a certificate of correction of applicant's mistake is permissible, and any attempt to remove or nullify the effect of the terminal disclaimer would typically require reexamination of the circumstances under which it was filed.

Although the remedial nature of reissue (35 U.S.C. 251) is well recognized, reissue is not available to correct all errors. It has been the Office position that reissue is not available to withdraw or otherwise nullify the effect of a terminal disclaimer recorded in an issued patent. First, the reissue statute only authorizes the Director of the USPTO to reissue a patent "for the unexpired part of the term of the original patent." *>Because< the granting of a reissue patent without the effect of a recorded terminal disclaimer would result in extending the term of the original patent, reissue under these circumstances would be contrary to the statute. Second, the principle against recapturing something that has been intentionally dedicated to the public dates back to *Leggett v. Avery*, 101 U.S. 256 (1879). The attempt to restore that portion of the patent term that was dedicated to the public to secure the grant of the original patent would be contrary to this recapture principle. Finally, applicants have the opportunity to challenge the need for a terminal disclaimer during the prosecution of the application that issues as a patent. "Reissue is not a substitute for Patent Office appeal procedures." *Ball Corp. v. United States*, 729 F.2d 1429, 1435, 221 USPQ 289, 293 (Fed. Cir. 1984). Where applicants did not challenge the propriety of the examiner's **>nonstatutory< double patenting rejection, but filed a terminal disclaimer to avoid the rejection, the filing of the terminal disclaimer did not constitute error within the meaning of 35 U.S.C. 251. *Ex parte Anthony*, 230 USPQ 467 (Bd. App. 1982), *aff'd*, No. 84-1357 (Fed. Cir. June 14, 1985).

Finally, the nullification of a recorded terminal disclaimer would not be appropriate in a reexamination proceeding. There is a prohibition (35 U.S.C. 305) against enlarging the scope of a claim during a reexamination proceeding. As noted by the Board in *Anthony*, *supra*, if a terminal disclaimer was nullified, "claims would be able to be sued upon for a longer period than would the claims of the original patent. Therefore, the vertical scope, as opposed to the horizontal scope (where the subject matter is enlarged), would be enlarged."

>Where a terminal disclaimer was submitted to overcome a nonstatutory double patenting rejection (made during prosecution of an application which has now issued as a patent), and the numbers for the patent being disclaimed in the terminal disclaimer were inadvertently transposed (e.g., 6,444,316 written as 6,444,136), a petition under 37 CFR 1.182 may be filed to withdraw the terminal disclaimer with the incorrect (transposed) patent number (recorded in the issued patent), and replace it with a corrected terminal disclaimer having the correct patent number. In this instance, the inadvertency is clear from the record. If the transposing error resulted in an earlier patent term expiration date than provided by the corrected terminal disclaimer, a statement must be included in the corrected terminal disclaimer to retain that earlier expiration date. The absence of such a statement will result in the Office declining to exercise its discretion to grant relief.<

TERMINAL DISCLAIMER TO OBVIATE A PROVISIONAL DOUBLE PATENTING REJECTION OVER A PENDING "REFERENCE" APPLICATION	Docket Number (Optional)

In re Application of:

Application No.:

Filed:

For:

The owner*, _____, of _____ percent interest in the instant application hereby disclaims, except as provided below, the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term of any patent granted on pending **reference** Application Number _____, filed on _____, as such term is defined in 35 U.S.C. 154 and 173, and as the term of any patent granted on said **reference** application may be shortened by any terminal disclaimer filed prior to the grant of any patent on the pending **reference** application. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and any patent granted on the **reference** application are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

In making the above disclaimer, the owner does not disclaim the terminal part of any patent granted on the instant application that would extend to the expiration date of the full statutory term as defined in 35 U.S.C. 154 and 173 of any patent granted on said **reference** application, "as the term of any patent granted on said **reference** application may be shortened by any terminal disclaimer filed prior to the grant of any patent on the pending **reference** application," in the event that: any such patent: granted on the pending **reference** application: expires for failure to pay a maintenance fee, is held unenforceable, is found invalid by a court of competent jurisdiction, is statutorily disclaimed in whole or terminally disclaimed under 37 CFR 1.321, has all claims canceled by a reexamination certificate, is reissued, or is in any manner terminated prior to the expiration of its full statutory term as shortened by any terminal disclaimer filed prior to its grant.

Check either box 1 or 2 below, if appropriate.

1. ☐ For submissions on behalf of a business/organization (e.g., corporation, partnership, university, government agency, etc.), the undersigned is empowered to act on behalf of the business/organization.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

2. ☐ The undersigned is an attorney or agent of record. Reg. No. _____

_____ _____
Signature Date

_____
Typed or printed name

_____
Telephone Number

☐ Terminal disclaimer fee under 37 CFR 1.20(d) is included.

WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.

*Statement under 37 CFR 3.73(b) is required if terminal disclaimer is signed by the assignee (owner).
Form PTO/SB/96 may be used for making this statement. See MPEP § 324.

This collection of information is required by 37 CFR 1.321. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

TERMINAL DISCLAIMER TO OBVIATE A DOUBLE PATENTING REJECTION OVER A "PRIOR" PATENT	Docket Number (Optional)

In re Application of:

Application No.:

Filed:

For:

The owner*, _____, of _____ percent interest in the instant application hereby disclaims, except as provided below, the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term **prior patent** No. _____ as the term of said prior patent is defined in 35 U.S.C. 154 and 173, and as the term of said **prior patent** is presently shortened by any terminal disclaimer. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and the **prior patent** are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

In making the above disclaimer, the owner does not disclaim the terminal part of the term of any patent granted on the instant application that would extend to the expiration date of the full statutory term as defined in 35 U.S.C. 154 and 173 of the **prior patent**, "as the term of said **prior patent** is presently shortened by any terminal disclaimer," in the event that said **prior patent** later:

expires for failure to pay a maintenance fee;
is held unenforceable;
is found invalid by a court of competent jurisdiction;
is statutorily disclaimed in whole or terminally disclaimed under 37 CFR 1.321;
has all claims canceled by a reexamination certificate;
is reissued; or
is in any manner terminated prior to the expiration of its full statutory term as presently shortened by any terminal disclaimer.

Check either box 1 or 2 below, if appropriate.

1. ☐ For submissions on behalf of a business/organization (e.g., corporation, partnership, university, government agency, etc.), the undersigned is empowered to act on behalf of the business/organization.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

2. ☐ The undersigned is an attorney or agent of record. Reg. No._____

_____ _____
Signature Date

_____
Typed or printed name

_____
Telephone Number

☐ Terminal disclaimer fee under 37 CFR 1.20(d) included.

WARNING: Information on this form may become public. Credit card information should not be included on this form. Provide credit card information and authorization on PTO-2038.

*Statement under 37 CFR 3.73(b) is required if terminal disclaimer is signed by the assignee (owner).
Form PTO/SB/96 may be used for making this certification. See MPEP § 324.

This collection of information is required by 37 CFR 1.321. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (*i.e.*, GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

<

Chapter 1500 Design Patents

1501 Statutes and Rules Applicable

The right to a patent for a design stems from:

35 U.S.C. 171. Patents for designs.

Whoever invents any new, original and ornamental design for an article of manufacture may obtain a patent therefor, subject to the conditions and requirements of this title.

The provisions of this title relating to patents for inventions shall apply to patents for designs, except as otherwise provided.

37 CFR 1.151. Rules applicable.

The rules relating to applications for patents for other inventions or discoveries are also applicable to applications for patents for designs except as otherwise provided.

37 CFR 1.152-1.155, which relate only to design patents, are reproduced in the sections of this chapter.

It is noted that design patent applications are not included in the Patent Cooperation Treaty (PCT), and the procedures followed for PCT international applications are not to be followed for design patent applications.

The practices set forth in other chapters of this *Manual of Patent Examining Procedure* (MPEP) are to be followed in examining applications for design patents, except as particularly pointed out in the chapter.

1502 Definition of a Design [R-2]

In a design patent application, the subject matter which is claimed is the design embodied in or applied to an article of manufacture (or portion thereof) and not the article itself. *Ex parte Cady*, 1916 C.D. 62, 232 O.G. 621 (Comm'r Pat. 1916). "[35 U.S.C.] 171 refers, not to the design of an article, but to the design for an article, and is inclusive of ornamental designs of all kinds including surface ornamentation as well as configuration of goods." *In re Zahn*, 617 F.2d 261, 204 USPQ 988 (CCPA 1980).

The design for an article consists of the visual characteristics embodied in or applied to an article.

Since a design is manifested in appearance, the subject matter of a design patent application may relate to the configuration or shape of an article, to the surface ornamentation applied to an article, or to the combination of configuration and surface ornamentation.

Design is inseparable from the article to which it is applied and cannot exist alone merely as a scheme of surface ornamentation. It must be a definite, preconceived thing, capable of reproduction and not merely the chance result of a method.

¶ *15.42 Visual Characteristics*

The design for an article consists of the visual characteristics or aspect displayed by the article. It is the appearance presented by the article which creates an impression through the eye upon the mind of the observer.

¶ *15.43 Subject Matter of Design Patent*

Since a design is manifested in appearance, the subject matter of a Design Patent may relate to the configuration or shape of an article, to the surface ornamentation on an article, or to both.

>

¶ *15.44 Design Inseparable From Article to Which Applied*

Design is inseparable from the article to which it is applied, and cannot exist alone merely as a scheme of ornamentation. It must be a definite preconceived thing, capable of reproduction,

and not merely the chance result of a method or of a combination of functional elements (35 U.S.C. 171; 35 U.S.C. 112, first and second paragraphs). See *Blisscraft of Hollywood v.United Plastics Co.*, 189 F. Supp. 333, 127 USPQ 452 (S.D.N.Y. 1960), 294 F.2d 694, 131 USPQ 55 (2d Cir. 1961).

<

1502.01 Distinction Between Design and Utility Patents [R-2]

In general terms, a "utility patent" protects the way an article is used and works (35 U.S.C. 101), while a "design patent" protects the way an article looks (35 U.S.C. 171). The ornamental appearance for an article includes its shape/configuration or surface ornamentation *>applied to< the article, or both. Both design and utility patents may be obtained on an article if invention resides both in its utility and ornamental appearance.

While utility and design patents afford legally separate protection, the utility and ornamentality of an article may not be easily separable. ** >Articles of manufacture may possess both functional and ornamental characteristics.<

Some of the more common differences between design and utility patents are summarized below:

(A) The term of a utility patent on an application filed on or after June 8, 1995 is 20 years measured from the U.S. filing date; or if the application contains a specific reference to an earlier application under 35 U.S.C. 120, 121, or 365(c), 20 years from the earliest effective U.S. filing date, while the term of a design patent is 14 years measured from the date of grant (see 35 U.S.C. 173).

(B) Maintenance fees are required for utility patents (see 37 CFR 1.20), while no maintenance fees are required for design patents.

(C) Design patent applications include only a single claim, while utility patent applications can have multiple claims.

(D) Restriction between plural, distinct inventions is discretionary on the part of the examiner in utility patent applications (see MPEP § 803), while it is mandatory in design patent applications (see MPEP § 1504.05).

(E) An international application naming various countries may be filed for utility patents under the Patent Cooperation Treaty (PCT), while no such provision exists for design patents.

(F) Foreign priority under 35 U.S.C. 119(a)-(d) can be obtained for the filing of utility patent applications up to 1 year after the first filing in any country subscribing to the Paris Convention, while this period is only 6 months for design patent applications (see 35 U.S.C. 172).

(G) Utility patent applications may claim the benefit of a provisional application under 35 U.S.C. 119(e) whereas design patent applications may not. See 35 U.S.C. 172 and 37 CFR 1.78 (a)(4).

(H) A Request for Continued Examination (RCE) under 37 CFR 1.114 may only be filed in utility and plant applications filed under 35 U.S.C. 111(a) on or after June 8, 1995, while RCE is not available for design applications (see 37 CFR 1.114(e)).

(I) * >Effective July 14, 2003, continued< prosecution application (CPA) practice under 37 CFR 1.53(d) is >only< available for design applications **>(see 37 CFR 1.53(d)(1)(i)). Prior to July 14, 2003, CPA practice was< available for utility and plant applications only where the prior application has a filing date prior to May 29, 2000 **.

(J) Utility patent applications filed on or after November 29, 2000 are subject to application publication under 35 U.S.C. 122(b)(1)(A), whereas design applications are not subject to application publication (see 35 U.S.C. 122(b)(2)).

Other distinctions between design and utility patent practice are detailed in this chapter. Unless otherwise provided, the rules for applications for utility patents are equally applicable to applications for design patents (35 U.S.C. 171 and 37 CFR 1.151).

1503 Elements of a Design Patent Application [R-2]

A design patent application has essentially the elements required of an application for a utility patent filed under 35 U.S.C. 101 (see Chapter 600). The arrangement of the elements of a design patent application and the sections of the specification are as specified in 37 CFR 1.154.

A claim in a specific form is a necessary element of a design patent application. See MPEP § *>1503.01, subsection III<.

A drawing is an essential element of a design patent application. See MPEP § 1503.02 for requirements for drawings.

1503.01 Specification [R-5]

37 CFR 1.153. Title, description and claim, oath or declaration.

(a)The title of the design must designate the particular article. No description, other than a reference to the drawing, is ordinarily required. The claim shall be in formal terms to the ornamental design for the article (specifying name) as shown, or as shown and described. More than one claim is neither required nor permitted.

(b)The oath or declaration required of the applicant must comply with § 1.63.

37 CFR 1.154. Arrangement of application elements in a design application.

(a) The elements of the design application, if applicable, should appear in the following order:

(1) Design application transmittal form.
(2) Fee transmittal form.
(3) Application data sheet (see § 1.76).
(4) Specification.
(5) Drawings or photographs.
(6) Executed oath or declaration (see § 1.153(b)).

(b) The specification should include the following sections in order:

(1) Preamble, stating the name of the applicant, title of the design, and a brief description of the nature and intended use of the article in which the design is embodied.

(2) Cross-reference to related applications (unless included in the application data sheet).

(3) Statement regarding federally sponsored research or development.

(4) Description of the figure or figures of the drawing.
(5) Feature description.
(6) A single claim.

(c) The text of the specification sections defined in paragraph (b) of this section, if applicable, should be preceded by a section heading in uppercase letters without underlining or bold type.

**>

¶ *15.05 Design Patent Specification Arrangement*

The following order or arrangement should be observed in framing a design patent specification:

(1) Preamble, stating name of the applicant, title of the design, and a brief description of the nature and intended use of the article in which the design is embodied.

(2) Cross-reference to related applications unless included in the application data sheet.

(3) Statement regarding federally sponsored research or development.

(4) Description of the figure or figures of the drawing.

(5) Descriptive statement, if any.

(6) A single claim.

<

I. PREAMBLE AND TITLE

A preamble, if included, should state the name of the applicant, the title of the design, and a brief description of the nature and intended use of the article in which the design is embodied (37 CFR 1.154).

The title of the design identifies the article in which the design is embodied by the name generally known and used by the public but it does not define the scope of the claim. See MPEP § 1504.04, subsection I.A. The title may be directed to the entire article embodying the design while the claimed design shown in full lines in the drawings may be directed to only a portion of the article. However, the title may not be directed to less than the claimed design shown in full lines in the drawings. A title descriptive of the actual article aids the examiner in developing a complete field of search of the prior art and further aids in the proper assignment of new applications to the appropriate class, subclass, and patent examiner, and the proper classification of the patent upon allowance of the application. It also helps the public in understanding the nature and use of the article embodying the design after the patent has been issued. For example, a broad title such as “Adapter Ring” provides little or no information as to the nature and intended use of the article embodying the design. If a broad title is used, the description of the nature and intended use of the design may be incorporated into the preamble. Absent an amendment requesting deletion of the description, it would be printed on any patent that would issue.

When a design is embodied in an article having multiple functions or comprises multiple independent parts or articles that interact with each other, the title must clearly define them as a single entity, for example, combined or combination, set, pair, unit assembly.

Since 37 CFR 1.153 requires that the title must designate the particular article, and since the claim must be in formal terms to the “ornamental design for the article (specifying name) as shown, or as shown and described,” the title and claim must correspond. When

the title and claim do not correspond, the title should be objected to under 37 CFR 1.153 as not corresponding to the claim.

However, it is emphasized that, under the second paragraph of 35 U.S.C. 112, the claim defines "the subject matter which the applicant regards as his invention" (emphasis added); that is, the ornamental design to be embodied in or applied to an article. Thus, the examiner should afford the applicant substantial latitude in the language of the title/claim. The examiner should only require amendment of the title/claim if the language is clearly misdescriptive, inaccurate, or unclear (i.e., the language would result in a rejection of the claim under 35 U.S.C. 112, second paragraph; see MPEP § 1504.04, subsection III). The use of language such as "or the like" or "or similar article" in the title when directed to the environment of the article embodying the design will not be the basis for a rejection of the claim under 35 U.S.C. 112, second paragraph. Such language is **>indefinite when it refers to the area of articles defining the subject matter of< the design. An acceptable title would be "door for cabinets, houses, or the like," while the title "door or the like" would be unacceptable and the claim will be rejected under 35 U.S.C. 112, second paragraph. *Ex parte Pappas*, 23 USPQ2d 1636 (Bd. Pat. App. & Inter. 1992). See also MPEP § 1504.04; subsection III.

Amendments to the title, whether directed to the article in which the design is embodied or its environment, must have antecedent basis in the original disclosure and may not introduce new matter. *Ex parte Strijland,* 26 USPQ2d 1259 (Bd. Pat. App. & Inter. 1992). If an amendment to the title is directed to the environment in which the design is used and the amendment would introduce new matter, the amendment to the title must be objected to under 35 U.S.C. 132. If an amendment to the title is directed to the article in which the design is embodied and the amendment would introduce new matter, in addition to the objection under 35 U.S.C. 132, the claim must be rejected under 35 U.S.C. 112, first paragraph.

Any amendment to the language of the title should also be made at each occurrence thereof throughout the application, except in the oath or declaration. If the title of the article is not present in the original figure descriptions, it is not necessary to incorporate the title into the descriptions as part of any amendment to the language of the title.

¶ *15.05.01 Title of Design Invention*

The title of a design being claimed must correspond to the name of the article in which the design is embodied or applied to. See MPEP § 1503.01.

¶ *15.59 Amend Title*

For **[1]**, the title **[2]** amended throughout the application, original oath or declaration excepted, to read: **[3]**

Examiner Note:

1. In bracket 1, insert reason.
2. In bracket 2, insert --should be-- or --has been--.

II. DESCRIPTION

No description of the design in the specification beyond a brief description of the drawing is generally necessary, since as a rule the illustration in the drawing views is its own best description. >*In re Freeman*, 23 App. D.C. 226 (App. D.C. 1904).< However, while not required, such a description is not prohibited and may be incorporated, at applicant's option, into the specification or may be provided in a separate paper. >*Ex parte Spiegel*, 1919 C.D. 112, 268 O.G. 741 (Comm'r Pat. 1919).< Descriptions of the figures are not required to be written in any particular format, however, if they do not describe the views of the drawing clearly and accurately, the examiner should object to the unclear and/or inaccurate descriptions and suggest language which is more clearly descriptive of the views.

In addition to the figure descriptions, the following types of statements are permissible in the specification:

(A) Description of the appearance of portions of the claimed design which are not illustrated in the drawing disclosure. Such a description, if provided, must be in the design application as originally filed, and may not be added by way of amendment after the filing of the application as it would be considered new matter.

(B) Description disclaiming portions of the article not shown in the drawing as forming no part of the claimed design.

(C) Statement indicating the purpose of broken lines in the drawing, for example, environmental structure or boundaries that form no part of the design to be patented.

(D) Description denoting the nature and environmental use of the claimed design, if not included in the preamble pursuant to 37 CFR 1.154 and MPEP § 1503.01, subsection I.

It is the policy of the Office to attempt to resolve questions about the nature and intended use of the claimed design prior to examination by making a telephone inquiry at the time of initial docketing of the application. This will enable the application to be properly classified and docketed to the appropriate examiner and to be searched when the application comes up for examination in its normal course without the need for a rejection under 35 U.S.C. 112 prior to a search of the prior art. Explanation of the nature and intended use of the article may be added to the specification provided it does not constitute new matter. It may alternately, at applicant's option, be submitted in a separate paper without amendment of the specification.

(E) A "characteristic features" statement describing a particular feature of the design that is considered by applicant to be a feature of novelty or nonobviousness over the prior art (37 CFR 1.71(c)).

This type of statement may not serve as a basis for determining patentability by an examiner. In determining the patentability of a design, it is the overall appearance of the claimed design which must be taken into consideration. *In re Rosen*, 673 F.2d 388, 213 USPQ 347 (CCPA 1982); *In re Leslie*, 547 F.2d 116, 192 USPQ 427 (CCPA 1977). Furthermore, the inclusion of such a statement in the specification is at the option of applicant and will not be suggested by the examiner.

¶ *15.47 Characteristic Feature Statement*

A "characteristic features" statement describing a particular feature of novelty or nonobviousness in the claimed design may be permissible in the specification. Such a statement should be in terms such as "The characteristic feature of the design resides in **[1]**," or if combined with one of the Figure descriptions, in terms such as "the characteristic feature of which resides in **[2]**." While consideration of the claim goes to the total or overall appearance, the use of a "characteristic feature" statement may serve later to limit the claim (*McGrady v. Aspenglas Corp.*, 487 F. Supp. 859, 208 USPQ 242 (S.D.N.Y. 1980)).

Examiner Note:

In brackets 1 and 2, insert brief but accurate description of the feature of novelty or nonobviousness of the claimed design.

¶ *15.47.01 Feature Statement Caution*

The inclusion of a feature statement in the specification is noted. However, the patentability of the claimed design is not based on the specified feature but rather on a comparison of the *overall appearance* of the design with the prior art. *In re Leslie*, 547 F.2d 116, 192 USPQ 427 (CCPA 1977).

The following types of statements are <u>not permissible</u> in the specification:

(A) A disclaimer statement directed to any portion of the claimed design that is shown in solid lines in the drawings is not permitted in the specification of an issued design patent. However, the disclaimer statement may be included in the design application as originally filed to provide antecedent basis for a future amendment. See *Ex parte Remington*, 114 O.G. 761, 1905 C.D. 28 (Comm'r Pat. 1904); *In re Blum*, 374 F.2d 904, 153 USPQ 177 (CCPA 1967).

(B) Statements which describe or suggest other embodiments of the claimed design which are not illustrated in the drawing disclosure, except one that is a mirror image of that shown or has a shape and appearance that would be evident from the one shown, are not permitted in the specification of an issued design patent. However, such statements may be included in the design application as originally filed to provide antecedent basis for a future amendment. In addition, statements which attempt to broaden the scope of the claimed design beyond that which is shown in the drawings are not permitted.

(C) Statements describing matters *>that< are directed to function >or are< unrelated to the design.

¶ *15.41 Functional, Structural Features Not Considered*

Attention is directed to the fact that design patent applications are concerned solely with the ornamental appearance of an article of manufacture. The functional and/or structural features stressed by applicant in the papers are of no concern in design cases, and are neither permitted nor required. Function and structure fall under the realm of utility patent applications.

**>

¶ *15.46.01 Impermissible Descriptive Statement*

The descriptive statement included in the specification is impermissible because **[1]**. See MPEP § 1503.01, subsection II. Therefore, the description should be canceled as any description of the design in the specification, other than a brief description of the drawing, is generally not necessary, since as a general rule, the illustration in the drawing views is its own best description.

Examiner Note:

In bracket 1, insert the reason why the descriptive statement is improper.

<

¶ *15.60 Amend All Figure Descriptions*

For **[1]**, the figure descriptions **[2]** amended to read: **[3]**

Examiner Note:

1. In bracket 1, insert reason.
2. In bracket 2, insert --should be-- or --have been-.
3. In bracket 3, insert amended text.

¶ *15.61 Amend Selected Figure Descriptions*

For **[1]**, the description(s) of Fig(s). **[2] [3]** amended to read: **[4]**

Examiner Note:

1. In bracket 1, insert reason.
2. In bracket 2, insert selected Figure descriptions.
3. In bracket 3, insert --should be-- or --have been-.
4. In bracket 4, insert amended text.

III. DESIGN CLAIM

The requirements for utility claims specified in 37 CFR 1.75 do not apply to design claims. Instead, the form and content of a design claim is set forth in 37 CFR 1.153:

37 CFR 1.153. ... claim...

(a) ... The claim shall be in formal terms to the ornamental design for the article (specifying name) as shown or as shown and described. More than one claim is neither required nor permitted.

*****

A design patent application may only include a single claim. The single claim should normally be in formal terms to "The ornamental design for (the article which embodies the design or to which it is applied) as shown." The description of the article in the claim should be consistent in terminology with the title of the invention. See MPEP § 1503.01, subsection I.

When the specification includes a proper **>descriptive statement< of the design (see MPEP § 1503.01, subsection II), or a proper showing of modified forms of the design or other descriptive matter has been included in the specification, the words "and described" must be added to the claim following the term "shown"; i.e., the claim must read "The ornamental design for (the article which embodies the design or to which it is applied) as shown and described."

**>Full lines in the drawing show the claimed design. Broken lines are used for numerous purposes. Under some circumstances, broken lines are used to illustrate the claimed design (i.e., stitching and fold lines). Broken lines are not permitted for the purpose of identifying portions of the claimed design which are immaterial or unimportant. See *In re Blum*, 374 F.2d 904, 907, 153 USPQ 177, 180 (CCPA 1967) (there are "*no* portions of *a design* which are 'immaterial' or 'not important.' A design is a unitary thing and all of its portions are material in that they contribute to the appearance which constitutes the design."). See also MPEP § 1503.02, subsection III.<

¶ *15.62 Amend Claim "As Shown"*

For proper form (37 CFR 1.153), the claim **[1]** amended to read: "**[2]** claim: The ornamental design for **[3]** as shown."

Examiner Note:

1. In bracket 1, insert --must be--.
2. In bracket 2, insert --I-- or --We--.
3. In bracket 3, insert title of the article in which the design is embodied or applied.

¶ *15.63 Amend Claim "As Shown and Described"*

For proper form (37 CFR 1.153), the claim **[1]** amended to read: "**[2]** claim: The ornamental design for **[3]** as shown and described."

Examiner Note:

1. In bracket 1, insert --must be--.
2. In bracket 2, insert --I-- or --We--.
3. In bracket 3, insert title of the article in which the design is embodied or applied.

¶ *15.64 Addition of "And Described" to Claim*

Because of **[1]** -- and described -- **[2]** added to the claim after "shown."

Examiner Note:

1. In bracket 1, insert reason.
2. In bracket 2, insert --must be--.

1503.02 Drawing [R-5]

37 CFR 1.152. Design drawings.

The design must be represented by a drawing that complies with the requirements of § 1.84 and must contain a sufficient number of views to constitute a complete disclosure of the appearance of the design. Appropriate and adequate surface shading should be used to show the character or contour of the surfaces represented. Solid black surface shading is not permitted except when used to represent the color black as well as color contrast. Broken lines may be used to show visible environmental structure, but may not be used to show hidden planes and surfaces that cannot be seen through opaque materials. Alternate positions of a design component, illustrated by full and broken lines in the same view are not permitted in a design drawing. Photographs and ink drawings are not permitted to be combined as formal drawings in one applica-

tion. Photographs submitted in lieu of ink drawings in design patent applications must not disclose environmental structure but must be limited to the design claimed for the article.

Every design patent application must include either a drawing or a photograph of the claimed design. As the drawing or photograph constitutes the entire visual disclosure of the claim, it is of utmost importance that the drawing or photograph be clear and complete, and that nothing regarding the design sought to be patented is left to conjecture.

When inconsistencies are found among the views, the examiner should object to the drawings and request that the views be made consistent. *Ex parte Asano*, 201 USPQ 315, 317 (Bd. Pat. App. & Inter. 1978); *Hadco Products, Inc. v. Lighting Corp. of America Inc.*, 312 F. Supp. 1173, 1182, 165 USPQ 496, 503 (E.D. Pa. 1970), *vacated on other grounds*, 462 F.2d 1265, 174 USPQ 358 (3d Cir. 1972). When the inconsistencies are of such magnitude that the overall appearance of the design is unclear, the claim should be rejected under 35 U.S.C. 112, first and second paragraphs, as nonenabling and indefinite. See MPEP § 1504.04, subsection I.A.

¶ *15.05.03 Drawing/Photograph Disclosure Objected To*

The drawing/photograph disclosure is objected to **[1].**

Examiner Note:

In bracket 1, insert statutory or regulatory basis for objection and an explanation.

**>

¶ *15.05.04 Replacement Drawing Sheets Required*

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as amended. If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. If all the figures on a drawing sheet are canceled, a replacement sheet is not required. A marked-up copy of the drawing sheet (labeled as "Annotated Sheet") including an annotation showing that all the figures on that drawing sheet have been canceled must be presented in the amendment or remarks section that explains the change to the drawings. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action.

<

¶ *15.05.05 Drawing Correction Required Prior to Appeal*

Any appeal of the design claim must include the correction of the drawings approved by the examiner in accordance with *Ex parte Bevan*, 142 USPQ 284 (Bd. App. 1964).

Examiner Note:

This form paragraph can be used in a FINAL rejection where an outstanding requirement for a drawing correction has not been satisfied.

¶ *15.07 Avoidance of New Matter*

When preparing new drawings in compliance with the requirement therefor, care must be exercised to avoid introduction of anything which could be construed to be new matter prohibited by 35 U.S.C. 132 and 37 CFR 1.121.

Form paragraph 15.48 may be used to notify applicant of the necessity for good drawings.

¶ *15.48 Necessity for Good Drawings*

The necessity for good drawings in a design patent application cannot be overemphasized. As the drawing constitutes the whole disclosure of the design, it is of utmost importance that it be so well executed both as to clarity of showing and completeness, that nothing regarding the design sought to be patented is left to conjecture. An insufficient drawing may be fatal to validity (35 U.S.C. 112, first paragraph). Moreover, an insufficient drawing may have a negative effect with respect to the effective filing date of a continuing application.

In addition to the criteria set forth in 37 CFR 1.81-1.88, design drawings must also comply with 37 CFR 1.152 as follows:

I. VIEWS

The drawings or photographs should contain a sufficient number of views to disclose the complete appearance of the design claimed, which may include the front, rear, top, bottom and sides. Perspective views are suggested and may be submitted to clearly show the appearance of three dimensional designs. If a perspective view is submitted, the surfaces shown would normally not be required to be illustrated in other views if these surfaces are clearly understood and fully disclosed in the perspective.

Views that are merely duplicative of other views of the design or that are flat and include no surface ornamentation may be omitted from the drawing if the specification makes this explicitly clear. See MPEP

§ 1503.01, subsection II. For example, if the left and right sides of a design are identical or a mirror image, a view should be provided of one side and a statement made in the drawing description that the other side is identical or a mirror image. If the design has a flat bottom, a view of the bottom may be omitted if the specification includes a statement that the bottom is flat and devoid of surface ornamentation. The term "unornamented" should not be used to describe visible surfaces which include structure that is clearly not flat. *Philco Corp. v. Admiral Corp.*, 199 F. Supp. 797, 131 USPQ 413 (D. Del. 1961).

Sectional views presented solely for the purpose of showing the internal construction or functional/mechanical features are unnecessary and may lead to confusion as to the scope of the claimed design. *Ex parte Tucker*, 1901 C.D. 140, 97 O.G. 187 (Comm'r Pat. 1901); *Ex parte Kohler*, 1905 C.D. 192, 116 O.G. 1185 (Comm'r Pat. 1905). Such views should be objected to under 35 U.S.C. 112, second paragraph, and their cancellation should be required. However, where the exact contour or configuration of the exterior surface of a claimed design is not apparent from the views of the drawing, and no attempt is made to illustrate features of internal construction, a sectional view may be included to clarify the shape of said design. *Ex parte Lohman*, 1912 C.D. 336, 184 O.G. 287 (Comm'r Pat. 1912). When a sectional view is added during prosecution, the examiner must determine whether there is antecedent basis in the original disclosure for the material shown in hatching in the sectional view (37 CFR 1.84(h)(3) and MPEP § 608.02).

II. SURFACE SHADING

While surface shading is not required under 37 CFR 1.152, it may be necessary in particular cases to shade the figures to show clearly the character and contour of all surfaces of any 3-dimensional aspects of the design. Surface shading is also necessary to distinguish between any open and solid areas of the article. However, surface shading should not be used on unclaimed subject matter, shown in broken lines, to avoid confusion as to the scope of the claim.

Lack of appropriate surface shading in the drawing as filed may render the design nonenabling and indefinite under 35 U.S.C. 112, first and second paragraphs. Additionally, if the surface shape is not evident from the disclosure as filed, the addition of surface shading after filing may comprise new matter. Solid black surface shading is not permitted except when used to represent the color black as well as color contrast. Oblique line shading must be used to show transparent, translucent and highly polished or reflective surfaces, such as a mirror. **>Contrast in materials may be shown by using line shading in one area and stippling in another. By using this technique, the claim will broadly cover contrasting surfaces unlimited by colors. The claim would not be limited to specific material either, as long as the appearance of the material does not patentably depart from the visual appearance illustrated in the drawing.<

Form paragraph 15.49 may be used to notify applicant that surface shading is necessary.

¶ *15.49 Surface Shading Necessary*

The drawing figures should be appropriately and adequately shaded to show clearly the character and/or contour of all surfaces represented. See 37 CFR 1.152. This is of particular importance in the showing of three (3) dimensional articles where it is necessary to delineate plane, concave, convex, raised, and/or depressed surfaces of the subject matter, and to distinguish between open and closed areas. Solid black surface shading is not permitted except when used to represent the color black as well as color contrast.

III. BROKEN LINES

The two most common uses of broken lines are to disclose the environment related to the claimed design and to define the bounds of the claim. Structure that is not part of the claimed design, but is considered necessary to show the environment in which the design is associated, may be represented in the drawing by broken lines. This includes any portion of an article in which the design is embodied or applied to that is not considered part of the claimed design. *In re Zahn*, 617 F.2d 261, 204 USPQ 988 (CCPA 1980). **>Unclaimed subject matter may be shown in broken lines for the purpose of illustrating the environment in which the article embodying the design is used. Unclaimed subject matter must be described as forming no part of the claimed design or of a specified embodiment thereof.< A boundary line may be shown in broken lines if it is not intended to form part of the claimed design. Applicant may choose to define the bounds of a claimed design with broken lines when the boundary does not exist in reality in the article embodying the design. It would be understood that the

claimed design extends to the boundary but does not include the boundary. Where no boundary line is shown in a design application as originally filed, but it is clear from the design specification that the boundary of the claimed design is a straight broken line connecting the ends of existing full lines defining the claimed design, applicant may amend the drawing(s) to add a straight broken line connecting the ends of existing full lines defining the claimed subject matter. Any broken line boundary other than a straight broken line may constitute new matter prohibited by 35 U.S.C. 132 and 37 CFR 1.121(f).

However, broken lines are not permitted for the purpose of indicating that a portion of an article is of less importance in the design. *In re Blum*, 374 F.2d 904, 153 USPQ 177 (CCPA 1967). Broken lines may not be used to show hidden planes and surfaces which cannot be seen through opaque materials. The use of broken lines indicates that the environmental structure or the portion of the article depicted in broken lines forms no part of the design, and is not to indicate the relative importance of parts of a design.

In general, when broken lines are used, they should not intrude upon or cross the showing of the claimed design and should not be of heavier weight than the lines used in depicting the claimed design. When broken lines cross over the full line showing of the claimed design and are defined as showing environment, it is understood that the surface which lies beneath the broken lines is part of the claimed design. When the broken lines crossing over the design are defined as boundaries, it is understood that the area within the broken lines is not part of the claimed design. Therefore, when broken lines are used which cross over the full line showing of the design, it is critical that the description of the broken lines in the specification explicitly identifies their purpose so that the scope of the claim is clear. As it is possible that broken lines with different purposes may be included in a single application, the description must make a visual distinction between the two purposes; such as --The broken lines immediately adjacent the shaded areas represent the bounds of the claimed design while all other broken lines are directed to environment and are for illustrative purposes only; the broken lines form no part of the claimed design.-- Where a broken line showing of environmental structure must necessarily cross or intrude upon the representation of the claimed design and obscures a clear understanding of the design, such an illustration should be included as a separate figure in addition to the other figures which fully disclose the subject matter of the design. Further, surface shading should not be used on unclaimed subject matter shown in broken lines to avoid confusion as to the scope of the claim.

The following form paragraphs may be used, where appropriate, to notify applicant regarding the use of broken lines in the drawings.

¶ *15.50 Design Claimed Shown in Full Lines*

The ornamental design which is being claimed must be shown in solid lines in the drawing. Dotted lines for the purpose of indicating unimportant or immaterial features of the design are not permitted. There are no portions of a claimed design which are immaterial or unimportant. See *In re Blum*, 374 F.2d 904, 153 USPQ 177 (CCPA 1967) and *In re Zahn*, 617 F.2d 261, 204 USPQ 988 (CCPA 1980).

¶ *15.50.01 Use of Broken Lines in Drawing*

Environmental structure may be illustrated by broken lines in the drawing if clearly designated as environment in the specification. See 37 CFR 1.152 and MPEP § 1503.02, subsection III.

**>

¶ *15.50.02 Description of Broken Lines*

The following statement must be used to describe the broken lines on the drawing (MPEP § 1503.02, subsection III):

-- The broken line showing of **[1]** is for the purpose of illustrating **[2]** and forms no part of the claimed design. --

The above statement **[3]** inserted in the specification preceding the claim.

Examiner Note:

1. In bracket 1, insert name of structure.
2. In bracket 2, insert --portions of the "article"-- or --environmental structure--.
3. In bracket 3, insert --must be-- or --has been--.

<

¶ *15.50.03 Objectionable Use of Broken Lines In Drawings*

Dotted lines or broken lines used for environmental structure should not cross or intrude upon the representation of the claimed design for which design protection is sought. Such dotted lines may obscure the claimed design and render the disclosure indefinite (35 U.S.C. 112).

¶ *15.50.04 Proper Drawing Disclosure With Use of Broken Lines*

Where broken lines showing environmental structure obscure the full line disclosure of the claimed design, a separate figure showing the broken lines must be included in the drawing in addi-

tion to the figures showing only claimed subject matter, 35 U.S.C. 112, first paragraph.

¶ *15.50.05 Description of Broken Lines as Boundary of Design*

The following statement must be used to describe the broken line boundary of a design (MPEP § 1503.02, subsection III):

-- The broken line(s) which define the bounds of the claimed design form no part thereof.--

IV. SURFACE TREATMENT

The ornamental appearance of a design for an article includes its shape and configuration as well as any indicia, contrasting color or materials, graphic representations, or other ornamentation applied to the article ("surface treatment"). Surface treatment must be applied to or embodied in an article of manufacture. Surface treatment, *per se* (i.e., not applied to or embodied in a specific article of manufacture), is not proper subject matter for a design patent under 35 U.S.C. 171. Surface treatment may either be disclosed with the article to which it is applied or in which it is embodied and must be shown in full lines or in broken lines (if unclaimed) to meet the statutory requirement. See MPEP § 1504.01. The guidelines that apply for disclosing computer-generated icons apply equally to all types of surface treatment. See MPEP § 1504.01(a).

A disclosure of surface treatment in a design drawing or photograph will normally be considered as *prima facie* evidence that the inventor considered the surface treatment shown as an integral part of the claimed design. An amendment canceling two-dimensional surface treatment or reducing it to broken lines will be permitted if it is clear from the application that applicant had possession of the underlying configuration of the basic design without the surface treatment at the time of filing of the application. See *In re Daniels,* 144 F.3d 1452, 1456-57, 46 USPQ2d 1788, 1790 (Fed. Cir. 1998). Applicant may remove surface treatment shown in a drawing or photograph of a design without such removal being treated as new matter, provided that the surface treatment does not obscure or override the underlying design. The removal of three-dimensional surface treatment that is an integral part of the configuration of the claimed design, for example, removal of beading, grooves, and ribs, will introduce prohibited new matter as the underlying configuration revealed by this amendment would not be apparent in the application as originally filed. See MPEP § 1504.04, subsection II.

V. PHOTOGRAPHS AND COLOR DRAWINGS

Drawings are normally required to be submitted in black ink on white paper. See 37 CFR 1.84(a)(1). Photographs are acceptable only in applications in which the invention is not capable of being illustrated in an ink drawing or where the invention is shown more clearly in a photograph (e.g., photographs of ornamental effects are acceptable). See also 37 CFR 1.81(c) and 1.83(c), and MPEP § 608.02.

Photographs submitted in lieu of ink drawings must comply with 37 CFR 1.84(b). Only one set of black and white photographs is required. Color photographs and color drawings may be submitted in design applications if filed with a petition under 37 CFR 1.84(a)(2). Petitions to accept color photographs or color drawings will be considered by the Primary Examiners as delegated by the TC Director. A grantable petition under 37 CFR 1.84(a)(2) must explain that color drawings or color photographs are necessary because color is an integral part of the claimed design. Any other explanation as to why color drawings or color photographs are necessary will normally not be acceptable. A grantable petition must also be accompanied by: (1) the fee set forth in 37 CFR 1.17(h); (2) three sets of the color photographs or color drawings; and (3) an amendment to the specification inserting the following statement --The file of this patent contains at least one drawing/photograph executed in color. Copies of this patent with color drawing(s)/photograph(s) will be provided by the Office upon request and payment of the necessary fee.-- See 37 CFR 1.84(a)(2)(*>iii<) and MPEP § 608.02. ** If the photographs are not of sufficient quality so that all details in the photographs are reproducible, this will form the basis of subsequent objection to the quality of the photographic disclosure. No application will be issued until objections directed to the quality of the photographic disclosure have been resolved and acceptable photographs have been submitted and approved by the examiner. If the details, appearance and shape of all the features and portions of the design are not clearly disclosed in the photographs, this would form the basis of a rejection of the

claim under 35 U.S.C. 112, first and second paragraphs, as nonenabling and indefinite.

Photographs and ink drawings must not be combined in a formal submission of the visual disclosure of the claimed design in one application. The introduction of both photographs and ink drawings in a design application would result in a high probability of inconsistencies between corresponding elements on the ink drawings as compared with the photographs.

When filing informal photographs or informal drawings with the original application, a disclaimer included in the specification or on the photographs themselves may be used to disclaim any surface ornamentation, logos, written matter, etc. which form no part of the claimed design. See also MPEP § 1504.04, subsection II.

Color photographs and color drawings may be submitted in design applications if filed with a petition under 37 CFR 1.84(a)(2). Color may also be shown in pen and ink drawings by lining the surfaces of the design for color in accordance with the symbols in MPEP § 608.02. If the formal drawing in an application is lined for color, the following statement should be inserted in the specification for clarity and to avoid possible confusion that the lining may be surface treatment --The drawing is lined for color.-- However, lining a surface for color may interfere with a clear showing of the design as required by 35 U.S.C. 112, first paragraph, as surface shading cannot be used to define the contours of the design.

If color photographs or color drawings are filed with the original application, color will be considered an integral part of the disclosed and claimed design. The omission of color in later filed formal photographs or drawings will be permitted if it is clear from the application that applicant had possession of the underlying configuration of the basic design without the color at the time of filing of the application. See *In re Daniels*, 144 F.3d 1452, 1456-57, 46 USPQ2d 1788, 1790 (Fed. Cir. 1998) and MPEP 1504.04, subsection II. Note also 37 CFR 1.152, which requires that the disclosure in formal photographs be limited to the design for the article claimed.

**>

¶ *15.05.041 Informal Color Drawing(s)/Photograph(s) Submitted*

Informal color photographs or drawings have been submitted for the purposes of obtaining a filing date. When formal drawings are submitted, any showing of color in a black and white drawing is limited to the symbols used to line a surface to show color (MPEP § 608.02). Lining entire surfaces of a design to show color(s) may interfere with a clear showing of the design as required by 35 U.S.C. 112 because surface shading cannot be used simultaneously to define the contours of those surfaces. However, a surface may be partially lined for color with a description that the color extends across the entire surface; this technique would allow for the use of shading on the rest of the surface showing the contours of the design (37 CFR 1.152). In the alternative, a separate view, properly shaded to show the contours of the design but omitting the color(s), may be submitted if identified as shown only for clarity of illustration.

In any drawing lined for color, the following descriptive statement must be inserted in the specification (the specific colors may be identified for clarity):

--The drawing is lined for color.--

However, some designs disclosed in informal color photographs/drawings cannot be depicted in black and white drawings lined for color. For example, a design may include multiple shades of a single color which cannot be accurately represented by the single symbol for a specific color. Or, the color may be a shade other than a true primary or secondary color as represented by the drafting symbols and lining the drawing with one of the drafting symbols would not be an exact representation of the design as originally disclosed. In these situations, applicant may file a petition to accept formal color drawings or color photographs under 37 CFR 1.84(a)(2).

<

¶ *15.45 Color Photographs/Drawings As Informal Drawings*

For filing date purposes, in those design patent applications containing color photographs/drawings contrary to the requirement for ink drawings or black and white photographs, the Office of Initial Patent Examination has been authorized to construe the color photographs/drawings as informal drawings rather than to hold the applications incomplete as filed. By so doing, the Patent and Trademark Office can accept the applications without requiring applicants to file petitions to obtain the original deposit date as the filing date. However, color photographs or color drawings are not permitted in design applications in the absence of a grantable petition pursuant to 37 CFR 1.84(a)(2). Before the color photographs or color drawings in this application can be treated as formal drawings, applicant must submit **[1]**.

Examiner Note:

In bracket 1, insert --a petition--, --the fee--, --statement in the specification--, --explanation of why color disclosure is neces-

sary--, and -- three full sets of color photographs or color drawings--.

1504 Examination [R-2]

In design patent applications, ornamentality, novelty*>,< nonobviousness >enablement and definiteness< are necessary prerequisites to the grant of a patent. The inventive novelty or unobviousness resides in the ornamental shape or configuration of the article in which the design is embodied or the surface ornamentation which is applied to or embodied in the design.

Novelty and nonobviousness of a design claim must generally be determined by a search in the pertinent design classes. It is also mandatory that the search be extended to the mechanical classes encompassing inventions of the same general type. Catalogs and trade journals >as well as available foreign patent databases< are also to be consulted.

If the examiner determines that the claim of the design patent application does not satisfy the statutory requirements, the examiner will set forth in detail, and may additionally summarize, the basis for all rejections in an Official action. *>If a reply to an Office action overcomes a rejection either by way of an amendment to the claim or by providing convincing arguments that the rejection should be withdrawn, that rejection must be indicated as withdrawn in the next Office action, unless such action is a notice of allowability. Likewise, any amendment to the specification or claim, or new drawing or drawing correction submitted in reply to an objection or objections in an Office action must be acknowledged in the next Office action, unless such action is a notice of allowability. When< an examiner determines that the claim in a design application is patentable under all statutory requirements, but formal matters still need to be addressed and corrected prior to allowance, an *Ex parte Quayle* action will be sent to applicant indicating allowability of the claim and identifying the necessary corrections.

¶ *15.19.01 Summary Statement of Rejections*

The claim stands rejected under **[1]**.

Examiner Note:

1. Use as summary statement of rejection(s) in Office action.

2. In bracket 1, insert appropriate basis for rejection, i.e., statutory provisions, etc.

¶ *15.58 Claimed Design Is Patentable (Ex parte Quayle Actions)*

The claimed design is patentable over the references cited.

¶ *15.72 Quayle Action*

This application is in condition for allowance except for the following formal matters: **[1]**.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire TWO MONTHS from the mailing date of this letter.

>If it is determined that a rejection of the claim should be given after a reply to a Quayle action, the indication of allowability set forth in the previous action must be withdrawn and prosecution reopened using the following form paragraph:

¶ *15.90 Indication of allowability withdrawn*

The indication of allowability set forth in the previous action is withdrawn and prosecution is reopened in view of the following new ground of rejection.

<

With respect to *pro se* design applications, the examiner should notify applicant in the first Office action that it may be desirable for applicant to employ the services of a registered patent attorney or agent to prosecute the application. Applicant should also be notified that the U.S. Patent and Trademark Office cannot aid in the selection of an attorney or agent. If it appears that patentable subject matter is present and the disclosure of the claimed design complies with the requirements of 35 U.S.C.112, the examiner should include a copy of the "Guide To Filing A Design Patent Application" with the first Office action and notify applicant that it may be desirable to employ the services of a professional patent draftsperson familiar with design practice to prepare the formal drawings. Applicant should also be notified that the U.S. Patent and Trademark Office cannot aid in the selection of a draftsperson. The following form paragraph, where appropriate, may be used.

¶ *15.66 Employ Services of Patent Attorney or Agent (Design Application Only)*

As the value of a design patent is largely dependent upon the skillful preparation of the drawings and specification, applicant might consider it desirable to employ the services of a registered patent attorney or agent. The U.S. Patent and Trademark Office cannot aid in the selection of an attorney or agent.

Applicant is advised of the availability of the publication "Attorneys and Agents Registered to Practice Before the U.S. Patent and Trademark Office." This publication is for sale by the

Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

¶ *15.66.01 Employ Services of Professional Patent Draftsperson (Design Application Only)*

As the value of a design patent is largely dependent upon the skillful preparation of the drawings, applicant might consider it desirable to employ the services of a professional patent draftsperson familiar with design practice. The U.S. Patent and Trademark Office cannot aid in the selection of a draftsperson.

Examiner Note:

This form paragraph should only be used in *pro se* applications where it appears that patentable subject matter is present and the disclosure of the claimed design complies with the requirements of 35 U.S.C. 112.

1504.01 Statutory Subject Matter for Designs

35 U.S.C. 171. Patents for designs.

Whoever invents any new, original, and ornamental design for an article of manufacture may obtain a patent therefor, subject to the conditions and requirements of this title.

The provisions of this title relating to patents for inventions shall apply to patents for designs, except as otherwise provided.

The language "new, original and ornamental design for an article of manufacture" set forth in 35 U.S.C. 171 has been interpreted by the case law to include at least three kinds of designs:

(A) a design for an ornament, impression, print, or picture applied to or embodied in an article of manufacture (surface indicia);

(B) a design for the shape or configuration of an article of manufacture; and

(C) a combination of the first two categories.

See *In re Schnell*, 46 F.2d 203, 8 USPQ 19 (CCPA 1931); *Ex parte Donaldson*, 26 USPQ2d 1250 (Bd. Pat. App. & Int. 1992).

A picture standing alone is not patentable under 35 U.S.C. 171. The factor which distinguishes statutory design subject matter from mere picture or ornamentation, *per se* (i.e., abstract design), is the embodiment of the design in an article of manufacture. Consistent with 35 U.S.C. 171, case law and USPTO practice, the design must be shown as applied to or embodied in an article of manufacture.

A claim to a picture, print, impression, etc. *per se*, that is not applied to or embodied in an article of manufacture should be rejected under 35 U.S.C. 171 as directed to nonstatutory subject matter. The following paragraphs may be used.

¶ *15.07.01 Statutory Basis, 35 U.S.C. 171*

The following is a quotation of 35 U.S.C. 171:

> Whoever invents any new, original, and ornamental design for an article of manufacture may obtain a patent therefor, subject to the conditions and requirements of this title.
>
> The provisions of this title relating to patents for inventions shall apply to patents for designs, except as otherwise provided.

¶ *15.09 35 U.S.C. 171 Rejection*

The claim is rejected under 35 U.S.C. 171 as directed to nonstatutory subject matter because the design is not shown embodied in or applied to an article.

Examiner Note:

This rejection should be used when the claim is directed to surface treatment which is not shown with an article in either full or broken lines.

¶ *15.44 Design Inseparable From Article to Which Applied*

Design is inseparable from the article to which it is applied, and cannot exist alone merely as a scheme of ornamentation. It must be a definite preconceived thing, capable of reproduction, and not merely the chance result of a method or of a combination of functional elements (35 U.S.C. 171; 35 U.S.C. 112, first and second paragraphs). See *Blisscraft of Hollywood v. United Plastics Co.*, 189 F. Supp. 333, 127 USPQ 452 (S.D.N.Y. 1960), 294 F.2d 694, 131 USPQ 55 (2d Cir. 1961).

Form paragraphs 15.38 and 15.40 may be used in a second or subsequent action, where appropriate (see MPEP § 1504.02).

1504.01(a) Computer-Generated Icons [R-5]

To be directed to statutory subject matter, design applications for computer-generated icons must comply with the "article of manufacture" requirement of 35 U.S.C. 171.

I. GUIDELINES FOR EXAMINATION OF DESIGN PATENT APPLICATIONS FOR COMPUTER-GENERATED ICONS

The following guidelines have been developed to assist USPTO personnel in determining whether design patent applications for computer-generated icons comply with the "article of manufacture" requirement of 35 U.S.C. 171.

A. General Principle Governing Compliance With the "Article of Manufacture" Requirement

Computer-generated icons, such as full screen displays and individual icons, are 2-dimensional images which alone are surface ornamentation. See, e.g., *Ex parte Strijland*, 26 USPQ2d 1259 (Bd. Pat. App. & Int. 1992) (computer-generated icon alone is merely surface ornamentation). The USPTO considers designs for computer-generated icons embodied in articles of manufacture to be statutory subject matter eligible for design patent protection under 35 U.S.C. 171. Thus, if an application claims a computer-generated icon shown on a computer screen, monitor, other display panel, or a portion thereof, the claim complies with the "article of manufacture" requirement of 35 U.S.C. 171. Since a patentable design is inseparable from the object to which it is applied and cannot exist alone merely as a scheme of surface ornamentation, a computer-generated icon must be embodied in a computer screen, monitor, other display panel, or portion thereof, to satisfy 35 U.S.C. 171. See MPEP § 1502.

"We do not see that the dependence of the existence of a design on something outside itself is a reason for holding it is not a design 'for an article of manufacture.' " *In re Hruby*, 373 F.2d 997, 1001, 153 USPQ 61, 66 (CCPA 1967) (design of water fountain patentable design for an article of manufacture). The dependence of a computer-generated icon on a central processing unit and computer program for its existence itself is not a reason for holding that the design is not for an article of manufacture.

B. Procedures for Evaluating Whether Design Patent Applications Drawn to Computer-Generated Icons Comply With the "Article of Manufacture" Requirement

USPTO personnel shall adhere to the following procedures when reviewing design patent applications drawn to computer-generated icons for compliance with the "article of manufacture" requirement of 35 U.S.C. 171.

(A) Read the entire disclosure to determine what the applicant claims as the design and to determine whether the design is embodied in an article of manufacture. 37 CFR 1.71 and 1.152-1.154.

Since the claim must be in formal terms to the design "as shown, or as shown and described," the drawing provides the best description of the claim. 37 CFR 1.153.

(1) Review the drawing to determine whether a computer screen, monitor, other display panel, or portion thereof, is shown. 37 CFR 1.152.

Although a computer-generated icon may be embodied in only a portion of a computer screen, monitor, or other display panel, the drawing "must contain a sufficient number of views to constitute a complete disclosure of the appearance of the article." 37 CFR 1.152. In addition, the drawing must comply with 37 CFR 1.84.

(2) Review the title to determine whether it clearly describes the claimed subject matter. 37 CFR 1.153.

The following titles do not adequately describe a design for an article of manufacture under 35 U.S.C. 171: "computer icon"; or "icon." On the other hand, the following titles do adequately describe a design for an article of manufacture under 35 U.S.C. 171: "computer screen with an icon"; "display panel with a computer icon"; "portion of a computer screen with an icon image"; "portion of a display panel with a computer icon image"; or "portion of a monitor displayed with a computer icon image."

(3) Review the specification to determine whether a characteristic feature statement is present. 37 CFR 1.71. If a characteristic feature statement is present, determine whether it describes the claimed subject matter as a computer-generated icon embodied in a computer screen, monitor, other display panel, or portion thereof. See *McGrady v. Aspenglas Corp.*, 487 F.2d 859, 208 USPQ 242 (S.D.N.Y. 1980) (descriptive statement in design patent application narrows claim scope).

(B) If the drawing does <u>not</u> depict a computer-generated icon embodied in a computer screen, monitor, other display panel, or a portion thereof, in either solid or broken lines, reject the claimed design under 35 U.S.C. 171 for failing to comply with the article of manufacture requirement.

(1) If the disclosure as a whole does <u>not</u> suggest or describe the claimed subject matter as a computer-generated icon embodied in a computer screen, monitor, other display panel, or portion thereof, indicate that:

(a) The claim is fatally defective under 35 U.S.C. 171; and

(b) Amendments to the written description, drawings and/or claim attempting to overcome the rejection will ordinarily be entered, however, any new matter will be required to be canceled from the written description, drawings and/or claims. If new matter is added, the claim should be rejected under 35 U.S.C. 112, first paragraph.

(2) If the disclosure as a whole suggests or describes the claimed subject matter as a computer-generated icon embodied in a computer screen, monitor, other display panel, or portion thereof, indicate that the drawing may be amended to overcome the rejection under 35 U.S.C. 171. Suggest amendments which would bring the claim into compliance with 35 U.S.C. 171.

(C) Indicate all objections to the disclosure for failure to comply with the formal requirements of the Rules of Practice in Patent Cases. 37 CFR 1.71, 1.81-1.85, and 1.152-1.154. Suggest amendments which would bring the disclosure into compliance with the formal requirements of the Rules of Practice in Patent Cases.

(D) Upon reply by applicant:

(1) Enter any amendments; and

(2) Review all arguments and the entire record, including any amendments, to determine whether the drawing, title, and specification clearly disclose a computer-generated icon embodied in a computer screen, monitor, other display panel, or portion thereof.

(E) If, by a preponderance of the evidence (see *In re Oetiker*, 977 F.2d 1443, 1445, 24 USPQ2d 1443, 1444 (Fed. Cir. 1992) ("After evidence or argument is submitted by the applicant in response, patentability is determined on the totality of the record, by a preponderance of evidence with due consideration to persuasiveness of argument.")), the applicant has established that the computer-generated icon is embodied in a computer screen, monitor, other display panel, or portion thereof, withdraw the rejection under 35 U.S.C. 171.

II. EFFECT OF THE GUIDELINES ON PENDING DESIGN APPLICATIONS DRAWN TO COMPUTER-GENERATED ICONS

USPTO personnel shall follow the procedures set forth above when examining design patent applications for computer-generated icons pending in the USPTO as of April 19, 1996.

III. TREATMENT OF TYPE FONTS

Traditionally, type fonts have been generated by solid blocks from which each letter or symbol was produced. Consequently, the USPTO has historically granted design patents drawn to type fonts. USPTO personnel should not reject claims for type fonts under 35 U.S.C. 171 for failure to comply with the "article of manufacture" requirement on the basis that more modern methods of typesetting, including computer-generation, do not require solid printing blocks.
>

IV. CHANGEABLE COMPUTER GENERATED ICONS

Computer generated icons including images that change in appearance during viewing may be the subject of a design claim. Such a claim may be shown in two or more views. The images are understood as viewed sequentially, no ornamental aspects are attributed to the process or period in which one image changes into another. A descriptive statement must be included in the specification describing the transitional nature of the design and making it clear that the scope of the claim does not include anything that is not shown. Examples of such a descriptive statement are as follows:

"The subject matter in this patent includes a process or period in which an image changes into another image. This process or period forms no part of the claimed design;" or

"The appearance of the transitional image sequentially transitions between the images shown in Figs. 1-8. The process or period in which one image transitions to another image forms no part of the claimed design;" or

"The appearance of the transitional image sequentially transitions between the images shown in Figs. 1-8. No ornamental aspects are associated with the process or period in which one image transitions to another image."<

1504.01(b) Design Comprising Multiple Articles or Multiple Parts

Embodied in a Single Article [R-5]

While the claimed design must be embodied in an article of manufacture as required by 35 U.S.C. 171, it may encompass multiple articles or multiple parts within that article. *Ex parte Gibson*, 20 USPQ 249 (Bd. App. 1933). **>When the design involves multiple articles, the title must identify a single entity of manufacture made up by the parts (e.g., set, pair, combination, unit, assembly). A descriptive statement should be included in the specification making it clear that the claim is directed to the collective appearance of the articles shown. If the separate parts are shown in a single view, the parts must be shown embraced by a bracket "}". The claim may also involve multiple parts of a single article, where the article is shown in broken lines and various parts are shown in solid lines. In this case, no bracket is needed.< See MPEP § 1503.01.

1504.01(c) Lack of Ornamentality [R-5]

I. FUNCTIONALITY VS. ORNAMENTALITY

An ornamental feature or design has been defined as one which was "created for the purpose of ornamenting" and cannot be the result or "merely a by-product" of functional or mechanical considerations. *In re Carletti*, 328 F.2d 1020, 140 USPQ 653, 654 (CCPA 1964); *Blisscraft of Hollywood v. United Plastic Co.*, 189 F. Supp. 333, 337, 127 USPQ 452, 454 (S.D.N.Y. 1960), *aff'd*, 294 F.2d 694, 131 USPQ 55 (2d Cir. 1961). It is clear that the ornamentality of the article must be the result of a conscious act by the inventor, as 35 U.S.C. 171 requires that a patent for a design be given only to "whoever *invents* any new, original, and ornamental design for an article of manufacture." Therefore, for a design to be ornamental within the requirements of 35 U.S.C. 171, it must be "created for the purpose of ornamenting." *In re Carletti*, 328 F.2d 1020, 1022, 140 USPQ 653, 654 (CCPA 1964).

To be patentable, a design must be "primarily ornamental." "In determining whether a design is *primarily functional or primarily ornamental* the claimed design is viewed in its entirety, for the ultimate question is not the functional or decorative aspect of each separate feature, but the overall appearance of the article, in determining whether the claimed design is dictated by the utilitarian purpose of the article." *L. A. Gear Inc. v. Thom McAn Shoe Co.*, 988 F.2d 1117, 1123, 25 USPQ2d 1913, 1917 (Fed. Cir. 1993). The court in *Norco Products, Inc. v. Mecca Development, Inc.*, 617 F.Supp. 1079, 1080, 227 USPQ 724, 725 (D. Conn. 1985), held that a "primarily functional invention is not patentable" as a design.

A determination of ornamentality is not a quantitative analysis based on the size of the ornamental feature or features but rather a determination based on their ornamental contribution to the design as a whole.

While ornamentality must be based on the entire design, "[i]n determining whether a design is primarily functional, the purposes of the particular elements of the design necessarily must be considered." *Power Controls Corp. v. Hybrinetics, Inc.*, 806 F.2d 234, 240, 231 USPQ 774, 778 (Fed. Cir. 1986). The court in *Smith v. M & B Sales & Manufacturing*, 13 USPQ2d 2002, 2004 (N. D. Cal. 1990), states that if "significant decisions about how to put it [the item] together and present it in the marketplace were informed by primarily ornamental considerations", this information may establish the ornamentality of a design.

"However, a distinction exists between the *functionality of an article* or features thereof and the *functionality of the particular design of such article* or features thereof that perform a function." *Avia Group International Inc. v. L. A. Gear California Inc.*, 853 F.2d 1557, 1563, 7 USPQ2d 1548, 1553 (Fed. Cir. 1988). The distinction must be maintained between the ornamental design and the article in which the design is embodied. The design for the article cannot be assumed to lack ornamentality merely because the article of manufacture would seem to be primarily functional.

II. ESTABLISHING A *PRIMA FACIE* BASIS FOR REJECTIONS UNDER 35 U.S.C. 171

To properly reject a claimed design under 35 U.S.C. 171 on the basis of a lack of ornamentality, an examiner must make a *prima facie* showing that the claimed design lacks ornamentality and provide a sufficient evidentiary basis for factual assumptions relied upon in such showing. The court in *In re Oetiker*, 977 F.2d 1443, 1445, 24 USPQ2d 1443, 1444 (Fed. Cir.

1992), stated that "the examiner bears the initial burden, on review of the prior art or on any other ground, of presenting a *prima facie* case of unpatentability."

The proper evidentiary basis for a rejection under 35 U.S.C. 171 that a claim is lacking in ornamentality is *an evaluation of the appearance of the design itself*. The examiner's knowledge of the art, a reply to a letter of inquiry, a brochure emphasizing the functional/mechanical features of the design, the specification of an analogous utility patent (the applicant's or another inventor), or information provided in the specification may be used to *supplement* the analysis of the design. If a design is embodied in a specific mechanical article, the analysis that the design lacks ornamentality because its appearance is dictated by functional requirements should be supported by reference to utility patents or some other source of information about the function of the design. If the design is embodied in an article that has a more general use, such as a clip, the analysis and explanation as to why the design lacks ornamentality should be detailed and specific. The examiner's contention that the specific appearance of the claimed design lacks ornamentality may be supported by the holding of the court in *In re Carletti et al.*, 328 F.2d 1020, 140 USPQ 653 (CCPA 1964), that a design to be patentable must be "created for the purpose of ornamenting" the article in which it is embodied. The presence or lack of ornamentality must be made on a case by case basis.

Knowledge that the article would be hidden during its end use based on the examiner's experience in a given art or information that may have been submitted in the application itself would **not** be considered *prima facie* evidence of the functional nature of the design. See *Seiko Epson Corp v. Nu-Kote Int'l Inc.*, 190 F.3d 1360, 52 USPQ2d 1011 (Fed. Cir. 1999). "Visibility during an article's 'normal use' is not a statutory requirement of §171, but rather a guideline for courts to employ in determining whether the patented features are 'ornamental'." *Larson v. Classic Corp.*, 683 F. Supp. 1202, 7 USPQ2d 1747 (N.D. Ill. 1988). If there is sufficient evidence to show that a specific design "is clearly intended to be noticed during the process of sale and equally clearly intended to be completely hidden from view in the final use," it is not necessary that a rejection be made under 35 U.S.C. 171. *In re Webb*, 916 F.2d 1553, 1558, 16 USPQ2d 1433, 1436 (Fed. Cir. 1990). The mere fact that an article would be hidden during its ultimate end use is **not** the basis for a rejection under 35 U.S.C. 171, but this information provides additional evidence to be used in support of the contention that the design lacks ornamentality. The only basis for rejecting a claim under 35 U.S.C. 171 as lacking in ornamentality is **an evaluation of the design itself** in light of additional information, such as that identified above.

Examples of proper evidentiary basis for a rejection under 35 U.S.C. 171 that a claim is lacking in ornamentality would be: (A) common knowledge in the art; (B) the appearance of the design itself; (C) the specification of a related utility patent; or (D) information provided in the specification.

A rejection under 35 U.S.C. 171 for lack of ornamentality must be supported by evidence and rejections should not be made in the absence of such evidence.

III. REJECTIONS MADE UNDER 35 U.S.C. 171

Rejections under 35 U.S.C. 171 for lack of ornamentality based on a proper *prima facie* showing fall into two categories:

(A) a design visible in its ultimate end use which is primarily functional based on the evidence of record; or

(B) a design not visible in its normal and intended use as evidence that its appearance is not a matter of concern. *In re Stevens*, 173 F.2d 1015, 81 USPQ 362 (CCPA 1949); *In re Webb*, 916 F.2d 1553, 1558, 16 USPQ2d 1433, 1436 (Fed. Cir. 1990).

When the examiner has established a proper *prima facie* case of lack of ornamentality, "the burden of coming forward with evidence or argument shifts to the applicant." *In re Oetiker*, 977 F.2d 1443, 1445, 24 USPQ2d 1443, 1444 (Fed. Cir. 1992). A rejection under 35 U.S.C. 171 for lack of ornamentality may be overcome by providing evidence from the inventor himself or a representative of the company that commissioned the design that there was an intent to create a design for the "purpose of ornamenting." *In re Carletti*, 328 F.2d 1020, 1022, 140 USPQ 653, 654 (CCPA 1964). Attorney's arguments are not a substitute for evidence. Once a proper *prima facie* case of lack of ornamentality is established by the examiner, it is incumbent upon applicant to come

forth with countervailing evidence to rebut the rejection made by the examiner. ** *Ex parte Webb*, 30 USPQ2d 1064, 1067-68 (Bd. Pat. App. & Int. 1993). Form paragraph 15.08 or 15.08.01, where appropriate, may be used to reject a claim under 35 U.S.C. 171 for lack of ornamentality.
**>

¶ *15.08 Lack of Ornamentality (Article Visible in End Use)*

The claim is rejected under 35 U.S.C. 171 as being directed to nonstatutory subject matter in that it lacks ornamentality. To be patentable, a design must be "created for the purpose of ornamenting" the article in which it is embodied. See *In re Carletti*, 328 F.2d 1020, 140 USPQ 653 (CCPA 1964).

The following evidence establishes a *prima facie* case of a lack of ornamentality: **[1]**

Evidence that demonstrates the design is ornamental may be submitted from the applicant in the form of an affidavit or declaration under 37 CFR 1.132:

(a) stating the ornamental considerations which entered into the design of the article; and

(b) identifying what aspects of the design meet those considerations.

An affidavit or declaration under 37 CFR 1.132 may also be submitted from a representative of the company, which commissioned the design, to establish the ornamentality of the design by stating the motivating factors behind the creation of the design.

Attorney arguments are not a substitute for evidence to establish the ornamentality of the claim. *Ex parte Webb*, 30 USPQ2d 1064, 1067-68 (Bd. Pat. App. & Inter. 1993).

Examiner Note:

In bracket 1, insert source of evidence of lack of ornamentality, for example, a utility patent, a brochure, a response to a letter of inquiry, etc.

¶ *15.08.01 Lack of Ornamentality (Article Not Visible in its Normal and Intended Use)*

The claim is rejected under 35 U.S.C. 171 as being directed to nonstatutory subject matter in that the design lacks ornamentality since it appears there is no period in the commercial life of applicant's **[1]** when its ornamentality may be a matter of concern. *In re Webb*, 916 F.2d 1553, 1558, 16 USPQ2d 1433, 1436 (Fed. Cir. 1990); *In re Stevens*, 173 F.2d 1015, 81 USPQ 362 (CCPA 1949).

The following evidence establishes a *prima facie* case of lack of ornamentality: **[2]**

In order to overcome this rejection, two types of evidence are needed:

(1) Evidence to demonstrate there is some period in the commercial life of the article embodying the claimed design when its ornamentality is a matter of concern. Such evidence may include a showing of a period in the life of the design when the ornamentality of the article may be a matter of concern to a purchaser during the process of sale. An example of this type of evidence is a sample of sales literature such as an advertisement or a catalog sheet which presents the appearance of the article as ornamental and not merely as a means of identification or instruction; and

(2) Evidence to demonstrate the design is ornamental. This type of evidence should demonstate "thought of ornament" in the design and should be presented in the form of an affidavit or declaration under 37 CFR 1.132 from the applicant:

(a) stating the ornamental considerations which entered into the design of the article; and

(b) identifying what aspects of the design meet those considerations.

An affidavit or declaration under 37 CFR 1.132 may also be submitted from a representative of the company, which commissioned the design, to establish the ornamentality of the design by stating the motivating factors behind the creation of the design.

Attorney arguments are not a substitute for evidence to establish the ornamentality of the claim. *Ex parte Webb*, 30 USPQ2d 1064, 1067-68 (Bd. Pat. App. & Inter. 1993).

Examiner Note:

1. In bracket 1, insert the name of the article in which the design is embodied.
2. In bracket 2, insert source of evidence of the article's design being of no concern, for example, an analysis of a corresponding utility patent, a brochure, a response to a letter of inquiry, etc.

<

IV. >OVERCOMING A 35 U.S.C. 171 REJECTION BASED ON LACK OF ORNAMENTALITY

A rejection under 35 U.S.C. 171 based on lack of ornamentality may be overcome by the following:

(A) An affidavit or declaration under 37 CFR 1.132 submitted from the applicant or a representative of the company, which commissioned the design, explaining specifically and in depth, which features or area of the claimed design were created with:

(1) a concern for enhancing the saleable value or increasing the demand for the article. *Gorham Manufacturing Co. v. White*, 81 U.S. (14 Wall) 511 (1871), or

(2) a concern primarily for the esthetic appearance of the article;

(B) Advertisements which emphasize the ornamentality of the article embodying the claimed design may be submitted as evidence to rebut the rejection. See *Berry Sterling Corp. v. Pescor Plastics Inc.*, 122 F.3d 1452, 43 USPQ2d 1953 (Fed. Cir. 1997);

(C) Evidence that the appearance of the design is ornamental may be shown by distinctness from the prior art as well as an attempt to develop or to maintain consumer recognition of the article embodying

the design. *Seiko Epson Corp. v. Nu-Kote Int'l Inc*., 190 F.3d 1360, 52 USPQ2d 1011 (Fed. Cir. 1999);

(D) Evidence may be provided by a representative of the company, which commissioned the design, to establish the ornamentality of the design by stating the motivating factors behind the creation of the design;

(E) When the rejection asserts that the design is purely dictated by functional considerations, evidence may be presented showing possible alternative designs which could have served the same function indicating that the appearance of the claimed design was not purely dictated by function. *L.A. Gear Inc. v. Thom McAn Shoe Co.*, 988 F.2d 1117, 25 USPQ2d 1913 (Fed. Cir. 1993);

(F) When the rejection asserts no period in the commercial life of the article when its ornamentality may be a matter of concern, the applicant must establish that the "article's design is a 'matter of concern' because of the nature of its visibility at some point between its manufacture or assembly and its ultimate use." *In re Webb*, 916 F.2d 1553, 1558, 16 USPQ2d 1433, 1436 (Fed. Cir. 1990).

Attorney arguments are not a substitute for evidence to establish the ornamentality of the claim. *Ex parte Webb*, 30 USPQ2d 1064, 1068 (Bd. Pat. App. & Inter. 1993).

V. < EVALUATION OF EVIDENCE SUBMITTED TO OVERCOME A REJECTION UNDER 35 U.S.C. 171

In order to overcome a rejection of the claim under 35 U.S.C. 171 as lacking in ornamentality, applicant must provide evidence that he or she created the design claimed for the "purpose of ornamenting" as required by the court in *In re Carletti*, 328 F.2d 1020, 1022, 140 USPQ 653, 654 (CCPA 1964). **

The mere display of the article embodying the design at trade shows or its inclusion in catalogs is insufficient to establish ornamentality. *Ex parte Webb*, 30 USPQ2d 1064 (Bd. Pat. App. & Inter. 1993). There must be some clear and specific indication of the ornamentality of the design in this evidence for it to be given probative weight in overcoming the *prima facie* lack of ornamentality. *Berry Sterling Corp. v. Pescor Plastics Inc.*, 122 F.3d 1452, 43 USPQ2d 1953 (Fed. Cir. 1997).

The examiner must * evaluate * evidence >submitted by the applicant< in light of the design as a whole to decide if the claim is primarily ornamental. It is important to be aware that this determination is not based on the size or amount of the features identified as ornamental but rather on their influence on the overall appearance of the design.

In a rejection of a claim under 35 U.S.C. 171 in which some of the evidentiary basis for the rejection is that the design would be hidden during its end use, the applicant must establish that the "article's design is a 'matter of concern' because of the nature of its visibility at some point between its manufacture or assembly and its ultimate use." *In re Webb*, 916 F.2d 1553, 1558, 16 USPQ2d 1433, 1436 (Fed. Cir. 1990). This concern may be shown by the submission of evidence that the appearance of the article was of concern during its period of commercial life by declarations from prospective/actual customers/users attesting that the ornamentality of the article was of concern to them. Unless applicant is directly involved with the sale of the design or works with users of the design, he or she cannot provide factual evidence as to the reasons for the purchase/selection of the article embodying the design.

Once applicant has proven that there is a period of visibility during which the ornamentality of the design is a "matter of concern," it is then necessary to determine whether the claimed design was primarily ornamental during that period. *Larson v. Classic Corp*., 683 F. Supp. 1202, 7 USPQ2d 1747 (N. D. Ill. 1988). The fact that a design would be visible during its commercial life is not sufficient evidence that the design was "created for the purpose of ornamenting" as required by the court in *In re Carletti*, 328 F.2d 1020, 1022, 140 USPQ 653, 654 (CCPA 1964). Examiners should follow the standard for determining ornamentality as outlined above.

"The possibility of encasing a heretofore concealed design element in a transparent cover for no reason other than to avoid this rule cannot avoid the visibility [guideline]... , lest it become meaningless." *Norco Products Inc. v. Mecca Development Inc.*, 617 F. Supp. 1079, 1081, 227 USPQ 724, 726 (D. Conn. 1985). Applicant cannot rely on mere possibilities to provide factual evidence of ornamentality for the claimed design.

The requirements for visibility of the design **and** that it was created for the "purpose of ornamenting" must be met for a rejection under 35 U.S.C. 171 to be overcome if the design would be hidden during its end use.

1504.01(d) Simulation

35 U.S.C. 171 requires that a design to be patentable be "original." Clearly, a design which simulates an existing object or person is not original as required by the statute. The Supreme Court in *Gorham Manufacturing Co. v. White*, 81 U.S. (14 Wall) 511 (1871), described a design as "the thing invented or produced, for which a patent is given." "The arbitrary chance selection of a form of a now well known and celebrated building, to be applied to toys, inkstands, paper - weights, etc. does not, in my opinion, evince the slightest exercise of invention...." *Bennage v. Phillippi*, 1876 C.D. 135, 9 O.G. 1159 (Comm'r Pat. 1876). This logic was reinforced by the CCPA in *In re Smith*, 25 USPQ 359, 360, 1935 C.D. 565, 566 (CCPA 1935), which stated that "to take a natural form, in a natural pose, ... does not constitute invention" when affirming the rejection of a claim to a baby doll. This premise was also applied in *In re Smith*, 25 USPQ 360, 362, 1935 C.D. 573, 575 (CCPA 1935), which held that a "baby doll simulating the natural features...of a baby without embodying some grotesqueness or departure from the natural form" is not patentable.

Therefore, a claim directed to a design for an article which simulates a well known or naturally occurring object or person should be rejected under 35 U.S.C. 171 as nonstatutory subject matter in that the claimed design lacks originality. Form paragraph 15.08.02 should be used. However, when a claim is rejected on this basis, examiners should provide evidence, if possible, of the appearance of the object, person or naturally occurring form in question so that a comparison may be made to the claimed design. Form paragraph 15.08.03 should be used. It would also be appropriate, if the examiner has prior art which anticipates or renders the claim obvious, to reject the claim under either 35 U.S.C. 102 or 103(a) concurrently. *In re Wise*, 340 F.2d 982, 144 USPQ 354 (CCPA 1965).

¶ *15.08.02 Simulation (Entire Article)*

The claim is rejected under 35 U.S.C. 171 as being directed to nonstatutory subject matter in that the design lacks originality. The design is merely simulating **[1]** which applicant himself did not invent. See *In re Smith*, 25 USPQ 359, 1935 C.D. 565 (CCPA 1935); *In re Smith*, 25 USPQ 360, 1935 C.D. 573 (CCPA 1935); and *Bennage* v. *Phillippi*, 1876 C.D. 135, 9 O.G. 1159.

Examiner Note:

1. In bracket 1, insert the name of the article or person being simulated, e.g., the White House, Marilyn Monroe, an animal which is not stylized or caricatured in any way, a rock or shell to be used as paperweight, etc.

2. This form paragraph should be followed by form paragraph 15.08.03 when evidence has been cited to show the article or person being simulated.

¶ *15.08.03 Explanation of evidence cited in support of simulation rejection*

Applicant's design has in no way departed from the natural appearance of **[1]**. This reference is not relied on in this rejection but is supplied merely as representative of the usual or typical appearance of **[2]** in order that the claim may be compared to that which it is simulating.

Examiner Note:

1. In bracket 1, insert name of article or person being simulated and source (patent, publication, etc.).

2. In bracket 2, insert name of article or person being simulated.

1504.01(e) Offensive Subject Matter

Design applications which disclose subject matter which could be deemed offensive to any race, religion, sex, ethnic group, or nationality, such as those which include caricatures or depictions, should be rejected as nonstatutory subject matter under 35 U.S.C. 171. See also MPEP § 608. Form paragraph 15.10 should be used.

¶ *15.10 Offensive Subject Matter*

The disclosure, and therefore the claim in this application, is rejected as being offensive and therefore improper subject matter for design patent protection under 35 U.S.C. 171. Such subject matter does not meet the statutory requirements of 35 U.S.C. 171. Moreover, since 37 CFR 1.3 proscribes the presentation of papers which are lacking in decorum and courtesy, and this includes depictions of caricatures in the disclosure, drawings, and/or a claim which might reasonably be considered offensive, such subject matter as presented herein is deemed to be clearly contrary to 37CFR 1.3. See MPEP § 608.

1504.02 Novelty [R-2]

35 U.S.C. 102. Conditions for patentability; novelty and loss of right to patent.

A person shall be entitled to a patent unless —

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for patent, or

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of the application for patent in the United States, or

(c) he has abandoned the invention, or

(d) the invention was first patented or caused to be patented, or was the subject of an inventor's certificate, by the applicant or his legal representatives or assigns in a foreign country prior to the date of the application for patent in this country on an application for patent or inventor's certificate filed more than twelve months before the filing of the application in the United States, or

**>

(e) the invention was described in — (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for the purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language; or<

(f) he did not himself invent the subject matter sought to be patented, or

(g)(1)during the course of an interference conducted under section 135 or section 291, another inventor involved therein establishes, to the extent permitted in section 104, that before such person's invention thereof the invention was made by such other inventor and not abandoned, suppressed, or concealed, or (2) before such person's invention thereof, the invention was made in this country by another inventor who had not abandoned, suppressed, or concealed it. In determining priority of invention under this subsection, there shall be considered not only the respective dates of conception and reduction to practice of the invention, but also the reasonable diligence of one who was first to conceive and last to reduce to practice, from a time prior to conception by the other.

35 U.S.C. 172. Right of priority.

The right of priority provided for by subsections (a) through (d) of section 119 of this title and the time specified in section 102(d) shall be six months in the case of designs. The right of priority provided for by section 119(e) of this title shall not apply to designs.

The standard for determining novelty under 35 U.S.C. 102 was set forth by the court in *In re Bartlett*, 300 F.2d 942, 133 USPQ 204 (CCPA 1962). "The degree of difference [from the prior art] required to establish novelty occurs when the average observer takes the new design for a different, and not a modified, already-existing design." 300 F.2d at 943, 133 USPQ at 205 (quoting Shoemaker, Patents For Designs, page 76). In design patent applications, the factual inquiry in determining anticipation over a prior art reference is the same as in utility patent applications. That is, the reference "must be identical in all material respects." *Hupp v. Siroflex of America Inc.*, 122 F.3d 1456, 43 USPQ2d 1887 (Fed. Cir. 1997).

The "average observer" test does not require that the claimed design and the prior art be from analogous arts when evaluating novelty. *In re Glavas*, 230 F.2d 447, 450, 109 USPQ 50, 52 (CCPA 1956). Insofar as the "average observer" under 35 U.S.C. 102 is not charged with knowledge of any art, the issue of analogousness of prior art need not be raised. This distinguishes 35 U.S.C. 102 from 35 U.S.C. 103(a) which requires determination of whether the claimed design would have been obvious to "a person of ordinary skill in the art."

When a claim is rejected under 35 U.S.C. 102 as being unpatentable over prior art, those features of the design which are functional and/or hidden during end use may not be relied upon to support patentability. *In re Cornwall*, 230 F.2d 447, 109 USPQ 57 (CCPA 1956); *Jones v. Progress Ind. Inc.*, 119 USPQ 92 (D. R.I. 1958). Further, in a rejection of a claim under 35 U.S.C. 102, mere differences in functional considerations do not negate a finding of anticipation when determining design patentability. *Black & Decker, Inc. v. Pittway Corp.*, 636 F.2d 1193, 231 USPQ 252 (N.D. Ill. 1986).

It is not necessary for the examiner to cite or apply prior art to show that functional and/or hidden features are old in the art as long as the examiner has properly relied on evidence to support the *prima facie* lack of ornamentality of these individual features. If applicant wishes to rely on functional or hidden features as a basis for patentability, the same standard for establishing ornamentality under 35 U.S.C. 171 must be applied before these features can be given any patentable weight. See MPEP § 1504.01(c).

In evaluating a statutory bar based on 35 U.S.C. 102(b), the experimental use exception to a statutory

bar for public use or sale (see MPEP § 2133.03(e)) does not usually apply for design patents. See *In re Mann*, 861 F.2d 1581, 8 USPQ2d 2030 (Fed. Cir. 1988). However, *Tone Brothers, Inc. v. Sysco Corp.*, 28 F.3d 1192, 1200, 31 USPQ2d 1321, 1326 (Fed. Cir. 1994) held that "experimentation directed to functional features of a product also containing an ornamental design may negate what otherwise would be considered a public use within the meaning of section 102(b)." See MPEP § 2133.03(e)(6).

Registration of a design abroad is considered to be equivalent to patenting under 35 U.S.C. 119(a)-(d) and 35 U.S.C. 102(d), whether or not the foreign grant is published. (See *Ex parte Lancaster,* 151 USPQ 713 (Bd. App. 1965); *Ex parte Marinissen*, 155 USPQ 528 (Bd. App. 1966); *Appeal No. 239-48, Decided April 30, 1965*, 151 USPQ 711, (Bd. App. 1965); *Ex parte Appeal decided September 3, 1968*, 866 O.G. 16 (Bd. App. 1966). The basis of this practice is that if the foreign applicant has received the protection offered in the foreign country, no matter what the protection is called ("patent," "Design Registration," etc.), if the United States application is timely filed, a claim for priority will vest. If, on the other hand, the U.S. application is not timely filed, a statutory bar arises under 35 U.S.C. 102(d) as modified by 35 U.S.C. 172. In order for the filing to be timely for priority purposes and to avoid possible statutory bars, the U.S. design patent application must be made within 6 months of the foreign filing. See also MPEP § 1504.10.

The laws of each foreign country vary in one or more respects.

The following table sets forth the dates on which design rights can be enforced in a foreign country (INID Code (24)) and thus, are also useable in a 35 U.S.C. 102(d) rejection as modified by 35 U.S.C. 172. It should be noted that in many countries the date of registration or grant is the filing date.

Country or Organization	Date(s) Which Can Also Be Used for 35 U.S.C. 102(d) Purposes[1] (INID Code (24))	Comment
AT-Austria	Protection starts on the date of publication of the design in the official gazette	
AU-Australia	Date of registration or grant which is the filing date	
BG-Bulgaria	Date of registration or grant which is the filing date	
BX-Benelux (Belgium, Luxembourg, and the Netherlands)	Date on which corresponding application became complete and regular according to the criteria set by the law	
CA-Canada	Date of registration or grant	
CH-Switzerland	Date of registration or grant which is the filing date	Minimum requirements: deposit application, object, and deposit fee
CL-Chile	Date of registration or grant	
CU-Cuba	Date of registration or grant which is the filing date	
CZ-Czech Republic	Date of registration or grant which is the filing date	
DE-Germany	Date of registration or grant	The industrial design right can be enforced by a court from the date of registration although it is in force earlier (as from the date of filing—as defined by law).
DK-Denmark	Date of registration or grant which is the filing date	
EG-Egypt	Date of registration or grant which is the filing date	
ES-Spain	Date of registration or grant	
FI-Finland	Date of registration or grant which is the filing date	
FR-France	Date of registration or grant which is the filing date	

Country or Organization	Date(s) Which Can Also Be Used for 35 U.S.C. 102(d) Purposes[1] (INID Code (24))	Comment
GB-United Kingdom	Date of registration or grant which is the filing date	Protection arises automatically under the Design Right provision when the design is created. Proof of the date of the design creation needs to be kept in case the design right is challenged. The protection available to designs can be enforced in the courts following the date of grant of the Certificate of Registration as of the date of registration which stems from the date of first filing of the design in the UK or, if a priority is claimed under the Convention, as another country.
HU-Hungary	Date of registration or grant	With retroactive effect as from the filing date
JP-Japan	Date of registration or grant	
KR-Republic of Korea	Date of registration or grant	
MA-Morocco	Date of registration or grant which is the filing date	
MC-Monaco	Date of registration or grant which is the filing date	Date of prior disclosure declared on deposit
NO-Norway	Date of registration or grant which is the filing date	
OA-African Intellectual Property Organization (OAPI) (Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Congo, Cote d`Ivoire, Gabon, Guinea, Mali, Mauritania, Niger, Senegal, and Togo)	Date of registration or grant which is the filing date	
PT-Portugal	Date of registration or grant	
RO-Romania	Date of registration or grant which is the filing date	
RU-Russian Federation	Date of registration or grant which is the filing date	

Country or Organization	Date(s) Which Can Also Be Used for 35 U.S.C. 102(d) Purposes[1] (INID Code (24))	Comment
SE-Sweden	Date of registration or grant	
TN-Tunisia	Date of registration or grant which is the filing date	
TT-Trinidad and Tobago	Date of registration or grant which is the filing date	
WO-World Intellectual Property Organization (WIPO)		Subject to Rule 14.2 of the Regulations (on defects), the International Bureau enters the international deposit in the International Register on the date on which it has in its possession the application together with the items required. Reproductions, samples, or models pursuant to Rule 12, and the prescribed fees.

[1]Based on information taken from the "Survey of Filing Procedures and Filing Requirements, as well as of Examination Methods and Publication Procedures, Relating to Industrial Designs" as adopted by the PCIPI Executive Coordination Committee of the World Intellectual Property Organization (WIPO) at its fifteenth session on November 25, 1994.

Rejections under 35 U.S.C. 102(d) as modified by 35 U.S.C. 172 should only be made when the examiner knows that the application for foreign registration/patent has actually issued before the U. S. filing date based on an application filed more than six (6) months prior to filing the application in the United States. If the grant of a registration/patent based on the foreign application is not evident from the record of the U. S. application or from information found within the preceding charts, then the statement below should be included in the first action on the merits of the application:

¶ *15.03.01 Foreign Filing More Than 6 Months Before U.S. Filing*

Acknowledgment is made of the **[1]** application identified in the declaration which was filed more than six months prior to the filing date of the present application. Applicant is reminded that if the **[2]** application matured into a form of patent protection before the filing date of the present application it would constitute a statutory bar to the issuance of a design patent in the United States under 35 U.S.C. 102(d) in view of 35 U.S.C. 172.

Examiner Note:

In brackets 1 and 2, insert the name of country where application was filed.

Form paragraphs for use in rejections under 35 U.S.C. 102 are set forth below.

¶ *15.11 35 U.S.C. 102(a) Rejection*

The claim is rejected under 35 U.S.C. 102(a) as being clearly anticipated by **[1]** because the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country before the invention thereof by the applicant for patent.

¶ *15.12 35 U.S.C. 102(b) Rejection*

The claim is rejected under 35 U.S.C. 102(b) as being clearly anticipated by **[1]** because the invention was patented or described in a printed publication in this or a foreign country, or in public use or on sale in this country more than one (1) year prior to the application for patent in the United States.

¶ *15.13 35 U.S.C. 102(c) Rejection*

The claim is rejected under 35 U.S.C. 102(c) because the invention has been abandoned.

¶ *15.14 35 U.S.C. 102(d)/172 Rejection*

The claim is rejected under 35 U.S.C. 102(d), as modified by 35 U.S.C. 172, as being clearly anticipated by **[1]** because the invention was first patented or caused to be patented, or was the subject of an inventor's certificate by the applicant, or his/her legal representatives or assigns in a foreign country prior to the date of the application for patent in this country on an application for patent or inventor's certificate filed more than six (6) months before the filing of the application in the United States.

¶ *15.15 35 U.S.C. 102(e) Rejection*

The claim is rejected under 35 U.S.C. 102(e) as being clearly anticipated by **[1]** because the invention was described in a patented or published application for patent by another filed in the United States before the invention thereof by the applicant for patent.

¶ *15.16 35 U.S.C. 102(f) Rejection*

The claim is rejected under 35 U.S.C. 102(f) because applicant did not himself invent the subject matter sought to be patented.

¶ *15.17 35 U.S.C. 102(g) Rejection*

The claim is rejected under 35 U.S.C. 102(g) because, before the applicant's invention thereof, the invention was made in this country by another who had not abandoned, suppressed or concealed it.

**>

¶ *15.24.05 Identical Claim: Common Assignee*

The claim is directed to the same invention as that of the claim of commonly assigned copending Application No. **[1]**. The issue of priority under 35 U.S.C. 102(g) and possibly 35 U.S.C. 102(f) of this single invention must be resolved. Since the U.S. Patent and Trademark Office normally will not institute an interference between applications or a patent and an application of common ownership (see MPEP § 2302), the assignee is required to state which entity is the prior inventor of the conflicting subject matter. A terminal disclaimer has no effect in this situation since the basis for refusing more than one patent is priority of invention under 35 U.S.C.102(f) or (g) and not an extension of monopoly. Failure to comply with this requirement will result in a holding of abandonment of this application.

The following form paragraph should be included after the form paragraph setting forth the rejection under 35 U.S.C. 102 (a), (b), (d) or (e) to provide an explanation of the applied reference.

¶ *15.15.01 Explanation of rejection under 35 U.S.C. 102(a), (b), (d), or (e)*

The shape and appearance of **[1]** is identical in all material respects to that of the claimed design, *Hupp v. Siroflex of America Inc*., 122 F.3d 1456, 43 USPQ2d 1887 (Fed. Cir. 1997).

Examiner Note:

1. This paragraph should be included after paragraph 15.11, 15.12, 15.14 or 15.15 to explain the basis of the rejection.

2. In bracket **[1]**, identify the reference applied against the claimed design.

The following form paragraphs may be used to reject a claim under 35 U.S.C. 102(e) over an application or patent having an earlier effective U.S. filing date with a common inventor and/or assignee, or that discloses but does not claim the design.

¶ *15.15.02 Provisional 35 U.S.C. 102(e) rejection - design disclosed but not claimed in another application with common inventor and/or assignee*

The claim is provisionally rejected under 35 U.S.C. 102(e) as being anticipated by copending Application No. **[1]** which has a common **[2]** with the instant application.

Based upon the different inventive entity and the earlier effective U.S. filing date of the copending application, it would constitute prior art under 35 U.S.C. 102(e), if published under 35 U.S.C. 122(b) or patented. This provisional rejection under 35 U.S.C. 102(e) is based upon a presumption of future publication or patenting of the copending application.

Since the design claimed in the present application is not the same invention claimed in the **[3]** application, the examiner suggests overcoming this provisional rejection in one of the following ways: (A) a showing under 37 CFR 1.132 that the design in the reference was derived from the designer of this application and is thus not the invention "by another;" (B) a showing of a date of invention for the instant application prior to the effective U.S. filing date of the reference under 37 CFR 1.131; (C) Perfecting a claim to priority under 35 U.S.C. 119 that antedates the reference by filing a certified priority document in the application that satisfies the enablement and description requirements of 35 U.S.C. 112, first paragraph; or (D) Perfecting priority under 35 U.S.C. 120 by amending the specification of the application to contain a specific reference to a prior application or by filing an application data sheet under 37 CFR 1.76 which contains a specific reference to a prior application in accordance with 37 CFR 1.78(a) and establishing that the prior application satisfies the enablement and description requirements of 35 U.S.C. 112, first paragraph.

This rejection may not be overcome by the filing of a terminal disclaimer. See *In re Bartfeld*, 925 F.2d 1450, 17 USPQ2d 1885 (Fed. Cir. 1991).

Examiner Note:

1. This form paragraph is used to provisionally reject over a copending application (utility or design) with an earlier filing date that discloses (but does not claim) the claimed invention which has not been patented or published under 35 U.S.C. 122. The copending application must have either a common assignee or at least one common inventor.

2. Use 35 U.S.C. 102(e) as amended by the American Inventor's Protection Act (form paragraph 7.12) to determine the reference's prior art date, unless the reference is a U.S. patent issued directly, or indirectly, from an international application which has an international filing date prior to November 29, 2000. Use pre-AIPA 35 U.S.C. 102(e) (form paragraph 7.12.01) only if the reference is a U.S. patent issued directly or indirectly from either a national stage of an international application (application under 35 U.S.C. 371) which has an international filing date prior to November 29, 2000 or a continuing application claiming benefit under 35 U.S.C. 120, 121, or 365 (c) to an international application having an international filing date prior to November 29, 2000. See the Examiner Notes for form paragraphs 7.12 and 7.12.01 to assist in the determination of the 35 U.S.C. 102(e) date.

3. In bracket 2, insert inventor or assignee.

¶ *15.15.03 Provisional 35 U.S.C. 102(e) rejection - design claimed in an earlier filed design patent application with common inventor and/or assignee*

The claim is provisionally rejected under 35 U.S.C. 102(e) as being anticipated by the claim in copending Design Patent Application No. **[1]** which has a common **[2]** with the instant application.

Based upon the different inventive entity and the earlier effective U.S. filing date of the copending application, it would constitute prior art under 35 U.S.C. 102(e), if patented. This provisional rejection under 35 U.S.C. 102(e) is based upon a presumption of future patenting of the copending application. The rejection may be overcome by abandoning the earlier filed copending application.

Examiner Note:

1. In bracket 2, insert inventor or assignee.

2. This form paragraph must be preceded by form paragraph 15.24.05 to notify the applicant that the question of patentability under 35 U.S.C. 102(f)/(g) also exists.

¶ *15.15.04 35 U.S.C. 102(e) rejection - design disclosed but not claimed in a patent*

The claim is rejected under 35 U.S.C. 102(e) as being anticipated by patent **[1]**.

Based upon the different inventive entity and the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e).

Since the design claimed in the present application is not the same invention claimed in patent **[2]**, the examiner suggests overcoming this rejection in one of the following ways: (A) a showing under 37 CFR 1.132 that the design in the reference was derived from the designer of this application and is thus not the invention "by another;" (B) a showing of a date of invention for the instant application prior to the effective U.S. filing date of the reference under 37 CFR 1.131; (C) Perfecting a claim to priority under 35 U.S.C. 119 that antedates the reference by filing a certified priority document in the application that satisfies the enablement and description requirements of 35 U.S.C. 112, first paragraph; or (D) Perfecting priority under 35 U.S.C. 120 by amending the specification of the application to contain a specific reference to a prior application or by filing an application data sheet under 37 CFR 1.76 which contains a specific reference to a prior application in accordance with 37 CFR 1.78(a) and establishing that the prior application satisfies the enablement and description requirements of 35 U.S.C. 112, first paragraph

This rejection may not be overcome by the filing of a terminal disclaimer. See *In re Bartfeld*, 925 F.2d 1450, 17 USPQ2d 1885 (Fed. Cir. 1991).

Examiner Note:

1. This form paragraph should be used when the claimed design in the application being examined is disclosed in the drawings of an earlier filed design or utility patent but is not claimed therein. When the design claimed in the application being examined is disclosed in the drawings of an earlier filed design patent, it would most often be in the form of subcombination subject matter, (part or portion of an article), that is patentably distinct from the claim

for the design embodied by the combination or whole article. It may also be unclaimed subject matter depicted in broken lines in the earlier filed application.

2. In brackets 1 and 2, insert number of patent.

The following form paragraphs may be used in a second or subsequent action, where appropriate.

¶ *15.38 Rejection Maintained*

The arguments presented have been carefully considered, but are not persuasive that the rejection of the claim under **[1]** should be withdrawn.

Examiner Note:

In bracket 1, insert basis of rejection.

**>

¶ *15.40.01 Final Rejection Under Other Statutory Provisions*

The claim is again and FINALLY REJECTED under **[1]** as **[2]**.

Examiner Note:

1. In bracket 1, insert statutory basis.
2. In bracket 2, insert reasons for rejection.
3. See paragraphs in MPEP Chapter 700, for "Action is Final" and "Advisory after Final" paragraphs.

<

1504.03 Nonobviousness [R-5]

35 U.S.C. 103. Conditions for patentability; non-obvious subject matter.

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

*****

**>

(c)(1) Subject matter developed by another person, which qualifies as prior art only under one or more of subsections (e), (f), and (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the claimed invention was made, owned by the same person or subject to an obligation of assignment to the same person.

(2) For purposes of this subsection, subject matter developed by another person and a claimed invention shall be deemed to have been owned by the same person or subject to an obligation of assignment to the same person if —

(A) the claimed invention was made by or on behalf of parties to a joint research agreement that was in effect on or before the date the claimed invention was made;

(B) the claimed invention was made as a result of activities undertaken within the scope of the joint research agreement; and

(C) the application for patent for the claimed invention discloses or is amended to disclose the names of the parties to the joint research agreement.

(3) For purposes of paragraph (2), the term "joint research agreement" means a written contract, grant, or cooperative agreement entered into by two or more persons or entities for the performance of experimental, developmental, or research work in the field of the claimed invention.<

A claimed design that meets the test of novelty must additionally be evaluated for nonobviousness under 35 U.S.C. 103(a).

I. GATHERING THE FACTS

The basic factual inquiries guiding the evaluation of obviousness, as outlined by the Supreme Court in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), are applicable to the evaluation of design patentability:

(A) Determining the scope and content of the prior art;

(B) Ascertaining the differences between the claimed invention and the prior art;

(C) Resolving the level of ordinary skill in the art; and

(D) Evaluating any objective evidence of nonobviousness (i.e., so-called "secondary considerations").

A. Scope of the Prior Art

The scope of the relevant prior art for purposes of evaluating obviousness under 35 U.S.C. 103(a) extends to all "analogous arts."

While the determination of whether arts are analogous is basically the same for both design and utility inventions (see MPEP § 904.01(c) and § 2141.01(a)), *In re Glava*s, 230 F.2d 447, 450 109 USPQ 50, 52 (CCPA 1956) provides specific guidance for evaluating analogous arts in the design context, which should be used to supplement the general requirements for analogous art as follows:

> The question in design cases is not whether the references sought to be combined are in analogous arts in the mechanical sense, but whether they are so related that the appearance of certain ornamental features in one

> would suggest the application of those features to the other.
>
> Thus, if the problem is merely one of giving an attractive appearance to a surface, it is immaterial whether the surface in question is that of wall paper, an oven door, or a piece of crockery. . . .
>
> On the other hand, when the proposed combination of references involves material modifications of the basic form of one article in view of another, the nature of the article involved is a definite factor in determining whether the proposed change involves [patentable] invention.

Therefore, where the differences between the claimed design and the prior art are limited to the application of ornamentation to the surface of an article, any prior art reference which discloses substantially the same surface ornamentation would be considered analogous art. Where the differences are in the shape or form of the article, the nature of the articles involved must also be considered.

B. Differences Between the Prior Art and the Claimed Design

In determining patentability under 35 U.S.C. 103(a), it is the overall appearance of the design that must be considered. *In re Leslie*, 547 F.2d 116, 192 USPQ 427 (CCPA 1977). The mere fact that there are differences between a design and the prior art is not alone sufficient to justify patentability. *In re Lamb*, 286 F.2d 610, 128 USPQ 539 (CCPA 1961).

All differences between the claimed design and the closest prior art reference should be identified in any rejection of the design claim under 35 U.S.C. 103(a). If any differences are considered *de minimis* or inconsequential from a design viewpoint, the rejection should so state.

C. Level of Ordinary Skill in the Art

In order to be unpatentable, 35 U.S.C. 103(a) requires that an invention must have been obvious to a designer having "ordinary skill in the art" to which the subject matter sought to be patented pertains. The "level of ordinary skill in the art" from which obviousness of a design claim must be evaluated under 35 U.S.C. 103(a) has been held by the courts to be the perspective of the "designer of . . . articles of the types presented." *In re Nalbandian*, 661 F.2d 1214, 1216, 211 USPQ 782, 784 (CCPA 1981); *In re Carter*, 673 F.2d 1378, 213 USPQ 625 (CCPA 1982).

D. Objective Evidence of Nonobviousness (Secondary Considerations)

Secondary considerations, such as commercial success and copying of the design by others, are relevant to the evaluation of obviousness of a design claim. Evidence of nonobviousness may be present at the time a *prima facie* case of obviousness is evaluated or it may be presented in rebuttal of a prior obviousness rejection.

II. *PRIMA FACIE* OBVIOUSNESS

Once the factual inquiries mandated under *Graham v. John Deere Co.*, 383 U. S. 1, 148 USPQ 459 (1966), have been made, the examiner must determine whether they support a conclusion of *prima facie* obviousness. To establish *prima facie* obviousness, all the claim limitations must be taught or suggested by the prior art.

In determining *prima facie* obviousness, the proper standard is whether the design would have been obvious to a designer of ordinary skill with the claimed type of article. *In re Nalbandian*, 661 F.2d 1214, 211 USPQ 782 (CCPA 1981).

As a whole, a design must be compared with something in existence, and not something brought into existence by selecting and combining features from prior art references. *In re Jennings*, 182 F.2d 207, 86 USPQ 68 (CCPA 1950). The "something in existence" referred to in *Jennings* has been defined as "...a reference... the design characteristics of which are basically the same as the claimed design...." *In re Rosen*, 673 F.2d 388, 391, 213 USPQ 347, 350 (CCPA 1982) (the primary reference did "...not give the same visual impression..." as the design claimed but had a "...different overall appearance and aesthetic appeal...".) Hence, it is clear that "design characteristics" means overall visual appearance. This definition of "design characteristics" is reinforced in the decision of *In re Harvey*, 12 F.3d 1061, 1063, 29 USPQ2d 1206, 1208 (Fed. Cir. 1993), and is supported by the earlier decisions of *In re Yardley*, 493 F.2d 1389, 181 USPQ 331, 334 (CCPA 1974) and *In re Leslie*, 547 F.2d 116, 192 USPQ 427, 431 (CCPA 1977). Specifically, in the *Yardley* decision, it was stated that "[t]he basic consideration in determining the patentability of designs over prior art is similarity of appearance." 493 F.2d at 1392-93, 181 USPQ at 334.

Therefore, in order to support a holding of obviousness, a *>primary< reference must be more than a design concept; it must have an appearance substantially the same as the claimed design. *In re Harvey*, 12 F.3d 1061, 29 USPQ2d 1206 (Fed. Cir. 1993). Absent such a reference, no holding of obviousness under 35 U.S.C. 103(a) can be made, whether based on a single reference alone or in view of modifications suggested by secondary prior art.

A rejection under 35 U.S.C. 103(a) based on a single non-analogous reference would not be proper. The reason is that under 35 U.S.C. 103(a), a designer of ordinary skill would not be charged with knowledge of prior art that is not analogous to the claimed design.

Examiners are advised that differences between the claimed design and a *>primary< reference may be held to be minor in nature and unrelated to the overall aesthetic appearance of the design with or without the support of secondary references. *In re Nalbandian*, 661 F.2d 1214, 211 USPQ 782 (CCPA 1981). If such differences are shown by secondary references, they should be applied so as to leave no doubt that those differences would have been obvious to a designer of ordinary skill in the art. *In re Sapp*, 324 F.2d 1021, 139 USPQ 522 (CCPA 1963).

When a claim is rejected under 35 U.S.C. 103(a) as being unpatentable over prior art, features of the design which are functional and/or hidden during end use may not be relied upon to support patentability. "[A] design claim to be patentable must also be ornamental; and functional features or forms cannot be relied upon to support its patentability." *Jones v. Progress, Ind. Inc.*, 119 USPQ 92, 93 (D. R.I. 1958). "It is well settled that patentability of a design cannot be based on elements which are concealed in the normal use of the device to which the design is applied." *In re Cornwall*, 230 F.2d 457, 459, 109 USPQ 57, 58 (CCPA 1956); *In re Garbo*, 287 F.2d 192, 129 USPQ 72 (CCPA 1961). It is not necessary that prior art be relied upon in a rejection under 35 U.S.C. 103(a) to show similar features to be functional and/or hidden in the art. However, examiners must provide evidence to support the *prima facie* functionality of such features. Furthermore, hidden portions or functional features cannot be relied upon as a basis for patentability. If applicant wishes to rely on functional or hidden features as a basis for patentability, then the same standard for establishing ornamentality under 35 U.S.C. 171 must be applied before these features can be given any patentable weight. See MPEP § 1504.01(c).

A. Combining Prior Art References

A rejection under 35 U.S.C. 103(a) would be appropriate if a designer of ordinary skill would have been motivated to modify a *>primary< reference by deleting features thereof or by interchanging with or adding features from pertinent secondary references. In order for secondary references to be considered, there must be some suggestion in the prior art to modify the basic design with features from the secondary references. *In re Borden*, 90 F.3d 1570, 1572, 39 USPQ2d 1524, 1526 (Fed. Cir. 1996). The long-standing test for properly combining references has been "...whether they are so related that the appearance of certain ornamental features in one would suggest the application of those features to the other." *In re Glavas*, 230 F.2d 447, 450, 109 USPQ 50, 52 (CCPA 1956).

The prohibition against destroying the function of the design is inherent in the logic behind combining references to render a claimed invention obvious under 35 U.S.C. 103(a). If the proposed combination of the references so alters the primary reference that its broad function can no longer be carried out, the combination of the prior art would not have been obvious to a designer of ordinary skill in the art. It is permissible to modify the primary reference to the extent that the specific function of the article may be affected while the broad function is not affected. For example, a primary reference to a cabinet design claimed as airtight could be modified to no longer be airtight so long as its function as a cabinet would not be impaired.

1. Analogous Art

When a modification to a *>primary< reference involves a change in configuration, both the *>primary< and secondary references must be from analogous arts. *In re Glavas*, 230 F.2d 447, 109 USPQ 50 (CCPA 1956). **

Analogous art can be more broadly interpreted when applied to a claim that is directed to a design with a portion simulating a well known or naturally occurring object or person. The simulative nature of that portion of the design is *prima facie* evidence that

art which simulates that portion would be within the level of ordinary skill under 35 U.S.C. 103(a).

2. Non-analogous Art

When modifying the surface of a *>primary< reference so as to provide it with an attractive appearance, it is immaterial whether the secondary reference is analogous art, since the modification does not involve a change in configuration or structure and would not have destroyed the characteristics (appearance and function) of the *>primary< reference. *In re Glavas*, 230 F.2d 447, 109 USPQ 50 (CCPA 1956).

III. REBUTTAL OF THE *PRIMA FACIE* CASE

Once a *prima facie* case of obviousness has been established, the burden shifts to the applicant to rebut it, if possible, with objective evidence of nonobviousness. Examples of secondary considerations are commercial success, expert testimony and copying of the design by others. Any objective evidence of nonobviousness or rebuttal evidence submitted by applicant, including affidavits or declarations under 37 CFR 1.132, must be considered by examiners in determining patentability under 35 U.S.C. 103(a).

When evidence of commercial success is submitted, examiners must evaluate it to determine whether there is objective evidence of success, and whether the success can be attributed to the ornamental design. *Litton System, Inc. v. Whirlpool Corp.*, 728 F.2d 1423, 221 USPQ 97 (Fed. Cir. 1984)*; In re Nalbandian*, 661 F.2d 1214, 211 USPQ 782 (CCPA 1981). An affidavit or declaration under 37 CFR 1.132 has minimal evidentiary value on the issue of commercial success if there is no nexus or connection between the sales of the article in which the design is embodied and the ornamental features of the design. *Avia Group Int'l Inc. v. L.A. Gear,* 853 F.2d 1557, 7 USPQ2d 1548 (Fed. Cir. 1988).

Submission of expert testimony must establish the professional credentials of the person signing the affidavit or declaration, and should not express an opinion on the ultimate legal issue of obviousness since this conclusion is one of law. *Avia Group Int'l Inc. v. L.A. Gear*, 853 F.2d 1557, 7 USPQ2d 1548 (Fed. Cir. 1988); *Panduit Corp. v. Dennison Mfg. Co*., 774 F.2d 1082, 227 USPQ 337 (Fed. Cir. 1985).

With regard to evidence submitted showing that competitors in the marketplace are copying the design, more than the mere fact of copying is necessary to make that action significant because copying may be attributable to other factors such as lack of concern for patent property or indifference with regard to the patentee's ability to enforce the patent. *Cable Electric Products, Inc. v. Genmark, Inc.*, 770 F.2d 1015, 226 USPQ 881 (Fed. Cir. 1985).

"A *prima facie* case of obviousness can be rebutted if the applicant...can show that the art in any material respect 'taught away' from the claimed invention...A reference may be said to teach away when a person of ordinary skill, upon reading the reference...would be led in a direction divergent from the path that was taken by the applicant." *In re Haruna*, 249 F.3d 1327, 58USPQ2d 1517 (Fed. Cir. 2001).

For additional information regarding the issue of objective evidence of nonobviousness, attention is directed to MPEP § 716 through § 716.06.

The following form paragraph may be used in an obviousness rejection under 35 U.S.C. 103(a), where appropriate.

¶ *15.18 35 U.S.C. 103(a) Rejection (Single Reference)*

The claim is rejected under 35 U.S.C. 103(a) as being unpatentable over **[1]**. Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

¶ *15.70 Preface, 35 U.S.C. 103(a) Rejection*

It would have been obvious to a designer of ordinary skill in the art at the time the invention was made to **[1]**.

Examiner Note:

Insert explanation of the use of the reference applied in bracket 1.

¶ *15.67 Rationale for 35 U.S.C. 103(a) Rejection (Single Reference)*

It is well settled that it is unobviousness in the overall appearance of the claimed design, when compared with the prior art, rather than minute details or small variations in design as appears to be the case here, that constitutes the test of design patentability. See *In re Frick*, 275 F.2d 741, 125 USPQ 191 (CCPA 1960) and *In re Lamb*, 286 F.2d 610, 128 USPQ 539 (CCPA 1961).

¶ *15.19 35 U.S.C. 103(a) Rejection (Multiple References)*

The claim is rejected under 35 U.S.C. 103(a) as being unpatentable over **[1]** in view of **[2]**.

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer of ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

**>

¶ *15.68 Rationale for 35 U.S.C. 103(a) Rejection (Multiple References)*

This modification of the primary reference in light of the secondary reference is proper because the applied references are so related that the appearance of features shown in one would suggest the application of those features to the other. See *In re Rosen*, 673 F.2d 388, 213 USPQ 347 (CCPA 1982); *In re Carter*, 673 F.2d 1378, 213 USPQ 625 (CCPA 1982), and *In re Glavas*, 230 F.2d 447, 109 USPQ 50 (CCPA 1956). Further, it is noted that case law has held that a designer skilled in the art is charged with knowledge of the related art; therefore, the combination of old elements, herein, would have been well within the level of ordinary skill. See *In re Antle*, 444 F.2d 1168,170 USPQ 285 (CCPA 1971) and *In re Nalbandian*, 661 F.2d 1214, 211 USPQ 782 (CCPA 1981).

<

The following form paragraphs may be used when making a rejection under 35 U.S.C. 103(a), where the reference application or patent is prior art under 35 U.S.C. 102(e).

¶ *15.19.02 Preface 35 U.S.C. 102(e)/103(a) rejection - Different inventors, common assignee, obvious designs, no evidence of common ownership at time later design was made*

The claim is directed to a design not patentably distinct from the design of commonly assigned **[1]**. Specifically, the claimed design is different from the one in **[2]** in that **[3]**. These differences are considered obvious and do not patentably distinguish the overall appearance of the claimed design over the design in **[4]**.

The commonly assigned **[5]**, discussed above, has a different inventive entity from the present application. Therefore, it qualifies as prior art under 35 U.S.C. 102(e), (f) or (g) and forms the basis for a rejection of the claim in the present application under 35 U.S.C. 103(a) if the conflicting design claims were not commonly owned at the time the design in this application was made. In order to resolve this issue, the applicant, assignee or attorney of record can state that the conflicting designs were commonly owned at the time the design in this application was made, or the assignee can name the prior inventor of the conflicting subject matter.

A showing that the designs were commonly owned at the time the design in this application was made will overcome a rejection under 35 U.S.C. 103(a) based upon the commonly assigned case as a reference under 35 U.S.C. 102(f) or (g), or 35 U.S.C. 102(e) for applications filed on or after November 29, 1999.

Examiner Note:

1. This form paragraph should be used when the application being examined is commonly assigned with a conflicting application or patent, but there is no indication that they were commonly assigned at the time the invention was actually made.

2. If the conflicting claim is in a patent with an earlier U.S. filing date, a rejection under 35 U.S.C. 102(e)/103(a) should be made.

3. If the conflicting claim is in a commonly assigned, copending application with an earlier filing date, a provisional rejection under 35 U.S.C. 102(e)/103(a) should be made.

4. An obviousness double patenting rejection may also be included in the action.

5. In brackets 1, 2, 4 and 5, insert patent and number, or copending application and serial number.

6. In bracket 3, identify differences between design claimed in present application and that claimed in earlier filed patent or copending application.

7. This form paragraph should only be used ONCE in an Office action.

8. If the rejection relies upon prior art under 35 U.S.C. 102(e), use 35 U.S.C. 102(e) as amended by the American Inventor's Protection Act to determine the reference's prior art date, unless the reference is a U.S. patent issued directly, or indirectly, from an international application which has an international filing date prior to November 29, 2000. Use pre-AIPA 35 U.S.C. 102(e) only if the reference is a U.S. patent issued directly or indirectly form either a national stage of an international application (application under 35 U.S.C. 371) which has international filing date prior to November 29, 2000 or a continuing application claiming benefit under 35 U.S.C. 120, 121, or 365(c) to an international application having an international filing date prior to November 29, 2000. See the Examiner Notes for form paragraphs 7.12 and 7.12.01 to assist in the determination of the reference's 35 U.S.C. 102(e) date.

**>

¶ *15.19.03 Provisional 35 U.S.C. 102(e)/103(a) rejection - design disclosed but not claimed in another application with common inventor and/or assignee*

The claim is provisionally rejected under 35 U.S.C. 103(a) as being obvious over copending Application No. **[1]** which has a common **[2]** with the instant application. Based upon the different inventive entity and the earlier effective U.S. filing date of the copending application, it would constitute prior art under 35 U.S.C. 102(e) if published under 35 U.S.C. 122(b) or patented. This provisional rejection under 35 U.S.C. 103(a) is based upon a presumption of future publication or patenting of the conflicting application.

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer having ordinary skill in the art

to which said subject matter pertains, the invention is not patentable.

[3]

Since the design claimed in the present application is not the same invention claimed in the **[4]** application, this provisional rejection may be overcome by a showing under 37 CFR 1.132 that the design in the reference was derived from the designer of this application and is thus not the invention "by another," or by a showing of a date of invention for the instant application prior to the effective U.S. filing date of the reference under 37 CFR 1.131. For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(l)(1) and § 706.02(l)(2).

Examiner Note:

1. This form paragraph should be used when the claimed design in the application being examined is obvious over subject matter disclosed in the drawings of an earlier filed design or utility application but is not claimed therein. The design claimed in the application being examined can be an obvious version of subject matter disclosed in the drawings of an earlier filed design application. This subject matter may be depicted in broken lines, or may be in the form of a subcombination (part or portion of an article) that is patentably distinct from the claim for the design embodied by the combination or whole article.
2. In brackets 1 and 4 insert serial number of copending application.
3. In bracket 2, insert inventor or assignee.
4. In bracket 3, provide explanation of obviousness including differences and follow the explanation with form paragraphs 15.70 and 15.67 or 15.68.
5. Use 35 U.S.C. 102(e) as amended by the American Inventor's Protection Act to determine the reference's prior art date, unless the reference is a U.S. patent issued directly, or indirectly, from an international application which has an international filing date prior to November 29, 2000. Use pre-AIPA 35 U.S.C. 102(e) only if the reference is a U.S. patent issued directly or indirectly from either a national stage of an international application (application under 35 U.S.C. 371) which has an international filing date prior to November 29, 2000 or a continuing application claiming benefit under 35 U.S.C. 120, 121, or 365(c) to an international application having an international filing date prior to November 29, 2000. See the Examiner Notes for form paragraphs 7.12 and 7.12.01 to assist in the determination of the reference's 35 U.S.C. 102(e) date.

<

¶ *15.19.04 Provisional 35 U.S.C. 102(e)/103(a) rejection - design claimed in an earlier filed design patent application with common inventor and/or assignee*

The claim is provisionally rejected under 35 U.S.C. 103(a) as being obvious over the claim in copending Design Patent Application No. **[1]** which has a common **[2]** with the instant application. Based upon the different inventive entity and the earlier effective U.S. filing date of the copending application, it would constitute prior art under 35 U.S.C. 102(e) if patented. This provisional rejection under 35 U.S.C. 103(a) is based upon a presumption of future patenting of the conflicting application.

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

[3]

Since the design claimed in the present application is not patentably distinct from the design claimed in the [4] application, this provisional rejection may be overcome by merging the two applications into a single continuation-in-part and abandoning the separate parent applications. For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(l)(1) and § 706.02(l)(2).

Examiner Note:

1. This form paragraph should be used when the claimed design in the application being examined is obvious over the design claimed in an earlier filed copending application.
2. A provisional obviousness-type double patenting rejection must also be included in the action.
3. In brackets 1 and 4, insert serial number of copending application.
4. In bracket 2, insert inventor or assignee.
5. In bracket 3, provide explanation of obviousness including differences and follow the explanation with form paragraphs 15.70 and 15.67 or 15.68.
6. This form paragraph must be preceded by form paragraph 15.19.02.

**>

¶ *15.19.05 35 U.S.C. 102(e)/103(a) rejection - design disclosed but not claimed*

The claim is rejected under 35 U.S.C. 103(a) as being obvious over **[1]**.

Based upon the different inventive entity and the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e).

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

[2]

Since the design claimed in the present application is not the same invention claimed in the **[3]** patent, this rejection may be overcome by a showing under 37 CFR 1.132 that the design in the reference was derived from the designer of this application and is thus not the invention " by another," or by a showing of a date of

invention for the instant application prior to the effective U.S. filing date of the reference under 37 CFR 1.131. For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(l)(1) and § 706.02(l)(2).

Examiner Note:

1. This form paragraph should be used when the claimed design in the application being examined is obvious over subject matter disclosed in the drawings of an earlier filed design or utility patent, or application publication, but is not claimed therein. The design claimed in the application being examined can be an obvious version of subject matter disclosed in the drawings of an earlier filed design application. This subject matter may be depicted in broken lines, or may be in the form of a subcombination (part or portion of an article) that is patentably distinct from the claim for the design embodied by the combination or whole article.

2. In brackets 1 and 3, insert number of the U.S. patent, U.S. patent application publication, or the WIPO publication of an international application that qualifies as prior art under 35 U.S.C. 102(e). See note 5 below.

3. In bracket 2, provide explanation of obviousness including differences and follow the explanation with form paragraphs 15.70 and 15.67 or 15.68.

4. Use 35 U.S.C. 102(e) as amended by the American Inventor's Protection Act to determine the reference's prior art date, unless the reference is a U.S. patent issued directly, or indirectly, from an international application which has an international filing date prior to November 29, 2000. Use pre-AIPA 35 U.S.C. 102(e) only if the reference is a U.S. patent issued directly or indirectly from either a national stage of an international application (application under 35 U.S.C. 371) which has an international filing date prior to November 29, 2000 or a continuing application claiming benefit under 35 U.S.C. 120, 121, or 365(c) to an international application having an international filing date prior to November 29, 2000. See the Examiner Notes for form paragraphs 7.12 and 7.12.01 to assist in the determination of the reference's 35 U.S.C. 102(e) date.

<

¶ *15.19.06 35 U.S.C. 102(e)/103(a) rejection - design claimed in a design patent with an earlier effective filing date and common assignee*

The claim is rejected under 35 U.S.C. 103(a) as being obvious over the claim in design patent **[1]**.

Based upon the different inventive entity and the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e).

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

[2]

Since the design claimed in the present application is not patentably distinct from the design claimed in the [3] patent, this rejection may be overcome by submitting an oath or declaration under 37 CFR 1.130 stating that this application and the reference are currently owned by the same party and that the inventor named in this application is the prior inventor of the subject matter in the reference under 35 U.S.C. 104. In addition, a terminal disclaimer in accordance with 37 CFR 1.321(c) is also required. For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(l)(1) and § 706.02(l)(2)

Examiner Note:

1. This form paragraph should be used when the claimed design in the application being examined is obvious over the design claimed in a design patent having an earlier effective date and a common assignee.

2. An obviousness-type double patenting rejection must also be included in the action.

3. In brackets 1 and 3, insert number of patent.

4. In bracket 2, provide explanation of obviousness including differences and follow the explanation by form paragraphs 15.70 and 15.67 or 15.68.

5. This form paragraph must be preceded by form paragraph 15.19.02.

¶ *15.19.07 35 U.S.C. 102(e)/103(a) rejection - design claimed in a design patent having an earlier effective filing date and no common assignee*

The claim is rejected under 35 U.S.C. 103(a) as being obvious over the claim in design patent **[1]**.

Based upon the different inventive entity and the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e).

Although the invention is not identically disclosed or described as set forth in 35 U.S.C. 102, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a designer having ordinary skill in the art to which said subject matter pertains, the invention is not patentable.

[2]

Examiner Note:

1. This form paragraph should be used when the claimed design in the application being examined is obvious over the design claimed in a design patent having an earlier effective filing date.

2. In bracket 2, provide explanation of obviousness including differences and follow explanation with form paragraphs 15.70 and 15.67 or 15.68.

The following form paragraphs may be used in a second or subsequent action where appropriate.

¶ *15.38 Rejection Maintained*

The arguments presented have been carefully considered, but are not persuasive that the rejection of the claim under **[1]** should be withdrawn.

Examiner Note:

In bracket 1, insert basis of rejection.

¶ *15.39 Obviousness Under 35 U.S.C. 103(a) Repeated*

It remains the examiner's position that the **[1]** design claimed is obvious under 35 U.S.C. 103(a) over **[2]**.

Examiner Note:

In bracket 1, insert name of design.

¶ *15.39.01 35 U.S.C. 103(a) Rejection Repeated (Multiple References)*

It remains the examiner's position that the claim is obvious under 35 U.S.C. 103(a) over **[1]** in view of **[2]**.

¶ *15.39.02 Final Rejection Under 35 U.S.C. 103(a) (Single Reference)*

The claim is again and FINALLY REJECTED under 35 U.S.C. 103(a) over **[1]**.

Examiner Note:

See form paragraphs in MPEP Chapter 700, for "Action is Final" and "Advisory after Final" paragraphs.

¶ *15.40 Final Rejection Under 35 U.S.C. 103(a) (Multiple References)*

The claim is again and FINALLY REJECTED under 35 U.S.C. 103(a) as being unpatentable over **[1]** in view of **[2]**.

Examiner Note:

See form paragraphs in MPEP Chapter 700 for "Action is Final" and "Advisory after Final" paragraphs.

1504.04 Considerations Under 35 U.S.C. 112 [R-5]

35 U.S.C. 112. Specification.

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same, and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

*****

The drawing in a design application is incorporated into the claim by use of the claim language "as shown."

Additionally, the drawing disclosure can be supplemented by narrative description in the specification (see MPEP § 1503.01, subsection II). This description is incorporated into the claim by use of the language "as shown and described." See MPEP § 1503.01, subsection III.

I. 35 U.S.C. 112, FIRST AND SECOND PARAGRAPHS

Enablement and Scope of Protection

Any analysis for compliance with 35 U.S.C. 112 should begin with a determination of whether the claims satisfy the requirements of the second paragraph before moving on to the first paragraph. See *In re Moore*, 439 F.2d 1232, 169 USPQ 236 (CCPA 1971). Therefore, before any determination can be made as to whether the disclosure meets the requirements of 35 U.S.C. 112, first paragraph, for enablement, a determination of the scope of protection sought by the claim must be made. However, since the drawing disclosure and any narrative description in the specification are incorporated into the claim by the use of the language "as shown and described," any determination of the scope of protection sought by the claim is also a determination of the subject matter that must be enabled by the disclosure. Hence, if the appearance and shape or configuration of the design for which protection is sought cannot be determined or understood due to an inadequate visual disclosure, then the claim, which incorporates the visual disclosure, fails to particularly point out and distinctly claim the subject matter applicant regards as their invention, in violation of the second paragraph of 35 U.S.C. 112. Furthermore, such disclosure fails to enable a designer of ordinary skill in the art to *>make an article having< the shape and appearance of the design for which protection is sought. In such case, a rejection of the claim under both the first and second paragraphs of 35 U.S.C. 112 would be warranted. An evaluation of the scope of the claim under 35 U.S.C 112, second paragraph, to determine whether the disclosure of the design meets the enablement requirement of 35 U.S.C. 112, first paragraph, cannot be based on the drawings alone. The scope of a claimed

design is understood to be limited to those surfaces or portions of the article shown in the drawing in full lines in combination with any additional written description in the specification. The title does not define the scope of the claimed design but merely identifies the article in which it is embodied. See MPEP § 1503.01, subsection I. It is assumed that the claim has been crafted to protect that which the applicant "regards as his invention." *In re Zahn*, 617 F.2d 261, 204 USPQ 988 (CCPA 1980). Therefore, when visible portions of the article embodying the design are not shown, it is because they form no part of the claim to be protected. It is *prima facie* evidence that the scope of the claimed design is limited to those surfaces "as shown" in the application drawing(s) in the absence of any additional written disclosure. See MPEP § 1503.01, subsection II. "[T]he adequacy of the disclosure must be determined by reference to the scope asserted." *Philco Corp. v. Admiral Corp.*, 199 F. Supp. 797, 131 USPQ 413, 418 (D. Del. 1961). However, it should be understood that when a surface or portion of an article is disclosed in full lines in the drawing it is considered part of the claimed design and its shape and appearance must be clearly and accurately depicted in order to satisfy the requirements of the first and second paragraphs of 35 U.S.C. 112.

Only those surfaces of the article that are visible at the point of sale or during use must be disclosed to meet the requirement of 35 U.S.C. 112, first and second paragraphs. "The drawing should illustrate the design as it will appear to purchasers and users, since the appearance is the only thing that lends patentability to it under the design law." *Ex parte Kohler*, 1905 C.D. 192, 192, 116 O.G. 1185, 1185 (Comm'r Pat. 1905). The lack of disclosure of those surfaces of the article which are hidden during sale or use does not violate the requirements of the first and second paragraphs of 35 U.S.C. 112 because the "patented ornamental design has no use other than its visual appearance...." *In re Harvey*, 12 F.3d 1061, 1064, 29 USPQ2d 1206, 1208 (Fed. Cir. 1993). Therefore, to make the "visual appearance" of the design merely involves the reproduction of what is shown in the drawings; it is not necessary that the functionality of the article be reproduced as this is not claimed. The function of a design is "that its appearance adds attractiveness, and hence commercial value, to the article embodying it." *Ex parte Cady*, 1916 C.D. 57, 61, 232 O.G. 619, 621 (Comm'r Pat. 1916).

The undisclosed surfaces not seen during sale or use are not required to be described in the specification even though the title of the design is directed to the complete article because the design is embodied only in those surfaces which are visible. *Ex parte Salsbury*, 38 USPQ 149, 1938 C.D. 6 (Comm'r Pat. 1938). While it is not necessary to show in the drawing those visible surfaces that are flat and devoid of surface ornamentation, they should be described in the specification by way of a **>descriptive statement< if they are considered part of the claimed design. *Ex parte Salsbury*, 38 USPQ 149, 1938 C.D. 6 (Comm'r Pat. 1938). Such **>descriptive statement< may not be used to describe visible surfaces which include structure that is clearly not flat. *Philco Corp. v. Admiral Corp.*, 199 F. Supp. 797, 131 USPQ 413 (D. Del. 1961). See also MPEP § 1503.02.

Applications filed in which the title (in the claim) defines an entire article but the drawings and the specification fail to disclose portions or surfaces of the article that would be visible either during use or on sale, will not be considered to violate the requirements of the first and second paragraphs of 35 U.S.C. 112. Therefore, amendment to the title will not be required in such applications. However, examiners should include a statement in the first Office action on the merits (including a notice of allowability) indicating that the surface(s) or portion(s) of the article that would be normally visible but are not shown in the drawing or described in the specification are understood to form no part of the claimed design and therefore, the determination of patentability of the claimed design is based on the views of the article shown in the drawing and the description in the specification. Form paragraph 15.85 may be used for this purpose.

When a claim is rejected under 35 U.S.C. 112, first and second paragraphs, as nonenabling and indefinite due to an insufficient drawing disclosure, examiners must specifically identify in the Office action what the deficiencies are in the drawing. A mere statement that the claim is nonenabling and indefinite due to the poor quality of the drawing is not a sufficient explanation of the deficiencies in the drawing disclosure. Examiners must specifically point out those portions of the drawing that are insufficient to permit an understanding of the shape and appearance of the design

claimed, and, if possible, suggest how the rejection may be overcome. Form paragraphs 15.21 and 15.20.02 may be used.

When inconsistencies between the views of the drawings are so great that the overall appearance of the design is unclear, the claim should be rejected under 35 U.S.C. 112, first and second paragraphs, as nonenabling and indefinite, and the rejection should specifically identify all of the inconsistencies between the views of the drawing. Otherwise, inconsistencies between drawing views will be objected to by the examiner and correction required by the applicant. See MPEP § 1503.02.

If the visual disclosure of the claimed design as originally filed is of such poor quality that its overall shape and appearance cannot be understood, applicant should be advised that the claim might be fatally defective by using form paragraph 15.65.

As indicated above, a narrative description in the specification can supplement the drawing disclosure to define the scope of protection sought by the claim. Furthermore, such description is incorporated into the claim by the use of the language "and described" therein. However, if a description in the specification refers to embodiments or modified forms not shown in the drawing, or includes vague and nondescriptive words such as "variations" and "equivalents," or a statement indicating that the claimed design is not limited to the exact shape and appearance shown in the drawing, the claim should be rejected under 35 U.S.C. 112, first and second paragraphs, as nonenabling and indefinite. The reason being the description fails to enable a designer of ordinary skill in the art to *>make an article having< the shape and appearance of those other embodiments, modified forms or "variations" and "equivalents" referred to in the description in the absence of additional drawing views. Furthermore, in the absence of additional drawing views, the description, which is incorporated into the claim, fails to particularly point out and distinctly claim the shape and appearance of those other embodiments, modified forms or "variations" and "equivalents" that applicants regard as their invention. Form paragraph 15.21 may be used to reject a claim for the above reasons.

**>

¶ *15.85 Undisclosed visible surface(s)/portion(s) of article not forming part of the claimed design*

The **[1]** of the article **[2]** not shown in the drawing or described in the specification. It is understood that the appearance of any part of the article not shown in the drawing or described in the specification forms no part of the claimed design. *In re Zahn*, 617 F.2d 261, 204 USPQ 988 (CCPA 1980). Therefore, the determination of patentability is based on the design for the article shown and described.

Examiner Note:

1. In bracket 1, insert surface or surfaces which are not shown.
2. In bracket 2, insert "is" or "are".

<

¶ *15.21 Rejection, 35 U.S.C. 112, First And Second Paragraphs*

The claim is rejected under 35 U.S.C. 112, first and second paragraphs, as the claimed invention is not described in such full, clear, concise and exact terms as to enable any person skilled in the art to make and use the same, and fails to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim is indefinite and nonenabling **[1]**.

Examiner Note:

1. This form paragraph should not be used when it is appropriate to make one or more separate rejections under the first and/or the second paragraph of 35 U.S.C. 112.
2. In bracket 1, a complete explanation of the basis for the rejection should be provided.

¶ *15.20.02 Suggestion To Overcome Rejection Under 35 U.S.C. 112, First and Second Paragraphs*

It is suggested that applicant may submit large, clear informal drawings or photographs which show **[1]** in order that the examiner may be in a position to determine if the claim may be clarified without the addition of new matter (35 U.S.C. 132, 37 CFR 1.121). In the alternative, applicant may disclaim the areas or portions of the design which are considered indefinite and nonenabling by converting them to broken lines and amend the specification to include a statement that the portions of the **[2]** shown in broken lines form no part of the claimed design.

Examiner Note:

1. In bracket 1, identify the areas or portions of the design which are unclear.
2. In bracket 2, insert title of the article.

¶ *15.65 Amendment May Not Be Possible*

The claim might be fatally defective; that is, it might not be possible to **[1]** without introducing new matter (35 U.S.C. 132, 37 CFR 1.121).

Examiner Note:

In bracket 1, identify portion of the claimed design which is insufficiently disclosed.

¶ *15.73 Corrected Drawing Sheets Required*

Failure to submit replacement correction sheets overcoming all of the deficiencies in the drawing disclosure set forth above, or an explanation why the drawing corrections or additional drawing views are not necessary will result in the rejection of the claim under 35 U.S.C. 112, first and second paragraphs, being made FINAL in the next Office action.

New Matter

New matter is subject matter which has no antecedent basis in the original specification, drawings or claim (MPEP § 608.04). An amendment to the claim must have antecedent basis in the original disclosure. 35 U.S.C. 132; 37 CFR 1.121(f). Prior to final action, all amendments will be entered in the application and will be considered by the examiner. *Ex parte Hanback*, 231 USPQ 739 (Bd. Pat. App. & Inter. 1986). An amendment to the claim which has no antecedent basis in the specification and/or drawings as originally filed introduces new matter because that subject matter is not described in the application as originally filed. The claim must be rejected under 35 U.S.C. 112, first paragraph. An amendment to the disclosure not affecting the claim (such as environment in the title or in broken lines in the drawings), which has no antecedent basis in the application as originally filed, must be objected to under 35 U.S.C. 132 as lacking support in the application as originally filed and a requirement must be made to cancel the new matter.

The scope of a design claim is defined by what is shown in full lines in the application drawings. *In re Mann*, 861 F.2d 1581, 8 USPQ2d 2030 (Fed. Cir. 1988). The claim may be amended by broadening or narrowing its scope within the bounds of the disclosure as originally filed.

A change in the configuration of the claimed design is considered a departure from the original disclosure and introduces prohibited new matter (37 CFR 1.121(f)). See *In re Salmon*, 705 F.2d 1579, 217 USPQ 981 (Fed. Cir. 1983). This includes the removal of three-dimensional surface treatment that is an integral part of the configuration of the claimed design, for example, beading, grooves, and ribs. The underlying configuration revealed by such an amendment would not be apparent in the application as filed and, therefore, it could not be established that applicant was in possession of this amended configuration at the time the application was filed. However, an amendment that changes the scope of a design by either reducing certain portions of the drawing to broken lines or converting broken line structure to solid lines is not a change in configuration as defined by the court in *Salmon*. The reason for this is because applicant was in possession of everything disclosed in the drawing at the time the application was filed and the mere reduction of certain portions to broken lines or conversion of broken line structure to solid lines is not a departure from the original disclosure. Examiners are cautioned that if broken line structure is converted to solid lines by way of amendment, the shape and configuration of that structure must have been fully disclosed and enabling at the time the application was filed. An amendment which alters the appearance of the claimed design by removing two-dimensional, superimposed surface treatment may be permitted if it is clear from the application that applicant had possession of the underlying configuration of the design without the surface treatment at the time of filing of the application. See *In re Daniels*, 144 F.3d 1452, 1456-57, 46 USPQ2d 1788, 1790 (Fed. Cir. 1998).

Amendments to the title must have antecedent basis in the original application to be permissible. If an amendment to the title directed to the article in which the design is embodied has no antecedent basis in the original application, the claim will be rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement thereof. *Ex parte Strijland*, 26 USPQ2d 1259 (Bd. Pat. App. & Inter. 1992). If an amendment to the title directed to the environment in which the design is used has no antecedent basis in the original application, it will be objected to under 35 U.S.C. 132 as introducing new matter into the disclosure. See MPEP § 1503.01, subsection I.

Examples of permissible amendments filed with the original application include: (A) a preliminary amendment filed simultaneously with the application papers, that is specifically identified in the original oath/declaration as required by 37 CFR 1.63 and MPEP § 608.04(b); and (B) the inclusion of a disclaimer in

the original specification or on the drawings/photographs as filed. See 37 CFR 1.152 and MPEP § 1503.01 and § 1503.02.

An example of a permissible amendment submitted after the filing of the application would be an amendment that does not involve a departure from the configuration of the original disclosure (37 CFR 1.121(f)).

An example of an impermissible amendment which introduces new matter would be an amendment to the claim without antecedent basis in the original disclosure which would change the configuration or surface appearance of the original design by the addition of previously undisclosed subject matter. *In re Berkman*, 642 F.2d 427, 209 USPQ 45 (CCPA 1981).

When an amendment affecting the claim is submitted that introduces new matter into the drawing, specification or title and a rejection under 35 U.S.C. 112, first paragraph is made, the examiner should specifically identify in the Office action the subject matter which is not considered to be supported by the original disclosure. A statement by the examiner that merely generalizes that the amended drawing, specification or title contains new matter is not sufficient. Examiners should specifically identify the differences or changes made to the claimed design that are considered to introduce new matter into the original disclosure, and if possible, suggest how the amended drawing, specification or title can be corrected to overcome the rejection. Form paragraph 15.51 may be used.

If an amendment that introduces new matter into the claim is the result of a rejection under 35 U.S.C. 112, first and second paragraphs for lack of enablement and indefiniteness, and it is clear that the disclosure of the claimed design as originally filed cannot be corrected without the introduction of new matter, the record of the application should reflect that the claim is seen to be fatally defective. Form paragraph 15.65 may be used to set forth this position.

**>

¶ *15.51 35 U.S.C. 112, First Paragraph Rejection (New Matter)*

The claim is rejected under 35 U.S.C. 112, first paragraph as failing to comply with the description requirement thereof since the **[1]** introduces new matter not supported by the original disclosure. The original disclosure does not reasonably convey to a designer of ordinary skill in the art that applicant was in possession of the design now claimed at the time the application was filed. See *In re Daniels*, 144 F.3d 1452, 46 USPQ2d 1788 (Fed. Cir. 1998); *In re Rasmussen*, 650 F.2d 1212, 211 USPQ 323 (CCPA 1981).

Specifically, there is no support in the original disclosure **[2]**.

To overcome this rejection, applicant may attempt to demonstrate that the original disclosure establishes that he or she was in possession of the amended claim or **[3]**.

Examiner Note:

1. In bracket 1, specify whether new drawing or amendment to the drawing, title or specification.

2. In bracket 2, specifically identify what is new matter so that the basis for the rejection is clear.

3. In bracket 3, insert specific suggestion how rejection may be overcome depending on the basis; such as, “the bracket in figures 3 and 4 of the new drawing may be corrected to correspond to the original drawing” or “the specification may be amended by deleting the descriptive statement.”

<

¶ *15.65 Amendment May Not Be Possible*

The claim might be fatally defective; that is, it might not be possible to **[1]** without introducing new matter (35 U.S.C. 132, 37 CFR 1.121).

Examiner Note:

In bracket 1, identify portion of the claimed design which is insufficiently disclosed.

¶ *15.51.01 Amendment to Disclosure Not Affecting Claim - 35 U.S.C. 132 Objection (New Matter)*

The **[1]** is objected to under 35 U.S.C. 132 and 37 CFR 1.121 as introducing new matter not supported by the original disclosure. The original disclosure does not reasonably convey to a designer of ordinary skill in the art that applicant was in possession of the amended subject matter at the time the application was filed. See *In re Rasmussen*, 650 F.2d 1212, 211 USPQ 323 (CCPA 1981).

Specifically, there is no support in the original disclosure **[2]**.

To overcome this objection, applicant may attempt to demonstrate that the original disclosure establishes that he or she was in possession of the amended subject matter or **[3]**.

Examiner Note:

1. In bracket 1, specify whether new drawing or amendment to the drawing, title or specification.

2. In bracket 2, specifically identify what is new matter so that the basis for the objection is clear.

3. In bracket 3, insert specific suggestion how the objection may be overcome depending on the basis; such as, “the broken line showing of environmental structure in Fig. 1 of the new drawing may be omitted to correspond to the original drawing” or “the title may be amended by deleting the reference to environmental structure”.

III. 35 U.S.C. 112, SECOND PARAGRAPH

Defects in claim language give rise to a rejection of the claim under the second paragraph of 35 U.S.C. 112. The fact that claim language, including terms of degree, may not be precise, does not automatically render the claim indefinite under 35 U.S.C. 112, second paragraph. "[T]he definiteness of the language employed must be analyzed – not in a vacuum, but always in light of the teachings of the prior art and of the particular application disclosure as it would be interpreted by one possessing the ordinary level of skill in the pertinent art." *In re Moore*, 439 F.2d 1232, 1235, 169 USPQ 236, 238 (CCPA 1971). A claim may appear indefinite when read in a vacuum, but may be definite upon reviewing the application disclosure or prior art teachings. Moreover, an otherwise definite claim in a vacuum may be uncertain when reviewing the application disclosure and prior art. *Moore*, 439 F.2d at 1235 n.2, 169 USPQ at 238 n.2. See also MPEP § 2173.05(b).

Use of phrases in the claim such as "or similar article," "or the like," or equivalent terminology has been held to be indefinite. See *Ex parte Pappas*, 23 USPQ2d 1636 (Bd. Pat. App. & Inter. 1992). However, the use of broadening language such as "or the like," or "or similar article" in the title when directed to the environment of the article embodying the design should not be the basis for a rejection under 35 U.S.C. 112, second paragraph. See MPEP § 1503.01, subsection I.

Examiners are reminded that there is no *per se* rule, and that the definiteness of claim language must be evaluated on the facts and circumstances of each application. The following form paragraphs may be used.

¶ *15.22.02 Rejection, 35 U.S.C. 112, 2nd Paragraph ("Or the Like" In Claim)*

The claim is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim is indefinite because of the use of the phrase "**[1]**" following the title. Cancellation of said phrase in the claim and each occurrence of the title throughout the papers, except the oath or declaration, will overcome the rejection. See *Ex parte Pappas*, 23 USPQ2d 1636 (Bd. App. & Inter. 1992) and 37 CFR 1.153.

Examiner Note:

1. This rejection should be used where there is another rejection in the Office action. For issue with an examiner's amendment, see form paragraph 15.69.01.
2. In bracket 1, insert --or the like-- or --or similar article--.
3. This form paragraph should not be used when "or the like" or "or similar article" in the title is directed to the environment of the article embodying the design.

¶ *15.69.01 Remove Indefinite Language ("Or The Like") by Examiner's Amendment*

The phrase **[1]** in the claim following the title renders the claim indefinite. By authorization of **[2]** in a telephone interview on **[3]**, the phrase has been cancelled from the claim and at each occurrence of the title throughout the papers, except the oath or declaration (35 U.S.C. 112, second paragraph, and 37 CFR 1.153). See *Ex parte Pappas*, 23 USPQ2d 1636 (Bd. Pat. App. & Inter. 1992).

Examiner Note:

In bracket 1, insert objectionable phrase, e.g., --or the like--, --or similar article--, etc.

Rejections under 35 U.S.C. 112, second paragraph, should be made when the scope of protection sought by the claim cannot be determined from the disclosure. For instance, a drawing disclosure in which the boundaries between claimed (solid lines) and unclaimed (broken lines) portions of an article are not defined or cannot be understood may be enabling under 35 U.S.C. 112, first paragraph, in that the shape and appearance of the article can be reproduced, but such disclosure fails to particularly point out and distinctly claim the subject matter that applicant regards as the invention. Form paragraph 15.22 may be used.

¶ *15.22 Rejection, 35 U.S.C. 112, 2nd Paragraph*

The claim is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim is indefinite **[1]**.

Examiner Note:

1. Use this form paragraph when the scope of the claimed design cannot be determined.
2. In bracket 1, provide a full explanation of the basis for the rejection.

The claim should be rejected as indefinite when it cannot be determined from the designation of the design as shown in the drawing, referenced in the title and described in the specification what article of manufacture is being claimed, e.g., a design claimed as a "widget" which does not identify a known or recognizable article of manufacture. The following form paragraphs may be used.

¶ *15.22.03 Rejection, 35 U.S.C. 112, Second Paragraph (Title Fails to Specify a Known Article of Manufacture)*

The claim is rejected under 35 U.S.C. 112, second paragraph, as indefinite in that the title, as set forth in the claim, fails to identify an article of manufacture and the drawing disclosure does not inherently identify the article in which the design is embodied. *Ex parte Strijland*, 26 USPQ2d 1259, 1263 (Bd. Pat. App. & Int. 1992). Therefore, any attempt to clarify the title by specifying the article in which the design is embodied may introduce new matter. See 35 U.S.C. 132 and 37 CFR 1.121.

¶ *15.21.01 Rejection, 35 U.S.C. 112 (Second Paragraph) (Information Requested)*

The claim is rejected for failing to particularly point out and distinctly claim the invention as required in 35 U.S.C. 112, second paragraph. The title of the article in which the design is embodied or applied is too ambiguous and therefore indefinite for the examiner to make a proper examination of the claim under 37 CFR 1.104.

Applicant is therefore required to provide a sufficient explanation of the nature and intended use of the article in which the claimed design is embodied or applied, so that a proper classification and reliable search can be made. See 37 CFR 1.154(b)(1); MPEP 1503.01. Additional information, if available, regarding analogous fields of search, pertinent prior art, advertising brochures and the filing of copending utility applications would also prove helpful. If a utility application has been filed, please furnish its application number.

This information should be submitted in the form of a separate paper, and should not be inserted in the specification (37 CFR 1.56). See also 37 CFR 1.97, 1.98 and 1.99.

Where the design claim would otherwise be patentable but for the presence of any rejection under 35 U.S.C. 112, first and/or second paragraphs, form paragraph 15.58.01 may be used.

¶ *15.58.01 Claimed Design Is Patentable (35 U.S.C. 112 Rejections)*

The claimed design is patentable over the references cited. However, a final determination of patentability will be made upon resolution of the above rejection.

Form paragraphs 15.38 and 15.40.01 may be used in a second or subsequent actioh, where appropriate (see MPEP § 1504.02).

1504.05 Restriction [R-5]

General principles of utility restriction are set forth in Chapter 800 of the MPEP. These principles are also applicable to design restriction practice with the exception of those differences set forth in this section.

Unlike a utility patent application, which can contain plural claims directed to plural inventions, a design patent application may only have a single claim**>. More than one embodiment of a design may be protected by a single claim. However, such embodiments may be presented only if they involve a single inventive concept according to the obviousness-type double patenting practice for designs. *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959).< Therefore, the examiner will require restriction in each design application which contains more than one patentably distinct design.

Restriction will be required under 35 U.S.C. 121 if a design patent application *>claims< multiple designs that are ** patentably distinct from each other **. The issue of whether a search and examination of an entire application can be made without serious burden to an examiner (as noted in MPEP § 803) is not applicable to design applications when determining whether a restriction requirement should be made. Clear admission on the record by the applicant that the embodiments are not patentably distinct will not overcome a requirement for restriction if the embodiments do not **>meet the following two requirements: (A) the embodiments must have overall appearances with basically the same design characteristics; and (B) the differences between the embodiments must be insufficient to patentably distinguish one design from the other. Regarding the second requirement, without evidence, such an admission is merely a conclusionary statement.< If multiple designs are held to be patentably indistinct and can be covered by a single claim, any rejection of one over prior art will apply equally to all. *Ex parte Appeal No*. 315-40, 152 USPQ 71 (Bd. App. 1965).

I. INDEPENDENT INVENTIONS

Design inventions are independent if there is no apparent relationship between two or more disparate articles disclosed in the drawings; for example, a pair of eyeglasses and a door handle; a bicycle and a camera; an automobile and a bathtub. Also note examples in MPEP § *>806.06<. Restriction in such cases is clearly proper. This situation may be rarely presented since design patent applications are seldom filed containing disclosures of independent articles.

II. DISTINCT INVENTIONS

**>In determining patentable distinctness, the examiner must compare the overall appearances of the multiple designs. Each design must be considered as a

whole, i.e., the elements of the design are not considered individually as they may be when establishing a *prima facie* case of obviousness under 35 U.S.C. 103(a). Designs are not distinct inventions if: (A) the multiple designs have overall appearances with basically the same design characteristics; and (B) the differences between the multiple designs are insufficient to patentably distinguish one design from the other. Differences may be considered patentably insufficient when they are *de minimis* or obvious to a designer of ordinary skill in the art. Therefore, in determining the question of patentable distinctness under 35 U.S.C. 121 in a design application, a search of the prior art may be necessary. Both of the above considerations are important. Differences between the designs may prove to be obvious in view of the prior art, but if the overall appearances are not basically the same, the designs remain patentably distinct. Embodiments claiming different scopes of the same design can be patentably distinct using the two-step analysis above. When an application illustrates a component, which is a subcombination of another embodiment, the subcombination often has a distinct overall appearance and a restriction should be required. When an application illustrates only a portion of the design, which is the subject of another embodiment, that portion often has a distinct overall appearance and a restriction should be required.<

A. Multiple Embodiments - Difference in Appearance

It is permissible to illustrate more than one embodiment of a design invention in a single application. However, such embodiments may be presented only if they involve a single inventive concept **>. Two designs involve a single inventive concept when the two designs are patentably indistinct according to the standard of obviousness-type double patenting.< See *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct over one another do not constitute a single inventive concept and thus may not be included in the same design application. *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967). The disclosure of plural embodiments does not require or justify more than a single claim, which claim must be in the formal terms stated in MPEP § 1503.01, subsection III. The specification should make clear that multiple embodiments are disclosed and should particularize the differences between the embodiments. If the disclosure of any embodiment relies on the disclosure of another embodiment for completeness to satisfy the requirements of 35 U.S.C. 112, first paragraph, the differences between the embodiments must be identified either in the figure descriptions or by way of a **>descriptive statement< in the specification of the application as filed. For example, the second embodiment of a cabinet discloses a single view showing only the difference in the front door of the cabinet of the first embodiment; the figure description should state that this view "is a second embodiment of Figure 1, the only difference being the configuration of the door, it being understood that all other surfaces are the same as those of the first embodiment." This type of statement in the description is understood to incorporate the disclosure of the first embodiment to complete the disclosure of the second embodiment. However, in the absence of such a statement in the specification of an application as filed, the disclosure of one embodiment will normally not be permitted to provide antecedent basis for any written or visual amendment to the disclosure of other embodiments.

The obviousness standard under 35 U.S.C. 103(a) must be applied in determining whether multiple embodiments may be retained in a single application. See MPEP § 1504.03. That is, it must first be determined whether the embodiments have overall appearances that are basically the same as each other. If the appearances of the embodiments are considered to be basically the same, then it must be determined whether the differences are either minor between the embodiments and not a patentable distinction, or obvious to a designer of ordinary skill in view of the analogous prior art . If embodiments meet both of the above criteria they may be retained in a single application. If embodiments do not meet either one of the above criteria, restriction must be required. It should be noted, that if the embodiments do not have overall appearances that are basically the same, restriction must be required since their appearances are patentably distinct. In such case it doesn't matter for restriction purposes, if the differences between the appearances of the embodiments are shown to be obvious in view of analogous prior art.

Form paragraph 15.27.02 or 15.27.03, if appropriate, may be used to notify applicant that restriction is not required because the embodiments are not patentably distinct.

¶ *15.27.02 Restriction Not Required - Change In Appearance (First Action - Non Issue)*

This application discloses the following embodiments:

Embodiment 1 - Figs. **[1]**

Embodiment 2 - Figs. **[2]**

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the differences between the appearances of the embodiments are considered minor and patentably indistinct, or are shown to be obvious in view of analogous prior art cited. Accordingly, they are deemed to be obvious variations and are being retained and examined in the same application. Any rejection of one embodiment over prior art will apply equally to all other embodiments. See *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the embodiments will be considered once the embodiments have been determined to comprise a single inventive concept. Failure of applicant to traverse this determination in reply to this action will be considered an admission of lack of patentable distinction between the above identified embodiments.

Examiner Note:

In bracket 3, add embodiments as necessary.

¶ *15.27.03 Restriction Not Required - Change In Appearance (First Action Issue)*

This application discloses the following embodiments:

Embodiment 1 - Figs. **[1]**

Embodiment 2 - Figs. **[2]**

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the differences between the appearances of the embodiments are considered minor and patentably indistinct, or are shown to be obvious in view of analogous prior art cited. Accordingly, they are deemed to be obvious variations and are being retained and examined in the same application.

Examiner Note:

In bracket 3, add embodiments as necessary.

The following form paragraphs may be used in a restriction requirement. Examiners must include a brief explanation of the differences between the appearances of the embodiments that render them patentably distinct.

¶ *15.27 Restriction Under 35 U.S.C. 121*

This application discloses the following embodiments:

Embodiment 1 - Figs. **[1]**

Embodiment 2 - Figs. **[2]**

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967). The **[4]** create(s) patentably distinct designs.

Because of the differences identified, the embodiments are considered to either have overall appearances that are **not** basically the same, or if they are basically the same, the differences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

The above embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment **[5]**

Group II: Embodiment **[6]**

[7]

Restriction is required under 35 U.S.C. 121 to one of the above identified patentably distinct groups of designs.

A reply to this requirement must include an election of a single group for prosecution on the merits, even if this requirement is traversed, 37 CFR 1.143. Any reply that does not include election of a single group will be held nonresponsive. Applicant is also requested to direct cancellation of all drawing figures and the corresponding descriptions which are directed to the nonelected groups.

Should applicant traverse this requirement on the grounds that the groups are not patentably distinct, applicant should present evidence or identify such evidence now of record showing the groups to be obvious variations of one another. If the groups are determined not to be patentably distinct and they remain in this application, any rejection of one group over prior art will apply equally to all other embodiments. See *Ex parte Appeal No.* 315-40, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the groups will be considered once the groups have been determined to comprise a single inventive concept.

In view of the above requirement, action on the merits is deferred pending compliance with the requirement in accordance

with *Ex parte Heckman*, 135 USPQ 229 (P.O. Super. Exam. 1960).

Examiner Note:

1. In bracket 3, add embodiments as necessary.
2. In bracket 4, insert an explanation of the difference(s) between the embodiments.
3. In bracket 7, add groups as necessary.

¶ *15.27.01 Restriction Under 35 U.S.C. 121 (Obvious Variations Within Group)*

This application discloses the following embodiments:

Embodiment 1 - Figs. **[1]**

Embodiment 2 - Figs. **[2]**

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

The above embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment **[4]**

Group II: Embodiment **[5]**

[6]

The embodiments disclosed within each group have overall appearances that are basically the same. Furthermore, the differences between them are considered minor and patentably indistinct, or are shown to be obvious in view analogous prior art cited. Therefore, they are considered by the examiner to be obvious variations of one another within the group. These embodiments thus comprise a single inventive concept and are grouped together. However, the **[7]** patentably distinguishes each group from the other(s).

Because of the differences identified, the embodiments of each Group are considered to either have overall appearances that are **not** basically the same, or if they are basically the same, the differences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

Restriction is required under 35 U.S.C. 121 to one of the patentably distinct groups of the designs.

A reply to this requirement must include an election of a single group for prosecution on the merits, even if this requirement is traversed, 37 CFR 1.143. Any reply that does not include election of a single group will be held nonresponsive. Applicant is also requested to direct cancellation of all drawing figures and the corresponding descriptions which are directed to the nonelected groups.

Should applicant traverse this requirement on the grounds that the groups are not patentably distinct, applicant should present evidence or identify such evidence now of record showing the groups to be obvious variations of one another. If the groups are determined not to be patentably distinct and they remain in this application, any rejection of one group over prior art will apply equally to all other groups. See *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the groups will be considered once the groups have been determined to comprise a single inventive concept.

In view of the above requirement, action on the merits is deferred pending compliance with the requirement in accordance with *Ex parte Heckman*, 135 USPQ 229 (P.O. Super. Exam. 1960).

Examiner Note:

1. In bracket 3, add embodiments as necessary.
2. In bracket 6, add groups as necessary.
3. In bracket 7, insert an explanation of the difference(s) between the groups.

¶ *15.28 Telephone Restriction Under 35 U.S.C. 121*

This application discloses the following embodiments:

Embodiment 1 - Figs. **[1]**

Embodiment 2 - Figs. **[2]**

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfield*, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967). The **[4]** create(s) patentably distinct designs. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

Because of the differences identified, the embodiments of each Group are considered to either have overall appearances that are **not** basically the same, or, if they are basically the same, the differences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

The above disclosed embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment **[5]**

Group II: Embodiment **[6]**

[7]

Restriction is required under 35 U.S.C. 121 to one of the patentably distinct groups of designs.

During a telephone discussion with **[8]** on **[9]**, a provisional election was made **[10]** traverse to prosecute the design(s) of group **[11]**. Affirmation of this election should be made by applicant in replying to this Office action.

Group **[12]** is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being for a nonelected design(s).

Examiner Note:

1. In bracket 3, add embodiments as necessary.
2. In bracket 4, insert an explanation of the difference(s) between the embodiments.
3. In bracket 7, add groups as necessary.
4. In bracket 10, insert --with-- or --without--.

¶ *15.28.01 Telephone Restriction Under 35 U.S.C.121 (Obvious Variations Within Group)*

This application discloses the following embodiments:

Embodiment 1 – Figs. **[1]**

Embodiment 2 – Figs. **[2]**

[3]

Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. See *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. See *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

The above embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment **[4]**

Group II: Embodiment **[5]**

[6]

The embodiments disclosed within each group have overall appearances that are basically the same. Furthermore, the differences between them are considered minor and patentably indistinct, or are shown to be obvious in view of analogous prior art cited. Therefore, they are considered by the examiner to be obvious variations of one another within the group. These embodiments thus comprise a single inventive concept and are grouped together. However, the **[7]** patentably distinguishes each group from the other(s).

Because of the differences identified, the embodiments of each Group are considered to either have overall appearances that are **not** basically the same, or if they are basically the same, the differences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

Restriction is required under 35 U.S.C. 121 to one of the patentably distinct groups of designs.

During a telephone discussion with **[8]** on **[9]**, a provisional election was made **[10]** traverse to prosecute the design(s) of group **[11]**. Affirmation of this election should be made by applicant in replying to this Office action.

Group **[12]** is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being for a nonelected design(s).

Examiner Note:

1. In bracket 3, add embodiments as necessary.
2. In bracket 6, add groups as necessary.
3. In bracket 7, insert an explanation of the differences between the groups.
4. In bracket 10, insert --with--or --without--.

¶ *15.31 Provisional Election Required (37 CFR 1.143)*

Applicant is advised that the **reply** to be complete must include a provisional election of one of the enumerated designs, even though the requirement may be traversed (37 CFR 1.143).

B. Combination/Subcombination - Difference in Scope

A design claim covers the entire design as a whole. Furthermore, claim protection to the whole design does not extend to any individual part or portion thereof. See *KeyStone Retaining Wall Systems Inc. v. Westrock Inc.*, 997 F.2d 1444, 27 USPQ2d 1297 (Fed. Cir. 1993). Embodiments directed to a design as a whole (combination) as well as individual parts or portions (subcombination) thereof may not be included in a single application if the appearances are patentably distinct. In such instance restriction would be required since patentably distinct combination/subcombination subject matter must be supported by separate claims. However, a design claim may cover embodiments of different scope directed to the same inventive concept within a single application if the designs are not patentably distinct. *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). The court held that the inventive concept of a design is not limited to its embodiment in a single specific article, and as long as the various embodiments are not patentably distinct, they may be protected by a single claim. *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C. 1965). The determination that the design of the subcombination/element is patentably indistinct from the combination means that the designs are not patentable (novel and unobvious) over each other and may remain in the same application. If the embodiments are patentably distinct, the designs are considered to be separate inventions which require separate claims, and restriction to one or the other is necessary. See *In re Kelly*, 200 USPQ 560 (Comm'r Pat. 1978); *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Ex parte Heckman*, 135 USPQ 229 (P.O. Super. Exam. 1960). In determining whether embodiments of different scope can be retained in a single application they must have overall appearances that are basically the same, and the difference in scope must be minor and not a patentable distinction. That is, they must, by themselves, be considered obvious over each other under 35 U.S.C. 103(a) without the aid of analogous prior art. The reason for this, as stated above, is because claim protection to the whole design does not extend to any individual part or portion thereof. Therefore, if the difference in scope between embodiments has an impact on the overall appearance that distinguishes

one over the other, they must be restricted since the difference in scope creates patentably distinct designs that must be supported by separate claims. Form paragraph 15.27.04 or 15.27.05, if appropriate, may be used to notify applicant that restriction is not required because the embodiments required are not patentably distinct.

¶ *15.27.04 Restriction Not Required – Change In Scope (First Action – Non Issue)*

This application discloses the following embodiments:

Embodiment 1 – Figs. **[1]**

Embodiment 2 – Figs. **[2]**

[3]

Designs which involve a change in scope may be included in the same design application only if they are patentably indistinct. However, design patent protection does not extend to patentably distinct segregable parts of a design. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C. 1965).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the difference in scope between embodiments is considered minor and patentably indistinct. Accordingly, they are deemed to be obvious variations and are being retained and examined in the same application. Any rejection of one embodiment over prior art will apply equally to all other embodiments. *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the embodiments will be considered once the embodiments have been determined to comprise a single inventive concept. Failure of applicant to traverse this determination in reply to this Office action will be considered an admission of lack of patentable distinction between the embodiments.

Examiner Note:

In bracket 3, add embodiments as necessary.

¶ *15.27.05 Restriction Not Required – Change In Scope (First Action Issue)*

This application discloses the following embodiments:

Embodiment 1 – Figs. **[1]**

Embodiment 2 – Figs. **[2]**

[3]

Designs which involve a change in scope may be included in the same design application only if they are patentably indistinct. However, design patent protection does not extend to patentably distinct segregable parts of a design. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C. 1965).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the difference in scope between embodiments is considered minor and patentably indistinct. Accordingly, they are deemed to be obvious variations and are being retained and examined in the same application.

Examiner Note:

In bracket 3, add embodiments as necessary.

Form paragraph 15.29 or 15.30, if appropriate, may be used to make a restriction requirement.

¶ *15.29 Restriction Under 35 U.S.C. 121 (Segregable Parts or Combination/Subcombination)*

This application discloses the following embodiments:

Embodiment 1 – Figs. **[1]** drawn to a **[2]**.

Embodiment 2 – Figs. **[3]** drawn to a **[4]**.

[5]

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I – Embodiment **[6]**

Group II – Embodiment **[7]**

[8]

The designs as grouped are distinct from each other since under the law a design patent covers only the invention disclosed as an entirety, and does not extend to patentably distinct segregable parts; the only way to protect such segregable parts is to apply for separate patents. See *Ex parte Sanford*, 1914 CD 69, 204 OG 1346 (Comm'r Pat. 1914); and *Blumcraft of Pittsburgh* v. *Ladd*, 144 USPQ 562 (D.D.C. 1965). It is further noted that patentably distinct combination/subcombination subject matter must be supported by separate claims, whereas only a single claim is permissible in a design patent application. See *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959).

[9]

Because the designs are distinct for the reason(s) given above, and have acquired separate status in the art, restriction for examination purposes as indicated is proper (35 U.S.C. 121).

A reply to this requirement must include an election of a single group for prosecution on the merits, even if this requirement is traversed. 37 CFR 1.143. Any reply that does not include an election of a single group will be held nonresponsive. Applicant is also requested to direct cancellation of all drawing figures and the corresponding descriptions which are directed to the nonelected groups.

Should applicant traverse this requirement on the grounds that the groups are not patentably distinct, applicant should present evidence or identify such evidence now of record showing the groups to be obvious variations of one another. If the groups are determined not to be patentably distinct and they remain in this application, any rejection of one group over the prior art will apply equally to all other groups. See *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the groups will be considered once the groups have been determined to comprise a single inventive concept.

In view of the above requirement, action on the merits is deferred pending compliance with the requirement in accordance with *Ex parte Heckman*, 135 USPQ 229 (P.O. Super. Exam. 1960).

Examiner Note:

1. In bracket 5, add embodiments as necessary.
2. In bracket 8, add groups as necessary.

3. In bracket 9, add comments, if necessary.

¶ *15.30 Telephone Restriction Under 35 U.S.C. 121 (Segregable Parts or Combination/Subcombination)*

This application discloses the following embodiments:

Embodiment 1 – Figs. **[1]** drawn to a **[2]**.

Embodiment 2 – Figs. **[3]** drawn to a **[4]**.

[5]

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I – Embodiment **[6]**

Group II – Embodiment **[7]**

[8]

The designs as grouped are distinct from each other since under the law a design patent covers only the invention disclosed as an entirety, and does not extend to patentably distinct segregable parts; the only way to protect such segregable parts is to apply for separate patents. See *Ex parte Sanford*, 1914 CD 69, 204 OG 1346 (Comm'r Pat. 1914); and *Blumcraft of Pittsburgh* v. *Ladd*, 144 USPQ 562 (D.D.C. 1965). It is further noted that patentably distinct combination/subcombination subject matter must be supported by separate claims, whereas only a single claim is permissible in a design patent application. See *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959).

[9]

During a telephone discussion with **[10]** on **[11]**, a provisional election was made **[12]** traverse to prosecute the invention of Group **[13]**. Affirmation of this election should be made by applicant in replying to this Office action.

Group **[14]** withdrawn from further consideration by the examiner, 37 CFR 1.142(b) as being for a nonelected invention.

Examiner Note:

1. In bracket 5, add embodiments as necessary.
2. In bracket 8, add groups as necessary.
3. In bracket 9, insert additional comments, if necessary.

Form paragraph 15.27.06 or 15.27.07, if appropriate, may be used to notify applicant that restriction is not required because the designs are not patentably distinct.

¶ *15.27.06 Restriction Not Required (Change in Appearance and Scope – First Action Non Issue)*

This application discloses the following embodiments:

Embodiment 1 - Figs. **[1]** drawn to a **[2]**.

Embodiment 2 - Figs. **[3]** drawn to a **[4]**.

[5]

Embodiments **[6]** involve a difference in appearance. Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

Embodiment(s) **[7]** directed to the combination(s) in relation to Embodiment(s) **[8]** directed to the subcombination(s)/element(s). Designs which involve a change in scope may be included in the same design application only if they are patentably indistinct. However, design protection does not extend to patentably distinct segregable parts of a design. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C.1965).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the differences between embodiments are considered minor and patentably indistinct, or are shown to be obvious in view of analogous prior art cited. Accordingly, they are deemed to be obvious variations and are being retained and examined in the same application. Any rejection of one embodiment over prior art will apply equally to all other embodiments. *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the embodiments will be considered once the embodiments have been determined to comprise a single inventive concept. Failure of applicant to traverse this determination in reply to this action will be considered an admission of lack of patentable distinction between the embodiments.

Examiner Note:

1. In bracket 5, add embodiments as necessary.
2. Insert an explanation of the differences between the designs in the explanations of the embodiments; for example, Figs. 1 – 5 directed to a cup and saucer; Figs. 6 – 9 directed to a saucer.
3. It is possible and proper that embodiments may be listed in both explanatory paragraphs.

¶ *15.27.07 Restriction Not Required (Change in Appearance and Scope – First Action Issue)*

This application discloses the following embodiments:

Embodiment 1 – Figs. **[1]** drawn to a **[2]**.

Embodiment 2 – Figs. **[3]** drawn to a **[4]**.

[5]

Embodiment(s) **[6]** involve a difference in appearance. Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967).

Embodiment(s) **[7]** directed to the combination(s) in relation to Embodiment(s) **[8]** directed to the subcombination(s)/element(s). Designs which involve a change in scope may be included in the same design application only if they are patentably indistinct. However, design protection does not extend to patentably distinct segregable parts of a design. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C.1965).

The above identified embodiments are considered by the examiner to present overall appearances that are basically the same. Furthermore, the differences between embodiments are considered minor and patentably indistinct, or are shown to be obvious in view of analogous prior art cited. Accordingly, they were deemed to be obvious variations and are being retained and

examined in the same application. Accordingly, they were deemed to comprise a single inventive concept and have been examined together.

Examiner Note:

1. In bracket 5, add embodiments as necessary.
2. Insert an explanation of the differences between the designs in the explanations of the embodiments; for example, Figs. 1 – 5 directed to a cup and saucer; Figs. 6 – 9 directed to a saucer.
3. It is possible and proper that embodiments may be listed in both explanatory paragraphs.

The following form paragraphs may be used in a restriction requirement.

Examiners must include a brief explanation of the differences between embodiments that render them patentably distinct.

¶ *15.27.08 Restriction with Differences in Appearance and Scope*

This application discloses the following embodiments:

Embodiment 1: Figs. **[1]** drawn to a **[2]**.

Embodiment 2: Figs. **[3]** drawn to a **[4]**.

[5]

The above embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment **[6]**

Group II: Embodiment **[7]**

[8]

Group(s) **[9]** involve a difference in appearance. Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967). The **[10]** creates patentably distinct designs.

Because of the differences identified, the embodiments are considered to either have overall appearances that are **not** basically the same, or if they are basically the same, the differences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

Group(s) **[11]** directed to the combination(s) in relation to Group(s) **[12]** directed to the subcombination(s)/element(s). The designs as grouped are distinct from each other since under the law a design patent covers only the design disclosed as an entirety, and does not extend to patentably distinct segregable parts; the only way to protect such segregable parts is to apply for separate patents. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburgh v. Ladd*, 238 F. Supp. 648, 144 USPQ 562 (D.D.C.1965). It is further noted that combination/subcombination subject matter, if patentably distinct, must be supported by separate claims, whereas only a single claim is permissible in a design patent application. *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959).

In any groups that include multiple embodiments, the embodiments are considered by the examiner to be obvious variations of one another within the group and, therefore, patentably indistinct. These embodiments thus comprise a single inventive concept and are grouped together.

Restriction is required under 35 U.S.C. 121 to one of the patentably distinct groups of designs.

A reply to this requirement must include an election of a single group for prosecution on the merits even if this requirement is traversed. 37 CFR 1.143. Any reply that does not include an election of a single group will be held nonresponsive. Applicant is also requested to direct cancellation of all drawing figures and the corresponding descriptions which are directed to the nonelected groups.

Should applicant traverse this requirement on the grounds that the groups are not patentably distinct, applicant should present evidence or identify such evidence now of record showing the groups to be obvious variations of one another. If the groups are determined not to be patentably distinct and they remain in this application, any rejection of one group over prior art will apply equally to all other groups. *Ex parte Appeal No. 315-40*, 152 USPQ 71 (Bd. App. 1965). No argument asserting patentability based on the differences between the groups will be considered once the groups have been determined to comprise a single inventive concept.

In view of the above requirement, action on the merits is deferred pending compliance with the requirement in accordance with *Ex parte Heckman*, 135 USPQ 229 (P.O. Super. Exam. 1960).

Examiner Note:

1. In bracket 5, add embodiments as necessary.
2. In bracket 8, add embodiments as necessary.
3. Insert an explanation of the differences between the designs in the explanations of the embodiments; for example, Figs. 1 – 5 directed to a cup and saucer; Figs. 6 – 9 directed to a saucer.
4. It is possible and proper that embodiments may be listed in both explanatory paragraphs.
5. In bracket 10, insert an explanation of the differences between the designs.

¶ *15.28.02 Telephone Restriction with Differences in Appearance and Scope*

This application discloses the following embodiments:

Embodiment 1: Figs. **[1]** drawn to a **[2]**.

Embodiment 2: Figs. **[3]** drawn to a **[4]**.

[5]

The above embodiments divide into the following patentably distinct groups of designs:

Group I: Embodiment **[6]**

Group II: Embodiment **[7]**

[8]

Group(s) **[9]** involve a difference in appearance. Multiple embodiments of a single inventive concept may be included in the same design application only if they are patentably indistinct. *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959). Embodiments that are patentably distinct from one another do not constitute a single inventive concept and thus may not be included in the same design application. *In re Platner*, 155 USPQ 222 (Comm'r Pat. 1967). The **[10]** creates patentably distinct designs.

Because of the differences identified, the embodiments are considered to either have overall appearances that are **not** basically the same, or if they are basically the same, the differences are **not** minor and patentably indistinct or are **not** shown to be obvious in view of analogous prior art.

Group(s) **[11]** directed to the combination(s) in relation to Group(s) **[12]** directed to the subcombination(s)/element(s). The designs as grouped are distinct from each other since under the law a design patent covers only the design disclosed as an entirety, and does not extend to patentably distinct segregable parts; the only way to protect such segregable parts is to apply for separate patents. *Ex parte Sanford*, 1914 C.D. 69, 204 O.G. 1346 (Comm'r Pat. 1914); *Blumcraft of Pittsburg v. Ladd*, 144 USPQ 562 (D.D.C.1965). It is further noted that combination/subcombination subject matter, if patentably distinct, must be supported by separate claims, whereas only a single claim is permissible in a design patent application. *In re Rubinfield*, 270 F.2d 391, 123 USPQ 210 (CCPA 1959).

In any groups that include multiple embodiments, the embodiments are considered by the examiner to be obvious variations of one another within the group and, therefore, patentably indistinct. These embodiments thus comprise a single inventive concept and are grouped together.

Restriction is required under 35 U.S.C. 121 to one of the patentably distinct groups of designs.

During a telephone discussion with **[13]** on **[14]**, a provisional election was made **[15]** traverse to prosecute the invention of Group **[16]**. Affirmation of this election should be made by applicant in replying to this Office action.

Group **[17]** is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being for a nonelected invention.

Examiner Note:

1. In bracket 5, add embodiments as necessary.
2. In bracket 8, add groups as necessary.
3. Insert an explanation of the differences between the designs in the explanations of the embodiments; for example, Figs. 1 – 5 directed to a cup and saucer; Figs. 6 – 9 directed to a saucer.
4. It is possible and proper that embodiments may be listed in both explanatory paragraphs.
5. In bracket 10, insert an explanation of the differences between the designs.
6. In bracket 15, insert --with-- or --without--.

¶ *15.33 Qualifying Statement To Be Used In Restriction When A Common Embodiment Is Included In More Than One Group*

The common embodiment is included in more than a single group as it is patentably indistinct from the other embodiment(s) in those groups and to give applicant the broadest possible choices in his or her election. If the common embodiment is elected in this application, then applicant is advised that the common embodiment should not be included in any continuing application to avoid a rejection on the ground of double patenting under 35 U.S.C. 171 in the new application.

The following form paragraphs may be used to notify applicant that the nonelected invention(s) are withdrawn from consideration.

¶ *15.34 Groups Withdrawn From Consideration After Traverse*

Group **[1]** withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being for a nonelected design, the requirement having been traversed in the reply filed on **[2]**.

¶ *15.35 Cancel Nonelected Design (Traverse)*

The restriction requirement maintained in this application is or has been made final. Applicant must cancel Group **[1]** directed to the design(s) nonelected with traverse in the reply filed on **[2]**, or take other timely appropriate action (37 CFR 1.144).

¶ *15.36 Groups Withdrawn From Consideration Without Traverse*

Group **[1]** withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being for the nonelected design. Election was made without traverse in the reply filed on **[2]**.

¶ *15.37 Cancellation of Nonelected Groups, No Traverse*

In view of the fact that this application is in condition for allowance except for the presence of Group **[1]** directed to a design or designs nonelected without traverse in the reply filed on **[2]**, and without the right to petition, such Group(s) have been canceled.

III. TRAVERSAL OF RESTRICTION REQUIREMENT

If a response to a restriction requirement includes an election with traverse on the grounds that the groups are not patentably distinct, applicant must present evidence or identify such evidence of record showing the groups to be obvious variations of one another. Traversal of a restriction requirement alone without an explanation in support thereof will be treated as an election without traverse. See MPEP § 818.03(a) and form paragraph 8.25.02.

A traversal of a restriction requirement based on there being no serious burden to an examiner to search and examine an entire application (as noted in MPEP § 803) is not applicable to design patent applications. The fact that the embodiments may be searched together cannot preclude a requirement for restriction if their appearances are considered patentably distinct, since patentably distinct embodiments cannot be supported by a single formal design claim. Also, clear admission on the record by the applicant that the embodiments are not patentably distinct (as noted in MPEP § 809.02(a)) will not overcome a requirement for restriction if the embodiments do not

have overall appearances that are basically the same as each other.

When a traversal specifically points out the supposed errors in a restriction, examiners must reevaluate the requirement in view of these remarks. If the restriction requirement is to be maintained, it must be repeated and made final in the next Office action and the arguments answered. See MPEP § 821.01. No application should be allowed on the next Office action where a response to a restriction requirement includes an election with traverse, unless the traversal is withdrawn in view of a telephone interview, or the examiner withdraws the restriction requirement.

1504.06 Double Patenting [R-5]

There are generally two types of double patenting rejections. One is the "same invention" type double patenting rejection based on 35 U.S.C. 171 which states in the singular that an inventor "may obtain a patent." The second is the "nonstatutory-type" double patenting rejection based on a judicially created doctrine grounded in public policy and which is primarily intended to prevent prolongation of the patent term by prohibiting claims in a second patent not patentably distinct from claims in a first patent. Nonstatutory double patenting includes rejections based on one-way determination of obviousness, and two-way determination of obviousness.

The charts in MPEP § 804 outline the procedure for handling all double patenting rejections.

Double patenting rejections are based on a comparison of the claims in a patent and an application or between two applications; the disclosure of the patent or application may be relied upon only to define the claim. 35 U.S.C. 171 specifically states that "a patent" may be obtained if certain conditions are met; this use of the singular makes it clear that only one patent may issue for a design.

Determining if a double patenting rejection is appropriate involves answering the following inquiries: Is the same design being claimed twice? If the answer is yes, then a rejection under 35 U.S.C. 171 should be given on the grounds of "same invention" type double patenting. If not, are the designs directed to patentably indistinct variations of the same inventive concept? If the answer is yes, then a rejection based on the nonstatutory type double patenting should be given.

Double patenting rejections are based on a comparison of claims. While there is a direct correlation between the drawings in a design application and the claim, examiners must be aware that no such correlation is necessary in a utility application or patent. Several utility patents may issue with the identical drawing disclosure but with claims directed to different inventions. So any consideration of possible double patenting rejections between a utility application or patent with a design application cannot be based on the utility drawing disclosure alone. *Anchor Hocking Corp. v. Eyelet Specialty Co.*, 377 F. Supp. 98, 183 USPQ 87 (D. Del. 1974). The examiner must be able to recreate the design claimed from the utility claims without any reliance whatsoever on the drawings.

If a provisional double patenting rejection (of any type) is the only rejection remaining in two conflicting applications, the examiner should withdraw that rejection in one of the applications (e.g., the application with the earlier filing date) and permit the application to issue as a patent. The examiner should maintain the provisional double patenting rejection in the other application which rejection will be converted into a double patenting rejection when the first application issues as a patent. If more than two applications conflict with each other and one is allowed, the remaining applications should be cross rejected against the others as well as the allowed application. For this type of rejection to be appropriate, there must be either at least one inventor in common, or a common assignee. If the claims in copending design applications or a design patent and design applications have a common assignee but different inventive entities, rejections under 35 U.S.C. 102(e), (f) and (g)/103(a) must be considered in addition to the double patenting rejection. See MPEP § 804, § 2136, § 2137 and § 2138.

I. "SAME INVENTION" DOUBLE PATENTING REJECTIONS

A design - design statutory double patenting rejection based on 35 U.S.C. 171 prevents the issuance of a second patent for a design already patented. For this type of double patenting rejection to be proper, identical designs with identical scope must be twice claimed. *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993). A design - utility "same inven-

tion" double patenting rejection is based on judicial doctrine as there is no statutory basis for this rejection because neither 35 U.S.C. 101 nor 35 U.S.C. 171 can be applied against both claims. *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969). The "same invention" type of double patenting rejection, whether statutory or nonstatutory, cannot be overcome by a terminal disclaimer. *In re Swett*, 145 F.2d 631, 172 USPQ 72 (CCPA 1971).

¶ *15.23.02 Summary for "Same Invention" – Type Double Patenting Rejections*

Applicant is advised that a terminal disclaimer may not be used to overcome a "same invention" type double patenting rejection. *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969); MPEP § 804.02.

Examiner Note:

This form paragraph should follow all "same invention" type double patenting rejections.

¶ *15.23 35 U.S.C. 171 Double Patenting Rejection (Design-Design)*

The claim is rejected under 35 U.S.C. 171 on the ground of double patenting since it is claiming the same design as that claimed in United States Design Patent No. **[1]**.

Examiner Note:

Form paragraph 15.23.02 should follow all "same invention" type double patenting rejections.

¶ *15.23.01 35 U.S.C. 171 Provisional Double Patenting Rejection (Design-Design)*

The claim is provisionally rejected under 35 U.S.C. 171 on the ground of double patenting since it is claiming the same design as that claimed in copending Application No. **[1]**. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

Examiner Note:

Form paragraph 15.23.02 should follow all "same invention" type double patenting rejections.

¶ *15.24.07 Double Patenting Rejection (Design-Utility)*

The claim is rejected under the judicially created doctrine of double patenting as being directed to the same invention as that set forth in claim **[1]** of United States Patent No. **[2]**. See *In re Thorington*, 418 F.2d 528,163 USPQ 644 (CCPA 1969).

Examiner Note:

Form paragraph 15.23.02 should follow all "same invention" type double patenting rejections.

¶ *15.24.08 Provisional Double Patenting Rejection (Design-Utility)*

The claim is provisionally rejected under the judicially created doctrine of double patenting as being directed to the same invention as that set forth in claim **[1]** of copending Application No. **[2]**. See *In re Thorington*, 418 F.2d 528,163 USPQ 644 (CCPA 1969).

This is a provisional double patenting rejection because the claims have not in fact been patented.

Examiner Note:

Form paragraph 15.23.02 should follow all "same invention" type double patenting rejections.

II. NONSTATUTORY DOUBLE PATENTING REJECTIONS

A rejection based on nonstatutory double patenting is based on a judicially created doctrine grounded in public policy so as to prevent the unjustified or improper timewise extension of the right to exclude granted by a patent. *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993).

A nonstatutory double patenting rejection of the obviousness-type applies to claims directed to the *same inventive concept with different appearances or differing scope which are patentably indistinct from each other*. Nonstatutory categories of double patenting rejections which are not the "same invention" type may be overcome by the submission of a terminal disclaimer.

**>In determining whether an obviousness-type double patenting rejection is appropriate, the examiner must compare the overall appearance of the claimed design in the application with the overall appearance of the claimed design in the conflicting application or patent. The claim in the patent or conflicting application must be considered as a whole, i.e., the elements of the claimed design of the reference are not considered individually as they may be when establishing a *prima facie* case of obviousness under 35 U.S.C. 103(a). After the factual inquiries mandated under *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), have been made, as with a rejection under 35 U.S.C. 103(a), the examiner must then determine whether the results of the inquiries support a conclusion of *prima facie* obviousness-type double patenting. To establish a *prima facie* case of obviousness-type double patenting: (A) the conflicting design claims must have overall appearances with basically the same design characteristics; and (B) the differences between the two designs must be insufficient to patentably distinguish one design from the other. Differences may be considered patentably

insufficient when they are *de minimis* or obvious to a designer of ordinary skill in the art. While the conflicting application or patent (if less than a year older than the application) used to establish a *prima facie* case of obviousness-type double patenting is not considered "prior art,"< the principle involved is the same. *In re Zickendraht*, 319 F.2d 225, 138 USPQ 22 (CCPA 1963)(see concurring opinion of Judge Rich).

In determining whether to make an obviousness-type double patenting rejection between designs having differing scope, the examiner should compare the reference claim with the application claim. A rejection is appropriate if:

(A) The difference in scope is minor and patentably indistinct between the claims being compared;

(B) Patent protection for the design, fully disclosed in and covered by the claim of the reference, would be extended by the allowance of the claim in the later filed application; and

(C) No terminal disclaimer has been filed.

This kind of obviousness-type double patenting rejection in designs will occur between designs which may be characterized as a combination (narrow claim) and a subcombination/element thereof (broad claim). See discussion in MPEP § 1504.05, subsection II, B. If the designs are patentably indistinct and are directed to the same inventive concept the examiner must determine whether the subject matter of the narrower claim is fully disclosed in and covered by the broader claim of the reference. If the reference does *not* fully disclose the narrower claim, then a double patenting rejection should not be made. The additional disclosure necessary to establish that the applicant was in possession of the narrower claim at the time the broader claim was filed may be in a title or **>descriptive statement< as well as in a broken line showing in the drawings. If the broader claim of the reference does not disclose the additional subject matter claimed in the narrower claim, then applicant could not have claimed the narrower claim at the time the application with the broader claim was filed and a rejection under nonstatutory double patenting would be inappropriate.

A nonstatutory double patenting rejection may be made between a patent and an application or provisionally between applications. Such rejection over a patent should only be given if the patent issued less than a year before the filing date of the application. If the patent is more than a year older than the application, the patent is considered to be "prior art" which may be applied in a rejection under 35 U.S.C. 102(b)/103(a). The purpose of a terminal disclaimer is to obviate a double patenting rejection by removing potential harm to the public by issuing a second patent. See MPEP § 804.

If the issue of double patenting is raised between a patent and a *continuing* application, examiners are reminded that this ground of rejection can only be made when the filing of the continuing application is voluntary and not the direct, unmodified result of restriction requirement under 35 U.S.C. 121. See MPEP § 804.01.

Examiners should particularly note that a design-design nonstatutory double patenting rejection does not *always* have to be made in both of the conflicting applications. For the most part, these rejections will be made in each of the conflicting applications; but, if the rejection is only appropriate in one direction, it is proper to reject only one application. The criteria for determining whether a one-way obviousness determination is necessary or a two-way obviousness determination is necessary is set forth in MPEP § 804. However, in design-utility situations, a two-way obviousness determination is necessary for the rejection to be proper. *In re Dembiczak*, 175 F.3d 994, 50 USPQ2d 1614 (Fed. Cir. 1999).

The following form paragraphs may be used in making a double patenting rejection. Explanation should be provided in the appropriate brackets.

¶ *15.24.06 Basis for Nonstatutory Double Patenting, "Heading Only"*

The non-statutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Examiner Note:

This form paragraph must precede all nonstatutory double patenting rejections as a heading, except "same invention" type.

¶ *15.24 Obviousness-type Double Patenting Rejection (Single Reference)*

The claim is rejected under the judicially created doctrine of the obviousness-type double patenting of the claim in United States Patent No. **[1]**. Although the conflicting claims are not identical, they are not patentably distinct from each other because **[2]**.

Examiner Note:

1. In bracket 1, insert prior U.S. Patent Number.
2. In bracket 2, the differences between the conflicting claims must be identified and indicated as being minor and not distinguishing the overall appearance of one over the other.
3. This form paragraph must be preceded by form paragraph 15.24.06 and followed by form paragraph 15.67.

¶ *15.24.03 Provisional Obviousness-Type Double Patenting Rejection (Single Reference)*

The claim is provisionally rejected under the judicially created doctrine of the obviousness-type double patenting of the claim of copending Application No. **[1]**. Although the conflicting claims are not identical, they are not patentably distinct from each other because **[2]**. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Examiner Note:

1. In bracket 1, insert conflicting application number.
2. In bracket 2, the differences between the conflicting claims must be identified and indicated as being minor and not distinguishing the overall appearance of one over the other.
3. This form paragraph must be preceded by form paragraph 15.24.06 and followed by form paragraph 15.67.

¶ *15.67 Rationale for 35 U.S.C. 103(a) Rejection (Single Reference)*

It is well settled that it is unobviousness in the overall appearance of the claimed design, when compared with the prior art, rather than minute details or small variations in design as appears to be the case here, that constitutes the test of design patentability. See *In re Frick*, 275 F.2d 741, 125 USPQ 191 (CCPA 1960) and *In re Lamb*, 286 F.2d 610, 128 USPQ 539 (CCPA 1961).

¶ *15.25 Obviousness-Type Double Patenting Rejection (Multiple References)*

The claim is rejected under the judicially created doctrine of the obviousness-type double patenting of the claim(s) in United States Patent No. **[1]** in view of **[2]**. At the time applicant made the design, it would have been obvious to a designer of ordinary skill in the art to **[3]** as demonstrated by **[4]**.

Examiner Note:

1. In bracket 1, insert conflicting patent number.
2. In bracket 2, insert secondary reference(s).
3. In bracket 3, insert an explanation of how the conflicting claim in the patent is modified.
4. In bracket 4, identify the secondary reference(s) teaching the modification(s).
5. This form paragraph must be preceded by form paragraph 15.24.06 and followed by form paragraph 15.68.

¶ *15.24.04 Provisional Obviousness-Type Double Patenting Rejection (Multiple References)*

The claim is provisionally rejected under the judicially created doctrine of the obviousness-type double patenting of the claim of copending Application No. **[1]** in view of **[2]**. At the time applicant made the design, it would have been obvious to a designer of ordinary skill in the art to **[3]** as demonstrated by **[4]**. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Examiner Note:

1. In bracket 1, insert conflicting application number.
2. In bracket 2, insert secondary reference(s).
3. In bracket 3, insert an explanation of how the conflicting claim in the copending application is modified.
4. In bracket 4, identify the secondary reference(s) teaching the modification(s).
5. This form paragraph must be preceded by form paragraph 15.24.06 and followed by form paragraph 15.68.

¶ *15.68 Rationale for 35 U.S.C. 103(a) Rejection (Multiple References)*

This modification of the basic reference in light of the secondary prior art is proper because the applied references are so related that the appearance of features shown in one would suggest the application of those features to the other. See *In re Rosen*, 673 F.2d 388, 213 USPQ 347 (CCPA 1982); *In re Carter*, 673 F.2d 1378, 213 USPQ 625 (CCPA 1982), and *In re Glavas*, 230 F.2d 447, 109 USPQ 50 (CCPA 1956). Further, it is noted that case law has held that a designer skilled in the art is charged with knowledge of the related art; therefore, the combination of old elements, herein, would have been well within the level of ordinary skill. See *In re Antle*, 444 F.2d 1168,170 USPQ 285 (CCPA 1971) and *In re Nalbandian*, 661 F.2d 1214, 211 USPQ 782 (CCPA 1981).

1504.10 Priority Under 35 U.S.C. 119(a)-(d) [R-5]

35 U.S.C. 172. Right of priority.

The right of priority provided for by subsections (a) through (d) of section 119 of this title and the time specified in section 102(d) shall be six months in the case of designs. The right of priority provided for by section 119(e) of this title shall not apply to designs.

The provisions of 35 U.S.C. 119(a)-(d) apply to design patent applications. However, in order to

obtain the benefit of an earlier foreign filing date, the United States application must be filed within 6 months of the earliest date on which any foreign application for the same design was filed. Design applications may not make a claim for priority of a provisional application under 35 U.S.C. 119(e).

¶ *15.01 Conditions Under 35 U.S.C. 119(a)-(d)*

Applicant is advised of conditions as specified in 35 U.S.C. 119(a)-(d). An application for a design patent for an invention filed in this country by any person who has, or whose legal representatives have previously filed an application for a design patent, or equivalent protection for the same design in a foreign country which offers similar privileges in the case of applications filed in the United States or in a WTO member country, or to citizens of the United States, shall have the same effect as the same application would have if filed in this country on the date on which the application for patent for the same invention was first filed in such foreign country, if the application in this country is filed within six (6) months from the earliest date on which such foreign application was filed.

¶ *15.01.01 Conditions Under 35 U.S.C. 172 Not Met*

The claim for priority under 35 U.S.C. 119(a)-(d) to the [1] application is acknowledged, however, the claim for priority cannot be based on such application since it was filed more than six (6) months before the filing of the application in the United States. 35 U.S.C 172.

Examiner Note:

1. In bracket, insert the name of the foreign country.

¶ *15.03 Untimely Priority Papers*

Receipt is acknowledged of the filing on **[1]** of a certified copy of the **[2]** application referred to in the oath or declaration. A claim for priority cannot be based on said application, since the United States application was filed more than six (6) months thereafter (35 U.S.C. 172).

The United States will recognize claims for the right of priority under 35 U.S.C. 119(a)-(d) based on applications filed under such bilateral or multilateral treaties as the "Hague Agreement Concerning the International Deposit of Industrial Designs," "Uniform Benelux Act on Designs and Models" and "European Community Design." In filing a claim for priority of a foreign application previously filed under such a treaty, certain information must be supplied to the United States Patent and Trademark Office. In addition to the application number and the date of filing of the foreign application, the following information is required:

(A) the name of the treaty under which the application was filed,

(B) the name of at least one country other than the United States in which the application has the effect of, or is equivalent to, a regular national filing and

(C) the name and location of the national or intergovernmental authority which received the application.

¶ *15.02 Right of Priority Under 35 U.S.C. 119(b)*

No application for design patent shall be entitled to the right of priority under 35 U.S.C. 119(b) unless a claim therefor and a certified copy of the original foreign application, specification and drawings upon which it is based are filed in the United States Patent and Trademark Office before the issue fee is paid, or at such time during the pendency of the application as required by the Director not earlier than six (6) months after the filing of the application in this country. Such certification shall be made by the Patent Office, or other proper authority of the foreign country in which filed, and show the date of the application and of the filing of the specification and other papers. The Director may require a translation of the papers filed if not in the English language, and such other information as deemed necessary.

The notation requirement on design patent application file wrappers when foreign priority is claimed is set forth in MPEP § 202.03.

¶ *15.04 Priority Under Bilateral or Multilateral Treaties*

The United States will recognize claims for the right of priority under 35 U.S.C. 119(a)-(d) based on applications filed under such bilateral or multilateral treaties as the Hague Agreement Concerning the International Deposit of Industrial Designs, the Benelux Designs Convention and European Community Design. In filing a claim for priority of a foreign application previously filed under such a treaty, certain information must be supplied to the United States Patent and Trademark Office. In addition to the application number and the date of filing of the application, the following information is requested: (1) the name of the treaty under which the application was filed; (2) the name of at least one country other than the United States in which the application has the effect of, or is equivalent to, a regular national filing; and (3) the name and location of the national or international governmental authority which received such application.

**

Attention is also directed to the paragraphs dealing with the requirements where an actual model was originally filed in Germany (MPEP § 201.14(b)).

See MPEP Chapter 200 and 37 CFR 1.55 for further discussion of the practice and procedure under 35 U.S.C. 119(a)-(d).

1504.20 Benefit Under 35 U.S.C. 120 [R-5]

35 U.S.C. 120. Benefit of earlier filing date in the United States.

An application for patent for an invention disclosed in the manner provided by the first paragraph of section 112 of this title in an application previously filed in the United States, or as provided by section 363 of this title, which is filed by an inventor or inventors named in the previously filed application shall have the same effect, as to such invention, as though filed on the date of the prior application, if filed before the patenting or abandonment of or termination of proceedings on the first application or on an application similarly entitled to the benefit of the filing date of the first application and if it contains or is amended to contain a specific reference to the earlier filed application. No application shall be entitled to the benefit of an earlier filed application under this section unless an amendment containing the specific reference to the earlier filed application is submitted at such time during the pendency of the application as required by the Director. The Director may consider the failure to submit such an amendment within that time period as a waiver of any benefit under this section. The Director may establish procedures, including the payment of a surcharge, to accept an unintentionally delayed submission of an amendment under this section.

If applicant is entitled under 35 U.S.C. 120 to the benefit of an earlier U.S. filing date, the statement that, "This is a division [continuation] of design Application No.— — — —, filed — — —." should appear in the first sentence of the specification. As set forth in 37 CFR 1.78(a)(2), the specification must contain or be amended to contain such a reference in the first sentence>(s)< following the title unless the reference is included in an application data sheet (37 CFR 1.76). The failure to timely submit such a reference is considered a waiver of any benefit under 35 U.S.C. 120.

Form paragraph 15.26 may be used to remind applicant that a reference to the prior application must be included in the first sentence>(s)< of the specification or in an application data sheet.

**>

¶ *15.26 Identification of Prior Application(s) in Nonprovisional Applications - Benefit Claimed*

Applicant is reminded of the following requirement:

In a continuation or divisional application (other than a continued prosecution application filed under 37 CFR 1.53(d)), the first sentence(s) of the specification or the application data sheet (37 CFR 1.76) should include a reference to the prior application(s) from which benefit is sought. See 37 CFR 1.78. The following format is suggested: "This is a continuation (or division) of Application No._____, filed _____, now (abandoned, pending or U.S. Patent No._____)."

<

Attention is directed to the requirements for "continuing" applications set forth in MPEP § 201.07, § 201.08, and § 201.11. Applicants are entitled to claim the benefit of the filing date of earlier applications for later claimed inventions under 35 U.S.C. 120 only when the earlier application discloses that invention in the manner required by 35 U.S.C. 112, first paragraph. In all continuation and divisional applications, a determination must be made by the examiner as to whether the conditions for priority under 35 U.S.C. 120 have been met. **>The claimed design in a continuation application and in a divisional application must be disclosed in< the original application. If this condition is not met, the application is not entitled to the benefit of the earlier filing date and the examiner should notify applicant accordingly by specifying the reasons why applicant is not entitled to claim the benefit under 35 U.S.C. 120. Form paragraphs 2.09 and 2.10 may be used followed by a specific explanation as to why the later filed application fails to comply with the requirements of 35 U.S.C 120. The examiner should also require applicant to cancel the claim for *>benefit< in the first sentence>(s)< of the specification >or submit a supplemental application data sheet, where appropriate<.

*>For applications filed prior to September 21, 2004, in< the absence of a statement in the application as originally filed incorporating by reference the disclosure of an earlier filed application, the disclosure in a continuing application may not be amended to conform to that of the earlier filed application for which priority is claimed. A mere statement that an application is a continuation or division of an earlier filed application is not an incorporation of anything into the application containing such reference for purposes of satisfying the disclosure requirements of 35 U.S.C. 112, first paragraph. *In re de Seversky*, 474 F.2d 671, 177 USPQ 144 (CCPA 1973). See also MPEP 608.01(p). >For applications filed on or after September 21, 2004, 37 CFR 1.57(a) provides that a claim under 37 CFR 1.78 for the benefit of a prior-filed application, that was present on the filing date of

the application, is considered an incorporation by reference as to inadvertently omitted material. See MPEP § 201.17.<

When the first application is found to be fatally defective under 35 U.S.C. 112 because of insufficient disclosure to support an allowable claim and such position has been made of record by the examiner, a second design patent application filed as an alleged "continuation-in-part" of the first application to supply the deficiency is not entitled to the benefit of the earlier filing date. See *Hunt Co. v. Mallinckrodt Chemical Works*, 177 F.2d 583, 83 USPQ 277 (F2d Cir. 1949) and cases cited therein. Also, a design application filed as a "continuation-in-part" that changes the shape or configuration of a design disclosed in an earlier application is not entitled to the benefit of the filing date of the earlier application. See *In re Salmon*, 705 F.2d 1579, 217 USPQ 981 (Fed. Cir. 1983). However, a later filed application that changes the scope of a design claimed in an earlier filed application by reducing certain portions of the drawing to broken lines is not a change in configuration as defined by the court in *Salmon*. See MPEP § 1504.04, subsection II.

Unless the filing date of an earlier application is actually needed, for example, in the case of an interference or to avoid an intervening reference, there is no need for the examiner to make a determination in a continuation-in-part application as to whether the requirement of 35 U.S.C. 120 is met. Note the holdings in *In re Corba*, 212 USPQ 825 (Comm'r Pat. 1981).

Form paragraph 15.74 may be used in a first Office action on the merits in any application identified as a continuation-in-part which claims *>benefit< under 35 U.S.C. 120 to a prior application.

**>

¶ *15.74 Continuation-In-Part*

Reference to this design application as a continuation-in-part under 35 U.S.C. 120 is acknowledged. Applicant is advised that the design disclosed in the parent application is not the same design as the design disclosed in this application. Therefore, this application does not satisfy the written description requirement of 35 U.S.C. 112, first paragraph, under 35 U.S.C. 120 and is not entitled to benefit of the earlier filing date. However, unless the filing date of the earlier application is actually needed, such as to avoid intervening prior art, the entitlement to priority in this CIP application will not be considered. See *In re Corba*, 212 USPQ 825 (Comm'r Pat. 1981).

Examiner Note:

This form paragraph should be used to notify applicant that the C-I-P application is not entitled to the benefit of the parent application under 35 U.S.C. 120.

<

Where a continuation-in-part application claims benefit under 35 U.S.C. 120 of the filing date of an earlier application, **>which in turn claims the priority under 35 U.S.C. 119(a)-(d) of a foreign application, and the conditions of 35 U.S.C. 120 are not met, a determination as to whether the foreign application for patent/registration has matured into a form of patent protection must be made.< To determine the status of the foreign application, the charts in MPEP § 1504.02 should be used. ** If the foreign application for patent/registration has matured into a form of patent protection and would anticipate or render the claim in the alleged CIP application obvious, the design shown in the foreign application papers would qualify as prior art under 35 U.S.C. 102(d)/172 and the claim should be rejected under 35 U.S.C. 102/103. >The claim for the benefit of the earlier filing date under 35 U.S.C. 120 as a continuation-in-part should be denied and the claim for priority under 35 U.S.C. 119(a)-(d) should also be denied.< Form paragraph 15.75 may be used.

**>

¶ *15.75 Preface to Rejection in Alleged CIP Based on 35 U.S.C. 102(d)/172*

Reference to this design application as a continuation-in-part under 35 U.S.C. 120 is acknowledged. Applicant is advised that the design disclosed in the parent application is not the same design as the design disclosed in this application. Therefore, this application does not satisfy the written description requirement of 35 U.S.C. 112, first paragraph, under 35 U.S.C. 120 and is not entitled to benefit of the earlier filing date.

The parent application claimed foreign priority under 35 U.S.C. 119(a) - (d). Insofar as the foreign application has matured into a patent/registration more than six months before the filing date of the present application, it qualifies as prior art under 35 U.S.C. 102(d)/172.

Examiner Note:

This form paragraph should be followed with a rejection under 35 U.S.C. 102 or 103(a) depending on the difference(s) between this claim and the design shown in the priority papers.

<

If the status of the foreign application cannot be determined the following form paragraph should be used instead.

**>

¶ *15.75.01 C-I-P Caution, Claim to Foreign Priority in Earlier Filed Application*

Reference to this application as a continuation-in-part under 35 U.S.C. 120 is acknowledged. Applicant is advised that the design disclosed in the parent application is not the same design as the design disclosed in this applicatoin. Therefore, this application does not satisfy the written description requirement of 35 U.S.C. 112, first paragraph, under 35 U.S.C. 120 and is not entitled to benefit of the earlier filing date.

However, unless the filing date of the earlier application is actually needed, such as to avoid intervening prior art, entitlement to priority in this CIP application will not be considered. See *In re Corba*, 212 USPQ 825 (Comm'r Pat. 1981).

The parent application claimed foreign priority under 35 U.S.C. 119(a) - (d). Applicant is reminded that if the foreign application to which priority was claimed matured into a form of patent protection prior to the filing of this application it qualifies as prior art under 35 U.S.C. 102(d)/172.

<

Where the conditions of 35 U.S.C. 120 are met, a design application may be considered a continuing application of an earlier utility application. Conversely, this also applies to a utility application relying on the benefit of the filing date of an earlier filed design application. See *In re Chu*, 66 F.3d 292, 36 USPQ2d 1089 (Fed. Cir. 1995); *In re Salmon*, 705 F.2d 1579, 217 USPQ 981 (Fed. Cir. 1983). In addition, a design application may claim benefit from an earlier filed PCT application under 35 U.S.C. 120 if the U.S. was designated in the PCT application.

Note also *In re Berkman*, 642 F.2d 427, 209 USPQ 45 (CCPA 1981) where the benefit of a design patent application filing date requested under 35 U.S.C. 120 was denied in the later filed utility application of the same inventor. The Court of Customs and Patent Appeals took the position that the design application did not satisfy 35 U.S.C. 112, first paragraph, as required under 35 U.S.C. 120.

1504.30 Expedited Examination [R-5]

37 CFR 1.155. Expedited examination of design applications

(a) The applicant may request that the Office expedite the examination of a design application. To qualify for expedited examination.

(1) The application must include drawings in compliance with § 1.84;

(2) The applicant must have conducted a preexamination search; and

(3) The applicant must file a request for expedited examination including:

(i) The fee set forth in § 1.17(k); and

(ii) A statement that a preexamination search was conducted. The statement must also indicate the field of search and include an information disclosure statement in compliance with § 1.98.

(b) The Office will not examine an application that is not in condition for examination (*e.g*, missing basic filing fee) even if the applicant files a request for expedited examination under this section.

37 CFR 1.155 establishes an expedited procedure for design applications. This expedited procedure became effective on September 8, 2000 and is available to all design applicants who first conduct a preliminary examination search and file a request for expedited treatment accompanied by the fee specified in 37 CFR 1.17(k). This expedited treatment is intended to fulfill a particular need by affording rapid design patent protection that may be especially important where marketplace conditions are such that new designs on articles are typically in vogue for limited periods of time.

A design application may qualify for expedited examination provided the following requirements are met:

(A) A request for expedited examination is filed (Form PTO/SB/27 may be used);

(B) The design application is complete and it includes drawings in compliance with 37 CFR 1.84 (see 37 CFR 1.154 and MPEP § 1503 concerning the requirements for a complete design application);

(C) A statement is filed indicating that a preexamination search was conducted (a search made by a foreign patent office satisfies this requirement). The statement must also include a list of the field of search such as by U.S. Class and Subclass (including domestic patent documents, foreign patent documents and nonpatent literature);

(D) An information disclosure statement in compliance with 37 CFR 1.98 is filed;

(E) The basic design application filing fee set forth in 37 CFR 1.16(*>b<) is paid; and

(F) The fee for expedited examination set forth in 37 CFR 1.17(k) is paid.

EXPEDITED EXAMINATION PROCEDURE

Design applications requesting expedited examination and complying with the requirements of 37 CFR 1.155 are examined with priority and undergo expedited processing throughout the entire course of prosecution in the Office, including appeal, if any, to the Board of Patent Appeals and Interferences. All processing is expedited from the date the request is granted.

Design applicants seeking expedited examination may file a design application in the Office together with a corresponding request under 37 CFR 1.155 by hand-delivering the application papers and the request **>to the Customer Service Window located at the Randolph Building, 401 Dulany Street, Alexandria, VA 22314.< For applicants who choose to file a design application and the corresponding request under 37 CFR 1.155 by mail, the envelope should be addressed to:

Mail Stop Expedited Design
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Mail Stop Expedited Design should only be used for the initial filing of design applications accompanied by a corresponding request for expedited examination under 37 CFR 1.155. Mail Stop Expedited Design should NOT be used for a request under 37 CFR 1.155 filed subsequent to the filing of the corresponding design application. Instead, a subsequently filed request under 37 CFR 1.155 should be made by facsimile transmission to the centralized facsimile number *>571-273-8300< with the notation "SPECIAL PROCEDURES SUBMISSION" included at the top of the first page and the corresponding application number identified.

Design application filings addressed to Mail Stop Expedited Design will be forwarded immediately to the Design TC Director's office. Whether an application requesting expedited examination is hand-delivered to the **>Customer Service Window< or mailed to Mail Stop Expedited Design, expedited processing is initiated at the Design TC Director's office provided the application (including the design application filing fee) is in condition for examination and a complete request under 37 CFR 1.155 (including the fee specified at 37 CFR 1.17(k)) qualifies the application for expedited examination.

Upon a decision by the Design TC Director to grant the request for expedited examination, the fees are immediately processed, the application papers are promptly assigned an application number, and the application is dispatched to an examiner for expedited examination. In addition, the applicant is notified that examination is being expedited. The expedited treatment under 37 CFR 1.155 occurs through initial examination processing and throughout the entire prosecution in the Office. Whereas, an application granted special status pursuant to a successful "petition to make special" under MPEP § 708.02 is prioritized while it is on the examiner's docket so that the application will be examined out of turn responsive to each successive communication from the applicant requiring Office action. For a patentable design application, the expedited treatment under 37 CFR 1.155 would be a streamlined filing-to-issuance procedure. This procedure further expedites design application processing by decreasing clerical processing time as well as the time spent routing the application between processing steps.

Although a request under 37 CFR 1.155 may be filed subsequent to the filing of the design application, it is recommended that the request and the corresponding design application be filed together in order to optimize expeditious processing.

If an application requesting expedited examination is incomplete (not in condition for examination), an appropriate notice will be mailed to the applicant identifying the reasons why the application is incomplete and requiring correction thereof. The Office will not examine an application that is not in condition for examination even if the applicant files a request for expedited examination.

If an application requesting expedited examination fails to comply with one or more of the requirements for expedited examination under 37 CFR 1.155, but the application is otherwise complete, the applicant will be promptly notified and required to comply with all requirements under 37 CFR 1.155 within a shortened time period extendable under 37 CFR 1.136(a). Unless all requirements under 37 CFR 1.155 are timely met, the application will await action in its regular turn.

Once a request under 37 CFR 1.155 is granted, examiners will expedite examination by examining the application out-of-turn. Examiners are strongly encouraged to use telephone interviews to resolve minor problems. Clerical processing of the application will be expedited as well.

If the overall appearance of two or more patentably distinct embodiments of an article as disclosed in the drawings are different in appearance or scope, restriction will be required in accordance with MPEP § 1504.05. If applicant refuses to make an election without traverse, the application will not be further examined at that time, and the application will await action in its regular turn. Divisional applications directed to nonelected inventions will not qualify for expedited examination unless the divisional application meets on its own all requirements for expedited examination under 37 CFR 1.155. Similarly, expedited status will not carry over to a continuing application, including a CPA, unless the continuing application meets on its own all requirements for expedited examination under 37 CFR 1.155.

Once a request for expedited examination is granted, prosecution will proceed according to the procedure under 37 CFR 1.155. There is no provision for "withdrawal" from expedited examination procedure.

1505 Allowance and Term of Design Patent

35 U.S.C. 173. Term of design patent.

Patents for designs shall be granted for the term of fourteen years from the date of grant.

1509 Reissue of a Design Patent [R-5]

See MPEP Chapter 1400 for practice and procedure in reissue applications. See also MPEP § 1457 regarding design reissue applications.

For design reissue application fee, see 37 CFR 1.16(*>e<). For fee for issuing a reissue design patent, see 37 CFR 1.18(b).

The term of a design patent may not be extended by reissue. *Ex parte Lawrence*, 70 USPQ 326 (Comm'r Pat. 1946). If a reissue application is filed for the purpose of correcting the drawing of a design patent, either by canceling views, amending views or adding new views, the provisions of 37 CFR 1.173(b)(3) must be followed. All changes to the patent drawing shall be explained, in detail, beginning on a separate sheet accompanying the papers including the amendment to the drawing. A marked-up copy of any amended drawing figure, including annotations indicating the changes made, should be submitted. The marked-up copy must be clearly labeled as "Annotated Marked-up Drawings" and it must be presented in the amendment or remarks section that explains the change to the drawing.

A reissue application must be filed with a copy of all drawing views of the design patent regardless of whether certain views are being cancelled or amended in the reissue application. Inasmuch as the drawing is the primary means for showing the design being claimed, it is important for purposes of comparison that the reissue of the design patent shows a changed drawing view in both its canceled and amended versions and/or show a previously printed drawing view that has been canceled but not replaced. In addition to drawing views that are unchanged from the original design patent, the drawing in the reissue application may include the following views, all of which will be printed as part of the design reissue patent:

(1) CANCELED drawing view. Such a drawing view must be surrounded by brackets and must be labeled as "Canceled." For example, FIG. 3 (Canceled). If a drawing view is canceled but not replaced the corresponding figure description in the reissue specification must also be cancelled. However, if a drawing view is cancelled and replaced by an amended drawing view the corresponding figure description in the reissue specification may or may not need to be amended.

(2) AMENDED drawing view. Such a drawing view must be labeled as "Amended." For example, FIG. 3 (Amended). When an amended drawing view is present, there may or may not be a corresponding canceled drawing view. If there is such a corresponding canceled drawing view, the amended and canceled drawing views should have the same figure number. The specification of the reissue application need not indicate that there is both a canceled version and an amended version of the drawing view.

(3) NEW drawing view. Such a drawing view must be labeled as "New" For example, FIG. 5 (New). The new drawing view should have a new figure number, that is, a figure number that did not appear in the orig-

inal design patent. The specification of the reissue application must include a figure description of the new drawing view.

If a drawing view includes both a cancelled and amended version, and the change in the amended version is for the purpose of converting certain solid lines to broken lines, the reissue specification must include a statement indicating the purpose of the broken lines.

1510 Reexamination

See MPEP Chapter 2200 for practice and procedure for reexamination applications.

1511 Protest

See MPEP Chapter 1900 for practice and procedure in protest.

1512 Relationship Between Design Patent, Copyright, and Trademark [R-2]

I. DESIGN PATENT/COPYRIGHT OVERLAP

There is an area of overlap between copyright and design patent statutes where the author/inventor can secure both a copyright and a design patent. Thus an ornamental design may be copyrighted as a work of art and may also be subject matter of a design patent. The author/inventor may not be required to elect between securing a copyright or a design patent. See *In re Yardley*, 493 F.2d 1389, 181 USPQ 331. In *Mazer v. Stein*, 347 U.S. 201, 100 USPQ 325 (1954), the Supreme Court noted the election of protection doctrine but did not express any view on it since a design patent had been secured in the case and the issue was not before the Court.

See form paragraph 15.55 which repeats this information.

II. INCLUSION OF COPYRIGHT NOTICE

It is the policy of the U.S. Patent and Trademark Office to permit the inclusion of a copyright notice in a design patent application, and thereby any patent issuing therefrom, under the following conditions.

(A) A copyright notice must be placed adjacent to the copyright material and, therefore, may appear at any appropriate portion of the patent application disclosure including the drawing. However, if appearing on the drawing, the notice must be limited in print size from 1/8 inch to 1/4 inch and must be placed within the "sight" of the drawing immediately below the figure representing the copyright material. If placed on a drawing in conformance with these provisions, the notice will not be objected to as extraneous matter under 37 CFR 1.84.

(B) The content of the copyright notice must be limited to only those elements required by law. For example, "© 1983 John Doe" would be legally sufficient under 17 U.S.C. 401 and properly limited.

(C) Inclusion of a copyright notice will be permitted only if the following waiver is included at the beginning (preferably as the first paragraph) of the specification to be printed for the patent:

> A portion of the disclosure of this patent document contains material to which a claim for copyright is made. The copyright owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent file or records, but reserves all other copyright rights whatsoever.

(D) Inclusion of a copyright notice after a Notice of Allowance has been mailed will be permitted only if the criteria of 37 CFR 1.312 have been satisfied.

Any departure from these conditions may result in a refusal to permit the desired inclusion. If the waiver required under condition (C) above does not include the specific language "(t)he copyright owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the U.S. Patent and Trademark Office patent file or records....", the copyright notice will be objected to as improper.

See form paragraph 15.55 which repeats this information.

>

¶ *15.55 Design Patent-Copyright Overlap*

There is an area of overlap between Copyright and Design Patent Statutes where an author/inventor can secure both a Copyright and a Design Patent. Thus, an ornamental design may be copyrighted as a work of art and may also be the subject matter of a Design Patent. The author/inventor may not be required to elect between securing a copyright or a design patent. See *In re Yardley*, 181 USPQ 331 (CCPA 1974). In *Mazer* v. *Stein*, 100 USPQ 325 (U.S. 1954), the Supreme Court noted the election of protection doctrine but did not express any view on it since a Design Patent

had been secured in the case and the issue was not before the Court.

It is the policy of the Patent and Trademark Office to permit the inclusion of a copyright notice in a Design Patent application, and thereby any patent issuing therefrom, under the following conditions:

(1) A copyright notice must be placed adjacent to the copyright material and, therefore, may appear at any appropriate portion of the patent application disclosure including the drawing. However, if appearing on the drawing, the notice must be limited in print size from 1/8 inch to 1/4 inch and must be placed within the "sight" of the drawing immediately below the figure representing the copyright material. If placed on a drawing in conformance with these provisions, the notice will not be objected to as extraneous matter under 37 CFR 1.84.

(2) The content of the copyright notice must be limited to only those elements required by law. For example, "© 1983 John Doe" would be legally sufficient under 17 U.S.C. 401 and properly limited.

(3) Inclusion of a copyright notice will be permitted only if the following waiver is included at the beginning (preferably as the first paragraph) of the specification to be printed for the patent:

> A portion of the disclosure of this patent document contains material to which a claim for copyright is made. The copyright owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent file or records, but reserves all other copyrights whatsoever.

(4) Inclusion of a copyright notice after a Notice of Allowance has been mailed will be permitted only if the criteria of 37 CFR 1.312 have been satisfied.

Any departure from these conditions may result in a refusal to permit the desired inclusion. If the waiver required under condition (3) above does not include the specific language "(t)he copyright owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent file or records...," the copyright notice will be objected to as improper.

<

The files of design patents D-243,821, D-243,824, and D-243,920 show examples of an earlier similar procedure.

III. DESIGN PATENT/TRADEMARK OVERLAP

A design patent and a trademark may be obtained on the same subject matter. The CCPA, in *In re Mogen David Wine Corp.*, 328 F.2d 925, 140 USPQ 575 (CCPA 1964), later reaffirmed by the same court at 372 F.2d *>539<, 152 USPQ 593 (CCPA 1967), held that the underlying purpose and essence of patent rights are separate and distinct from those pertaining to trademarks, and that no right accruing from one is dependent or conditioned by the right concomitant to the other.

See form paragraph 15.55.01 which repeats this information.

>

¶ *15.55.01 Design Patent - Trademark Overlap*

A design patent and a trademark may be obtained on the same subject matter. The Court of Customs and Patent Appeals, in *In re Mogen David Wine Corp.*, 328 F.2d 925, 140 USPQ 575 (CCPA 1964), later reaffirmed by the same court at 372 F.2d 539, 152 USPQ 593 (CCPA 1967), has held that the underlying purpose and essence of patent rights are separate and distinct from those pertaining to trademarks, and that no right accruing from the one is dependent upon or conditioned by any right concomitant to the other.

<

IV. INCLUSION OF TRADEMARKS IN DESIGN PATENT APPLICATIONS

A. Specification

The use of trademarks in design patent application specifications is permitted under limited circumstances. See MPEP § 608.01(v). This section assumes that the proposed use of a trademark is a legal use under Federal trademark law.

B. Title

It is improper to use a trademark alone or coupled with the word "type" (e.g., Band-Aid type Bandage) in the title of a design. Examiners must object to the use of a trademark in the title of a design application and require its deletion therefrom.

C. Drawings

When a trademark is used in the drawing disclosure of a design application, the specification must include a statement preceding the claim identifying the trademark material forming part of the claimed design and the name of the owner of the registered trademark. Form paragraph 15.76 may be used.

¶ *15.76 Trademark in Drawing*

The **[1]** forming part of the claimed design is a registered trademark of **[2]**. The specification must be amended to include a statement preceding the claim identifying the trademark material forming part of the claimed design and the name of the owner of the trademark.

Examiner Note:

1. In bracket 1, identify the trademark material.
2. In bracket 2, identify the trademark owner.

Any derogatory use of a trademark in a design application is prohibited and will result in a rejection of the claim under 35 U.S.C. 171 as being offensive and, therefore, improper subject matter for design patent protection. Cf. *Dallas Cowboys Cheerleaders, Inc. v. Pussycat Cinema, Ltd.*, 604 F.2d 200, 203 USPQ 161 (2d Cir. 1979) and *Coca-Cola Co. v. Gemini Rising Inc*., 346 F. Supp. 1183, 175 USPQ 56 (E.D.N.Y. 1972).

1513 Miscellaneous

With respect to copies of references being supplied to applicant in a design patent application, see MPEP § 707.05(a).

Effective May 8, 1985, the Statutory Invention Registration (SIR), 35 U.S.C. 157, and 37 CFR 1.293 - 1.297 replaced the former Defensive Publication Program. The Statutory Invention Registration (SIR) Program applies to utility, plant, and design applications. See MPEP Chapter 1100.

Chapter 1600 Plant Patents

1601 Introduction: The Act, Scope, Type of Plants Covered

The right to a plant patent stems from:

35 U.S.C. 161. Patents for plants.

Whoever invents or discovers and asexually reproduces any distinct and new variety of plant, including cultivated sports, mutants, hybrids, and newly found seedlings, other than a tuber propagated plant or a plant found in an uncultivated state, may obtain a patent therefor, subject to the conditions and requirements of this title.

The provisions of this title relating to patents for inventions shall apply to patents for plants, except as otherwise provided.

Asexually propagated plants are those that are reproduced by means other than from seeds, such as by the rooting of cuttings, by layering, budding, grafting, inarching, etc. Plants capable of sexual reproduction are not excluded from consideration if they have also been asexually reproduced.

With reference to tuber propagated plants, for which a plant patent cannot be obtained, the term "tuber" is used in its narrow horticultural sense as meaning a short, thickened portion of an underground branch. Such plants covered by the term "tuber propagated" are the Irish potato and the Jerusalem artichoke. This exception is made because this group alone, among asexually reproduced plants, is propagated by the same part of the plant that is sold as food.

The term "plant" has been interpreted to mean "plant" in the ordinary and accepted sense and not in the strict scientific sense and thus excludes bacteria. *In re Arzberger*, 112 F. 2d 834, 46 USPQ 32 (CCPA 1940). The term "plant" thus does not include asexual propagating material, *per se*. *Ex parte Hibberd*, 227 USPQ 443, 447 (Bd. Pat. App. & Int. 1985).

An asexually reproduced plant may alternatively be protected under 35 U.S.C. 101, as the Plant Patent Act (35 U.S.C. 161) is not an exclusive form of protection which conflicts with the granting of utility patents to plants. *Ex parte Hibberd*, 227 USPQ 443 (Bd. Pat. App. & Int. 1985). Inventions claimed under 35 U.S.C. 101 may include the same asexually reproduced plant which is claimed under 35 U.S.C. 161, as well as plant materials and processes involving plant materials. The filing of a terminal disclaimer may be used in appropriate situations to overcome an obviousness-type double patenting rejection based on claims to the asexually reproduced plant and/or fruit and propagating material thereof in an application under 35 U.S.C. 101 and the claim to the same asexually reproduced plant in an application under 35 U.S.C. 161.

35 U.S.C. 163. Grant.

In the case of a plant patent, the grant shall include the right to exclude others from asexually reproducing the plant, and from using, offering for sale, or selling the plant so reproduced, or any of its parts, throughout the United States, or from importing the plant so reproduced, or any parts thereof, into the United States.

As provided in 35 U.S.C. 161, the rights associated with a plant patent include the rights associated with a utility patent, and the "right to exclude" has additional terms provided in 35 U.S.C. 163. A plant patent issuing from an application filed after June 7, 1995 has a term which expires 20 years after the filing date of the application, or any earlier filing date claimed under 35 U.S.C. 120, 121 or 365(c). See MPEP § 2701. Plant patent applications will be published pursuant to 35 U.S.C. 122(b).

1602 Rules Applicable

37 CFR 1.161. Rules applicable.

The rules relating to applications for patent for other inventions or discoveries are also applicable to applications for patents for plants except as otherwise provided.

1603 Elements of a Plant Application

37 CFR 1.163. Specification and arrangement of application elements in a plant application.

*****

(b) The elements of the plant application, if applicable, should appear in the following order:

(1) Plant application transmittal form.
(2) Fee transmittal form.
(3) Application data sheet (see § 1.76).
(4) Specification.
(5) Drawings (in duplicate).
(6) Executed oath or declaration (§ 1.162).

*****

An application for a plant patent consists of the same parts as other applications. For information pertaining to the oath or declaration, specification and claim, or drawings, see MPEP § 1604, § 1605, or § 1606, respectively.

1604 Applicant, Oath or Declaration

37 CFR 1.162. Applicant, oath or declaration.

The applicant for a plant patent must be the person who has invented or discovered and asexually reproduced the new and distinct variety of plant for which a patent is sought (or as provided in §§ 1.42, 1.43 and 1.47). The oath or declaration required of the applicant, in addition to the averments required by § 1.63, must state that he or she has asexually reproduced the plant. Where the plant is a newly found plant, the oath or declaration must also state that it was found in a cultivated area.

A Plant Patent Application (35 U.S.C. 161) Declaration, Form PTO/SB/03, may be used to submit a declaration. Form PTO/SB/81 may be used to appoint an attorney or agent. See MPEP § 402.

In an application for a plant patent, there can be joint inventors. See *Ex parte Kluis*, 70 USPQ 165 (Bd. App. 1945).

PLANT PATENT APPLICATION (35 U.S.C. 161) DECLARATION (37 CFR 1.63)

☐ Declaration Submitted with Initial Filing **OR** ☐ Declaration Submitted after Initial Filing (surcharge (37 CFR 1.16 (e)) required)

Attorney Docket Number	
First Named Inventor	
COMPLETE IF KNOWN	
Application Number	/
Filing Date	
Group Art Unit	
Examiner Name	

As a below named inventor, I hereby declare that:

My residence, mailing address, and citizenship are as stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the new and distinct variety of:

plant named:

which is claimed and for which a plant patent is sought, the specification of which

☐ is attached hereto **OR** ☐ was filed on (MM/DD/YYYY) as United States

Application Number and was amended on (MM/DD/YYYY) (if applicable).

I hereby state that I have reviewed and understand the contents of the above identified specification, including the claim, as amended by any amendment specifically referred to above.
I have asexually reproduced the plant to which this application applies.

☐ Said plant was found in a cultivated area *(check this box for newly found plant only)*

I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56, including for continuation-in-part applications, material information which became available between the filing date of the prior application and the National or PCT International filing date of the continuation-in-part.

I hereby claim foreign priority benefits under 35 U.S.C. 119(a)-(d) or 365(b) of any foreign application(s) for patent or inventor's certificate, or 365(a) of any PCT international application which designated at least one country other than the United States of America, listed below and have also identified below, by checking the box, any foreign application for patent or inventor's certificate, or any PCT international application having a filing date before that of the application on which priority is claimed.

1605 Specification and Claim

35 U.S.C. 162. Description, claim.

No plant patent shall be declared invalid for noncompliance with section 112 of this title if the description is as complete as is reasonably possible.

The claim in the specification shall be in formal terms to the plant shown and described.

37 CFR 1.163. Specification and arrangement of application elements in a plant application.

(a) The specification must contain as full and complete a disclosure as possible of the plant and the characteristics thereof that distinguish the same over related known varieties, and its antecedents, and must particularly point out where and in what manner the variety of plant has been asexually reproduced. For a newly found plant, the specification must particularly point out the location and character of the area where the plant was discovered.

(b) The elements of the plant application, if applicable, should appear in the following order:

(1) Plant application transmittal form.

(2) Fee transmittal form.

(3) Application data sheet (see § 1.76).

(4) Specification.

(5) Drawings (in duplicate).

(6) Executed oath or declaration (§ 1.162).

(c) The specification should include the following sections in order:

(1) Title of the invention, which may include an introductory portion stating the name, citizenship, and residence of the applicant.

(2) Cross-reference to related applications (unless included in the application data sheet).

(3) Statement regarding federally sponsored research or development.

(4) Latin name of the genus and species of the plant claimed.

(5) Variety denomination.

(6) Background of the invention.

(7) Brief summary of the invention.

(8) Brief description of the drawing.

(9) Detailed botanical description.

(10) A single claim.

(11) Abstract of the disclosure.

(d) The text of the specification or sections defined in paragraph (c) of this section, if applicable, should be preceded by a section heading in upper case, without underlining or bold type.

37 CFR 1.164. Claim.

The claim shall be in formal terms to the new and distinct variety of the specified plant as described and illustrated, and may also recite the principal distinguishing characteristics. More than one claim is not permitted.

The specification should include a complete detailed description of the plant and the characteristics thereof that distinguish the same over related known varieties, and its antecedents, expressed in botanical terms in the general form followed in standard botanical textbooks or publications dealing with the varieties of the kind of plant involved (evergreen tree, dahlia plant, rose plant, apple tree, etc.), rather than a mere broad nonbotanical characterization such as commonly found in nursery or seed catalogs. The specification should also include the origin or parentage and the genus and species designation of the plant variety sought to be patented. The Latin name of the genus and species of the plant claimed should be stated and preceded by the heading set forth in 37 CFR 1.163(c)(4). The specification must particularly point out where, e.g., location or place of business, and in what manner the variety of plant has been asexually reproduced.

Form Paragraphs 16.01, 16.09, and 16.10 may be used to object to the disclosure under 37 CFR 1.163(a).

¶ *16.01 Specification, Manner of Asexually Reproducing*

The application is objected to under 37 CFR 1.163(a) because the specification does not "particularly point out where and in what manner the variety of plant has been asexually reproduced". Correction is required.

¶ *16.09 Specification, Less Than Complete Description*

The disclosure is objected to under 37 CFR 1.163(a) because the specification presents less than a full and complete botanical description and the characteristics which distinguish over related known varieties. More specifically: **[1]**.

¶ *16.10 Specification, Location of Plant Not Disclosed*

The disclosure is objected to under 37 CFR 1.163(a) because the specification does not particularly point out the location and character of the area where the plant was discovered.

Where color is a distinctive feature of the plant, the color should be positively identified in the specification by reference to a designated color as given by a recognized color dictionary or color chart.

Form Paragraphs 16.02 and 16.03 may be used to object to the disclosure or reject the claim, respectively, because of a lack of a clear and complete disclosure with regard to colors.

¶ *16.02 Colors Specified Do Not Correspond With Those Shown*

The disclosure is objected to under 35 U.S.C. 112, first paragraph, because the **[1]** colors specified fail to correspond with those shown.

¶ *16.03 Rejection, 35 U.S.C. 112, 1st Paragraph, Non-Support for Colors*

The claim is rejected under 35 U.S.C. 112, first paragraph, as being unsupported by a clear and complete disclosure with regard to **[1]** colors, for the following reasons: **[2]**.

If the written description of a plant is deficient in certain respects (see, e.g., In re Greer, 484 F.2d 488, 179 USPQ 301 (CCPA 1973)), a clarification or additional description of the plant, or even a wholesale substitution of the original description so long as not totally inconsistent and unrelated to the original description and photograph of the plant may be submitted in reply to an Office action. Such submission will not constitute new matter under 35 U.S.C. 132. Jessel v. Newland, 195 USPQ 678, 684 (Dep. Comm'r Pat. 1977).

The rules on Deposit of Biological Materials, 37 CFR 1.801-1.809, do not apply to plant patent applications in view of the reduced disclosure requirements of 35 U.S.C. 162, even where a deposit of a plant has been made in conjunction with a utility application (35 U.S.C. 101).

A plant patent is granted only on the entire plant. It, therefore, follows that only one claim is necessary and only one is permitted. A method claim in a plant patent application is improper. An example of a proper claim would be "A new and distinct variety of hybrid tea rose plant, substantially as illustrated and described herein."

1606 Drawings

37 CFR 1.165. Plant drawings.

(a) Plant patent drawings should be artistically and competently executed and must comply with the requirements of § 1.84. View numbers and reference characters need not be employed unless required by the examiner. The drawing must disclose all the distinctive characteristics of the plant capable of visual representation.

(b) The drawings may be in color. The drawing must be in color if color is a distinguishing characteristic of the new variety. Two copies of color drawings or photographs and a black and white photocopy that accurately depicts, to the extent possible, the subject matter shown in the color drawing or photograph must be submitted.

If the drawings or photographs are in color, two color copies of each drawing or photograph are required. If the required copies of the drawings are not included, the application will be accorded a filing date, but correction will be required before the application is forwarded for examination. The requirement under 37 CFR 1.165(b) for a black and white photocopy of any color drawing or photograph has been waived. See 1246 O.G. 106 (May 22, 2001).

37 CFR 1.84. Standards for drawings.

*****

(c) *Identification of drawings.* Identifying indicia, if provided, should include the title of the invention, inventor's name, and application number, or docket number (if any) if an application number has not been assigned to the application. If this information is provided, it must be placed on the front of each sheet and centered within the top margin.

*****

(e) *Type of paper*. Drawings submitted to the Office must be made on paper which is flexible, strong, white, smooth, non-shiny, and durable. All sheets must be reasonably free from cracks, creases, and folds. Only one side of the sheet may be used for the drawing. Each sheet must be reasonably free from erasures and must be free from alterations, overwritings, and interlineations. Photographs must be developed on paper meeting the sheet-size requirements of paragraph (f) of this section and the margin requirements of paragraph (g) of this section. See paragraph (b) of this section for other requirements for photographs.

(f) *Size of paper*. All drawing sheets in an application must be the same size. One of the shorter sides of the sheet is regarded as its top. The size of the sheets on which drawings are made must be:

(1) 21.0 cm. by 29.7 cm. (DIN size A4), or

(2) 21.6 cm. by 27.9 cm. (8 1/2 by 11 inches).

(g) *Margins.* The sheets must not contain frames around the sight (*i.e.*, the usable surface), but should have scan target points (*i.e.*, cross-hairs) printed on two cater-corner margin corners. Each sheet must include a top margin of at least 2.5 cm. (1 inch), a left side margin of at least 2.5 cm. (1 inch), a right side margin of at least 1.5 cm. (5/8 inch), and a bottom margin of at least 1.0 cm. (3/8 inch), thereby leaving a sight no greater than 17.0 cm. by 26.2 cm. on 21.0 cm. by 29.7 cm. (DIN size A4) drawing sheets, and a sight no greater than 17.6 cm. by 24.4 cm. (6 15/16 by 9 5/8 inches) on 21.6 cm. by 27.9 cm. (8 1/2 by 11 inch) drawing sheets.

*****

(i) *Arrangement of views.* One view must not be placed upon another or within the outline of another. All views on the same sheet should stand in the same direction and, if possible, stand so that they can be read with the sheet held in an upright position. If views wider than the width of the sheet are necessary for the clearest illustration of the invention, the sheet may be turned on its side so that the top of the sheet, with the appropriate top margin to be used as the heading space, is on the right-hand side. Words must appear in a horizontal, left-to-right fashion when the page is either upright or turned so that the top becomes the right side, except for graphs utilizing standard scientific convention to denote the axis of abscissas (of X) and the axis of ordinates (of Y).

*****

(t) *Numbering of sheets of drawings*. The sheets of drawings should be numbered in consecutive Arabic numerals, starting with 1, within the sight as defined in paragraph (g) of this section. These numbers, if present, must be placed in the middle of the top of the sheet, but not in the margin. The numbers can be placed on the right-hand side if the drawing extends too close to the middle of the top edge of the usable surface. The drawing sheet numbering must be clear and larger than the numbers used as reference characters to avoid confusion. The number of each sheet should be shown by two Arabic numerals placed on either side of an oblique line, with the first being the sheet number and the second being the total number of sheets of drawings, with no other marking.

(u) *Numbering of views.*

(1) The different views must be numbered in consecutive Arabic numerals, starting with 1, independent of the numbering of the sheets and, if possible, in the order in which they appear on the drawing sheet(s). Partial views intended to form one complete view, on one or several sheets, must be identified by the same number followed by a capital letter. View numbers must be preceded by the abbreviation "FIG." Where only a single view is used in an application to illustrate the claimed invention, it must not be numbered and the abbreviation "FIG." must not appear.

(2) Numbers and letters identifying the views must be simple and clear and must not be used in association with brackets, circles, or inverted commas. The view numbers must be larger than the numbers used for reference characters.

*****

(x) *Holes*. No holes should be made by applicant in the drawing sheets.

Form Paragraphs 16.06, 16.06.01, 16.07, and 16.11 may be used to object to the drawing disclosure.

¶ *16.06 Drawings Must Be in Duplicate*

The disclosure is objected to under 37 CFR 1.165(b) because applicant has not provided copies of the drawing in duplicate. Correction is required.

¶ *16.07 Drawing Figures Not Competently Executed*

The disclosure is objected to under 37 CFR 1.165(a) because Fig. **[1]** not artistically and/or competently executed.

¶ *16.11 Drawings in Improper Scale*

The disclosure is objected to under 37 CFR 1.165(a) because the drawings are of an inadequate scale to show the distinguishing features of the plant.

1607 Specimens

37 CFR 1.166. Specimens.

The applicant may be required to furnish specimens of the plant, or its flower or fruit, in a quantity and at a time in its stage of growth as may be designated, for study and inspection. Such specimens, properly packed, must be forwarded in conformity with instructions furnished to the applicant. When it is not possible to forward such specimens, plants must be made available for official inspection where grown.

Specimens of the plant variety, its flower or fruit, should not be submitted unless specifically called for by the examiner.

Form Paragraph 16.13 may be used to require specimens.

¶ *16.13 Specimens Are Required*

Applicant **[1]** required to submit **[2]** in accordance with 37 CFR 1.166.

1608 Examination

37 CFR 1.167. Examination.

Applications may be submitted by the Patent and Trademark Office to the Department of Agriculture for study and report.

The authority for submitting plant applications to the Department of Agriculture for report is given in:

Executive Order No. 5464, October 17, 1930. Facilitating the consideration of applications for plant patents.

I, Herbert Hoover, President of the United States of America, under the authority conferred upon me by act of May 23, 1930 (Public No. 245) [now 35 U.S.C. 164], entitled "An act to provide for plant patents," and by virtue of all other powers vested in me relating thereto, do hereby direct the Secretary of Agriculture: (1) to furnish the Commissioner of Patents such available information of the Department of Agriculture, or (2) to conduct through the appropriate bureau or division of the department such research upon special problems, or (3) to detail to the Commissioner of Patents such officers and employees of the department, as the Commissioner may request for the purpose of carrying said act into effect.

35 U.S.C. 164. Assistance of Department of Agriculture.

The President may by Executive order direct the Secretary of Agriculture, in accordance with the requests of the Director, for the purpose of carrying into effect the provisions of this title with respect to plants (1) to furnish available information of the Department of Agriculture, (2) to conduct through the appropriate bureau or division of the Department research upon special problems, or (3) to detail to the Director officers and employees of the Department.

Plant applications are subject to the same examination process as any other national application. As such, the statutory provisions with regard to patentable subject matter, utility, novelty, obviousness, disclosure, and claim specificity requirements apply (35 U.S.C. 101, 102, 103, and 112). The sole exception in terms of applicability of these statutory provisions is set forth in 35 U.S.C. 162.

The prior art considered by the examiner is developed by a search of appropriate subclasses of the United States patent classification system as well as patent and nonpatent literature data bases. Where appropriate, a report may be obtained from the Agricultural Research Service, Horticultural Research Branch, Department of Agriculture.

1609 Report of Agricultural Research Service

Where the examiner considers it necessary to the examination of the plant patent application, a copy of the file and drawing of the application are forwarded to the National Program Leader for Horticultural Crops, Agricultural Research Service (ARS), U.S. Department of Agriculture, along with a request for a report as to whether the plant variety disclosed is new and distinct over known plant varieties. As the report is merely advisory to the Office, it is placed in the file but is not given a paper number. The copy of the report is customarily utilized by the examiner in the preparation of his or her action on the application.

The report may embody criticisms and objections to the disclosure, may offer suggestions for correction of such, or the report may merely state that:

> "Examination of the specification submitted indicates that the variety described is not identical with others with which our specialists are familiar."

1610 The Action

The action on the application by the examiner will include all matters as provided for in other types of patent applications. See 37 CFR 1.161.

With reference to the examination of the claim, the language must be such that it is directed to the "new and distinct variety of plant." This is important as under no circumstance should the claim be directed to a new variety of flower or fruit in contradistinction to the plant bearing the flower or the tree bearing the fruit. This is in spite of the fact that it is accepted and general botanical parlance to say "A variety of apple or a variety of blackberry" to mean a variety of apple tree or a variety of blackberry plant.

Where the application is otherwise allowable, a claim which recites, for example "A new variety of apple characterized by," may be amended by the insertion of — tree — after "apple" by an examiner's amendment.

By the same token, the title of the invention must relate to the entire plant and not to its flower or fruit, thus: Apple Tree, Rose Plant.

Care should also be exercised that the specification does not contain unwarranted advertising, for example, "the disclosed plant being grown in the XYZ Nurseries of Topeka, Kansas." It follows, also, that in the drawings any showing in the background of a plant, as a sign carrying the name of an individual, nursery, etc., is objectionable and deletion thereof is required. Nor should the specification include laudatory expressions, such as, "The rose is prettier than any other rose." Such expressions are wholly irrelevant. Where the fruit is described, statements in the specification as to the character and quality of products made from the fruit are not necessary and should be deleted.

The Office action may include so much of any report of the ARS as the examiner deems necessary, or may embody no part of it. In the event of an interview, the examiner, in his or her discretion, may show the entire report to the inventor or attorney.

Form Paragraph 16.12 may be used to reference portions of the ARS report.

¶ *16.12 Report From U.S. Dept. of Agriculture*

This application has been submitted to the U.S. Department of Agriculture for a report. Pertinent portions follow: **[1]**

The report of the ARS is not in the nature of a publication and matters raised therein within the personal knowledge of the specialists of the ARS are not sufficient basis for a rejection unless it is first ascertained by the examiner that the same can be supported by affidavits by said specialists (37 CFR 1.104(d)(2)). See *Ex parte Rosenberg*, 46 USPQ 393 (Bd. App. 1939).

Form Paragraphs 16.04 and 16.08, as appropriate, may be used to reject the claim.

¶ *16.04 Rejection, 35 U.S.C. 102*

The claim is rejected under 35 U.S.C. 102 as failing to patentably distinguish over **[1]**.

¶ *16.08 Rejection, 35 U.S.C. 112*

The claim is rejected under 35 U.S.C. 112 **[1]** because **[2]**.

1611 Issue

The preparation of a plant patent application for issue involves the same procedure as for other applications (37 CFR 1.161), with the exception that where there are color drawings, the better one of the two judged, for example, by its sharpness or cleanliness is selected to be printed in the patent.

The International Patent Classification symbols, most recent edition, should be placed in the issuing classification boxes on the file wrapper or on the Issue Classification slip of all plant patent applications being sent to issue.

All plant patent applications should contain an abstract when forwarded to the Office of Patent Publication.

1612 UPOV Convention

On November 8, 1981, the 1978 text of the "International Convention for the Protection of New Varieties of Plants" (generally known by its French acronym as the UPOV Convention) took effect in the United States and two other states that had not been party to the 1961 text, Ireland and New Zealand. As of September 24, 2000, 46 states were party to the UPOV Convention: Argentina, Australia, Austria, Belgium, Bolivia, Brazil, Bulgaria, Canada, Chile, China, Colombia, Czech Republic, Denmark, Ecuador, Estonia, Finland, France, Germany, Hungary, Ireland, Israel, Italy, Japan, Kenya, Kyrgyzstan, Mexico, Netherlands, New Zealand, Norway, Panama, Paraguay, Poland, Portugal, Republic of Moldova, Russian Federation, Slovakia, Slovenia, South Africa, Spain, Sweden, Switzerland, Trinidad and Tobago, Ukraine, United Kingdom, United States of America, and Uruguay. Most states adhere to the 1978 text. The United States adheres to the 1991 text, and has a reservation under Article 35(2) of the text (which allows plant patents rather than breeder's rights certificates to be granted).

The 1961, 1978, and 1991 texts guarantee to plant breeders in each member state both national treatment and the right of priority in all other member states. In many states, new plant varieties are protected by breeders' rights laws rather than patent laws. Accordingly, the Paris (Industrial Property) Convention cannot always be relied on to provide these and other rights.

Insofar as the patenting of asexually reproduced plants in the United States is concerned, both national treatment and the right of priority have been accorded to foreign plant breeders since enactment of the plant patent law in 1930 (now 35 U.S.C. 161-164). See MPEP § 1613 for the right of priority based upon an application for plant breeder's rights.

Application of the UPOV Convention in the United States does not affect the examination of plant patent applications, except in one instance. It is now necessary as a condition for receiving a plant patent to register a variety denomination for that plant. Inclusion of the variety denomination in the patent comprises its registration.

The registration process in general terms consists of inclusion of a proposed variety denomination in the plant patent application. The examiner must evaluate the proposed denomination in light of UPOV Convention, Article 13. Basically, this Article requires that the proposed variety denomination not be identical with or confusingly similar to other names utilized in the United States or other UPOV member countries for the same or a closely related species. In addition, the proposed denomination must not mislead the average consumer as to the characteristics, value, or identity of the patented plant. Ordinarily, the denomination proposed for registration in the United States

must be the same as the denomination registered in another member state of UPOV.

Form Paragraph 16.05 may be used to object to the disclosure as lacking a common or market name or "denomination" of the plant.

¶ *16.05 Name or Denomination for Plant Missing*

The disclosure is objected to under 37 CFR 1.121(e) because no "variety denomination" of the instant plant has been set forth in the disclosure. 37 CFR 1.163(c)(4). Correction by adding such a name is required.

¶ *16.05.01 Latin Name of Genus and Species of the Plant Claimed Missing*

The disclosure is objected to under 37 CFR 1.121(e) because the Latin name of the genus and species of the instant plant has not been set forth in the disclosure. 37 CFR 1.163(c)(4). Correction by adding such a name is required.

1613 Right of Priority Based upon Application for Plant Breeder's Rights

Pursuant to 35 U.S.C. 119(f), an application for a plant patent may rely upon an application for plant breeder's rights filed in a WTO member country (or in a foreign UPOV Contracting Party) for priority under 35 U.S.C. 119(a) through (c).

Chapter 1700 Miscellaneous

1701 Office Personnel Not To Express Opinion on Validity*>,< Patentability>, or Enforceability< of Patent [R-3]

Every patent is presumed to be valid. 35 U.S.C. 282, first sentence. Public policy demands that every employee of the United States Patent and Trademark Office (USPTO) refuse to express to any person any opinion as to the validity or invalidity of, or the patentability or unpatentability of any claim in any U.S. patent, except to the extent necessary to carry out

(A) an examination of a reissue application of the patent,

(B) a reexamination proceeding to reexamine the patent, or

(C) an interference involving the patent.

The question of validity or invalidity is otherwise exclusively a matter to be determined by a court. >Likewise, the question of enforceability or unenforceability is exclusively a matter to be determined by a court.< Members of the patent examining corps are cautioned to be especially wary of any inquiry from any person outside the USPTO, including an employee of another U.S. Government agency, the answer to which might indicate that a particular patent should not have issued. No USPTO employee may pursue a bounty offered by a private sector source for identifying prior art. The acceptance of payments from outside sources for prior art search activities may subject the employee to administrative disciplinary action.

When a field of search for an invention is requested, examiners should routinely inquire whether the invention has been patented in the United States. If the invention has been patented, no field of search should be suggested.

Employees of the USPTO, particularly patent examiners who examined an application which matured into a patent or a reissued patent or who conducted a reexamination proceeding, should not discuss or answer inquiries from any person outside the USPTO as to whether or not a certain reference or other particular evidence was considered during the examination or proceeding and whether or not a claim would have been allowed over that reference or other evidence had it been considered during the examination or proceeding. Likewise, *employees* are cautioned against answering any inquiry concerning any entry in the patent or reexamination file, including the extent of the field of search and any entry relating thereto. The record of the file of a patent or reexamination proceeding must speak for itself.

Practitioners **>shall not make< improper inquiries of members of the patent examining corps. Inquiries from members of the public relating to the matters discussed above must of necessity be refused and such refusal should not be considered discourteous or an expression of opinion as to validity *>,< patentability >or enforceability.

The definitions set forth in 37 CFR 104.1 and the exceptions in 37 CFR 104.21 are applicable to this section.<

1701.01 Office Personnel Not To Testify [R-3]

It is the policy of the United States Patent and Trademark Office (USPTO) that its employees, including patent examiners, will not appear as witnesses or give testimony in legal proceedings, except under the conditions specified in 37 CFR Part 104, Subpart C. >The definitions set forth in 37 CFR 104.1 and the exceptions in 37 CFR 104.21 are applicable to

this section.< Any employee who testifies contrary to this policy will be *dismissed or removed*.

Whenever an employee of the USPTO, including a patent examiner, is asked to testify or receives a subpoena, the employee shall immediately notify the Office of the USPTO General Counsel. Inquiries requesting testimony shall be also referred immediately to the Office of the USPTO General Counsel.

**

Any individual desiring the testimony of an employee of the USPTO, including the testimony of a patent examiner or other quasi-judicial employee, must comply with the provisions of 37 CFR Part 104, Subpart C.

A request by a third party to take deposition testimony of a patent examiner in a pending *ex parte* reexamination proceeding will generally be denied in view of the *ex parte* nature of the reexamination proceeding.

A request for testimony of an employee of the USPTO should be made to the Office of the USPTO General Counsel at least **10 working days** prior to the date of the expected testimony.

>Patent examiners and other USPTO employees performing or assisting in the performance of quasi-judicial functions, are forbidden to testify as experts or to express opinions as to the validity of any patent.<

If an employee is authorized to testify, the employee will be limited to testifying about facts within the employee's personal knowledge. Employees are prohibited from giving expert or opinion testimony. *Fischer & Porter Co. v. Corning Glass Works*, 61 F.R.D. 321, 181 USPQ 329 (E.D. Pa. 1974). Likewise, employees are prohibited from answering hypothetical or speculative questions. *In re Mayewsky*, 162 USPQ 86, 89 (E.D. Va. 1969) (deposition of an examiner must be restricted to relevant matters of fact and must avoid any hypothetical or speculative questions or conclusions based thereon); *ShafferTool Works v. Joy Mfg. Co.*, 167 USPQ 170 (S.D. Tex. 1970) (deposition of examiner should be limited to matters of fact and must not go into hypothetical or speculative areas or the bases, reasons, mental processes, analyses, or conclusions of the examiner in acting upon a patent application). Employees will not be permitted to give testimony with respect to subject matter which is privileged. Several court decisions limit testimony with respect to quasi-judicial functions performed by employees. Those decisions include *United States v. Morgan*, 313 U.S. 409, 422 (1941) (improper to inquire into mental processes of quasi-judicial officer or to examine the manner and extent to which the officer considered an administrative record); *Western Electric Co. v. Piezo Technology, Inc.*, 860 F.2d 428, 8 USPQ2d 1853 (Fed. Cir. 1988) (patent examiner may not be compelled to answer questions which probe the examiner's technical knowledge of the subject matter of a patent); *McCulloch Gas Processing Co. v. Department of Energy*, 650 F.2d 1216, 1229 (Temp. Emer. Ct. App. 1981) (discovery of degree of expertise of individuals performing governmental functions not permitted); *In re Nilssen*, 851 F.2d 1401, 7 USPQ2d 1500 (Fed. Cir. 1988) (technical or scientific qualifications of examiners-in-chief are not legally relevant in appeal under 35 U.S.C. 134 since board members need not be skilled in the art to render obviousness decision); *Lange v. Commissioner*, 352 F. Supp. 166, 176 USPQ 162 (D.D.C. 1972) (technical qualifications of examiners-in-chief not relevant in 35 U.S.C. 145 action).

In view of the discussion above, if an employee is authorized to testify in connection with the employee's involvement or assistance in a quasi-judicial proceeding which took place before the USPTO, the employee will not be permitted to give testimony in response to questions that the Office determines are impermissible. Impermissible questions include, but are not limited to, questions directed to discovering the mental processes or expertise of a quasi-judicial official, such as:

(A) Information about that employee's:

(1) Background;

(2) Expertise;

(3) Qualifications to examine or otherwise consider a particular patent or trademark application;

(4) Usual practice or whether the employee followed a procedure set out in any Office manual of practice (including the MPEP or TMEP) in a particular case;

(5) Consultation with another Office employee;

(6) Understanding of:

(a) A patented invention, an invention sought to be patented, or patent application, patent, reexamination or interference file;

(b) Prior art;

(c) Registered subject matter, subject matter sought to be registered, or a trademark application, registration, opposition, cancellation, interference, or concurrent use file;

(d) Any Office manual of practice;

(e) Office regulations;

(f) Patent, trademark, or other law; or

(g) The responsibilities of another Office employee;

(7) Reliance on particular facts or arguments;

(B) To inquire into the manner in and extent to which the employee considered or studied material in performing a quasi-judicial function; or

(C) To inquire into the bases, reasons, mental processes, analyses, or conclusions of that Office employee in performing the quasi-judicial function.

Any request for testimony addressed or delivered to the Office of the USPTO General Counsel shall comply with 37 CFR 104.22(c). All requests must be in *writing*. The need for a subpoena may be obviated where the request complies with 37 CFR 104.22(c) if the party requesting the testimony further meets the following conditions:

(A) The party requesting the testimony identifies the civil action or other legal proceeding for which the testimony is being taken. The identification shall include the:

(1) Style of the case;

(2) Civil action number;

(3) District in which the civil action is pending;

(4) Judge assigned to the case; and

(5) Name, address, and telephone number of counsel for all parties in the civil action.

(B) The party agrees not to ask questions seeking information which is precluded by 37 CFR 104.23;

(C) The party shall comply with applicable provisions of the Federal Rules of Civil Procedure, including Rule 30, and give 10 working days notice to the Office of the USPTO General Counsel prior to the date a deposition is desired. Fifteen working days notice is required for any deposition which is desired to be taken between November 15 and January 15;

(D) The party agrees to notice the deposition at a place convenient to the USPTO. The Conference Room in the Office of the USPTO General Counsel is deemed to be a place convenient to the Office; and

(E) The party agrees to supply a copy of the transcript of the deposition to the USPTO for its records.

Absent a written agreement meeting the conditions specified in paragraphs (A) through (E), a party must comply with the precise terms of 37 CFR 104.22(c) and the USPTO will not permit a deposition without issuance of a subpoena.

1702 Restrictions on **>Practice in Patent Matters< [R-3]

**>

37 CFR 11.10. Restrictions on practice in patent matters.

(a) Only practitioners who are registered under § 11.6 or individuals given limited recognition under § 11.9(a) or (b) are permitted to prosecute patent applications of others before the Office; or represent others in any proceedings before the Office.

(b) *Post employment agreement of former Office employee*. No individual who has served in the patent examining corps or elsewhere in the Office may practice before the Office after termination of his or her service, unless he or she signs a written undertaking agreeing:

(1) To not knowingly act as agent or attorney for, or otherwise represent, or assist in any manner the representation of, any other person:

(i) Before the Office,

(ii) In connection with any particular patent or patent application,

(iii) In which said employee participated personally and substantially as an employee of the Office; and

(2) To not knowingly act within two years after terminating employment by the Office as agent or attorney for, or otherwise represent, or assist in any manner the representation of any other person:

(i) Before the Office,

(ii) In connection with any particular patent or patent application,

(iii) If such patent or patent application was pending under the employee's official responsibility as an officer or employee within a period of one year prior to the termination of such responsibility.

(3) The words and phrases in paragraphs (b)(1) and (b)(2) of this section are construed as follows:

(i) *Represent* and *representation* mean acting as patent attorney or patent agent or other representative in any appearance before the Office, or communicating with an employee of the Office with intent to influence.

(ii) *Assist in any manner* means aid or help another person on a particular patent or patent application involving representation.

(iii) *Particular patent or patent application* means any patent or patent application, including, but not limited to, a provisional, substitute, international, continuation, divisional, continuation-in-part, or reissue patent application, as well as any protest, reexamination, petition, appeal, or interference based on the patent or patent application.

(iv) *Participate personally and substantially.* (A) Basic requirements. The restrictions of § 11.10(a)(1) apply only to those patents and patent applications in which a former Office employee had "personal and substantial participation," exercised "through decision, approval, disapproval, recommendation, the rendering of advice, investigation or otherwise." To *participate personally* means directly, and includes the participation of a subordinate when actually directed by the former Office employee in the patent or patent application. *Substantially* means that the employee's involvement must be of significance to the matter, or form a basis for a reasonable appearance of such significance. It requires more than official responsibility, knowledge, perfunctory involvement, or involvement on an administrative or peripheral issue. A finding of substantiality should be based not only on the effort devoted to a patent or patent application, but also on the importance of the effort. While a series of peripheral involvements may be insubstantial, the single act of approving or participation in a critical step may be substantial. It is essential that the participation be related to a "particular patent or patent application." (*See* paragraph (b)(3)(iii) of this section.)

(B) Participation on ancillary matters. An Office employee's participation on subjects not directly involving the substantive merits of a patent or patent application may not be "substantial," even if it is time-consuming. An employee whose official responsibility is the review of a patent or patent application solely for compliance with administrative control or budgetary considerations and who reviews a particular patent or patent application for such a purpose should not be regarded as having participated substantially in the patent or patent application, except when such considerations also are the subject of the employee's proposed representation.

(C) Role of official responsibility in determining substantial participation. *Official responsibility* is defined in paragraph (b)(3)(v) of this section. "Personal and substantial participation" is different from "official responsibility." One's responsibility may, however, play a role in determining the "substantiality" of an Office employee's participation.

(v) *Official responsibility* means the direct administrative or operating authority, whether intermediate or final, and either exercisable alone or with others, and either personally or through subordinates, to approve, disapprove, or otherwise direct Government actions.

(A) Determining official responsibility. Ordinarily, those areas assigned by statute, regulation, Executive Order, job description, or delegation of authority determine the scope of an employee's "official responsibility". All particular matters under consideration in the Office are under the "official responsibility" of the Director of the Office, and each is under that of any intermediate supervisor having responsibility for an employee who actually participates in the patent or patent application within the scope of his or her duties. A patent examiner would have "official responsibility" for the patent applications assigned to him or her.

(B) Ancillary matters and official responsibility. *Administrative* authority as used in paragraph (v) of this section means authority for planning, organizing and controlling a patent or patent application rather than authority to review or make decisions on ancillary aspects of a patent or patent application such as the regularity of budgeting procedures, public or community relations aspects, or equal employment opportunity considerations. Responsibility for such an ancillary consideration does not constitute official responsibility for the particular patent or patent application, except when such a consideration is also the subject of the employee's proposed representation.

(C) Duty to inquire. In order for a former employee, *e.g.*, former patent examiner, to be barred from representing or assisting in representing another as to a particular patent or patent application, he or she need not have known, while employed by the Office, that the patent or patent application was pending under his or her official responsibility. The former employee has a reasonable duty of inquiry to learn whether the patent or patent application had been under his or her official responsibility. Ordinarily, a former employee who is asked to represent another on a patent or patent application will become aware of facts sufficient to suggest the relationship of the prior matter to his or her former office, *e.g.*, technology center, group or art unit. If so, he or she is under a duty to make further inquiry. It would be prudent for an employee to maintain a record of only patent application numbers of the applications actually acted upon by decision or recommendation, as well as those applications under the employee's official responsibility which he or she has not acted upon.

(D) Self-disqualification. A former employee, *e.g.*, former patent examiner, cannot avoid the restrictions of this section through self-disqualification with respect to a patent or patent application for which he or she otherwise had official responsibility. However, an employee who through self-disqualification does not participate personally and substantially in a particular patent or patent application is not subject to the lifetime restriction of paragraph (b)(1) of this section.

(vi) *Pending* means that the matter was in fact referred to or under consideration by persons within the employee's area of official responsibility.

(4) Measurement of the two-year restriction period. The two-year period under paragraph (b)(2) of this section is measured from the date when the employee's official responsibility in a particular area ends, not from the termination of service in the Office, unless the two occur simultaneously. The prohibition applies to all particular patents or patent applications subject to such official responsibility in the one-year period before termination of such responsibility.

(c) *Former employees of the Office*. This section imposes restrictions generally parallel to those imposed in 18 U.S.C. 207(a) and (b)(1). This section, however, does not interpret these statutory provisions or any other post-employment restrictions that may apply to former Office employees, and such former employees should not assume that conduct not prohibited by this section is otherwise permissible. Former employees of the Office,

whether or not they are practitioners, are encouraged to contact the Department of Commerce for information concerning applicable post-employment restrictions.

(d) An employee of the Office may not prosecute or aid in any manner in the prosecution of any patent application before the Office.

(e) Practice before the Office by Government employees is subject to any applicable conflict of interest laws, regulations or codes of professional responsibility.<

See also MPEP § 309.

1703 The *Official Gazette* [R-2]

The *Official Gazette of the United States Patent and Trademark Office (Official Gazette)* is published >electronically< every Tuesday in two sections, the *Official Gazette – Patents* and the *Official Gazette – Trademarks*. **

The *Official Gazette — Patents* reports the reexamination certificates, reissues, plant patents, utility patents, and design patents issued and statutory invention registrations (if any) published on that day. **>The *Official Gazette — Patents* (eOG:P) allows browsing through the issued patents for the week. The eOG:P can be browsed by classification or type of patent, for example, utility, design, and plant. Specific patents can be accessed by class/subclass or patentee name. Links are provided to the various pages of the eOG:P:

(A) *Browse by Class/Subclass* page to access patents by a specific classification;

(B) *Classification of Patents* page with links to patents by a range of classifications;

(C) *Browse Granted Patents* page to access a patent by patent number or link to patents by type;

(D) *Index of Patentees* page to browse by names of inventors and assignees in either a cumulative alphabetical index or individual indexes by type of patent. Each patentee listing contains a link to the patent;

(E) *Geographical Index of Inventors* to link to patents by the state or country of residence of the first listed inventor; and

(F) *Notices* page containing the text of important notices for the week.<

As to each patent, the following information is given:

(A) Patent number;

(B) Title of the invention;

(C) Applicant's name;

(D) Applicant's city and state of residence and, if unassigned, applicant's mailing address;

(E) Assignee's name, city and state of residence, if assigned;

(F) U.S. or PCT parent application data, if any;

(G) Filing date;

(H) Application number;

(I) Foreign priority application data, if any;

(J) International classification;

(K) U.S. classification by class and subclass;

(L) Number of claims;

(M) Selected figure of the drawing, if any **;

(N) A claim or claims; *

(O) For reissue patents, the original patent number and issue date, and the original application number and filing date>; and

(P) Patent Application Publication Number and Publication date, if any.<

The *Official Gazette – Trademarks* >is published electronically and< contains ** an illustration of each trademark published for opposition, an alphabetical list of registered trademarks, a classified list of registered trademarks, an index of registrants, a list of canceled trademark registrations, and a list of renewed trademark registrations.

**The information in the *Official Gazette* pertaining to each issued patent and each trademark registration can be obtained from the Patent Grants Database and the U.S. Trademark Electronic Search System (TESS) respectively, both also available on the USPTO web site.

>Regular and special notices of the United States Patent and Trademark Office are published in the *Official Gazette Notices*, both as part of the *Official Gazette — Patents* (eOG:P) and as a separate publication. The notices that are included in this publication include notices of patent and trademark suits, disclaimers filed, Certificates of Correction issued, lists of applications and patents available for license or sale, notices of 37 CFR 1.47 applications, and general information such as orders, notices, changes in rules, changes in classification, certain adverse decisions in interferences, the condition of work in the Office, registration of attorneys and agents, reprimands, suspensions, and exclusions of registered attorneys and

agents, and notices to parties not reached by mail. The *Official Gazette Notices* are available on the United States Patent and Trademark Office web site (www.uspto.gov).< Paper copies of the *Official Gazette* ** *Notices* are available from the Government Printing Office. Orders >for the *Official Gazette Notices*< should be addressed and subscriptions should be made payable to the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

1704 Application Records and Reports [R-5]

The PALM (Patent Application Locating and Monitoring) System is the automated data management system used by the United States Patent and Trademark Office (USPTO) for the retrieval and/or online updating of the computer record of each patent application. The PALM System also maintains examiner time, activity, docket, and technical support staff backlog records.

Information retrieval from PALM is by means of the PALM intranet. Transactions are entered via bar code readers, by keyed entries, or by making an appropriate choice in a drop down menu. Among other items, classification, examiner docket, attorney, inventor, >status,< and prosecution history data as well as the location of each >paper< application can be retrieved and updated online with PALM.

I. DOCKET REPORTS

The recording of changes to examiner dockets is accomplished by PALM simultaneously with the recording of incoming and outgoing communications, transfers of applications to and from dockets, and other types of updating of the application record. The status of each examiner's docket can be determined by means of the PALM intranet and is supplemented by periodic printed >or electronic< reports. Docket reports that are generated by PALM include the individual examiner new, special, and amended docket which lists applications in priority order; the individual examiner rejected application docket; the individual examiner new application profile, which lists the totals of new applications in each docket, sorted by month of filing; and various summaries of the above reports at the art unit, Technology Center (TC), and corps levels.

II. BIWEEKLY TIME AND ACTIVITY REPORTS

All reporting of examiner time and activity is on a biweekly basis. Each examiner's examining and non-examining time, as listed on the examiner's Biweekly Time Worksheet, PTO-690E, is entered into PALM for use in the computation of productivity data. The biweekly reports produced include the individual Biweekly Examiner Time and Activity Report which lists, by application number, all applications for which actions have been counted during the biweekly period. The type of action counted for each application is also indicated on the report. This report also includes examiner time data, an action summary, and cumulative summaries to date for the current quarter and fiscal year. Various summary reports at the Art Unit, TC, and Corps levels are also produced.

1705 Examiner Docket, Time, and Activity Recordation [R-5]

Actions prepared by examiners are submitted to their respective legal instrument examiners for processing in accordance with the procedures set forth below.

I. PROCEDURES FOR *>CREDITING< AN EXAMINER'S ACTION

(A) The examiner completes an Examiner's Case Action Worksheet, Form PTO-1472, which identifies the type of action prepared. The worksheet is attached to the application if the application is maintained in a paper file, or placed in an Action folder with the Office action if the application is an Image File Wrapper (IFW) application for processing by the legal instrument examiner;

(B) The legal instrument examiner checks the worksheet to verify that the examiner provided all necessary information relating to that action;

(C) The legal instrument examiner enters the type of action and the count date thereof on the Contents flap of the file wrapper if the application is maintained in a paper file, or **>sends the application to mailing and then enters the action into< the IFW (see IFW Manual); and

(D) The legal instrument examiner *>records< the >type of< examiner's action for the application directly into PALM.

Each examiner's action that is counted and reported to the PALM system will be listed by application number on the Biweekly Examiner Time and Activity Report. The examiner should check his/her Biweekly Examiner Time and Activity Report to verify that all applications worked on for the biweekly report period are properly listed.

Examples of examiner's actions that are reported to PALM by the legal instrument examiner, but are not listed on the Biweekly Examiner Time and Activity Report, include examiner's amendments, actions in reexamination proceedings, interview summaries, transfers of applications, and supplemental Office actions and miscellaneous Office letters which do not set a period for reply.

FORM PTO-1472
(Rev. 4-2002)

U.S. DEPARTMENT OF COMMERCE
PATENT AND TRADEMARK OFFICE

EXAMINER'S CASE ACTION WORKSHEET

Application No.	Legal Instrument Examiner

CHECK TYPE OF ACTION DATE OF COUNT

☐ Non-Final Rejection	☐ Restriction/Election Only	☐ Final Rejection
☐ Ex Parte Quayle	☐ Allowance	☐ Advisory Action
☐ Examiner's Answer	☐ Reply Brief Noted	☐ Non-Entry of Reply Brief
☐ Defective Notice of Appeal	☐ Interference Disposal SPE _____ (Approval for Disposal)	☐ Suspension (Examiner-Initiated) SPE _____ (*initial*)
☐ Defective Appeal Brief	☐ SIR Disposal (use only after FAOM)	☐ Supplemental Examiner's Amendment
☐ Miscellaneous Office Letter (With Shortened Statutory Period Set)	☐ Notice of Non-Responsive Amendment (With One Month Time Period set)	☐ Miscellaneous Office Letter (No Response Period Set)
☐ Abandonment after BPAI Decision	☐ Supplemental Action (excluding Examiner's Answer)	☐ Response to Rule 312 Amendment
☐ Letter Restarting Period for Response (e.g., Missing References)	☐ Interview Summary	☐ Authorization to Change Previous Office Action SPE: _____ (*Initial*)
☐ Abandonment	☐ Express Abandonment Date: _____	☐ Other Specify: _____

Examiner's Name: **AU:**

II. COUNTING OF FIRST ACTION ON THE MERITS (FAOM)

Office actions on the merits consist of rejections (final and non-final), *Ex parte Quayle* actions, and allowances.

The first time an examiner performs one of the above merit actions, he/she receives credit for a First Action on the Merits (FAOM) on the production reports.

A second/subsequent but FAOM usually occurs when the first action is a restriction/election action and the second action is an action on the merits. The examiner indicates the type of second action on the Examiner's Case Action Worksheet, and the PALM system will automatically determine if it is a FAOM. If the second action is a FAOM, the action will be listed and credited on the Biweekly Examiner Time and Activity Report as a Second/Subsequent FAOM.

III. COUNTING OF DISPOSALS

An examiner receives a "disposal" count for the following actions:

(A) Allowance;

(B) Abandonment;

(C) *>Requests for Continued Examination;

(D) < Examiner's Answer;

*>

(E) <International Preliminary Examination Report;

*>

(F) <Statutory Invention Registration (SIR) disposal (only after a FAOM; see MPEP § 1101); and

*>

(G) <Interference wherein the application would be in condition for allowance but for the interference.

These same items constitute the "disposals" for performance evaluation of examining art units and TCs. However, disposals at the Office level consist only of allowances and abandonments.

For either an allowance or an abandonment after an Examiner's Answer or decision by a court or the Board of Patent Appeals and Interferences, no disposal credit is received, though these actions are indicated on the Biweekly Examiner Time and Activity Report.

IV. CORRECTION INFORMATION

(A) If any information is either missing from or incorrect on the Biweekly Examiner Time and Activity Report, the examiner should promptly notify >their supervisory patent examiner (SPE) and either< the legal instrument examiner >or PALM troubleshooter< by providing all the pertinent information necessary to make the changes to the PALM system (e.g., examining hours, application number, type of action, etc.).

(B) The >PALM troubleshooter or< legal instrument examiner will report the necessary changes and corrections directly into PALM. These changes will be listed on the next Biweekly Examiner Time and Activity Report.

(C) If any information is missing from the last Biweekly Examiner Time and Activity Report of a quarter (except at the end of a fiscal year) or is incorrect, the examiner should promptly notify the >PALM troubleshooter or< legal instrument examiner and his/her supervisory patent examiner (SPE). The >PALM troubleshooter or< legal instrument examiner will make the appropriate changes directly into the PALM system. The changes will be listed on the next Biweekly Examiner Time and Activity Report. However, these changes will not be reflected in the *>previous< Quarter's Report; the examiner's SPE may manually make an adjustment to the records to show these changes.

(D) In order to ensure that all PALM reports are correct at the end of the fiscal year (rating period), a special correction cycle is provided on the PALM system. If any information is missing from or is incorrect on the last Biweekly Examiner Time and Activity Report, the examiner should immediately notify the legal instrument examiner and his/her SPE. These changes will be reflected in the examiner's final biweekly report for the entire fiscal year.

1706 Disclosure Documents [R-3]

A service provided by the United States Patent and Trademark Office (USPTO) is the acceptance and preservation for two years of "Disclosure Documents" as evidence of the date of conception of an invention. However, inventors are strongly encouraged to file a provisional patent application instead of a Disclosure

Document. A provisional application for patent is a U.S. national application for patent filed in the USPTO under 35 U.S.C. 111(b). It allows filing without a formal patent claim, oath or declaration, or any information disclosure (prior art) statement. It provides the means to establish an early effective filing date in a non-provisional patent application filed under 35 U.S.C. 111(a). It also allows the term "Patent Pending" to be applied to products for which a patent application has been filed. A provisional application has a pendency lasting 12 months from the date the provisional application is filed. The 12-month pendency period cannot be extended. Unlike a Disclosure Document, the benefit of the filing date of the provisional application may be relied upon pursuant to 35 U.S.C. 119(e) in a corresponding non-provisional application or for foreign priority purposes when filing a patent application on the invention in other countries. See MPEP § 201.04(b) and § 601.01(b).

I. THE PROGRAM

A paper disclosing an invention (called a Disclosure Document) and signed by the inventor or inventors may be forwarded to the USPTO by the inventor (or by any one of the inventors when there are joint inventors), by the owner of the invention, or by the attorney or agent of the inventor(s) or owner. The Disclosure Document will be retained for two years, and then be destroyed unless it is referred to in a separate letter in a related patent application filed within those two years.

THE DISCLOSURE DOCUMENT IS NOT A PATENT APPLICATION, AND THE DATE OF ITS RECEIPT IN THE USPTO WILL NOT BECOME THE EFFECTIVE FILING DATE OF ANY PATENT APPLICATION SUBSEQUENTLY FILED. THESE DOCUMENTS WILL BE KEPT IN CONFIDENCE BY THE USPTO.

This program does not diminish the value of the conventional, witnessed, permanently bound, and page-numbered laboratory notebook or notarized records as evidence of conception of an invention.

II. CONTENT OF DISCLOSURE

The benefits afforded by the Disclosure Document will depend directly upon the adequacy of the disclosure. It is strongly recommended that the document contain a clear and complete explanation of the manner and process of making and using the invention in sufficient detail to enable a person having ordinary knowledge in the field of the invention to make and use the invention. When the nature of the invention permits, a drawing or sketch should be included. The use or utility of the invention should be described, especially in chemical inventions. Where the invention is directed to a design, the appearance presented by the object should be described.

III. PREPARATION OF THE DOCUMENT

A standard format for the Disclosure Document is required to facilitate the USPTO's electronic data capture and storage. The Disclosure Document (including drawings or sketches) must be on white letter-size ($8\ ^1/_2$ by 11-inch) or A4 (21.0 by 29.7 cm) paper, written on one side only, with each page numbered. Text and drawings must be sufficiently dark to permit reproduction with commonly used office copying machines. Oversized papers, even if foldable to the above dimensions, will not be accepted. Attachments such as videotapes and working models will not be accepted and will be returned.

IV. OTHER ENCLOSURES

The Disclosure Document must be accompanied by a separate cover letter signed by the inventor stating that he or she is the inventor and requesting that the material be received under the Disclosure Document Program. The inventor's request may take the following form:

> The undersigned, being the inventor of the disclosed invention, requests that the enclosed papers be accepted under the Disclosure Document Program, and that they be preserved for a period of two years.

A Disclosure Document Deposit Request form (PTO/SB/95) can also be used as a cover letter. This form is available at the USPTO's Internet site or by calling the USPTO **>Contact Center< (see MPEP § 1730).

A notice with an identifying number and date of receipt in the USPTO will be mailed to the customer, indicating that the Disclosure Document may be relied upon only as evidence of conception and that a patent application should be diligently filed if patent protection is desired. The USPTO prefers that applicants send two copies of the cover letter or Disclosure

Document Deposit Request form and one copy of the Disclosure Document, along with a self-addressed stamped envelope. The second copy of the cover letter or form will be returned with the notice. It is not necessary to submit more than one copy of the document in order for it to be accepted under the Disclosure Document Program.

V. DISPOSITION

The Disclosure Document will be preserved by the USPTO for two years after its receipt. It will then be destroyed unless it is referred to in a separate letter in a related patent application filed within the two-year period. The separate letter filed in the related patent application must identify not only the patent application, but also the Disclosure Document by its title, number, and date of receipt in the USPTO. Acknowledgment of such letters will be made in the next official communication or in a separate letter from the USPTO.

VI. ACKNOWLEDGMENT

When a paper referring to a Disclosure Document is filed in a patent application within 2 years after the filing of a Disclosure Document, the examining Technology Center (TC) technical support staff member will prepare either (1) a memorandum indicating that a reference to Disclosure Document No. -- has been made in Patent Application No. --, or (2) a copy of the paper filed in the application referring to the Disclosure Document. The memorandum or copy is forwarded to the Customer Contact Team of the Office of Initial Patent Examination (OIPE).

Upon receipt, the Customer Service Branch of the OIPE prepares a retention label (PTO-150) and attaches it to the Disclosure Document, and indicates such on the forwarded memo or copy, and returns the memo or copy to the TC. The returned memo or copy is stapled to the inside left flap of the file wrapper if the application is maintained in a paper file, or added to the Image File Wrapper (IFW) if the application is an IFW application, so that the examiner's attention is directed to it when the next Office action is prepared. If prosecution before the examiner has been concluded, a separate letter indicating that the Disclosure Document will be retained should be sent to the applicant by the examining TC technical support staff member.

After the acknowledging letter is mailed, the paper number of the acknowledgment is noted in the application file. The returned memo or copy is retained with the original paper referring to the Disclosure Document in the file wrapper.

VII. FEE

A fee of $10, as set forth in 37 CFR 1.21(c), in the form of a check or money order made payable to "Commissioner for Patents" must accompany the Disclosure Document when it is submitted to the USPTO. Documents not accompanied by the full fee will be returned. Mail the Disclosure Document along with the fee to:

Mail Stop DD
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Applicants can request a copy of their Disclosure Document as filed in the USPTO if they are the original submitters of the document. The request must be made in writing and accompanied by a fee for $25.

Fees are subject to change annually. To confirm current fees, contact the **>USPTO Contact Center< or visit the USPTO's Internet site (see MPEP § 1730).

VIII. NOTICE TO INVENTORS

The two-year retention period is not a "grace period" during which the inventor can wait to file his or her patent application without possible loss of benefits. As explained above, it may be advisable to file a provisional application instead of a Disclosure Document. It must be recognized that, in order to establish priority of invention, an affidavit or testimony referring to a Disclosure Document must usually also establish diligence in completing the invention or in filing the patent application after the filing of the Disclosure Document.

Inventors are also reminded that any public use or sale in the United States or publication of the invention anywhere in the world more than one year prior to the filing of a patent application on that invention will prohibit the granting of a U.S. patent on it. See 35 U.S.C. 102(b). Foreign patent laws in this regard may be much more restrictive than U.S. laws.

The USPTO advises inventors who are not familiar with the requirements of U.S. patent law and procedures to consult an attorney or agent registered to practice before the USPTO. A list of *Attorneys and Agents Registered to Practice Before the U.S. Patent and Trademark Office* can be found at the USPTO's Internet site. See MPEP § 1730 for additional sources of this list.

As a service to USPTO's customers, the three Partnership Patent and Trademark Depository Libraries (PTDLs) listed below have been authorized to act as USPTO's "agent" in accepting documents under the Disclosure Document Program. This service provides customers with a completed transaction on-site, eliminating the wait for USPTO notification of acceptance. The documents are stamped with an identifying number and date at the time of receipt by the PTDL. Original documents are sent to the USPTO for processing and retention.

To locate a Patent and Trademark Depository Library (PTDL) near you, consult the complete listing of PTDLs found in every issue of the *Official Gazette*, call the USPTO **>Contact Center<, or access the USPTO's Internet site (see MPEP § 1730). The nationwide network of PTDLs has collections of patents and patent-related reference materials available to the public, including automated access to USPTO data bases. Contact the PTDL prior to your visit to learn about its collections, services, and hours.

1711 U.S.-Philippines Search Exchange

The United States-Philippines search exchange program involves patent applications filed in the United States which are subsequently followed by corresponding applications filed in the Republic of the Philippines and patent applications filed in the Philippines subsequently followed by corresponding applications filed in the United States.

The program operates as follows:

The applicant files his or her application in the United States Patent and Trademark Office (USPTO) which will process the application in the normal manner and examine the application in the usual time sequence.

If the applicant should later file a corresponding application in the Philippines Patent Office, he or she may elect to use the special filing procedure. Under this special filing procedure, applicant files his or her application in the Philippines accompanied by a notice of election to participate in the special procedure, which notice of election contains a certification that the description (excluding references to related applications), claims, and drawings are identical to those of the corresponding application originally filed in the United States. The earlier filed application must be fully identified, and, in applications without a claim of priority, a certified copy of the earlier filed U.S. application must be submitted to the Philippines Patent Office. In addition, applicant must also agree that all amendments to his or her U.S. application will also be made with respect to his or her application filed in the Philippines.

In the USPTO, applicant will regularly file two copies of each amendment. One copy must be marked "Copy for Philippines Patent Office." Upon termination of prosecution, the USPTO shall remove all copies so marked from the U.S. file and promptly forward the same to the Philippines Patent Office.

Election forms for participation in this special program must be signed in duplicate and simultaneously accompany the application to be filed in the Philippines.

Upon receipt of properly filed notice of election, the Philippines Patent Office will notify the USPTO of the election by forwarding one copy of the election

forms to the USPTO. The Philippines Patent Office will defer action on the Philippines application pending receipt of information as to the disposition of the application by the USPTO. If no such information is received by the Philippines Office within a reasonable amount of time from the date of filing in the Philippines, the Philippines Office may, either on its own initiative, or at applicant's request, inquire as to the status of the U.S. application and, if desired, proceed with its own independent examination.

Upon disposal of the application by the USPTO, appropriate information will be sent to the Philippines Patent Office which will include all necessary identifying data, whether allowed or abandoned, notice of allowance, copies of documents cited during examination, a copy of the last office action and, when necessary, any earlier actions which may be included by reference in the last action. The Philippines Office will then make its own complete office action based upon the claims as amended with USPTO, performing whatever checks desired and searching for copending interfering applications. Alternatively, the Philippines may request applicant to show cause why the results of the U.S. examination should not be accepted in the Philippines. All avenues of appeal will remain open to the applicant.

Where copending applications are cited and applied during examination in the USPTO full examination will not be forwarded to the Philippines Patent Office, and the fact that a U.S. copending application was cited would be noted as a matter of information, since such references are inapplicable in the Philippines.

Where the application originates in the Philippines Patent Office and is subsequently filed in the USPTO, a similar procedure as outlined above, consonant with U.S. law, will be followed.

It is believed that this program will facilitate the handling of U.S. origin applications filed in the Republic of the Philippines resulting in a savings in time and expense of prosecution to U.S. applicants.

1720 Dissemination of Court and Board of Patent Appeals and Interferences Decisions [R-3]

I. COURT DECISIONS

The Office of the Solicitor forwards to the Office of the Commissioner for Patents copies of all recent court decisions in patent cases where a precedential opinion is issued. The Office of the Commissioner for Patents will routinely forward these opinions to TC Directors, the **>Office of Patent Training<, and the Director of the Office of Patent Quality Assurance.

TC Directors, in turn, are to make copies available to supervisors and other individuals as the TC Director determines to be appropriate. TC Directors are encouraged to discuss the contents of the opinions in their staff meetings, particularly where such meetings are being held to reinforce examination quality.

II. BOARD OF PATENT APPEALS AND INTERFERENCES DECISIONS

A decision rendered by the Board of Patent Appeals and Interferences (Board) is returned to the examiner through the TC Director and the examiner's supervisor. The examiner takes action consistent with the decision rendered by the Board unless rehearing of the Board decision will be requested (MPEP § 1214.04). The TC Director may circulate and discuss the decision among some or all of the supervisors in the TC, and the supervisors, in turn, may circulate the decision among the examiners in their art units, depending on the subject matter or issues in the decisions.

1721 Treatment of Court and Board of Patent Appeals and Interferences Decisions Affecting Patent and Trademark Office Policy and Practice [R-3]

In the event the Board of Patent Appeals and Interferences (Board) or court decision is one that significantly adds to the body of law by, for example, addressing a new legal or procedural issue, or providing a new interpretation of a prior decision, such a decision may result in an internal United States Patent and Trademark Office (USPTO) memorandum pointing out the significance of the decision to the examination process.

When any examiner or supervisor in the Patent Examining Corps concludes that a recent decision of the Board or a court affects existing USPTO policy or practice, he or she should bring the matter to the attention of his/her TC Director through normal chain-of-command procedures.

When the TC Director believes that guidance to the Corps is warranted as a result of a decision, the TC Director should consult with the Deputy Commissioner for Patent Examination Policy and provide a draft of the guidance that is recommended as appropriate under the circumstances. The Deputy Commissioner for Patent Examination Policy will then consult appropriate Office officials, as necessary, to formulate a recommendation to the Commissioner for Patents on the policy implications of the opinion.

It may be necessary for the Director, General Counsel, Solicitor, Chief Administrative Patent Judge, Commissioner for Patents, Deputy Commissioner for Patent Examination Policy, Deputy Commissioner for Patent Operations and TC Director making the recommendation to meet to review and discuss the policy ramifications of the opinion and recommended guidance to enable the Director to decide how the USPTO will proceed.

Communication of the decision on the policy implications of the court or Board decision will normally take place by either notice in the *Official Gazette* and/or via memorandum to USPTO personnel. Ultimately, the policy implications of the decision will be officially incorporated into the Manual of Patent Examining Procedure and **>Office of Patent Training< curriculum materials during the next update cycle for these reference materials.

1730 Information Sources [R-5]

I. IN GENERAL

General information about patents, trademarks, products and services offered by the United States Patent and Trademark Office (USPTO), and other related information is available by contacting the USPTO Contact Center at:

800-PTO-9199 or 571-272-1000

(TDD) 571-272-9950

An automated message system is available 7 days a week, 24 hours a day providing informational responses to frequently asked questions and the ability to order certain documents. Customer service representatives are available to answer questions, send materials or connect customers with other offices of the USPTO from 8:30 a.m. - 8:00 p.m. EST/EDT, Monday-Friday excluding federal holidays.

For other technical patent information needs, the Inventors Assistance Center can be reached through customer service representatives at the above numbers, Monday through Friday (except federal holidays) from 8:30 a.m. to 5:00 p.m. EST/EDT.

General information can also be obtained in person from the Public Search Facilities of the USPTO. See subsection IV. below.

II. USPTO INTERNET SITE

A. General Information

The USPTO web site (http://www.uspto.gov or ftp.uspto.gov) provides a wealth of information to all users. The USPTO web site offers links to news and notices (such as announcements, press releases, *Official Gazette* Notices and *Federal Register* Notices), USPTO contacts and addresses, activities and education related pages (such as the PTDL program and the Kids Pages), patent specific information (such as issued patents and published patent applications, general information pertaining to applying for a patent, electronic filing of patent applications, and reference materials such as the MPEP and examination guidelines), and trademark specific information (such as the Trademark Manual of Examining Procedure and the U.S. Trademark Electronic Search System (TESS)). In addition, the web site allows downloading of a variety of USPTO forms (including PCT forms), ordering copies of patents and trademarks, accessing a list of all current fees, paying patent maintenance fees, replenishing deposit accounts, accessing various legal materials, linking to related web sites, etc.

B. Electronic Business

The Patent Electronic Business Center (EBC) *>assists< USPTO customers **>in filing< patent applications electronically, *>submitting< assignment documents for recordation, *>retrieving< data, *>checking< the status of pending actions, and *>submitting< information and applications. The hours of operation of the EBC are Monday through Friday 6 a.m. - midnight (EST/EDT). The EBC can be reached by telephone at 866-217-9197 (toll-free) or 571-272-4100. The EBC may be reached by e-mail at ebc@uspto.gov and by fax at 571-273-0177.

1. USPTO Databases

(a) Issued Patents

The Patent Grants Database provides access to the full-text of all U.S. patents issued since 1976, and to the full-page images of all U.S. patents issued since 1790.

(b) Published Applications

The Patent Applications Database provides both full-text and full-page images of all U.S. patent applications published since March 15, 2001.

(c) Status Information

Status information relating to patent applications is available through the Patent Application Information Retrieval (PAIR) system. There is both a public and private side to PAIR. In public PAIR, information is available relating to issued patents, published patent applications, and applications to which a patented or published application claims domestic priority. In private PAIR, an applicant (or his or her registered patent attorney or registered patent agent) can securely track the progress of his or her application(s) through the USPTO. Private PAIR makes available information relating to unpublished patent applications, but the applicant must associate a Customer Number with the application to obtain access. See MPEP § 403 for Customer Number practice.

(d) Image File Wrapper (IFW)

The Image File Wrapper (IFW) system uses image technology to replace the paper processing of patent applications in the Office. Paper components of these application files (including the specification, oath or declaration, drawings, information disclosure statements, amendments, Office actions, and file jacket notations) have been scanned to create electronic image files. For patent applications in the IFW system, the IFW file is the Official file and no access is granted to the original paper document sheets used to create the IFW file. All processing and examination is conducted using the electronic images instead of the paper source documents.

If an IFW file has been created for a patented application, published application, or an application to which a patented or published application claims domestic priority, the IFW file (with the exception of non-patent literature) is accessible through public PAIR. All patent applications filed after June 30, 2003 have been scanned into the IFW system and will be available in public PAIR as soon as they have been published or patented. Pending applications filed before June 30, 2003 are scanned into IFW as incoming papers are received in the Office. Non-patent literature (NPL) may be viewed using private PAIR (if an IFW file has been created) or obtained from the USPTO Office of Public Records.

Questions about IFW images viewed in PAIR should be directed to the Patent EBC.

(e) Assignments on the Web (AOTW)

Assignment information is available for issued patents and published applications recorded since August 1980.

2. Transacting Electronic Business

(a) Filing Applications and Other Documents

The Electronic Filing System (EFS) allows customers to electronically file patent application documents securely via the Internet. EFS is a system for submitting new utility patent applications and pre-grant publication submissions in electronic publication-ready form. EFS includes software to help customers prepare submissions in Portable Document Format (PDF) and eXtensible Markup Language (XML) and to assemble the various parts of the application as an electronic submission package. EFS can be used to submit:

(A) new utility patent applications >including sequence listings, computer program listings, and large tables<;

(B) provisional patent applications;

(C) sequence listings in computer readable form (CRF) for an application previously filed on paper;

(D) pre-grant publication resubmissions for previously filed applications, where the applicant wants an amended, redacted, voluntary, or republication specification to be published rather than the application as originally filed;

(E) multiple assignments; and

(F) Electronic Information Disclosure Statements (eIDS).

At this time EFS does not accept:

(A) Design applications;

(B) New plant applications;

(C) Corrected or revised patent application republications pursuant to 37 CFR 1.221(b);

(D) Reissue applications;

(E) International applications filed under the Patent cooperation Treaty (PCT); or

(F) Reexamination requests.

>EFS-Web allows customers to electronically file patent application documents securely via the Internet via a web page. EFS-Web is a system for submitting new utility, design and provisional patent applications, requests to enter the U.S. National stage under 35 U.S.C. 371, and documents related to previously-filed patent applications. Customers prepare documents in Portable Document Format (PDF), attach the documents, validate that the PDF documents will be compatible with USPTO internal automated information systems, submit the documents, and pay fees with real-time payment processing. Some forms are available as fillable EFS-Web forms. When these fillable EFS-Web forms are used, the data entered into the forms is automatically loaded into USPTO information systems.

EFS-Web can be used to submit:

(A) New utility patent applications and fees;

(B) New design patent applications and fees;

(C) Provisional patent applications and fees;

(D) Requests to enter the national stage under 35 U.S.C. 371 and fees; and

(E) Most follow-on documents and fees for a previously filed patent application.

The following is a list of submission types that are not allowed to be filed using EFS-Web:

(A) New plant patent applications;

(B) Correspondence concerning registration practice requiring an original hand written signature under 37 CFR 1.4(e). See 37 CFR 1.6(d)(1).

(C) A document that is required by statute to be certified. See 37 CFR 1.4(f) and 37 CFR 1.6(d)(2). An example of such a submission is a certified copy of a foreign patent application filed pursuant to 35 U.S.C. 119 or a certified copy of an international application filed pursuant to 35 U.S.C. 365.

(D) A request for reexamination under 37 CFR 1.510 or 1.913 (see 37 CFR 1.6(d)(5)) and related documents;

(E) Submissions regarding reissue applications;

(F) Correspondence to be filed in a patent application subject to a secrecy order under 37 CFR 5.1 through 5.5. See 37 CFR 1.6(d)(6);

(G) Submissions in contested cases before the Board of Patent Appeals and Interferences, except as the Board may expressly authorize. See 37 CFR 1.6(d)(9);

(H) Papers filed in contested cases before the Board of Patent Appeals and Interferences, which are governed by 37 CFR 41.106(f). See 37 CFR 1.6(d)(3);

(I) Correspondence filed in connection with a disciplinary proceeding under 37 CFR part 10. See 37 CFR 1.6(d)(3);

(J) Submissions that are not associated with an application;

(K) Third party sumissions under 37 CFR 1.99;

(L) Protests under 37 CFR 1.291;

(M) Public use hearing papers under 37 CFR 1.292;

(N) Documents related to interference proceedings;

(O) Documents submitted by a third-party;

(P) Assignment documents;

(Q) Submissions related to the international phase of international patent applications under the Patent Cooperation Treaty;

(R) Pre-grant publication documents for amended, redacted, voluntary, and republication publications;

(S) Documents related to proceedings before the Court of Appeals for the Federal Circuit or the U.S. District Court.<

(b) Paying Fees and Replenishing Deposit Accounts

The Office of Finance On-Line Shopping page may be used to pay maintenance fees or to maintain and replenish deposit accounts.

(c) Ordering Copies and Publications

Copies of patent applications as filed and patent file wrappers that have been issued or published are available on-line from the Office of Public Records (OPR). Presentation patents may also be ordered on the web.

Available service options, fees and delivery methods vary by document type. Contact OPR at 1-800-972-6382 or 571-272-3150 for more information.

III. PCT

For questions and information concerning the Patent Cooperation Treaty (PCT), the PCT Help Desk is available to provide assistance and may be reached by telephone at 571-272-4300 between the hours of 9:00 am and 4:30 pm (EST/EDT), Monday through Friday, or by facsimile at 571-273-0419, 24 hours a day. In addition, helpful information is available through the internet at the Office of PCT Legal Administration page of the USPTO web site and at the World Intellectual Property Office web site (http://www.wipo.org/).

IV. USPTO SEARCH AND INFORMATION RESOURCE FACILITIES

The following USPTO search and information resource facilities are accessible to the public:

(A) Public Search Facility (Madison East, first floor, 600 Dulany St., Alexandria, VA 22314) at 571-272-3275

(Hours: Weekdays, 8:00 a.m. to 8:00 p.m., EST/EDT); and

(B) Scientific and Technical Information Center

(1) Main Library (Madison West, first floor, 600 Dulany St., Alexandria, VA 22314) at 571-272-3547

(2) Biotech/Chemical Library (Remsen 1D58) at 571-272-2520

(Hours: Weekdays, 8:30 a.m. to 5:00 p.m., EST/EDT).

V. REGISTERED PRACTIONERS

The USPTO cannot recommend any particular attorney or agent, or aid in the selection of an attorney or agent. A list of *Attorneys and Agents Registered to Practice Before the U.S. Patent and Trademark Office* may be purchased on DVD-ROM from the USPTO's Office of Electronic Information Products (571-272-5600). The DVD-ROM is also available on the USPTO web site (http://www.uspto.gov) from the "Products and Services Catalog".

To obtain a list of registered patent attorneys and agents for a particular area, customers may either contact a customer service representative through the USPTO Contact Center (see "In General" above), or acquire the information from the USPTO web site. The attorneys and agents list may be examined without charge at Patent and Trademark Depository Libraries (PTDLs) and at many other libraries throughout the U.S. Many large cities also have associations of patent attorneys and agents which may be consulted.

VI. MISCELLANEOUS

A. Recently Filed Applications

For information and questions concerning recently filed patent applications and filing receipts, contact the Customer Service Center of the Office of Initial Patent Examination at 571-272-4000 (hours: weekdays, 8:30 a.m. to 5:00 p.m., EST/EDT.

B. Pre-Grant Publication

For inquiries concerning projected pre-grant publication dates, contact the Pre-Grant Publication Division at 703-605-4283.

C. Status Information

For information on the status of a patent application, patent applicants who have access to PAIR should check PAIR. Alternatively, applicants may contact the File Information Unit at (703) 308-2733.

D. Correspondence

For information pertaining to mail, facsimile, or hand-delivery of correspondence to the USPTO, see MPEP §§ 502 - 502.01.

E. Copies of Documents

Inquiries regarding certified or uncertified copies of documents, including patent applications-as-filed, patent related file wrappers, patent copies, and reproduced copies of individual replacement pages or previous revisions of the MPEP, should be directed to the Office of Public Records Document Services at 571-272-3150 or 1-800-972-6382. Orders may be placed by facsimile when paying by VISA®, MasterCard®, American Express®, Discover®, or USPTO Deposit Account at 571-273-3250. To order file histories for self-service copying, contact the File Information Unit at (703) 308-2733.

F. Maintenance Fees

Information regarding maintenance fees may be obtained from the Patent Application Information Retrieval (PAIR) system on the USPTO web site, or by contacting the Receipts Accounting Division at 571-272-6500.

G. Assignments

For questions pertaining to filing assignments or other documents affecting title, contact the Assignment Division at 571-272-3350. Documents may be submitted to the Assignment Division by facsimile at 571-273-0140. See MPEP § 302.09 for additional information.

H. Petitions

For matters decided by the Office of Petitions, the appropriate USPTO personnel may be reached at 571-272-3282. Petitions to withdraw an application from issue may be sent by facsimile to 571-273-0025. All other facsimile transmissions to the Office of Petitions should be sent to the Central FAX Number 571-273-8300.

I. PatentIn

For information regarding orders for the PatentIn software program, call the Office of Electronic Information Products at 571-272-5600. For assistance downloading or using PatentIn, contact the Patent Electronic Business Center (see subsection II.B. above).

Chapter 1800 Patent Cooperation Treaty

INTRODUCTION

This chapter is designed to be a guide for patent examiners in searching and examining applications filed under the Patent Cooperation Treaty (PCT). Applicants desiring additional information for filing international applications should obtain a copy of the PCT Applicant's Guide from the World Intellectual Property Organization (WIPO) in Geneva, Switzerland.

The Articles and Regulations under the PCT are reproduced in Appendix T of this Manual and the Administrative Instructions are reproduced in Appendix AI of this Manual. The text of the *PCT Applicant's Guide*, the monthly *PCT Newsletter*, the weekly *PCT Gazette*, downloadable PCT forms, and additional information about the processing of international applications are available from WIPO's website (www.wipo.int/pct).

PCT applications are processed by the International Application Processing Division within the U.S. Patent and Trademark Office.

1801 Basic Patent Cooperation Treaty (PCT) Principles [R-6]

I. MAJOR CONCEPTS OF THE PCT

The Patent Cooperation Treaty (PCT) enables the U.S. applicant to file one application, "an international application," in a standardized format in English in the U.S. Receiving Office (the U.S. Patent and Trademark Office), and have that application acknowledged as a regular national or regional filing in as many Contracting States to the PCT as the applicant "designates" or "elects," that is, names, as countries or regions in which patent protection is desired. (For international applications filed on or after January 1, 2004, the filing of an international application will automatically constitute the designation of all contracting countries to the PCT on that filing date.) In the same manner, the PCT enables foreign applicants to file a PCT international application, designating the United States of America, in their home language in their home patent office and have the application acknowledged as a regular U.S. national filing. The PCT also provides for an international search report and written opinion (for international applications filed on or after January 1, 2004) that are established normally at 16 months from the priority date, and publication of the international application after 18 months from the priority date. Upon payment of national fees and the furnishing of any required translation, usually 30 months after the filing of any priority application for the invention, or the international filing date if no priority is claimed, the application will be subjected to national procedures for granting of patents in each of the designated countries. For any countries remaining whose national laws are not compatible with the 30 month period set forth in PCT Article 22(1), the filing of a demand for an international preliminary examination electing such countries within 19 months from the priority date will result in an extension of the period for entering the national stage to 30 months from the priority date. An up-to-date list of such countries may be found on WIPO's web site (www.wipo.int/pct/en/index.html). A brief description of the basic flow under the PCT is provided in MPEP § 1842.

The PCT offers an alternative route to filing patent applications directly in the patent offices of those countries which are Contracting States of the PCT. It does not preclude taking advantage of the priority rights and other advantages provided under the Paris Convention and the WTO administered Agreement on Trade-Related Aspects of Intellectual Property (TRIPS Agreement). The PCT provides an additional and optional foreign filing route to patent applicants.

The filing, search and publication procedures are provided for in Chapter I of the PCT. Additional pro-

cedures for a preliminary examination of PCT international applications are provided for in optional PCT Chapter II.

In most instances a national U.S. application is filed first. An international application for the same subject matter will then be filed subsequently within the priority year provided by the Paris Convention and the priority benefit of the U.S. national application filing date will be claimed.

II. RECEIVING OFFICE (RO)

The international application (IA) must be filed in the prescribed receiving Office (RO)(PCT Article 10). The United States Patent and Trademark Office will act as a receiving Office for United States residents and nationals (35 U.S.C. 361(a)). Under PCT Rule 19.1(a)(iii), the International Bureau of the World Intellectual Property Organization will also act as a Receiving Office for U.S. residents and nationals. The receiving Office functions as the filing and formalities review organization for international applications. International applications must contain upon filing the designation of at least one Contracting State in which patent protection is desired and must meet certain standards for completeness and formality (PCT Articles 11(1) and 14(1)).

Where a priority claim is made, the date of the earlier filed national application is used as the date for determining the timing of international processing, including the various transmittals, the payment of certain international and national fees, and publication of the application. Where no priority claim is made, the international filing date will be considered to be the "priority date" for timing purposes (PCT Article 2(xi)).

The international application is subject to the payment of certain fees within 1 month from the date of filing. The receiving Office will grant an international filing date to the application, collect fees, handle informalities by direct communication with the applicant, and monitor all corrections (35 U.S.C. 361(d)). By 13 months from the priority date, the receiving Office should prepare and transmit a copy of the international application, called the search copy (SC), to the International Searching Authority (ISA); and forward the original, called the record copy (RC), to the International Bureau (IB) (PCT Rules 22.1 and 23). A second copy of the international application, the home copy (HC), remains in the receiving Office (PCT Article 12(1)). Once the receiving Office has transmitted copies of the application, the International Searching Authority becomes the focus of international processing.

III. INTERNATIONAL SEARCHING AUTHORITY (ISA)

The basic functions of the International Searching Authority (ISA) are to conduct a prior art search of inventions claimed in international applications; it does this by searching in at least the minimum documentation defined by the Treaty (PCT Articles 15 and 16 and PCT Rule 34), and for international applications filed on or after January 1, 2004, to issue a written opinion (PCT Rule 43*bis*) which will normally be considered to be the first written opinion of the International Preliminary Examining Authority where international preliminary examination is demanded. See PCT Rule 66.1*bis*.

For most applications filed with the United States Receiving Office, the applicant may choose (in the Request form) * the U.S. Patent and Trademark Office*>,< the European Patent Office>, or the Korean Intellectual Property Office< to act as the International Searching Authority. However, the European Patent Office may not be competent to act as an International Searching Authority for certain applications filed by nationals or residents of the United States. See MPEP § 1840.01 for a discussion of applications and subject matter that will not be searched by the European Patent Office. The International Searching Authority is also responsible for checking the content of the title and abstract (PCT Rules 37.2 and 38.2).

An international search report (ISR), and for international applications filed on or after January 1, 2004, a written opinion, will normally be issued by the International Searching Authority within 3 months from the receipt of the search copy (usually about 16 months after the priority date) (PCT Rule 42). Copies of the international search report and prior art cited will be sent to the applicant by the ISA (PCT Rules 43 and 44.1). The international search report will contain a listing of documents found to be relevant and will identify the claims in the application to which they are pertinent. In applications filed on or after January 1, 2004, the ISA will normally issue a written opinion as

to whether each claim appears to satisfy the PCT Article 33 criteria of "novelty," "inventive step," and "industrially applicable." The written opinion may also indicate defects in the form or content of the international application under the PCT articles and regulations, as well as any observations the ISA wishes to make on the clarity of the claims, the description, and the drawings, or on the question of whether the claims are fully supported by the description.

Once the international search report and written opinion are established, the ISA transmits one copy of each to the applicant and the International Bureau, and international processing continues before the International Bureau.

IV. INTERNATIONAL BUREAU (IB)

The basic functions of the International Bureau (IB) are to maintain the master file of all international applications and to act as the publisher and central coordinating body under the Treaty. The World Intellectual Property Organization (WIPO) in Geneva, Switzerland performs the duties of the International Bureau.

If the applicant has not filed a certified copy of the priority document in the receiving Office with the international application, or requested upon filing that the receiving Office prepare and transmit to the International Bureau a copy of the prior U.S. national application, the priority of which is claimed, the applicant must submit such a document directly to the International Bureau or the receiving Office not later than 16 months after the priority date (PCT Rule 17). The request (Form PCT/RO/101) contains a box which can be checked requesting that the receiving Office prepare the certified copy. This is only possible, of course, if the receiving Office is a part of the same national Office where the priority application was filed.

The applicant has normally 2 months from the date of transmittal of the international search report to amend the claims by filing an amendment and may file a brief statement explaining the amendment directly with the International Bureau (PCT Article 19 and PCT Rule 46). The International Bureau will then normally publish the international application along with the search report and any amended claims at the expiration of 18 months from the priority date (PCT Article 21). The written opinion, on the other hand, will not be made publicly available until the expiration of 30 months from the priority date. See PCT Rule 44*ter*. The international publication includes a front page containing bibliographical data, the abstract, and a figure of the drawing (PCT Rule 48). The publication also contains the search report and any amendments to the claims submitted by the applicant. If the application is published in a language other than English, the search report and abstract are also published in English. The International Bureau publishes a *PCT Gazette* in the French and English languages which contains information similar to that on the front pages of published international applications, as well as various indexes and announcements (PCT Rule 86). The International Bureau also transmits copies of the publication of the international application to all designated Offices that have requested to receive the publication (PCT Article 20, PCT Rule 47, and PCT Rule 93*bis*.1).

V. DESIGNATED OFFICE (DO) and ELECTED OFFICE (EO)

The designated Office is the national Office (for example, the USPTO) acting for the state or region designated under Chapter I. Similarly, the elected Office is the national Office acting for the state or region elected under Chapter II.

PCT Article 22(1) was amended, effective April 1, 2002, to specify that a copy of the international application, a translation thereof (as prescribed), and the national fee are due to the designated Office not later than at the expiration of 30 months from the priority date. Accordingly, the time period for filing the copy of the international application, the translation, and the fee under PCT Article 22 is now the same as the 30 month time period set forth in PCT Article 39. The USPTO has adopted the 30 month time limit set forth in PCT Article 22(1). Most Contracting States have changed their national laws for consistency with PCT Article 22(1) as amended. An up-to-date listing of Contracting States that have adopted Article 22(1) as amended is maintained at WIPO's website at http://www.wipo.int/pct/en/texts/pdf/time_limits.pdf. For those few remaining Contracting States that have not adopted Article 22(1) as amended, if no "Demand" for international preliminary examination has been filed within 19 months of the priority date, the appli-

cant may be required to complete the requirements for entering the national stage within 20 months from the priority date of the international application in the national offices of those states. When entering the national stage following Chapter I, the applicant has the right to amend the application within the time limit set forth in PCT Rule 52.1. After this time limit has expired (PCT Article 28 and PCT Rule 52), each designated Office will make its own determination as to the patentability of the application based upon its own specific national or regional laws (PCT Article 27(5)).

If the applicant desires to obtain the benefit of delaying the entry into the national stage until 30 months from the priority date in one or more countries where the 30 month time limit set forth in PCT Article 22(1) as amended does not apply, a Demand for international preliminary examination must be filed with an appropriate International Preliminary Examining Authority within 19 months of the priority date. Those states in which the Chapter II procedure is desired must be "elected" in the Demand. For international applications filed on or after January 1, 2004, the applicant should file the demand with the competent International Preliminary Examining Authority (IPEA) before the expiration of the later of the following time limits: (A) three months from the date of transmittal to the applicant of the international search report and written opinion under PCT Rule 43*bis*.1, or of the declaration referred to in PCT Article 17(2)(a); or (B) 22 months from the priority date of the international application. However, applicant may still desire to file the demand by 19 months from the priority date for those countries that have not yet adopted PCT Article 22(1) as amended.

The original Demand is forwarded to the International Bureau by the IPEA. The International Bureau then notifies the various elected Offices that the applicant has entered Chapter II and sends a copy of any amendments filed under PCT Article 19 and any statement explaining the amendments to the IPEA. See PCT Rule 62. In applications filed on or after January 1, 2004, the International Bureau also sends the IPEA a copy of the written opinion established by the International Searching Authority unless the International Searching Authority is also acting as IPEA. See PCT Rule 62.1(i).

VI. INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY (IPEA)

The International Preliminary Examining Authority (IPEA) normally starts the examination process when it is in possession of:

(A) the demand;

(B) the amount due;

(C) if the applicant is required to furnish a translation under PCT Rule 55.2, that translation;

(D) either the international search report or a notice of the declaration by the International Searching Authority (ISA) that no international search report will be established; and

(E) if the international application has a filing date on or after January 1, 2004, the written opinion established under PCT Rule 43*bis*.1.

However, for international applications having an international filing date on or after January 1, 2004, the IPEA shall not start the international preliminary examination before the expiration of the later of three months from the transmittal of the international search report (or declaration that no international search report will be established) and written opinion; or the expiration of 22 months from the priority date unless the applicant expressly requests an earlier start, with the exception of the situations provided for in PCT Rule 69.1(b)-(e).

The written opinion of the ISA is usually considered the first written opinion of the IPEA unless the IPEA has notified the International Bureau that written opinions established by specified International Searching Authorities shall not be considered a written opinion for this purpose. See PCT Rule 66.1*bis*. Also, the IPEA may, at its discretion issue further written opinions provided sufficient time is available. See PCT Rule 66.4.

The IPEA establishes the international preliminary examination report (entitled "international preliminary report on patentability" for applications having an international filing date on or after January 1, 2004), which presents the examiner's final position as to whether each claim is "novel," involves "inventive step," and is "industrially applicable" by 28 months from the priority date. A copy of the international preliminary examination report is sent to the applicant and to the International Bureau. The International

Bureau then communicates a copy of the international preliminary examination report to each elected Office.

The applicant must complete the requirements for entering the national stage by the expiration of 30 months from the priority date to avoid any question of withdrawal of the application as to that elected Office; however, some elected Offices provide a longer period to complete the requirements.

A listing of all national and regional offices, and the corresponding time limits for entering the national stage after PCT Chapter I and PCT Chapter II, may be found on WIPO's web site at: http://www.wipo.int/pct/en/index.html.

1802 PCT Definitions [R-1]

The PCT contains definitions in PCT Article 2 and in PCT Rule 2, which are found in MPEP Appendix T. Additional definitions are **>in 35 U.S.C. 351, found in MPEP Appendix L, in 37 CFR 1.9 and 1.401, found in MPEP Appendix R, and in PCT Administrative Instructions Section 101, found in< MPEP Appendix AI.

1803 Reservations Under the PCT Taken by the United States of America [R-6]

The United States of America had originally declared that it was not bound by Chapter II (PCT Article 64 (1)), but withdrew that reservation on July 1, 1987.

It has also declared that, as far as the United States of America is concerned, international publication is not required (PCT Article 64 (3)). Accordingly, under PCT Article 64(3)(b), if the United States is the only PCT Contracting State designated in an international application, the international application will not be published by the International Bureau (IB) at 18 months. Even though the United States Patent and Trademark Office has begun pre-grant publication under 35 U.S.C. 122(b), the United States has not removed its reservation under PCT Article 64(3) because not all United States patent applications are published. See 35 U.S.C. 122(b)(2). The application will, however, be published under 35 U.S.C. 122(b) if it enters the national stage in the United States. It will be published again if it is allowed to issue as a United States patent.

The United States of America also made a reservation under PCT Article 64(4) which relates to the prior art effective date of a U.S. patent issuing from an international application. See 35 U.S.C. 102(e) and 363.

The above reservations under PCT Article 64(3) and (4) are still in effect.

The U.S. Receiving Office continues to accept applications only in English. See 35 U.S.C. 361(c). PCT Rules *>20.1(c)<, 26.3*ter*(a) and 26.3*ter*(c) permit an international filing date to be accorded even though portions of an international application are in a language not acceptable to the Receiving Office. PCT Rules *>20.1(c)<, 26.3*ter*(a) and 26.3*ter*(c) are not compatible with the national law applied by the United States Patent and Trademark Office (USPTO) as Receiving Office. Thus, the USPTO has taken a reservation on adherence to these Rules pursuant to PCT Rules *>20.1(d)<, 26.3*ter*(b) and 26.3*ter*(d). As a result, PCT Rules *>20.1(c)<, 26.3*ter*(a) and 26.3*ter*(c) shall not apply to the USPTO as Receiving Office for as long as the aforementioned incompatibility exists.

* PCT Rules 49.5(c-bis) and 49.5(k) continue not to be compatible with the national law applied by the USPTO as a Designated Office. See 35 U.S.C. 371(c)(2). >Also, PCT Rules 49*ter*.1(a)-(d) and 49*ter*.2(a)-(g) are not compatible with the national law applied by the USPTO as a Designated Office. See 35 U.S.C. 119(a). Thus, the USPTO has taken a reservation on adherence to these Rules pursuant to PCT Rules 49.5(l), 49*ter*.1(g) and 49*ter*.2(h).< As a result, PCT Rules 49.5(*c-bis*)>,< * 49.5(k)>, 49*ter*.1(a)-(d) and 49*ter*.2(a)-(g)< shall not apply to the USPTO as Designated Office for as long as the aforementioned incompatibility exists. See the International Bureau's notice published **>on the WIPO web site at: http://www.wipo.int/pct/en/texts/reservations/res_incomp.pdf<.

1805 Where To File an International Application [R-6]

35 U.S.C. 361. Receiving Office.

(a)The Patent and Trademark Office shall act as a Receiving Office for international applications filed by nationals or residents of the United States. In accordance with any agreement made between the United States and another country, the Patent and Trademark Office may also act as a Receiving Office for interna-

tional applications filed by residents or nationals of such country who are entitled to file international applications.

*****

See 37 CFR 1.421 - 1.423 as to who can file an international application.

Only if at least one of the applicants is a resident or national of the United States of America may an international application be filed in the United States Receiving Office (PCT Article 9(1) and (3), PCT Rules 19.1 and 19.2, 35 U.S.C. 361(a) and 37 CFR 1.412(a), 1.421). The concepts of residence and nationality are defined in PCT Rule 18.1. For the purpose of filing an international application, the applicant may be either the inventor or the successor in title of the inventor (assignee or owner). However, the laws of the various designated States regarding the requirements for applicants must also be considered when filing an international application. For example, the patent law of the United States of America requires that, for the purposes of designating the United States of America, the applicant(s) must be the inventor(s) (35 U.S.C. 373, PCT Article 27(3)).

The United States Receiving Office is located at 2900 Crystal Drive in Arlington, Virginia. International applications and related papers may be deposited with the United States Receiving Office by addressing the papers to "Mail Stop PCT" and delivering them to the Customer Service Window at the USPTO's Alexandria headquarters. The street address is: U.S. Patent and Trademark Office, Customer Service Window, Mail Stop PCT, Randolph Building, 401 Dulany Street, Alexandria, VA 22314. The mailing address for delivery by the U.S. Postal Service is: Mail Stop PCT, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450. It should be noted that the "Express Mail" provisions of 37 CFR 1.10 apply to the filing of all applications and papers filed in the U.S. Patent and Trademark Office, including PCT international applications and related papers and fees. It should be further noted, however, that PCT international applications and papers relating to international applications are specifically excluded from the Certificate of Mailing or Transmission procedures under 37 CFR 1.8. See MPEP § 1834. If 37 CFR 1.8 is improperly used, the date to be accorded the paper will be the date of actual receipt in the Office unless the receipt date falls on a Saturday, Sunday, or Federal holiday in which case the date of receipt will be the next succeeding day which is not a Saturday, Sunday, or Federal holiday (37 CFR 1.6).

Irrespective of the Certification practice under 37 CFR 1.8(a), facsimile transmission (without the benefit of the certificate under 37 CFR 1.8(a)) may be used to submit certain papers in international applications. However, facsimile transmission may not be used for the filing of an international application, the filing of color drawings under 37 CFR 1.437, or the filing of a copy of the international application and the basic national fee to enter the U.S. national stage under 35 U.S.C. 371. See 37 CFR 1.6(d)(3) and (4), 1.8(a)(2)(i)(D), and 1.8(a)(2)(i)(F). The Demand for international preliminary examination may be filed by facsimile transmission. See MPEP § 1834.01.

The United States Receiving Office and PCT Help Desk are available to offer guidance on PCT requirements and procedures. See MPEP § 1730 for information on contacting the staff and other available means for obtaining information.

WARNING - although the United States patent law at 35 U.S.C. 21(a) authorizes the Director to prescribe by rule that any paper or fee required to be filed in the Patent and Trademark Office will be considered filed in the Office on the date on which it was deposited with the United States Postal Service, PCT Rule 20.1(a) provides for marking the "date of actual receipt on the request." Although the "Express Mail" provisions under 37 CFR 1.10 have not been contested to date regarding PCT applications, applicants should be aware of a possible different interpretation by foreign authorities.

PCT Rule 19.4 provides for transmittal of an international application to the International Bureau as Receiving Office in certain instances. For example, when the international application is filed with the United States Receiving Office and the language in which the international application is filed is not accepted by the United States Receiving Office, or if the applicant does not have the requisite residence or nationality, the application may be forwarded to the International Bureau for processing in its capacity as a Receiving Office. See 37 CFR 1.412(c)(6). The Receiving Office of the International Bureau will consider the international application to be received as of the date accorded by the United States Receiving Office. This practice will avoid the loss of a filing date in those instances where the United States

Receiving Office is not competent to act, but where the international application indicates an applicant to be a national or resident of a PCT Contracting state or is in a language accepted under PCT Rule 12.1(a) by the International Bureau as a Receiving Office. Of course, where questions arise regarding residence or nationality, i.e., the U.S. is not clearly competent, the application will be forwarded to the International Bureau as Receiving Office. Note, where no residence or nationality is indicated, the U.S. is not competent, and the application will be forwarded to the International Bureau as Receiving Office so long as the necessary fee is paid. The fee is an amount equal to the transmittal fee.

If all of the applicants are indicated to be residents or nationals of non-PCT Contracting States, PCT Rule 19.4 does not apply, and the application is denied an international filing date.

>

Any applicant who is a resident or national of a PCT Contracting State may also file their application directly with the International Bureau as receiving Office. An applicant may wish to consider filing directly with the International Bureau as receiving Office instead of the United States Receiving Office in the situation where applicant is filing their international application after the expiration of the 12 month priority period but within two months of the expiration of the priority period, and where applicant desires to request restoration of the right of priority under the in spite of due care standard. See MPEP § 1828.01. An applicant may also request that an application be forwarded to the International Bureau for processing in its capacity as receiving Office in accordance with PCT Rule 19.4(a)(iii) in situations where the international application was filed with the United States Receiving Office after the expiration of the 12 month priority period but within two months of the expiration of the priority period, and where applicant desires to request restoration of the right of priority under the in spite of due care standard.

Applications filed with, or forwarded to, the International Bureau must have a foreign filing license.

<

1807 Agent or Common Representative and General Power of Attorney [R-7]

37 CFR 1.455. Representation in international applications.

(a) Applicants of international applications may be represented by attorneys or agents registered to practice before the United States Patent and Trademark Office or by an applicant appointed as a common representative (PCT Art. 49, Rules 4.8 and 90 and § 11.9). If applicants have not appointed an attorney or agent or one of the applicants to represent them, and there is more than one applicant, the applicant first named in the request and who is entitled to file in the U.S. Receiving Office shall be considered to be the common representative of all the applicants. An attorney or agent having the right to practice before a national office with which an international application is filed and for which the United States is an International Searching Authority or International Preliminary Examining Authority may be appointed to represent the applicants in the international application before that authority. An attorney or agent may appoint an associate attorney or agent who shall also then be of record (PCT Rule 90.1(d)). The appointment of an attorney or agent, or of a common representative, revokes any earlier appointment unless otherwise indicated (PCT Rule 90.6(b) and (c)).

(b) Appointment of an agent, attorney or common representative (PCT Rule 4.8) must be effected either in the Request form, signed by applicant, in the Demand form, signed by applicant, or in a separate power of attorney submitted either to the United States Receiving Office or to the International Bureau.

(c) Powers of attorney and revocations thereof should be submitted to the United States Receiving Office until the issuance of the international search report.

(d) The addressee for correspondence will be as indicated in section 108 of the Administrative Instructions.

PCT Rule 90.
Agents and Common Representatives

*****

90.4.Manner of Appointment of Agent or Common Representative

(a) The appointment of an agent shall be effected by the applicant signing the request, the demand, or a separate power of attorney. Where there are two or more applicants, the appointment of a common agent or common representative shall be effected by each applicant signing, at his choice, the request, the demand or a separate power of attorney.

(b) Subject to Rule 90.5, a separate power of attorney shall be submitted to either the receiving Office or the International Bureau, provided that, where a power of attorney appoints an agent under Rule 90.1(b), (c), or (d)(ii), it shall be submitted to the International Searching Authority or the International Preliminary Examining Authority, as the case may be.

(c) If the separate power of attorney is not signed, or if the required separate power of attorney is missing, or if the indication of the name or address of the appointed person does not comply with Rule 4.4, the power of attorney shall be considered nonexistent unless the defect is corrected.

(d) Subject to paragraph (e), any receiving Office, any International Searching Authority, any International Preliminary Examining Authority and the International Bureau may waive the requirement under paragraph (b) that a separate power of attorney be submitted to it, in which case paragraph (c) shall not apply.

(e) Where the agent or the common representative submits any notice of withdrawal referred to in Rules 90*bis*.1 to 90*bis*.4, the requirement under paragraph (b) for a separate power of attorney shall not be waived under paragraph (d).

*****

Where an appointment of an agent or common representative is effected by a separate power of attorney, that power of attorney must be submitted to either the receiving Office or the International Bureau. However, a power of attorney appointing an agent or subagent to represent the applicant specifically before the International Searching Authority or the International Preliminary Examining Authority must be submitted directly to that Authority. See PCT Rule 90.4(b).

>The Customer Number Practice set forth in MPEP § 403 may not be used in the international phase to appoint an agent or designate a correspondence address. A power of attorney making use of the Customer Number Practice in the international phase to indicate the name or address of an appointed person will be considered nonexistent unless the defect is corrected. See PCT Rule 90.4(c).<

I. "GENERAL" POWER OF ATTORNEY

PCT Rule 90.

Agents and Common Representatives

*****

90.5.General Power of Attorney

(a) Appointment of an agent in relation to a particular international application may be effected by referring in the request, the demand, or a separate notice to an existing separate power of attorney appointing that agent to represent the applicant in relation to any international application which may be filed by that applicant (i.e., a "general power of attorney"), provided that:

(i) the general power of attorney has been deposited in accordance with paragraph (b), and

(ii) a copy of it is attached to the request, the demand or the separate notice, as the case may be; that copy need not be signed.

(b) The general power of attorney shall be deposited with the receiving Office, provided that, where it appoints an agent under Rule 90.1(b), (c), or (d)(ii), it shall be deposited with the International Searching Authority or the International Preliminary Examining Authority, as the case may be.

(c) Any receiving Office, any International Searching Authority and any International Preliminary Examining Authority may waive the requirement under paragraph (a)(ii) that a copy of the general power of attorney is attached to the request, the demand or the separate notice, as the case may be.

(d) Notwithstanding paragraph (c), where the agent submits any notice of withdrawal referred to in Rules 90*bis*.1 to 90*bis*.4 to the receiving Office, the International Searching Authority or the International Preliminary Examining Authority, a copy of the general power of attorney shall be submitted to that Office or Authority.

*****

"General" powers of attorney are recognized for the purpose of filing and prosecuting an international application before the international authorities. See PCT Rule 90.5.

Any general power of attorney must be filed with the receiving Office if the appointment was for the purposes of the international phase generally, or with the International Searching Authority or International Preliminary Examining Authority if the appointment was specifically to represent the applicant before that Authority. The appointment will then be effective in relation to any particular application filed by that applicant provided that the general power of attorney is referred to in the request, the Demand or a separate notice, and that a copy of the general power of attorney is attached to that request, Demand or separate notice. That copy of the signed original need not, itself, be separately signed.

II. WAIVER OF REQUIREMENT FOR A POWER OF ATTORNEY

Pursuant to PCT Rules 90.4(d) and 90.5(c), which are applicable to international applications having an international filing date on or after January 1, 2004, the receiving Office, International Bureau, International Searching Authority and International Preliminary Examining Authority may waive the requirement for a separate power of attorney or copy of the general power of attorney in all cases except with respect to notice of withdrawals under PCT Rule 90*bis* (i.e.,

notices withdrawing international applications, designations, priority claims, demands or elections). The USPTO, when acting in its capacity as a receiving Office, International Searching Authority, or International Preliminary Examining Authority, will in most cases waive the requirement for a separate power of attorney and copy of the general power of attorney in international applications having an international filing date on or after January 1, 2004. However, a separate power of attorney or copy of the general power of attorney may still be required in certain cases, e.g., where an agent's authority to act on behalf of the applicant is in doubt.

Model power of attorney and general power of attorney forms are available online from WIPO's web site (www.wipo.int/pct/en/index.html).

1808 Change in or Revocation of the Appointment of an Agent or a Common Representative [R-7]

PCT Rule 90.
Agents and Common Representatives

*****

90.6.Revocation and Renunciation

(a) Any appointment of an agent or common representative may be revoked by the persons who made the appointment or by their successors in title, in which case any appointment of a subagent under Rule 90.1(d) by that agent shall also be considered as revoked. Any appointment of a subagent under Rule 90.1(d) may also be revoked by the applicant concerned.

(b) The appointment of an agent under Rule 90.1(a) shall, unless otherwise indicated, have the effect of revoking any earlier appointment of an agent made under that Rule.

(c) The appointment of a common representative shall, unless otherwise indicated, have the effect of revoking any earlier appointment of a common representative.

(d) An agent or a common representative may renounce his appointment by a notification signed by him.

(e) Rule 90.4(b) and (c) shall apply, *mutatis mutandis*, to a document containing a revocation or renunciation under this Rule.

37 CFR 1.455. Representation in international applications.

(a) Applicants of international applications may be represented by attorneys or agents registered to practice before the United States Patent and Trademark Office or by an applicant appointed as a common representative (PCT Art. 49, Rules 4.8 and 90 and § 11.9). If applicants have not appointed an attorney or agent or one of the applicants to represent them, and there is more than one applicant, the applicant first named in the request and who is entitled to file in the U.S. Receiving Office shall be considered to be the common representative of all the applicants. An attorney or agent having the right to practice before a national office with which an international application is filed and for which the United States is an International Searching Authority or International Preliminary Examining Authority may be appointed to represent the applicants in the international application before that authority. An attorney or agent may appoint an associate attorney or agent who shall also then be of record (PCT Rule 90.1(d)). The appointment of an attorney or agent, or of a common representative, revokes any earlier appointment unless otherwise indicated (PCT Rule 90.6(b) and (c)).

(b) Appointment of an agent, attorney or common representative (PCT Rule 4.8) must be effected either in the Request form, signed by applicant, in the Demand form, signed by applicant, or in a separate power of attorney submitted either to the United States Receiving Office or to the International Bureau.

(c) Powers of attorney and revocations thereof should be submitted to the United States Receiving Office until the issuance of the international search report.

(d) The addressee for correspondence will be as indicated in section 108 of the Administrative Instructions.

The appointment of an agent or a common representative can be revoked. The document containing the revocation must be signed by the persons who made the appointment or by their successors in title. The appointment of a sub-agent may also be revoked by the applicant concerned. If the appointment of an agent is revoked, any appointment of a sub-agent by that agent is also considered revoked. >Also, as an agent may not be appointed by Customer Number Practice in the international phase (see MPEP § 1807), an appointment of an agent may not be revoked by reference to a Customer Number.<

The appointment of an agent for the international phase in general automatically has the effect, unless otherwise indicated, of revoking any earlier appointment of an agent. The appointment of a common representative similarly has the effect, unless otherwise indicated, of revoking any earlier appointment of a common representative.

Renunciation of an appointment may be made by means of a notification signed by the agent or common representative. The applicant is informed of the renunciation by the International Bureau.

The rules for signing and submission of a power of attorney set forth in PCT Rule 90.4(b) and (c) also apply to a revocation or renunciation of an appointment. See PCT Rule 90.6(e).

U.S. attorneys or agents wishing to withdraw from representation in international applications may

request to do so. To expedite the handling of requests for permission to withdraw as attorney, the request should be submitted to Mail Stop PCT and should indicate the present mailing addresses of the attorney who is withdrawing and of the applicant. >The Office will not accept address changes to a new practitioner or law firm absent the filing of a power of attorney to the new representative.< Because the United States Patent and Trademark Office (USPTO) does not recognize law firms, each attorney of record must sign the notice of withdrawal, or the notice of withdrawal must contain a clear indication of one attorney signing on behalf of another.

**>In accordance with 37 CFR 10.40, the USPTO will usually require the practitioner(s) to certify that he, she or they have: (1) given reasonable notice to the client, prior to the expiration of the reply period, that the practitioner(s) intends to withdraw from employment; (2) delivered to the client or a duly authorized representative of the client all papers and property (including funds) to which the client is entitled; and (3) notified the client of any replies that may be due and the time frame within which the client must respond. Furthermore, as 37 CFR 10.40 permits withdrawal from representation before the Office for reasons set forth in 37 CFR 10.40(b) and (c), if the reasons for withdrawal do not conform to one of the mandatory or permissive reasons set forth in 37 CFR 10.40, the Office will not approve the request.

The Office will not approve requests from practitioners to withdraw from applications where the requesting practitioner was not appointed in a power of attorney but is acting, or has acted, in a representative capacity pursuant to 37 CFR 1.34. In these situations, the practitioner is responsible for the correspondence the practitioner files in the application while acting in a representative capacity. As such, there is no need for the practitioner to obtain the permission of the Office to withdraw from representation.

Practitioners should note that the International Bureau will not record a change in the agent if the requested change is received by it after the expiration of 30 months from the priority date. See PCT Rule 92*bis*. Where a request to withdraw from representation is filed with the USPTO after the expiration of this time period, the request may not be treated on the merits.<

For withdrawal of attorney or agent in the national stage, see MPEP § 402.06.

1810 Filing Date Requirements [R-6]

PCT Article 11.
Filing Date and Effects of the International Application

(1) The receiving Office shall accord as the international filing date the date of receipt of the international application, provided that that Office has found that, at the time of receipt:

(i) the applicant does not obviously lack, for reasons of residence or nationality, the right to file an international application with the receiving Office,

(ii) the international application is in the prescribed language,

(iii) the international application contains at least the following elements:

(a) an indication that it is intended as an international application,

(b) the designation of at least one Contracting State,

(c) the name of the applicant, as prescribed,

(d) a part which on the face of it appears to be a description,

(e) a part which on the face of it appears to be a claim or claims.

*****

35 U.S.C. 363. International application designating the United States: Effect.

An international application designating the United States shall have the effect, from its international filing date under article 11 of the treaty, of a national application for patent regularly filed in the Patent and Trademark Office except as otherwise provided in section 102(e) of this title.

35 U.S.C. 373. Improper Applicant.

An international application designating the United States, shall not be accepted by the Patent and Trademark Office for the national stage if it was filed by anyone not qualified under chapter 11 of this title to be an applicant for the purpose of filing a national application in the United States. Such international applications shall not serve as the basis for the benefit of an earlier filing date under section 120 of this title in a subsequently filed application, but may serve as the basis for a claim of the right of priority under subsections (a) through (d) of section 119 of this title, if the United States was not the sole country designated in such international application.

37 CFR 1.431. International application requirements.

(a) An international application shall contain, as specified in the Treaty and the Regulations, a Request, a description, one or more claims, an abstract, and one or more drawings (where required). (PCT Art. 3(2) and Section 207 of the Administrative Instructions.)

(b) An international filing date will be accorded by the United States Receiving Office, at the time of receipt of the international application, provided that:

(1) At least one applicant is a United States resident or national and the papers filed at the time of receipt of the international application so indicate (35 U.S.C. 361(a), PCT Art. 11(1)(i)).

(2) The international application is in the English language (35 U.S.C. 361(c), PCT Art. 11(1)(ii)).

(3) The international application contains at least the following elements (PCT Art. 11(1)(iii)):

(i) An indication that it is intended as an international application (PCT Rule 4.2);

(ii) The designation of at least one Contracting State of the International Patent Cooperation Union (§ 1.432);

(iii) The name of the applicant, as prescribed (note §§ 1.421-1.423);

(iv) A part which on the face of it appears to be a description; and

(v) A part which on the face of it appears to be a claim.

(c) Payment of the international filing fee (PCT Rule 15.2) and the transmittal and search fees (§ 1.445) may be made in full at the time the international application papers required by paragraph (b) of this section are deposited or within one month thereafter. The international filing, transmittal, and search fee payable is the international filing, transmittal, and search fee in effect on the receipt date of the international application.

(1) If the international filing, transmittal and search fees are not paid within one month from the date of receipt of the international application and prior to the sending of a notice of deficiency which imposes a late payment fee, applicant will be notified and given one month within which to pay the deficient fees plus the late payment fee. Subject to paragraph (c)(2) of this section, the late payment fee will be equal to the greater of:

(i) Fifty percent of the amount of the deficient fees; or

(ii) An amount equal to the transmittal fee.

(2) The late payment fee shall not exceed an amount equal to fifty percent of the international filing fee not taking into account any fee for each sheet of the international application in excess of thirty sheets (PCT Rule 16*bis*).

(3) The one-month time limit set pursuant to paragraph (c) of this section to pay deficient fees may not be extended.

(d) If the payment needed to cover the transmittal fee, the international filing fee, the search fee, and the late payment fee pursuant to paragraph (c) of this section is not timely made in accordance with PCT Rule 16*bis*.1(e), the Receiving Office will declare the international application withdrawn under PCT Article 14(3)(a).

THE "INTERNATIONAL FILING DATE"

An international filing date is accorded to the earliest date on which the requirements under PCT Article 11(1) were satisfied. If the requirements under PCT Article 11(1) are not satisfied as of the date of initial receipt of the international application papers, the receiving Office will invite applicant to correct the deficiency within a set time limit. See PCT Article 11(2) and PCT Rule *>20.3<. In such case, the international filing date will be the date on which a timely filed correction is received by the receiving Office. >In applications filed on or after April 1, 2007, if the defect under PCT Article 11(1) is that the purported international application fails to contain a portion which on its face appears to be a description or claims, and if the application, on its initial receipt date, contained a priority claim and a proper incorporation by reference statement, the initial receipt date may be retained as the international filing date if the submitted correction was completely contained in the earlier application. See PCT Rules 4.18 and 20.6.< If the defect under PCT Article 11(1) is not timely corrected, the receiving Office will promptly notify the applicant that the application is not and will not be treated as an international application. See PCT Rule *>20.4<. Where all the sheets pertaining to the same international application are not received on the same day by the receiving Office, in most instances, the date of receipt of the application will be amended to reflect the date on which the last missing sheets were received. As an amended date of receipt may cause the priority claim to be forfeited, applicants should assure that all sheets of the application are deposited with the receiving Office on the same day. **>In applications filed on or after April 1, 2007, if the application, on its initial receipt date, contained a priority claim and a proper incorporation by reference statement, the initial receipt date may be retained as the international filing date if the submitted correction was completely contained in the earlier application. Again see PCT Rules 4.18 and 20.6 .<

An all too common occurrence is that applicants will file an international application in the U.S. Receiving Office and no applicant has a U.S. residence or nationality. Applicants are cautioned to be sure that at least one applicant is a resident or national of the U.S. before filing in the U.S. Receiving Office. Where no applicant indicated on the request papers is a resident or national of the United States, the USPTO is not a competent receiving Office for the international application under PCT Rule 19.1(a). Nonetheless, the date the international application was filed in the USPTO will not be lost as a filing date for the international application if at least one applicant is a

resident or national of any PCT Contracting State. Under PCT Rule 19.4, the USPTO will receive the application on behalf of the International Bureau as receiving Office (PCT Rule 19.4(a)) and, upon payment of a fee equal to the transmittal fee, the USPTO will promptly transmit the international application to the International Bureau under PCT Rule 19.4(b). However, if all of the applicants are indicated to be both residents and nationals of non-PCT Contracting States, PCT Rule 19.4 does not apply, and the application is denied an international filing date.

The USPTO is also not competent to receive international applications that are not in the English language and, upon payment of a fee equal to the transmittal fee, the USPTO will forward such applications to the International Bureau under PCT Rule 19.4 provided they are in a language accepted by the International Bureau as receiving Office.

A discussion of PCT Rule 19.4 is also included in MPEP § 1805.

1812 Elements of the International Application [R-2]

PCT Article 3.
The International Application

(1) Applications for the protection of inventions in any of the Contracting States may be filed as international applications under this Treaty.

(2) An international application shall contain, as specified in this Treaty and the Regulations, a request, a description, one or more claims, one or more drawings (where required), and an abstract.

(3) The abstract merely serves the purpose of technical information and cannot be taken into account for any other purpose, particularly not for the purpose of interpreting the scope of the protection sought.

(4) The international application shall:

(i) be in a prescribed language;

(ii) comply with the prescribed physical requirements;

(iii) comply with the prescribed requirement of unity of invention;

(iv) be subject to the payment of the prescribed fees.

Any international application must contain the following elements: request, description, claim or claims, abstract and one or more drawings (where drawings are necessary for the understanding of the invention (PCT Article 3(2) and PCT Article 7(2)). The elements of the international application are to be arranged in the following order: the request, the description (other than any sequence listing part thereof), the claims, the abstract, the drawings, and the sequence listing part of the description (where applicable) (Administrative Instructions Section 207(a)). All the sheets contained in the international application must be numbered in consecutive Arabic numerals by using the following separate series of numbers: a first series applying to the request; a second series to the description, claims and abstract; a third series to the drawings (where applicable); and a further series to the sequence listing part of the description (where applicable) (PCT Rule 11.7 and Administrative Instructions Section 207(b)). Only one copy of the international application need be filed in the United States Receiving Office (37 CFR 1.433(a)). The request is made on a standardized form (Form PCT/RO/101), copies of which can be obtained from the USPTO **>or online from WIPO's web site (www.wipo.int/pct/en/index.html). The "Request" form can also be presented as a computer printout prepared using the PCT-SAFE software. This software can be downloaded from the PCT-SAFE web site (www.wipo.int/pct-safe).< The details of a computer generated Request form are provided in Administrative Instructions Section 102*bis*.

1817 PCT Member States [R-7]

An updated list of PCT Contracting States is available from WIPO's web site (www.wipo.int/pct/guide/en/gdvol1/annexes/annexa/ax_a.pdf). The following list of PCT Contracting States was updated at the time of publication of the MPEP:

State	Ratification, Accession or Declaration	Date of Ratification, Accession or Declaration	Date From Which State May Be Designated
(1) Central African Republic°	Accession	15 September 1971	01 June 1978

°Members of African Intellectual Property Organization (OAPI) regional patent system. Only regional patent protection is available for OAPI member states. A designation of any state is an indication that all OAPI states have been designated.

°°Members of European Patent Convention (EPC) regional patent system. Either national patents or European patents for member States are available through PCT, except for Belgium, Cyprus, France, Greece, Ireland, Italy, Latvia, Malta, Monaco, Netherlands, and Slovenia, for which only European patents are available if the PCT is used.

The following states are members of African Regional Intellectual Property Organization (ARIPO) regional patent system and are Contracting States of both the Harare Protocol and the PCT: (4) Malawi, (34) Sudan, (68) Kenya, (73) Swaziland, (75) Uganda, (81) Lesotho, (89) Ghana, (90) Zimbabwe, (91) Sierra Leone, (93) Gambia, (103) United Republic of Tanzania, (107) Mozambique, (114) Zambia, (122) Botswana, and (123) Namibia. Note that with the accession of Botswana to the PCT, all 14 States party to the Harare Protocol are now also Contracting States of the PCT. State (73) Swaziland can only be designated for the purposes of an ARIPO patent and not for the purposes of a national patent. All other PCT Contracting States which are also party to the Harare Protocol can be designated either for a national or an ARIPO patent, or both a national and an ARIPO patent.

The following states are members of the Eurasian Patent Organization (EAPO) regional patent system: (15) Russian Federation, (57) Kazakhstan, (58) Belarus, (65) Kyrgyzstan, (66) Republic of Moldova, (67) Tajikistan, (70) Armenia, (78) Turkmenistan, and (82) Azerbaijan. All PCT Contracting States which are also party to the Eurasian Patent Convention can be designated either for a national or a Eurasian patent, or both a national and a Eurasian patent. Note, however, that it is not possible to designate only some of these States for a Eurasian patent and that any designation of one or more States for a Eurasian patent will be treated as a designation of all the States which are party to both the Convention and the PCT for a Eurasian patent.

1817.01 Designation of States in International Applications Having an International Filing Date On or After January 1, 2004 [R-5]

[Note: The regulations under the PCT were changed effective January 1, 2004. A corresponding change was made to Title 37 of the Code of Federal Regulations. See *January 2004 Revision of Patent Cooperation Treaty Application Procedure,* 68 FR 59881 (Oct. 20, 2003), 1276 O.G. 6 (Nov. 11, 2003). All international applications having an international filing date before January 1, 2004, will continue to be processed under the procedures in effect on the international filing date. For the designation of states in international applications having an international filing date before January 1, 2004, see MPEP § 1817.01(a) for the information that previously appeared in this section].

>

PCT Rule 4.
The Request (Contents)

*****

4.9. Designation of States; Kinds of Protection; National and Regional Patents

(a) The filing of a request shall constitute:

(i) the designation of all Contracting States that are bound by the Treaty on the international filing date;

(ii) an indication that the international application is, in respect of each designated State to which Article 43 or 44 applies, for the grant of every kind of protection which is available by way of the designation of that State:

(iii) an indication that the international application is, in respect of each designated State to which Article 45(1) applies, for the grant of a regional patent and also, unless Article 45(2) applies, a national patent.

(b) Notwithstanding paragraph (a)(i), if, on October 5, 2005, the national law of a Contracting State provides that the filing of an international application which contains the designation of that State and claims the priority of an earlier national application having effect in that State shall have the result that the earlier national application ceases to have effect with the same consequences as the withdrawal of the earlier national application, any request in which the priority of an earlier national application filed in that State is claimed may contain an indication that the designation of that State is not made, provided that the designated Office notifies the International Bureau by January 5, 2006, that this paragraph shall apply in respect of designations of that State and that the notification is still in force on the international filing date. The information received shall be promptly published by the International Bureau in the Gazette.

(c) *[Deleted]*<

37 CFR 1.432. Designation of States by filing an international application.

The filing of an international application request shall constitute:

(a) The designation of all Contracting States that are bound by the Treaty on the international filing date;

(b) An indication that the international application is, in respect of each designated State to which PCT Article 43 or 44 applies, for the grant of every kind of protection which is available by way of the designation of that State; and

(c) An indication that the international application is, in respect of each designated State to which PCT Article 45(1) applies, for the grant of a regional patent and also, unless PCT Article 45(2) applies, a national patent.

For international applications having an international filing date on or after January 1, 2004, the filing of an international application request constitutes: (A) the designation of all Contracting States that are bound by the Treaty on the international filing date; (B) an indication that the international application is, in respect of each designated State to which PCT Article 43 or 44 applies, for the grant of every kind of protection which is available by way of the designation of that State; and (C) an indication that the international application is, in respect of each designated State to which PCT Article 45(1) applies, for the grant of a regional patent and also, unless PCT Article 45(2) applies, a national patent. See 37 CFR 1.432 and PCT Rule 4.9. This automatic indication of all designations and all types of protection possible overcomes a pitfall in the designation system in effect for applications having an international filing prior to January 1, 2004, where applicants inadvertently omitted a designation or type of protection and failed to timely satisfy the requirements under former PCT Rule 4.9(b) to perfect a precautionary designation.

>Pursuant to PCT Rule 4.9(b), certain States may be excepted from the all-inclusive designation system under limited circumstances. Specifically, where the international application contains a priority claim to an earlier national application having effect in a State whose national law provides that the designation of such State has the result that the earlier national application ceases to have effect in such State, then the request may contain an indication that such State is not designated. Applicability of PCT Rule 4.9(b) is contingent upon timely notice by the affected Office

to the International Bureau. As of April 1, 2006, the request may exclude the following designations: Germany (DE), Japan (JP), Republic of Korea (KR), and Russian Federation (RU). See "Reservations and Incompatibilities" at http://www.wipo.int/pct/en/applicants.html for further information.<

APPLICANT FOR PURPOSES OF EACH DESIGNATION

Where there is but a single applicant, the right to file an international application and to designate Contracting States or regions exists if the applicant is a resident or national of a PCT Contracting State. The applicant can be an individual, corporate entity or other concern. In the case where there are several applicants who are different for different designated states, the right to file an international application and to designate Contracting States or regions exists if at least one of them is a resident or national of a Contracting State. If entry into the U.S. national phase is desired, inventors must be indicated as applicants at least for purposes of the United States.

1817.01(a) Designation of States and Precautionary Designations in International Applications Having an International Filing Date Before January 1, 2004 [R-6]

[Note: For the designation of States in applications having an international filing date on or after January 1, 2004, see MPEP § 1817.01.]

Former

37 CFR 1.432. Designation of States and payment of designation and confirmation fees.

(a) The designation of States including an indication that applicant wishes to obtain a regional patent, where applicable, shall appear in the Request upon filing and must be indicated as set forth in PCT Rule 4.9 and section 115 of the Administrative Instructions. Applicant must specify at least one national or regional designation on filing of the international application for a filing date to be granted.

(b) If the fees necessary to cover all the national and regional designations specified in the Request are not paid by the applicant within one year from the priority date or within one month from the date of receipt of the international application if that month expires after the expiration of one year from the priority date, applicant will be notified and given one month within which to pay the deficient designation fees plus a late payment fee. The late payment fee shall be equal to the greater of fifty percent of the amount of the deficient fees up to a maximum amount equal to the basic fee, or an amount equal to the transmittal fee (PCT Rule 16*bis*). The one-month time limit set in the notification of deficient designation fees may not be extended. Failure to timely pay at least one designation fee will result in the withdrawal of the international application.

(1) The one designation fee must be paid:

(i) Within one year from the priority date;

(ii) Within one month from the date of receipt of the international application if that month expires after the expiration of one year from the priority date; or

(iii) With the late payment fee defined in this paragraph within the time set in the notification of the deficient designation fees or in accordance with PCT Rule 16*bis*.1(e).

(2) If after a notification of deficient designation fees the applicant makes timely payment, but the amount paid is not sufficient to cover the late payment fee and all designation fees, the Receiving Office will, after allocating payment for the basic, search, transmittal and late payment fees, allocate the amount paid in accordance with PCT Rule 16*bis*.1(c) and withdraw the unpaid designations. The notification of deficient designation fees pursuant to this paragraph may be made simultaneously with any notification pursuant to § 1.431(c).

(c) The amount payable for the designation fee set forth in paragraph (b) is:

(1) The designation fee in effect on the filing date of the international application, if such fee is paid in full within one month from the date of receipt of the international application;

(2) The designation fee in effect on the date such fee is paid in full, if such fee is paid in full later than one month from the date of receipt of the international application but within one year from the priority date;

(3) The designation fee in effect on the date one year from the priority date, if the fee was due one year from the priority date, and such fee is paid in full later than one month from the date of receipt of the international application and later than one year from the priority date; or

(4) The designation fee in effect on the international filing date, if the fee was due one month from the international filing date and after one year from the priority date, and such fee is paid in full later than one month from the date of receipt of the international application and later than one year from the priority date.

(d) On filing the international application, in addition to specifying at least one national or regional designation under PCT Rule 4.9(a), applicant may also indicate under PCT Rule 4.9(b) that all other designations permitted under the Treaty are made.

(1) Indication of other designations permitted by the Treaty under PCT Rule 4.9(b) must be made in a statement on the Request that any designation made under this paragraph is subject to confirmation (PCT Rule 4.9(c)) not later than the expiration of 15 months from the priority date by:

(i) Filing a written notice with the United States Receiving Office specifying the national and/or regional designations being confirmed;

(ii) Paying the designation fee for each designation being confirmed; and

(iii) Paying the confirmation fee specified in § 1.445(a)(4).

(2) Unconfirmed designations will be considered withdrawn. If the amount submitted is not sufficient to cover the designation fee and the confirmation fee for each designation being confirmed, the Receiving Office will allocate the amount paid in accordance with any priority of designations specified by applicant. If applicant does not specify any priority of designations, the allocation of the amount paid will be made in accordance with PCT Rule 16*bis*.1(c).

The designation of States is the indication, in Box No. V of the request (except in the last sub-box of that Box), of the specific regional patents, national patents, and/or other kinds of protection the applicant is seeking. Specific designations for the purpose of obtaining national and regional patents are effected by indicating each Contracting State or region concerned. On the printed form, this is accomplished by marking the appropriate check-boxes next to the names of the States or regions. For detailed instructions regarding "specific" designations, see the **>"Notes to the Request Form (PCT/RO/101)."<

All designations must be made in the international application on filing; none may be added later. However, there is a safety net designed to protect applicants who make mistakes or omissions among the specific designations, by way of making a precautionary designation of all other States which have not been specifically designated in the Request whose designation would be permitted under the Treaty.

In addition to specific designations described above, the applicant may, under PCT Rule 4.9(b), indicate in the request that all designations which would be permitted under the PCT are also made, provided that at least one specific designation is made and that the request also contains a statement relating to the confirmation of any precautionary designations so made. That statement must declare that any such designation is subject to confirmation (as provided in Rule 4.9(c)), and that any such designation which is not so confirmed before the expiration of 15 months from the priority date is to be regarded as withdrawn by the applicant at the expiration of that time limit.

Precautionary designations are effected in practice by including the necessary statement in the last sub-box of Box No. V of the request (the statement is set out in the printed request form). Since the precautionary designations are designed particularly to enable applicants to correct omissions and mistakes in the original list of specific designations, it is strongly recommended that applicants make the precautionary designations indication (by leaving the pre-printed statement in the printed form, if that form is used) unless there is a particular reason for doing otherwise. The request form makes provision for the applicant to omit designations if that is desired. It should be noted that no fees are payable in respect of precautionary designations except where the applicant later decides to confirm them.

Precautionary designations will be regarded as withdrawn by the applicant unless they are confirmed, but the applicant is not obliged to confirm them. The precautionary designation procedure enables the applicant to make, in the request, all designations permitted by the PCT in addition to those made specifically. For this purpose, the request must also contain a statement that any precautionary designations so made are subject to confirmation as provided in Rule 4.9(c) and that any designation which is not so confirmed before the expiration of 15 months from the priority date is to be regarded as withdrawn by the applicant at the expiration of that time limit. Noting that the confirmation of designations is entirely at the applicant's discretion, no notification is sent to the applicant reminding him or her that the time limit for confirming precautionary designations is about to expire. Applicants are cautioned that in order for the confirmation of a designation of the U.S. to be valid, the inventor must have been named in the application papers as filed, 37 CFR 1.421(b).

APPLICANT FOR PURPOSES OF EACH DESIGNATION

Where there is but a single applicant, the right to file an international application and to designate contracting states or regions exists if the applicant is a resident or national of a contracting state. The applicant can be an individual, corporate entity or other concern. If the United States is to be designated, it is particularly important to note that the applicant must also be the inventor.

In the case where there are several applicants who are different for different designated states, the right to file an international application and to designate contracting states or regions exists if at least one of them is a resident or national of a contracting state. If the United States is to be designated, it is important to note that the applicant must also be the inventor. If the inventor is not also the applicant, the designation of the United States is invalid.

1817.02 Continuation or Continuation-in-Part Indication in the Request [R-7]

PCT Rule 4.
The Request (Contents)

*****

**>

4.11.Reference to Continuation or Continuation-in-Part, or Parent Application or Grant

(a) If:

*****

(ii) the applicant intends to make an indication under Rule 49*bis*.1(d) of the wish that the international application be treated, in any designated State, as an application for a continuation or a continuation-in-part of an earlier application;

the request shall so indicate and shall indicate the relevant parent application or parent patent or other parent grant.<

*****

The Supplemental Box of the request form should be used where the applicant has an earlier pending United States nonprovisional application or international application designating the U.S. and wishes the later filed international application to be treated as a continuation or continuation-in-part of such earlier application. To properly identify the parent application, the specific reference must identify the parent application by application number and indicate the relationship to the parent application (i.e., "continuation" or "continuation-in-part"). The specific reference must also indicate the filing date of the parent application if the parent application is an international application. See 37 CFR 1.78(a).

Identification of the parent application in the request does not relieve applicants from having to perfect the benefit claim upon entry into the U.S. national stage by including a proper claim in an application data sheet or in the first sentence(s) of the specification (see 37 CFR 1.78(a)(2)). However, inclusion of a proper reference to the parent application in the international phase does provide certain benefits to applicants, e.g., where applicant chooses to file a continuing application claiming benefit under 35 U.S.C. 365(c) to the international application (i.e., a bypass application) rather than entering the U.S. national phase under 35 U.S.C. 371.

1819 Earlier ** Search [R-7]

PCT Rule 4.
***>The Request (Contents)*

*****

4.12. Taking into Account Results of Earlier Search

If the applicant wishes the International Searching Authority to take into account, in carrying out the international search, the results of an earlier international, international-type or national search carried out by the same or another International Searching Authority or by a national Office ("earlier search"):

(i) the request shall so indicate and shall specify the Authority or Office concerned and the application in respect of which the earlier search was carried out;

(ii) the request may, where applicable, contain a statement to the effect that the international application is the same, or substantially the same, as the application in respect of which the earlier search was carried out, or that the international application is the same, or substantially the same, as that earlier application except that it is filed in a different language.

*****

PCT Rule 12bis.
Copy of Results of Earlier Search and of Earlier Application; Translation

12bis.1 Copy of Results of Earlier Search and of Earlier Application; Translation

(a) Where the applicant has, under Rule 4.12, requested the International Searching Authority to take into account the results of an earlier search carried out by the same or another International Searching Authority or by a national Office, the applicant shall, subject to paragraphs (c) to (f), submit to the receiving Office, together with the international application, a copy of the results of the earlier search, in whatever form (for example, in the form of a search report, a listing of cited prior art or an examination report) they are presented by the Authority or Office concerned.

(b) The International Searching Authority may, subject to paragraphs (c) to (f), invite the applicant to furnish to it, within a time limit which shall be reasonable under the circumstances:

(i) a copy of the earlier application concerned;

(ii) where the earlier application is in a language which is not accepted by the International Searching Authority, a translation of the earlier application into a language which is accepted by that Authority;

(iii) where the results of the earlier search are in a language which is not accepted by the International Searching Authority, a translation of those results into a language which is accepted by that Authority;

(iv) a copy of any document cited in the results of the earlier search.

(c) Where the earlier search was carried out by the same Office as that which is acting as the receiving Office, the applicant may, instead of submitting the copies referred to in paragraphs (a) and (b)(i) and (iv), indicate the wish that the receiving Office prepare and transmit them to the International Searching Authority. Such request shall be made in the request and may be subjected by the receiving Office to the payment to it, for its own benefit, of a fee.

(d) Where the earlier search was carried out by the same International Searching Authority, or by the same Office as that which is acting as the International Searching Authority, no copy or translation referred to in paragraphs (a) and (b) shall be required to be submitted under those paragraphs.

(e) Where the request contains a statement under Rule 4.12(ii) to the effect that the international application is the same, or substantially the same, as the application in respect of which the earlier search was carried out, or that the international application is the same, or substantially the same, as that earlier application except that it is filed in a different language, no copy or translation referred to in paragraphs (b)(i) and (ii) shall be required to be submitted under those paragraphs.

(f) Where a copy or translation referred to in paragraphs (a) and (b) is available to the International Searching Authority in a form and manner acceptable to it, for example, from a digital library or in the form of the priority document, and the applicant so indicates in the request, no copy or translation shall be required to be submitted under those paragraphs.

Where the applicant wishes the International Searching Authority (ISA) to take into account, in carrying out the international search, the results of one or more earlier international, international-type, or national searches carried out by the same or another ISA or by a national Office, the application(s) must be identified in the request. Applicants should identify the application(s) in Box No. VII of the request by the filing date, application number, and the country or regional Office.<

The United States Patent and Trademark Office performs an international-type search on all U.S. national applications filed on and after 1 June 1978. No specific request by the applicant is required and no number identifying the international-type search is assigned by the Office. See 37 CFR 1.104(a)(3).

1820 Signature of Applicant [R-6]

PCT Article 14.

Certain Defects in the International Application

(1)(a)The receiving Office shall check whether the international application contains any of the following defects, that is to say

(i) it is not signed as provided in the Regulations;

*****

PCT Rule 4.

The Request (Contents)

*****

4.15.Signature

(a) Subject to paragraph (b), the request shall be signed by the applicant or, if there is more than one applicant, by all of them.

(b) Where two or more applicants file an international application which designates a State whose national law requires that national applications be filed by the inventor and where an applicant for that designated State who is an inventor refused to sign the request or could not be found or reached after diligent effort, the request need not be signed by that applicant if it is signed by at least one applicant and a statement is furnished explaining, to the satisfaction of the receiving Office, the lack of the signature concerned.

*****

PCT Rule 26.

Checking by, and Correcting Before, the Receiving Office of Certain Elements of the International Application

*****

26.2bis.Checking of Requirements Under Article 14(1)(a)(i) and (ii)

(a) For the purposes of Article 14(1)(a)(i), if there is more than one applicant, it shall be sufficient that the request be signed by one of them.

(b) For the purposes of Article 14(1)(a)(ii), if there is more than one applicant, it shall be sufficient that the indications required under Rule 4.5(a)(ii) and (iii) be provided in respect of one of them who is entitled according to Rule 19.1 to file the international application with the receiving Office.

SIGNATURE OF APPLICANT OR AGENT

Pursuant to PCT Rule 4.15, the international application must be signed in Box No. X of the request by the applicant, or, where there are two or more applicants, by all of them. However, under PCT Rule 26.2*bis*, which is applicable to international applications having an international filing date on or after January 1, 2004, it is sufficient for purposes of PCT Article 14(1)(a)(i) that the application is signed by only one of the applicants. Thus, for international applications having an international filing date on or after January 1, 2004, the United States Receiving Office will not issue an invitation to applicants to furnish missing signatures where the request is signed by at least one of the applicants. Notwithstanding PCT Rule 26.2*bis*, any designated/elected office, in accordance with its national law, can still require confirmation of the international application by the signature of any applicant for such >designated< state who has not signed the request. PCT Rule *>51*bis*.1(a)(vi)<. Pursuant to 37 CFR 1.4(d), the request filed may be either an original, or a copy thereof.

The international application may be signed by an agent.

For international applications having an international filing date on or after January 1, 2004, the requirement for the submission of a separate power of attorney may be waived by the receiving Office. The United States Receiving Office will, in most cases, waive the requirement for a separate power of attorney. See MPEP § 1807.

If the international application has an international filing date before January 1, 2004, then the agent must be appointed as such by the applicant in a separate power of attorney signed by the applicant. If there are two or more applicants, the request may be signed by an agent on behalf of all or only some of them; in that case the agent must be appointed as such in one or more powers of attorney signed by the applicants on whose behalf the agent signs the application. Where a power of attorney appointing an agent who signs an international application having an international filing date prior to January 1, 2004 is missing, the signature is treated as missing until the power of attorney is submitted.

The signature should be executed in black indelible ink. The name of each person signing the international application should be indicated (preferably typewritten) next to the signature. Where a person signs on behalf of a legal entity (an organization such as a corporation, university, nonprofit organization, or governmental agency), his or her name and the capacity in which he or she signs should be indicated. Proof of the person's authority to sign on behalf of the legal entity will be required if that person does not possess apparent authority to sign on behalf of the legal entity and that person has not submitted a statement that he or she is authorized to sign on behalf of the legal entity (discussed below). An officer (President, Vice-President, Secretary, Treasurer, Chief Executive Officer, Chief Operating Officer or Chief Financial Officer) of an organization is presumed to have authority to sign on behalf of that organization. The signature of the chairman of the board is also acceptable, but not the signature of an individual director. Variations of these titles (such as vice-president for sales, executive vice-president, assistant treasurer, vice-chairman of the board of directors) are acceptable. In general, a person having a title (manager, director, administrator, general counsel) that does not clearly set forth that person as an officer of the organization is not presumed to be an officer or to have the authority to sign on behalf of the organization. However, an exception is made with respect to foreign juristic applicants. This is because in foreign countries, a person who holds the title "Manager" or "Director" is normally an officer or the equivalent thereof; therefore, those terms are generally acceptable as indicating proper persons to sign applications for foreign applicants. However, titles such as "Manager of Patents," suggesting narrowly limited duties, are not acceptable. An attorney does not generally have apparent authority to sign on behalf of an organization.

Proof that a person has the authority to sign on behalf of a legal entity may take the form of a copy of a resolution of the board of directors, a provision of the bylaws, or a copy of a paper properly delegating authority to that person to sign the international application on behalf of the legal entity.

It is acceptable to have a person sign the international application on behalf of a legal entity if that person submits a statement that the person has the authority to sign the international application on behalf of the legal entity. This statement should be on a separate paper and must not appear on the Request

(or Demand) form itself. The statement must include a clause such as "The undersigned (whose title is supplied below) is empowered to sign the Request on behalf of the applicant."

The international application can be filed without applicant's signature on the request. The lack of any required signature on the request is a correctable defect under PCT Article 14(1)(a)(i) and (b), and can be remedied by filing a copy of the request (or, where the request has been signed by an agent, of a power of attorney) duly signed by the applicant within the time limit fixed by the receiving Office for the correction of this defect.

APPLICANT INVENTOR UNAVAILABLE OR UNWILLING TO SIGN THE INTERNATIONAL APPLICATION

PCT Rule 4.15(b) provides that, where an applicant inventor for the designation of a State whose national law requires that national applications be filed by the inventor (the United States of America is the only Contracting State to have such a requirement in its national law) refused to sign the request or could not be found or reached after diligent effort, the request need not be signed by that applicant inventor if it is signed by at least one applicant and a statement is furnished explaining, to the satisfaction of the receiving Office, the lack of the signature concerned. The significance of PCT Rule 4.15(b) has been greatly diminished with respect to international applications having an international filing date on or after January 1, 2004, in light of * PCT Rule 26.2*bis*(a), which provides that where there is more than one applicant, the signature requirements for purposes of PCT Article 14(1)(a)(i) will be considered to have been satisfied if the request is signed by one of the applicants.

For international applications having an international filing date prior to January 1, 2004, if the requisite statement under PCT Rule 4.15(b) is furnished to the satisfaction of the receiving Office, the international application complies with the requirements of PCT Article 14(1)(a)(i) for the purposes of all designated States (including the United States of America) without adverse consequences in the international phase. However, additional proofs may be required by the United States Patent and Trademark Office after entry into the national phase if the required oath or declaration by the inventor is not signed by all the applicant inventors.

INVENTOR DECEASED

37 CFR 1.422. When the inventor is dead.

In case of the death of the inventor, the legal representative (executor, administrator, etc.) of the deceased inventor may file an international application which designates the United States of America.

A legal representative of a deceased inventor may be indicated in the international application as an applicant for the purposes of the United States. In such case, the indication in the request (in Box II or III, as appropriate) for the legal representative should be made as follows: SMITH, Alfred, legal representative of JONES, Bernard (deceased), followed by indications of the address, nationality and residence of the legal representative. The legal representative should be indicated as an "applicant only" except where the legal representative is also an inventor, in which case the legal representative should be indicated as an "applicant and inventor." The name of the deceased inventor should also appear in a separate box (in Box III) with the indication of "deceased" (e.g., "JONES, Bernard (deceased))" and identified as an "inventor only" and not as an applicant.

1821 The Request [R-5]

A general overview of certain aspects of the request follows.

37 CFR 1.434. The request.

(a) The request shall be made on a standardized form (PCT Rules 3 and 4). Copies of printed Request forms are available from the United States Patent and Trademark Office. Letters requesting printed forms should be marked "Mail Stop PCT."

(b) The Check List portion of the Request form should indicate each document accompanying the international application on filing.

(c) All information, for example, addresses, names of States and dates, shall be indicated in the Request as required by PCT Rule 4 and Administrative Instructions 110 and 201.

(d) For the purposes of the designation of the United States of America, an international application shall include:

(1) The name of the inventor; and;

(2) A reference to any prior-filed national application or international application designating the United States of America, if the benefit of the filing date for the prior-filed application is to be claimed.

(e) An international application may also include in the Request a declaration of the inventors as provided for in PCT Rule 4.17(iv).

The request must either be made on a printed form to be filled in with the required indications or be presented as a computer printout complying with the Administrative Instructions. Any prospective applicant may obtain copies of the printed request form, free of charge, from the receiving Office with which he/she plans to file his/her international application. Applicants may obtain an English language request form from the United States Patent and Trademark Office using the following address: Mail Stop PCT, Commissioner for Patents, P.O. Box 1450, Alexandria, Virginia 22313-1450. Forms may also be obtained from the World Intellectual Property Organization (WIPO) web site (www.wipo.int/pct/en/forms/index.htm). Details of the requirements for the request if presented as a computer printout are set out in Administrative Instructions Section 102*bis*.

As provided in Administrative Instructions Section 102*bis*(c), reduced fees are payable in respect of an international application containing the request in PCT-EASY format filed, together with a PCT-EASY *>physical medium<, with a receiving Office which, under paragraph (a), accepts the filing of such international applications. >The United States Receiving Office currently accepts the following PCT-EASY physical media: 3.5 inch diskette, CD-R, and DVD-R. The PCT Applicant's Guide, available online at http://www.wipo.int/pct/guide/en/, provides up-to-date information regarding physical media accepted by the receiving Offices.< To prepare a request in PCT-EASY format and the PCT-EASY *>physical medium<, applicants must use PCT-SAFE software, which is available for downloading at WIPO's web site (www.wipo.int/pct-safe). For technical support and assistance with the software, the web site also provides contact information for the PCT-SAFE Help Desk.

The request contains a petition for the international application to be processed according to the PCT and must also contain certain indications. It must contain the title of the invention. It must identify the applicant and the agent (if any), and must contain the designation of at least one Contracting State. For international applications having an international filing date on or after January 1, 2004, the filing of an international application request constitutes the designation of all Contracting States that are bound by the PCT on the international filing date. See MPEP § 1817.01. The request must contain an indication of any wish of the applicants to obtain a European patent rather than, or in addition to, a national patent in respect of a designated State.

The request may not contain any matter that is not specified in PCT Rules 4.1 to 4.17 or permitted under PCT Rule 4.18(a) by the Administrative Instructions. Any additional material will be deleted *ex officio*. See PCT Rule 4.18(b) and Administrative Instructions Section 303.

DATES

Each date appearing in the international application or in any correspondence must be indicated by the Arabic number of the day, the name of the month and the Arabic number of the year, in that order. In the request, after, below or above that indication, the date should be repeated in parentheses with a two-digit Arabic numeral each for the number of the day and for the number of the month and followed by the number of the year in four digits, in that order and separated by periods, slashes or hyphens after the digit pairs of the day and of the month, for example, "20 March 2004 (20.03.2004)," "20 March 2004 (20/03/2004)," or "20 March 2004 (20-03-2004)." See Administrative Instructions Section 110.

SUPPLEMENTAL BOX

This box is used for any material which cannot be placed in one of the previous boxes because of space limitations. The supplemental information placed in this box should be clearly entitled with the Box number from which it is continued, e.g., "Continuation of Box No. IV."

FILE REFERENCE

The applicant or his/her agent may indicate a file reference in the box provided for this purpose on the first sheet of the request form, on each page of the other elements of the international application, on the first sheet of the demand form, and in any other correspondence relating to the international application. PCT Rule 11.6(f) indicates that the file reference may be included in the top margin of the sheets of the international application. As provided in Administrative Instructions Section 109, the file reference may be composed either of letters of the Latin alphabet or Arabic numerals, or both. It may not exceed 12

characters including spaces. If the file reference exceeds 12 characters, the receiving Office may *ex officio* truncate the reference number to 12 characters and notify the applicant. The receiving Office, the International Bureau, the International Searching Authority and the International Preliminary Examining Authority (International Authorities) will use the file reference in correspondence with the applicant.

TITLE OF INVENTION

The Request must contain the title of the invention; the title must be short (preferably 2 to 7 words) and precise (PCT Rule 4.3). The title in Box No. I of the Request is considered to be the title of the application. The title appearing on the first page of the description (PCT Rule 5.1(a)) and on the page containing the abstract should be consistent with the title indicated in Box No. I of the Request form.

A title should not be changed by the examiner merely because it contains words which are not considered descriptive of the invention. Words, for example, such as "improved" or "improvement of" are acceptable. If the title is otherwise not descriptive of the invention, a change to a more descriptive title should be made and the applicant informed thereof in the search report.

Where the title is missing or is inconsistent with the title in the description, the receiving Office invites the applicant to correct the missing or inconsistent title.

APPLICANT

Any resident or national of a Contracting State may file an international application. Where there are two or more applicants, at least one of them must be a national or a resident of a PCT Contracting State.

The question whether an applicant is a resident or national of a Contracting State depends on the national law of that State and is decided by the receiving Office. Also, possession of a real and effective industrial or commercial establishment in a Contracting State may be considered residence in that State, and a legal entity constituted according to the national law of a Contracting State is considered a national of that State.

The applicant must be identified by the indication of his/her name and address and by marking next to that indication, the check-box "This person is also inventor" in Box No. II, or "applicant and inventor" in Box No. III, where the applicant is also the inventor or one of the inventors, or the check-box "applicant only" where the applicant is not the inventor or one of the inventors. Where the applicant is a corporation or other legal entity (that is, not a natural person), the check-box "applicant only" must be marked. The applicant's nationality and residence must also be indicated.

NAMES

The names of a natural person must be indicated by the family name followed by the given name(s). Academic degrees or titles or other indications which are not part of the person's name must be omitted. The family name should preferably be written in capital letters.

The name of a legal entity must be indicated by its full official designation (preferably in capital letters).

ADDRESSES

Addresses must be indicated in such a way as to satisfy the requirements for prompt postal delivery at the address indicated and must consist of all the relevant administrative units up to and including the house number (if any). The address must also include the country.

1823 The Description [R-5]

PCT Article 5.
The Description

The description shall disclose the invention in a manner sufficiently clear and complete for the invention to be carried out by a person skilled in the art.

PCT Rule 5.
The Description

5.1.Manner of the Description

(a) The description shall first state the title of the invention as appearing in the request and shall:

(i) specify the technical field to which the invention relates;

(ii) indicate the background art which, as far as known to the applicant, can be regarded as useful for the understanding, searching and examination of the invention, and, preferably, cite the documents reflecting such art;

(iii) disclose the invention, as claimed, in such terms that the technical problem (even if not expressly stated as such) and its solution can be understood, and state the advantageous effects, if any, of the invention with reference to the background art;

(iv) briefly describe the figures in the drawings, if any;

(v) set forth at least the best mode contemplated by the applicant for carrying out the invention claimed; this shall be done in terms of examples, where appropriate, and with reference to the drawings, if any; where the national law of the designated State does not require the description of the best mode but is satisfied with the description of any mode (whether it is the best contemplated or not), failure to describe the best mode contemplated shall have no effect in that State;

(vi) indicate explicitly, when it is not obvious from the description or nature of the invention, the way in which the invention is capable of exploitation in industry and the way in which it can be made and used, or, if it can only be used, the way in which it can be used; the term "industry" is to be understood in its broadest sense as in the Paris Convention for the Protection of Industrial Property.

(b) The manner and order specified in paragraph (a) shall be followed except when, because of the nature of the invention, a different manner or a different order would result in a better understanding and a more economic presentation.

(c) Subject to the provisions of paragraph (b), each of the parts referred to in paragraph (a) shall preferably be preceded by an appropriate heading as suggested in the Administrative Instructions.

PCT Administrative Instruction Section 204.
Headings of the Parts of the Description

The headings of the parts of the description should be as follows:

(i) for matter referred to in Rule 5.1(a)(i), "Technical Field";

(ii) for matter referred to in Rule 5.1(a)(ii), "Background Art";

(iii) for matter referred to in Rule 5.1(a)(iii), "Disclosure of Invention";

(iv) for matter referred to in Rule 5.1(a)(iv), "Brief Description of Drawings";

(v) for matter referred to in Rule 5.1(a)(v), "Best Mode for Carrying Out the Invention," or, where appropriate, "Mode(s) for Carrying Out the Invention";

(vi) for matter referred to in Rule 5.1(a)(vi), "Industrial Applicability";

(vii) for matter referred to in Rule 5.2(a), "Sequence Listing";

(viii) for matter referred to in Rule 5.2(b), "Sequence Listing Free Text."

PCT Administrative Instruction Section 209.
Indications as to Deposited Biological Material on a Separate Sheet

(a) To the extent that any indication with respect to deposited biological material is not contained in the description, it may be given on a separate sheet. Where any such indication is so given, it shall preferably be on Form PCT/RO/134 and, if furnished at the time of filing, the said Form shall, subject to paragraph (b), preferably be attached to the request and referred to in the check list referred to in Rule 3.3 (a)(ii).

**>

(b) For the purposes of designated Offices, which have so notified the International Bureau under Rule 13*bis*.7(a), paragraph (a) applies only if the said Form or sheet is included as one of the sheets of the description of the international application at the time of filing.<

37 CFR 1.435. The description.

(a) The application must meet the requirements as to the content and form of the description set forth in PCT Rules 5, 9, 10, and 11 and sections 204 and 208 of the Administrative Instructions.

(b) In international applications designating the United States the description must contain upon filing an indication of the best mode contemplated by the inventor for carrying out the claimed invention.

The description must disclose the invention in a manner sufficiently clear and complete for it to be carried out by a person skilled in the art. It must start with the title of the invention as appearing in Box No. I of the request. PCT Rule 5 contains detailed requirements as to the manner and order of the description, which, generally, should be in six parts. Those parts should have the following headings: "Technical Field," "Background Art," "Disclosure of Invention," "Brief Description of Drawings," "Best Mode for Carrying Out the Invention" or, where appropriate, "Mode(s) for Carrying Out the Invention," "Industrial Applicability," "Sequence Listing," and "Sequence Listing Free Text," where applicable.

The details required for the disclosure of the invention so that it can be carried out by a person skilled in the art depend on the practice of the national Offices. It is therefore recommended that due account be taken of national practice in the United States of America when the description is drafted.

The need to amend the description during the national phase may thus be avoided.

This applies likewise to the need to indicate the "best mode for carrying out the invention." If at least one of the designated Offices requires the indication of the best mode (for instance, the United States Patent and Trademark Office), that best mode must be indicated in the description.

A description drafted with due regard to what is said in these provisions will be accepted by all the designated Offices. It might require more care than the drafting of a national patent application, but certainly much less effort than the drafting of multiple applications, which is necessary where the PCT route is not used for filing in several countries.

1823.01 Reference to Deposited Biological Material [R-5]

PCT Rule 13bis.
Inventions Relating to Biological Material

13bis.1.Definition

For the purposes of this Rule, "reference to deposited biological material" means particulars given in an international application with respect to the deposit of a biological material with a depositary institution or to the biological material so deposited.

13bis.2.References (General)

Any reference to deposited biological material shall be made in accordance with this Rule and, if so made, shall be considered as satisfying the requirements of the national law of each designated State.

13bis.3.References: Contents; Failure to Include Reference or Indication

(a) A reference to deposited biological material shall indicate:

(i) the name and address of the depositary institution with which the deposit was made;

(ii) the date of deposit of the biological material with that institution;

(iii) the accession number given to the deposit by that institution; and

(iv) any additional matter of which the International Bureau has been notified pursuant to Rule 13*bis*.7(a)(i), provided that the requirement to indicate that matter was published in the Gazette in accordance with Rule 13*bis*.7(c) at least two months before the filing of the international application.

(b) Failure to include a reference to deposited biological material or failure to include, in a reference to deposited biological material, an indication in accordance with paragraph (a), shall have no consequence in any designated State whose national law does not require such reference or such indication in a national application.

13bis.4.References: Time Limit for Furnishing Indications

(a) Subject to paragraphs (b) and (c), if any of the indications referred to in Rule 13*bis*.3(a) is not included in a reference to deposited biological material in the international application as filed but is furnished to the International Bureau:

(i) within 16 months from the priority date, the indication shall be considered by any designated Office to have been furnished in time;

(ii) after the expiration of 16 months from the priority date, the indication shall be considered by any designated Office to have been furnished on the last day of that time limit if it reaches the International Bureau before the technical preparations for international publication have been completed.

(b) If the national law applicable by a designated Office so requires in respect of national applications, that Office may require that any of the indications referred to in Rule 13*bis*.3(a) be furnished earlier than 16 months from the priority date, provided that the International Bureau has been notified of such requirement pursuant to Rule 13*bis*.7(a)(ii) and has published such requirement in the Gazette in accordance with Rule 13*bis*.7(c) at least two months before the filing of the international application.

(c) Where the applicant makes a request for early publication under Article 21(2)(b), any designated Office may consider any indication not furnished before the technical preparations for international publication have been completed as not having been furnished in time.

**>

(d) The International Bureau shall notify the applicant of the date on which it received any indication furnished under paragraph (a), and:

(i) if the indication was received before the technical preparations for international publication have been completed, publish the indication furnished under paragraph (a), and an indication of the date of receipt, together with the international application;<

(ii) if the indication was received after the technical preparations for international publication have been completed, notify that date and the relevant data from the indication to the designated Offices.

13bis.5.References and Indications for the Purposes of One or More Designated States; Different Deposits for Different Designated States; Deposits with Depositary Institutions Other Than Those Notified

(a) A reference to deposited biological material shall be considered to be made for the purposes of all designated States, unless it is expressly made for the purposes of certain of the designated States only; the same applies to the indications included in the reference.

(b) References to different deposits of the biological material may be made for different designated States.

(c) Any designated Office may disregard a deposit made with a depositary institution other than one notified by it under Rule 13*bis*.7(b).

13bis.6.Furnishing of Samples

Pursuant to Articles 23 and 40, no furnishing of samples of the deposited biological material to which a reference is made in an international application shall, except with the authorization of the applicant, take place before the expiration of the applicable time limits after which national processing may start under the said Articles. However, where the applicant performs the acts referred to in Articles 22 or 39 after international publication but before the expiration of the said time limits, the furnishing of samples of the deposited biological material may take place, once the said acts have been performed. Notwithstanding the previous provision, the furnishing of samples of the deposited biological material may take place under the national law applicable by any designated Office as soon as, under that law, the international publication has the effects of the compulsory national publication of an unexamined national application.

13bis.7.National Requirements: Notification and Publication

(a) Any national Office may notify the International Bureau of any requirement of the national law:

(i) that any matter specified in the notification, in addition to those referred to in Rule 13*bis*.3(a)(i), (ii) and (iii), is required to be included in a reference to deposited biological material in a national application;

(ii) that one or more of the indications referred to in Rule 13*bis*.3(a) are required to be included in a national application as filed or are required to be furnished at a time specified in the notification which is earlier than 16 months after the priority date.

(b) Each national Office shall notify the International Bureau of the depositary institutions with which the national law permits deposits of biological materials to be made for the purposes of patent procedure before that Office or, if the national law does not provide for or permit such deposits, of that fact.

(c) The International Bureau shall promptly publish in the Gazette requirements notified to it under paragraph (a) and information notified to it under paragraph (b).

PCT Administrative Instruction Section 209. Indications as to Deposited Biological Material on a Separate Sheet

(a) To the extent that any indication with respect to deposited biological material is not contained in the description, it may be given on a separate sheet. Where any such indication is so given, it shall preferably be on Form PCT/RO/134 and, if furnished at the time of filing, the said Form shall, subject to paragraph (b), preferably be attached to the request and referred to in the check list referred to in Rule 3.3 (a)(ii).

**>

(b) For the purposes of designated Offices, which have so notified the International Bureau under Rule 13*bis*.7(a), paragraph (a) applies only if the said Form or sheet is included as one of the sheets of the description of the international application at the time of filing.<

REFERENCES TO DEPOSITED BIOLOGICAL MATERIAL IN THE CASE OF MICROBIOLOGICAL INVENTIONS

The PCT does not require the inclusion of a reference to a biological material and/or to its deposit with a depositary institution in an international application; it merely prescribes the contents of any "reference to deposited biological material" (defined as "particulars given... with respect to the deposit of biological material... or to the biological material so deposited") which is included in an international application, and when such a reference must be furnished. It follows that the applicant may see a need to make such a reference only when it is required for the purpose of disclosing the invention claimed in the international application in a manner sufficient for the invention to be carried out by a person skilled in the art that is, when the law of at least one of the designated States provides for the making, for this purpose, of a reference to a deposited biological material if the invention involves the use of a biological material that is not available to the public. Any reference to a deposited biological material furnished separately from the description will be included in the **>publication of the< international application.

A reference to a deposited biological material made in accordance with the requirements of the PCT must be regarded by each of the designated Offices as satisfying the requirements of the national law applicable in that Office with regard to the contents of such references and the time for furnishing them.

A reference may be made for the purposes of all designated States or for one or only some of the designated States. A reference is considered to be made for the purpose of all designated States unless it is expressly made for certain designated States only. References to different deposits may be made for the purposes of different designated States.

There are two kinds of indication which may have to be given with regard to the deposit of the biological material, namely:

(A) indications specified in the PCT Regulations themselves; and

(B) additional indications by the national (or regional) Office of (or acting for) a State designated in the international application and which have been published in the *PCT Gazette*; these additional indications may relate not only to the deposit of the biological material but also to the biological material itself.

The indications in the first category are:

(1) the name and address of the depositary institution with which the deposit was made;

(2) the date of the deposit with that institution; and

(3) the accession number given to the deposit by that institution.

U.S. requirements include the name and address of the depository institution at the time of filing, the date of the deposit or a statement that the deposit was made on or before the priority date of the international application and, to the extent possible, a taxonomic description of the biological material. See Annex L of the PCT Applicant's Guide.

The national laws of some of the national (or regional) Offices require that, besides indications concerning the deposit of a biological material, an indication be given concerning the biological material itself, such as, for example, a short description of its characteristics, at least to the extent that this information is available to the applicant. These requirements must be met in the case of international applications for which any such Office is a designated Office, provided that the requirements have been published in the *PCT Gazette*. Annex L of the PCT Applicant's Guide indicates, for each of the national (or regional) Offices, the requirements (if any) of this kind which have been published.

If any indication is not included in a reference to a deposited biological material contained in the international application as filed, it may be furnished to the International Bureau within 16 months after the priority date unless the International Bureau has been notified (and, at least 2 months prior to the filing of the international application, it has published in the *PCT Gazette*) that the national law requires the indication to be furnished earlier. However, if the applicant makes a request for early publication, all indications should be furnished by the time the request is made, since any designated Office may regard any indication not furnished when the request is made as not having been furnished in time.

No check is made in the international phase to determine whether a reference has been furnished within the prescribed time limit. However, the International Bureau notifies the designated Offices of the date(s) on which indications, not included in the international application as filed, were furnished to it. Those dates are also mentioned in the **>publication of the< international application. Failure to include a reference to a deposited biological material (or any indication required in such a reference) in the international application as filed, or failure to furnish it (or the indication) within the prescribed time limit, has no consequence if the national law does not require the reference (or indication) to be furnished in a national application. Where there is a consequence, it is the same as that which applies under the national law.

To the extent that indications relating to the deposit of a biological material are not given in the description, because they are furnished later, they may be given in the "optional sheet" provided for that purpose. If the sheet is submitted when the international application is filed, a reference to it should be made in the check list contained on the last sheet of the request form. Should >certain States be designated, e.g.,< Israel, Japan, Korea, Mexico, or Turkey**, such a sheet must, if used, be included as one of the sheets of the description at the time of filing; otherwise the indications given in it will not be taken into account by the respective patent offices of those designated States in the national phase. >Requirements of the various Offices are set forth in Annex L of the PCT Applicant's Guide, available online at http://www.wipo.int/pct/guide/en/.< If the sheet is furnished to the International Bureau later, it must be enclosed with a letter.

Each national (or regional) Office whose national law provides for deposits of biological material for the purposes of patent procedure notifies the International Bureau of the depositary institutions with which the national law permits such deposits to be made. Information on the institutions notified by each of those Offices is published by the International Bureau in the *PCT Gazette*.

A reference to a deposit cannot be disregarded by a designated Office for reasons pertaining to the institution with which the biological material was deposited if the deposit referred to is one made with a depositary institution notified by that Office. Thus, by consulting the *PCT Gazette* or Annex L of the PCT Applicant's Guide, the applicant can be sure that he has deposited the biological material with an institution which will be accepted by the designated Office.

International Searching Authorities and International Preliminary Examining Authorities are not expected to request access to deposited biological material. However, in order to retain the possibility of access to a deposited biological material referred to in an international application which is being searched or examined by such an Authority, the PCT provides that the Authorities may, if they fulfill certain conditions, ask for samples. Thus, an Authority may only ask for samples if it has notified the International Bureau (in a general notification) that it may require samples and the International Bureau has published the notification in the *PCT Gazette*. The only Authority which has made such a notification (and thus the only Authority which may request samples) is the Japan Patent Office. If a sample is asked for, the

request is directed to the applicant, who then becomes responsible for making the necessary arrangements for the sample to be provided.

The furnishing of samples of a deposit of a biological material to third persons is governed by the national laws applicable in the designated Offices. PCT Rule 13*bis*.6(b), however, provides for the delaying of any furnishing of samples under the national law applicable in each of the designated (or elected) Offices until the start of the national phase, subject to the ending of this "delaying effect" brought about by the occurrence of either of the following two events:

(A) the applicant has, after international publication of the international application, taken the steps necessary to enter the national phase before the designated Office.

(B) international publication of the international application has been effected, and that publication has the same effects, under the national law applicable in the designated Office, as the compulsory national publication of an unexamined national application (in other words, the international application has qualified for the grant of "provisional protection").

1823.02 Nucleotide and/or Amino Acid Sequence Listings, and Tables Related to Sequence Listings [R-5]

PCT Rule 5.

The Description

*****

5.2.Nucleotide and/or Amino Acid Sequence Disclosure

(a) Where the international application contains disclosure of one or more nucleotide and/or amino acid sequences, the description shall contain a sequence listing complying with the standard prescribed by the Administrative Instructions and presented as a separate part of the description in accordance with that standard.

(b) Where the sequence listing part of the description contains any free text as defined in the standard provided for in the Administrative Instructions, that free text shall also appear in the main part of the description in the language thereof.

PCT Rule 13ter.

Nucleotide and/or Amino Acid Sequence Listings

13ter.1. Procedure Before the International Searching Authority

(a) Where the international application contains disclosure of one or more nucleotide and/or amino acid sequences, the International Searching Authority may invite the applicant to furnish to it, for the purposes of the international search, a sequence listing in electronic form complying with the standard provided for in the Administrative Instructions, unless such listing in electronic form is already available to it in a form and manner acceptable to it, and to pay to it, where applicable, the late furnishing fee referred to paragraph (c), within a time limit fixed in the invitation:

(b) Where at least part of the international application is filed on paper and the International Searching Authority finds that the description does not comply with Rule 5.2(a), it may invite the applicant to furnish, for the purposes of the international search, a sequence listing in paper form complying with the standard provided for in the Administrative Instructions, unless such listing in paper form is already available to it in a form and manner acceptable to it, whether or not the furnishing of a sequence listing in electronic form is invited under paragraph (a), and to pay, where applicable, the late furnishing fee referred to in paragraph (c), within a time limit fixed in the invitation.

(c) The furnishing of a sequence listing in response to an invitation under paragraph (a) or (b) may be subjected by the International Searching Authority to the payment to it, for its own benefit, of a late furnishing fee whose amount shall be determined by the International Searching Authority but shall not exceed 25% of the international filing fee referred to in item 1 of the Schedule of Fees, not taking into account any fee for each sheet of the international application in excess of 30 sheets, provided that a late furnishing fee may be required under either paragraph (a) or (b) but not both.

(d) If the applicant does not, within the time limit fixed in the invitation under paragraph (a) or (b), furnish the required sequence listing and pay any required late furnishing fee, the International Searching Authority shall only be required to search the international application to the extent that a meaningful search can be carried out without the sequence listing.

(e) Any sequence listing not contained in the international application as filed, whether furnished in response to an invitation under paragraph (a) or (b) or otherwise, shall not form part of the international application, but this paragraph shall not prevent the applicant from amending the description in relation to a sequence listing pursuant to Article 34(2)(b).

(f) Where the International Searching Authority finds that the description does not comply with Rule 5.2(b), it shall invite the applicant to submit the required correction. Rule 26.4 shall apply *mutatis mutandis* to any correction offered by the applicant. The International Searching Authority shall transmit the correction to the receiving Office and to the International Bureau.

13ter.2. Procedure Before the International Preliminary Examining Authority

Rule 13*ter*.1 shall apply *mutatis mutandis* to the procedure before the International Preliminary Examining Authority.

13ter.3. Sequence Listing for Designated Office

No designated Office shall require the applicant to furnish to it a sequence listing other than a sequence listing complying with the standard provided for in the Administrative Instructions.

PCT Administrative Instruction Section 208. Sequence Listings

Any nucleotide and/or amino acid sequence listing ("sequence listing"), whether on paper or in electronic form, filed as part of the international application, or furnished together with the international application or subsequently, shall comply with Annex C.

I. REQUIREMENTS FOR SEQUENCE LISTINGS

Where an international application discloses one or more nucleotide and/or amino acid sequences, the description must contain a sequence listing complying with the standard specified in the Administrative Instructions. The standard is set forth in detail in Annex C - Standard for the Presentation of Nucleotide and Amino Acid Sequence Listings in International Patent Applications Under the PCT. The standard allows the applicant to draw up a single sequence listing which is acceptable to all receiving Offices, International Searching and Preliminary Examining Authorities for the purposes of the international phase, and to all designated and elected Offices for the purposes of the national phase. The International Searching Authority and the International Preliminary Examining Authority may, in some cases, invite the applicant to furnish a listing complying with that standard. The applicant may also be invited to furnish a listing in an electronic form provided for in the PCT Administrative Instructions. It is advisable for the applicant to submit a listing of the sequence in electronic form, if such a listing is required by the competent International Searching Authority or International Preliminary Examining Authority, together with the international application rather than to wait for an invitation by the International Searching Authority or International Preliminary Examining Authority.

The electronic form is not mandatory in international applications to be searched by the United States International Searching Authority or examined by the United States International Preliminary Examining Authority. However, if an electronic form of a sequence listing is not provided, a search or examination will be performed only to the extent possible in the absence of the electronic form. The U.S. sequence rules (37 CFR 1.821 - 1.825) and the PCT sequence requirements are substantively consistent. In this regard, full compliance with the requirements of the U.S. rules will ensure compliance with the applicable PCT requirements. For a detailed discussion of the U.S. sequence rules, see MPEP § 2420 - § 2421.04. **

II. QUALIFYING FOR POTENTIALLY REDUCED BASIC FEE BY FILING SEQUENCE LISTING AND/OR TABLES ON COMPACT DISC RATHER THAN ON PAPER

PCT Administrative Instruction Section 801. Filing of International Applications Containing Sequence Listings and/or Tables

(a) Pursuant to Rules 89*bis* and 89*ter*, where an international application contains disclosure of one or more nucleotide and/or amino acid sequence listings ("sequence listings"), the receiving Office may, if it is prepared to do so, accept that the sequence listing part of the description, as referred to in Rule 5.2(a) and/or any table related to the sequence listing(s) ("sequence listings and/or tables"), be filed, at the option of the applicant:

(i) only on an electronic medium in electronic form in accordance with Section 802; or

(ii) both on an electronic medium in electronic form and on paper in accordance with Section 802;

provided that the other elements of the international application are filed as otherwise provided for under the Regulations and these Instructions.

(b) Any receiving Office which is prepared to accept the filing in electronic form of the sequence listings and/or tables under paragraph (a) shall notify the International Bureau accordingly. The notification shall specify the electronic media on which the receiving Office will accept such filings. The International Bureau shall promptly publish any such information in the Gazette.

(c) A receiving Office which has not made a notification under paragraph (b) may nevertheless decide in a particular case to accept an international application the sequence listings and/or tables of which are filed with it under paragraph (a).

(d) Where the sequence listings and/or tables are filed in electronic form under paragraph (a) but not on an electronic medium specified by the receiving Office under paragraph (b), that Office shall, under Article 14(1)(a)(v), invite the applicant to furnish to it replacement sequence listings and/or tables on an electronic medium specified under paragraph (b).

(e) Where an international application containing sequence listings and/or tables in electronic form is filed under paragraph

(a) with a receiving Office which is not prepared, under paragraph (b) or (c), to accept such filings, Section 333(b) and (c) shall apply.

Part 8 of the Administrative Instructions became effective January 11, 2001. Under Administrative Instructions Section 801(a), applicants may file the nucleotide and/or amino acid sequence listing part of the description of an international application on an electronic medium in electronic form with certain receiving Offices. As of September 6, 2002, Part 8 of the Administrative Instructions was expanded to include tables related to sequence listings. At the present time, the United States Receiving Office (RO/US) has not notified the International Bureau (IB) under Administrative Instructions Section 801(b) that it will be generally accepting the filing of international applications under Administrative Instructions Section 801(a). The RO/US will, however, accept such applications in a particular case pursuant to Administrative Instructions Section 801(c), provided that applicant follows the Guidelines set forth below in subsection II. A.

PCT Administrative Instruction Section 803.
Calculation of International Filing Fee for International Applications Containing Sequence Listings and/or Tables

Where sequence listings and/or tables are filed in electronic form under Section 801(a), the international filing fee payable in respect of that application shall include the following two components:

(i) a basic component calculated as provided in the Schedule of Fees in respect of all pages filed on paper (that is, all pages of the request, description (excluding sequence listings and/or tables if also filed on paper), claims, abstract and drawings), and

(ii) an additional component, in respect of sequence listings and/or tables, equal to 400 times the fee per sheet as referred to in item 1 of the Schedule of Fees, regardless of the actual length of the sequence listings and/or tables filed in electronic form and regardless of the fact that sequence listings and/or tables may have been filed both on paper and in electronic form.

Applicants will usually achieve a significant fee savings by filing international applications under Administrative Instructions Section 801(a) in situations where the sequence listings and/or tables consume over four hundred (400) combined pages. The potentially reduced international filing fee described in Administrative Instructions Section 803 is available to applications filed pursuant to the Guidelines below. Applicants who do not wish to file under Administrative Instructions Section 801(a) may submit the sequence listing part and any related tables under conventional filing procedures but will not be eligible for the potentially reduced international filing fee described in Administrative Instructions Section 803.

When filing an international application under Administrative Instructions Section 801(a) in the RO/US, applicant should not submit a paper copy of the Sequence Listing part and/or tables. If both a sequence listing part and a tables part are filed under Administrative Instructions Section 801(a), the sequence listing part and the tables part must not be filed on the same electronic medium. With specific regard to tables, only tables which are related to sequence listings, as referred to in PCT Rule 5.2(a), are covered under Part 8 of the Administrative Instructions. Currently, other types of table data may not be filed on electronic media.

A. Guidelines on Qualifying for Potentially Reduced International Filing Fee Under PCT Administrative Instructions Section 803

1. What To Submit

The applicant is required to submit a complete copy of the international application, wherein the sequence listing part and/or tables part of the application is submitted on electronic media rather than on paper. The application is to be accompanied by a transmittal letter entitled "Compact Disc Transmittal Sheet For Submission Of Sequence Listing and/or Tables To the United States Receiving Office Under PCT Administrative Instructions - Part 8."

(a) Complete International Application With Sequence Listing Part and/or Tables Part on Electronic Media

Applicant shall submit a paper copy of the complete international application, with the exception that the sequence listing part and/or tables part is provided on electronic media rather than on paper. Four (4) copies of the sequence listing part and/or three (3) copies of the tables part are to be included with the application, each copy on an electronic medium or set of electronic media if additional capacity is needed. One copy of the sequence listing part, called the "computer readable form" (CRF) copy required by the Administrative Instructions (see Annex C of the

Administrative Instructions, paragraphs 39-46), may be submitted on any acceptable medium under 37 CFR 1.824(c), although compact disc (CD) media is preferred. All other copies must be submitted only on CD media as specified below:

(1) CD-R

Type: 120mm Compact Disc Recordable

Specification: ISO 9660, 650MB; or

(2) CD-ROM

Type: ISO/IEC 10149:1995, 120mm Compact Disc Read Only Memory

Specification: ISO 9660, 650MB

Each electronic medium shall be enclosed in a hard protective case within a padded envelope. If a sequence listing file is included, the four (4) sequence listing part copies shall be labeled as follows:

(1) "COPY 1 – SEQUENCE LISTING PART"
(2) "COPY 2 – SEQUENCE LISTING PART"
(3) "COPY 3 – SEQUENCE LISTING PART"
(4) "CRF"

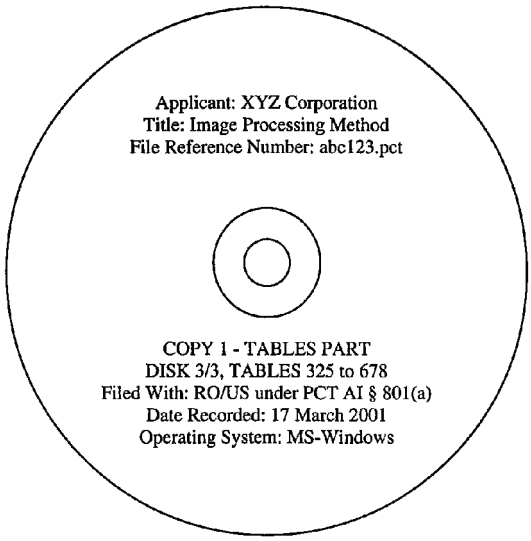
If tables file(s) are included, the three (3) tables part copies shall be labeled as follows:

(1) "COPY 1 – TABLES PART"
(2) "COPY 2 – TABLES PART"
(3) "COPY 3 – TABLES PART"

Additionally, the labeling shall contain the following information:

(1) Name of Applicant
(2) Title of Invention
(3) Applicant's or Agent's File Reference Number
(4) Date of Recording
(5) Computer Operating System Used
(6) Name of the Competent Authority (i.e. the RO/US)
(7) Indication that the sequence listing part and/or tables part is being filed under Administrative Instructions Section 801(a)
(8) If the sequence listing file and/or tables file(s) consumes more than one CD, an indication such as "DISK 1/3", "DISK 2/3", and "DISK 3/3"
(9) For a CD containing tables, an indication such as "TABLES 1 to 450"

Examples of properly labeled electronic media appear below.



Important Notes:

The electronic medium itself must be neatly labeled with the required information. Labeling of the protective case is recommended, but not required. Sequence listings or tables submitted for correction, rectification, or amendment must satisfy the additional labeling requirements of Administrative Instructions Section 802(d).

Each CD shall contain either: (1) only a sequence listing part or (2) only a tables part. A sequence listing part and a tables part must not reside together on the same CD. Furthermore, each file in the tables part must have a file name which indicates the name of the table contained therein, e.g., "table-1.txt", "table-2.txt", etc. In addition, no programs or any explanatory files shall appear on any CD.

The sequence listing file and/or tables file(s) must be in compliance with the American Standard Code for Information Interchange (ASCII) and formatted in accordance with Administrative Instructions Annex C, paragraph 41 and Administrative Instructions Annex C-*bis*. No copy protection or encryption techniques are permitted. File compression is acceptable for the sequence listing part, so long as the compressed file is in a self-extracting format and uses the compression method described in Administrative Instructions Part 7, Annex F, Section 4.1.1. File Compression is not permitted for the tables part.

(b) Compact Disc Transmittal Sheet for Submission of Sequence Listing and/or Tables to the United States Receiving Office Under PCT Administrative Instructions - Part 8.

If applicant desires for an application to be accepted pursuant to Administrative Instructions Section 801(c), the application must be submitted with a document entitled "Compact Disc Transmittal Sheet For Submission Of Sequence Listing and/or Tables To The United States Receiving Office Under PCT Administrative Instructions - Part 8." This document is available as a PDF sheet that may be downloaded from http://www.uspto.gov/web/offices/pac/dapps/pct/part8translett.pdf. The PDF sheet includes the following information:

(1) Name of Applicant

(2) Applicant's or Agent's File Reference Number

(3) Title of Invention

(4) Name of Sequence Listing File and/or Tables File(s) (as per CD directory)

(5) Size of Sequence Listing File and/or Tables Files(s) (in bytes or kilobytes as per CD directory)

(6) Date of Sequence Listing File and/or Tables File(s) (as per CD directory)

(7) Statement that the four (4) submitted copies of the Sequence Listing Part and/or three (3) submitted copies of the Tables Part are identical

(8) Contact information

(a) Name of Contact

(b) Telephone Number

(c) Facsimile Number

(9) Signature of Applicant, Agent, or Common Representative

Important Note: The "Compact Disc Transmittal Sheet For Submission Of Sequence Listing and/or Tables To The United States Receiving Office Under PCT Administrative Instructions - Part 8" is separate and apart from any other transmittal letter. The Transmittal Sheet requirement cannot be satisfied by incorporating the above information into any other document. A sample copy of a "Compact Disc Transmittal Sheet for Submission of Sequence Listing To the United States Receiving Office Under PCT Administrative Instructions - Part 8" is reproduced on the following page.

COMPACT DISC TRANSMITTAL SHEET FOR SUBMISSION OF SEQUENCE LISTING AND/OR TABLES TO THE UNITED STATES RECEIVING OFFICE UNDER PCT ADMINISTRATIVE INSTRUCTIONS - PART 8	*For Receiving Office Use Only* International Application Number
For Receiving Office Use Only Date of transmission back to applicant	*For Receiving Office Use Only* Date of receipt in RO/US | # CDs recvd.

CONTINUATION OF TABLES FILE(S) (attach additional sheets if necessary)

This sheet offers a sample or suggested format for a Compact Disc Transmittal Sheet For Submission Of Sequence Listing and/or Tables To The United States Receiving Office Under PCT Administrative Instructions - Part 8. This sample sheet is not an OMB officially approved form.

2. Where To Submit

(a) United States Postal Service (Express Mail, Priority Mail, First Class Mail, etc.)

If deposited with the United States Postal Service, the entire international application, including all applicable items set forth in MPEP § 1823.02 paragraph II.A.1. above, should be addressed to:

Mail Stop PCT
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

(b) Hand-Carried or by Private Delivery Service

If hand-carried or deposited with a private delivery service, the entire international application, including all applicable items set forth in MPEP § 1823.02 paragraph II.A.1. above, should be delivered to:

U.S. Patent and Trademark Office
Customer Service Window, Mail Stop PCT
Randolph Building
401 Dulany Street
Alexandria, VA 22314

1824 The Claims [R-6]

PCT Article 6.
The Claims

The claim or claims shall define the matter for which protection is sought. Claims shall be clear and concise. They shall be fully supported by the description.

PCT Rule 6.
The Claims

6.1.Number and Numbering of Claims

(a) The number of the claims shall be reasonable in consideration of the nature of the invention claimed.

(b) If there are several claims, they shall be numbered consecutively in Arabic numerals.

(c) The method of numbering in the case of the amendment of claims shall be governed by the Administrative Instructions.

6.2.References to Other Parts of the International Application

(a) Claims shall not, except where absolutely necessary, rely, in respect of the technical features of the invention, on references to the description or drawings. In particular, they shall not rely on such references as: "as described in part ... of the description," or "as illustrated in figure ... of the drawings."

(b) Where the international application contains drawings, the technical features mentioned in the claims shall preferably be followed by the reference signs relating to such features. When used, the reference signs shall preferably be placed between parentheses. If inclusion of reference signs does not particularly facilitate quicker understanding of a claim, it should not be made. Reference signs may be removed by a designated Office for the purposes of publication by such Office.

6.3.Manner of Claiming

(a) The definition of the matter for which protection is sought shall be in terms of the technical features of the invention.

(b) Whenever appropriate, claims shall contain:

(i) a statement indicating those technical features of the invention which are necessary for the definition of the claimed subject matter but which, in combination, are part of the prior art,

(ii) a characterizing portion - preceded by the words "characterized in that," "characterized by," "wherein the improvement comprises," or any other words to the same effect - stating concisely the technical features which, in combination with the features stated under (i), it is desired to protect.

(c) Where the national law of the designated State does not require the manner of claiming provided for in paragraph (b), failure to use that manner of claiming shall have no effect in that State provided the manner of claiming actually used satisfies the national law of that State.

6.4.Dependent Claims

(a) Any claim which includes all the features of one or more other claims (claim in dependent form, hereinafter referred to as "dependent claim") shall do so by a reference, if possible at the beginning, to the other claim or claims and shall then state the additional features claimed. Any dependent claim which refers to more than one other claim ("multiple dependent claim") shall refer to such claims in the alternative only. Multiple dependent claims shall not serve as a basis for any other multiple dependent claim. Where the national law of the national Office acting as International Searching Authority does not allow multiple dependent claims to be drafted in a manner different from that provided for in the preceding two sentences, failure to use that manner of claiming may result in an indication under Article 17(2)(b) in the international search report. Failure to use the said manner of claiming shall have no effect in a designated State if the manner of claiming actually used satisfies the national law of that State.

(b) Any dependent claim shall be construed as including all the limitations contained in the claim to which it refers or, if the dependent claim is a multiple dependent claim, all the limitations contained in the particular claim in relation to which it is considered.

(c) All dependent claims referring back to a single previous claim, and all dependent claims referring back to several previous claims, shall be grouped together to the extent and in the most practical way possible.

6.5.Utility Models

Any designated State in which the grant of a utility model is sought on the basis of an international application may, instead of Rules 6.1 to 6.4, apply in respect of the matters regulated in those Rules the provisions of its national law concerning utility models once the processing of the international application has started in that State, provided that the applicant shall be allowed at least two months from the expiration of the time limit applicable under Article 22 to adapt his application to the requirements of the said provisions of the national law.

PCT Administrative Instruction Section 205.
Numbering and Identification of Claims Upon Amendment

(a) Amendments to the claims under Article 19 or Article 34(2)(b) may be made either by cancelling one or more entire claims, by adding one or more new claims or by amending the text of one or more of the claims as filed. All the claims appearing on a replacement sheet shall be numbered in Arabic numerals. Where a claim is cancelled, no renumbering of the other claims shall be required. In all cases where claims are renumbered, they shall be renumbered consecutively.

(b) The applicant shall, in the letter referred to in the second and third sentences of Rule 46.5(a) or in the second and fourth sentences of Rule 66.8(a), indicate the differences between the claims as filed and the claims as amended. He shall, in particular, indicate in the said letter, in connection with each claim appearing in the international application (it being understood that identical indications concerning several claims may be grouped), whether:

(i) the claim is unchanged;

(ii) the claim is cancelled;

(iii) the claim is new;

(iv) the claim replaces one or more claims as filed;

(v) the claim is the result of the division of a claim as filed.

37 CFR 1.436. The claims.

The requirements as to the content and format of claims are set forth in PCT Art. 6 and PCT Rules 6, 9, 10 and 11 and shall be adhered to. The number of the claims shall be reasonable, considering the nature of the invention claimed.

The claim or claims must "define the matter for which protection is sought." Claims must be clear and concise. They must be fully supported by the description. PCT Rule 6 contains detailed requirements as to the number and numbering of claims, the extent to which any claim may refer to other parts of the international application, the manner of claiming, and dependent claims. As to the manner of claiming, the claims must, whenever appropriate, be in two distinct parts; namely, the statement of the prior art and the statement of the features for which protection is sought ("the characterizing portion").

The physical requirements for the claims are the same as those for the description. Note that the claims must commence on a new sheet.

The procedure for rectification of obvious *>mistakes< is explained in MPEP § 1836. The omission of an entire sheet of the claims cannot be rectified without affecting the international filing date>, except in applications filed on or after April 1, 2007, where, if the application, on its initial receipt date, contained a priority claim and a proper incorporation by reference statement, the original international filing date may be retained if the submitted correction was completely contained in the earlier application. See PCT Rules 4.18 and 20.6<. It is recommended that a request for rectification of obvious *>mistakes< in the claims be made only if the *>mistake< is liable to affect the international search; otherwise, the rectification should be made by amending the claims.

The claims can be amended during the international phase under PCT Article 19 on receipt of the international search report, during international preliminary examination if the applicant has filed a Demand, and during the national phase.

Multiple dependent claims are permitted in international applications before the United States Patent and Trademark Office as an International Searching and International Preliminary Examining Authority or as a Designated or Elected Office, if they are in the alternative only and do not serve as a basis for any other multiple dependent claim (PCT Rule 6.4(a), 35 U.S.C. 112). The claims, being an element of the application, should start on a new page (PCT Rule 11.4). Page numbers must not be placed in the margins (PCT Rule 11.7(b)). Line numbers should appear in the right half of the left margin (PCT Rule 11.8(b)). Paragraph numbers (e.g., paragraph numbers complying with 37 CFR 1.52(b)(6)) are acceptable provided they are not placed in the margins. See PCT Rule 11.6(e).

The number of claims shall be reasonable, considering the nature of the invention claimed (37 CFR 1.436).

1825 The Drawings [R-6]

PCT Article 7.
The Drawings

(1) Subject to the provisions of paragraph (2)(ii), drawings shall be required when they are necessary for the understanding of the invention.

(2) Where, without being necessary for the understanding of the invention, the nature of the invention admits of illustration by drawings:

(i) the applicant may include such drawings in the international application when filed.

(ii) any designated Office may require that the applicant file such drawings with it within the prescribed time limit.

PCT Rule 7.
The Drawings

7.1.Flow Sheets and Diagrams

Flow sheets and diagrams are considered drawings.

7.2.Time Limit

The time limit referred to in Article 7(2)(ii) shall be reasonable under the circumstances of the case and shall, in no case, be shorter than two months from the date of the written invitation requiring the filing of drawings or additional drawings under the said provision.

PCT Rule 11.
Physical Requirements of the International Application

*****

11.5.Size of Sheets

The size of the sheets shall be A4 (29.7 cm x 21 cm). However, any receiving Office may accept international applications on sheets of other sizes provided that the record copy, as transmitted to the International Bureau, and, if the competent International Searching Authority so desires, the search copy, shall be of A4 size.

11.6.Margins

*****

(c) On sheets containing drawings, the surface usable shall not exceed 26.2 cm x 17.0 cm. The sheets shall not contain frames around the usable or used surface. The minimum margins shall be as follows:

- top: 2.5 cm
- left side: 2.5 cm
- right side: 1.5 cm
- bottom: 1.0 cm

*****

11.11.Words in Drawings

(a) The drawings shall not contain text matter, except a single word or words, when absolutely indispensable, such as “water,” “steam,” “open,” “closed,” “section on AB,” and, in the case of electric circuits and block schematic or flow sheet diagrams, a few short catchwords indispensable for understanding.

(b) Any words used shall be so placed that, if translated, they may be pasted over without interfering with any lines of the drawings.

*****

11.13.Special Requirements for Drawings

(a) Drawings shall be executed in durable, black, sufficiently dense and dark, uniformly thick and well-defined, lines and strokes without colorings.

(b) Cross-sections shall be indicated by oblique hatching which should not impede the clear reading of the reference signs and leading lines.

(c) The scale of the drawings and the distinctness of their graphical execution shall be such that a photographic reproduction with a linear reduction in size to two-thirds would enable all details to be distinguished without difficulty.

(d) When, in exceptional cases, the scale is given on a drawing, it shall be represented graphically.

(e) All numbers, letters and reference lines, appearing on the drawings, shall be simple and clear. Brackets, circles or inverted commas shall not be used in association with numbers and letters.

(f) All lines in the drawings shall, ordinarily, be drawn with the aid of drafting instruments.

(g) Each element of each figure shall be in proper proportion to each of the other elements in the figure, except where the use of a different proportion is indispensable for the clarity of the figure.

(h) The height of the numbers and letters shall not be less than 0.32 cm. For the lettering of drawings, the Latin and, where customary, the Greek alphabets shall be used.

(i) The same sheet of drawings may contain several figures. Where figures on two or more sheets form in effect a single complete figure, the figures on the several sheets shall be so arranged that the complete figure can be assembled without concealing any part of any of the figures appearing on the various sheets.

(j) The different figures shall be arranged on a sheet or sheets without wasting space, preferably in an upright position, clearly separated from one another. Where the figures are not arranged in an upright position, they shall be presented sideways with the top of the figures at the left side of the sheet.

(k) The different figures shall be numbered in Arabic numerals consecutively and independently of the numbering of the sheets.

(l) Reference signs not mentioned in the description shall not appear in the drawings, and vice versa.

(m) The same features, when denoted by reference signs, shall, throughout the international application, be denoted by the same signs.

(n) If the drawings contain a large number of reference signs, it is strongly recommended to attach a separate sheet listing all reference signs and the features denoted by them.

*****

37 CFR 1.437. The drawings.

**>

(a) Drawings are required when they are necessary for the understanding of the invention (PCT Art. 7).

(b) The physical requirements for drawings are set forth in PCT Rule 11 and shall be adhered to.<

The international application must contain drawings when they are necessary for the understanding of

the invention. Moreover where, without drawings being actually necessary for the understanding of the invention, its nature admits of illustration by drawings, the applicant may include such drawings and any designated Office may require the applicant to file such drawings during the national phase. Flow sheets and diagrams are considered drawings.

Drawings must be presented on one or more separate sheets. They may not be included in the description, the claims or the abstract. They may not contain text matter, except a single word or words when absolutely indispensable. Note that if the drawings contain text matter not in English but in a language accepted under PCT Rule 12.1(a) by the International Bureau as a Receiving Office, the international application will be transmitted to the International Bureau for processing in its capacity as a Receiving Office. See 37 CFR 1.412(c)(6)(ii). If the drawings contain text matter not in a language accepted under PCT Rule 12.1(a) by the International Bureau as a Receiving Office, the application will be denied an international filing date.

All lines in the drawings must, ordinarily, be drawn with the aid of a drafting instrument and must be executed in black, uniformly thick and well-defined lines. Color drawings are not acceptable. PCT Rules 11.10 to 11.13 contain detailed requirements as to further physical requirements of drawings. Drawings newly executed according to national standards may not be required during the national phase if the drawings filed with the international application comply with PCT Rule 11. The examiner may require new drawings where the drawings which were accepted during the international phase did not comply with PCT Rule 11. A file reference may be indicated in the upper left corner on each sheet of the drawings as for the description.

All of the figures constituting the drawings must be grouped together on a sheet or sheets without waste of space, preferably in an upright position and clearly separated from each other. Where the drawings or tables cannot be presented satisfactorily in an upright position, they may be placed sideways, with the tops of the drawings or tables on the left-hand side of the sheet.

The usable surface of sheets (which must be of A4 size) must not exceed 26.2 cm x 17.0 cm. The sheets must not contain frames around the usable surface. The minimum margins which must be observed are: top and left side: 2.5 cm; right side: 1.5 cm; bottom: 1.0 cm.

All sheets of drawings must be numbered in the center of either the top or the bottom of each sheet but not in the margin in numbers larger than those used as reference signs in order to avoid confusion with the latter. For drawings, a separate series of page numbers is to be used. The number of each sheet of the drawings must consist of two Arabic numerals separated by an oblique stroke, the first being the sheet number and the second being the total number of sheets of drawings. For example, "2/5" would be used for the second sheet of drawings where there are five in all.

Different figures on the sheets of drawings must be numbered in Arabic numerals consecutively and independently of the numbering of the sheets and, if possible, in the order in which they appear. This numbering should be preceded by the expression "Fig."

The PCT makes no provision for photographs. Nevertheless, they are allowed by the International Bureau where it is impossible to present in a drawing what is to be shown (for instance, crystalline structures). Where, exceptionally, photographs are submitted, they must be on sheets of A4 size, they must be black and white, and they must respect the minimum margins and admit of direct reproduction. Color photographs are not accepted.

The procedure for rectification of obvious *>mistakes< in the drawings is explained in MPEP § 1836. The omission of an entire sheet of drawings cannot be rectified without affecting the international filing date >, except in applications filed on or after April 1, 2007, where, if the application, on its initial receipt date, contained a priority claim and a proper incorporation by reference statement, the original international filing date may be retained if the submitted correction was completely contained in the earlier application. See PCT Rules 4.18 and 20.6<. Changes other than the rectification of obvious *>mistakes< are considered amendments.

The drawings can be amended during the international phase only if the applicant files a Demand for international preliminary examination. The drawings can also be amended during the national phase.

If drawings are referred to in an international application and are not found in the search copy file, the examiner should refer the application to a Special

Program Examiner in his or her Technology Center. See Administrative Instructions Section 310.

1826 The Abstract [R-6]

PCT Rule 8.
The Abstract

8.1.Contents and Form of the Abstract

(a) The abstract shall consist of the following:

(i) a summary of the disclosure as contained in the description, the claims, and any drawings; the summary shall indicate the technical field to which the invention pertains and shall be drafted in a way which allows the clear understanding of the technical problem, the gist of the solution of that problem through the invention, and the principal use or uses of the invention;

(ii) where applicable, the chemical formula which, among all the formulae contained in the international application, best characterizes the invention.

(b) The abstract shall be as concise as the disclosure permits (preferably 50 to 150 words if it is in English or when translated into English).

(c) The abstract shall not contain statements on the alleged merits or value of the claimed invention or on its speculative application.

(d) Each main technical feature mentioned in the abstract and illustrated by a drawing in the international application shall be followed by a reference sign, placed between parentheses.

8.2.Figure

(a) If the applicant fails to make the indication referred to in Rule 3.3(a)(iii), or if the International Searching Authority finds that a figure or figures other than that figure or those figures suggested by the applicant would, among all the figures of all the drawings, better characterize the invention, it shall, subject to paragraph (b), indicate the figure or figures which should accompany the abstract when the latter is published by the International Bureau. In such case, the abstract shall be accompanied by the figure or figures so indicated by the International Searching Authority. Otherwise, the abstract shall, subject to paragraph (b), be accompanied by the figure or figures suggested by the applicant.

(b) If the International Searching Authority finds that none of the figures of the drawings is useful for the understanding of the abstract, it shall notify the International Bureau accordingly. In such case, the abstract, when published by the International Bureau, shall not be accompanied by any figure of the drawings even where the applicant has made a suggestion under Rule 3.3(a)(iii).

8.3.Guiding Principles in Drafting

The abstract shall be so drafted that it can efficiently serve as a scanning tool for purposes of searching in the particular art, especially by assisting the scientist, engineer or researcher in formulating an opinion on whether there is a need for consulting the international application itself.

37 CFR 1.438. The abstract.

(a) Requirements as to the content and form of the abstract are set forth in PCT Rule 8, and shall be adhered to.

(b) Lack of an abstract upon filing of an international application will not affect the granting of a filing date. However, failure to furnish an abstract within one month from the date of the notification by the Receiving Office will result in the international application being declared withdrawn.

The abstract must consist of a summary of the disclosure as contained in the description, the claims and any drawings. Where applicable, it must also contain the most characteristic chemical formula. The abstract must be as concise as the disclosure permits (preferably 50 to 150 words if it is in English or when translated into English). National practice (see MPEP § 608.01(b)) also provides a maximum of 150 words for the abstract. See 37 CFR 1.72(b). The PCT range of 50 - 150 words is not absolute but publication problems could result when the PCT limit is increased beyond the 150 word limit. Maintaining the PCT upper limit is encouraged. As a rule of thumb, it can be said that the volume of the text of the abstract, including one of the figures from the drawings (if any), should not exceed what can be accommodated on an A4 sheet of typewritten matter, 1 1/2 spaced. The abstract of the international application as filed must begin on a new sheet following the claims (Administrative Instructions Section 207). The other physical requirements must correspond to those for the description. The abstract must be so drafted that it can efficiently serve as a scanning tool for the purposes of searching in the particular art. These and other requirements concerning the abstract are spelled out in detail in PCT Rule 8. Useful guidance can be obtained from the "Guidelines for the Preparation of Abstracts Under the Patent Cooperation Treaty," published in the *PCT Gazette* (No. 5/1978). Those Guidelines may be obtained, in English and French, from the International Bureau.

The abstract should be primarily related to what is new in the art to which the invention pertains. Phrases should not be used which are implicit, (for instance, "the invention relates to..."), and statements on the alleged merits or value of the invention are not allowed.

Where the receiving Office finds that the abstract is missing, it invites the applicant to furnish it within a time limit fixed in the invitation. The international application is considered withdrawn if no abstract is

furnished to the receiving Office within the time limit fixed. Where the receiving Office has not invited the applicant to furnish an abstract, the International Searching Authority establishes one. The same applies where the abstract does not comply with the requirements outlined in the preceding paragraphs. Where the abstract is established by the International Searching Authority, the applicant may **>propose modifications of, or comment on, the new abstract until the expiration of 1 month from the date of mailing of the international search report (PCT Rule 38.3).<

SUMMARY OF ABSTRACT REQUIREMENTS

Preferably 50-150 words. Should contain:

(A) Indication of field of invention.

(B) Clear indication of the technical problem.

(C) Gist of invention's solution of the problem.

(D) Principal use or uses of the invention.

(E) Reference numbers of the main technical features placed between parentheses.

(F) Where applicable, chemical formula which best characterizes the invention.

Should not contain:

(A) Superfluous language.

(B) Legal phraseology such as "said" and "means."

(C) Statements of alleged merit or speculative application.

(D) Prohibited items as defined in PCT Rule 9.

1827 Fees [R-2]

A complete list of Patent Cooperation Treaty fee amounts which are to be paid to the United States Patent and Trademark Office, for both the national and international stages, can be found at the beginning of each weekly issue of the *Official Gazette* of the United States Patent and Trademark Office and on the >Office of< PCT Legal *>Administration< page of the USPTO web site (see MPEP § 1730). Applicants are urged to refer to this list before submitting any fees to the USPTO.

Pursuant to PCT Rules 14.1(c), *>15.4<, and 16.1(f), the *>international filing<, transmittal, and search fee payable is the *>international filing<, transmittal, and search fee in effect on the *>receipt< date of the international application. See 37 CFR 1.431(c).

>

1827.01 Refund of International Application Fees [R-6]

37 CFR 1.446. Refund of international application filing and processing fees.

(a) Money paid for international application fees, where paid by actual mistake or in excess, such as a payment not required by law or treaty and its regulations, may be refunded. A mere change of purpose after the payment of a fee will not entitle a party to a refund of such fee. The Office will not refund amounts of twenty-five dollars or less unless a refund is specifically requested and will not notify the payor of such amounts. If the payor or party requesting a refund does not provide the banking information necessary for making refunds by electronic funds transfer, the Office may use the banking information provided on the payment instrument to make any refund by electronic funds transfer.

(b) Any request for refund under paragraph (a) of this section must be filed within two years from the date the fee was paid. If the Office charges a deposit account by an amount other than an amount specifically indicated in an authorization under § 1.25(b), any request for refund based upon such charge must be filed within two years from the date of the deposit account statement indicating such charge and include a copy of that deposit account statement. The time periods set forth in this paragraph are not extendable.

(c) Refund of the supplemental search fees will be made if such refund is determined to be warranted by the Director or the Director's designee acting under PCT Rule 40.2(c).

(d) The international and search fees will be refunded if no international filing date is accorded or if the application is withdrawn before transmittal of the record copy to the International Bureau (PCT Rules 15.6 and 16.2). The search fee will be refunded if the application is withdrawn before transmittal of the search copy to the International Searching Authority. The transmittal fee will not be refunded.

(e) The handling fee (§ 1.482(b)) will be refunded (PCT Rule 57.6) only if:

(1) The Demand is withdrawn before the Demand has been sent by the International Preliminary Examining Authority to the International Bureau, or

(2) The Demand is considered not to have been submitted (PCT Rule 54.4(a)).

Although 37 CFR 1.446(a) indicates that a "mere change of purpose after the payment of a fee will not entitle a party to a refund of such fee," 37 CFR 1.446(d) and (e) contain exceptions to this general statement.

According to 37 CFR 1.446(d), the search fee will be refunded if no international filing date is accorded or if the application is withdrawn before the search copy is transmitted to the International Searching Authority. The transmittal fee will not be refunded.

According to 37 CFR 1.446(e), the handling fee will be refunded if the Demand is withdrawn before the Demand has been sent by the International Preliminary Examining Authority to the International Bureau.

Refund of the supplemental search fee will be made if the applicant is successful in a protest (filed pursuant to 37 CFR 1.477) to a holding of lack of unity of invention. The supplemental search fee must be paid and be accompanied by (1) a protest and (2) a request for refund of the supplemental search fee.

Any request for refund of the search fee made after the search copy has been transmitted to the International Searching Authority must be directed to the International Searching Authority and not to the Receiving Office. This is clearly necessary where applicant has chosen the European Patent Office or the Korean Intellectual Property Office as the International Searching Authority.<

1828 Priority Claim and Document [R-6]

An applicant who claims the priority of one or more earlier national, regional or international applications for the same invention must indicate on the Request, at the time of filing, the country in or for which it was filed, the date of filing, and the application number. See PCT Article 8 and PCT Rule 4.10 for priority claim particulars and PCT Rule 90*bis*.3 for withdrawal of priority claims. Note that under PCT Rule 4.10, an applicant may claim the priority of an application filed in or for a State which is a Member of the World Trade Organization (WTO), even if that State is not party to the Paris Convention for the Protection of Industrial Property (Paris Convention). However, a PCT Contracting State that is not a Member of the WTO would not be obliged to recognize the effects of such a priority claim.

Effective July 1, 1998, applicant may correct or add a priority claim by a notice submitted to the Receiving Office or the International Bureau >(IB)< within 16 months from the priority date, or where the priority date is changed, within 16 months from the priority date so changed, whichever period expires first, provided that a notice correcting or adding a priority claim may in any event be submitted until the expiration of 4 months from the international filing date. PCT Rule 26*bis*.1 and 37 CFR 1.451 and 1.465.

Under the PCT procedure, the applicant may file the certified copy of the earlier filed national application together with the international application in the receiving Office for transmittal with the record copy, or alternatively the certified copy may be submitted by the applicant to the **>IB< or the receiving Office not later than 16 months from the priority date or, if the applicant has requested early processing in any designated Office, not later than the time such processing or examination is requested. The **>IB< will normally furnish copies of the certified copy to the various designated Offices so that the applicant will not normally be required to submit certified copies to each designated Office. >If the earlier filed application was filed with the U.S. Patent and Trademark Office, applicant may request the U.S. Receiving Office (RO/US) to prepare, and transmit to the IB, a certified copy of the earlier application. In international applications filed in the RO/US on or after August 31, 2007, the RO/US will electronically transmit the certified copy of the earlier application if the applicant has made a request in accordance with PCT Rule 17.1(b) and 37 CFR 1.451(b). Further, in such international applications filed on or after August 31, 2007, the USPTO has waived the fee set out in 37 CFR 1.19(b)(1)(iii)(A) for electronically providing a copy of the patent application as filed.<

For use of the priority document in a U.S. national application which entered the national stage from an international application after compliance with 35 U.S.C. 371, see MPEP § 1893.03(c).

>

1828.01 Restoration of the Right of Priority [R-6]

On April 1, 2007, the regulations to the PCT were amended to allow applicants with applications which were filed on or after that date and which were also filed after the expiration of the 12 month priority period but within two months of the expiration of the priority period, to request that the right of priority be restored, provided that the failure to file the application within the priority period was in spite of due care or unintentional. See PCT Rule 26*bis*.3. Grantable requests for restoration of the right of priority must be filed within two months from the date of expiration of the priority period as defined by new PCT Rule 2.4, and must be accompanied by: (i) the requisite fee; (ii) a notice under PCT Rule 26*bis*.1(a) adding the priority claim, if the priority claim in respect of the earlier application is not contained in the international application; and (iii) a statement that the delay in filing the international application within the priority period was unintentional. The Director may require additional information where there is a question whether the delay was unintentional. If the applicant makes a request for early publication under PCT Article 21(2)(b), any of requirements (i), (ii), or (iii) above which are filed after the technical preparations for international publication have been completed by the International Bureau shall be considered as not having been submitted in time.

The International Bureau has indicated that it intends to decide these matters under both the in spite of due care and unintentional standards. Therefore, in view of the fact that the USPTO only decides these matters under the unintentional standard, applicants may wish to consider filing directly with the International Bureau as receiving Office instead of the United States Receiving Office in the situation where applicant desires to request restoration of the right of priority under the in spite of due care standard. Applicants may also request that an application be forwarded to the International Bureau for processing in its capacity as a receiving Office in accordance with PCT Rule 19.4(a)(iii) in situations where applicants, after the international application has been filed, realize that the application was filed after the expiration of the 12 month priority period but within two months of the expiration of the priority period, and where applicant desires to request restoration of the right of priority under the in spite of due care standard. Applications filed with, or forwarded to, the International Bureau must have a foreign filing license.

It must be noted that restoration of a right of priority to a prior application by the United States Receiving Office, or by any other receiving Office, under the provisions of PCT Rule 26*bis*.3, will not entitle applicants to a right of priority to such prior application in any application which enters the national stage under 35 U.S.C. 371, or in any application filed under 35 U.S.C. 111(a) which claims benefit under 35 U.S.C. 120 and 365(c) to an international application in which the right to priority has been restored. See 35 U.S.C. 119. It must also be noted that even though restoration of such a right will not entitle applicant to the right of priority in a subsequent United States application, the priority date will still govern all PCT time limits, including the thirty-month period for filing national stage papers and fees under 37 CFR 1.495. PCT Article 2(ix), which defines "priority date" for purposes of computing time limits, contains no limitation that the priority claim be valid. Thus, for example, in an international application containing an earliest priority claim to a German application filed thirteen months prior to the filing date of the international application, the filing date of the German application will be used as the basis for computing time limits under the PCT, including the thirty-month time period set forth in 37 CFR 1.495 to submit the basic national fee (37 CFR 1.492(a)) to avoid abandonment, even though applicant would not be entitled to priority to the German application in the United States national phase since the German application was filed more than twelve months from the international filing date. See 35 U.S.C. 119(a) and 365(b).<

1830 International Application Transmittal Letter [R-5]

A PCT international application transmittal letter, Form PTO-1382, is available ** for applicants to use when filing PCT international applications and related documents with the United States Receiving Office. The form >, which< is intended to simplify the filing of PCT international applications and related documents **>with the United States Receiving Office,

may be obtained online at http://www.uspto.gov/web/offices/pac/dapps/pct/chapter1.htm.<

1832 License Request for Foreign Filing Under the PCT

A license for foreign filing is not required to file an international application in the United States Receiving Office but may be required before the applicant or the U.S. Receiving Office can forward a copy of the international application to a foreign patent office, the International Bureau or other foreign authority (35 U.S.C. 368, 37 CFR 5.1 and 5.11). A foreign filing license to permit transmittal to a foreign office or international authority is not required if the international application does not disclose subject matter in addition to that disclosed in a prior U.S. national application filed more than 6 months prior to the filing of the international application (37 CFR 5.11(a)). In all other instances (direct foreign filings outside the PCT or filings in a foreign receiving Office), the applicant should petition for a license for foreign filing (37 CFR 5.12) and if appropriate, identify any additional subject matter in the international application which was not in the earlier U.S. national application (37 CFR 5.14 (c)). This request and disclosure information may be supplied on the PCT international application transmittal letter, Form PTO-1382.

If no petition or request for a foreign filing license is included in the international application, and it is clear that a license is required because of the designation of foreign countries and the time at which the Record Copy must be transmitted, it is current Office practice to construe the filing of such an international application to include a request for a foreign filing license. If the license can be granted, it will be issued without further correspondence. If no license can be issued, or further information is required, applicant will be contacted. The automatic request for a foreign filing license does not apply to the filing of a foreign application outside the PCT.

EFFECT OF SECRECY ORDER

If a secrecy order is applied to an international application, the application will not be forwarded to the International Bureau as long as the secrecy order remains in effect (PCT Article 27(8) and 35 U.S.C. 368). If the secrecy order remains in effect, the international application will be declared withdrawn (abandoned) because the Record Copy of the international application was not received in time by the International Bureau (37 CFR 5.3(d), PCT Article 12(3), and PCT Rule 22.3). It is, however, possible to prevent abandonment as to the United States of America if it has been designated, by fulfilling the requirements of 35 U.S.C. 371(c).

1834 Correspondence [R-3]

PCT Rule 92.
Correspondence

92.1.Need for Letter and for Signature

(a) Any paper submitted by the applicant in the course of the international procedure provided for in the Treaty and these Regulations, other than the international application itself, shall, if not itself in the form of a letter, be accompanied by a letter identifying the international application to which it relates. The letter shall be signed by the applicant.

(b) If the requirements provided for in paragraph (a) are not complied with, the applicant shall be informed as to the non-compliance and invited to remedy the omission within a time limit fixed in the invitation. The time limit so fixed shall be reasonable in the circumstances; even where the time limit so fixed expires later than the time limit applying to the furnishing of the paper (or even if the latter time limit has already expired), it shall not be less than 10 days and not more than one month from the mailing of the invitation. If the omission is remedied within the time limit fixed in the invitation, the omission shall be disregarded; otherwise, the applicant shall be informed that the paper has been disregarded.

(c) Where non-compliance with the requirements provided for in paragraph (a) has been overlooked and the paper taken into account in the international procedure, the non-compliance shall be disregarded.

92.2.Languages

(a) Subject to Rules 55.1 and 66.9 and to paragraph (b) of this Rule, any letter or document submitted by the applicant to the International Searching Authority or the International Preliminary Examining Authority shall be in the same language as the international application to which it relates. However, where a translation of the international application has been transmitted under Rule 23.1(b) or furnished under Rule 55.2, the language of such translation shall be used.

(b) Any letter from the applicant to the International Searching Authority or the International Preliminary Examining Authority may be in a language other than that of the international application, provided the said Authority authorizes the use of such language.

(c) *[Deleted]*

(d) Any letter from the applicant to the International Bureau shall be in English or French.

(e) Any letter or notification from the International Bureau to the applicant or to any national Office shall be in English or French.

*****

PCT Administrative Instruction Section 105. Identification of International Application With Two or More Applicants

**>Where any international application indicates two or more applicants, it shall be sufficient, for the purpose of identifying that application, to indicate, in any Form or correspondence relating to such application, the name of the applicant first named in the request. The provisions of the first sentence of this Section do not apply to the demand.<

>

I. < NOTIFICATION UNDER PCT RULE 92.1(b) OF DEFECTS WITH REGARD TO CORRESPONDENCE

If the Office finds that papers, other than the international application itself, are not accompanied by a letter identifying the international application to which they relate, or are accompanied by an unsigned letter, or are furnished in the form of an unsigned letter, it notifies the applicant and invites him or her to remedy the omission. The Office disregards the said papers or letter if the omission is not remedied within the time limit fixed in the invitation (PCT Rule 92.1(b)). If the omission has been overlooked and the paper taken into account, the omission is disregarded.
>

II. < CORRESPONDENCE ADDRESS

Where there is a sole applicant without an agent in an international application, correspondence will be sent to the applicant at his or her indicated address; or, if he or she has appointed one or more agents, to that agent or the first-mentioned of those agents; or, if he or she has not appointed an agent but has indicated a special address for notifications, at that special address.

Where there are two or more applicants who have appointed one or more common agents, correspondence will be addressed to that agent or the first-mentioned of those agents. Where no common agent has been appointed, correspondence will be addressed to the common representative (either the appointed common representative or the applicant who is considered to be the common representative (PCT Rule 90.2) at the indicated address; or, if the common representative has appointed one or more agents, to that agent or the first-mentioned of those agents; or, if the common representative has not appointed an agent but has indicated a special address for notifications, at that address.

>

III. < FILING OF CORRESPONDENCE BY MAIL

The "Express Mail" procedure set forth at 37 CFR 1.10 applies to papers filed with the U.S. Patent and Trademark Office (USPTO) in international applications. Accordingly, papers filed with the USPTO in international applications will be accorded by the USPTO the date of deposit with the United States Postal Service as shown on the "date-in" on the "Express Mail" mailing label as the date of filing in the USPTO if the provisions of 37 CFR 1.10 are complied with. See MPEP § 513.

If there is a question regarding the date of deposit, the Express Mail provisions of 37 CFR 1.10(c)-(e) require, in addition to using the "Express Mail Post Office to Addressee" service, an indication of the "Express Mail" mailing label number on each paper or fee. In situations wherein the correspondence includes several papers directed to the same application (for example, Request, description, claims, abstract, drawings, and other papers) the correspondence may be submitted with a cover or transmittal letter, which should itemize the papers. The cover or transmittal letter must have the "Express Mail" mailing label number thereon.

The certificate of mailing by first class mail procedure set forth at 37 CFR 1.8 differs from the 37 CFR 1.10 Express Mail procedure. See 37 CFR 1.8(a)(2)(i)(D) and (E). It is important to understand that the 37 CFR 1.8 certificate of mailing procedure CANNOT be used for filing any papers during the international stage if the date of deposit is desired. If the 37 CFR 1.8 certificate of mailing procedure is used, the paper and/or fee will be accorded the date of receipt in the USPTO unless the receipt date falls on a Saturday, Sunday, or Federal holiday in which case the date of receipt will be the next succeeding day which is not a Saturday, Sunday, or Federal holiday (37 CFR 1.6(a)(1)). Accordingly, the certificate of mailing procedures of 37 CFR 1.8 are not available to have a submission during the international stage con-

sidered as timely filed if the submission is not physically received at the USPTO on or before the due date.

1834.01 Use of Telegraph, Teleprinter, Facsimile Machine [R-5]

PCT Rule 92.4 provides that a national Office may receive documents by telegraph, teleprinter, or facsimile machine. However, the United States Patent and Trademark Office has not informed the International Bureau that it accepts such submissions other than facsimile transmissions. Accordingly, applicants may not currently file papers in international applications with the United States Patent and Trademark Office via telegraph or teleprinter.

Generally, any paper may be filed by facsimile transmission with certain exceptions which are identified in 37 CFR 1.6(d). It should be noted that a facsimile transmission of a document is not permitted and, if submitted, will not be accorded a date of receipt if the document is:

(A) Required by statute to be certified;

(B) A >color< drawing submitted under 37 CFR 1.437;

(C) An international application for patent; or

(D) A copy of the international application and the basic national fee necessary to enter the national stage, as specified in 37 CFR 1.495(b).

Facsimile transmission may be used to submit substitute sheets (other than >color< drawings), extensions of time, power of attorney, fee authorizations (other than the basic national fee), ** >demands<, response to written opinions, oaths or declarations, petitions, and translations in international applications.

A Certificate of Transmission may be used as provided in 37 CFR 1.8(a)(1) except in the instances specifically excluded in 37 CFR 1.8(a)(2). Note particularly that the Certificate of Transmission cannot be used for the filing of an international application for patent or correspondence in an international application before the U.S. Receiving Office, the U.S. International Searching Authority, or the U.S. International Preliminary Examining Authority. Guidelines for facsimile transmission are clearly set forth in 37 CFR 1.6(d) and should be read before transmitting by facsimile machine.

A signature on a document received via facsimile in a permitted situation is acceptable as a proper signature. See PCT Rule 92.4(b) and 37 CFR 1.4(d)(1)(ii).

The receipt date of a document transmitted via facsimile is the date in the USPTO on which the transmission is completed, unless the receipt date is a Saturday, Sunday, or Federal holiday in which case the date of receipt will be the next succeeding day which is not a Saturday, Sunday, or Federal holiday (37 CFR 1.6(a)(3)). See 37 CFR 1.6(d). Where a document is illegible or part of the document is not received, the document will be treated as not received to the extent that it is illegible or the transmission failed. See PCT Rule 92.4(c).

1834.02 Irregularities in the Mail Service

PCT Rule 82.
Irregularities in the Mail Service

82.1.Delay or Loss in Mail

(a) Any interested party may offer evidence that he has mailed the document or letter five days prior to the expiration of the time limit. Except in cases where surface mail normally arrives at its destination within two days of mailing, or where no airmail service is available, such evidence may be offered only if the mailing was by airmail. In any case, evidence may be offered only if the mailing was by mail registered by the postal authorities.

(b) If the mailing, in accordance with paragraph (a), of a document or letter is proven to the satisfaction of the national Office or intergovernmental organization which is the addressee, delay in arrival shall be excused, or, if the document or letter is lost in the mail, substitution for it of a new copy shall be permitted, provided that the interested party proves to the satisfaction of the said Office or organization that the document or letter offered in substitution is identical with the document or letter lost.

(c) In the cases provided for in paragraph (b), evidence of mailing within the prescribed time limit, and, where the document or letter was lost, the substitute document or letter as well as the evidence concerning its identity with the document or letter lost shall be submitted within one month after the date on which the interested party noticed or with due diligence should have noticed the delay or the loss, and in no case later than six months after the expiration of the time limit applicable in the given case.

(d) Any national Office or intergovernmental organization which has notified the International Bureau that it will do so shall, where a delivery service other than the postal authorities is used to mail a document or letter, apply the provisions of paragraphs (a) to (c) as if the delivery service was a postal authority. In such a case, the last sentence of paragraph (a) shall not apply but evidence may be offered only if details of the mailing were recorded by the delivery service at the time of mailing. The notification may contain an indication that it applies only to mailings using

specified delivery services or delivery services which satisfy specified criteria. The International Bureau shall publish the information so notified in the Gazette.

(e) Any national Office or intergovernmental organization may proceed under paragraph (d):

(i) even if, where applicable, the delivery service used was not one of those specified, or did not satisfy the criteria specified, in the relevant notification under paragraph (d), or

(ii) even if that Office or organization has not sent to the International Bureau a notification under paragraph (d).

82.2.Interruption in the Mail Service

(a) Any interested party may offer evidence that on any of the 10 days preceding the day of expiration of the time limit the postal service was interrupted on account of war, revolution, civil disorder, strike, natural calamity, or other like reason, in the locality where the interested party resides or has his place of business or is staying.

(b) If such circumstances are proven to the satisfaction of the national Office or intergovernmental organization which is the addressee, delay in arrival shall be excused, provided that the interested party proves to the satisfaction of the said Office or organization that he effected the mailing within five days after the mail service was resumed. The provisions of Rule 82.1(c) shall apply *mutatis mutandis*.

DELAY OR LOSS IN MAIL

Delay or loss in the mail shall be excused when it is proven to the satisfaction of the receiving Office that the concerned letter or document was mailed at least five days before the expiration of the time limit. The mailing must have been by registered air mail or, where surface mail would normally arrive at the destination concerned within two days of mailing, by registered surface mail (PCT Rule 82.1(a) to (c)). PCT Rule 82 contains detailed provisions governing the situation where a letter arrives late or gets lost due to irregularities in the mail service, for example, because the mail service was interrupted due to a strike. The provisions operate to excuse failure to meet a time limit for filing a document for up to six months after the expiration of the time limit concerned, provided that the document was mailed at least five days before the expiration of the time limit. In order to take advantage of these provisions, the mailing must have been by registered airmail or, where surface mail would normally arrive at the destination concerned within two days of mailing, by registered surface mail. Evidence is required to satisfy the Office, and a substitute document must be filed promptly—see PCT Rule 82.1(b) and (c) for details.

INTERRUPTION IN MAIL SERVICE

The provisions of PCT Rule 82.1(c) apply *mutatis mutandis* for interruptions in the mail service caused by war, revolution, civil disorder, strike, natural calamity or other like reasons (PCT Rule 82.2).

Special provisions also apply to mail interruptions caused by war, revolution, civil disorder, strike, natural calamity or other like reasons—see PCT Rule 82.2 for details.

See PCT Rule 80.5 for guidance on periods which expire on a non-working day.

1836 Rectification of Obvious *>Mistakes< [R-6]

**>

PCT Rule 91.
Rectification or Obvious Mistakes in the International Application and Other Documents

91.1 Rectification of Obvious Mistakes

(a) An obvious mistake in the international application or another document submitted by the applicant may be rectified in accordance with this Rule if the applicant so requests.

(b) The rectification of a mistake shall be subject to authorization by the "competent authority", that is to say:

(i) in the case of a mistake in the request part of the international application or in a correction thereof—by the receiving Office;

(ii) in the case of a mistake in the description, claims or drawings or in a correction thereof, unless the International Preliminary Examining Authority is competent under item (iii)—by the International Searching Authority;

(iii) in the case of a mistake in the description, claims or drawings or in a correction thereof, or in an amendment under Article 19 or 34, where a demand for international preliminary examination has been made and has not been withdrawn and the date on which international preliminary examination shall start in accordance with Rule 69.1 has passed—by the International Preliminary Examining Authority;

(iv) in the case of a mistake in a document not referred to in items (i) to (iii) submitted to the receiving Office, the International Searching Authority, the International Preliminary Examining Authority or the International Bureau, other than a mistake in the abstract or in an amendment under Article 19—by that Office, Authority or Bureau, as the case may be.

(c) The competent authority shall authorize the rectification under this Rule of a mistake if, and only if, it is obvious to the competent authority that, as at the applicable date under paragraph (f), something else was intended than what appears in the document concerned and that nothing else could have been intended than the proposed rectification.

(d) In the case of a mistake in the description, claims or drawings or in a correction or amendment thereof, the competent authority shall, for the purposes of paragraph (c), only take into account the contents of the description, claims and drawings and, where applicable, the correction or amendment concerned.

(e) In the case of a mistake in the request part of the international application or a correction thereof, or in a document referred to in paragraph (b)(iv), the competent authority shall, for the purposes of paragraph (c), only take into account the contents of the international application itself and, where applicable, the correction concerned, or the document referred to in paragraph (b)(iv), together with any other document submitted with the request, correction or document, as the case may be, any priority document in respect of the international application that is available to the authority in accordance with the Administrative Instructions, and any other document contained in the authority's international application file at the applicable date under paragraph (f).

(f) The applicable date for the purposes of paragraphs (c) and (e) shall be:

(i) in the case of a mistake in a part of the international application as filed—the international filing date;

(ii) in the case of a mistake in a document other than the international application as filed, including a mistake in a correction or an amendment of the international application—the date on which the document was submitted.

(g) A mistake shall not be rectifiable under this Rule if:

(i) the mistake lies in the omission of one or more entire elements of the international application referred to in Article 3(2) or one or more entire sheets of the international application;

(ii) the mistake is in the abstract;

(iii) the mistake is in an amendment under Article 19, unless the International Preliminary Examining Authority is competent to authorize the rectification of such mistake under paragraph (b)(iii); or

(iv) the mistake is in a priority claim or in a notice correcting or adding a priority claim under Rule 26bis.1(a), where the rectification of the mistake would cause a change in the priority date;

provided that this paragraph shall not affect the operation of Rules 20.4, 20.5, 26*bis* and 38.3.

(h) Where the receiving Office, the International Searching Authority, the International Preliminary Examining Authority or the International Bureau discovers what appears to be a rectifiable obvious mistake in the international application or another document, it may invite the applicant to request rectification under this Rule.

91.2 Requests for Rectification

A request for rectification under Rule 91.1 shall be submitted to the competent authority within 26 months from the priority date. It shall specify the mistake to be rectified and the proposed rectification, and may, at the option of the applicant, contain a brief explanation. Rule 26.4 shall apply *mutatis mutandis* as to the manner in which the proposed rectification shall be indicated.

91.3 Authorization and Effect of Rectifications

(a) The competent authority shall promptly decide whether to authorize or refuse to authorize a rectification under Rule 91.1 and shall promptly notify the applicant and the International Bureau of the authorization or refusal and, in the case of refusal, of the reasons therefor. The International Bureau shall proceed as provided for in the Administrative Instructions, including, as required, notifying the receiving Office, the International Searching Authority, the International Preliminary Examining Authority and the designated and elected Offices of the authorization or refusal.

(b) Where the rectification of an obvious mistake has been authorized under Rule 91.1, the document concerned shall be rectified in accordance with the Administrative Instructions.

(c) Where the rectification of an obvious mistake has been authorized, it shall be effective:

(i) in the case of a mistake in the international application as filed, from the international filing date;

(ii) in the case of a mistake in a document other than the international application as filed, including a mistake in a correction or an amendment of the international application, from the date on which that document was submitted.

(d) Where the competent authority refuses to authorize a rectification under Rule 91.1, the International Bureau shall, upon request submitted to it by the applicant within two months from the date of the refusal, and subject to the payment of a special fee whose amount shall be fixed in the Administrative Instructions, publish the request for rectification, the reasons for refusal by the authority and any further brief comments that may be submitted by the applicant, if possible together with the international application. A copy of the request, reasons and comments (if any) shall if possible be included in the communication under Article 20 where the international application is not published by virtue of Article 64(3).

(e) The rectification of an obvious mistake need not be taken into account by any designated Office in which the processing or examination of the international application has already started prior to the date on which that Office is notified under Rule 91.3(a) of the authorization of the rectification by the competent authority.

(f) A designated Office may disregard a rectification that was authorized under Rule 91.1 only if it finds that it would not have authorized the rectification under Rule 91.1 if it had been the competent authority, provided that no designated Office shall disregard any rectification that was authorized under Rule 91.1 without giving the applicant the opportunity to make observations, within a time limit which shall be reasonable under the circumstances, on the Office's intention to disregard the rectification.

Obvious mistakes in the international application or other papers submitted by the applicant may generally be rectified under PCT Rule 91, if the rectification is authorized, as required, within the applicable time limit. Any such rectification is free of charge. The omission of entire sheets of the international application cannot be rectified under PCT Rule 91. Correc-

tion of such mistakes may only be made in accordance with PCT Rule 20.6. Mistakes in the abstract, in amendments under PCT Article 19 (unless the International Preliminary Examining Authority is competent to authorize the rectification under PCT Rule 91.1(b)(iii)), or in a priority claim or in a notice correcting or adding a priority claim where the rectification would cause a change in the priority, also cannot be rectified under PCT Rule 91.

Applicants often attempt to rely upon the priority application to establish a basis for obvious mistake. The priority document (application) cannot be used to support obvious mistake corrections to the description, claims, or drawings or in a correction or amendment thereof. The rectification is obvious only in the sense that the competent authority (i.e., the receiving Office, the International Searching Authority, the International Preliminary Examining Authority, or the International Bureau), as appropriate, would immediately realize that something else was intended other than what appears in the document and that nothing else could have been intended than what is offered as rectification. Examples of obvious mistakes that are rectifiable include linguistic errors, spelling errors and grammatical errors so long as the meaning of the disclosure does not change upon entry of the rectification. Changes to chemical or mathematical formulas would not generally be rectifiable unless they would be common knowledge to anyone. A missing chemical formula or missing line of text would not be considered to be an obvious mistake subject to rectification.

Rectifications must be authorized:

(A) by the Receiving Office if the mistake is in the request;

(B) by the International Searching Authority if the mistake is in the description, claims, or drawings or in a correction thereof or in any paper submitted to that Authority, unless the International Preliminary Examining Authority is competent;

(C) by the International Preliminary Examining Authority if the mistake is in the description, claims, or drawings or in a correction thereof, or in an amendment under Article 19 or 34, or in any paper submitted to that Authority, where a demand for Chapter II examination has been filed and has not been withdrawn and the date on which international preliminary examination shall start in accordance with PCT Rule 69.1 has passed;

(D) by the International Bureau if the mistake is in any paper submitted to it other than the international application or amendments or corrections to the application.

The request for rectification must be addressed to the authority competent to authorize the rectification. It must be filed within 26 months from the priority date.

The International Searching Authority informs the applicant of the decision by use of Form PCT/ISA/217, while the International Preliminary Examining Authority informs the applicant of the decision regarding the authorization or refusal to authorize the rectification of obvious mistakes by use of Form PCT/IPEA/412.

<

1840 The International Searching Authority [R-5]

35 U.S.C. 362. International Searching Authority and International Preliminary Examining Authority.

(a) The Patent and Trademark Office may act as an International Searching Authority and International Preliminary Examining Authority with respect to international applications in accordance with the terms and conditions of an agreement which may be concluded with the International Bureau, and may discharge all duties required of such Authorities, including the collection of handling fees and their transmittal to the International Bureau.

(b) The handling fee, preliminary examination fee, and any additional fees due for international preliminary examination shall be paid within such time as may be fixed by the Director.

37 CFR 1.413. The United States International Searching Authority.

(a) Pursuant to appointment by the Assembly, the United States Patent and Trademark Office will act as an International Searching Authority for international applications filed in the United States Receiving Office and in other Receiving Offices as may be agreed upon by the Director, in accordance with the agreement between the Patent and Trademark Office and the International Bureau (PCT Art. 16(3)(b)).

(b) The Patent and Trademark Office, when acting as an International Searching Authority, will be identified by the full title "United States International Searching Authority" or by the abbreviation "ISA/US."

(c) The major functions of the International Searching Authority include:

(1) Approving or establishing the title and abstract;

(2) Considering the matter of unity of invention;

(3) Conducting international and international-type searches and preparing international and international-type search reports (PCT Art. 15, 17 and 18, and PCT Rules 25, 33 to 45 and 47), and issuing declarations that no international search report will be established (PCT Article 17(2)(a));

(4) Preparing written opinions of the International Searching Authority in accordance with PCT Rule 43*bis* (when necessary); and

(5) Transmitting the international search report and the written opinion of the International Searching Authority to the applicant and the International Bureau.

The United States Patent and Trademark Office (USPTO) agreed to and was appointed by the PCT Assembly, to act as an International Searching Authority. As such an Authority, the primary functions are to establish (1) international search reports and (2) for international applications having an international filing date on or after January 1, 2004, written opinions. See PCT Article 16 and PCT Rule 43*bis*.

Pursuant to an agreement concluded with the International Bureau, the USPTO, as an International Searching Authority, agreed to conduct international searches and prepare international search reports and written opinions of the International Searching Authority, for, in addition to the United States of America, Barbados, Brazil, Egypt, India, Israel, Mexico, New Zealand, the Philippines, Saint Lucia, South Africa, and Trinidad and Tobago. The agreement stipulated the English language and specified that the subject matter to be searched is that which is searched or examined in United States national applications.

I. TRANSMITTAL OF THE SEARCH COPY TO THE INTERNATIONAL SEARCHING AUTHORITY

The "search copy" is transmitted by the Receiving Office to the International Searching Authority (PCT Article 12(1)), the details of the transmittal are provided in PCT Rule 23.

II. THE MAIN PROCEDURAL STEPS IN THE INTERNATIONAL SEARCHING AUTHORITY

The main procedural steps that any international application goes through in the International Searching Authority are (1) the making of the international search (PCT Article 15), (2) the preparing of the international search report (PCT Article 18 and PCT Rule 43) and (3) for international applications having an international filing date on or after January 1, 2004, the preparing of a written opinion of the International Searching Authority (PCT Rule 43*bis*).

III. COMPETENT INTERNATIONAL SEARCHING AUTHORITY

In respect of international applications filed with the U.S. Receiving Office, the United States International Searching Authority, which is the Examining Corps of the USPTO, is competent to carry out the international search (PCT Article 16, PCT Rules 35 and 36, 35 U.S.C. 362 and 37 CFR 1.413).

The European Patent Office >(EPO) or the Korean Intellectual Property Office (KIPO)< may also be competent to carry out the international search (PCT Article 16, PCT Rules 35 and 36) for international applications filed with the U.S. Receiving Office. See MPEP **>§§ 1840.01 - 1840.02 for further information< regarding the competency of the EPO >and the KIPO< as an International Searching Authority for applications filed by U.S. nationals or residents in the USPTO or in the International Bureau (IB) as receiving Office.

**

1840.01 The European Patent Office as an International Searching Authority [R-5]

Since October 1, 1982, the European Patent Office (EPO) has been available as an International Searching Authority for PCT applications filed by U.S. nationals or residents in the U.S. Patent and Trademark Office (USPTO) as receiving Office or in the International Bureau (IB) as receiving Office. The choice of International Searching Authority, either the EPO >,the Korean Intellectual Property Office (KIPO)< or the USPTO, must be made by the applicant on filing the international application. The EPO has expressed the following limitations concerning its competency to act as an International Searching Authority. For updates or possible changes to these limitations, applicants should consult the PCT Newsletter which is available in electronic form from the web site of the World Intellectual Property Organization **>(www.wipo.int/pct/en/newslett/)<.

I. SUBJECT MATTER THAT WILL NOT BE SEARCHED BY THE EPO

A. Field of Biotechnology

The EPO is not a competent authority within the meaning of PCT Article 16(3)(b), and will not carry out an international search in respect of any international application filed on or after March 1, 2002 and before January 1, 2004 if the application: (A) was filed with the USPTO as receiving Office by a national or resident of the U.S.; or (B) was filed with the IB as receiving Office by a national or resident of the U.S. (provided the application did not also identify as an applicant at its time of filing a national or resident of a European Patent Convention (EPC) Contracting State),where such application contains one or more claims relating to the field of biotechnology as defined by the following units of the International Patent Classification:

C12M	Apparatus for enzymology or microbiology
C12N	Micro-organisms or enzymes; compositions thereof
C12P	Fermentation or enzyme-using processes to synthesise a desired chemical compound or composition or to separate optical isomers from a racemic mixture
C12Q	Measuring or testing processes involving enzymes or micro-organisms; compositions or test papers therefor; processes of preparing such compositions; condition-responsive control in microbiological or enzymological processes
C07K	Peptides
G01N 33/50 (including subdivisions)	Chemical analysis of biological material, e.g. blood, urine; testing involving biospecific ligand binding methods; immunological testing
A61K 39	Medicinal preparations containing antigens or antibodies
A61K 48	Medicinal preparations containing genetic material which is inserted into cells of the living body to treat genetic diseases; Gene therapy
A01H	New plants or processes for obtaining them; plant reproduction by tissue culture techniques

For information, U.S. classes covering the corresponding subject matter are listed below:

424	Drug, bio-affecting and body treating compositions
435	Chemistry: molecular biology and microbiology
436	Chemistry: analytical and immunological testing
514	Drug, bio-affecting and body treating compositions
530	Chemistry: natural resins or derivatives; peptides or proteins; lignins or reaction products thereof
536	Organic compounds–part of the class 532-570 series
800	Multicellular living organisms and unmodified parts thereof
930	Peptide or protein sequence

B. Field of Business Methods

The EPO is not a competent authority within the meaning of PCT Article 16(3)(b) and will not carry out an international search in respect of any international application filed on or after March 1, 2002 if the application: (A) is filed with the USPTO as receiving Office by a national or resident of the U.S.; or (B) is filed with the IB as receiving Office by a national or resident of the U.S. (provided the application does not also identify as an applicant at its time of filing a

national or resident of an EPC Contracting State), where such application contains one or more claims relating to the field of business methods as defined by the following units of the International Patent Classification:

**>G06Q	Data processing systems or methods, specially adapted for administrative, commercial, financial, managerial, supervisory or forecasting purposes; systems or methods specially adapted for administrative, commercial, financial, managerial, supervisory or forecasting purposes, not otherwise provided for
G06Q 10/00	Administration, e.g., office automation or reservations; Management, e.g., resource or project management
G06Q 30/00	Commerce, e.g., marketing, shopping, billing, auctions or e-commerce
G06Q 40/00	Finance, e.g., banking, investment or tax processing; Insurance, e.g., risk analysis or pensions
G06Q 50/00	Systems or methods specially adapted for a specific business sector, e.g., health care, utilities, tourism or legal services
G06Q 90/00	Systems or methods specially adapted for administrative, commercial, financial, managerial, supervisory or forecasting purposes, not involving significant data processing
G06Q 99/00	Subject matter not provided for in other groups of this subclass<

For information, the U.S. class covering the corresponding subject matter is listed below:

705	Data processing: financial, business practice, management, or cost/price determination

The U.S. Receiving Office will forward all international applications to the EPO as ISA if so indicated by the applicant and the EPO will perform a competence check on the search copy. Where the EPO finds that it was indicated as the ISA but the application falls under the limitations indicated above, the EPO will *ex officio* change the ISA from EPO to the USPTO and will inform the applicant, the International Bureau and the USPTO accordingly. The EPO will transfer moneys received as the search fee as well as the search copy to the USPTO.

C. Declaration Under PCT Article 17(2)(a)(i)

It should be noted that even when the European Patent Office is a competent International Searching Authority (for example, if one or more applicants is a resident or national of an EPC contracting state and the application was filed with the International Bureau as receiving Office), the EPO nonetheless will not search, by virtue of PCT Article 17(2)(a)(i), any international application to the extent that it considers that the international application relates to subject matter set forth in PCT Rule 39.1.

II. FEES FOR SERVICES OF THE ISA/EP

The international search fee for the European Patent Office must be paid to the USPTO as a Receiving Office within one month from the time of filing the international application. The search fee for the European Patent Office is announced weekly in the *Official Gazette* in United States dollars. The search fee will change as costs and exchange rates require. If exchange rates fluctuate significantly, the fee may change frequently. Notice of changes will be published in the *Official Gazette* shortly before the effective date of any change.

If the European Patent Office as the International Searching Authority considers that the international application does not comply with the requirement of unity of invention as set forth in PCT Rule 13, the European Patent Office will invite applicants to

timely pay directly to it an additional search fee in Euros for each additional invention.

>

1840.02 The Korean Intellectual Property Office as an International Searching Authority [R-5]

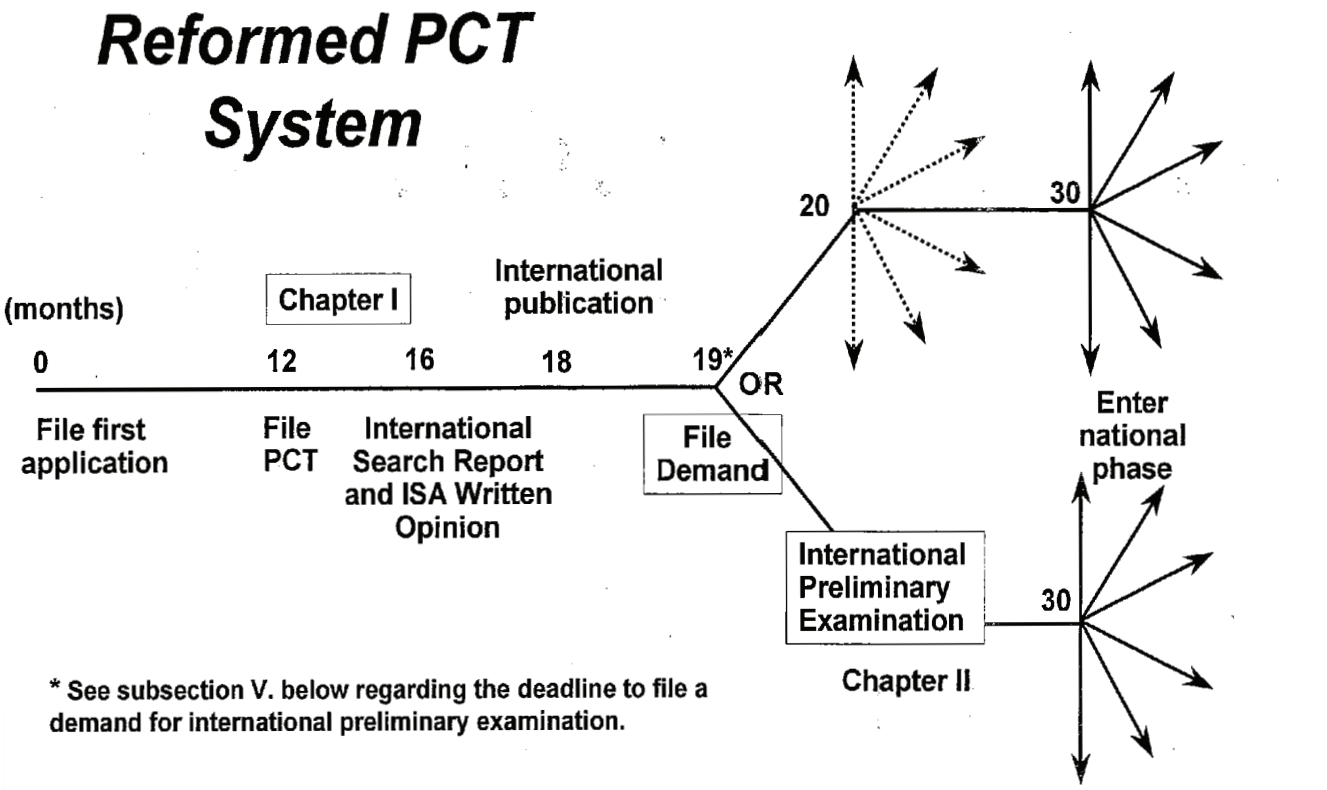
Since January 1, 2006, the Korean Intellectual Property Office (KIPO) has been available as an International Searching Authority for PCT applications filed by U.S. nationals or residents in the U.S. Patent and Trademark Office (USPTO) as receiving Office or in the International Bureau (IB) as receiving Office. The choice of International Searching Authority, either the KIPO, the European Patent Office (EPO) or the USPTO, must be made by the applicant on filing the international application.

The international search fee for the KIPO must be paid to the USPTO as a receiving Office within one month from the time of filing the international application. The search fee for the KIPO is announced weekly in the Official Gazette in United States dollars. The search fee will change as costs and exchange rates require. If exchange rates fluctuate significantly, the fee may change frequently. Notice of changes will be published in the Official Gazette shortly before the effective date of any change.

If the KIPO as the International Searching Authority considers that the international application does not comply with the requirement of unity of invention as set forth in PCT Rule 13, the KIPO may invite applicants to timely pay directly to it an additional search fee in Korean won for each additional invention.<

1842 Basic Flow Under the PCT [R-2]

*>



<

I. MEASURING TIME LIMITS UNDER THE PCT

Time limits under the PCT are measured from the "priority date" of the application. The priority date for the purposes of computing time limits is defined in PCT Article 2(xi). Where an international application does not contain any priority claim under PCT Article 8, the international filing date is considered to be the priority date.

II. INTERNATIONAL FILING DATE

An international application under the Patent Cooperation Treaty is generally filed within 12 months after the filing of the first application directed to the same subject matter, so that priority may be claimed under PCT Article 8 and Article 4 of the Stockholm Act of the Paris Convention for the Protection of Industrial Property. PCT Article 11 specifies the elements required for an international application to be accorded an international filing date.

III. ESTABLISHMENT OF THE INTERNATIONAL SEARCH REPORT >AND WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY<

As provided in PCT Rule 42 >and PCT Rule 43*bis*<, the time limit for establishing the international search report (or a declaration that no international search report will be established) >and, for international applications having an international filing date on or after January 1, 2004, the written opinion,< is three months from the receipt of the search copy by the International Searching Authority, or nine months from the priority date, whichever time limit expires later.

IV. INTERNATIONAL PUBLICATION

Under PCT Article 21, the international publication of the international application by the International Bureau shall be effected promptly after the expiration of 18 months from the priority date of that application.

V. DEADLINE FOR FILING THE DEMAND

>

A. International Applications Having a Filing Date On or After January 1, 2004

International preliminary examination is optional, but if a demand for international preliminary examination is filed in an international application having an international filing date on or after January 1, 2004, it must be filed prior to the expiration of whichever of the following periods expires later: (A) three months from the date of transmittal to the applicant of the international search report and the written opinion; or (B) 22 months from the priority date. Otherwise the demand shall be considered as if it had not been submitted and the International Preliminary Examining Authority shall so declare. See PCT Rule 54. In order to take advantage of a national phase entry time limit of at least 30 months from the priority date in relation to all States designated in the international application, it may be necessary to file a demand before the expiration of 19 months from the priority date. See subsection VI.A., below.

B. International Applications Having a Filing Date Before January 1, 2004<

International Preliminary Examination is optional, and a Demand for International Preliminary Examination may be filed at any time. However, in order to take advantage of a national phase entry time limit of at least 30 months from the priority date in relation to all States designated in the international application, it may be necessary to file a demand before the expiration of 19 months from the priority date. >See subsection VI.A., below.<

VI. DEADLINE FOR FILING COPY, TRANSLATION, AND FEE IN NATIONAL STAGE OFFICES

A listing of all national and regional offices, and the corresponding time limits for entering the national stage following PCT Chapter I and PCT Chapter II, may be found on WIPO's web site at: http://www.wipo.int/pct/en/index.html.

A. National Stage Entry Following PCT Chapter I

PCT Article 22(1) was amended, effective April 1, 2002, to specify that the national stage requirements are due not later than at the expiration of 30 months from the priority date if no demand has been filed. Prior to April 1, 2002, PCT Article 22(1) specified that these requirements were due not later than at the expiration of 20 months from the priority date. See http://www.wipo.int/pct/en/index.html for a list of the Contracting States that have not yet changed their national laws to adopt the 30 month period now set forth in PCT Article 22(1).

B. National Stage Entry Following PCT Chapter II

If the election of a Contracting State has been effected by filing a demand prior to the expiration of the 19th month from the priority date, the provisions of Article 39 apply rather than the provisions of Article 22. The deadline for filing the national stage requirements under PCT Article 39(a) is 30 months from the priority date, but any national law may fix time limits which expire later than the time limit provided in PCT Article 39(a). See PCT Article 39(b) and the list of time limits found on WIPO's web site at http://www.wipo.int/pct/en/index.html.

1843 The International Search [R-6]

PCT Article 17.
Procedure Before the International Searching Authority

(1) Procedure before the International Searching Authority shall be governed by the provisions of this Treaty, the Regulations, and the agreement which the International Bureau shall conclude, subject to this Treaty and the Regulations, with the said Authority.

(2)(a) If the International Searching Authority considers:

(i) that the international application relates to a subject matter which the International Searching Authority is not required, under the Regulations, to search, and in the particular case decides not to search, or

(ii) that the description, the claims, or the drawings, fail to comply with the prescribed requirements to such an extent that a meaningful search could not be carried out, the said Authority shall so declare and shall notify the applicant and the International Bureau that no international search report will be established.

(b) If any of the situations referred to in subparagraph (a) is found to exist in connection with certain claims only, the international search report shall so indicate in respect of such claims, whereas, for the other claims, the said report shall be established as provided in Article 18.

(3)(a) If the International Searching Authority considers that the international application does not comply with the requirement of unity of invention as set forth in the Regulations, it shall invite the applicant to pay additional fees. The International Searching Authority shall establish the international search report on those parts of the international application which relate to the invention first mentioned in the claims ("main invention") and, provided the required additional fees have been paid within the prescribed time limit, on those parts of the international application which relate to inventions in respect of which the said fees were paid.

(b) The national law of any designated State may provide that, where the national Office of the State finds the invitation, referred to in subparagraph (a), of the International Searching Authority justified and where the applicant has not paid all additional fees, those parts of the international application which consequently have not been searched shall, as far as effects in the State are concerned, be considered withdrawn unless a special fee is paid by the applicant to the national Office of that State.

PCT Rule 43bis.
Written Opinion of the International Searching Authority

43bis.1.Written Opinion

(a) Subject to Rule 69.1(b-*bis*), the International Searching Authority shall, at the same time as it establishes the international search report or the declaration referred to in Article 17(2)(a), establish a written opinion as to:

(i) whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), and to be industrially applicable;

(ii) whether the international application complies with the requirements of the Treaty and these Regulations in so far as checked by the International Searching Authority.

The written opinion shall also be accompanied by such other observations as these Regulations provide for.

**>

(b) For the purposes of establishing the written opinion, Articles 33(2) to (6) and 35(2) and (3) and Rules 43.4, 43.6*bis*, 64, 65, 66.1(e), 66.7, 67, 70.2(b) and (d), 70.3, 70.4(ii), 70.5(a), 70.6 to 70.10, 70.12, 70.14 and 70.15(a) shall apply *mutatis mutandis*.<

(c) The written opinion shall contain a notification informing the applicant that, if a demand for international preliminary examination is made, the written opinion shall, under Rule 66.1*bis*(a) but subject to Rule 66.1*bis*(b), be considered to be a written opinion of the International Preliminary Examining Authority for the purposes of Rule 66.2(a), in which case the applicant is invited to submit to that Authority, before the expiration of the time limit under Rule 54*bis*.1(a), a written reply together, where appropriate, with amendments.

The international search is a thorough, high quality search of the most relevant resources. Upon completion of the international search an international search report is established. The report provides information

on the relevant prior art to the applicant, the public, the designated Offices, and the International Preliminary Examining Authority.

PCT Article 15 describes the objective of the international search, i.e., to uncover relevant prior art, and also describes the international-type search. It should be noted generally that an international-type search is performed on all U.S. national applications filed after June 1, 1978.

Some major amendments to the PCT Rules became effective January 1, 2004. One of the consequences of these amendments is that for all international applications having an international filing date on or after January 1, 2004, and subject to PCT Rule 69.1(b-*bis*), the International Searching Authority establishes a written opinion of the International Searching Authority at the same time it establishes either the international search report or the declaration of non-establishment of the international search report under PCT Article 17(2)(a). (For applications having an international filing date prior to January 1, 2004, the International Searching Authority establishes an international search report but does not establish a written opinion.) The written opinion indicates whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), and to be industrially applicable. The written opinion also indicates any defects in the form or content of the international application under the PCT Articles or Regulations. In addition, the written opinion includes any observations that the International Searching Authority wishes to make on the clarity of the claims, the description, and the drawings, or on the question of whether the claims are fully supported by the description.

1843.01 Prior Art for Chapter I Processing [R-6]

PCT Rule 33.
Relevant Prior Art for the International Search

33.1.Relevant Prior Art for the International Search

(a) For the purposes of Article 15(2), relevant prior art shall consist of everything which has been made available to the public anywhere in the world by means of written disclosure (including drawings and other illustrations) and which is capable of being of assistance in determining that the claimed invention is or is not new and that it does or does not involve an inventive step (i.e., that it is or is not obvious), provided that the making available to the public occurred prior to the international filing date.

(b) When any written disclosure refers to an oral disclosure, use, exhibition, or other means whereby the contents of the written disclosure were made available to the public, and such making available to the public occurred on a date prior to the international filing date, the international search report shall separately mention that fact and the date on which it occurred if the making available to the public of the written disclosure occurred on a date which is the same as, or later than, the international filing date.

(c) Any published application or any patent whose publication date is the same as, or later than, but whose filing date, or, where applicable, claimed priority date, is earlier than the international filing date of the international application searched, and which would constitute relevant prior art for the purposes of Article 15(2) had it been published prior to the international filing date, shall be specially mentioned in the international search report.

33.2.Fields to Be Covered by the International Search

(a) The international search shall cover all those technical fields, and shall be carried out on the basis of all those search files, which may contain material pertinent to the invention.

(b) Consequently, not only shall the art in which the invention is classifiable be searched but also analogous arts regardless of where classified.

(c) The question what arts are, in any given case, to be regarded as analogous shall be considered in the light of what appears to be the necessary essential function or use of the invention and not only the specific functions expressly indicated in the international application.

(d) The international search shall embrace all subject matter that is generally recognized as equivalent to the subject matter of the claimed invention for all or certain of its features, even though, in its specifics, the invention as described in the international application is different.

33.3.Orientation of the International Search

(a) International search shall be made on the basis of the claims, with due regard to the description and the drawings (if any) and with particular emphasis on the inventive concept towards which the claims are directed.

(b) In so far as possible and reasonable, the international search shall cover the entire subject matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended.

PCT Rule 64.
Prior Art for International Preliminary Examination

64.1.Prior Art

(a) For the purposes of Article 33(2) and (3), everything made available to the public anywhere in the world by means of written disclosure (including drawings and other illustrations) shall be considered prior art provided that such making available occurred prior to the relevant date.

**>

(b) For the purposes of paragraph (a), the relevant date shall be:

(i) subject to items (ii) and (iii), the international filing date of the international application under international preliminary examination;

(ii) where the international application under international preliminary examination claims the priority of an earlier application and has an international filing date which is within the priority period, the filing date of such earlier application, unless the International Preliminary Examining Authority considers that the priority claim is not valid;

(iii) where the international application under international preliminary examination claims the priority of an earlier application and has an international filing date which is later than the date on which the priority period expired but within the period of two months from that date, the filing date of such earlier application, unless the International Preliminary Examining Authority considers that the priority claim is not valid for reasons other than the fact that the international application has an international filing date which is later than the date on which the priority period expired. <

64.2.Non-Written Disclosures

In cases where the making available to the public occurred by means of an oral disclosure, use, exhibition or other non-written means ("non-written disclosure") before the relevant date as defined in Rule 64.1(b) and the date of such non-written disclosure is indicated in a written disclosure which has been made available to the public on a date which is the same as, or later than, the relevant date, the non-written disclosure shall not be considered part of the prior art for the purposes of Article 33(2) and (3). Nevertheless, the international preliminary examination report shall call attention to such non-written disclosure in the manner provided for in Rule 70.9.

64.3.Certain Published Documents

In cases where any application or any patent which would constitute prior art for the purposes of Article 33(2) and (3) had it been published prior to the relevant date referred to in Rule 64.1 was published on a date which is the same as, or later than, the relevant date but was filed earlier than the relevant date or claimed the priority of an earlier application which had been filed prior to the relevant date, such published application or patent shall not be considered part of the prior art for the purposes of Article 33(2) and (3). Nevertheless, the international preliminary examination report shall call attention to such application or patent in the manner provided for in Rule 70.10.

The objective of the international search is to discover relevant prior art (PCT Article 15(2)). "Prior art" consists of everything which has been made available to the public anywhere in the world by means of written disclosure (including drawings and other illustrations); it is relevant in respect of the international application if it is capable of being of assistance in determining that the claimed invention is or is not new and that the claimed invention does or does not involve an inventive step (i.e., that it is or is not obvious), and if the making available to the public occurred prior to the international filing date for the purposes of the international search report and prior to the earliest validly claimed priority date for the purposes of the written opinion of the International Searching Authority. For further details, see PCT Rules 33, 43*bis*.1(b) and 64.

A written disclosure, that is, a document, is regarded as made available to the public if, at the relevant date, it was possible for members of the public to gain access to the content of the document and to acquire possession of the content of the document, and there was no bar of confidentiality restricting the use or dissemination of knowledge gained thereby. Where the document only provides the month or the year, but not the specific date, which the document was made available to the public, the content of the document is presumed to have been made available to the public on the last day of that month or that year, respectively, unless evidence is provided to prove otherwise.

Prior art disclosure on the Internet or on an on-line database is considered in the same manner as other forms of written disclosure. Information disclosed on the Internet or an on-line database is considered to be publicly available as of the date the disclosure was publicly posted. Where the examiner obtains an electronic document that establishes the publication date for the Internet disclosure, he/she should make a printout of this document, which must mention both the URL of the relevant Internet disclosure and the date of publication of that relevant Internet disclosure. The examiner must then cite this printout in the international search report as an "L" document and cite the relevant Internet disclosure according to the relevance of its content ("X", "Y", "A") and according to the date as established ("X", "Y", "A", "P,X", "P,Y", "P,A", "E", etc.). See MPEP § 1844.01 **>, subsection VII.< Where the examiner is unable to establish the publication date of the relevant Internet disclosure and it is relevant to the inventive step and/or novelty of the claimed invention, he/she should cite it in the international search report as a category "L" document for those claims which it would have affected if

it were published in time, giving the date the document was printed out as its publication date.

Examiners are also encouraged to cite prior art that might be of assistance in determining whether other requirements are fulfilled, such as sufficient support of the claims by the description and industrial applicability. The examiner should also note any documents that may be of importance for other reasons, such as documents putting doubt upon the validity of any priority claimed, documents contributing to a better or more correct understanding of the claimed invention, and documents illustrating the technological background, but the examiner should not spend time in searching for these documents, nor the consideration of such matters unless there is a special reason for doing so in a particular case. Documents which do not qualify as prior art because they post-date the claimed invention may nevertheless be cited to show a universal fact, such as characteristics or properties of a material, or a specific scientific fact, or to show the level of ordinary skill in the art. Furthermore, examiners must recognize that different designated Offices may have different definitions of what is the effective date of prior art. Accordingly, when performing the search, examiners should be mindful to pick out and select for citation, where appropriate, prior art which may be relevant in offices other than the one in which they are situated. However, the examiner need not expand the search beyond the standard search parameters to discover such art. Where the search has been performed and such potentially relevant prior art has been identified, examiners are encouraged to, for example, cite all relevant art published prior to the international filing date even if that art and the international application under consideration have common applicants and/or inventors. As such, if the examiner is basing the international search on a prior search performed in a prior related U.S. national application, it may be necessary for the examiner to review the prior art published within the time period of the one year preceding the filing date of the prior U.S. application for any written disclosures based on the applicant's own work that may have been published within that time period. Any such documents are considered prior art in an international application and are cited on the international search report even though they do not meet the definition of prior art in the prior U.S. national application. A further objective of the international search is to avoid, or at least minimize, additional searching at the national stage.

The international search is made on the basis of the claims, with due regard to the description and the drawings (if any) contained in the international application (PCT Article 15(3)) and should cover the entire subject matter to which the claims are directed or to which they might reasonably be expected to be directed after they have been amended (PCT Rule 33.3(b)).

The relevant date for the purpose of considering prior art for the purposes of establishment of the written opinion of the International Searching Authority is defined in PCT Rule 64.1(b) as the international filing date or, where the international application contains a * claim for priority, **>the date provided in PCT Rule 64.1(b)(ii)-(iii). See MPEP § 1878.01(a).<

In establishment of the written opinion, when determining whether there is inventive step, account should be taken of what the applicant acknowledges in his/her description as known. Such admissions should be regarded as correct and used when considering whether the claimed invention lacks novelty and/or inventive step where appropriate.

A nonwritten disclosure such as an oral disclosure, use, exhibition or other means of disclosure is not relevant prior art for the purposes of the international search unless it is substantiated by a written disclosure made available to the public prior to the international filing date and it is the written disclosure which constitutes the prior art. However, if the date on which the written disclosure was made available to the public was on or after the filing date of the international application under consideration, the search report should separately mention that fact and the date on which the written disclosure was available, even though such a written disclosure does not meet the definition of relevant prior art in the international phase, so long as the non-written disclosure was made available to the public on a date prior to the international filing date since such a non-written disclosure may be considered to be prior art under national law in the national phase. See PCT Rules 33.1(b), 64.2 and 70.9.

DOCUMENTS AND DATABASES SEARCHED BY THE INTERNATIONAL SEARCHING AUTHORITY

The International Searching Authority must endeavor to discover as much of the relevant prior art as its facilities permit (PCT Article 15(4)), and, in any case, must consult the so-called "minimum documentation" (PCT Rule 34).

Even though completeness should be the ultimate goal of the international search, this goal may at times be difficult to obtain, because of such factors as text search limitations and the inevitable imperfections of any classification system and its implementation. The examiner therefore consults the appropriate minimum documentation and the most relevant search resources for the technology, including databases listed in the U.S. Search Guidance index (available through the USPTO Intranet web site), and organizes the search effort and utilizes the search time in such a manner as to reduce to a minimum the possibility of failing to discover existing highly relevant prior art, such as art that fully anticipates any claims.

When conducting the search, it may be necessary to make use of the Internet as a search tool. Where the international application has not yet been published at the time of the search, there exists the danger that search terms used in the search on non-secure Internet search engines or in databases available on the Internet may be observed by third parties. Accordingly, all web sites must be treated as non-secure unless the Office has a commercial arrangement with a service provider in order to maintain confidentiality and a secure connection to that web site. Consequently, extreme caution must be exercised when using the Internet as a search tool where (as in most cases) the international application has not yet been published. Where a relevant database is accessible via the Internet, but an alternative secure connection to the same database is accessible, the secure connection must be used. Where no secure connection to a database on the Internet is available, the search may be conducted on the Internet using generalized search terms representing combinations of features that relate to the claimed invention, which have already been shown to exist in the state of the art.

1843.02 < Certain Subject Matter Need Not Be Searched [R-2]

>

PCT Rule 39.
Subject Matter under Article 17(2)(a)(i)

39.1.Definition

No International Searching Authority shall be required to search an international application if, and to the extent to which, its subject matter is any of the following:

(i) scientific and mathematical theories,

(ii) plant or animal varieties or essentially biological processes for the production of plants and animals, other than microbiological processes and the products of such processes,

(iii) schemes, rules or methods of doing business, performing purely mental acts or playing games,

(iv) methods for treatment of the human or animal body by surgery or therapy, as well as diagnostic methods,

(v) mere presentations of information,

(vi) computer programs to the extent that the International Searching Authority is not equipped to search prior art concerning such programs.

PCT Rule 66.
Procedure Before the International Preliminary Examining Authority

66.1.Basis of the International Preliminary Examination

*****

(e) Claims relating to inventions in respect of which no international search report has been established need not be the subject of international preliminary examination.

PCT Rule 67.
Subject Matter Under Article 34(4)(a)(i)

67.1.Definition

No International Preliminary Examining Authority shall be required to carry out an international preliminary examination on an international application if, and to the extent to which, its subject matter is any of the following:

(i) scientific and mathematical theories,

(ii) plant or animal varieties or essentially biological processes for the production of plants and animals, other than microbiological processes and the products of such processes,

(iii) schemes, rules, or methods of doing business, performing purely mental acts, or playing games,

(iv) methods for treatment of the human or animal body by surgery or therapy, as well as diagnostic methods,

(v) mere presentations of information,

(vi) computer programs to the extent that the International Preliminary Examining Authority is not equipped to carry out an

international preliminary examination concerning such programs.<

The USPTO has declared that it will search and examine, in international applications, all subject matter searched and examined in U.S. national applications. However under PCT *>Rules< 39, >43*bis*.1(b), 66.1(e) and 67.1,< no International Searching Authority is required to perform an international search >or to establish a written opinion concerning novelty, inventive step and industrial applicability< where the international application relates to any of the following subject matters:

(A) Scientific and mathematical theories;

(B) Plant or animal varieties or essentially biological processes for the production of plants and animals, other than microbiological processes and the products of such processes;

(C) Schemes, rules or methods of doing business, performing purely mental acts or playing games;

(D) Methods for treatment of the human or animal body by surgery or therapy, as well as diagnostic methods;

(E) Mere presentation of information; and

(F) Computer programs to the extent ** the said Authority is not equipped to search prior art **>concerning such programs<.

>See PCT Rule 39. In addition, the examiner is not required to search the international application, to the extent that a meaningful search cannot be carried out, in certain cases where a nucleotide and/or amino acid sequence listing is not furnished in accordance with the prescribed standard or in a computer readable form. See Administrative Instructions Section 513(c). However, the U.S. Patent and Trademark Office has declared that it will search and examine all subject matter searched and examined in U.S. national applications.<

The applicant considering the filing of an international application may be well advised not to file one if the subject matter of the application falls into one of the above mentioned areas. If he or she still does file, the International Searching Authority may declare that it will not establish an international search report. Accordingly, applicant should take into consideration which International Searching Authority (e.g., European Patent Office) he or she selects to conduct the international search. It is to be noted, nevertheless, that the lack of the international search report in such case will not have, in itself, any influence on the validity of the international application and the latter's processing will continue, including its communication to the designated Offices.

1843.03 No Search Required if Claims Are Unclear [R-6]

If the International Searching Authority considers that the description, the claims, or the drawings fail to comply with the prescribed requirements to such an extent that a meaningful search could not be carried out, it may declare that it will not establish a search report (PCT Article 17(2)(a)(ii)). Further, for applications having an international filing date on or after January 1, 2004, if the International Searching Authority considers that the description, claims, or drawings are so unclear, or the claims are so inadequately supported by the description that no meaningful opinion can be formed on the novelty, inventive step (non-obviousness), or industrial applicability of the claimed invention, the Authority shall not go into these issues in its written opinion with regard to the claims so affected (PCT Rules 43*bis*.1(b) and *>66.1(e)<). For example, the examiner may determine that a meaningful search cannot be carried out or that no meaningful opinion can be formed in certain cases where a nucleotide and/or amino acid sequence listing is not furnished in accordance with the prescribed standard or in a computer readable form. See Administrative Instructions Section 513(c) and MPEP § 1848. Further, the examiner may determine that a meaningful search cannot be carried out or that no meaningful opinion can be formed for improper multiple dependent claims (see PCT Rule 6.4(a)).

1843.04 Procedure for Claims Not Required To Be Searched and for Claims That Are Unclear [R-6]

The International Searching Authority (ISA) may declare that a meaningful search cannot be carried out with respect to some of the claims only and/or that only certain claims relate to subject matter which the ISA is not required to and has decided not to search. Where only some of the claims will not be searched, the ISA searches the remaining claims of the international application. Any unsearched claims and the rea-

sons why those claims have not been searched are indicated in Box >No.< II of the international search report (Form PCT/ISA/210).

If the examiner determines that none of the claims will be searched, the examiner declares that no search report will be established using *>Form< PCT/ISA/203. The lack of the international search report will not, in itself, have any influence on the validity of the international application and the latter's processing will continue, including its communication to the designated Offices.

If the international application cites a document that is not published or otherwise not accessible to the ISA and the document appears essential to a correct understanding of the invention to the extent that a meaningful international search would not be possible without knowledge of the content of that document, the ISA may postpone the search and request that the applicant first provide first a copy of the document, if possible to do so within the time limits for the preparation of the international search report of the ISA under the PCT. If no copy of the document is received, the ISA should first attempt to carry out the international search and then, if necessary, indicate that no meaningful search could be carried out in total or that the search needed to be restricted.

For international applications having an international filing date on or after January 1, 2004, and subject to PCT Rule 69.1(b-*bis*), the ISA establishes the written opinion of the International Searching Authority (Form PCT/ISA/237) at the same time it establishes either the international search report (Form PCT/ISA/210) or the declaration of non-establishment of the international search report (Form PCT/ISA/203). However, if the ISA determines that for any or all claims (A) the international application relates to subject matter for which it is not required to establish a written opinion concerning novelty, inventive step and industrial applicability, (B) the description, claims, or drawings, are so unclear, or the claims are so inadequately supported by the description, that no meaningful opinion can be formed on the novelty, inventive step, or industrial applicability, of the claimed invention, or (C) the subject matter of the claims relates to inventions for which no international search report will be established, the ISA indicates, in Box >No.< III of the written opinion of the International Searching Authority (Form PCT/ISA/237), that no opinion with regard to novelty, inventive step or industrial applicability will be established with regard to those claims. In most instances it will be sufficient for the examiner to (A) indicate that no international search report has been established for the relevant claims as the reason for not establishing an opinion on novelty, inventive step, and industrial applicability and (B) refer to the international search report or declaration of non-establishment of the international search report for further details.

1843.05 Time Limit for Establishing the International Search Report and the Written Opinion of the International Searching Authority [R-6]

Publication of the international application occurs at 18 months from the earliest priority date or, where there is no priority date, 18 months from the international filing date. The international search report is subject to international publication. The written opinion is not published but is made available to the public after the expiration of 30 months from the priority date. See PCT Rule 44*ter*. The Office goal is to have the search report and, if the application has an international filing date on or after January 1, 2004, the written opinion, mailed in sufficient time to reach the International Bureau by the end of 16 months from the priority date or 9 months from the filing date if no priority claim is made. This is necessary since the technical preparations for publication are completed by 17.5 months from the earliest priority date. In view of the treaty mandated publication and the time needed for technical preparation, the Office sets time periods for completion of the search report and the written opinion which will ensure sufficient time to complete internal processing and review and achieve receipt of the search report and the written opinion at the International Bureau by the 16th month from the priority date. See PCT Rule 42.1 and 43*bis*.1(a).

Thus, as a matter of practice, each Technology Center tends to set its internal time period for completion of the search report and the written opinion to meet the time limits set by the International Application Processing Division. The International Application Processing Division sets its time for completion to

ensure adequate time for review, corrections (where necessary) and mailing.

**

The Patent Cooperation Treaty is extremely date sensitive and for that reason, examiners are encouraged to complete the international search and prepare the search report, and in applications having an international filing date filed on or after January 1, 2004, the written opinion, promptly after receipt. Monitoring and tracking procedures have been devised to minimize the risk of late search reports and written opinions and/or date of transmission thereof.

1844 The International Search Report [R-6]

PCT Article 18.
The International Search Report

(1) The international search report shall be established within the prescribed time limit and in the prescribed form.

(2) The international search report shall, as soon as it has been established, be transmitted by the International Searching Authority to the applicant and the International Bureau.

(3) The international search report or the declaration referred to in Article 17(2)(a) shall be translated as provided in the Regulations. The translations shall be prepared by or under the responsibility of the International Bureau.

The results of the international search are recorded in the international search report (Form PCT/ISA/210), which, together with the written opinion of the International Searching Authority (Form PCT/ISA/237) for applications having an international filing date on or after January 1, 2004, is transmitted with Form PCT/ISA/220. The search report will be published by the International Bureau and, together with the written opinion of the International Searching Authority, will serve as a basis for examination of the international application by the designated Offices and the International Preliminary Examining Authority.

The search report is only for the purpose of identifying prior art and should not contain any expressions of opinion, reasoning, argument or explanation as to any cited prior art. However, in applications having an international filing date on or after January 1, 2004, such comments should be included in the written opinion of the International Searching Authority.

The printed international search report form (Form PCT/ISA/210) to be transmitted to the applicant and to the International Bureau contains two main sheets ("first sheet" and "second sheet") to be used for all searches. These two main sheets are intended for recording the important features of the search such as the fields searched and for citing documents revealed by the search. The printed international search report form also contains five optional continuation sheets for use where necessary. They are the: "continuation of first sheet (1)," "continuation of first sheet (2)," "continuation of first sheet (3)," "continuation of second sheet" and "patent family annex," respectively. The patent family annex sheet is not currently used by the United States International Searching Authority since patent family information is not readily available to the examiner. The "continuation of first sheet (1)" is to be used only when the international application includes a nucleotide and/or amino acid sequence and indicates the basis on which the international search was carried out, since the relevant listings or related tables may be filed or furnished at different times and in different forms. The "continuation of first sheet (2)" is used where an indication is made on the first sheet that claims were found unsearchable (item 2) and/or unity of invention is lacking (item 3). The relevant indications must then be made on that continuation sheet. The "continuation of first sheet (3)" is to contain the text of the abstract where an abstract or an amended abstract has been established by the International Searching Authority (item 5) and an indication to that effect is made on the first sheet. The "continuation of second sheet" is to be used where the space on the second sheet is insufficient for the citation of documents. The form also includes an "extra sheet" which may be used whenever additional space is required to complete information from the other sheets.

It is to be noted that only the "second sheet", the "continuation of second sheet" (if any), the "continuation of first sheet (2)" (if any), and the "extra sheet" (if any), as well as any separate sheet with information on members of patent families, will be the subject of international publication, as the "first sheet," "continuation of first sheet (1)" (if any), and the "continuation of first sheet (3)" (if any) contain only information which will already appear on the front page of the publication of the international application (PCT Rule *>48.2(b)<).

CONTENTS OF THE INTERNATIONAL SEARCH REPORT

The international search report (PCT Rule 43) contains, among other things, the citations of the documents considered to be relevant (PCT Rule 43.5 and Administrative Instructions Section 503), the classification of the subject matter of the invention (PCT Rule 43.3 and Administrative Instructions Section 504) and an indication of the fields searched (PCT Rule 43.6). Citations of particular relevance must be specially indicated (Administrative Instructions Section 505); citations of certain *>special< categories of documents are also indicated (Administrative Instructions Section 507); citations which are not relevant to all the claims must be cited in relation to the claim or claims to which they are relevant (Administrative Instructions Section 508); if only certain passages of the cited document are particularly relevant, they must be identified, for example, by indicating the page, the column or the lines, where the passage appears >(PCT Rule 43.5(e)<.

1844.01 Preparing the International Search Report (Form PCT/ISA/210) [R-6]

**

The first sheet of the international search report indicates the total number of sheets in the report. The correct number is entered, not including sheets that have not been filled-in (blank sheets). The number of sheets only includes the number of sheets from Form PCT/ISA/210.

**>

I. BASIS OF THE REPORT

A. Box 1a – Language

In most circumstances, the first box under box 1a is checked indicating that the search is carried out on the basis of the international application in the language in which it was filed. Alternatively, the second box under box 1a is checked and an indication of English made when the search is on the basis of a translation of the international application into English.

B. Box 1b – Rectification of an Obvious Mistake

Where the application includes the rectification of an obvious mistake authorized by or notified to the International Searching Authority under PCT Rule 91, box 1b of the first sheet is checked. The authorization or notification will generally be indicated on a Notification of Decision Concerning Request for Rectification (Form PCT/RO/109 or PCT/ISA/217) (see MPEP § 1836).

C. Box 1c And Box No. I – Nucleotide and/or Amino Acid Sequence Listings and Related Tables<

Where the application discloses any nucleotide and/or amino acid sequence, box *>1c< of the first sheet is checked and Box No. I (appearing on "continuation of first sheet (1)") indicates the format (that is, whether in paper copy or *>electronic< form) and status (that is whether filed with the international application or later, for purposes of search) of the sequence listing, and any related tables.

**>

II. < BOX 2 AND BOX NO. II – LIMITATION< OF THE SUBJECT OF THE INTERNATIONAL SEARCH

The report indicates whether **>any claims are unsearchable for any of the reasons indicated below. If any such limitations of the subject of the search are applied, the claims in respect of which a search has not been carried out are identified and the reasons for this are indicated. The three categories where such limitations< may arise are:

(A) claims drawn to subject matter not required to be searched by the International Searching Authority (see MPEP § 1843.02);

(B) claims in respect of which a meaningful search cannot be carried out (see MPEP § 1843.03); >and<

(C) multiple dependent claims which do not comply with PCT Rule 6.4(a) (see MPEP § 1843.03)>.<

**

Where claims are not searched for any of the reasons identified in (A)-(C) above, box 2 of the first sheet of the international search report is checked. In addition, Box No. II of the international search report

(on "continuation of first sheet (2)") is completed, giving the details.
>

III. BOX 3 AND BOX NO. III – LACK OF UNITY OF THE CLAIMED INVENTION

The report indicates whether the search is limited due to a lack of unity of invention. If unity is lacking, the claims in respect of which a search has not been carried out are identified and the reasons for this are indicated.<

Where lack of unity has been found (see MPEP § 1850), box 3 of the first sheet of the international search report is checked. In addition, Box No. III of the international search report (on "continuation of first sheet (2)") is completed, irrespective of whether an invitation to pay additional search fees has issued. The search report indicates the separate inventions claimed in the application, whether additional search fees were requested and paid, and which claims were searched. It also indicates whether any additional search fees were accompanied by a protest.

>An explanation of the separate inventions is entered in the appropriate area in Box No. III (see MPEP § 1850).

If applicant paid all the required additional search fees for additional inventions, the examiner should check item 1 under Box No. III indicating that the international search report covers all searchable claims.

If the examiner did not invite payment of additional search fees, item 2 should be checked under Box. No. III and the international search report will cover all searchable claims.

If, in response to a lack of unity of invention, applicant paid only some of the required additional search fees for additional inventions, the examiner should check item 3 under Box No. III and indicate the claims for which fees were paid and therefore, covered by the international search.

If the international search report is based on the invention first mentioned in the claims, the examiner should check item 4 under Box No. III and indicate the claims limited to the first mentioned invention that are covered by the international search report.

Regarding the three boxes indicating a Remark on Protest, the first box would be checked if the payment of any additional search fees is accompanied by a protest. The second box would not be checked since the ISA/US does not require a protest fee. The third box would be checked if the payment of any additional search fees is not accompanied by a protest. See MPEP § 1850, subsection X., for a discussion of protest procedure.<

IV. TITLE, ABSTRACT, AND FIGURE FOR PUBLICATION

The international application must contain an abstract and a title. The examiner considers the abstract (together with the title of the invention and the figure of the drawings to be published with the abstract) in relation to the requirements of the Regulations under the PCT. The examiner indicates approval or amendment of *>the title of the invention,< the text of the abstract, ** and the selection of the figure that is to accompany the abstract in items 4 to 6 of the first sheet of the international search report.

A. >Box 4 - <Title

PCT Rule 4.
The Request (Contents)

*****

4.3.Title of the Invention

The title of the invention shall be short (preferably from two to seven words when in English or translated into English) and precise.

*****

PCT Rule 37.
Missing or Defective Title

37.1.Lack of Title

If the international application does not contain a title and the receiving Office has notified the International Searching Authority that it has invited the applicant to correct such defect, the International Searching Authority shall proceed with the international search unless and until it receives notification that the said application is considered withdrawn.

37.2.Establishment of Title

If the international application does not contain a title and the International Searching Authority has not received a notification from the receiving Office to the effect that the applicant has been invited to furnish a title, or if the said Authority finds that the title does not comply with Rule 4.3, it shall itself establish a title. Such title shall be established in the language in which the international application is to be published or, if a translation into another language was transmitted under Rule 23.1(b) and the International Searching Authority so wishes, in the language of that translation.

The title must be short and precise (preferably from two to seven words in English or when translated into English). Furthermore, the title should clearly and concisely state the technical designation of the invention. In this regard the following should be taken into account:

(A) personal names or trade names or similar terms of non-technical nature which do not serve to identify the invention should not be used;

(B) the abbreviation "etc.," being vague, should not be used and should be replaced by an indication of what it is intended to cover;

(C) titles such as "Method," "Apparatus," "Chemical Compounds" alone or similar vague titles do not clearly state the technical designation of the invention and should not be used.

In general, the examiner is required to draft a new title if the applicant failed to provide a title or if the title is deficient because it does not comply with the requirements of PCT Rule 4.3. The examiner is not required to gain the applicant's approval of the new title established by the examiner.

>On the first sheet of the international search report, the examiner indicates the title text is approved (the first box under Box 4) or has been established (the second box under Box 4).<

B. >Box 5 and Box 6 - < Abstract and Figure for Publication

PCT Rule 8.
The Abstract

8.1.Contents and Form of the Abstract

(a) The abstract shall consist of the following:

(i) a summary of the disclosure as contained in the description, the claims, and any drawings; the summary shall indicate the technical field to which the invention pertains and shall be drafted in a way which allows the clear understanding of the technical problem, the gist of the solution of that problem through the invention, and the principal use or uses of the invention;

(ii) where applicable, the chemical formula which, among all the formulae contained in the international application, best characterizes the invention.

(b) The abstract shall be as concise as the disclosure permits (preferably 50 to 150 words if it is in English or when translated into English).

(c) The abstract shall not contain statements on the alleged merits or value of the claimed invention or on its speculative application.

(d) Each main technical feature mentioned in the abstract and illustrated by a drawing in the international application shall be followed by a reference sign, placed between parentheses.

8.2.Figure

(a) If the applicant fails to make the indication referred to in Rule 3.3(a)(iii), or if the International Searching Authority finds that a figure or figures other than that figure or those figures suggested by the applicant would, among all the figures of all the drawings, better characterize the invention, it shall, subject to paragraph (b), indicate the figure or figures which should accompany the abstract when the latter is published by the International Bureau. In such case, the abstract shall be accompanied by the figure or figures so indicated by the International Searching Authority. Otherwise, the abstract shall, subject to paragraph (b), be accompanied by the figure or figures suggested by the applicant.

(b) If the International Searching Authority finds that none of the figures of the drawings is useful for the understanding of the abstract, it shall notify the International Bureau accordingly. In such case, the abstract, when published by the International Bureau, shall not be accompanied by any figure of the drawings even where the applicant has made a suggestion under Rule 3.3(a)(iii).

PCT Rule 38.
Missing or Defective Abstract

38.1.Lack of Abstract

If the international application does not contain an abstract and the receiving Office has notified the International Searching Authority that it has invited the applicant to correct such defect, the International Searching Authority shall proceed with the international search unless and until it receives notification that the said application is considered withdrawn.

38.2.Establishment of Abstract

**>If the international application does not contain an abstract and the International Searching Authority has not received a notification from the receiving Office to the effect that the applicant has been invited to furnish an abstract, or if the said Authority finds that the abstract does not comply with Rule 8, it shall itself establish an abstract. Such abstract shall be established in the language in which the international application is to be published or, if a translation into another language was transmitted under Rule 23.1(b) and the International Searching Authority so wishes, in the language of that translation.

38.3.Modification of Abstract

The applicant may, until the expiration of one month from the date of mailing of the international search report, submit to the International Searching Authority:

(i) proposed modifications of the abstract; or

(ii) where the abstract has been established by the Authority, proposed modifications of, or comments on, that abstract, or both modifications and comments;

and the Authority shall decide whether to modify the abstract accordingly. Where the Authority modifies the abstract, it shall notify the modification to the International Bureau. <

In general, the examiner will have to establish a new abstract if the applicant did not provide an abstract or if the abstract does not comply with PCT Rule 8. In determining the definitive contents of the abstract, or establishing the text of the abstract anew where it is missing, the examiner should take into consideration the fact that the abstract is merely for use as technical information and, in particular, must not be used for the purpose of interpreting the scope of the protection sought. The abstract constitutes an efficient instrument for the purpose of assisting the scientist, engineer, or researcher in searching in the particular technical field and should in particular make it possible to assess whether there is need for consulting the international application itself. WIPO guidelines for the preparation of abstracts are found in WIPO Standard ST.12/A, which is available from WIPO's web site (www.wipo.int/scit/en/standards/standards.htm).

In considering the adequacy of the applicant's abstract and figure, because of practical difficulties experienced by the International Bureau with publication, examiners should have particular regard to the following:

(A) It is important that the abstract be as concise as the disclosure permits (preferably 50 to 150 words if it is in English or when translated into English). Within this constraint the abstract must provide a summary of the technical information about the disclosure as contained in the description, claims, and drawings. It should be drafted so as to serve as an efficient scanning tool for searching purposes in the art.

(B) Phrases should not be used which can be implied, such as "This disclosure concerns," "The invention defined by this disclosure," and "This invention relates to."

(C) Only one figure should normally be selected unless this would lead to inadequate disclosure. The inclusion of more than two figures should not be considered except in extreme circumstances where necessary information cannot be otherwise conveyed. Where none of the figures is considered useful for the understanding of the invention (even where the applicant has suggested a figure), no figure should be selected.

(D) Abstracts may be incomprehensible if the numerals of the selected figure(s) do not correspond with those in the abstract. Thus, this should be avoided.

(E) An absence of reference numbers on the figures must be accepted as the examiner has no mechanism to initiate their addition.

(F) Each main technical feature mentioned in the abstract and illustrated by a drawing should be followed by a reference sign, placed between parentheses.

**>In box 5 of the first sheet of the international search report, the examiner indicates approval of the text of the abstract by checking the first box. When the text of the abstract is missing or defective the second box is checked and the new abstract is established by entering the text of the new abstract. The defect or reason for establishing the new abstract should be indicated, e.g., too long or missing.

The applicant may submit modifications of the abstract until the expiration of one month from the date of mailing of the search report.< If the examiner establishes a new abstract, the applicant **>may propose modifications of, and/or comment on,< the new abstract after it has been established in the international search report. The applicant is allowed one month from the date of mailing of the international search report to respond to the examiner's abstract in the report. If the applicant does comment, the examiner takes the applicant's comments into consideration. It is not necessary for the examiner to reply to the applicant's comments even if adverse. If the examiner decides to amend the abstract established in the international search report >based on the proposed modifications and/or comment,< the International Bureau and the applicant are notified using Form PCT/ISA/205. See PCT Rule *>38.3< and Administrative Instructions Section 515.

When indicating the figure to be published, the applicant's suggestion is found in Box >No.< IX of the request **>(Form PCT/RO/101)<. Where none of the figures is considered useful for the understanding of the abstract, this is indicated at the appropriate box (**>box 6b< of the first sheet of Form PCT/ISA/210). When no drawings accompany the application, none of the boxes are checked. >Otherwise, box 6a is checked and the reason for selecting the figure to be published is indicated, i.e., as suggested by the appli-

cant, as selected by the examiner because either the applicant failed to suggest a figure in Box No. IX of Form PCT/RO/101 or the figure better characterizes the invention.< It is not recommended to select more than one figure; however, if it is necessary to do so then the wording of the form should be changed to reflect the change from single case to plural case. For example, "figure" is changed to "figures", "is" to "are" and **>" No. " to "Nos."<.

V. >BOX A -< CLASSIFICATION OF SUBJECT MATTER

The International Searching Authority assigns obligatory International Patent Classification (IPC) symbols in accordance with the rules as set forth in the Guide to the IPC and in the IPC itself (using the edition of the IPC in force at the time), whereby the technical subject of the invention of the application is identified. The International Searching Authority then records the International Patent Classification >and U.S. Classification< in Box A of the second sheet of the international search report. The IPC Guide can be accessed via the Patent Examiner's Toolkit under Classification Tools or via WIPO's web site (www.wipo.int).

VI. >BOX B -< RECORDING THE SEARCH

The examiner records the search history in Box B of the second sheet of the international search report. In recording the search history of the international search, the examiner lists the classification identification of the fields searched. Examiners are also encouraged to record the search history in sufficient detail to allow examiners of national stage applications to fully interpret and rely upon the international search. This includes recording the details of any patent and non-patent literature searches as well as searches conducted on the Internet.

Where the international search report is entirely or partly based on a previous search made for an application relating to a similar subject, the previous application number and the relevant search history consulted for this previous search is, where appropriate, identified as having been consulted for the international application in question, except in those instances where the details of an earlier search cannot be ascertained, or whenever it is impractical to record the full details of the earlier search. In the later case, a summary of the earlier search should be included. Where the previous application has been published, this information is recorded in the international search report.

VII. >BOX C -< DOCUMENTS CONSIDERED TO BE RELEVANT

The completion of Box C of the second sheet of the international search report can be considered as having three components. These are: (A) the citation category; (B) the citation of the document together with identification of the relevant passages where appropriate; and (C) the identification of relevant claim numbers. The citation of multiple documents showing the same inventive elements should be kept to a minimum. Further, when citing a document, the examiner should clearly indicate which portions of the document are most relevant.

A. Citation Category

Documents which are cited are given a category indication by way of an alphabetic character, details of which are given in Administrative Instructions Sections 505 and 507 and below. The categories for citations are also explained under the "documents considered to be relevant" section of the report. A category should always be indicated for each document cited. Where needed, combinations of different categories are possible.

1. Particularly Relevant Documents

Where a document cited in the international search report is particularly relevant, it is indicated by the letters "X" or "Y". Category "X" is applicable where a document is such that when taken alone, a claimed invention cannot be considered novel or where a document is such that when considered in light of common general knowledge, a claimed invention cannot be considered to involve an inventive step. Category "Y" is applicable where a document is such that a claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other documents of the same category, such combination being obvious to a person skilled in the art.

2. Documents Defining the State of the Art and Not Prejudicing Novelty or Inventive Step

Where a document cited in the international search report represents state of the art and is not prejudicial to the novelty or inventive step of the claimed invention, it is indicated by the letter "A".

3. Documents Which Refer to a Non-Written Disclosure

Where a document cited in the international search report refers to a non-written disclosure referred to in PCT Rule 33.1(b), the letter "O" is entered. Examples of such disclosures include conference proceedings. The document category "O" is always accompanied by a symbol indicating the relevance of the document, for example: "O,X", "O,Y", or "O,A".

4. Intermediate Documents

Documents published on dates falling between the date of filing of the application being searched and the date of priority claimed, or the earliest priority if there is more than one (see PCT Article 2(xi)(b)), are denoted by the letter "P". The letter "P" is also given to a document published on the very day of the earliest date of priority of the patent application under consideration. The document category "P" is always accompanied by a symbol indicating the relevance of the document, for example: "P,X", "P,Y", or "P,A".

5. Documents Relating to the Theory or Principle Underlying the Invention

Where any document cited in the search report is a document that may be useful for a better understanding of the principle or theory underlying the invention, or is cited to show that the reasoning or the facts underlying the invention are incorrect, it is indicated by the letter "T".

6. Potentially Conflicting Patent Documents

Any patent document bearing a filing or priority date earlier than the filing date of the application searched (not the priority date) but published on or later than that date and the content of which would constitute prior art relevant to novelty (PCT Article 33(2)) is indicated by the letter "E" (see Administrative Instructions Section 507(b) and PCT Rule 33.1(c)).

7. Documents Cited in the Application

When the search report cites documents already mentioned in the description of the patent application for which the search is carried out, such documents may be identified on the search report by the wording "cited in the application" under the cited document.

8. Documents Cited for Other Reasons

Where in the search report any document is cited for reasons other than those referred to in the foregoing paragraphs (in particular as evidence), for example:

(A) a document which may throw doubt on a priority claim (Article 4(C)(4) of the Paris Convention), or

(B) a document cited to establish the publication date of another citation,

the document is indicated by the letter "L". Brief reasons for citing the document should be given. Documents of this type need not be indicated as relevant to any particular claims. However, where the evidence that they provide relates only to certain claims (for example the "L" document cited in the search report may invalidate the priority in respect of certain claims and not others), then the citation of the document should refer to those claims.

**>

B.* < *Citation of the Documents

Identification of any document should be made according to WIPO Standard ST.14 (see Administrative Instructions Section 503). For "A" citations it is not necessary to indicate the relevant claims unless there is good reason to do so; for example where there is a clear lack of unity *a priori* (see MPEP § 1850) and the citation is relevant only to a particular claim or group of claims or when the claims meet the criteria of novelty, inventive step, and industrial applicability under PCT Article 33(2) to (4) and the "A" category citations represent the most relevant prior art. The box on the second sheet of Form PCT/ISA/210 entitled "Further documents listed are in the continuation of Box C" is checked if a continuation sheet is used to list additional documents that will not fit in the space provided in Box C.

>

C. Relationship Between Documents and Claims

Each citation should include a reference to the claims to which it relates (see Administrative Instructions Section 508). If necessary, various relevant parts of the document cited should each be related to the claims in like manner (with the exception of "L" documents and "A" documents). It is also possible for the same document to represent a different category with respect to different claims. For example:

WO1990/001867 A (WIDEGREN LARS (SE)) 8 March 1990 (08-03-1990), figures 1 and 2

X 1
Y 2-5
A 6-10

The above example means that Figures 1 and 2 of the cited document disclose subject matter which prejudices the novelty or inventive step of claim 1, which prejudices the inventive step of claims 2-5 when combined with another document cited in the search report, and which represents non-prejudicial state of the art for the subject matter of claims 6-10.<

VIII. FINALIZATION OF THE SEARCH REPORT

The identification of the International Searching Authority which established the international search report and the date of actual completion, that is, the date on which the report was drawn up are indicated at the bottom of the second sheet of the international search report. This information is generated automatically by the OACS software when preparing the international search report. The international search report will be accompanied by a transmittal letter (Form PCT/ISA/220) indicating the date the search report was mailed to the applicant. ** See MPEP § *>1845.02<.

Pursuant to PCT Rule 43.8, the international search report must indicate the name of the officer of the International Searching Authority responsible for the report, i.e., the "authorized officer." An "authorized officer" is the person who actually performed the search work and prepared the search report, or another person who was responsible for supervising the search. See Administrative Instructions Section 514. Thus, an examiner need not have signatory authority in order to be named as an authorized officer on the search report. However, the "file copy" of the search report must be signed by an examiner having at least partial signatory authority.

The international search report should be mailed within 3 months of receipt of the search copy or within 9 months from the priority date, whichever is later.

**>

PATENT COOPERATION TREATY

PCT

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference CMC-123-PCT	**FOR FURTHER ACTION**	see Form PCT/ISA/220 as well as, where applicable, item 5 below.
International application No. PCT/US07/00150	International filing date *(day/month/year)* 05 April 2007 (05.04.2007)	(Earliest) Priority Date *(day/month/year)* 05 April 2006 (05.04.2006)
Applicant ACME FASTENER CORPORATION		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 4 sheets.

[X] It is also accompanied by a copy of each prior art document cited in this report.

1. **Basis of the report**
   a. With regard to the **language**, the international search was carried out on the basis of:
      [X] the international application in the language in which it was filed.
      [ ] a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).
   b. [ ] This international search report has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43.6*bis*(a)).
   c. [ ] With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. [ ] **Certain claims were found unsearchable** (see Box No. II).

3. [X] **Unity of invention is lacking** (see Box No. III).

4. With regard to the **title**,
   [X] the text is approved as submitted by the applicant.
   [ ] the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,
   [X] the text is approved as submitted by the applicant.
   [ ] the text has been established, according to Rule 38.2, by this Authority as it appears in Box No. IV. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. With regard to the **drawings**,
   a. the figure of the **drawings** to be published with the abstract is Figure No. 3
      [X] as suggested by the applicant.
      [ ] as selected by this Authority, because the applicant failed to suggest a figure.
      [ ] as selected by this Authority, because this figure better characterizes the invention.
   b. [ ] none of the figures is to be published with the abstract.

Form PCT/ISA/210 (first sheet) (April 2007) (Revised)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US07/00150

Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:

2. ☐ Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

Please See Continuation Sheet

1. ☒ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.

2. ☐ As all searchable claims could be searched without effort justifying additional fees, this Authority did not invite payment of additional fees.

3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

☐ The additional search fees were accompanied by the applicant's protest and, where applicable, the payment of a protest fee.

☐ The additional search fees were accompanied by the applicant's protest but the applicable protest fee was not paid within the time limit specified in the invitation.

☒ No protest accompanied the payment of additional search fees.

Form PCT/ISA/210 (continuation of first sheet (2)) (April 2007)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US07/00150

A. CLASSIFICATION OF SUBJECT MATTER
IPC: **B25C 5/06** (2006.01)
USPC: 227/8
According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
U.S.: 227/8,120,121,123,127,128,131

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
EAST (DERWENT, USPTO, USPGPUB, JPO, EPO) - electromagnet?, magazine?

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X --- Y A	US 4,375,867 A (NOVAK et al.) 08 March 1983 (08.03.1983), column 3, line 65 - column 4, line 49, and figure 3	1 and 2 --- 3 and 5-15 4 and 16-20
Y	US 4,183,453 A (BARRETT et al.) 15 January 1980 (15.01.1980), column 1, lines 40-49; column 2, line 40 - column 5, line 2; column 6, line 34 - column 7, line 7; and figures 5-7	3 and 5-10
Y	US 3,041,614 A (D'HAEM et al.) 03 July 1962 (03.07.1962), column 4, line 76 - column 5, line 23	11-15

☐ Further documents are listed in the continuation of Box C. ☐ See patent family annex.

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"&" document member of the same patent family

Date of the actual completion of the international search	Date of mailing of the international search report

Form PCT/ISA/210 (second sheet) (April 2007)

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US07/00150

Box III. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING
This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be searched, the appropriate additional search fees must be paid.

Group I, claim(s) 1 and 2, drawn to an electromagnetic fastener driver with a safety interlock to prevent actuation of the tool without the fastener output channel being pressed against a work piece.

Group II, claim(s) 3 and 5, drawn to an electromagnetic fastener driver with means to prevent the feeding of a fastener while the tool is being actuated.

Group III, claim(s) 6-10, drawn to an electromagnetic fastener driver with a control means to provide for multiple driving strokes to be delivered to a single fastener with a single actuation of the tool.

Group IV, claim(s) 11-15, drawn to an electromagnetic fastener driver with fastener anti-jam means.

Group V, claim(s) 4 and 16-20, drawn to an electromagnetic fastener driver with means to hold the fastener magazine in a predetermined position.

The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of the Group I invention is the safety interlock to prevent actuation of the tool without the fastener output channel being pressed against a work piece. The special technical feature of the Group II invention is the means to prevent the feeding of a fastener while the tool is being actuated. The special technical feature of the Group III invention is the control means to provide for multiple driving strokes to be delivered to the same fastener with a single actuation of the tool The special technical feature of the Group IV invention is the fastener anti-jam means. The special technical feature of the Group V inventions is the means to hold the fastener magazine in a predetermined position. None of these special technical features are common to the other groups, nor do they correspond to a special technical feature in the other groups. Therefore, unity of invention is lacking.

Form PCT/ISA/210 (extra sheet) (April 2007)

1845 Written Opinion of the International Searching Authority [R-6]

PCT Rule 43bis.
Written Opinion of the International Searching Authority

43bis.1.Written Opinion

**>

(a) Subject to Rule 69.1(b-*bis*), the International Searching Authority shall, at the same time as it establishes the international search report or the declaration referred to in Article 17(2)(a), establish a written opinion as to:<

(i) whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious), and to be industrially applicable;

(ii) whether the international application complies with the requirements of the Treaty and these Regulations in so far as checked by the International Searching Authority.

The written opinion shall also be accompanied by such other observations as these Regulations provide for.

**>

(b) For the purposes of establishing the written opinion, Articles 33(2) to (6) and 35(2) and (3) and Rules 43.4, 43.6*bis*, 64, 65, 66.1(e), 66.7, 67, 70.2(b) and (d), 70.3, 70.4(ii), 70.5(a), 70.6 to 70.10, 70.12, 70.14 and 70.15(a) shall apply *mutatis mutandis*.<

(c) The written opinion shall contain a notification informing the applicant that, if a demand for international preliminary examination is made, the written opinion shall, under Rule 66.1*bis*(a) but subject to Rule 66.1*bis*(b), be considered to be a written opinion of the International Preliminary Examining Authority for the purposes of Rule 66.2(a), in which case the applicant is invited to submit to that Authority, before the expiration of the time limit under Rule 54*bis*.1(a), a written reply together, where appropriate, with amendments.

For international applications having an international filing date on or after January 1, 2004, the examiner is required, in most instances, to establish a written opinion on novelty, inventive step, and industrial applicability of the claimed invention at the same time he/she establishes the international search report. The international search report and written opinion together serve to inform the International Preliminary Examining Authority of the documents and arguments necessary to complete the relevant assessments if international preliminary examination is demanded, and to inform the designated Offices of information that may be relevant to examination in the national phase. (The written opinion is transmitted to the designated offices in the form of an international preliminary report on patentability if no international preliminary examination report is established under Chapter II of the PCT). A written opinion of the International Searching Authority is not required in the limited instance where a demand for international preliminary examination and required fees (PCT Rule 69.1(a)) have been filed with the United States International Preliminary Examining Authority and the examiner considers all the conditions of PCT Article 34(2)(c)(i) to (iii) to be fulfilled. In this limited instance, a positive international preliminary examination report may be issued. See PCT Rule 69.1(b-*bis*)).

The applicant must be notified in the written opinion of the defects found in the application. The examiner is further required to fully state the reasons for his/her opinion (PCT *>Rules 66.1*bis* and<66.2(b)) and invite a written reply, with amendments where appropriate (PCT Rule 66.2(c)).

1845.01 Preparing the Written Opinion of the International Searching Authority (Form PCT/ISA/237) [R-7]

The International Patent Classification and U.S Classification in the header on the cover sheet of Form PCT/ISA/237 is to be consistent with the indication of classification of subject matter in Box A on the second sheet of the International Search Report (Form PCT/ISA/210).

The Boxes marked on the cover sheet represent a summary of the indications detailed on the subsequent relevant sheets of Form PCT/ISA/237.

I. BOX NO. I. — BASIS OF OPINION

When completing Box No. I, item 1, of Form PCT/ISA/237, the examiner must indicate whether or not the opinion has been established on the basis of the international application in the language in which it was filed. If a translation was furnished for the purpose of the search, this must be indicated.

Box No. I, item 2 of Form PCT/ISA/237 is to be marked when the opinion is established taking into account the rectification of an obvious mistake under PCT Rule 91.

With respect to Box No. I, item 3 of Form PCT/ISA/237, if the opinion has been based on a nucleotide and/or amino acid sequence disclosed and necessary to the claimed invention, the examiner must indicate the type of material (i.e., a sequence listing

and/or tables related thereto), the format of the material (i.e., on paper or in electronic form) and the time of filing/furnishing (i.e., contained in the international application as filed, filed together with the international application in electronic form and/or furnished subsequently to the ISA for the purposes of the search). If more than one version or copy of the sequence listing and/or tables relating thereto is filed, the examiner must indicate whether the applicant has provided the required statement indicating that the information in the subsequent or additional copies are identical to that in the application as filed or does not go beyond the application as filed, as appropriate.

II. BOX NO. II. — PRIORITY

Box No. II of Form PCT/ISA/237 is to inform applicant of the status of a request for priority. Where one or more citations of the international search report were published after the earliest priority date, the validity of that earliest priority date requires checking. Where the priority document is one which is in the records of the ISA, it should be obtained from those records. If a copy of the priority document is not available before preparation of the written opinion of the ISA because it has not yet been provided by the applicant, and if that earlier application was not filed with that Authority in its capacity as a national Office or the priority document is not available to that Authority from a digital library in accordance with the Administrative Instructions, the written opinion of the ISA may be established as if the priority had been validly claimed.

If the examiner needs a copy of a foreign priority document, the copy will be supplied on request to the International Bureau (IB) unless the IB has not yet received the priority document, in which case the examiner may invite the applicant to furnish such a copy. See PCT Rule 66.7(a). The examiner may consult with the Technology Center Special Program Examiner regarding requesting a copy of the priority document from the IB. If the priority document is not in English, the examiner may invite the applicant to furnish a translation of the priority document within two months of the invitation. See PCT Rule 66.7(b). Box No. II, item 3, "Additional Observations" may be used to invite applicant to supply a copy of the priority document and/or translation. Preparation of the written opinion by the International Searching Authority should not be delayed to await a response to the invitation. The written opinion of the ISA will ordinarily be established as if the priority claim had been validly claimed even though the copy and/or translation has not been furnished. However, failure to timely furnish a copy of the priority document and/or translation may result in any further written opinion or international preliminary examination report of the International Preliminary Examining Authority being established as if the priority had not been claimed.

If applicant fails to furnish a copy or translation of the earlier application, whose priority has been claimed, check item 1 and then check the first box of the subsection if applicant failed to furnish a copy of the earlier application whose priority has been claimed, and check the second box of the subsection if applicant failed to furnish a translation of the earlier application whose priority has been claimed.

When the claim for priority has been found invalid (e.g., the notification under PCT Rule 26*bis*.2(b) has been provided or all claims are directed to inventions which were not described and enabled by the earlier application), check item 2 in Box II and indicate why the claim for priority has been found invalid following item 3 "Additional observations".

III. BOX NO. III. — NON-ESTABLISHMENT OF OPINION ON NOVELTY, INVENTIVE STEP AND INDUSTRIAL APPLICABILITY

Box No. III of Form PCT/ISA/237 is intended to cover situations where some or all claims of an application are so unclear or inadequately supported by the description that the question of novelty, inventive step (nonobviousness), and industrial applicability cannot be considered, or where the international application or claims thereof relate to subject matter for which it is not required to establish a written opinion concerning novelty, inventive step and industrial applicability, or where no international search report has been established for the claims.

If some or all of the claims of an application relate to subject matter for which it is not required to establish a written opinion concerning novelty, inventive step and industrial applicability, check the appropriate box, indicate which claims relate to that subject matter and specify the reasons e.g., improper multiple

dependent claims that fail to comply with PCT Rule 6.4.

If some or all of the claims of an application are so unclear that no meaningful opinion could be formed, check the appropriate box, indicate which claims are unclear and specify the reasons.

If some or all of the claims are so inadequately supported by the description that no meaningful opinion could be formed, check the appropriate box.

If no international search report has been established for certain claims, check the appropriate box and indicate the claim numbers.

If the nucleotide and/or amino acid sequence listing does not comply with Annex C of the Administrative Instructions, the examiner must indicate whether the written form and/or the electronic form is not in compliance and the reason for the non-compliance. Further, if tables related to the sequence listing are included as part of the international application, and these tables fail to comply with the technical requirements of Annex C of the Administrative Instructions, the examiner must indicate this in Box No. III.

IV. BOX NO. IV. — LACK OF UNITY OF INVENTION

Box No. IV of Form PCT/ISA/237 should be used by the examiner to notify applicant that lack of unity has been found by checking item 1, and one of the four boxes under item 1.

If applicant paid additional fees for additional inventions, the examiner should check the first box under item 1.

If the additional fees were paid under protest, the examiner should check the second box under item 1.

Regarding the third box, since the ISA/US does not require a protest fee, this box would not be checked.

If the search report is based on the first mentioned invention (no additional search fees were paid), the examiner should check the fourth box under item 1.

Item 2 of Box No. IV is to be completed if the examiner determines that unity of invention is lacking but chooses not to invite the applicant to agree to a search limited to the first mentioned invention or pay additional fees.

If a lack of unity exists, the examiner would mark the second box under item 3. However, since the reasons for the lack of unity have already been set forth on the simultaneously issued international search report, the examiner can simply state that the reason the requirement of unity of invention is not complied with is set forth in the international search report. The first box under item 3 would never be marked.

Item 4 is used by the examiner to indicate which parts of the application form the basis of the opinion after the lack of unity of invention has been explained. The first box should be checked when the opinion is established for all parts. Otherwise, the second box is checked and the relevant claims identified.

V. BOX NO. V. — REASONED STATEMENT WITH REGARD TO NOVELTY, INVENTIVE STEP, AND INDUSTRIAL APPLICABILITY OF CLAIMS

In Box No. V of Form PCT/ISA/237, the examiner must list in summary form all claims with regard to the criteria of novelty (N), inventive step (IS), and industrial applicability (IA). For definitions of novelty, inventive step, and industrial applicability see MPEP §§ 1878.01(a)(1), 1878.01(a)(2), and 1878.01(a)(3), respectively.

Box No. V is the main purpose of the written opinion. All claims without fatal defects are treated on the merits in Box No. V as to novelty, inventive step (nonobviousness) and industrial applicability.

The treatment of claims in Box No. V is similar in format to an Office action in a U.S. national patent application except that the words “rejection,” “patentability,” and “allowable are never used in a written opinion. On the international level, all written opinions are nonbinding and a patent does not issue; what does issue is an international preliminary report on patentability (IPRP), which is nonbinding on the elected States.

Examiner statements in Box No. V can be positive or negative. If the claims define over the prior art and meet the test of novelty, inventive step (nonobviousness) and industrial applicability, a positive statement equivalent to detailed reasons for allowance in a corresponding U.S. national application should be provided, indicating how the claims meet the tests of novelty, inventive step and industrial applicability.

Form paragraphs 18.04 and 18.04.01 may be used for this purpose.

¶ *18.04 Meets Novelty and Inventive Step*

Claim **[1]** the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest **[2]**.

Examiner Note:

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s), and insert the verb --meet-- or --meets--, as appropriate.
2. In bracket 2, insert the details of the claimed subject matter that render it unobvious over the prior art.
3. If the claims also meet the industrial applicability criteria set out in PCT Article 33(4), this form paragraph should be followed by form paragraph 18.04.01.
4. If the claims do not meet the industrial applicability criteria set out in PCT Article 33(4), this form paragraph should be followed by form paragraph 18.03.

¶ *18.04.01 Meets Industrial Applicability*

Claim [1] the criteria set out in PCT Article 33(4), and thus [2] industrial applicability because the subject matter claimed can be made or used in industry.

Examiner Note:

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s), and the verb --meet-- or -- meets--, as appropriate.
2. In bracket 2, insert --have-- or --has--, as appropriate.
3. If the claims meet all of the requirements of PCT Article 33(2)-(4), use form paragraph 18.04 before this form paragraph to provide positive statements for novelty and inventive step under PCT Article 33(2)-(3).
4. If the claims have industrial applicability but lack novelty and inventive step, use this form paragraph and additionally use form paragraph 18.01.
5. If the claims have industrial applicability and novelty but lack inventive step, use this form paragraph and additionally use one or more of form paragraphs 18.02, 18.02.01 and 18.02.02, as appropriate.
6. If the claims do not have industrial applicability, use form paragraph 18.03 instead of this form paragraph.

If, on the other hand, it is the opinion of the examiner that some or all claims lack novelty, inventive step, or industrial applicability, specific reasons must be given similar to those used in U.S. national applications.

Form paragraphs 18.01, 18.02, 18.02.01, 18.02.02, and 18.03 may be used, as appropriate, to explain the negative statements listed in Box No. V.

¶ *18.01 Lacks Novelty*

Claim **[1]** novelty under PCT Article 33(2) as being anticipated by **[2]**.

Examiner Note:

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, insert name of prior art relied upon.

¶ *18.02 Lacks Inventive Step - One Reference*

Claim **[1]** an inventive step under PCT Article 33(3) as being obvious over **[2]**. **[3]**

Examiner Note:

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, insert name of prior art relied upon.
3. In bracket 3, add reasoning.

¶ *18.02.01 Lacks Inventive Step - Two References*

Claim **[1]** an inventive step under PCT Article 33(3) as being obvious over **[2]** in view of **[3]**. **[4]**

Examiner Note:

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, insert name of PRIMARY prior art relied upon.
3. In bracket 3, insert name of SECONDARY prior art relied upon.
4. In bracket 4, add reasoning.

¶ *18.02.02 Lacks Inventive Step - Additional Reference*

Claim **[1]** an inventive step under PCT Article 33(3) as being obvious over the prior art as applied in the immediately preceding paragraph and further in view of **[2]**. **[3]**

Examiner Note:

1. This form paragraph may follow either 18.02 or 18.02.01.
2. In bracket 1, pluralize "claim" if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
3. In bracket 2, insert name of additional prior art relied upon.
4. In bracket 3, add reasoning.

¶ *18.03 Lacks Industrial Applicability*

Claim **[1]** industrial applicability as defined by PCT Article 33(4). **[2]**

Examiner Note:

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s), and the verb --lack-- or --lacks--, as appropriate.
2. In bracket 2, add reasoning.

Examiners are encouraged to indicate any amendments which applicant could present which would avoid a negative statement in the international preliminary examination report in the event that applicant chooses to file a demand.

VI. BOX NO. VI. — CERTAIN DOCUMENTS CITED

Since all documents cited at the time of establishment of the written opinion will be listed on the

simultaneously established search report, there is no need to also list them on the written opinion, and as such this box should be left blank.

VII. BOX NO. VII. — CERTAIN DEFECTS IN THE INTERNATIONAL APPLICATION

In Box No. VII of Form PCT/ISA/237, defects in the form and content of the international application are identified.

Defects that would be listed in Box No. VII include informalities such as misplaced and/or omitted drawing numerals, misspelled words, and grammatical errors.

The following form paragraphs are used in Box No. VII of PCT/ISA/237, "Certain defects in the international application," for noting technical defects.

**>

¶ *18.08 Drawing - Defect in Form or Contents Thereof*

The drawings contain the following defect(s) in the form or content thereof: **[1]**

Examiner Note:

In bracket 1, insert identification of defects in drawings.

<

¶ *18.08.01 Drawing Is Required*

The subject matter of this application admits of illustration by drawing to facilitate understanding of the invention. Applicant is required under PCT Article 7(1) to furnish a drawing.

**>

¶ *18.09 Description - Defect in Form or Contents Thereof*

The description contains the following defect(s) in the form or contents thereof: **[1]**

Examiner Note:

In bracket 1, insert the technical problem, e.g., misspelled word.

¶ *18.10 Claims - Defect in Form or Contents Thereof*

Claim **[1]** contain(s) the following defect(s) in the form or contents thereof: **[2]**

Examiner Note:

1. In bracket 1, pluralize "claim" if needed, and insert claim no.(s).

2. In bracket 2, identify the technical deficiency.

<

VIII. BOX NO. VIII. — CERTAIN OBSERVATIONS ON THE INTERNATIONAL APPLICATION

In Box No. VIII, the examiner notifies the applicant of observations made as to the clarity of the claims, the description, the drawings, or on the question whether the claims are fully supported by the description.

If the claims, the description, or the drawings are so unclear, or the claims are so inadequately supported by the description, that no meaningful opinion can be formed on the question of novelty, inventive step (nonobviousness) or industrial applicability, the applicant is so informed in Box No. III. See PCT Article 34(4)(a)(ii). Reasons for the examiner's opinion that the claims, description and drawings, etc., lack clarity must also be provided.

If the above situation is found to exist in certain claims only, the provisions of PCT Article 34(4)(a)(ii) shall apply to those claims only.

If the lack of clarity of the claims, the description, or the drawings is of such a nature that it is possible to form a meaningful opinion on the claimed subject matter, then it is required that the examiner consider the claims and render a written opinion on novelty, inventive step, and industrial applicability in Box No. V.

Since the claims of an international application are not subject to a rejection on either art or indefiniteness consistent with U.S. practice, observations by the examiner with regard to clarity of the claims, the description and the drawings will be treated in the form of an objection in the written opinion in Box No. VIII.

The following form paragraphs may be used in Box No. VIII, "Certain observations on the international application," of Form PCT/ISA/237 for noting objections which are substantive rather than merely technical in nature.

**>

¶ *18.11 Drawing Objections - Lack Clarity*

The drawings are objected to under PCT Article 7 as lacking clarity under PCT Article 7 because: **[1]**

Examiner Note:

In bracket 1, insert reasons why the drawings lack clarity, e.g., inaccurate showing.

¶ *18.12.01 Claims Objectionable - Inadequate Written Description*

Claim **[1]** objected to under PCT Article 6 because the claim **[2]** not fully supported by the description. The application, as originally filed, did not describe: **[3]**

Examiner Note:

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s), and the verb --is-- or --are--, as appropriate.
2. In bracket 2, pluralize "claim" if needed, and insert the verb --is-- or --are--.
3. In bracket 3, identify subject matter not described in the application as filed.

¶ *18.13.01 Claims Objectionable - Non-Enabling Disclosure*

Claim **[1]** objected to under PCT Article 6 because the claim **[2]** not fully supported by the description. The description does not disclose the claimed invention in a manner sufficiently clear and complete for the claimed invention to be carried out by a person skilled in the art as required by PCT Article 5 because: **[3]**

Examiner Note:

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 2, pluralize "claim" if needed, insert the verb --is-- or --are--.
3. In bracket 3, identify the claimed subject matter that is not enabled and explain why it is not enabled.

¶ *18.14.01 Claims Objectionable - Lack of Best Mode*

Claim **[1]** objected to under PCT Article 6 because the claim **[2]** not fully supported by the description. The description fails to set forth the best mode contemplated by the applicant for carrying out the claimed invention as required by PCT Rule 5.1(a)(v) because: **[3]**.

Examiner Note:

1. In bracket 1, pluralize "claim" if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 2, pluralize "claim" if needed, and insert the appropriate verb --is-- or --are--.
3. In bracket 3, insert the objection and reasons.

¶ *18.15 Claims Objectionable - Indefiniteness*

Claim **[1]** objected to under PCT Article 6 as lacking clarity because claim **[2]** indefinite for the following reason(s): **[3]**

Examiner Note:

1. In brackets 1 and 2, pluralize "claim" if needed, insert claim no.(s) and the appropriate verb --is-- or --are--.
2. In bracket 3, insert reasons.

<

IX. AUTHORIZED OFFICER

Pursuant to PCT Rules 43*bis*.1 and 70.14, the written opinion of the International Searching Authority must indicate the name of the officer of the International Searching Authority responsible for the written opinion, i.e., the "authorized officer." An "authorized officer" is the person who actually performed the search work and prepared the search report and the written opinion, or another person who was responsible for supervising the search and the establishment of the written opinion. See Administrative Instructions Section 514. Thus, an examiner need not have signatory authority in order to be named as an authorized officer on the written opinion. However, the "file copy" of the written opinion must be signed by an examiner having at least partial signatory authority.

X. TIME TO REPLY

If, in response to the written opinion of the International Searching Authority (Form PCT/ISA/237), applicant wishes to file a demand and amendments and/or arguments, the time period for response is 3 months from the mailing of the international search report and the written opinion or before the expiration of 22 months from the priority date, whichever expires later.

1. This opinion contains indications relating to the following items:

- [X] Box No. I Basis of the opinion
- [ ] Box No. II Priority
- [ ] Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- [X] Box No. IV Lack of unity of invention
- [X] Box No. V Reasoned statement under Rule 43*bis*.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- [ ] Box No. VI Certain documents cited
- [X] Box No. VII Certain defects in the international application
- [ ] Box No. VIII Certain observations on the international application

2. **FURTHER ACTION**

If a demand for international preliminary examination is made, this opinion will be considered to be a written opinion of the International Preliminary Examining Authority ("IPEA") except that this does not apply where the applicant chooses an Authority other than this one to be the IPEA and the chosen IPEA has notified the International Bureau under Rule 66.1*bis*(b) that written opinions of this International Searching Authority will not be so considered.

If this opinion is, as provided above, considered to be a written opinion of the IPEA, the applicant is invited to submit to the IPEA a written reply together, where appropriate, with amendments, before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later.

For further options, see Form PCT/ISA/220.

3. For further details, see notes to Form PCT/ISA/220.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No.
PCT/US07/00150

Box No. I Basis of this opinion

1. With regard to the **language**, this opinion has been established on the basis of:
   - [X] the international application in the language in which it was filed.
   - [ ] a translation of the international application into _____ which is the language of a translation furnished for the purposes of international search (Rules 12.3(a) and 23.1(b)).

2. [ ] This opinion has been established taking into account the **rectification of an obvious mistake** authorized by or notified to this Authority under Rule 91 (Rule 43*bis*.1(a))

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, this opinion has been established on the basis of:

   a. type of material
      - [ ] a sequence listing
      - [ ] table(s) related to the sequence listing

   b. format of material
      - [ ] on paper
      - [ ] in electronic form

   c. time of filing/furnishing
      - [ ] contained in the international application as filed
      - [ ] filed together with the international application in electronic form
      - [ ] furnished subsequently to this Authority for the purposes of search

4. [ ] In addition, in the case that more than one version or copy of a sequence listing and/or table(s) relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

5. Additional comments:

PCT/US07/00150

Box No. IV Lack of unity of invention

1. [X] In response to the invitation (Form PCT/ISA/206) to pay additional fees the applicant has, within the applicable time limit:
   - [X] paid additional fees.
   - [ ] paid additional fees under protest and, where applicable, the protest fee.
   - [ ] paid additional fees under protest but the applicable protest fee was not paid.
   - [ ] not paid additional fees.
2. [ ] This Authority found that the requirement of unity of invention is not complied with and chose not to invite the applicant to pay additional fees.
3. This Authority considers that the requirement of unity of invention in accordance with Rule 13.1, 13.2 and 13.3 is
   - [ ] complied with.
   - [X] not complied with for the following reasons:

   See the lack of unity section of the International Search Report (Form PCT/ISA/210)

4. Consequently, this opinion has been established in respect of the following parts of the international application:
   - [X] all parts.
   - [ ] the parts relating to claims Nos. _____

Continuation of:

V.2. Citations and Explanations:

Claims 1 and 2 lack novelty under PCT Article 33(2) as being anticipated by Novak et al. (US 4,375,867). Novak et al. teaches the claimed electromagnetic fastener tool 10 with a housing 12 having a fastener magazine assembly 18 mounted thereon with the magazine assembly having a fastener output channel. The magazine assembly 18 is pivoted between a first position wherein the tool can not be actuated and a second position wherein a fastener may be driven from the tool (note figure 3 and column 3, line 65 through column 4, line 5). The magazine assembly 18 is moved from the first position to the second position by placing the fastener output channel firmly against a work piece. As shown in figure 3 and described at column 4, lines 6-49, the magazine assembly 18 and the trigger button 24 are coupled by a safety mechanism 62. This safety mechanism has a sliding rod 64 with the lower end of the rod 64 being attached to the top of the channel 48 of the magazine assembly such that rod 64 moves with the magazine assembly. When the magazine assembly 18 is placed on a work piece, it rotates into the second position and pushes rod 64 upward. The upper portion of rod 64 has a spring 74 which includes a cam surface 76, a curved surface 78 and a bottom edge 81. Bottom edge 81 of spring 74 is normally positioned adjacent flange 86 of trigger button 24 and blocks upward movement of the trigger button. Thus, the trigger button may not be depressed (moved upwards) to actuate the tool until the bottom edge of spring 74 is moved away from flange 86. This is accomplished by the interaction of curved surface 78 of spring 74 with a corresponding curved surface 82 fixed to the housing 12. When rod 64 moves upward, spring 74 is bent away from trigger button 24 by the interaction of curved surfaces 78 and 82. Thus, placing the fastener output channel of the magazine assembly 18 against the work piece moves bottom edge 81 of spring 74 out of its blocking position adjacent flange 86 of trigger button 24 and permits the tool to be actuated.

Claims 3 and 5-10 lack an inventive step under PCT Article 33(3) as being obvious over Novak et al. (US 4,375,867) in view of Barrett et al. (US 4,183,453). As for claims 3 and 5, Novak et al. does not teach the claimed mechanical means for blocking the feeding of a fastener from the magazine while the magazine assembly is in the second position (pressed against the work piece). Barrett et al. teaches such a blocking means. Note figures 5-7 and column 6, line 34 through column 7, line 7. The Barrett et al. blocking means is interconnected with the trigger switch 40 such that when the trigger is depressed to actuate the tool and drive a fastener from the magazine output channel, a clamp 48 is depressed onto the top of the second fastener in the fastener stick in magazine 42. Forward movement of the second fastener into the magazine output channel is thus prevented as long as trigger switch 40 remains depressed. When the trigger switch is released, clamp 48 moves away from the fastener stick and a fastener can be fed into the magazine output channel. Since the provision of such a blocking means is known as a desirable feature for solenoid actuated fastener driving tools because they are notorious for needing multiple strokes of the driver to properly drive a fastener, it would have been obvious to one of ordinary skill in this art to provide such a blocking means in the Novak et al. solenoid actuated tool. Note the teaching in Barrett et al. from column 2, line 40 through column 5, line 2 regarding the need for multiple blows from the driver to a single fastener. Barrett et al. discloses a control means which provides for multiple blows by the driver 32 on the fastener for each actuation of the trigger. Barrett et al. teaches at column 1, lines 40-49 that is advantageous to operate solenoid actuated fastener drivers in this manner because such tools may require two or more blows from the driver to properly drive the fastener an adequate depth into the work piece. In view of this teaching, it would have been obvious to one of ordinary skill in this art to provide the Novak et al. tool with the claimed control means to provide a predetermined plurality of driving strokes to a single fastener.

Claims 11-15 lack an inventive step under PCT Article 33(3) as being obvious over Novak et al. (US 4,375,867) in view of D'Haem et al. (US 3,041,614). Novak et al. does not teach the provision of an anti-jam means to clear jammed fasteners from the fastener output channel. The claims call for the fastener output channel to be formed with a removable cover plate to permit clearing the tool in the event of a fastener jam. D'Haem et al. teaches the use of a removable cover plate 51 to allow clearing the tool as claimed (see column 4, line 76 through column 5, line 23). In view of this teaching, it would have been obvious to one of ordinary skill in this art to modify Novak et al. to include a removable cover plate in order to allow the tool to be cleared.

Claims 4 and 16-20 meet the criteria set out in PCT Article 33(2) and (3) because the prior art does not teach or fairly suggest the claimed means to hold the fastener magazine in the second position as claimed in claims 4 and 16-20.

Claims 1-20 meet the criteria set out in PCT Article 33(4), and thus have industrial applicability because the subject matter claimed can be made or used in industry.

1845.02 Notification of Transmittal of the International Search Report and the Written Opinion of the International Searching Authority, or the Declaration (Form PCT/ISA/220) [R-6]

The examiner completes the Notification of Transmittal of the International Search Report and the Written Opinion of the International Searching Authority, or >the< Declaration (Form PCT/ISA/220) upon completion of the International Search Report (Form PCT/ISA/210) or the Declaration of Non-Establishment of the International Search Report (Form PCT/ISA/203) and, for applications filed on or after January 1, 2004, completion of the Written Opinion of the International Searching Authority (Form PCT/ISA/237).

The Form PCT/ISA/220 serves as a cover letter for the PCT/ISA/210 or PCT/ISA/203 and for the PCT/ISA/237.

>The Form PCT/ISA/220 indicates the mailing date, which is important for the computation of the time limit for filing amendments to the claims under PCT Article 19 (see MPEP § 1853) and proposed modifications of, or comments on, the abstract. In applications filed on or after January 1, 2004, the mailing date on Form PCT/ISA/220 may also establish the time limit for making a demand under PCT Rule 54*bis*.1 (see MPEP § 1842, subsection V.A.) and for making Article 34 Amendments that will be ensured consideration by the examiner (see MPEP § 1871).<

When processing an application having an international filing date filed prior to January 1, 2004, the examiner should make sure the Form PCT/ISA/220 being issued is the version of the form dated April 2002 and entitled "Notification of Transmittal of the International Search Report or the Declaration."

I. ADDRESS FOR CORRESPONDENCE

The address for correspondence is taken from the request (Form PCT/ISA/101). When an agent represents the applicant, the address for correspondence is listed in Box No. IV of the PCT request Form. For applicants processing their own applications, the address for correspondence may be listed in Box No. II of the request Form. However, where **>a Notification of the Recording of a Change (Form PCT/IB/306)< shows any changes in the applicant or address for correspondence effected under PCT Rule 92*bis*, the later address is used.

II. APPLICANT

When there is more than one applicant in respect of the international application, only the first mentioned of these on the request Form is indicated in the international search report. Other applicants, if any, are indicated by the words "et al" following the first applicant's name. The first mentioned applicant is indicated in Box No. II of the request Form, a second applicant is listed in Box No. III; further applicants are listed on the continuation sheet if there are more than two applicants. Company names are >preferably< written in capital letters; for personal names the family name is >preferably< given first in capital letters and the given names are in mixed case. This helps to identify the family name.

PCT

NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL SEARCH REPORT AND THE WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY, OR THE DECLARATION

(PCT Rule 44.1)

	Date of mailing *(day/month/year)* 15 June 2007 (15.06.2007)
Applicant's or agent's file reference CMC-123-PCT	**FOR FURTHER ACTION** See paragraphs 1 and 4 below
International application No. PCT/US07/00150	International filing date *(day/month/year)* 05 April 2007 (05.04.2007)
Applicant ACME FASTENER CORPORATION	

1. ☒ The applicant is hereby notified that the international search report and the written opinion of the International Searching Authority have been established and are transmitted herewith.

   Filing of amendments and statement under Article 19:
   The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):

   When? The time limit for filing such amendments is normally two months from the date of transmittal of the international search report.

   Where? Directly to the International Bureau of WIPO, 34 chemin des Colombettes 1211 Geneva 20, Switzerland, Facsimile No.: +41 22 338 82 70

   For more detailed instructions, see the notes on the accompanying sheet.

2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect and the written opinion of the International Searching Authority are transmitted herewith.

3. ☐ **With regard to the protest** against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:

   ☐ the protest together with the decision thereon has been transmitted to the International Bureau together with the applicant's request to forward the texts of both the protest and the decision thereon to the designated Offices.

   ☐ no decision has been made yet on the protest; the applicant will be notified as soon as a decision is made.

4. **Reminders**

   Shortly after the expiration of **18 months** from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau as provided in Rules 90*bis*.1 and 90*bis*.3, respectively, before the completion of the technical preparations for international publication.

   The applicant may submit comments on an informal basis on the written opinion of the International Searching Authority to the International Bureau. The International Bureau will send a copy of such comments to all designated Offices unless an international preliminary examination report has been or is to be established. These comments would also be made available to the public but not before the expiration of 30 months from the priority date.

   Within **19 months** from the priority date, but only in respect of some designated Offices, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase **until 30 months** from the priority date (in some Offices even later); otherwise, the applicant must, **within 20 months** from the priority date, perform the prescribed acts for entry into the national phase before those designated Offices.

   In respect of other designated Offices, the time limit of **30 months** (or later) will apply even if no demand is filed within 19 months.

   See the Annex to Form PCT/IB/301 and, for details about the applicable time limits, Office by Office, see the *PCT Applicant's Guide*, Volume II, National Chapters and the WIPO Internet site.

Name and mailing address of the ISA/ Mail Stop PCT, Attn: ISA/US Commissioner for Patents P.O. Box 1450 Alexandria, Virginia 22313-1450 Facsimile No. (571) 273-3201	Authorized officer Patent Examiner Telephone No. 571-272-3700

Form PCT/ISA/220 (October 2005) *(See notes on accompanying sheet)*

NOTES TO FORM PCT/ISA/220

These Notes are intended to give the basic instructions concerning the filing of amendments under Article 19. The Notes are based on the requirements of the Patent Cooperation Treaty, the Regulations and the Administrative Instructions under that Treaty. In case of discrepancy between these Notes and those requirements, the latter are applicable. For more detailed information, see also the *PCT Applicant's Guide*, a publication of WIPO.

In these Notes, "Article," "Rule" and "Section" refer to the provisions of the PCT, the PCT Regulations and the PCT Administrative Instructions, respectively.

INSTRUCTIONS CONCERNING AMENDMENTS UNDER ARTICLE 19

The applicant has, after having received the international search report and the written opinion of the International Searching Authority, one opportunity to amend the claims of the international application. It should however be emphasized that, since all parts of the international application (claims, description and drawings) may be amended during the international preliminary examination procedure, there is usually no need to file amendments of the claims under Article 19 except where, e.g. the applicant wants the latter to be published for the purposes of provisional protection or has another reason for amending the claims before international publication. Furthermore, it should be emphasized that provisional protection is available in some States only (see *PCT Applicant's Guide*, Volume I/A, Annexes B1 and B2).

The attention of the applicant is drawn to the fact that amendments to the claims under Article 19 are not allowed where the International Searching Authority has declared, under Article 17(2), that no international search report would be established (see *PCT Applicant's Guide*, Volume I/A, paragraph 296).

What parts of the international application may be amended ?

Under Article 19, only the claims may be amended.

During the international phase, the claims may also be amended (or further amended) under Article 34 before the International Preliminary Examining Authority. The description and drawings may only be amended under Article 34 before the International Preliminary Examining Authority.

Upon entry into the national phase, all parts of the international application may be amended under Article 28 or, where applicable, Article 41.

When ? Within 2 months from the date of transmittal of the international search report or 16 months from the priority date, whichever time limit expires later. It should be noted, however, that the amendments will be considered as having been received on time if they are received by the International Bureau after the expiration of the applicable time limit but before the completion of the technical preparations for international publication (Rule 46.1).

Where not to file the amendments ?

The amendments may only be filed with the International Bureau and not with the receiving Office or the International Searching Authority (Rule 46.2).

Where a demand for international preliminary examination has been/is filed, see below.

How ? Either by cancelling one or more entire claims, by adding one or more new claims or by amending the text of one or more of the claims as filed.

A replacement sheet must be submitted for each sheet of the claims which, on account of an amendment or amendments, differs from the sheet originally filed.

All the claims appearing on a replacement sheet must be numbered in Arabic numerals. Where a claim is cancelled, no renumbering of the other claims is required. In all cases where claims are renumbered, they must be renumbered consecutively (Section 205(b)).

The amendments must be made in the language in which the international application is to be published.

What documents must/may accompany the amendments ?

Letter (Section 205(b)):

The amendments must be submitted with a letter.

The letter will not be published with the international application and the amended claims. It should not be confused with the "Statement under Article 19(1)" (see below, under "Statement under Article 19(1)").

The letter must be in English or French, at the choice of the applicant. However, if the language of the international application is English, the letter must be in English; if the language of the international application is French, the letter must be in French.

Notes to Form PCT/ISA/220 (first sheet) (October 2005)

NOTES TO FORM PCT/ISA/220 (continued)

The letter must indicate the differences between the claims as filed and the claims as amended. It must, in particular, indicate, in connection with each claim appearing in the international application (it being understood that identical indications concerning several claims may be grouped), whether

(i) the claim is unchanged;
(ii) the claim is cancelled;
(iii) the claim is new;
(iv) the claim replaces one or more claims as filed;
(v) the claim is the result of the division of a claim as filed.

The following examples illustrate the manner in which amendments must be explained in the accompanying letter:

1. [Where originally there were 48 claims and after amendment of some claims there are 51]:
"Claims 1 to 29, 31, 32, 34, 35, 37 to 48 replaced by amended claims bearing the same numbers; claims 30, 33 and 36 unchanged; new claims 49 to 51 added."
2. [Where originally there were 15 claims and after amendment of all claims there are 11]:
"Claims 1 to 15 replaced by amended claims 1 to 11."
3. [Where originally there were 14 claims and the amendments consist in cancelling some claims and in adding new claims]:
"Claims 1 to 6 and 14 unchanged; claims 7 to 13 cancelled; new claims 15, 16 and 17 added." or
"Claims 7 to 13 cancelled; new claims 15, 16 and 17 added; all other claims unchanged."
4. [Where various kinds of amendments are made]:
"Claims 1-10 unchanged; claims 11 to 13, 18 and 19 cancelled; claims 14, 15 and 16 replaced by amended claim 14; claim 17 subdivided into amended claims 15, 16 and 17; new claims 20 and 21 added."

"Statement under Article 19(1)" (Rule 46.4)

The amendments may be accompanied by a statement explaining the amendments and indicating any impact that such amendments might have on the description and the drawings (which cannot be amended under Article 19(1)).

The statement will be published with the international application and the amended claims.

It must be in the language in which the international application is to be published.

It must be brief, not exceeding 500 words if in English or if translated into English.

It should not be confused with and does not replace the letter indicating the differences between the claims as filed and as amended. It must be filed on a separate sheet and must be identified as such by a heading, preferably by using the words "Statement under Article 19(1)."

It may not contain any disparaging comments on the international search report or the relevance of citations contained in that report. Reference to citations, relevant to a given claim, contained in the international search report may be made only in connection with an amendment of that claim.

Consequence if a demand for international preliminary examination has already been filed

If, at the time of filing any amendments and any accompanying statement, under Article 19, a demand for international preliminary examination has already been submitted, the applicant must preferably, at the time of filing the amendments (and any statement) with the International Bureau, also file with the International Preliminary Examining Authority a copy of such amendments (and of any statement) and, where required, a translation of such amendments for the procedure before that Authority (see Rules 55.3(a) and 62.2, first sentence). For further information, see the Notes to the demand form (PCT/IPEA/401).

If a demand for international preliminary examination is made, the written opinion of the International Searching Authority will, except in certain cases where the International Preliminary Examining Authority did not act as International Searching Authority and where it has notified the International Bureau under Rule 66.1*bis*(b), be considered to be a written opinion of the International Preliminary Examining Authority. If a demand is made, the applicant may submit to the International Preliminary Examining Authority a reply to the written opinion together, where appropriate, with amendments before the expiration of 3 months from the date of mailing of Form PCT/ISA/220 or before the expiration of 22 months from the priority date, whichever expires later (Rule 43*bis*.1(c)).

Consequence with regard to translation of the international application for entry into the national phase

The applicant's attention is drawn to the fact that, upon entry into the national phase, a translation of the claims as amended under Article 19 may have to be furnished to the designated/elected Offices, instead of, or in addition to, the translation of the claims as filed.

For further details on the requirements of each designated/elected Office, see the *PCT Applicant's Guide*, Volume II.

1848 Sequence Listings and Tables Related to Sequence Listings [R-6]

PCT Rule 13ter.
Nucleotide and/or Amino Acid Sequence Listings

13ter.1.Procedure Before the International Searching Authority

(a) Where the international application contains disclosure of one or more nucleotide and/or amino acid sequences, the International Searching Authority may invite the applicant to furnish to it, for the purposes of the international search, a sequence listing in electronic form complying with the standard provided for in the Administrative Instructions, unless such listing in electronic form is already available to it in a form and manner acceptable to it, and to pay to it, where applicable, the late furnishing fee referred to paragraph (c), within a time limit fixed in the invitation.

(b) Where at least part of the international application is filed on paper and the International Searching Authority finds that the description does not comply with Rule 5.2(a), it may invite the applicant to furnish, for the purposes of the international search, a sequence listing in paper form complying with the standard provided for in the Administrative Instructions, unless such listing in paper form is already available to it in a form and manner acceptable to it, whether or not the furnishing of a sequence listing in electronic form is invited under paragraph (a), and to pay, where applicable, the late furnishing fee referred to in paragraph (c), within a time limit fixed in the invitation.

(c) The furnishing of a sequence listing in response to an invitation under paragraph (a) or (b) may be subjected by the International Searching Authority to the payment to it, for its own benefit, of a late furnishing fee whose amount shall be determined by the International Searching Authority but shall not exceed 25% of the international filing fee referred to in item 1 of the Schedule of Fees, not taking into account any fee for each sheet of the international application in excess of 30 sheets, provided that a late furnishing fee may be required under either paragraph (a) or (b) but not both.

(d) If the applicant does not, within the time limit fixed in the invitation under paragraph (a) or (b), furnish the required sequence listing and pay any required late furnishing fee, the International Searching Authority shall only be required to search the international application to the extent that a meaningful search can be carried out without the sequence listing.

(e) Any sequence listing not contained in the international application as filed, whether furnished in response to an invitation under paragraph (a) or (b) or otherwise, shall not form part of the international application, but this paragraph shall not prevent the applicant from amending the description in relation to a sequence listing pursuant to Article 34(2)(b).

(f) Where the International Searching Authority finds that the description does not comply with Rule 5.2(b), it shall invite the applicant to submit the required correction. Rule 26.4 shall apply *mutatis mutandis* to any correction offered by the applicant. The International Searching Authority shall transmit the correction to the receiving Office and to the International Bureau.

PCT Administrative Instruction Section 513.
Sequence Listings

(a) Where the International Searching Authority receives a correction of a defect under Rule 13*ter*.1(f), it shall:

(i) indelibly mark, in the upper right-hand corner of each replacement sheet, the international application number and the date on which that sheet was received;

(ii) indelibly mark, in the middle of the bottom margin of each replacement sheet, the words "SUBSTITUTE SHEET (*>Rule< 13*ter*.1(f))" or their equivalent in the language of publication of the international application;

(iii) indelibly mark on the letter containing the correction, or accompanying any replacement sheet, the date on which that letter was received;

(iv) keep in its files a copy of the letter containing the correction or, when the correction is contained in a replacement sheet, the replaced sheet, a copy of the letter accompanying the replacement sheet, and a copy of the replacement sheet;

(v) promptly transmit any letter and any replacement sheet to the International Bureau, and a copy thereof to the receiving Office.

(b) Where the international search report and the written opinion of the International Searching Authority are based on a sequence listing that was not contained in the international application as filed but was furnished subsequently to the International Searching Authority, the international search report and the written opinion of the International Searching Authority shall so indicate.

(c) Where a meaningful international search cannot be carried out and a meaningful written opinion, as to whether the claimed invention appears to be novel, to involve an inventive step (to be non-obvious) and to be industrially applicable, cannot be established because a sequence listing is not available to the International Searching Authority in the required form, that Authority shall so state in the international search report or declaration referred to in Article 17(2)(a), and in the written opinion.

(d) The International Searching Authority shall indelibly mark, in the upper right-hand corner of the first sheet of any sequence listing on paper which was not contained in the international application as filed but was furnished subsequently to that Authority, the words "SUBSEQUENTLY FURNISHED

SEQUENCE LISTING" or their equivalent in the language of publication of the international application.

(e) The International Searching Authority shall keep in its files:

(i) any sequence listing on paper which was not contained in the international application as filed but was furnished subsequently to that Authority; and

(ii) any sequence listing in electronic form furnished for the purposes of the international search.

Where an international application contains disclosure of a nucleotide and/or amino acid sequence, the description must contain a listing of the sequence complying with the standard specified in Annex C of the Administrative Instructions. See MPEP § 1823.02. If the International Searching Authority finds that an international application contains such a disclosure but that the description does not include such a listing or that the listing included does not comply with that standard, the International Searching Authority may invite the applicant to furnish a listing complying with that standard.

If the International Searching Authority finds that a sequence listing is not in an electronic form provided for in the Administrative Instructions, it may invite the applicant to furnish a listing to it in such a form.

An invitation from the International Searching Authority to furnish a sequence listing complying with the standard specified in the Administrative Instructions, will specify a time limit for complying with the invitation. Any sequence listing furnished by the applicant in response to the invitation must be accompanied by a statement to the effect that the listing does not include matter which goes beyond the disclosure in the international application as filed. If the applicant does not comply within that time limit, the search undertaken by the International Searching Authority may be *>limited<.

If the applicant wishes to include such a listing in the text of the description itself, appropriate amendments may be made later under PCT Article 34, provided that the applicant files a Demand for international preliminary examination.

The United States Receiving Office has not notified the International Bureau under Administrative Instructions Section 801(b) that it is prepared to accept the filing in electronic form of the sequence listing and/or any tables related to the sequence listing of international applications under Administrative Instructions Section 801(a). However, Administrative Instructions Section 801(c) permits a receiving Office that has not notified the IB under Administrative Instructions Section 801(b) to decide in a particular case to accept such sequence listing filings. The RO/US will accept applications where the sequence listing and/or table is filed using CD-R or CD-ROM as the electronic medium, and where no paper copy of the sequence listing part is submitted. The application must be filed in accordance with the Guidelines set forth in MPEP § 1823.02, subsection II. A in order to be accepted. There may be significant cost savings if such a submission is accepted. If accepted under the USPTO's Guidelines, the electronic submission counts as 400 sheets in addition to the actual number of sheets of the Request, description excluding the sequence listing part thereof, claims, abstract and drawings. Four copies of the electronic submission of the sequence listing are required. One copy goes to the IB as part of the Record copy; the second copy becomes part of the Home copy; the third copy becomes part of the Search copy; and the fourth copy goes to the Scientific and Technical Information Center (STIC) as the electronic form (also known as the computer readable form (CRF). Three copies of the electronic submission of any table related to the sequence listing are required. One copy goes to the IB as part of the record copy; the second copy becomes part of the home copy; the third copy becomes part of the search copy. See MPEP § 1823.02.

1850 Unity of Invention Before the International Searching Authority [R-7]

PCT Rule 13.
Unity of Invention

13.1.Requirement

The international application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention").

13.2.Circumstances in Which the Requirement of Unity of Invention Is to Be Considered Fulfilled

Where a group of inventions is claimed in one and the same international application, the requirement of unity of invention referred to in Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

13.3.Determination of Unity of Invention Not Affected by Manner of Claiming

The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim.

13.4.Dependent Claims

Subject to Rule 13.1, it shall be permitted to include in the same international application a reasonable number of dependent claims, claiming specific forms of the invention claimed in an independent claim, even where the features of any dependent claim could be considered as constituting in themselves an invention.

13.5.Utility Models

Any designated State in which the grant of a utility model is sought on the basis of an international application may, instead of Rules 13.1 to 13.4, apply in respect of the matters regulated in those Rules the provisions of its national law concerning utility models once the processing of the international application has started in that State, provided that the applicant shall be allowed at least two months from the expiration of the time limit applicable under Article 22 to adapt his application to the requirements of the said provisions of the national law.

PCT Rule 40.
Lack of Unity of Invention (International Search)

40.1Invitation to Pay Additional Fees; Time Limit

The invitation to pay additional fees provided for in Article 17(3)(a) shall:

(i) specify the reasons for which the international application is not considered as complying with the requirement of unity of invention;

(ii) invite the applicant to pay the additional fees within one month from the date of the invitation, and indicate the amount of those fees to be paid; and

(iii) invite the applicant to pay, where applicable, the protest fee referred to in Rule 40.2(e) within one month from the date of the invitation, and indicate the amount to be paid.

40.2.Additional Fees

(a) The amount of the additional fees due for searching under Article 17(3)(a) shall be determined by the competent International Searching Authority.

(b) The additional fees due for searching under Article 17(3)(a) shall be payable direct to the International Searching Authority.

(c) Any applicant may pay the additional fees under protest, that is, accompanied by a reasoned statement to the effect that the international application complies with the requirement of unity of invention or that the amount of the required additional fees is excessive. Such protest shall be examined by a review body constituted in the framework of the International Searching Authority, which, to the extent that it finds the protest justified, shall order the total or partial reimbursement to the applicant of the additional fees. On the request of the applicant, the text of both the protest and the decision thereon shall be notified to the designated Offices together with the international search report. The applicant shall submit any translation thereof with the furnishing of the translation of the international application required under Article 22.

(d) The membership of the review body referred to in paragraph (c) may include, but shall not be limited to, the person who made the decision which is the subject of the protest.

(e) The examination of a protest referred to in paragraph (c) may be subjected by the International Searching Authority to the payment to it, for its own benefit, of a protest fee. Where the applicant has not, within the time limit under Rule 40.1(iii), paid any required protest fee, the protest shall be considered not to have been made and the International Searching Authority shall so declare. The protest fee shall be refunded to the applicant where the review body referred to in paragraph (c) finds that the protest was entirely justified.

37 CFR 1.475. Unity of invention before the International Searching Authority, the International Preliminary Examining Authority and during the national stage.

(a) An international and a national stage application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention"). Where a group of inventions is claimed in an application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

(b) An international or a national stage application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations of categories:

(1) A product and a process specially adapted for the manufacture of said product; or

(2) A product and a process of use of said product; or

(3) A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or

(4) A process and an apparatus or means specifically designed for carrying out the said process; or

(5) A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process.

(c) If an application contains claims to more or less than one of the combinations of categories of invention set forth in paragraph (b) of this section, unity of invention might not be present.

(d) If multiple products, processes of manufacture or uses are claimed, the first invention of the category first mentioned in the claims of the application and the first recited invention of each of the other categories related thereto will be considered as the main invention in the claims, see PCT Article 17(3)(a) and § 1.476(c).

(e) The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim.

I. THE REQUIREMENT FOR "UNITY OF INVENTION"

Any international application must relate to one invention only or to a group of inventions so linked as to form a single general inventive concept (PCT Article 3(4)(iii) and 17(3)(a), PCT Rule *>13.1<, and 37 CFR 1.475). Observance of this requirement is checked by the International Searching Authority and may be relevant in the national (or regional) phase.

The decision in *Caterpillar Tractor Co. v. Commissioner of Patents and Trademarks*, 650 F. Supp. 218, 231 USPQ 590 (E.D. Va. 1986) held that the Patent and Trademark Office interpretation of 37 CFR 1.141(b)(2) as applied to unity of invention determinations in international applications was not in accordance with the Patent Cooperation Treaty and its implementing regulations. In the Caterpillar international application, the USPTO acting as an International Searching Authority, had held lack of unity of invention between a set of claims directed to a process for forming a sprocket and a set of claims drawn to an apparatus (die) for forging a sprocket. The court stated that it was an unreasonable interpretation to say that the expression "specifically designed" as found in former PCT Rule 13.2(ii) means that the process and apparatus have unity of invention if they can only be used with each other, as was set forth in MPEP § 806.05(e).

Therefore, when the Office considers international applications as an International Searching Authority, as an International Preliminary Examining Authority, and during the national stage as a Designated or Elected Office under 35 U.S.C. 371, PCT Rule 13.1 and 13.2 will be followed when considering unity of invention of claims of different categories without regard to the practice in national applications filed under 35 U.S.C. 111. No change was made in restriction practice in United States national applications filed under 35 U.S.C. 111 outside the PCT.

In applying PCT Rule 13.2 to international applications as an International Searching Authority, an International Preliminary Examining Authority and to national stage applications under 35 U.S.C. 371, examiners should consider for unity of invention all the claims to different categories of invention in the application and permit retention in the same application for searching and/or preliminary examination, claims to the categories which meet the requirements of PCT Rule 13.2.

PCT Rule 13.2, as it was modified effective July 1, 1992, no longer specifies the combinations of categories of invention which are considered to have unity of invention. Those categories, which now appear as a part of Chapter 10 of the International Search and Preliminary Examination Guidelines, may be obtained from the Patent Examiner's Toolkit link or from WIPO's website (www.wipo.int/pct/en/texts/gdlines.htm). The categories of invention in former PCT Rule 13.2 have been replaced with a statement describing the method for determining whether the requirement of unity of invention is satisfied. Unity of invention exists only when there is a technical relationship among the claimed inventions involving one or more special technical features. The term "special technical features" is defined as meaning those technical features that define a contribution which each of the inventions considered as a whole, makes over the prior art. The determination is made based on the contents of the claims as interpreted in light of the description and drawings. Chapter 10 of the International Search and Preliminary Examination Guidelines also contains examples concerning unity of invention.

II. DETERMINATION OF "UNITY OF INVENTION"

An international application should relate to only one invention or, if there is more than one invention, the inclusion of those inventions in one international application is only permitted if all inventions are so linked as to form a single general inventive concept (PCT Rule 13.1). With respect to a group of inventions claimed in an international application, unity of invention exists only when there is a technical relationship among the claimed inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" is defined in PCT Rule 13.2 as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art. The determination is made on the

contents of the claims as interpreted in light of the description and drawings (if any).

Whether or not any particular technical feature makes a "contribution" over the prior art, and therefore constitutes a "special technical feature," should be considered with respect to novelty and inventive step. For example, a document discovered in the international search shows that there is a presumption of lack of novelty or inventive step in a main claim, so that there may be no technical relationship left over the prior art among the claimed inventions involving one or more of the same or corresponding special technical features, leaving two or more dependent claims without a single general inventive concept.

Lack of unity of invention may be directly evident "*a priori*," that is, before considering the claims in relation to any prior art, or may only become apparent "*a posteriori*," that is, after taking the prior art into consideration. For example, independent claims to A + X, A + Y, X + Y can be said to lack unity *a priori* as there is no subject matter common to all claims. In the case of independent claims to A + X and A + Y, unity of invention is present *a priori* as A is common to both claims. However, if it can be established that A is known, there is lack of unity *a posteriori*, since A (be it a single feature or a group of features) is not a technical feature that defines a contribution over the prior art.

Although lack of unity of invention should certainly be raised in clear cases, it should neither be raised nor maintained on the basis of a narrow, literal or academic approach. There should be a broad, practical consideration of the degree of interdependence of the alternatives presented, in relation to the state of the art as revealed by the international search or, in accordance with PCT Article 33(6), by any additional document considered to be relevant. If the common matter of the independent claims is well known and the remaining subject matter of each claim differs from that of the others without there being any unifying novel inventive concept common to all, then clearly there is lack of unity of invention. If, on the other hand, there is a single general inventive concept that appears novel and involves inventive step, then there is unity of invention and an objection of lack of unity does not arise. For determining the action to be taken by the examiner between these two extremes, rigid rules cannot be given and each case should be considered on its merits, the benefit of any doubt being given to the applicant.

From the preceding paragraphs it is clear that the decision with respect to unity of invention rests with the International Searching Authority or the International Preliminary Examining Authority. However, the International Searching Authority or the International Preliminary Examining Authority should not raise objection of lack of unity of invention merely because the inventions claimed are classified in separate classification groups or merely for the purpose of restricting the international search to certain classification groups.

Unity of invention has to be considered in the first place only in relation to the independent claims in an international application and not the dependent claims. By "dependent" claim is meant a claim which contains all the features of one or more other claims and contains a reference, preferably at the beginning, to the other claim or claims and then states the additional features claimed (PCT Rule 6.4). The examiner should bear in mind that a claim may also contain a reference to another claim even if it is not a dependent claim as defined in PCT Rule 6.4. One example of this is a claim referring to a claim of a different category (for example, "Apparatus for carrying out the process of Claim 1 ...," or "Process for the manufacture of the product of Claim 1 ..."). Similarly, a claim to one part referring to another cooperating part, for example, "plug for cooperation with the socket of Claim 1 ...") is not a dependent claim.

If the independent claims avoid the prior art and satisfy the requirement of unity of invention, no problem of lack of unity arises in respect of any claims that depend on the independent claims. In particular, it does not matter if a dependent claim itself contains a further invention. For example, suppose claim 1 claims a turbine rotor blade shaped in a specified manner such that it avoids the prior art, while claim 2 is for a "turbine rotor blade as claimed in claim 1" and produced from alloy Z. Then no objection under PCT Rule 13 arises either because alloy Z was new and its composition was not obvious and thus the alloy itself already contains the essential features of an independent possibly later patentable invention, or because, although alloy Z was not new, its application in respect of turbine rotor blades was not obvious, and thus represents an independent invention in conjunc-

tion with turbine rotor blades. As another example, suppose that the main claim defines a process avoiding the prior art for the preparation of a product A starting from a product B and the second claim reads: "Process according to claim 1 characterized by producing B by a reaction using the product C." In this case, too, no objection arises under PCT Rule 13, whether or not the process for preparation of B from C is novel and inventive, since claim 2 contains all the features of claim 1. Equally, no problem arises in the case of a genus/species situation where the genus claim avoids the prior art, provided the genus claim is directed only to alternatives of a similar nature and the species falls entirely within the genus. To determine if a genus claim is directed only to alternatives "of a similar nature," see subsection III.B. below. Moreover, no problem arises in the case of a combination/subcombination situation where the subcombination claim avoids the prior art and the combination claim includes all the features of the subcombination.

If, however, an independent claim does not avoid the prior art, then the question whether there is still an inventive link between all the claims dependent on that claim needs to be carefully considered. If there is no link remaining, an objection of lack of unity *a posteriori* (that is, arising only after assessment of the prior art) may be raised. Similar considerations apply in the case of a genus/species or combination/subcombination situation.

This method for determining whether unity of invention exists is intended to be applied even before the commencement of the international search. Where a search of the prior art is made, an initial determination of unity of invention, based on the assumption that the claims avoid the prior art, may be reconsidered on the basis of the results of the search of the prior art.

Alternative forms of an invention may be claimed either in a plurality of independent claims, or in a single claim. In the latter case, the presence of the independent alternatives may not be immediately apparent. In either case, however, the same criteria should be applied in deciding whether there is unity of invention. Accordingly, lack of unity of invention may exist within a single claim. Where the claim contains distinct embodiments that are not linked by a single general inventive concept, the objection as to lack of unity of invention should be raised. PCT Rule 13.3 does not prevent an Authority from objecting to alternatives being contained within a single claim on the basis of considerations such as clarity, the conciseness of claims or the claims fee system applicable in that Authority.

Objection of lack of unity of invention does not normally arise if the combination of a number of individual elements is claimed in a single claim (as opposed to distinct embodiments as discussed in the paragraph immediately above), even if these elements seem unrelated when considered individually.

III. ILLUSTRATIONS OF PARTICULAR SITUATIONS

There are three particular situations for which the method for determining unity of invention contained in PCT Rule 13.2 is explained in greater detail:

(A) Combinations of different categories of claims;

(B) So-called "Markush practice"; and

(C) Intermediate and final products.

Principles for the interpretation of the method contained in PCT Rule 13.2, in the context of each of those situations are set out below. It is understood that the principles set out below are, in all instances, interpretations of and not exceptions to the requirements of PCT Rule 13.2.

Examples to assist in understanding the interpretation on the three areas of special concern referred to in the preceding paragraph are set out in Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from the Patent Examiner's Toolkit link or from WIPO's web site (www.wipo.int/pct/en/texts/gdlines.htm).

A. Combinations of Different Categories of Claims

The method for determining unity of invention under PCT Rule 13 shall be construed as permitting, in particular, the inclusion of any one of the following combinations of claims of different categories in the same international application:

(A) In addition to an independent claim for a given product, an independent claim for a process specially adapted for the manufacture of the said

product, and an independent claim for a use of the said product; or

(B) In addition to an independent claim for a given process, an independent claim for an apparatus or means specifically designed for carrying out the said process; or

(C) In addition to an independent claim for a given product, an independent claim for a process specially adapted for the manufacture of the said product and an independent claim for an apparatus or means specifically designed for carrying out the said process.

A process is specially adapted for the manufacture of a product if it inherently results in the product and an apparatus or means is specifically designed for carrying out a process if the contribution over the prior art of the apparatus or means corresponds to the contribution the process makes over the prior art.

Thus, a process shall be considered to be specially adapted for the manufacture of a product if the claimed process inherently results in the claimed product with the technical relationship being present between the claimed product and claimed process. The words "specially adapted" are not intended to imply that the product could not also be manufactured by a different process.

Also an apparatus or means shall be considered to be specifically designed for carrying out a claimed process if the contribution over the prior art of the apparatus or means corresponds to the contribution the process makes over the prior art. Consequently, it would not be sufficient that the apparatus or means is merely capable of being used in carrying out the claimed process. However, the expression "specifically designed" does not imply that the apparatus or means could not be used for carrying out another process, nor that the process could not be carried out using an alternative apparatus or means.

More extensive combinations than those set forth above should be looked at carefully to ensure that the requirements of both PCT Rule 13 (unity of invention) and PCT Article 6 (conciseness of claims) are satisfied. In particular, while a single set of independent claims according to one of (A), (B), or (C) above is always permissible, it does not require the International Authority to accept a plurality of such sets which could arise by combining the provisions of PCT Rule 13.3 (which provides that the determination of unity of invention be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim), with the provisions set out above (thus resulting in a set based on each of a number of independent claims in the same category under PCT Rule 13.3). The proliferation of claims arising from a combined effect of this kind should be accepted only exceptionally. For example, independent claims are permissible for two related articles such as a transmitter and receiver; however, it does not follow that an applicant may include also, in the one international application, four additional independent claims: two for a process for the manufacture of the transmitter and the receiver, respectively, and two for use of the transmitter and receiver, respectively.

A single general inventive concept must link the claims in the various categories and in this connection the wording above should be carefully noted. The link between product and process in (A) is that the process must be "specially adapted for the manufacture of" the product. Similarly, in (B), the apparatus or means claimed must be "specifically designed for" carrying out the process. Likewise, in (C), the process must be "specially adapted for the manufacture of" the product and the apparatus must be "specifically designed for" carrying out the process. In combinations (A) and (C), the emphasis is on, and the essence of the invention should primarily reside in, the product, whereas in combination (B) the emphasis is on, and the invention should primarily reside in, the process. (See Examples in Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from the Patent Examiner's Toolkit link or from WIPO's web site (www.wipo.int/pct/en/texts/gdlines.htm.))

B. "Markush Practice"

The situation involving the so-called Markush practice wherein a single claim defines alternatives (chemical or non-chemical) is also governed by PCT Rule 13.2. In this special situation, the requirement of a technical interrelationship and the same or corresponding special technical features as defined in PCT Rule 13.2, shall be considered to be met when the alternatives are of a similar nature.

When the Markush grouping is for alternatives of chemical compounds, they shall be regarded as being

of a similar nature where the following criteria are fulfilled:

(A) All alternatives have a common property or activity; and

(B)(1) A common structure is present, i.e., a significant structural element is shared by all of the alternatives; or

(B)(2) In cases where the common structure cannot be the unifying criteria, all alternatives belong to a recognized class of chemical compounds in the art to which the invention pertains.

In paragraph (B)(1), above, the words "significant structural element is shared by all of the alternatives" refer to cases where the compounds share a common chemical structure which occupies a large portion of their structures, or in case the compounds have in common only a small portion of their structures, the commonly shared structure constitutes a structurally distinctive portion in view of existing prior art, and the common structure is essential to the common property or activity. The structural element may be a single component or a combination of individual components linked together.

In paragraph (B)(2), above, the words "recognized class of chemical compounds" mean that there is an expectation from the knowledge in the art that members of the class will behave in the same way in the context of the claimed invention. In other words, each member could be substituted one for the other, with the expectation that the same intended result would be achieved.

The fact that the alternatives of a Markush grouping can be differently classified should not, taken alone, be considered to be justification for a finding of a lack of unity of invention.

When dealing with alternatives, if it can be shown that at least one Markush alternative is not novel over the prior art, the question of unity of invention should be reconsidered by the examiner. Reconsideration does not necessarily imply that an objection of lack of unity shall be raised. (See Examples in Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from the Patent Examiner's Toolkit link or from WIPO's web site (www.wipo.int/pct/en/texts/gdlines.htm.))

C. Intermediate and Final Products

The situation involving intermediate and final products is also governed by PCT Rule 13.2.

The term "intermediate" is intended to mean intermediate or starting products. Such products have the ability to be used to produce final products through a physical or chemical change in which the intermediate loses its identity.

Unity of invention shall be considered to be present in the context of intermediate and final products where the following two conditions are fulfilled:

(A) The intermediate and final products have the same essential structural element, in that:

(1) The basic chemical structures of the intermediate and the final products are the same, or

(2) The chemical structures of the two products are technically closely interrelated, the intermediate incorporating an essential structural element into the final product; and

(B) The intermediate and final products are technically interrelated, this meaning that the final product is manufactured directly from the intermediate or is separated from it by a small number of intermediates all containing the same essential structural element.

Unity of invention may also be considered to be present between intermediate and final products of which the structures are not known, for example, as between an intermediate having a known structure and a final product the structure of which is not known, or as between an intermediate of unknown structure and a final product of unknown structure. In order to satisfy unity in such cases, there must be sufficient evidence to lead one to conclude that the intermediate and final products are technically closely interrelated as, for example, when the intermediate contains the same essential element as the final product or incorporates an essential element into the final product.

It is possible to accept in a single international application different intermediate products used in different processes for the preparation of the final product, provided that they have the same essential structural element.

The intermediate and final products shall not be separated, in the process leading from one to the other, by an intermediate which is not new.

If the same international application claims different intermediates for different structural parts of the final product, unity shall not be regarded as being present between the intermediates.

If the intermediate and final products are families of compounds, each intermediate compound shall correspond to a compound claimed in the family of the final products. However, some of the final products may have no corresponding compound in the family of the intermediate products so that the two families need not be absolutely congruent.

As long as unity of invention can be recognized applying the above interpretations, the fact that, besides the ability to be used to produce final products, the intermediates also exhibit other possible effects or activities shall not affect the decision on unity of invention. (See Examples in Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from the Patent Examiner's Toolkit link or from WIPO's web site (www.wipo.int/pct/en/texts/gdlines.htm.))

IV. SEARCH OF ADDITIONAL INVENTIONS WITHOUT PAYMENT OF FEES

If little or no additional search effort is required, reasons of economy *may* make it advisable for the examiner, while making the search for the main invention, to search at the same time, despite the nonpayment of additional fees, one or more additional inventions in the classification units consulted for the main invention. The international search for such additional inventions will then have to be completed in any further classification units which may be relevant, when the additional search fees have been paid. This situation may occur when the lack of unity of invention is found either "*a priori*" or "*a posteriori*."

When the examiner finds lack of unity of invention, normally, the applicant is invited to pay fees for the search of additional inventions. In exceptional circumstances, however, the examiner may be able to establish both an international search (and for international applications having a filing date on or after January 1, 2004, a written opinion) covering more than one invention with negligible additional work, in particular, when the inventions are conceptually very close. In those cases, the examiner may decide to complete the international search (and where applicable, the written opinion of the International Searching Authority) for the additional invention(s) together with that for the invention first mentioned. For international applications having a filing date on or after January 1, 2004, in considering the amount of work involved, the examiner should take into account the time needed to create the written opinion as well as that needed to perform the search, since even when the additional work with regard to the search is negligible, the opposite may be the case for the written opinion of the International Searching Authority and therefore justify requesting the additional fees. If it is considered that the total additional work does not justify requesting additional fees, all results are included in the international search report (and where applicable, the written opinion) without inviting the applicant to pay an additional search fee in respect of the additional inventions searched but stating the finding of lack of unity of invention.

V. INVITATION TO PAY ADDITIONAL FEES

The search fee which the applicant is required to pay is intended to compensate the International Searching Authority for carrying out an international search (and for international applications having a filing date on or after January 1, 2004, for preparing a written opinion), but only where the international application meets the "requirement of unity of invention". That means that the international application must relate to only one invention or must relate to a group of inventions which are so linked as to form a single general inventive concept (PCT Articles 3(4)(iii) and 17(3)(a)).

If the International Searching Authority finds that the international application does not comply with the requirement of unity of invention, the applicant will be informed of the lack of unity of invention by a communication preceding the issuance of the international search report (and for international applications having a filing date on or after January 1, 2004, a written opinion of the International Searching Authority), which contains an invitation to pay additional search fees. (Form PCT/ISA/206 or USPTO/299 (telephone practice), see below). This invitation specifies the reasons the international application is not considered to comply with the requirement of unity of invention, identifies the separate inventions, and indicates the number of additional search fees and the

amount to be paid (PCT Rules 40.1, 40.2(a) and (b)). The International Searching Authority cannot consider the application withdrawn for lack of unity of invention, nor invite the applicant to amend the claims, but informs the applicant that, if the international search report is to be drawn up in respect of those inventions present other than the first mentioned, then the additional fees must be paid within one month from the date of the invitation to pay additional fees (PCT Rule 40.1). Such additional fees are payable directly to the International Searching Authority which is conducting the search, i.e., the United States Patent and Trademark Office (USPTO), the European Patent Office (EPO), or the Korean Intellectual Property Office (KIPO). The search fee amounts for the USPTO, EPO, and KIPO are found in each weekly edition of the *Official Gazette*.

In the invitation to pay additional fees, the International Searching Authority should set out a logically presented, technical reasoning containing the basic considerations behind the finding of lack of unity (PCT Rule 40.1).

Since these payments must take place within the time limit set by the International Searching Authority so as to enable the observation of the time limit for establishing the international search report set by PCT Rule 42, the International Searching Authority should endeavor to ensure that international searches be made as early as possible after the receipt of the search copy. The International Searching Authority finally draws up the international search report (and for international applications having a filing date on or after January 1, 2004, the written opinion of the International Searching Authority) on those parts of the international application which relate to the "main invention," that is, the invention or the group of inventions so linked as to form a single general inventive concept first mentioned in the claims (PCT Article 17(3)(a)). Moreover, the international search report (and for international applications having a filing date on or after January 1, 2004, the written opinion of the International Searching Authority) will be established also on those parts of the international application which relate to any invention (or any group of inventions so linked as to form a single general inventive concept) in respect of which the applicant has paid any additional fee within the prescribed time limits.

Where, within the prescribed time limit, the applicant does not pay any additional fees or only pays some of the additional fees indicated, certain parts of the international application will consequently not be searched. The lack of an international search report in respect of such parts of the international application will, in itself, have no influence on the validity of the international application and processing of the international application will continue, both in the international and in the national (regional) phases. The unsearched claims, upon entry into the national stage, will be considered by the examiner and may be the subject of a holding of lack of unity of invention.

VI. PREPARATION OF THE INVITATION TO PAY ADDITIONAL FEES

An Invitation to Pay Additional Fees and, Where Applicable, Protest Fee (Form PCT/ISA/206) is used to invite the applicant to pay additional search fees. In the space provided on form PCT/ISA/206, the examiner should indicate the number of inventions claimed in the international application covering which particular claims and explain why the international application is not considered to comply with the requirements of unity of invention. The examiner should then indicate the total amount of additional fees required for the search of all claimed inventions.

Any claims found to be unsearchable under PCT Article 17(2)(b) are not included with any invention. Unsearchable claims include the following:

(A) claims drawn to subject matter not required to be searched by the International Searching Authority (see MPEP § 1843.02);

(B) claims in respect of which a meaningful search cannot be carried out (see MPEP § 1843.03);

(C) multiple dependent claims which do not comply with PCT Rule 6.4(a) (see MPEP § 1843.03).

In the box provided at the top of the form, the time limit of one month for response is set according to PCT Rule 40.1. Extensions of time are not permitted.

VII. AUTHORIZED OFFICER

Form PCT/ISA/206 must be signed by an examiner with at least partial signatory authority.

VIII. TELEPHONIC UNITY PRACTICE

Telephone practice may be used to allow applicants to pay additional fees if

(A) Applicant or applicant's legal representative has a USPTO deposit account,

(B) Applicant or the legal representative orally agrees to charge the additional fees to the account, and

(C) A complete record of the telephone conversation is included with the international search report including:

(1) Examiner's name;

(2) Authorizing attorney's name;

(3) Date of conversation;

(4) Inventions for which additional fees paid; and

(5) Deposit account number and amount to be charged.

When the telephone practice is used in making lack of unity requirements, it is critical that the examiner orally inform applicant that there is no right to protest the holding of lack of unity of invention for any group of invention(s) for which no additional search fee has been paid.

The examiner must further orally advise applicant that any protest to the holding of lack of unity or the amount of additional fee required must be filed in writing no later than one month from the mailing date of the international search report. The examiner should fill in the information on Form USPTO/299 "Chapter I PCT Telephone Memorandum for Lack of Unity" as a record of the telephonic holding of lack of unity.

If the applicant or the legal representative or agent refuses to either agree to a search limited to the first mentioned invention or authorize payment of additional fees over the telephone, or if applicant does not have a deposit account, the examiner should send a written invitation using Form PCT/ISA/206.

If a written invitation is required, the examiner should, if possible, submit the written invitation to the Technology Center for review and mailing within 7 days from the date the international application is charged to the examiner.

IX. FORM PARAGRAPHS FOR LACK OF UNITY IN INTERNATIONAL APPLICATIONS

**>

¶ *18.05 Heading for Lack of Unity Action for PCT Applications During the International Phase (Including Species)*

REQUIREMENT FOR UNITY OF INVENTION

As provided in 37 CFR 1.475(a), an international application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention"). Where a group of inventions is claimed in an international application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim. See 37 CFR 1.475(e).

When Claims Are Directed to Multiple Processes, Products, and/or Apparatuses:

Products, processes of manufacture, processes of use, and apparatuses are different categories of invention. When an application includes claims to more than one product, process, or apparatus, the first invention of the category first mentioned in the claims of the application and the first recited invention of each of the other categories related thereto will be considered as the "main invention" in the claims. In the case of non-compliance with unity of invention and where no additional fees are timely paid, the international search and/or international preliminary examination, as appropriate, will be based on the main invention in the claims. See PCT Article 17(3)(a), 37 CFR 1.475(d), 37 CFR 1.476(c) and 37 CFR 1.488(b)(3).

As provided in 37 CFR 1.475(b), an international application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations of categories:

(1) A product and a process specially adapted for the manufacture of said product; or

(2) A product and process of use of said product; or

(3) A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or

(4) A process and an apparatus or means specifically designed for carrying out the said process; or

(5) A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process.

Otherwise, unity of invention might not be present. See 37 CFR 1.475(c).

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Examiner Note:

1. Begin all Lack of Unity actions for PCT applications during the international phase (including species) with this heading.
2. Follow with form paragraphs 18.06 - 18.06.02, 18.07 - 18.07.03, as appropriate.
3. Use form paragraph 18.18 for lack of unity in U.S. national stage applications submitted under 35 U.S.C. 371.

<

¶ *18.06 Lack of Unity - Three Groups of Claims*

Group **[1]**, claim(s) **[2]**, drawn to **[3]**.
Group **[4]**, claim(s) **[5]**, drawn to **[6]**.
Group **[7]**, claim(s) **[8]**, drawn to **[9]**.

Examiner Note:

1. In brackets 1, 4 and 7, insert Roman numerals for each Group.
2. In brackets 2, 5 and 8, insert respective claim numbers.
3. In brackets 3, 6 and 9, insert respective names of grouped inventions.

¶ *18.06.01 Lack of Unity - Two (or Additional) Groups of Claims*

Group **[1]**, claim(s) **[2]**, drawn to **[3]**.
Group **[4]**, claim(s) **[5]**, drawn to **[6]**.

Examiner Note:

This form paragraph may be used alone or following form paragraph 18.06.

¶ *18.06.02 Lack of Unity - One Additional Group of Claims*

Group **[1]**, claim(s) **[2]**, drawn to **[3]**.

Examiner Note:

This form paragraph may be used following either form paragraph 18.06 or 18.06.01.

**>

¶ *18.07 Lack of Unity - Reasons Why Inventions Lack Unity*

The groups of inventions listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Examiner Note:

Follow with form paragraphs 18.07.01 through 18.07.03, as appropriate.

¶ *18.07.01 Same or Corresponding Technical Feature Lacking Among Groups*

[1] lack unity of invention because the groups do not share the same or corresponding technical feature.

Examiner Note:

1. This form paragraph may be used, for example, where the claims of Group I are directed to A + B, whereas the claims of Group II are directed to C + D, and thus the groups do not share a technical feature.
2. In bracket 1: For **international applications in the international phase**, identify the groups involved by Roman numerals (e.g., "Groups I and II") in accordance with the groups listed using form paragraphs 18.06 - 18.06.02. For **U.S. national stage applications under 35 U.S.C. 371**, identify the groups involved by Roman numerals (e.g., "Groups I and II") where inventions have been grouped using form paragraphs 18.06 - 18.06.02, or identify the species involved where species have been listed using form paragraph 18.20.

¶ *18.07.02 Shared Technical Feature Does Not Make a Contribution Over the Prior Art*

[1] lack unity of invention because even though the inventions of these groups require the technical feature of **[2]**, this technical feature is not a special technical feature as it does not make a contribution over the prior art in view of **[3]**. **[4]**

Examiner Note:

1. In bracket 1: For **international applications in the international phase**, identify the groups involved by Roman numerals (e.g., "Groups I and II") in accordance with the groups listed using form paragraphs 18.06 - 18.06.02. For **U.S. national stage applications under 35 U.S.C. 371**, identify the groups involved by Roman numerals (e.g., "Groups I and II") where inventions have been grouped using form paragraphs 18.06 - 18.06.02, or identify the species involved where species have been listed using form paragraph 18.20.
2. In bracket 2, identify the technical feature shared by the groups.
3. In bracket 3, insert citation of prior art reference(s) demonstrating the shared technical feature does not make a contribution over the prior art. Whether a particular technical feature makes a "contribution" over the prior art, and, therefore, constitutes a "special technical feature," is considered with respect to novelty and inventive step.
4. In bracket 4, explain how the shared technical feature lacks novelty or inventive step in view of the reference(s).

¶ *18.07.03 Heading – Chemical Compound Alternatives of Markush Group Are Not of a Similar Nature*

Where a single claim defines alternatives of a Markush group, the requirement of a technical interrelationship and the same or corresponding special technical features as defined in Rule 13.2, is considered met when the alternatives are of a similar nature. When the Markush grouping is for alternatives of chemical compounds, the alternatives are regarded as being of a similar nature where the following criteria are fulfilled:

(A) all alternatives have a common property or activity; AND

(B)(1) a common structure is present, that is, a significant structural element is shared by all of the alternatives; OR

(B)(2) in cases where the common structure cannot be the unifying criteria, all alternatives belong to a recognized class of chemical compounds in the art to which the invention pertains.

The phrase "significant structural element is shared by all of the alternatives" refers to cases where the compounds share a common chemical structure which occupies a large portion of their structures, or in case the compounds have in common only a small portion of their structures, the commonly shared structure constitutes a structurally distinctive portion in view of existing prior art, and the common structure is essential to the common property or activity.

The phrase "recognized class of chemical compounds" means that there is an expectation from the knowledge in the art that members of the class will behave in the same way in the context of the claimed invention, i.e. each member could be substituted one for the other, with the expectation that the same intended result would be achieved.

Examiner Note:

1. This heading should be used when the chemical alternatives of a Markush group are determined to lack unity of invention.
2. Follow with form paragraphs listed using form paragraphs 18.07.03a - 18.07.03c, as appropriate.

¶ *18.07.03a Alternatives Lack Common Property or Activity*

The chemical compounds of **[1]** are not regarded as being of similar nature because all of the alternatives do not share a common property or activity. **[2]**

Examiner Note:

1. In bracket 1: For i**nternational applications in the international phase**, identify the groups involved by Roman numerals (e.g., "Groups I and II") in accordance with the groups listed using form paragraphs 18.06 - 18.06.02. For **U.S. national stage applications under 35 U.S.C. 371**, identify the species involved where species have been listed using form paragraph 18.20.
2. In bracket 2, insert reasoning.

¶ *18.07.03b Alternatives Share a Common Structure - However, the Common Structure is Not a Significant Structural Element and the Alternatives Do Not Belong to a Recognized Class*

Although the chemical compounds of **[1]** share a common structure of **[2]**, the common structure is not a significant structural element because it represents only a small portion of the compound structures and does not constitute a structurally distinctive portion in view of **[3]**. Further, the compounds of these groups do not belong to a recognized class of chemical compounds. **[4]**

Examiner Note:

1. In bracket 1: For **international applications in the international phase**, identify the groups involved by Roman numerals (e.g., "Groups I and II") in accordance with the groups listed using form paragraphs 18.06 - 18.06.02. For **U.S. national stage applications under 35 U.S.C. 371**, identify the species involved where species have been listed using form paragraph 18.20.
2. In bracket 2, identify common structure.
3. In bracket 3, insert citation of prior art reference(s) relied upon to demonstrate the commonly shared structure is not distinctive.
4. In bracket 4, explain why the compounds do not belong to a recognized class of chemical compounds.

¶ *18.07.03c Alternatives Do Not Share a Common Structure or Belong to Recognized Class*

The chemical compounds of **[1]** are not regarded as being of similar nature because: (1) all the alternatives do not share a common structure and (2) the alternatives do not all belong to a recognized class of chemical compounds. **[2]**

Examiner Note:

1. In bracket 1: For **international applications in the international phase**, identify the groups involved by Roman numerals (e.g., "Groups I and II") in accordance with the groups listed using form paragraphs 18.06 - 18.06.02. For **U.S. national stage applications under 35 U.S.C. 371**, identify the species involved where species have been listed using form paragraph 18.20.
2. In bracket 2, insert reasoning.

<

X. PROTEST PROCEDURE

PCT Administrative Instruction Section 502. Transmittal of Protest Against Payment of Additional Fees and Decision Thereon Where International Application Is Considered to Lack Unity of Invention

The International Searching Authority shall transmit to the applicant, preferably at the latest together with the international search report, any decision which it has taken under Rule 40.2(c) on the protest of the applicant against payment of additional fees where the international application is considered to lack unity of invention. At the same time, it shall transmit to the International Bureau a copy of both the protest and the decision thereon, as well as any request by the applicant to forward the texts of both the protest and the decision thereon to the designated Offices.

37 CFR 1.477. Protest to lack of unity of invention before the International Searching Authority.

(a) If the applicant disagrees with the holding of lack of unity of invention by the International Searching Authority, additional fees may be paid under protest, accompanied by a request for refund and a statement setting forth reasons for disagreement or why the required additional fees are considered excessive, or both (PCT Rule 40.2(c)).

(b) Protest under paragraph (a) of this section will be examined by the Director or the Director's designee. In the event that the applicant's protest is determined to be justified, the additional fees or a portion thereof will be refunded.

(c) An applicant who desires that a copy of the protest and the decision thereon accompany the international search report when forwarded to the Designated Offices may notify the International Searching Authority to that effect any time prior to the issuance of the international search report. Thereafter, such notification should be directed to the International Bureau (PCT Rule 40.2(c)).

The applicant may protest the allegation of lack of unity of invention or that the number of required additional fees is excessive and request a refund of the additional fee(s) paid. If, and to the extent that, the International Searching Authority finds the protest justified, the fee(s) are refunded (PCT Rule 40.2(c)). (The additional search fees must be paid for any protest to be considered.)

Protest of allegation of lack of unity is in the form of a reasoned statement accompanying payment of the additional fee, explaining why the applicant believes that the requirements of unity of invention are fulfilled and fully taking into account the reasons indicated in the invitation to pay additional fees issued by the International Searching Authority. Any such protest filed with the U.S. International Searching Authority will be decided by a Technology Center Director (MPEP § 1002.02(c) item (2)). To the extent applicant's protest is found to be justified, total or partial reimbursement of the additional fee will be made. On the request of the applicant, the text of both the protest and the decision thereon is sent to the designated Offices together with the international search report (37 CFR 1.477(c)).

XI. NOTIFICATION OF DECISION ON PROTEST

A Notification of Decision of Protest or Declaration That Protest Considered Not to Have Been Made (Form PCT/ISA/212) is used by the Technology Center (TC) to inform the applicant of the decision regarding applicant's protest on the payment of additional fees concerning unity of invention. The TC checks the appropriate box, i.e., 1 or 2. If box 2 is checked, a clear and concise explanation as to why the protest concerning the unity of invention was found to be unjustified must be given. Since the space is limited, supplemental attachment sheet(s) should be incorporated whenever necessary.

XII. AUTHORIZED OFFICER

Form PCT/ISA/212 must be signed by a TC Director. See MPEP § 1002.02 (c), item (2).

XIII. UNITY OF INVENTION - NUCLEOTIDE SEQUENCES

Under 37 CFR 1.475 and 1.499 *et seq*., when claims do not comply with the requirement of unity of invention, i.e., when the claimed subject matter does not involve "one or more of the same or corresponding special technical features," 37 CFR 1.475(a), an additional fee is required to maintain the claims in the same application. 37 CFR 1.476(b).

Nucleotide sequences encoding the same protein are considered to satisfy the unity of invention standard and will continue to be examined together.

Examples concerning Unity of Invention involving biotechnological inventions may be found in Chapter 10 of the International Search and Preliminary Examination Guidelines which can be obtained from the Patent Examiner's Toolkit link or from the WIPO's web site (www.wipo.int/pct/en/texts/gdlines.htm).

1851 Identification of Patent Documents [R-6]

The examiner, in completing the international search report as well as the written opinion and international preliminary examination report, is required to cite the references in accordance with the provisions of Administrative Instructions Sections 503 and 611 and WIPO Standard ST.14. These sections of the Administrative Instructions require reference citations to include, in addition to other information which is apparent from the forms which the examiner fills out, an indication of the two-letter country code of the country or entity issuing or publishing the document and the standard code for identifying the kind of patent document. The discussion which follows is limited to the identification of patent documents (and nonpatent publications) and a listing of the two-letter country codes for countries or other entities which issue or publish industrial property information.

The standard codes for identifying different kinds of patent documents are found in the "WIPO Handbook on Industrial Property Information and Documentation" - WIPO Standard ST.16 which is published by the World Intellectual Property Organi-

zation. The listing is extensive. The Special Program Examiners in each Technology Center (TC) have a complete copy of Standard ST.16. It is also accessible on WIPO's web site **>(www.wipo.int/scit/en/standards/standards.htm).< Provided herein is an abbreviated version representing the countries and codes commonly used by the examiner in preparing search reports.

U.S. patents published before January 2, 2001, are Code A documents generally. Beginning with patents published on January 2, 2001, U.S. patents are Code B documents. Patent Application Publications, first published on March 15, 2001, are Code A documents. Reexamination certificates published before January 2, 2001, are Code B documents. Reexamination certificates published on or after January 2, 2001, are Code C documents. Tables providing a complete list of the kind codes of patents and other documents published by the USPTO are included in MPEP § 901.04(a). All nonpatent literature documents are Code N. Numerical designations are sometimes found on published documents along with the letter code designation. These should be used by the examiner only if such numerical designation is on the document. Numerical codes along with letter codes can be found, for example, on certain published patent documents such as the German Offenlegungsschrift and published international applications. If numerical designations are not provided, the examiner should use only the letter code designation.

The most commonly cited documents are patents and published patent applications. A guideline for the citation of such documents is listed below. The listing is indicated in the order in which the elements should be listed.

In the case of a patent or published patent application:

(A) The Office that issued the document, by the two letter code (WIPO Standard ST.3);

(B) The number of the document as given to it by the Office that issued it (for Japanese patent documents the indication of the year of the reign of the Emperor must precede the serial number of the patent document);

(C) The kind of document, by the appropriate symbols as indicated on the document under WIPO Standard ST.16 or, if not indicated on that document, as provided in that Standard, if possible;

(D) The name of the patentee or applicant (in capital letters, where appropriate, abbreviated);

(E) The date of publication of the cited patent document or, in case of a corrected patent document, the date of issuance of the corrected patent document as referred to under INID code (48) of WIPO Standard ST.9 and, if provided on the document, the supplementary correction code as referred to under INID code (15);

(F) Where applicable, the pages, columns, lines or paragraph numbers where the relevant passages appear, or the relevant figures of the drawings.

The following examples illustrate the citation of a patent document as indicated above:

JP 10-105775 A (NCR INTERNATIONAL INC.) 24 April 1998 (24.04.1998) paragraphs 26 to 30.

DE 3744403 A1 (JOSEK, A.) 29 August 1991 (29-08-1991), page 1, abstract.

US 5,635,683 A (MCDERMOTT, R. M. et al.) 03 June 1997 (03/06/1997), column 7, lines 21 to 40.

STANDARD CODE FOR THE IDENTIFICATION OF DIFFERENT KINDS OF PATENT DOCUMENTS

The Code, WIPO Standard ST.16, is subdivided into mutually exclusive groups of letters. The groups characterize patent documents, nonpatent literature documents (N), and restricted documents (X). Groups 1-7 comprise letters enabling identification of documents pertaining to different publication levels.

Group 1	Use for documents resulting from a patent application and being identified as the primary or major series (excluding the utility model documents of Group 2 and the special series of patent documents of Group 3, below)
A	First publication level
B	Second publication level
C	Third publication level

Group 2	Use for utility model documents having a numbering series other than the documents of Group 1
U	First publication level
Y	Second publication level
Z	Third publication level

Group 3	Use for special series of patent documents
M	Medicament patent documents (e.g., documents previously published by FR)
P	Plant patent documents (e.g., published by US)
S	Design patent documents (e.g., published by US)

Group 4	Use for special types of patent documents or documents derived from/relating to patent applications and not covered by Groups 1 to 3 above, as specified below:
L	Documents, not covered by letter code W, relating to patent documents and containing bibliographic information and only the text of an abstract and/or claim(s) and, where appropriate, a drawing.
R	Separately published search reports
T	Publication, for information or other purposes, of the translation of the whole or part of a patent document already published by another office or organization

Group 4	Use for special types of patent documents or documents derived from/relating to patent applications and not covered by Groups 1 to 3 above, as specified below:
W	Documents relating to utility model documents falling in Group 2 and containing bibliographic information and only the text of an abstract and/or claim(s) and, where appropriate, a drawing

Group 5	Use for series of patent documents not covered by Groups 1 to 4, above
E	First publication level
F	Second publication level
G	Third publication level

Group 6	Use for series of patent documents or documents derived from/relating to patent applications not covered by Groups 1 to 5 above, according to the special requirements of each industrial property office
H	
I	

Group 7	Other
N	Non-patent literature documents
X	Documents restricted to the internal use of industrial property offices

List of Examples of Patent Documents, Previously and Currently Published, or Intended To Be Published, Divided According to Code

CODE: A	Patent Documents Identified as Primary or Major Series — First Publication Level
EXAMPLES:	
Australia	Standard or petty patent application
Austria	Patent application (Aufgebot)
Belgium	Brevet d'invention/ Uitvindingsoctrooi
Belgium	Brevet de perfectionnement/Verbeteringsoctrooi
Belgium	Demande de brevet d'invention/Uitvin dingsoctrooiaanvraag
Brazil	Pedido de privilégio (Unexamined patent application for invention)
Bulgaria	Patentna zajavka predostavena za publichna inspektzija (Patent application made available to the public)
Canada	Patent (prior to October 1, 1989, under previous Patent Act)
Canada	Patent application laid open to public inspection under amended Patent Act, as of October 1, 1989)
China	Patent application published before the examination
Cuba	Patent application
Czechoslovakia	Patent application
Czechoslovakia	Inventor's certificate application
Czech Republic	Prihláška Vynálezu (Application for the protection of an invention — patent)
Denmark	Almindeligt tilgaengelig patentansøgning
Egypt	Patent specification
European Patent - Office	Patent application published with search report
European Patent Office	Patent application published without search report
European Patent Office	Separate publication of the search report
Finland	Julkiseksi tullut patenttihakemus-Allmänt tillgänglig patentansökan
France	Brevet d'invention (old law)
France	Brevet d'invention premiére et unique publication
France	Certificat d'addition à un brevet d'invention, premiére et unique publication

CODE: A	Patent Documents Identified as Primary or Major Series — First Publication Level
France	Certificat d'utilité, premiére et unique publication
France	Certificat d'addition à un certificat d'utilité, premiére et unique publication
France	Demande de brevet d'invention, premiére publication
France	Demande de certificat d'addition à un brevet d'invention, premiére publication
France	Demande de certificat d'utilité, premiére publication
France	Demande de certificat d'addition à un certificat d'utilité, premiére publication
Germany	Offenlegungsschrift
Germany (document published by the Patent Office of the former GDR)	Patentschrift (Ausschliessungspatent), patent granted in accordance with paragraph 17.1 of the Patent Law of the former German Democratic Republic of October 27, 1983
Germany (document published by the Patent Office of the former GDR)	Patentschrift (Wirtschaftspatent), patent granted in accordance with paragraph 17.1 of the Patent Law of the former German Democratic Republic of October 27, 1983

Spain	Patente de invención con examen previo (Patent specification published after examination)
Sweden	Utläggningsskrift
Switzerland	Patentschrift/Fascicule du brevet/Fascicolo del brevetto (Patent published and pertaining to the technical fields for which search and examination as to novelty are made)
United Kingdom	Amended patent specification (old Law)
United Kingdom	Patent specification (new Law)
United States of America	Reexamination certificate (published prior to January 2, 2001)
United States of America	Patent (published on or after January 2, 2001)

CODE: C	Patent Documents Identified as Primary or Major Series - Third Publication Level
EXAMPLES:	
Argentina	Patente de invención (Patent)

CODE: E	Patent Documents Identified as Series Other Than the Documents Coded A, B, C, U, Y, Z, M, P, S, T, W, L or R - First Publication Level
EXAMPLES:	
Canada	Reissue patent (under amended Patent Act, as of October 1, 1989)
France	Certificat d'addition à brevet d'invention (old Law)
Sweden	Patentskrift i ändrad lydelse (Amended patent specification)
United States of America	Reissue patent

CODE: H	Patent Documents Identified in Series According to Special Requirements of Individual Industrial Property Offices
EXAMPLES:	
United States of America	Statutory invention registration

CODE: M	Patent Documents Identified in Series According to Special Requirements of Individual Industrial Property Offices
EXAMPLES:	
France	Brevet spécial de médicament
France	Addition à un brevet spécial de médicament

CODE: P	Plant Patent Documents
EXAMPLES:	
United States of America	Plant patent
United States of America	Plant patent application publication

CODE: S	Design Patent Documents
EXAMPLES:	
Brazil	Pedido de privilégio (unexamined patent application for industrial model)
Russian Federation	Patent na promishlenniy obrazets (Design patent)
United States of America	Design patent

CODE: U	Utility Model Documents Having a Numbering Series Other Than the Documents Coded A, B or C— First Publication Level
EXAMPLES:	
Austria	Gebrauchsmuster-schrift (published with or without a search report)
Brazil	Pedido de privilégio (unexamined patent application for industrial model)
Bulgaria	Zajavka za polezni modeli predostavena za publichna inspektzija (Utility model application made available to the public)
Czech Republic	Uzitny vzor (Utility model)
Denmark	Almindeligt tilgaengelig brugsmodelansogning
Denmark	Brugsmodelskrift
Finland	Hyödyllisyysmalli-Nyttighetsmodell (Utility model)
Germany	Gebrauchsmuster
Greece	Etisi gia Pistopiitiko Ipodigmatos Chrisimotitas (Utility model application)
Hungary	Hasznalati minta leiras (Utility model specification)
Japan	Kôkai jitsuyô shin-an kôhô (Published unexamined utility model application)
Japan	Tôroku jitsuyô shin-an kôhô (Published registered utility model application) (without substantive examination)
Mexico	Utility model
Poland	Opis zgloszeniowy wzoru uzytilowego
Portugal	Pedido de modelo de utilidade (Published application for a utility model)
Republic of Korea	Konggae shilyong shin-an kongbo
Russian Federation	Svidetelstvo na poleznuyu model (Certificate for utility model)
Slovakia	Úžitkovy vzor (Utility model)
Spain	Solicitud de modelo de utilidad

CODE: Y	Utility Model Documents Having a Numbering Series Other Than the Documents Coded A, B or C— Second Publication Level
EXAMPLES:	
Brazil	Patente (granted patent of utility model)
Bulgaria	Opisanie na patent za polezen model (Description of a patent for utility model)
Denmark	Brugsmodelskrift
Denmark	Brugsmodelskrift (amended)
Greece	Pistopiitiko Ipodigmatos Chrisimotitas (Utility model)
Japan	Jitsuyô shin-an kôhô (Published examined utility model application)
Poland	Opis ochronny wzoru uzytkowego
Portugal	Modelo de utilidade (Granted utility model)
Republic of Korea	Shilyong shin-an kongbo (Utility model specification)
Spain	Modelo de utilidad

Country Codes

The two-letter country codes listed below are set forth in WIPO Standard ST.3, which is published in the "WIPO Handbook on Industrial Property Information and Documentation" and is accessible via the internet at the WIPO website (www.wipo.int/scit/en/standards/standards.htm). WIPO Standard ST.3 provides, in Annex A, Section 1, a listing of two-letter country codes and/or organizational codes in alphabetic sequence of their short names for the states, other entities and intergovernmental organizations issuing or publishing industrial property documents. Codes for states or organizations that existed on January 1, 1978, but that no longer exist are provided in Annex B, Section 2. Annex B, Section 1 (not reproduced below) lists States for which the Codes have changed.

1852 **>Taking Into Account Results of Earlier Search(es)< [R-7]

**>

PCT Rule 41.

Taking into Account Results of Earlier Search

41.1.Taking into Account Results of Earlier Search

Where the applicant has, under Rule 4.12, requested the International Searching Authority to take into account the results of an earlier search and has complied with Rule 12*bis*.1 and:

(i) the earlier search was carried out by the same International Searching Authority, or by the same Office as that which is acting as the International Searching Authority, the International Searching Authority shall, to the extent possible, take those results into account in carrying out the international search;
